A NEW AND

COMPLETE COLLECTION OF VOYAGES and TRAVELS:

CONTAINING

All that have been remarkable from the earlieſt Period to the preſent Time; and including not only the VOYAGES and TRAVELS of the Natives of THESE KINGDOMS, but alſo thoſe of

FRANCE, RUSSIA, SPAIN, PORTUGAL, GERMANY, ITALY, TURKEY, DENMARK, SWEDEN, HOLLAND, SWITZERLAND, PRUSSIA, &c.

WITH

An Account of the riſe and Progreſs of NAVIGATION among the various Nations of the Earth, and of the Diſcoveries of the Portugueſe, Engliſh, Dutch, and French, in Africa and the Eaſt-Indies, and thoſe of Columbus in the Weſt-Indies, and the Continent of America,

With the Relations of MAGHELLAN, DRAKE, CANDISH, ANSON, DAMPIER, and all the Circumnavigators,

Including a moſt faithful Recital of the remarkable Voyages and Diſcoveries undertaken at the Expence of the PARLIAMENT of GREAT BRITAIN, and by Order of his preſent MAJESTY GEORGE III. in the SOUTH-SEAS, by thoſe great and experienced Navigators,

BYRON, WALLIS, ‖ CARTERET, FURNEAUX, ‖ COOK, PARKINSON, ‖ FORSTER, &c. &c.

TOGETHER WITH

An accurate Deſcription of NEW HOLLAND, ZEALAND, O-TAHEITEE, TANNA, the SOCIETY, FRIENDLY, and other *newly diſcovered* Iſles, and their Inhabitants.

Likewiſe the Voyage of Mr. de BOUGAINVILLE to the SOUTH SEAS, by Order of the FRENCH KING.

ALSO

An ACCOUNT of the Right Honourable LORD MULGRAVE'S EXPEDITION, for the Diſcovery of a Paſſage towards the NORTH-POLE.

AND

A ſuccinct Narrative of the VOYAGES and TRAVELS undertaken for Diſcoveries in the Northern Hemiſphere by Order of her Moſt Serene Highneſs the preſent EMPRESS OF RUSSIA;

With a particular Deſcription of the New Archipelago diſcovered in the Proſecution of that Plan:

Comprehending an Extenſive Syſtem of Geography,

Deſcribing, in the moſt accurate Manner,

Every Place worthy of Notice, in Europe, Aſia, Africa, and America:

AND COMPRISING

A full Diſplay of the Situation, Climate, Soil, Produce, Laws, Manners, Cuſtoms, &c. of the different Countries of the Univerſe. A ſummary View of the various Revolutions of Government or changes of Nature which they have undegone. With a Diſcuſſion of ſeveral Phœnomena of Nature hitherto unaccounted for by Philoſophers.

The whole exhibiting a View of the *preſent State of the World*, and calculated to give the Reader a clear Idea of the Government, Policy, and Commercial Intereſts, of all the different Inhabitants: Being the reſult of unwearied Aſſiduity, aſſiſted by the beſt Authorities.

By JOHN HAMILTON MOORE,

MASTER OF THE ACADEMY AT BRENTFORD, AND AUTHOR OF THE PRACTICAL NAVIGATOR, &c.

Aſſiſted by ſeveral PERSONS who have made the SUBJECTS of VOYAGES and TRAVELS their particular STUDY.

Embelliſhed with the moſt ſuperb and elegant Set of Copper-Plates, Maps, Charts, Plans, &c. (upwards of One Hundred in the Whole) that was ever given with a Work of this Kind; engraved from the Deſign of *Samuel Wale*, Eſq. Mr. *Dodd*, &c. by *Grignion*, *Walker*, *Rennol'ſon*, *Goldar*, *Taylor*, *Conder*, and other Capital Maſters.

BRITISH MUSEUM

Prince Henry, third ſon of King John of Portugal, returning from the ſiege of Ceuta, conceived ſuch a violent deſire of making new diſcoveries that he ſpent near 10 years in cauſing attempts of that nature to be made, in the proſecution of which he appeared to have at heart, a ſcheme for reſtoring the trade with Aſia, by finding out a paſſage round Africa to the Weſt Indies, which muſt neceſſarily divert it from its old channel, and prove moſt beneficial to thoſe who firſt accompliſhed the arduous undertaking.

It ſeems that the prince was the more encouraged to proceed in his ſcheme by the information of certain Moors, concerning the ſituation of the Southern coaſts of Africa, of which no European adventurers had any knowledge, none of them having ventured beyond Cape NAO, ſo called from being conſidered as the utmoſt boundary of their navigation toward that quarter of the globe. But no obſtacles appearing ſufficient in the eyes of Prince Henry, who every day grew more bent upon his deſign, in the year 1417, he cauſed two veſſels to be fitted out for the purpoſe of diſcovery; they ran 60 leagues beyond Cape Nao to Cape Bojador, where being diſcouraged by a ſwelling ſea, breaking on the ſands, they returned, and the Prince ſent out, 1418.
Juan Gonzales Zarco, and Triſtan Vaz Teixeira, gentlemen of his houſhold, in a ſmall ſhip, with orders to coaſt along the coaſt of Barbary, till they had paſſed the Cape, and diſcover all the land which the Arabs ſaid reached beyond the equinoctial line: but their veſſel was driven by a ſtorm out of her courſe, till, accidentally, they made an iſland which they called Puerto Santo, or Holy Iſland, on account of their deliverance. The prince, on their return, pleaſed with their diſcovery, ſent them thither again, together with Bartholomew Pereſtrello, with cattle; as alſo corn and plants; but the intention was defeated by the fecundity of a couple of rabbits, thoſe animals multiplying ſo exceedingly, as to deſtroy what was planted; and thus a circumſtance ſo trifling, rendered the project of a ſettlement abortive. The year following, the ſame gentlemen made another voyage, in which they diſcovered the iſland of Madeira, where they found a chapel, tomb, and ſtone, erected by an Engliſhman, who, flying from his country with a woman whom he loved, was driven thither by ſtreſs of weather; the ſhip taking advantage of a favouring gale, having left the young couple behind them.* The land being covered with woods, the Portugueſe ſet fire to them, to clear it: theſe are ſaid to have burned for ſeven years, and when the iſland was at laſt ſettled, wood became one of the ſcarceſt articles in the country. —A courſe of time being neceſſary for furniſhing the new ſettlements, it was not till 15 years afterwards that Gilianez paſſed the dreadful Cape Bojador, beyond which he ſailed 30 leagues, and the year following, proceeded 12 leagues farther, returning with a quantity of ſea wolves ſkins, but, on their landing, the inhabitants fled for fear of them, and could not be perſuaded to return.

Prince Henry ſtill continuing to purſue his plan, Antony Gonzales, in the year 1442, by his order, coaſted as far as Cape Blanco. Nunho Triſtan paſſing ſtill further, diſcovered one of the iſlands of Arguim, called Adeget, and another, which they named De Los Garzas.

Dinis Fernandez, in 1447, diſcovered Cabo Verde, or Cape Verde; but venturing up the river which the Spaniards called Rio Grande, he was cut off by the natives, as were moſt of his followers.

Alvaro Fernandez afterwards ſailed 40 leagues farther; and thus Prince Henry had the ſatisfaction of ſeeing his plans ſucceſſively executed, till death removed him in the midſt of them: after which they were purſued by his nephew, Alfonſo V. in whoſe reign Gonzalo de Vello, 1449.
diſcovered the iſlands called Azores, which are eight in number, viz. St. Michael, St. Mary, Jeſus, or Tereſa, Gracioſa, Pico, Fayal, Flores, and Corvo, lying nearly in the ſame latitude with Liſbon.

The next year the iſlands of Cape Verde were diſcovered by Antonio Nole, a Genoeſe, in the ſervice of Portugal. Theſe iſlands lie about 100 leagues to the Weſtward of Cape Verde, and are called Brava, Boaviſta, du Sal, S. Nicholao, S. Lucia, S. Vincent, and S. Antonio: he alſo found the iſles Maya, and S. Philip, and S. Jacob.

In 1471, John de Santeren and Peter de Eſcobar, went to the place called Mina, on account of the gold trade there, and proceeded from thence to Cape St. Catharine. The ſame year Ferdinand Po, found out an iſland which he called Hermoſa, a name which it has ſince loſt, but retains that of him who diſcovered it. About the ſame time the iſlands S. Thomas, Anna Bom, and Principe, were diſcovered.

It was at this period the King of Portugal took upon him the title of *Lord of Guinea*.—It had heretofore been the cuſtom to ſet up wooden croſſes in the new diſcovered countries, but this prince ordered that ſtone ones ſhould be in future erected by the captains, whereon his own name and theirs were to be inſcribed. The firſt of theſe captains was called Cam: paſſing Cape Catharine, he came to the river Congo, ſailing up which, he found by the ſigns of the blacks, 1484.
that they had a king, who lived at a diſtance from the ſea coaſt. This being all the information he could get, he returned home; where being arrived, and bringing ſome of the natives with him, King John gave them many preſents, and ordered Cam to proceed again to Congo, and endeavour the converſion of the people, who were all heathens.—In this he happily ſucceeded, and returning to Congo, being admitted to the King of that place, perſuaded him to ſend

* The lady died ſoon afterwards, and Macham, with his companions, having paid this tribute to her memory, made a boat out of the trunk of a tree, in which without ſails, or oars, he paſſed over to Africa: the Moors preſented him to their king, who ſent him to the King of Caſtile.

ſome of the ſons of his chief men to Portugal, to be baptiſed and inſtructed in the principles of the chriſtian religion.

Some time after, the King of Benin, a territory ſituate between fort St. George and Congo, pretending a deſire to be converted to chriſtianity, ſent an embaſſy to the King of Portugal, deſiring to have prieſts for their inſtruction: the ambaſſador, among other things informed King John, that 250 leagues beyond their country, reigned a powerful prince, called Ogane, by whom the kings of Benin were confirmed in their royalty, their meſſengers receiving from him a ſtaff, with a head and a croſs, like that of Malta; but added, that the perſons receiving theſe, never were allowed to behold his face, his foot only being put out from behind a curtain, in token of his granting their requeſt.

The wonderful accounts of a certain prince called Preſter John, reigning in thoſe parts, being at that time current in Europe, King John concluded this muſt be that very extraordinary perſonage.—To ſatisfy himſelf in this particular, as well as to get ſome account of India, Peter de Covillam, and Alonſo de Payva, were ſent over land for intelligence: by way of Grand Cairo, they went to Tor on the coaſt of Arabia, where they ſeparated, Covillam ſetting out for India, and Payva, for Ethiopia, both agreeing to meet again at Grand Cairo, by a certain appointed time: the former proceeded to Cananor, Calicut and Goa, paſſing from thence to Sofala, and afterwards to Aden, at the Mouth of the Red Sea, on the ſide of Arabia; when, coming at laſt to Grand Cairo, he found the companion of his travels was no more; from hence he ſent the king an account of his proceedings by a Jew come from Portugal, and afterwards went into Ethiopia, where he was kindly entertained, but from whence he was never permitted to return.

At the ſame time that theſe ſet out by land, Bartholomew Diaz put to ſea, with three ſhips: he diſcovered the mountains called Serra Prada, and paſſed on in ſight of a bay, which he named *De los Vaqueros*, on account of the great herds of cattle, that he ſaw there; he touched afterwards at the iſland of Santa Cruz, entered the mouth of the river del Infante, and at laſt came to the famous Cape which is the utmoſt Southern boundary of Africa: to this Cape he gave the name of Tormentoſo, on account of the ſtorms which he there met with. But King John changed the appellation to that of Cabo de Buena Eſperanza, on account of the hopes he entertained of diſcovering a paſſage round it by ſea to the Eaſt Indies: however this (which was of more conſequence than finding out Preſter John's dominions) did not take place in the reign of King John, who, having fixed the Portugueſe dominion in Guinea, died, and was ſucceeded by King Emanuel.

It was in the reign of this monarch that Vaſquez de Gama, being intruſted with the command of three ſhips and a tender, paſſed the Cape, and made his way to India by ſea: previous to which, Chriſtopher Columbus, had ſailed to the Weſt Indies; the new world was thus diſcovered, and the conqueſt of Mexico and Peru followed in conſequence of that diſcovery.

In 1494, Sebaſtian Cabot diſcovered North America, in the reign of King Henry VII. of England.—In the year 1500, Braſil was firſt found out by Peter Alvarez Cabral, who was ſent on an expedition with 1200 men, to gain footing in India, but was driven by a ſtorm on that part of the coaſt of South America; and, in 1519, Ferdinand Maghellan found a paſſage from the Weſtern to the Southern ocean, by thoſe Straits which have ever ſince borne the name of their unfortunate diſcoverer.

The way thus opened, each ſucceeding period furniſhed new diſcoveries of the Engliſh, the Dutch, the French, and in effect, all the nations of Europe, whoſe ſituation would permit them; eagerly followed the example of the ſucceſsful Portugueſe and Spaniards, who, equally jealous of them, and of each other, took all manner of pains to preſerve their dominion where they had gained footing, and as much as poſſible to thwart all thoſe who adopted the plan of making new diſcoveries. But notwithſtanding this, we find the Dutch, at various periods, buſy in ſettling themſelves in India, and ſecuring the poſſeſſion of the ſpice trade. In 1600, an Engliſh Eaſt-India company, was eſtabliſhed by Queen Elizabeth; ſettlements in Aſia were alſo obtained. A great part of the continent of North America, firſt diſcovered by Sebaſtian Cabot, was alſo peopled after that time by Britiſh ſubjects: nor were the French idle, they alſo got footing in Aſia, the Weſt-Indies, and North America, in ſpite of all the obſtacles that at firſt appeared to hinder them; while the Portugueſe and Spaniards, eſpecially the latter, often found themſelves much embarraſſed to preſerve their new poſſeſſions. A paſſage being opened from the Atlantic to the South Sea, by Cape Horn, and the Straits of Maghellan, and the poſſibility of circum-navigating the globe, which before exiſted in idea, confirmed by experience, the ſettlements on the coaſts of the Pacific Ocean were expoſed to aſſaults from enemies whom the Spaniards little expected to viſit them in thoſe ſeas, the riches of the new world being alone ſufficient to excite them to ſuch an undertaking. Drake, Candiſh, and others, following the track, afterwards ſailed round the world, and to their diſcoveries much has been added by more modern navigators. But as all theſe, together with all that is found remarkable in the relation of voyagers and travellers will be found at large in the following ſheets, we forbear to dwell upon them here, having already given the reader a view of the riſe and progreſs of the art of navigation, and a ſummary account of the undertakings of thoſe firſt adventurers, whoſe names will ever be had in remembrance.

Having finiſhed this ſketch, we ſhall now proceed with the work itſelf, beginning with the voyages of Chriſtopher Columbus and Vaſquez de Gama, whoſe diſcoveries form an æra the moſt remarkable in the hiſtory of navigation, as they firſt poured the treaſures of the Eaſtern and Weſtern world into the lap of Europe, and thereby laid the foundation of her preſent grandeur and refinement.

INTRODUCTION.

MANKIND being intended by Providence for ſocial as well as rational creatures, it ſeems to have been the grand deſign of God and Nature, that after having multiplied and repleniſhed the earth, they ſhould hold intercourſe with each other, and thereby derive ſuch mutual advantages as without a miraculous intervention could never otherwiſe ariſe to any ſeparate community. It may poſſibly, be objected that if this were really the deſign of Heaven, men would not have been ſcattered at a diſtance from each other with intervening wilds, deſarts, mountains, and vaſt oceans to divide them. But, upon an examination of the diſpenſations of Providence, this ſeeming weighty objection will vaniſh. Man is a Being capable of improvement, and intended to be conſtantly employed in exertions either of his corporeal or mental faculties. It is for the brute creation alone, to remain, from their firſt period of exiſtence, in their wilds and foreſts, till death aſſimilates them with their original duſt. Man has a nobler claim, by arts enabled to remove the apparent obſtacles of nature, to viſit diſtant lands, and from experience to reap advantage and uſeful improvement, and, in all the various changes of the world, ſtill to find employment for his rational faculties, and means to occupy his induſtry.

The ſtate wherein we now ſee the terraqueous globe is not that which it always exhibited: beſides the general deluge ſo fully deſcribed in ſcripture, we have authentic accounts of partial deluges, dreadful earthquakes, and other phœnomena, which from time to time have wrought amazing changes on the face of the earth, levelling mountains, elevating valleys, rending aſunder vaſt continents, producing new iſlands, burying vaſt tracts of land beneath the ocean, and cauſing the ſea in other places to retire, and the dry land to appear. How far theſe changes may have conduced to the ſeparation of mankind in ſome places, and to the aſſociating them in others, is a matter, perhaps worthy the diſcuſſion of the philoſophical enquirer. Whether the various nations of the peopled earth were ſeparated by ſuch vaſt tracts of ocean in the antediluvian world, is more than we can take upon us to determine; but it ſeems clear that after the general deluge, men were fearful of truſting themſelves upon the world of waters even for ages, till by ſlow degrees they were convinced of the utility, when numbers had experienced the advantages of a certain confined navigation peculiar to thoſe ages.

It would be as tedious as uſeleſs for us to take up too much of the readers time with a detail of the expeditions of all the deſcendants of Noah, and the chiefs of fabulous times, of which all the accounts are ſo mixed with fable, that it is ſcarcely poſſible for the moſt accutate inveſtigator to diſtinguiſh and ſeparate truth from error. Of this ſort are the expedition of the Cretan Jupiter againſt the Sidonians, of Perſeus into Africa againſt Meduſa, with others, too tedious here to mention. The relation of the voyage of Jaſon in the ſhip Argo, ſaid to be the firſt large veſſel built by the Greeks, is likewiſe immerſed in fabulous obſcurity: it is only to be concluded that the Argonauts ſailed under a brave commander of the name of Jaſon, to clear the ſeas of pirates, and to eſtabliſh ſome branches of uſeful commerce at Colchis and elſewhere.

From all authentic hiſtory, ſacred and profane, we have reaſon to believe that the Phœnicians were the firſt, and for a long period of time the moſt ſucceſsful of the antient navigators. We find the King of Tyre, whoſe ſubjects were of that nation, aſſiſting King Solomon with gold and curious materials for building the famous temple at Jeruſalem.—Though the virtue of the magnetic needle was totally unknown in thoſe days, yet it is morally certain that theſe bold navigators not only coaſted along the neighbouring ſhores of the Mediterranean, but ſailed Southward to Africa, and North as far as Britain, trading for tin to the coaſt of Cornwall, at a time when the exiſtence of this iſland was not known to the greater part of the nations inhabiting the continent. The Aſſyrians, Ægyptians and other antient ſtates are reported to have had great fleets before the days of David or even of Moſes.—The accounts of the naval power of Semiramis are to be ſuſpected as fabulous; that the Ægyptians and ſome other nations have been repreſented as covering the ſeas with their fleets, may probably have ariſen from the numbers of Phœnician veſſels employed in their ſervice.—The Greeks who learned other arts from them, acquired that of navigation among the reſt, and almoſt as ſoon as they were formed into ſtates, began to think of making themſelves reſpectable for their fleets, with which they repeatedly defeated thoſe of the Perſians, and while the Phœnicians were employed in trading and planting colonies in various other parts of the world, made themſelves maſters of the Eaſtern coaſts of the Mediterranean.

Carthage, a colony from Tyre, from ſmall beginnings roſe to high eſtimation for her naval power, by which means, in a great meaſure ſhe was enabled to contend with Rome for the empire of the world. But the indefatigable induſtry, unwearied application, and boundleſs thirſt of conqueſt which marked the character of the Romans, cauſed them at laſt to triumph. Though at firſt they were little ſkilled in maritime affairs, to which their ancient genius had not led them, yet finding themſelves thus powerfully oppoſed by a people whoſe great reſources were in trade, and whoſe naval ſtrength contributed chiefly to their ſupport; they reſolved on manning great fleets, in which, though at firſt they were unſucceſsful, they were at length enabled to combat their enemies, as it were upon their own element, and finally gave them ſuch a terrible overthrow as induced them to accept of ſuch a peace as the conquerors were diſpoſed to grant.—The fleets at this time conſiſted of galleys of various ſizes, with ſeveral benches of rowers, and were filled with ſoldiers who fought with their uſual weapons of war, to which were added various engines peculiar to their ſituation, and ſome of the galleys had towers, from whence they ſhot or threw darts, ſtones and other miſſiles. By the help of theſe, they could make ſafe approaches to the walls of towns in *offenſive* war, and when attacked in their own veſſels could carry on a *defence* as from land caſtles.

But though the Romans by their aſſiduities had overcome great obſtacles, and were become the maſters at ſea, yet we do not find that their genius led them towards *diſcovery*.—Conqueſt engroſſed their ideas, and as the then known world had furniſhed ſufficient employment for their arms, and put them in poſſeſſion of an empire, which was at laſt too extenſive for them to preſerve entire, they were little ſolicitous of penetrating farther, and exploring unknown regions in the manner of the more modern Europeans.

The power which the Romans had thus wreſted from the Greeks and Carthaginians they preſerved till the diviſion of the empire, after which, it began to decline.—The diſtant provinces revolted.—The nations ſhook off the yoke of the conquerors; barbarians whoſe names were almoſt unknown, poured in upon the various parts of the divided empire; Rome ſinking under her own weight, was at laſt ſacked by the Goths, and Conſtantinople taken by the Saracens, in the reign of Michael Palæologus, which event put an end to the Eaſtern empire.

From this period the Arabs began to date their conſequence.—Though at firſt apparently enemies to learning and the arts, yet as they extended their power, they became encouragers of them, and, while the deſtruction of the Weſtern empire had involved Europe in ignorance and diſtraction, theſe people began to cultivate uſeful knowledge, and to carry on an extenſive trade with divers nations, though in ſhips of a very ſlight conſtruction. Nor did the diviſion of the Arabian Empire prove the extinction of this commerce, which long ſurvived the deſtruction of the Khalifate, and the remains of which, were yet viſible to the Portugueſe when they entered the Indian ſeas, along whoſe coaſts the pilots, it is ſaid, were found to have the uſe of ſea charts, and even that of the compaſs, the diſcovery of which, was then ſo recent in Europe.

In the mean time the rival Republics of Genoa and Veniee, were almoſt the only powers that attended to trade and navigation in the Weſtern World, the cruſades abroad, and the feudal ſyſtem which prevailed amongſt the moſt reſpectable powers at home, joined to their inteſtine diviſions, proving moſt unfavourable to the arts, and prolonging that night of ignorance, whoſe ſhades began to be diſpelled about the fifteenth century. The conqueſts of Jenghiz Khan, and the wars of the ſucceſſors of Saladin, as well as thoſe of Tamerlane, had ſucceſſively kept Aſia in a ferment; and the two Republics maintained their naval conſequence, till the Venetians at length prevailed, and ſecured to themſelves the ſovereignty of the inner ſeas.—Before a way to India was opened by the Cape of Good Hope, the great market for ſpices, drugs, and other valuable commodities of the Eaſt, was fixed at the city of Malakka, from whence they were fetched for the uſe of the Weſtern nations as far as the Red Sea.—But the diſcoveries of the Portugueſe turned the channel of this trade, and in effect proved fatal to the wealth and power of the Venetians, which had for a long ſucceſſion of years been at once the wonder, and the envy of Europe.

It is to the directive power of the magnetic needle, firſt diſcovered about the year 1300, that this change may properly be attributed. Who was the author of this diſcovery is uncertain; but it is generally aſcribed to an inhabitant of Amalfi, in the kingdom of Naples, of whoſe name there is no authentic account.—Indeed, whoever the perſon was, his claim could be only as a mere diſcoverer of this property, which was not applied till about the year 1405, by the Portugueſe for the purpoſes of navigation. *

Prince

* The load-ſtone or magnet, as ſome ſay, was firſt found in Magneſia, a country of Lydia; according to others, the Magneſians were only the firſt who diſcovered its property of attracting iron. It is well known to have two poles, which conſtantly incline to thoſe of the world, if nothing intervene to alter their direction. This property is found to be communicable, and hence the nautical needle once properly touched points conſtantly towards the pole, unleſs ſome maſs of interpoſing iron, or ſomewhat of a magnetic nature, interpoſes to prevent its direction. The cauſe of this wonderful effect is one of thoſe ſecrets which it has pleaſed Heaven hitherto to conceal from the prying ſearchers into nature's volume. This wonder is augmented by another, namely, the different variations of the compaſs, which are found by obſerving the ſun and ſtars, and appear not to be guided by parallels of latitude, nor regulated by meridians; ſome have attributed this to certain magnetic qualities in certain mountains; ſome to a principle of magnetiſm in the earth communicable from the pole in different degrees, at different diſtances.—But what tends to overthrow theſe various opinions, and ſeems almoſt to mock conjecture, is a variation of the variation itſelf, as it continues not the ſame at all times even in the ſame ſituations. On the whole, from whatſoever hidden powers in nature the cauſe of magnetiſm originates, it is to its effects, as employed in framing the mariners compaſs, that mankind owe the diſcovery of a new world.

VOYAGES AND TRAVELS.

THE FIRST VOYAGE OF CHRISTOPHER COLUMBUS.

CHRISTOPHER COLUMBUS, who added a fourth quarter to the world by his discoveries towards the latter end of the fifteenth century, was a native of Genoa, of uncertain parentage, but of confessed abilities. He had a strong propensity to the study of navigation, early in life he discovered an inclination to mathematical researches, and had been employed in trading voyages to divers parts of the world before he attempted to set out upon this grand discovery. His motives to the undertaking, according to his own account, were the following: First, The figure of the earth suggested to him the probability that there must be some counterbalance of land, to answer to the vast tract of ocean which appeared to surround the habitable world. Secondly, He greatly relied upon some hints of this kind, which he thought he traced in several ancient writers, as well as on the observations which he himself had made in the course of some of his own voyages. These were confirmed by those of other navigators, among whom was one who mentioned a large island, which he said he had discovered to the westward of Ireland, since supposed to be Newfoundland. One Martin Vincent, who used to sail to the Azores, is said to have told Columbus, that being 450 leagues to the westward of Cape St. Vincent, he took up a piece of timber which seemed to be wrought by some artisan, but apparently, without the help of iron. Peter Correa, who had married Columbus's wife's sister, reported that he had seen another piece of the same sort at Puerto Santo, and that there had also been canes found so thick that every joint would hold a gallon of wine, which were shewn to the king of Portugal. Such canes being generally found in India, concurred with other circumstances to inspire Columbus with the notion of sailing westward to the East Indies; which, if no intervening lands obstructed, he concluded there was a moral certainty of accomplishing. The casting up of pines and dead bodies at the Floras, which latter, by their features, seemed to have been the inhabitants of some remoter region, tended still farther to confirm him in his opinion.

Possessed with the resolution of making the experiment, he first proposed the matter to his countrymen the Genoese, by whom it was rejected. He then addressed himself to the King of Portugal, in whose dominions he lived, and where he had married and intended to settle. But that monarch seemed extremely backward to engage in such an extensive undertaking. The reasons urged were, that his Majesty had already been at great expence in sending persons to make discoveries along the African coast, and to find out an eastern passage to the Indies by sea, without having reaped the expected advantages; and that there appeared little prospect of attaining the end by an expedition to the westward where fresh difficulties and dangers would arise, since after all the labour that had been bestowed on the favourite scheme of the Portuguese, carried on since Prince Henry's time, there had not been found any navigators yet successful enough to weather the Cape of Good Hope, and spread their sails upon the Indian Ocean.

However plausible this reasoning might seem, it appeared in the sequel, that his Portuguese Majesty was not so much bent against a expedition of this sort, as he was averse to employing Columbus; for, by the advice of some who shared his confidence, the king secretly caused a vessel to be fitted out, which was sent to discover what some, in jest, had termed Columbus's world; but for want of constancy and a proper idea of what course to take, the scheme miscarried, and those who had thus been sent to circumvent the first proposer, returned without having effected any thing, and fully convinced that there could be no lands to the westward beyond those already discovered; because they had not the fortune to find them out.

Columbus being informed of what had passed, was so much disgusted at this duplicity, that (his wife being already dead) he determined to leave Portugal, and accordingly departed privately from that kingdom, taking with him his son James, and proceeded to Castile. Then, having left the child in a monastery at Palos, he went to Cordova, where the Spanish court then was, and where he recommended himself by his knowledge and abilities to the notice and friendship of several persons whom he thought most likely to favour his scheme, which he intended to propose to the reigning princes King Ferdinand and Queen Isabella. Columbus leaves Portugal.

But lest he should meet with another repulse in Spain, in order that no time might be lost, he dispatched his brother Bartholomew to England to make proposals to King Henry VII: but his messenger falling into the hands of pirates, and afterwards not getting a speedy audience of the king, these and other circumstances occasioned Columbus no longer to rely upon the English, who might otherwise have insured to themselves the West India islands and most probably a lasting English establishment in South America.

The application at first intended was now made to their Catholic Majesties, but the matter being referred to certain Spanish cosmographers, by the prior of Prado, afterwards archbishop of Grenada, whom the king had thought fit to consult upon the occasion; these men whose ideas were by no means so extensive as those of Columbus, gave their opinions against the

1492 expedition, urging a variety of futile reaſons, * which however, had ſo much weight with the court, that after a tedious and fruitleſs attendance, he received for anſwer, that their Majeſties were then ſo much engaged in their wars with the Moors, that they could not attend to any new undertaking: and in the end it was ſignified to him, that they would not liſten to the propoſals which the projector of the ſcheme offered them.

In effect, after many conferences, Columbus, for that time, received a flat refuſal, though the Dukes Medina, Celi, and other perſons of note were by this time become his advocates: five years having been thus waſted in ſolicitations, he at laſt reſolved to leave Spain as he had quitted Portugal. He therefore ſet out for the monaſtery of Palos, to take his ſon from thence; but there F. John Perez perſuaded him once more to apply to their Catholic Majeſties, then carrying on the ſiege of Grenada. He was prevailed on to do ſo; but his terms † being diſapproved, he reſumed his reſolution of leaving the country, and was got two leagues on his way, when the queen ſent to recal him. He obeyed the ſummons, and her Majeſty having reſolved to gratify his deſire, even to the pledging of her jewels, an agreement fully to his ſatisfaction was drawn up, at the camp of St. Faith, before the town of Grenada, on the 17th of April in 1492.

All things being thus adjuſted, it was not long before the proper preparations were made for that voyage, which was to determine whether the opinion of Columbus were the reveries of an enthuſiaſtic dreamer, or were ſuch as originated in a depth of comprehenſion, and deſerved the encouragement of the princes of the earth.

Columbus embarks on his expedition.

With a fleet conſiſting only of three caravels the admiral ſet out from Palos, on Friday the 2d of Auguſt, himſelf commanding the St. Maria, and Martin Alonſo Pinſon the Pinta, of which his brother Franciſco was maſter, the third veſſel, called the Ninna, was under the conduct of Vincent Yannez Pinſon; and all the three caravels contained not above 120 men. They arrived at the Canaries on the 11th of the ſame month, without any other accident except that of the Pinta's rudder breaking looſe; and having refreſhed themſelves at Gomera, on the 6th of September departed from thoſe iſlands. Moſt of the ſailors loſt their ſpirts when they loſt ſight of the land; Columbus, however, re-aſſured them, and whenever they talked of danger, diſcourſed of riches and honours, by which means, together with making it a conſtant rule to falſify the reckoning in ſuch a manner as that the mariners might not imagine themſelves ſo diſtant from home as they really were, he contrived from time to time to keep them quiet. On the 14th of September he firſt obſerved the variation of the compaſs; two days after they ſaw weeds floating on the water, and ſome ſmall animals alive among them, and as they proceeded, obſerved ſeveral flights of birds holding their courſe weſtward.

The ſeamen murmur.

Theſe favourable ſigns continuing for ſome days, but no land appearing, the mariners were loud in complaints againſt the admiral, who, they ſaid, in the vain expectation of gratifying his own avarice and ambition had brought them thither to be ſtarved to death or ſwallowed up by the mercileſs ocean. They added, that having already done more than could be expected, in venturing ſo far, it were better they ſhould return, and in caſe of oppoſition from Columbus, ſome of them were of opinion, that, like another Jonas, he ſhould be thrown overboard to facilitate their project.

The admiral, who was not ignorant of their murmurings, ſtill carried himſelf with ſteadineſs and reſolution, ſometimes uſing ſoothing words, ſometimes more ſternly reproving them, with a ſecret determination of proceeding at all events upon the expedition, which he doubted not in the end would anſwer his expectations. He failed not always to put them in mind of the good ſigns which they had ſeen, but theſe had ſo frequently diſappointed the ſailors, that they began to give little credit to ſuch tokens.

On the 25th, Pinſon, whoſe veſſel was a-head of the reſt, thought he diſcovered land, but this proved an illuſion. On ſtanding all night towards the quarter where he thought he had perceived it, in the morning it was found the fleet had been only purſuing a ridge of clouds, which greatly added to the admiral's embarraſſment, as well as to their vexation.

At laſt, when the patience of the ſeamen was exhauſted, and Columbus himſelf, to pacify them, talked of returning, in caſe land was not diſcovered in three days, at the ſame time offering thirty crowns a year to the diſcoverer; juſt at this criſis, on the night of the 11th of October, the admiral being then in his cabin, thought he ſaw a light, and called two of his men to obſerve it, but it diſappeared preſently, and left them in ſome uncertainty, till about two the next morning, when Roderic de Triana, of the Pinta, gave the ſignal agreed on, being then at the diſtance of two leagues from the ſhore. When day-light appeared, they found it to be an iſland about 15 leagues in length, the ground level, covered with trees and verdure, a lake of good water in the middle, and well inhabited. This proved to be one of the Lucayos, which was called Guanahani by the natives, but to which Columbus gave the name of San Salvador: landing here with his men in ſight of a multitude of the natives, who ſtood on the ſhore in ſilent admiration: he took poſſeſſion of the place in the name of their Catholic Majeſties.

The admiral diſcovers land.

San Salvador diſcovered.

Perceiving the people to be of a peaceable and friendly diſpoſition, he made them ſome ſmall preſents, and afterwards began to barter with them, exchanging glaſs beads and ſuch toys, for fruits, parrots, ſpun cotton, and more valuable things. The Indians were naked, of a middle ſize, and olive complexion, but painted according to their particular fancies. They had ſmall plates of gold hanging at their noſtrils, which they ſaid came from a land to the ſouthward, where that precious metal was to be found in abundance. Theſe Indians took the ſhips for living creatures, reverenced the Spaniards as ſuperior beings, and being totally ignorant of the uſe of iron and ſuch kind of weapons as their new gueſts wore, they innocently laid their hands on the edges of thoſe ſwords that were afterwards employed in the deſtruction of ſuch numbers of their countrymen.

The intelligence the Spaniards had received concerning a country where gold abounded, contributed to haſten their departure from San Salvador, from whence they accordingly ſet ſail on Sunday the 15th of October, and at the diſtance of ſeven leagues, diſcovered an iſland which they called St. Maria de la Conception, where every thing ſo nearly reſembled what they had ſeen at St. Salvador, that they did not think fit to make any long ſtay there, but weighing anchor on the 17th proceeded weſtward, where they found another iſland, which was bigger than the two former,

Conception.

* One of the reaſons alledged was, that if any man ſhould ſail ſtrait away weſtward beyond the known hemiſphere, he would go down, on account of the rotundity of the earth, and would never return again, ſince to attempt it would be like a veſſel's climbing a hill, which could not be done by the ſtrongeſt gale.

† Theſe terms were, "That he ſhould be admiral on the "ocean, that all civil employments as well of government as "adminiſtration of juſtice in all the lands diſcovered ſhould be "wholly at his diſpoſal, and that all governors of provinces "ſhould be choſen out of one of three perſons whom he ſhould "name, and that he ſhould appoint judges in all ports of "Spain trading to the Indies, to decide matters relating to thoſe "parts. And that he ſhould have one tenth of all that was "bought, bartered for, or found within the limits of his ad"miralty, over and above the ſalary and perquiſites of his em"ployment." But to ſhew that he was willing to venture ſomething on his own account, on condition of having the eighth part of what he might bring home in his fleet, he agreed to be at the eighth part of the expence of the undertaking. Theſe were high demands, but the hazard ſeems to have been adequate to theſe, moſt of which are found recited and granted by their Catholic Majeſties to their admiral after his return from his firſt voyage.

former, where the women wore ſhort coats of cotton, reaching from their navels to the mid-thigh, which was the whole of their dreſs. To this the admiral gave the name of Fernandina; and departing from thence, diſcovered another, which he called Iſabella; theſe two latter appellations being given in honour of the king and queen of Spain. And he ſet ſail as ſoon as he had learned its product and the manners of the people, not chuſing to ſpend any more time amongſt iſlands which he found ſo nearly ſimilar to each other.

Fernandina.

Iſabella.

Cuba.

The fleet next proceeded to Cuba, where the Spaniards expected to get farther intelligence concerning the gold which was the principal object of their ſearch. Two Chriſtians were ſent with two Indians, the one from St. Salvador, and the other from that country, to ſearch the iſland. On their return they reported that they had ſeen a town conſiſting of about fifty houſes, where they were well treated, the new gueſts being reverenced as deities by the people. Here they ſaw cotton growing, as alſo many ſtrange birds and trees, and an animal reſembling a dog, but which could not bark. The Indians being queſtioned whether they had any gold or pearls in their country, made ſigns that plenty of thoſe commodities was to be found in a place called Bohio, and Columbus following their directions as well as he could underſtand them, having ſeized twelve of the natives, to carry them with them to Spain, ſteered eaſtward till he reached the iſland which is now called Hiſpaniola, from the Spaniſh appellation of Eſpagnola, given it by the admiral.

Hiſpaniola.

This iſland is about ſixteen leagues diſtant from Cuba, the firſt port of which Columbus called St. Nicholas, becauſe he anchored there on the feſtival of that ſaint. Here he took a young woman, whom they treated well, and who proved very ſerviceable to them afterwards, and the natives having a high opinion of the Spaniards, who had hitherto treated them well, the new comers ſtill found themſelves honoured and reſpected wherever they came A principal cacique, called Guacanagari, conceived a ſtrong affection for his new gueſts, which he diſplayed on ſeveral occaſions, eſpecially by ordering all poſſible aſſiſtance to be given to Columbus when ſome of his mariners through ignorance had run one of the caravels upon the flats. Another veſſel, which was commanded by Alonſo Pinſon, had left him while at Cuba, and gone in ſearch of Hiſpaniola before him, underſtanding that there was gold to be found there, the greateſt ſhare of which he thought to ſecure to himſelf by this proceeding. Nevertheleſs the admiral, when he met him afterwards at ſea, did not hold it prudent to take notice of what had paſſed, but choſe to accept excuſes which he could not believe, rather than to enter into any altercation with him upon the ſubject. In the mean while both parties had carried on a gainful traffic, receiving gold and other things of value in exchange for glaſs beads and ſuch ſort of toys, with which theſe people were particularly delighted.

As the iſlanders had expreſſed great fears of the neighbouring Caribbees, whom they repreſented as fierce cannibals, the Spaniards formed a good excuſe for building a fort in their country, which was garriſoned with 38 ſoldiers, who were left there by way of protecting them againſt the invaſions of theſe ſavages; and thus this firſt colony was planted at the port which they called the Nativity, becauſe they had firſt landed there on Chriſtmas day.

The firſt Spaniſh colony in the Weſt Indies.

On Friday, the 4th of January, the admiral ſet ſail from the iſland, and being joined by the Pinta, proceeded to ſome other capes and harbours, and among the reſt, being near the place called the Lover's Cape, he met with ſome fierce Indians, with whom his men had a ſkirmiſh, which terminated to the advantage of the Europeans, whoſe weapons could not be reſiſted by a people armed only with clubs and bows and arrows, and ignorant of the uſe of iron. To this place they gave the name of Golfo de Flechas, or the gulf of arrows, but the Indians called it Samana.

Golfo de Flechas.

From hence Columbus departed on the 16th day of the ſame month, ſetting ſail for Spain, but before he could reach the Azores was overtaken by a violent ſtorm, in which, on the 24th of February, the caravel Pinta was ſeparated from the admiral, whoſe men began again to murmur, proviſion falling ſhort, and his veſſel being ſcarcely able to weather the tempeſt which a few days afterwards drove him to St. Mary's, one of the Azores, where he caſt anchor, on the 18th, after having ſuffered as much by diſeaſe as by the violence of the ſtorm, during the continuance of which he had thrown his papers over board, in order that the account of his diſcoveries might not be loſt though the veſſel which carried him might have foundered. The admiral and his men remembering that they had made a vow in their diſtreſs to go barefooted in their ſhirts to ſome church dedicated to the bleſſed virgin, at the firſt land they made, were all reſolved to perform it at this iſland. To this they were yet more induced by the friendly profeſſions of the people who were ſubjects to a prince in alliance with the king of Caſtile. Half the ſhip's crew embarking in one of the boats for this purpoſe, had but juſt landed, when the governor attended by a number of people, who had lain in ambuſh for that purpoſe, ruſhed out upon them, and, contrary to honour and the laws of nations, ſeized and made them priſoners, taking care alſo to ſecure the boat to prevent the poſſibility of their return. But the admiral brought his ſhip round to a point from whence the church might be diſcerned to which the Spaniards had intended to make their proceſſion. Here he came to an anchor, and demanded his men and boat, which were refuſed him; but as he perſevered in his reſolution, and, though forced out to ſea by the wind, returned, uſing threats as well as perſuaſions, he at laſt obtained them, with many aſſurances of friendſhip from thoſe diſſemblers, on his producing their catholic majeſties commiſſion.

1493

The admiral lands at the Azores.

His people ſeized at St. Mary's.

From hence he ſailed on the 24th day of February, and was ſoon after overtaken by another ſtorm as dreadful as the former, on which account the Spaniards made a ſecond vow, in caſe of being delivered, to ſend one of their people on pilgrimage to our Lady de Cinta, at Guelva, and the lot fell upon the admiral. In the end they were forced upon the rock of Liſbon, and he found himſelf obliged to put in at that port, where the Portugueſe much admired at the preſervation of his veſſel from the fury of the fighting elements. Here the captain of a guard-ſhip interrogated him very cloſely, but at laſt was ſatisfied with ſeeing the letter which he brought from the king and queen of Caſtile, to whom he had immediately diſpatched an expreſs, giving an account of what had happened ſince his departure from Palos. In the mean time the king of Portugal ſent for the admiral, and obſerved, that having been formerly in his employ, the diſcoveries newly made belonged of right to him. Columbus anſwering that he knew of no ſuch agreement, the king ſaid he doubted not but juſtice would be done, and ſo the matter dropped; and the admiral was afterwards moſt courteouſly entertained, and had the offer of being ſafely conveyed over land to Spain, which however he choſe to decline. Setting ſail from Liſbon on Wedneſday the 13th of March, he arrived on the Friday following, at the Port of Palos, from whence, as the reader may remember, he had departed on the 23d of Auguſt in the foregoing year.

Arrives at Palos.

Thus did Columbus accompliſh his firſt voyage, lay the foundation of the Spaniſh empire in the Weſt Indies, and mark out a way for the diſcovery of that New World, to which he had not even the honour of giving a name. Marked out as he was by providence and nature for a perſevering and much enduring man, he had ſcarce arrived in Spain before he perceived the firſt appearance of that malice which afterwards purſued him for a ſucceſſion of years, and contributed to render uneaſy the life which he was ſo willing to ſpend in promoting the honour and advantage of a proud and thankleſs nation.

1493 Thoſe very people who had laughed at his project and affected to treat him as little better than a madman, as ſoon as they heard of his ſucceſs, pretended to make extremely light of it, ſaying that he had done no more than any pilot might have performed, and that on the whole, he was rather forwarded by chance than ſkill in his boaſted expedition.

But their Catholic Majeſties at this time appeared to have adopted another opinion. They received him in the moſt honourable manner, and ſhewed him every poſſible mark of diſtinction*. Yet, that he had ſecret enemies about the court, was a circumſtance which he ſtill ſuſpected, and which proved too true in the ſequel. Among theſe was the biſhop of Burgos, a man of a narrow mind and envious diſpoſition. This eccleſiaſtic, having from the firſt ſhewn himſelf inimical to Columbus and his undertaking, was ready to burſt with malice at his ſucceſs, and reſolved for ever to thwart the man whoſe genius was ſuperior to his own†.

Theſe diſcoveries, however, were even then deemed of ſo much importance that their Catholic Majeſties thought proper to apply to the Pope for a bull to confirm their right in them, which was accordingly granted in a very ample manner, though not without occaſioning the king of Portugal to ſignify his diſpleaſure. But at length, certain articles were agreed on, and eaſtern and weſtern limits fixed by the conſent of both crowns, and the approbation of the court of Rome; the circumnavigation of the globe, which muſt neceſſarily render all ſuch limits vain, being a matter of which neither party had an idea, though it ſeems ſomething of this kind ſuggeſted itſelf to the more extenſive genius and underſtanding of Columbus.

Letters-patent were now granted to the admiral in the name of Ferdinand and Iſabella, confirming his privileges, and it was reſolved that he ſhould return with a fleet to Hiſpaniola, to reinforce the Spaniſh colony planted there, and to complete the reduction of the iſlands.

THE SECOND VOYAGE OF CHRISTOPHER COLUMBUS.

PREPARATIONS neceſſary for the undertaking being made, Columbus ſet ſail from Cadiz on Wedneſday the 25th of September, on his ſecond voyage; and, on the 2d of October came to Gran Canaria, from whence the ſame night he ſailed for Gomera, where he arrived on the 5th, and two days afterwards proceeded on his voyage to the Indies, having appointed the general rendezvous, in caſe of ſeparation, at the port of the Nativity, in Hiſpaniola.

Marigalante, Guadalupe, and Antigua diſcovered.

In his way he diſcovered Marigalante, Guadalupe, Antigua, and other of the Weſt India iſlands, and heard news of the continent before he reached Hiſpaniola, though that was the firſt port at which he intended to land.

But when the admiral arrived there, he found affairs in a ſituation far different from that wherein he had left them. On the Spaniards firſt ſending their boat on ſhore, they found by the anſwers returned to the enquiries it was natural for them to make concerning their countrymen, that the colony of the Nativity was no more; on this they ſuſpected ſome treachery; but Columbus choſe to take no notice of what was told him, till there ſhould be proof ſufficient either to confirm or overthrow his ſuſpicions.

The fleet coming to an anchor in the port on the Thurſday following, they found their ſettlement abandoned, the town burned, and the dead bodies of ſeveral Chriſtians lying in the neighbouring fields; nor could they for ſome time find any Indians from whom to gain intelligence, as the natives conſtantly fled, till at length they met with the brother of Guacanagari (the friendly cacique already mentioned) at the head of a party, from whom they learned, that ſoon after the departure of the admiral, the Spaniards began to quarrel among themſelves, being almoſt all equally covetous of gold, and deſirous of having as many women as poſſible; that two of them having ſlain one of their fellows, went over to Caunabo, a fierce cacique, who killed them, together with nine others that had accompanied them in their flight; that ſome time after Caunabo, by night, ſurprized the fort, burning the houſes of the Chriſtians, who fled towards the ſea-ſhore, and ſome were drowned and others died by famine or diſeaſe on ſhore. As a confirmation of the truth of this report, they found the cacique himſelf ſo ill that he could not leave his houſe, he and ſeveral of his men having been wounded in defence of the Spaniards. Theſe misfortunes determined Columbus to ſeek ſome other place upon the iſland, where he might plant a colony, being little ſatisfied with ſuch a diſaſtrous beginning.

* The Spaniards left at Hiſpaniola deſtroyed.

With this reſolution, he left the Nativity in the beginning of December, after having completed the converſion of Guacanagari to the Chriſtian faith; and anchoring at Monte Chriſto, ſoon after proceeded to a place where there was a town of Indians. Landing on a plain near a rock, where he thought a fort might conveniently be erected, he founded a town, which he called Iſabella, in compliment to her Catholic Majeſty. Soon after the admiral fell ſick, and ſome of his men entered into a conſpiracy to revolt from him, but the intended conſpiracy was diſcovered, and the ringleader ſecured. In the mean time having received intelligence of the gold mines of Cibao, he ſent Alonſo de Hojeda with a party to explore them. This indefatigable man brought a favourable account of the country, confirming that report, on which, when Columbus recovered from his ſickneſs, having taken proper precaution for preventing the diſorders which might otherwiſe ariſe in his abſence, he himſelf ſet out at the head of as many men as could be ſpared from the charge of the town and the defence of the ſhipping, in order to penetrate into that province, and happily effected his deſign, meeting with much civility from the Indians. Paſſing over the mountains in the middle of March, Columbus entered Cibao, and, in a ſtrong and pleaſant ſituation cauſed a fort to be erected, which he called the Caſtle of St. Thomas, where he placed fifty-ſix men in garriſon, under the command of Don Peter Margerite. Then he ſet out upon his return to Iſabella, which he reached on Sunday the 29th of March, where the Spaniards found melons already ripe, though it was but two months ſince the ſeed was put into the earth. Within twenty days cucumbers came up, and a countryman gathered wheat ears the the next day, though the corn had been ſown only in the latter end of January.

A conſpiracy.

The Spaniards enter Cibao.

In April that year, the admiral ſent a re-inforcement to St. Thomas's Caſtle, it being reported that the natives meditated an attack upon the fort. But this ſuccour prevented them; and in the mean time ſeveral

* When Columbus came to Palos, Pinſon (whoſe veſſel had been ſeparated from the admiral's in a ſtorm) being arrived at Gallicia, would have attended on the king and queen, but they abſolutely forbad him to come to court without his commander, on which he returned to his native country, where he is ſaid to have died of grief for his ſo much deſerved diſappointment.

† The ſtory which is related of Columbus's experiment with an egg, which, when none could ſet upright on its little end, he accompliſhed by cracking the ſhell, may ſerve to ſhew that he did not want for ready wit. This being accompliſhed, all in the company laughed, crying that it was no more than any body might have done, "Yes, (ſaid the admiral) as any body can "find the way to the new world—but it is becauſe I have firſt "ſhewed it them."

several Indians being taken prisoners, were put in irons and sent to Isabella, for having plundered the Christians, but Columbus released them at the intercession of a friendly cacique, in order to conciliate the affections of his countrymen. In the mean time he also appointed a council to govern the island, at the head of which he placed his brother James, and then sat out upon fresh discoveries.

His first object was Cuba, for which he proceeded on the 24th of April in the afternoon, and after having sailed along the coast, went over to Jamaica, where the Spaniards being threatened in a hostile manner by the Indians, repulsed them with missile weapons from their boats, after which some canoes coming on board, furnished them with provisions in a peaceable manner. Nevertheless, the admiral thought proper again to return to Cuba, which all this while had been mistaken for the continent; and the fleet came to a point, which they called Cabo de Santa Cruz, or of the holy cross, after which, sailing along the coast they met with very tempestuous weather, and were not a little incommoded and endangered by the flats and small islands. The admiral still held on his course, without stopping till he came to one of them rather larger than the rest, where he landed, naming it St. Mary. Here was a town which all the Indians deserted on the arrival of the Christians, so that finding nothing remarkable there except some parrots, and certain birds, of which none knew the name, as was the case on most of the other islands, they resumed their course, and arriving at Cuba, took an Indian, who came in a canoe to barter for provisions. This man told them it was an island, and gave them some farther account of the country. From hence, provisions running short, Columbus intended to sail immediately for Hispaniola, but after enduring much sickness and fatigue, was forced back to Jamaica, where he was obliged to stay some time before he could accomplish his design. At last, however, he attained his end, and arriving at Isabella, there found his brother Bartholomew Columbus, who had been sent to the English court to treat with King Henry VII. concerning the discovery of the Indies, which, as he was on his return to Spain, he found had already been discovered. The admiral appointed him governor, in order to relieve himself in some measure from the great fatigue which his charge occasioned; but notwithstanding this measure, he found himself involved in much trouble, for the Indians had revolted, and Don Peter Margerite, who had been left with near 400 men to command St. Thomas's Castle, and keep the province of Cibao in obedience, had returned to Spain, because he could not bring the council left by the admiral at Isabella, under the controul of his absolute authority. On his departure all the men under his command separated, every one going whither he thought proper, and committing such outrages, that the Indians who found themselves oppressed beyond measure, began to esteem those as infernal dæmons, whom on their first arrival, they had honoured as divinities. The consequence was, that wherever the natives could conveniently light on a single Christian, or surprise a small party, they put them to death without mercy. Columbus indeed at his return punished many who had been concerned in such proceedings, but this measure was so far from answering the end proposed, that a general revolt ensued. Of four caciques, by whom the island was governed, three declared against the Christians, but the fourth (Guacanagari) continued in the interest of

Outrages of the islanders.

the Christians. It was natural to think that Columbus cultivated his friendship at this critical juncture, and indeed he took him with him when he sat out to give battle to the Indians. The latter met the Spaniards as men secure of conquest, their number amounting, according to the Spanish account, to no less than 100,000 men, while Columbus had with him but 200 Christians, 20 horses, and 20 dogs. This small body of Spaniards being divided into two battalions, the one commanded by the admiral, and the other by the lieutenant, attacked the enemy in different places at the same time, and soon having broken them with a discharge of their cross-bows, immediately the horse charged them, and the dogs fell furiously upon the unwieldy multitude, and put them entirely to the rout. What followed was only the pursuit of a number of poor fearful wretches, whom the victorious Spaniards killed or took prisoners at pleasure. Caunabo, who had surprised the town of the Nativity on Columbus's first departure from the island, being among the captives was sent to Spain together with his brother; and this defeat so much dispirited the Indians, that the country was soon reduced to obedience, and all the inhabitants promised to pay tribute to their Catholic Majesties.*

1493

The Indians defeated.

The Spaniards say, that when they had reduced the island, and become thoroughly acquainted with the natives, they found their religious opinions to be made up of a heap of absurdities. Columbus observes, that all the devotion he could perceive they paid was to their Cemies, or household gods, each of their chiefs having a house apart, in which nothing was to be found but certain wooden images so called, and what was devoted to their service.

Indian worship in the islands.

Thither they used to repair, as to a temple, to perform certain ceremonies. There they had a round table formed like a dish, on which lay a kind of powder that they put on the head of the Cemi, afterwards snuffing it up their noses and muttering something to themselves. When they resorted to the Cemies, they shunned the Christians, and frequently buried their idols in the woods, lest they should be destroyed. These images they were reported to steal from each other, and by means of some of them, the caciques practised many impositions. Once it happened that some of the Spaniards rushing into a house where there was a Cemi, the idol on a sudden seemed to make a loud exclamation in their language: but the Christians suspecting some fraud, immediately overthrew it, when they found it was hollow, and by means of a trunk which entered it, a man from a dark corner of the house spoke whatever the cacique ordered him; the latter finding the fraud detected, desired the Christians not to mention the matter to his subjects, as he confessed that by means of frauds like this he was best enabled to secure their obedience, and collect a tribute from the people. These caciques thus assuming in some measure the priestly character, were accordingly reverenced in a double capacity. The islanders had also their jugglers and necromancers who pretended to talk with the dead, and held a number of strange fables relative to the origin of mankind, with many others concerning metamorphoses, which they believed to have happened in former ages; but all in general believed the immortality of the soul, which they suppose, after death to go to a certain neighbouring country, from whence it frequently returned and haunted those persons and places with which the deceased when living was best acquainted.

The superstition.

All things being settled at Hispaniola, Columbus

* All the inhabitants of Cibao upwards of fourteen years old, where the gold mines were, engaged to pay a large horse-bell full of gold dust, and all the rest twenty-five pounds of cotton each, tickets being given to such as performed the condition, in order that punishment might be inflicted on those who refused or neglected to submit to this imposition. It may be remarked here that however moderate the conduct of Columbus might appear in comparison with that of some succeeding conquerors in the new world, yet as it was plain that his aim was conquest, this circumstance, together with the insolence of the Spaniards, might well justify the islanders in the resistance of which the conquerors complained. Indeed if we refer to Columbus's character of the Indians he first met with on this island, we shall incline to think they had hard measures dealt them. After many other encomiums on them, he adds, "They "love their neighbours as themselves; and their conversation is "the sweetest in the universe, being pleasant, and always smil-"ing." Surely it must require a great degree of provocation to render people of such a disposition implacable enemies. This character given of them by the first discoverer, will ever remain a lasting testimony against the Spaniards, who at last treated them with a barbarity that even savages would blush at.

1498 set sail for Spain on the 10th of March, touching at Guadalupe in his way, where the Spaniards had a skirmish with some fierce Indian women; and from what they saw when they came on shore, concluded the islanders to be canibals; so making no stay there, they departed for Spain, where they arrived in the beginning of June, when provisions were grown so scarce on board the fleet that some proposed eating the Indians, and others were for throwing them overboard; all this the admiral by his prudence prevented, and brought them all safe to land, together with Indian birds, beasts, and plants, various kinds of instruments and ornaments, and what was still more valued, samples of gold which the new world produced, and which was the source of so much misery to the wretched natives, thousands of whom the Spaniards afterwards obliged to work in their own mines to satisfy the avarice of their imperious masters.

The admiral arrives in Spain.

Columbus immediately on his landing prepared to set out for Burgos, where he was received with every mark of respect by their Catholic Majesties, who had indeed the greatest reason to confer honours and favour upon the man that had been thus indefatigable in their service, and already laid the foundation of their empire in countries, the very existence of which had been questioned.

His reception at court.

The admiral having satisfied the king and queen of the state wherein he left Hispaniola, pressed to be sent out again with all convenient speed, which was promised accordingly. Yet it was not till February, in the year 1498, that he obtained two ships to be sent out under the command of Peter Fernandez Coronel, while he himself stayed behind soliciting for a fleet proper for his return, and waiting the necessary orders relative to the government of the Spanish acquisitions in the West Indies.

THE THIRD AND FOURTH VOYAGES OF CHRISTOPHER COLUMBUS.

THOUGH Columbus spared no pains either in his solicitations at court, or his preparations for sea, he could not get all in readiness till the month of May, when he set sail from the Bay of St. Lucar de Berrameda with six ships loaded with necessaries of all sorts for Hispaniola. On his way he retook a Spanish vessel from three French ships which had made a prize of her: he afterwards sailed to Madeira, and the Cape Verd islands. In his course from thence to Hispaniola, he discovered an island which he called by the name of the Trinity, and afterwards the Continent itself, where his men going on shore found the natives to be a civil and obliging people, but staid not long enough to come intimately acquainted with their manners, the admiral being in haste to stand over for Hispaniola, whither he had already dispatched three ships with orders to make the best of their way, and where on his arrival, he found that his presence was much wanted.

Roldan's rebellion.

In his absence one Francis Roldan, whom he had left chief justice, but subservient to his brother the lieutenant James Columbus, growing jealous and envious of James's authority, took advantage of the ill temper of the people when the Spanish provisions failed, and they who were not accustomed to what would well support the Indians were seized with divers diseases, to demand the launching of a caraval which was left ready to send to Spain, in case of necessity. This Don James would not consent to, urging the want of tackling and other very weighty objections, on which an open insurrection was raised, and the Indians were invited to join the revolters. At one time they plotted to stab the lieutenant, at another to massacre the christians; and thus the island was once more thrown into such confusion as much astonished the admiral, who on his arrival found not the three ships which he had dispatched before him. These vessels had put in at Xaragua, where the insurgents were who had inveigled many of the Spaniards to join them, that coming afterwards to St. Domingo, Columbus got intelligence of all that had passed, and taking care to put all things there in a state of defence, set on foot a treaty with the chief rebel, as he found his party very powerful, and was willing if possible to restore peace in his government. This treaty met with many obstructions, as Roldan was continually altering his mind, at one time demanding vessels to carry him and his followers to Spain, at another resolving to remain on the island. Affairs, however, were at last settled by the prudence of the admiral, who having made many concessions * to his opponent, the latter returned to his duty.

But scarcely was this matter concluded, when Alonso de Ojeda, who had been out upon discoveries, arrived and began stirring up the people again to a revolt, which was suppressed by Roldan, who now acted for the admiral, and this revolter was forced to quit the island, after which one of his partisans, who had laid a plot to stab Roldan, was hanged, and others imprisoned. Thus all things promised the restoration of peace, the Indians submitting, and the Spaniards finding the mines so rich, that a private man was known to dig up 40 ounces of gold in a day, one third of which was reserved for the use of their Catholic Majesties.

But while these things were passing in Hispaniola, the court of Spain was perpetually urged by the murmurs of the people at home to supersede the admiral in his command. These murmurs were excited by the false accounts the rebels had sent of Hispaniola; and at length their design succeeded so well, that their Majesties sent thither Francis de Bovadilla, a poor knight of the order of Calatrava, with full power to enquire into all things, and if he found Columbus guilty of what he was charged with, to send him to Spain, and remain there himself as governor. Arriving at St. Domingo at the latter end of August, when the admiral was absent, he took up his quarters in the palace, superseded him in the government before he saw his face, and then commanded him to repair to him immediately; at the same time, to strengthen his summons, sending him their Majesties letter, which was in form as follows:

Their Catholic Majesties letter.

"To D. Christopher Columbus, our Admiral
"of the Ocean.

"We have ordered the Commendary D. Francis
"de Bovadilla, the bearer, to acquaint you with
"some things from Us: We therefore desire you to
"give him entire credit, and to obey him. Given
"at Madrid, the 21st day of May, 1499.
By command of their Highnesses,
Mich. Perez de Almazan. I, The King,
I, The Queen."

Columbus who was about returning to Spain, attending according to this summons, came with his brother James to St. Domingo, when Bovadilla, without any legal information, immediately ordered them both to be put in irons, and after having drawn up the form of a process, in which all witnesses were heard

* The terms agreed upon, were, "I. That fifteen of the revolters should be sent to Spain by the first ships. II. That "lands and houses should be given to those that remained, for "their pay. III. That proclamation should be made that all "that had happened was caused by false suggestions, and through "the fault of ill men. IV. That the admiral should again appoint Roldan perpetual judge."

heard on the one ſide, and none on the other, cauſed them to be put on board ſhip in their fetters, and thus ſent back to Spain; where Columbus, on his arrival, wrote to their Majeſties from Cadiz, who cauſed him to be releaſed, and fully cleared him from all the imputations thrown upon him by his enemies.* Yet they did not think fit to re-inſtate him in his government, but ſent the commendary Nicholas de Obenda to ſuperſede Bovadilla, and to do right to the admiral who was to be diſpatched to make new diſcoveries.

For this purpoſe all due diligence was uſed in preparation, and the admiral having requeſted that their Majeſties would be pleaſed to ſhelter him from all future malicious proceſſes they re-aſſured him by letter; obſerving that his impriſonment had been very diſpleaſing to them, and promiſing him all privileges and prerogatives granted before, which they offered to renew, if neceſſary, concluding, "And "be aſſured that we will honour and favour you in "greater matters. And be ſatisfied that we will "take due care of your ſons and brothers which "ſhall be done when you are departed. We there-"fore pray you not to delay your departure."

Theſe were the fair words and promiſes which Columbus was obliged to receive inſtead of a re-eſtabliſhment in his government, and the puniſhment of thoſe men who afterwards proved themſelves to have deſerved as ill of the ſtate as they had done of him. However, being ſtill willing to ſerve the king, and more particularly the queen of Spain, he ſet ſail from Cadiz on the 9th of May, to make further diſcoveries on the coaſt of the great American continent, which the Spaniards then called Paria. The wind proving favorable, the fleet reached almoſt as far as the Caribbee iſlands without handing their ſails. Then ſtanding immediately for Hiſpaniola, with a view of changing one of his ſhips which was leaky, when Columbus ſent his boat aſhore to inform the commendary, who had been diſpatched to ſuperſede Bovadilla, of his purpoſe, he found himſelf refuſed entrance into the harbour of that very town which he had cauſed to be built on an iſland that he had diſcovered and taken ſo much pains to bring into ſubjection to the crown of Spain.

The admiral's third voyage.

He is refuſed entrance into the harbour of St. Domingo.

As he foreſaw an approaching ſtorm, being thus excluded from the harbour, he ſcreened his veſſels by lying as cloſe under the land as poſſible, notwithſtanding which, three broke from him, and were much endangered, yet all met again the Sunday following. But of the fleet then prepared to carry Bovadilla home, which conſiſted of eighteen veſſels, not above four were ſaved, Bovadilla himſelf periſhing on board the admiral's ſhip, the governor having been imprudent enough to let them put to ſea, though Columbus, by his meſſage had ſignified his apprehenſion of the approaching tempeſt.

Having repaired the ſhips at Port Azuga, the fleet holding on their courſe were carried by the force of the currents among ſome ſandy iſlands near Jamaica, and afterwards came to the iſle called Guania, where Columbus took a canoe as long as a galley, eight feet wide, covered in the middle with an awning of palm-tree leaves, calculated to keep out the ſun and rain. He took what he thought moſt curious out of this canoe, and afterwards diſmiſſed the people all but one old man, whom he kept till he had got what intelligence he could, and uſed him to converſe with the Indians wherever they came, after which he was likewiſe ſent away with preſents.

Inſtead of ſailing towards the country ſince called New Spain, the admiral now convinced that the continent, called Paria, muſt be ſeparated from the extremity of the Eaſt Indies by a vaſt ſea, concluded from the courſe of the coaſt, that it was likely there might be ſome ſtreight which would ſerve as an inlet to that ocean: he therefore ſteered towards Veragua and Nombre de Dios, where he conceived that ſtreight muſt be. There was not, however, the ſtreight ſought for, but an iſthmus or narrow neck of land, which diſappointed him in his deſign; yet his curioſity was greatly ſatisfied in ſailing along the coaſt, where he found the people, in general, friendly, tractable, and modeſt, but ignorant of the uſe of letters, running away when they ſaw any one make uſe of a pen and ink, and ſeemingly much addicted to the belief of inchantments, and ſuch ſuperſtitions. 1498

After having made ſome diſcoveries of this kind upon the continent, coming at laſt to the river Belem, which the Indians called Yebra, where he was informed the gold mines of Veragua were, of which he had heard much during the voyage, Columbus ſent his brother up that river with the boats to the town of Quibo, an Indian prince, who came down in his canoe to meet them, and afterwards ventured on board the admiral's ſhip. This cacique ſent men to guide a party of the Spaniards to ſome gold mines, with which they were well ſatisfied, but it afterwards appeared that theſe mines were not thoſe of Veragua but of Urira a neighbouring town in enmity with Quibo, for which reaſon he had cauſed the chriſtians to be conducted thither.

At length, after having viewed the country, the admiral reſolved to build a town, and to plant a colony on the banks of the river Belem.

The great rains, which had ſufficiently incommoded the Spaniards, being over, the mouth of the river was ſo choaked with ſand, and ſuch a ſwell occaſioned by that circumſtance, that they were in the greateſt danger of being daſhed in pieces by the waves. And, to add to their misfortune, they juſt then diſcovered, that Quibo, being diſpleaſed at their deſign of planting a colony in thoſe parts, had reſolved to deſtroy them all. To prevent this deſign, the lieutenant going on ſhore with 76 men, ſurpriſed him at his own houſe, and took him, together with 30 perſons, conſiſting of his wives, relations and dependents, but the cacique being put into a boat bound, eſcaped by plunging ſuddenly into the ſea, before the Chriſtians could reach the ſhip; and being now more ſtrongly ſet againſt them than ever, as ſoon as he perceived the Spaniards ſailing out of the river, he cauſed an aſſault to be made upon the town. The new ſettlers were forced to retire to a place, where by throwing up works, and planting a few cannon they could better defend themſelves than in the ſlight houſes which they had built in that country. In the mean time the crew of a boat which was ſent on ſhore for freſh water was cut off, one man only excepted, who had eſcaped to the town with the unwelcome tidings.

The ſhips in diſtreſs.

While Columbus waited till the ſea, which had again been ſwelled, ſhould ſettle, hoping for an opportunity of ſending another boat on ſhore, to know what had been the fate of the former, ſeveral of the Indian priſoners, who had been ſafely conveyed on board the ſhip, eſcaped by ſwimming, through the careleſſneſs of the ſailors, and the reſt hanged themſelves in deſpair, becauſe, being diſcovered, they were hindered from following their companions. No hoſtages being now left on board, the admiral had every reaſon to conclude that things went ill, but was ſomewhat comforted when he found that ſome of his men ſaid there would not be wanting thoſe who would follow the example of the Indians, and ſwim to the ſhore, if the remaining boat were permitted to carry them as far as where the water did not break. This being granted, one Peter de Ledeſma, a pilot, offered himſelf, and completed the undertaking; and Columbus, by his means, being informed of the deſtruction of the boat's crew, and the ſad ſituation of the remains of his colony, reſolved to remain till the weather would permit his relieving them. While he waited thus, it grew ſo favourable, that within eight days, by the help of the boat and ſome

A pilot ſwims on ſhore.

* It appears that Columbus ſtill retained a ſenſe of the unworthy treatment he had received, as he uſed to ſay he would always keep thoſe fetters which had been put on him at Hiſpaniola, as a reward of his ſervices; and actually ordered them to be hung up in his chamber, and to be buried with him at his deceaſe.

1505 some canoes, those on shore were got safe off. And thus the new colony was abandoned, nothing being left behind but the hulk of an old ship, which was so worm-eaten as to be unfit for service.

The admiral designed for Hispaniola, but by reason of winds and currents, could not make that island. He passed by the Tortugas, so named from the tortoises frequenting those shores, after having weathered a storm, and with much trouble kept his vessels above water, came to an anchor first at Cuba, and afterwards at a port named Puerto Bona, in Jamaica; finding no town there, nor any fresh water, he proceeded to another harbour eastward, where he ran the leaky ships a-ground, which were propped and shored up. The water coming almost as high as the upper decks, the admiral caused sheds to be built on the planks for the better security of himself and his people in a country which was not subdued, nor at all inhabited by Christians.

The fleet forced into Jamaica.

In this situation he dispatched two persons to Hispaniola to desire a ship might be sent him with ammunition and provisions fit to transport his people to old Spain. As this voyage was undertaken in a canoe built for the purpose, the event of it on those seas was very uncertain. Some time after the messengers were gone, numbers of the Spaniards fell sick, many of those who were in health mutinied, and departed in canoes upon the very same voyage to Hispaniola. But for want of skill these latter were obliged to return, after having thrown most of the Indians overboard whom they had taken to row them.

In want of provisions.

While the admiral lay thus deserted, to complete his misfortune, the people of the country began to be very slack in bringing in provisions, which, when he observed, he had recourse to a stratagem that extricated him and his men from that difficulty. Recollecting that on a certain evening there would be an eclipse of the moon, he sent to call together the principal persons among the Indians, who being arrived, he ordered the interpreter to tell them, that the God of the Christians who had driven these rebellious Spaniards back that had deserted him, was now angry with them for not furnishing his people provisions, a token of which would appear the next night in the heavens, when the moon would rise of a bloody colour, and her brightness would be obscured, as a sign of pestilence and famine, with which he intended to chastise them. The Indians suspended their belief of this prediction, till the time appointed, when perceiving the eclipse beginning as the moon rose, and the darkness still increasing, they came from all parts loaded with provisions, and beseeching the admiral to intercede for them with his God. Accordingly he shut himself up while the eclipse lasted, and when he perceived it was going off, came out and told them he had prayed to God for them, who would cause the moon to shine forth again, and avert the threatened judgments, if they would take care never to offend again in like manner. This had the desired effect, and there was no longer any reason to complain of the Indians want of care to supply the Christians with provisions while they remained upon the island.

Relieved by an eclipse.

In the mean time Mendez and Fiesco, who had been dispatched to Hispaniola, after suffering many hardships reached a little rocky island, where they could find nothing but rain water, which, however, so far relieved them who were just perishing for thirst, that in the evening of that day they completed their voyage to Hispaniola, which they knew to be no more than eight leagues distant. When they arrived at the nearest port, Mendez, though ill of an ague, went directly to the province of Xaragua, where the governor then was; and Fiesco would have returned, as he had in charge to acquaint the admiral of the success of the voyage, but the difficulties and dangers which they had suffered were such, that neither Indians nor sailors could accompany him. As to Mendez, all that he could obtain of the governor, after long waiting and much solicitation was only leave to go to St. Domingo, and there to purchase a ship and fit it out, with the admiral's own money, which was accordingly done, and the vessel sent to Spain, to give an account to their Catholic Majesties of all that happened.

Voyage of Mendez and Fiesco.

A small caraval which arrived one evening, casting anchor near the place where Columbus's ships were run a-ground, brought the above account written by Mendez. The captain coming in his boat to visit the admiral, presented him with two flitches of bacon and a cask of wine from the governor of Hispaniola, but declined to take any of the men on board, and excused himself by saying that he could not take them all; then weighing anchor, he stood off to sea again the same night. The mutineers, whom Columbus thought the arrival of this vessel might have quieted, were sent to on this occasion, and the messenger carried some of the bacon with him by way of proof. Terms were offered them; but they pretended to believe nothing of what was told them; they went even so far as to say, in their wisdom, "That the appearance of the caraval was nothing but a phantom, "as it was well known, that the admiral dealt in enchantments, for if it had been a real vessel he and "his brother would doubtless have embarked in her." In effect these unreasonable men would not hear of any terms, till at last, coming down towards the ships, they were engaged and defeated by the lieutenant; then, by compulsion, they submitted, and were pardoned, and permitted to range abroad on the island, Columbus sending them a commander to restrain them within proper bounds, and detaining Porras, their leader, prisoner.

A caraval arrives from Hispaniola.

Thus matters stood when the ship fitted out by Mendez with the admiral's money arrived, which took on board, indiscriminately, all the Christians, and carried them to Hispaniola, where the governor shewed, as before, evident marks of the duplicity of his conduct. On the 2d of September the admiral left the island, and after experiencing much danger from storms, arrived at length at the port of St. Lucar de Barrameda, from whence, in May 1505, he sat out for the court, where (Queen Isabella his patroness being dead) he found the Catholic King endeavouring to abridge those privileges which were once so freely granted him. But before any new terms could be settled, Columbus wearied out with toils, and vexed with repeated disappointments, expired at Valladolid, on the 20th day of May, in the year, 1506.

THE FIRST VOYAGE OF VASQUEZ DE GAMA,

For the Discovery of a Passage by Sea to the East Indies.

HAVING given a recital of all the voyages of Columbus, which we thought it not proper to interrupt by any other relation, as the motives of them were so evidently connected, we shall now proceed to those of Vasquez de Gama, who was sent out in the reign of King Emanuel of Portugal, to effect a passage to the East Indies by sea, his grand object being to double that Cape which Diaz had so luckily discovered.

Gama was already known for a man of resolution and abilities, and one who possessed a great fund of knowledge in the art of navigation. With three small ships,

ſhips, and 160 men, he ſailed from Belem, on Saturday the 8th of July, 1497; his little fleet which was ſeparated ſome time after, in a dark night, all happily meeting again at Cape Verd. Bartholomew Diaz, in a ſmall caraval deſtined for La Mina, bore them company till the 3d of Auguſt, when he returned towards Spain, and Gama proceeded on his voyage of diſcovery, and after meeting with very tempeſtuous weather, on the 4th of November came to anchor at an iſland which they called St. Helena.

But finding that the inhabitants of that iſle, who had at firſt allured them to land, had hoſtile intentions, having wounded the general and ſome of his men, the Portugueſe returned the compliment with a diſcharge of croſs-bows from their boats, and departed. They came in ſight of the Cape of Good Hope in the evening of the 18th, but the wind being contrary, they ſtood out to ſea, turning again towards the ſhore at night. And thus they tacked till the 20th, when at laſt they doubled that cape, and found themſelves at large in the Indian Ocean, ſailing along a pleaſant and not unfruitful coaſt.

Angra del Blas.

Landing, on the 24th, at a place called Angra del Blas; they were at firſt kindly received by the people, who, notwithſtanding, meditated miſchief, and lay in ambuſh againſt them, which the party on ſhore perceiving, marched towards their boats, from whence being ſuccoured, an engagement would have enſued, but the Portugueſe not deſigning to hurt any of the natives, went on board, and only fired two pieces of ordnance, which ſo much affrighted them, that they dropped their weapons; ſome of the men, however, ſetting up a pillar with the King of Portugal's arms, it was immediately pulled down by the negroes, who would endure no ſuch monument of that prince's claims to be erected in their country.

After their departure from hence, they met with ſtormy weather, and on the 11th of January, being near land, along which they coaſted for ſome time, at length two of the company (one of whom was Martin Alonſo) were ordered to go on ſhore. Here they preſented the king of the country with a cap, a jacket, and a pair of ſtockings, with which, being all red, his majeſty was highly delighted; they gave him alſo a copper bracelet, though the country abounded with that metal. The king having diſplayed this amazing finery to his ſubjects, invited Alonſo to ſupper with him on a boiled hen and millet, and, in effect, he and his people were ſo obliging to the Chriſtians, that the general gave the place the appellation of *The land of good people*. They appeared extremely fond of linen, which they were willing to purchaſe at a high rate. Their weapons were iron darts, and bows with arrows of that metal, and copper, as has been already obſerved, was plentiful among them. Their houſes were but ſtraw-thatched ſheds, yet not ill furniſhed. The proportion of the females to the males was two to one in favour of the former, and both ſexes appeared to be equally obliging and tractable.

Having refreſhed themſelves at this place, they proceeded 50 leagues beyond Sofalda (eſteemed the ancient Ophir) where Gama and Captain Coello, on the 24th of January, went up a wide river in their boats: here they found a people of a free and civil diſpoſition, ſome of the women were tolerably handſome, and none ſeemed at all ſurpriſed at the conſtruction of the European ſhips, aſſerting, that they had ſeen veſſels of as large ſize, and giving their gueſts to underſtand that they were of a diſtant country. Two of their chief men came on board Gama's ſhips, where they were well regaled. On their return, they ſent down ſome pieces of callico to be ſold, ſeemed very willing to traffic, and held a friendly correſpondence with the Chriſtians. Here Gama erected a mark, and his ſhips were repaired, in order to proceed on their voyage. But while they were thus employed, numbers of the men fell ſick, their bodies being bloated, and their gums ſwelling and rotting with an intolerable ſtench. As cutting was the only cure, many died of the conſequences of that operation. Nevertheleſs from the good reception the Portugueſe met with here, which Gama looked upon as a good omen of his future ſucceſs, he called this river *Rio de Buenos Sinays*, or *The river of good ſigns*, which he left on the 24th of January. 1498

Sickneſs of the Portugueſe.

Afterwards they fell in with ſeveral iſlands, near one of which they came to an anchor, when many of the natives came off in their boats. They were of a black complexion, and cloathed in callico, having turbans of ſilk wrought with gold on their heads, their weapons and manners reſembling thoſe of the Moors, though they did not ſeem at all willing to paſs under that denomination. They ſpoke the Arabic language, in which they informed the Portugueſe, that the country belonged to a great king, and that the iſland was called Mozambique, adding, that the people carried on a trade with the Moors of India, for precious ſtones, ſpices, and other articles of eaſtern trade. Mozambique.

On this information, Coello, with the ſmalleſt ſhip, ſailed up the harbour, to which he was conducted by the natives, and anchored before the principal town of Mozambique, which is ſituate in 15 deg. ſouth lat. Gama found it inhabited by Moors, trading to the Red Sea, in large ſhips without decks, and conſtructed without nails, being ſewed together with the filaments of the cocoa tree. The houſes were built with hurdles, and that of their chief had mud walls. The inhabitants were Mahometans, the natives of the continent blacks. The Portugueſe were amazed to find that the mariners here had charts, and made uſe of a compaſs of a ſquare figure, to direct them in their trading voyages.

As ſoon as all the ſhips had entered the harbour; the Schiek and his principal people came to viſit the Chriſtians, whom they miſtook for Moors, and were aſſiduous in ſending them proviſions and preſents; but when Gama, in return, ſent him braſs baſons, coral, and hawks bells, he ſeemed much diſſatisfied becauſe he had not been preſented with any ſcarlet. However, the Moors continued to treat the Portugueſe with reſpect, till by ſome queſtions that the Schiek put to them, he found out his error, after which he and his people thwarted them in every thing. They had promiſed Gama two pilots, but having ſent him only one, when he went in his boat to demand the other, they endeavoured to entrap him by perſuading him to come cloſe into the harbour; but the general ſuſpecting treachery, fired upon them, and retreated to his ſhips, which were coming forward to his aſſiſtance. Nor would the Schiek afterwards permit the ſhips to take in water, till at laſt the men landed and took it away by force, and the general being aſſured by a white Moor who came on board, that the Portugueſe muſt not expect any favour now they were known to be Chriſtians, Gama ſailed up, and bringing his guns to bear, cannonaded the town, to the great terror of the inhabitants, after which he departed thence, intending for Quiloa, but the currents carrying him beyond that place, went to Mombaſſa, an iſland cloſe in with the continent, where he arrived on the 7th of April. Treachery of the Schiek. Mombaſſa.

He found the country fertile, abounding with orchards, and ſtored with the moſt delicious fruits which grow in thoſe latitudes. The city was ſeated on a rock, the houſes were well built, and the ſtreets conveniently diſpoſed. The produce of the land was ivory, wax, and honey, with a great port for merchandiſe. The dreſs of the inhabitants in general was rich; the women were arrayed in ſilks, ornamented with gold and jewels.

Gama, who had already ſeen a ſpecimen of Moorish treachery, being viſited in the night, as his ſhip lay without the bar, by a boat, in which were 100 armed men, who demanded to be brought to the general, he permitted only four to come on board after having left their weapons behind them. Theſe men told him there were Chriſtians at Mombaſſa, ſaid their king would cauſe the Portugueſe ſhips to be loaded with ſpices, and offered to take ſome of them on ſhore

1498 and ſhew them the city. The offer was accepted, and certain Portugueſe were ſent to view the place, with preſents for their prince, who received them kindly, ſending them back with ſamples of ſpices and corn, and promiſed to traffic with them for theſe and other commodities.

The general thinking them ſincere in their profeſſions, ſailed up the harbour the next morning, but his ſhip ſtriking on a ſhoal, he was obliged to caſt anchor again. The Moors on board and the pilots immediately jumped into the ſea, nor could the natives by any means be perſuaded to deliver up the latter. This raiſing ſuſpicions, two of the people brought from Mozambique being put to the torture, confeſſed that the deſtruction of the ſhip had been reſolved upon, and that the pilots fearing they were diſcovered, had leaped overboard to avoid puniſhment. The Moors in the night attempted to cut the ſhip's cable, which they failed of accompliſhing, and when ſhe was got off the ſhoal, Gama had no inclination to remain any longer at Mombaſſa. He was now convinced that the Mahometans in that place muſt have heard what the fleet had done at Mozambique, he therefore weighed anchor on the 13th, and on the ſame day came before Melinda, having taken in his way a little pinnace, with 17 Moors and a quantity of gold and ſilver on board.

Melinda. Melinda lies in 3° of ſouth lat. The city was found to be ſeated on a rocky coaſt, but the country about it pleaſant and fruitful. The natives from the waiſt downwards were cloathed with ſilk and cotton ſtuffs, with turbans of ſilk and gold. They were good horſemen and archers, though moſtly left-handed, and the women, in general, beautiful, and richly dreſſed. The produce of the country conſiſts of gold, ivory, pitch and wax, which were exchanged with the merchants of Cambaya and Guzârat for ſpices and other Indian commodities.

When Gama came to an anchor here, he found nobody would venture to ſend out any boats from the town, which he attributed to the ſight of the pinnace he had taken; he therefore took an old Moor from among the priſoners he had made, and cauſed him to be left on a ſhoal, in ſight of the city, in order that he might be fetched off by ſome off his countrymen. This ſtratagem ſucceeded, for a boat was immediately ſent for him, and he being properly inſtructed, carried preſents from the general to the king, with orders to ſay that the deſign of the Portugueſe was to enter into a treaty with him, and the next day Gama came up towards the city, anchoring near ſome ſhips which ſeemed filled with Indian Chriſtians. Theſe men were brown, well ſhaped and wore long white callico gowns, had large beards and long hair, which was plaited up under their turbans. They paid their devotions to a picture of the Virgin Mary and ſome Apoſtles, which the general ſhewed them to try if they were really Chriſtians. They had ſome little knowledge of the Arabic language, and came from Cranganor, but could give no account of Calicut, which was the principal object of the general's enquiry. The king of Melinda came the next day in a great boat to viſit him richly attired, a ſcarf being rolled round his head, while a hat of crimſon ſattin lay on a cuſhion by him. Twenty Moors richly dreſſed attended him, he had alſo his ſword-bearer and muſicians, and in every reſpect kept much ſtate and grandeur. Gama went in his boat to meet him, when he was invited on board the royal barge, where the king having aſked him many queſtions, and learned his country and the place of his deſtination, promiſed him a pilot to conduct him to Calicut; after which he invited him to court, but this favour the general declined for the preſent, promiſing to call in his return. While he ſtayed there, however, he was witneſs to ſome mock fights, which ſhewed him the nature of making war in that country. Being provided with a pilot, and all things neceſſary, he proceeded on his voyage on the 22d of April, having left with the king the thirteen Moors, whom he had taken priſoners, a preſent which proved very acceptable to his Majeſty.

We have already obſerved, that Gama's deſignation was for Calicut, which lies on the coaſt of Malabar. In order to give an idea of that part of India, it may be proper to obſerve, that it is 93 leagues from Mount Dehli to Cape Comorin, including the Malabar coaſt, which compriſed ſeven gentile kingdoms. The firſt of theſe was Cananor; the ſecond Calicut, of which the city of the ſame name was the metropolis; the third Cranganor; the fourth Cochin; the fifth Porka; the ſixth Coulan; and the ſeventh Travankor, near Cape Comorin. The kings of Cananor, Calicut, and Coulan were the only independent monarchs in theſe parts; the reſt were only petty princes. Coaſt of Malabar.

The king of Calicut was called The Samorin, or emperor, for which diſtinction there were various reaſons aſſigned. The ſtory generally believed at that time among the native Indians was, that the Arabians having diſcovered India about 600 years ſince, when a prince named Perimal, reigned over all the Malabar kingdoms, theſe ſtrangers, who were Mahometans, coming to Coulan which was then the capital, perſuaded the king to change his ancient for their more modern ſuperſtition, and this bigotted monarch going on a pilgrimage to Mecca, divided among his kindred all his dominions except Calicut, which he bequeathed to his page (who was alſo related to him) giving him the title of Samorin (or emperor) which the princes of Calicut ſtill retained when Gama grrived on their coaſts.

He found the city of Calicut ſituate on an open ſhore; by which means there was no harbour, but only an open road for the ſhipping. The town was large, but the palaces and temples were the only ſtone buildings in the place, the houſes being generally compoſed of hurdles. Gama came to anchor on the 20th of May, about ſix miles from the city, to which he was afterwards conducted, and caſt anchor again on the outſide of the bar. As ſoon as he found it convenient he ſent his boats on ſhore with one of his baniſhed men, who found in the city a Moor called Bontaybo. This man knowing him for a Portugueſe immediately demanded with tokens of great aſtoniſhment, What brought him and his countrymen into thoſe ſeas? Being afterwards conducted to the general, Bontaybo gave aſſurances of his friendſhip, and congratulated him on having diſcovered a new paſſage to ſo rich a country. City of Calicut, Where Gama anchors.

By the advice of this friendly Moor, Gama ſent immediate notice of his arrival to the Samorin, who was then at a village about five leagues diſtant, inſpired with the expectation that his commercial deſigns would be favoured by a prince, the chief part of whoſe revenues, as he underſtood, aroſe from trade.

In the mean time the Samorin being informed of all that was paſſing, and poſſibly at that time well enough inclined towards the Europeans, ſent a pilot to bring the general to Padarane, who being cautious how he truſted to ſtrangers, at firſt was not very willing to enter far into the port. Having received permiſſion to land wherever he pleaſed, Gama called a council, in which he ſignified to the members his intention of going to the emperor (whom he conceived to be a chriſtian prince) and ſettling a treaty of commerce with him. He was adviſed by his brother to ſend ſome other perſon in his ſtead; but in this matter he ſuffered his earneſt deſire of bringing his project to bear, to get the better of his caution, though whatever opinion he might entertain of the prevalence of the Chriſtian religion at Calicut, he had been forewarned of the inimical diſpoſition of the Moors that came to traffic in thoſe parts. He is invited to Padarane.

On the 28th of May, Gama landed in as great ſtate as his circumſtances would permit, and ſet out for the Samorin's palace. On their way thither, the ſtrangers were followed by great crowds, and a miniſter of the emperor, called the Cutwal, ſhewed them The Portugueſe land.

introduced to the
ZAMORIN (or KING) at
Calicut in India.

much respect. By him the general and his people were persuaded to enter a temple, which (having their heads full of the idea of Christianity in India) they conceived from certain expressions and ceremonies of the Indians, to be dedicated to the Virgin Mary. In this apprehension they fell down and worshipped there, though the place was full of frightful idols: One of the company however observed, "That if the adoration was meant to be paid by the natives to the devil, yet he meant to pay his devotions to God."

Being arrived at the palace, they found it large, well situated, and accommodated with delightful gardens. Gama was received at the gate by an old high priest, who conducted him in through a guard that pressed so hard as to squeeze several of the natives to death, and greatly to incommode the Portuguese, though the latter had officers appointed on purpose to clear the way for them. When they were admitted, they found the hall of audience somewhat to resemble a theatre in its interior form, the floor being covered with velvets, the walls hung with silk, and the seats rising above each other in regular gradation. The king was a man of an olive complexion advanced in years, and of a commanding aspect. He reclined, under a canopy, on a settee of white silk, embroidered with gold. His cloathing was of white callico, wrought with flowers of gold, the buttons being all large pearls. He had rings set with jewels in his ears, and his fingers and toes were ornamented in the same manner. His arms and legs though otherwise naked, were likewise adorned with gold rings; and he was served with betel nut (which he chewed with salt and areka) in a golden bason, having another ready for him to spit into, which was made of the same metal, and a golden fountain that furnished him with water to wash his mouth after his chewing. This prince wore a crown in shape of a mitre, which was ornamented with precious stones of various colours and sizes.

Samorin's palace described.

In the midst of all this state, Gama having made his reverence, was ordered to advance, and was seated near the emperor,; his followers, who entered afterwards, being placed on the opposite side. When they called for drink, water was served them out of a golden cup with a spout from which they were obliged to pour it into their mouths without touching their lips, (which the Moors there reckoned an indelicate custom) but in endeavouring to use this method, some of the Christians wetted their cloaths, and caused diversion to the courtiers; whilst others overcharging their throats, began to fall into fits of coughing or to throw it up again, which greatly embarrassed them, as they had been informed the Samorin kept such state that it was reckoned an affront to let any one's breath reach him, or to cough, spit, or sneeze in his presence.

Gama was desired to declare his business to the emperor's officers, but he refused in quality of an ambassador, to make it known to any but that prince himself, and a few selected from his council. This being agreed to, Gama and Fernan Martinez, were conducted into another apartment, where the Indian interpreter, the chief bramin, the betel server and the comptroller of the household, were the only persons present when the Samorin received the embassy, which the general delivered in the name of the king of Portugal, who, he said having heard of Christian princes in the Indies, of whom he conceived the emperor of Calicut to be the chief, was desirous of corresponding with him. The general received a favourable answer; and not chusing to lodge among the natives, when it grew late, was conducted to an apartment provided for him by the Samorin's command.

Gama delivers his embassy.

Thus far all went well; but the next day when Gama resolved to send the emperor a present, which consisted of scarlet, coral, brass, sugar, oil and honey, the Cutwal would by no means allow it to be carried to court, as not being rich enough; observing that his master expected gold from so great a monarch as the king of Portugal: the general excused himself by saying that these things ought rather to be considered as a present from himself, than from his prince, who doubtless would send something more suitable as soon as he should be informed of the greatness of the emperor, and his resolution of corresponding with him and trading with his subjects.

Objections to the present.

1498

But all this availed nothing, the Moors having already prejudiced the court against him. For fear, the arrival of these strangers at Calicut should prove a hindrance to that trade, which they themselves had monopolised, they related with many exaggerations all that had happened at Mozambique and along the African coast: in conclusion, observing that these things being considered, together with the smallness of the present which Gama brought, he ought rather to be considered as some pirate or needy adventurer than as the ambassador of a great king.

Artifices of the Moors.

The general was however admitted again to the Samorin's presence, who received him at first with an angry countenance complaining of his delay of resorting to court, which, in fact, had been occasioned by the dispute with the Cutwal and others about the presents. Afterwards this prince demanded, Whether so extraordinary an adventurer had been sent to discover stones or men? because he observed that if the latter was the object, presents ought to have been sent to him. At last this great king descended so low as to ask of the general a Saint Mary that he conceived to be gold, and which, though Gama asserted it was only gilt wood, yet he refused to part with on a supposition that it had preserved him from the dangers of the sea. After having used all his endeavours to find out whether his guest was really a pirate or a fugitive, the emperor seemed well pleased, on hearing a letter from the king of Portugal read and interpreted, as it related to the establishing a commercial connexion between his subjects and the merchants of Calicut, which had all the appearance of a mutual benefit.

The Samorin's suspicions.

His avarice.

But notwithstanding this interview seemed to have produced favourable effects, the Moors equally influenced by considerations of interest and of religion, ceased not to plot against Gama, whom at first they would have persuaded the Cutwal to assassinate. Though this scheme did not take effect, yet that officer confined the general, and used every artifice to seize the Portuguese ships; but the firmness of the prisoner defeating this design also he had recourse to another method of proceeding, namely that of urging him to cause all his goods to be landed, which he thought by those means secretly to secure; and therefore on that condition promised to let him go on board his vessel in safety.

Gama is confined

Though little confidence was to be placed in such a man, yet Gama promised to send for the merchandise in case some almadias or pinnaces of the country were dispatched to bring them on shore, as he said his brother (whom he had previously instructed) would never trust the ships boats to land men or goods without being authorised by his presence. The matter being thus settled, he wrote word, That he was confined, but otherwise well enough used. In this letter he ordered his brother to send part of the goods, observing, that should he afterwards be detained, it must be looked upon that the Samorin meant to keep him prisoner; in which case he commanded the ships to sail back without him, and to solicit the court of Portugal immediately to dispatch a strong fleet to his relief.

Part of his cargo sent on shore.

The goods were sent accordingly, and the general being set at liberty, returned to his ships; but the hatred of the Moors, who now saw their enemy removed out of their reach, increasing with their disappointments, they contrived to hinder the sale of his commodities; and though the emperor, on being informed of these proceedings by Gama, appeared much offended with the Cutwal, yet that officer was not punished, nor was this insolence of the Moors at all restrained. The goods being however removed to Calicut, the sale was opened, and the Portuguese, by their

Gama returns to his ships.

1498 their commander's permiſſion, viſited the city; but not without being frequently inſulted by the Mahometans who were heartily vexed that the general would not land again; from which he was diſſuaded by the friendly Moor Bontaybo.

Sends a meſſage to the Samorin.

Gama, who had little reaſon to be ſatisfied with his ſituation, preparing to depart, ordered Diaz to go with a preſent to the emperor, deſiring, that if the latter had any intention of ſending an ambaſſador to Portugal he might be diſpatched immediately, as the fleet was about to ſail.

The preſent was delivered to the factor, and the Samorin only anſwered that if Gama was reſolved to depart, he ſhould expect 600 ſharifins to be paid according to the cuſtom of that port. Diaz was alſo detained, and a proclamation made, forbidding any one from the city to go on board the fleet; yet Bontaybo went, and having obſerved upon the fickle temper of the emperor, warned Gama of the hazard he muſt run, in caſe he ſhould ſtay till the arrival of the fleet from Mecca, which would doubtleſs take him. There needed no more to ſet a prudent man upon his guard. Gama contrived ſoon afterwards to ſecure ſome principal men that came on board, and then ſent a letter demanding his factor and ſecretary, but theſe not being returned as he expected, he put to ſea immediately.

The meſſenger confined.

The general makes reprizals.

The Indians perceiving his reſolution ſent a boat after him, the crew of which told him that his people were ſafe in the king's palace, and that they would be ſent to him the next day. Gama anſwered, That it might be ſo, but he expected to ſee them or receive letters from them, otherwiſe he would ſink the next boat that ſhould dare to approach him; adding, That if they were finally reſolved not to reſtore his men, he would put to death thoſe of theirs that he had in poſſeſſion.

This threat had the deſired effect; for the next day the perſons demanded were brought, and put on board the ſhip's boat at the place where Gama came to an anchor, not daring to come near his ſhip. By them a letter was alſo ſent to the king of Portugal, which was to the following purport:

His plan ſucceeds.

"Vaſquez de Gama, a gentleman of thy houſe, "came to my country, of whoſe coming I was glad. "In my country there is plenty of cinnamon, cloves, "pepper and precious ſtones. The things that I am "deſirous to have out of thine are ſilver, gold, "coral, and ſcarlet."

The inſincerity of the emperor's profeſſions however appeared ſo plainly that Gama ſent back only the * Nayres, and when, after many endeavours uſed to deceive him, he found he could not get his merchandiſe returned, he declared he would take the reſt of the natives of the country with him, to confirm his having diſcovered the paſſage to India, ſince the Samorin had refuſed to ſend ſuch commodities as he had deſired for a confirmation.

He had not got above a league from Calicut, before he was ſurpriſed by the appearance of a number of boats which purſued the fleet, but by means of his ordnance and a freſh gale that ſprung up, he avoided the danger. Previous to this, Bontaybo's goods being ſeized on ſhore, he had fled to the general for ſhelter, and he was now employed to write a letter to the emperor, expatiating on the advantage that would reſult to his ſubjects from trading with the Portugueſe who, as he promiſed, would return as ſpeedily as poſſible to thoſe coaſts with the wares and merchandiſes that were required.

An attack intended on the fleet.

* Or nobleman.

† This man was afterwards baptiſed, became a good catholic, and was carried to Portugal. He ſaid the deſign of the Lord of Goa was to make the Portugueſe when he had taken them, ſerve him in his wars againſt the neighbouring princes.

Some days afterwards another attack was made upon them by pirates, one of whoſe veſſels they took, (after having driven the reſt cloſe to ſhore) and found it laden with cocoas and molaſſes, having alſo a quantity of weapons on board. Arriving at a little iſland with four others in the neighbourhood, called Anſandiva, the Portugueſe were in danger of a ſurpriſe from ſome of the ſame viſitants; but being warned by the natives, the ordnance was fired at the free booters, and they retreated with precipitation. 1499

Another attack defeated.

Gama now received a meſſage from one Zabaius the lord of Goa, who invited him in a very friendly manner to his country. But the meſſenger being ſuſpected for a ſpy, and accordingly put to the torture, he confeſſed that this invitation was meant only as a ſnare to entrap and ſeize the Portugueſe, which they thus luckily avoided falling into, by the warineſs of their commander †.

Intended treachery of the Lord of Goa.

Contrary winds, alternate ſtorms and calms, and a ſickneſs which proved epidemical, rendered the voyage from Anſandiva very troubleſome, till, at length a favourable gale, brought the fleet in ſight of Mogadoxo, at the 2d of February, at a time when they had reaſon to believe they were near Mozambique.

The city appeared large and well built, ſurrounded with walls. In the middle ſtood a large palace on a riſing ground; but the inhabitants being Moors, Gama was ſo far from having an inclination to land there, that he cauſed his great guns to be loaded and fired at the walls as he paſſed along, which did them conſiderable damage, and then purſued his courſe for 113 leagues towards Melinda, as he had at firſt intended.

Mogadoxo.

Here the general and his men met with very kind entainment, but ſtayed only five days, leſt the winter ſhould overtake them at the cape; in their way to which they touched at the iſland of Zanzibar, where he found the inhabitants, though Moors, well diſpoſed towards the Portugueſe, who had been obliged by this time to burn one of their veſſels, named the St. Raphael, becauſe ſickneſs had ſo much leſſened their numbers, that there were not hands ſufficient to man the ſhips and bring them home in ſafety.

Zanzibar.

Having again refreſhed his men at St. Blas; the general proceeded, and doubled the Cape of Good Hope on the 25th of April, after which a favourable gale ſprung up, which continuing for twenty days, brought him to St. Jago, one of the Cape Verd iſlands, where a tempeſt ſeparating the ſhips, Coello's veſſel was the firſt that reached Liſbon‡, while Gama, after having weathered the ſtorm, leaving his ſhip at St. Jago, hired a veſſel to carry him home. He put in at the Terceras in his way, where his brother Paul who had long been in an ill ſtate of health expired. Having paid the laſt tribute to his memory, the General departed from the Terceras, and ſteering directly for Portugal, arrived at Belem in September, after having been two years and two months upon a voyage full of perils and difficulties, by the accompliſhment of which he acquired the honour of being regiſtered as the firſt adventurer that ever diſcovered a paſſage to the Eaſt Indies by ſea, and of opening a freſh channel of commerce to the nations of Europe with thoſe rich and plentiful countries. Other voyagers of the ſame nation following his track eſtabliſhed factories in thoſe remote regions, and Gama himſelf returned thither in 1502. Of theſe expeditions we ſhall ſpeak hereafter; but ſhall now proceed according to the plan laid down to give an account of the circumnavigators; beginning with the unfortunate Maghellan, who periſhed in the undertaking.

St. Blas.

The General's arrival at Belem.

THE

‡ He was ſuſpected of deſign in this ſeparation, which ſome affirmed he effected only on purpoſe to be the firſt that ſhould bring the court of Portugal the news of this important diſcovery.

THE VOYAGE OF FERDINAND MAGHELLAN.

1517 MAGHELLAN was a native of Portugal, a gentleman by birth, and a ſoldier by profeſſion. He had ſerved his country in the Indian as well as African wars; having been employed in thoſe expeditions which ſucceeded Gama's diſcovery, and which at length brought Malacca, Goa and Ormuz under the Portugueſe dominion.

Though the paſſage from the Atlantic to the Pacific ocean which Columbus went in ſearch of, had never been diſcovered, yet Vaſquez Nunez de Bilboa having diſcovered the laſt mentioned ſea from the mountains of Pancas, in the province of Panama, Maghellan from hence conceived an idea of undertaking the circumnavigation of the globe, which he firſt communicated to his court, but being ſlighted in that particular, and meeting with ſome other diſappointments *, he reſolved to quit Portugal, and make his propoſals to Charles V. then king of Spain and emperor of Germany.

Maghellan's propoſals rejected in Portugal.

Maghellan failed not to obſerve to this prince that all the Banda and Molucca iſlands muſt of right fall to his lot, according to the diviſion mutually conſented to by king John II. of Portugal, and Ferdinand, and Iſabella of Caſtile. Theſe iſlands he propoſed to diſcover by a weſtern navigation. And the project was ſo pleaſing to the king, that he gave orders for making the neceſſary preparations with as much expedition as the nature of the ſcheme would allow.

Accepted in Spain.

Charles ſtopped not here, for beſides ordering five veſſels to be fitted out with every convenience neceſſary for the purpoſe, notwithſtanding the oppoſition made by the Portugueſe ambaſſador, his majeſty conferred upon Maghellan and his companion Ruy Falero, the order of St. Jago, as a ſpur to this arduous undertaking.

He is envied by the Spaniards.

Yet, however honoured, the former was at court there were not wanting thoſe who greatly envied him, and wiſhed to retard the expedition. He received many inſults on account of his country, and when all was juſt ready for the embarkation, it had nearly been prevented by Ruy Falero's conteſting with the admiral the honour of bearing the royal ſtandard; but this matter being ſettled, and his rival perſuaded to ſtay at home, his health not being in a ſtate that rendered it prudent for him to proſecute ſo long and uncertain a voyage, Maghellan took the ſole command of the ſquadron, and the buſineſs proceeded.

Sets out on his expedition.

The ſquadron which conſiſted of the admiral's ſhip, the S. Antonio, Juan de Cartagena, vice admiral; the S. Jago, Juan Rodriguez Serrano, and the Conception, Gaſpar de Quezada, maſter, ſet ſail from Cadiz on the 10th of Auguſt for Teneriff, where they arrived in ſafety on the 2d of September, and proceeded from thence to Rio Janeira on the coaſt of Braſil. There they refreſhed themſelves, taking in ſuch neceſſaries as they ſtood in need of, and on the 27th continued their voyage.

Diſcontents among his men.

At this time many diſputes aroſe concerning the courſe which it was beſt for them to purſue, and, the fleet being anchored on Eaſter day in St. Julian's river, which they had entered the preceding evening, when maſs was ordered to be ſaid on ſhore, the three captains, Luys de Mendoſa, Gaſpar de Quezada, and Juan de Cartagena did not appear †, a circumſtance which much diſquieted Maghellan, becauſe from their diſobedience, as well as other circumſtances, he inferred that a ſpirit of diſcontent reigned among the majority of the ſquadron. And thus, like Columbus, he found it very difficult to adapt a proper line of conduct. To return with diſgrace was what he could not brook; to proceed was to encounter a variety of perils, at the ſame time that he had every thing to apprehend from his own people. In this ſituation, the weather growing ſevere, the murmurings increaſing, and a conſpiracy of the three captains being ſuſpected, the general called his own ſhip's crew to arms. In the mean time, as Mendoſa was reading a letter he had ſent him, this captain was ſtabbed to the heart. At that inſtant a boat was manned with about 30 of the admiral's friends, who boarded the Victoria, and took 40 priſoners ſuſpected of being concerned in the conſpiracy out of that and the other ſhips. But Quezada only was executed, and Mendoſa's dead body was ordered to be quartered.—Thus the oppoſition ended for that time, and the proper meaſures were taken for the fleet to proceed as ſoon as the weather would permit; for which purpoſe Serrano was ordered to examine the American coaſt along which they were to ſail, in order to make the intended diſcovery.

1519

A conſpiracy ſuppreſſed.

While they had been thus detained on the Braſilian coaſt, according to the Spaniſh account, they ſaw men of a vaſt ſtature, and whoſe voice, eſpecially if enraged, reſembled the roaring of bulls. One of theſe came on board, whoſe voice and face were equally frightful, and whoſe height was ſuch, that the head of a middle-ſized Spaniard ſcarcely reached to his waiſt. There may be reaſon to think this account rather exaggerated; however that might be, it ſeems that he behaved himſelf very peaceably, and was well enough ſatisfied with every thing about him, till by way of preſenting him with toys, the Spaniards put ſhackles upon his legs, which as ſoon as he diſcovered to be intended to deprive him of his liberty, ſtriving in vain to get rid of them, he raved and roared moſt hideouſly. His apparel conſiſted of the ſkin of a ſtrange beaſt, and the ſame ſkin covered his legs and feet as well as his body, which notwithſtanding they deſcribe as being painted all over; and each of his cheeks was drawn on the figure of a ſtag, with two red circles round his eyes, which contributed to render his appearance more frightful.

Account of giants.

Maghellan's people ſaid they found moſt of the inhabitants of the coaſt apparrelled much in the ſame manner as this man, and deſcribe them as a race of giants, ignorant and ſuperſtitious, believing their country to be haunted by evil ſpirits, at the apprehenſion of which they ſeemed to be extremely terrified. Their weapons were bows and arrows, the bow-ſtrings being made of ſome guts or ſinews, and the arrows headed with ſharp ſtones. Their moveable cottages which, like their bodies, were covered with ſkins, they carried with them from one place to another as occaſion ſerved; they devoured their meat, which they did not ſeem to have any method of dreſſing, with the voraciouſneſs of canibals, eating with it a certain ſmall ſort of root, in their language called *Caper*, which ſerved them for bread, and drank vaſt quantities of water at their meals.

The only religious ideas theſe people entertained centered in the belief of two beings, one of whom they termed *Setebos*, who ſeemed to be ſuperior, and the other whom they called *Chelcule*, and whom they looked on as an inferior deity. In this barren country (the inhabitants of which the Spaniards termed Patagons) they however ſet up a croſs, and took ſolemn poſſeſſion of it.—But to return to the narration.

One of the veſſels loſt.

Serrano who as we have obſerved before, was diſpatched on an expedition to reconnoitre the coaſt, found a river which was about a league broad at the entrance, to which he gave the name of S. Clare, having firſt diſcovered it on that Saint's day. He was

* He is ſaid to have been denied by the court ſo ſmall an augmentation of his pay as half a ducat per month, which unkindneſs he could not but remember.

† The laſt was already under an arreſt for diſreſpect ſhewed to his commander.

1520

six days examining it, and fishing for seals, and was afterwards exposed to a violent tempest, which split the sails of his vessel, and in the end wrecked him upon the shore, while the boats crew were saved from the fury of the elements, but reduced to great extremities by famine on these barren coasts. In their distress they sent two of their people to their commander to give him notice of their situation, who dispatched a vessel to their assistance, and thus prevented that fate which must otherwise have been inevitable.

Maghellan leaves Port Julian and sets the convicts on shore.

The general left the port of St. Julian where he stayed so long with little satisfaction, on the 24th of August, setting Juan de Cartagena on shore, and the same punishment was inflicted on Pedro Sanchez Revora, the priest who had been found guilty of being concerned in the conspiracy. They were supplied with a quantity of provisions but were never heard of more.

Sailing from hence, on St. Ursula's day, in the latter end of October the fleet came to a promontory which Maghellan called Cape Virgin, and perceiving an inlet, sent to examine the coast. Upon the different reports of the people of the vessels and boats detached for this purpose, a council of the chief officers and pilots was called, in which Estevan Gomez, pilot of the Antonio, declared for returning home, and was followed by all the members, the general only excepted, who declared that though tempest and famine should threaten the strongest opposition, he was resolved to persevere. The Antonio being afterwards sent to find out a nearer passage than any which they had yet a reason to expect, the pilot before-mentioned, together with the purser having stabbed the master, carried home the ship; and the general himself having gone in pursuit of her in vain, proceeded on his voyage, and at length fell in with the passage which he had so long been in search of, and in 52° of south lat. entered those streights which have ever since born his name. He was transported with joy at this discovery, and named the point of land from which he first had this agreeable prospect, Port Desire. After sailing through this new-discovered passage with all the caution necessary in such a situation, they entered the great South Sea on the 28th day of December, being one year four months and eighteen days, from his first departure from Spain, and four months and four days from his leaving Port Julian.

He discovers the passage into the S. Sea.

On this wide extended ocean the fleet wandered between three and four months without sight of land, except two uninhabited islands. Their distresses in the course of this time were so great, that the men were reduced to the necessity of eating the hides which covered the ships rigging, which they steeped in salt water in order to render them fit for chewing. To this partial famine, it was not wonderful that sickness should succeed. And those who were not seized with immediate fits of illness, had the misfortune to be disabled from subsisting on these hard viands, by their gums growing over their teeth, whereby they were starved to death. It was happy for the rest that they sailed all this while upon a peaceful sea, impelled by gentle breezes, from whence it was denominated the Pacific Ocean. It was not till the 6th of March that they fell in with a parcel of islands justly named the Ladrones, or isles of thieves. Here they landed, and found them possessed by a people that exhibited not the least appearance of having any order or form of government prevailing among them. The men went entirely naked, their complexion olive, their hair black and long, reaching to their waists. The women were more modest in their manners, wore a sort of covering of palm-tree leaves, and were generally found to be industrious. But while

Ladrones.

these were busied at home, their husbands and male relations employed themselves in thieving abroad; and soon became so troublesome to their new guests, that the Spaniards having endeavoured by threatening, firing upon them, and burning some of their houses, (which were built of wood, and covered with palm-tree leaves) to deter them from such practices, perceiving that all this was to no purpose, departed from thence and landed at Zamul, 30 leagues distant, Zamul. on the 10th of the same month, and the next day came to Hummuna, which island they found to be Hummuna. pleasant, and the people full of humanity, ready to accommodate them with all the refreshments which the place afforded.

They afterwards sailed between several islands, and on the 28th came to one called Buthuan, where they Buthuan. were honourably entertained by the king. The people here, though not acquainted with christianity, were observed [or supposed] by Maghellan and his company to make the sign of the cross at their meals. The king's palace somewhat resembled a hay-loft, being built so high upon large posts, that it was not to be entered without ladders. The islanders greatly admired their new guests, and treated them with a kind of veneration. The earth here was said to be so rich, that large pieces of gold, some of the size of hazel-nuts and others as large as eggs, were procured by sifting the common mould of the country.

The king appeared to be a well featured man, of an olive complexion, was clothed in cotton, wore a dagger with a gold haft by his side, and was adorned with a profusion of gold rings. Maghellan presented his majesty with cloth of various colours, and his attendants with glasses, knives, and crystal beads*. The islanders, who were a very lively people, seemed to have no other religious rites than a certain ceremony which they practised, of lifting their hands and eyes towards heaven, and calling on their god Abba.

After passing among several islands, most of which afforded barley, figs, oranges, goats, poultry, and doves, and proved pleasant enough to the sailors, the fleet came to Zubut on the 7th of April, where their Zubut. salute when they anchored in the port, at first put the inhabitants into great terror, till the manner of the compliment was explained to them.

Here the king at first demanded tribute, but this the general absolutely refused to pay; and his Majesty being told that these strangers were Portuguese, whose countrymen had before this time stormed Calicut, and were renowned for their atchievements in India, he thought fit to drop that demand, and entertained them with great kindness and hospitality. Maghellan had influence enough to prevail upon this prince, his brother, and the queen to be baptized; a total abolition of idolatry through the whole island was the consequence, so that in eight days all the inhabitants embraced Christianity.

In the isle of Mathan, which lies not far from Mathan. Zubut, Maghellan found his fate. The island was under the government of two kings, from whom the Christians demanded the acknowledgement of tribute. This being refused, an open rupture ensued, and the general, with only 60 Spaniards, gave battle to the natives, whose numbers, as they say, amounted to above 6000 men. After a long and sharp dispute, in which however, the Indians lost not above fifteen, and the Spaniards only nine men, Maghellan, being too far engaged, was wounded with a poisoned arrow, and a thrust in the head with a lance, put a period The general slain. to his life: nor was even his body recovered from the enemy.

Greatly disconcerted at the loss of so able a commander, they chose Odoardo Barbosa, a Portuguese, and Juan Serrano to succeed him, who, with others, was

* It is related that one of the islanders offered a Christian a crown of gold and a collar, for six threads of crystal beads, but Maghellan would not permit a bargain so unequal to take place. If this be true, it was a proof of a moderation which the Spaniards, in most of their expeditions, were little inclined to imitate. We are told that the inhabitants suffered their guests to erect a cross and a crown of thorns, being however induced to it by a pious fraud of the general's, who persuaded them that this cross would protect them from the dangers by lightning and tempests to which those countries are subject.

was invited to an entertainment on ſhore, where all the company was maſſacred, himſelf excepted. He was reſerved by the Indians in hopes of obtaining a ranſom for him, but the reſt of the Spaniards refuſing to treat with ſuch an enemy on any terms, ſailed away and left this victim entirely in their power.

The company which remained, to the number of 80, held on their courſe towards the Moluccas, of which Maghellan before his death had heard tidings. Sailing to Behol, they there burned one of their ſhips, named the Conception, in order for the better manning and furniſhing the other two. From hence they came to Paviloghan, inhabited by blacks, and a large iſland called Chippit, where there was gold, with plenty of goats, rice, poultry, and ſpices. Here they were received in an amicable manner, and at parting the prince of the country marked his body and limbs with blood, by way of a covenant of peace.

Caghuian, Puloan, Borneo.

After coming to Caghuian, and Puloan, they arrived at Borneo, having weathered a tempeſt which overtook them juſt as they were at the entrance of the port.

They found the iſlanders to be numerous, and devoted to their king, who was a Moor, and kept great ſtate. The iſland lies in 5° 15′ north lat. and 176° long. from the meridian of London. The capital city contained no leſs than 25,000 houſes. Camphire, cinnamon, oranges and lemons were the chief produce of the country. They ſaw elephants here and ſtore of cattle and poultry. The Spaniards were attacked in this port by an Indian fleet which they defeated, taking priſoner a prince of the country, who however, through negligence or deſign was ſuffered to eſcape out of their hands, and preſently after the Spaniards ſet ſail, ſtill holding on their courſe for the Moluccas.

Other iſlands.

From Borneo they came to Cimbubon, Zolo, and Taghima, and ſailing north-eaſtward, arrived at Mangandano, where they took ſome Indians in a canoe, who gave them directions which way to ſteer for the Moluccas; and after paſſing by ſeveral other iſlands, they reached the chief of them, called Tiridore, or Tidore (after weathering another ſtorm) on the morning of the 8th of November.

Moluccas.

They found theſe iſles, which were five in number, abounding in oranges, lemons, pomegranates, rich ſpices; and Gilolo, near Tiridore, was well peopled by Moors and Pagans; the latter of which were reported, among other abſurdities, to adore the firſt object they met with in the morning, though in their manners in general, they were otherwiſe leſs ſuperſtitious than the Mahometans.—Here a warehouſe was opened, and the Spaniards traded very advantageouſly with the natives, exchanging cloth, glaſs, and quickſilver, for cloves and other products of the country. At the Moluccas, they were well ſupplied with proviſion, as thoſe countries abounded with ſheep, goats, poultry, ſago, ſugar, pomegranates, figs, and oranges. They were attended on their departure by the kings of ſome of the iſlands, as far as Mare, at which place they took their leave, ſteering SW. their company being now reduced to 46 Spaniards and 13 Indians; and paſſing by many other iſles, came to Timor where they found there was plenty of ginger, and white Sanders wood, and no want of neceſſary proviſions.

1520

Mare.

Timor.

From hence they ſhaped their courſe for the Cape of Good Hope, after having waited long for the advantage of the wind, and run down as far as 42°, though the Cape itſelf lies only in 34° ſouth lat.

Having reſolved not to put in at Mozambique, though in want of proviſions when they paſſed near that coaſt, for fear of the Portugueſe who were there, theſe adventurers found themſelves in extreme diſtreſs: on this account before they reached St. James's, one of the Cape Verd iſlands, where, notwithſtanding there was as much to be apprehended from the ſame enemy, yet their ſituation was ſuch, that they determined to run all hazards rather than to periſh with hunger. On this account they put in there, and were at firſt ſupplied with proviſions, but 13 of their crew being detained priſoners by the Portugueſe at the ſecond time of landing, the reſt weighed anchor, hoiſted ſail, and made the beſt of their way home without them. Theſe being wafted on by briſk and favourable gales, arrived in ſafety at the port of St. Lucar, near Seville, on the 7th day of September, under the conduct of John Sebaſtian Camo*; the whole voyage having taken up the ſpace of three years and thirty-ſeven days.

In diſtreſs for proviſions.

Put in at St. James's

Where 13 are made priſoners.

THE VOYAGES OF SIR FRANCIS DRAKE,

The Firſt Engliſh Circum-navigator.

FRANCIS DRAKE, was one of the twelve children of Mr. Edmund Drake, of Taviſtock in Devonſhire. This gentleman being much inclined to the proteſtant religion, and living in the reign of Queen Mary I. was obliged to retire from his native place and fix himſelf in Kent, in order to avoid the perſecutions of that prejudiced princeſs. In the reign of her ſiſter and ſucceſſor, affairs taking a different turn both in regard to religion and politics, he was made a chaplain in the royal navy.

There appears to be a kind of cloud of uncertainty generally hanging over the origin of celebrated perſons. The patronage given to Francis Drake (like the birth of Columbus, whoſe very name was in diſpute) ſeems to be a matter not eaſy to be traced†. We can only find that he was one of four brothers bred to the ſea, and took an early delight in attending to nautical ſtudies, and practical navigation.

Account of Drake's voyage with Sir John Hawkins,

The firſt voyage in which he has been noticed was that in which he acted as captain of a ſhip called the Judith, bound to the Weſt Indies, under the command of Sir John Hawkins, whom we find ſet down to be his near relation.

Some of the viceroys and governors, though they were expreſsly forbidden to encourage the trade of theſe diſcoverers who ſailed towards the new world, were yet found often ſecretly to aſſiſt them, and ſometimes after that aſſiſtance given, when they had obtained all they could expect, are reported to have ſeized on what had been acquired by this contraband trade—which is no more than an additional proof of the abuſes incident to power when intereſted men are in poſſeſſion of it.

Sir John Hawkins's little fleet, among which was the Judith (as we have before taken notice) being forced by ſtreſs of weather into the port of S. John d'Ulloa in the Bay of Mexico, where they waited to take in proviſions, twelve ſail of Spaniſh veſſels arriving ſoon after from Europe, the harbour was divided by agreement between the ſhipping of the two nations, and hoſtages‡ given on either ſide, for the preſervation of peace between them.

But

* He was greatly honoured by the king on his return, who gave him for his arms the terreſtrial globe, with this motto, *Primus me circumdediſti.*

† Camden ſays that F. Drake was put apprentice to the maſter of a trading veſſel, who dying left him his ſhip. Stowe ſays that his great patron was Francis Ruſſel, afterwards Duke of Bedford. Chriſtopher Columbus has generally been ſaid to be originally of the name of Colon, but how he came by his other appellation, is uncertain, and ſeems to have remained a myſtery even to his own family.

‡ It appeared afterwards that though the Engliſh ſent ſix gentlemen, the Spaniſh hoſtages were only ſix common men, dreſſed up for the occaſion.

1570

But this continued not long; for the viceroy, ſome weeks after, regardleſs of an agreement which he might be inclined to conſider as a matter of neceſſity, the Engliſh being in abſolute poſſeſſion of the harbour on his arrival, ordered a ſudden attack to be made on Sir John Hawkins's fleet, while the officers were at dinner, and cauſed the Engliſh on ſhore to be maſſacred. In the ſea-fight, out of four trading veſſels 3 were ſunk. The Minion, Captain Hampton, was boarded, but the aſſailants were repulſed, and the Spaniſh vice admiral blown up, after which two veſſels were ſet on fire, and turned adrift in order to burn the Engliſh admiral's ſhip the Jeſus, and alſo the Minion, from which they had before ſuffered a repulſe; the former was deſtroyed, after having ſhifted the commander and the crew on board the Judith; and the latter put to ſea and got clear of them.

Treachery of the Mexican viceroy.

But this eſcape inſured not ſafety to Sir John Hawkins who was diſtreſſed with the crews of two veſſels on board a ſingle one, which had not proviſions for them, at the ſame time that there was every thing to apprehend from the enemy, along whoſe coaſt they ſailed; yet 100 of theſe men choſe to be landed on this hoſtile ſhore, all of whom except five, periſhed by ſword, famine, ſickneſs, or fatigue*.

Great part of the crew landed on the American coaſt.

The Judith, however, with the remainder of the crew arrived in England, Mr. Drake having had the credit of contributing greatly by his prudent management to the lucky eſcape of thoſe who were removed from the Jeſus on board his own veſſel, and conducting her under favour of the night from the ſcene of action.

This misfortune of Sir John Hawkins, could not but be felt by his relation, who made this period the æra of his reſentment to the Spaniards, from whom no reparation could be gotten, as they alledged the Engliſh carried on an illicit trade to their coaſts, which could not be juſtified by the queen of Great Britain †.

Beſides his reſentments to Spain, Drake had his private intereſts to gratify, which we ſhall find he never loſt ſight of in all his undertakings, and to which he ſometimes even ſacrificed juſtice as will appear in the ſequel.

Other voyagers.

Thus ſtimulated, he made a voyage in 1570 with two ſhips under his command, called the Dragon and the Swan, and in 1571 with the Swan only. Both theſe voyages were undertaken chiefly on his own account, but it ſeems that (experience excepted) they did not turn out much to his advantage.

The next year, when the nation was on the eve of a war with Spain, this adventurer however fitted out the Paſcha a letter of marque of 70 tuns, together with the Swan of 50, commanded by his brother John, having 73 men on board the two veſſels, and embarked on another expedition. They cleared the Land's End on the 12th of May, having favourable winds they paſſed between Dominica and Guadalupe at the end of June, and, on the 6th of July came in ſight of Santa Maria.

Theſe veſſels whoſe deſtination was for Nombre de Dios, came on the 15th day of the month to Port Pheaſant, which lay at a convenient diſtance for the deſigns they had formed, and where Drake intended to build two or three ſmall pinnaces, the materials and frame-work of which he had had the caution to take with him.

Going on ſhore here, he was ſurpriſed to find a plate of lead nailed to a tree, with a few lines engraven on it by an Engliſhman, of the name of Garet, who had left that place the day before. The ſubſtance of what he found ſet down there, was to adviſe him to make no ſtay, as the Spaniards had by ſome means found out that he intended to viſit them in thoſe parts.

Is warned to quit that coaſt.

Notwithſtanding this friendly advertiſement, Drake, fortifying himſelf as well as he could, reſolved to compleat the building of his pinnaces. Here he met with one Captain Rauſe, who informed him of the ſituation of the Symerons, a ſet of revolted negroes who had ſettled themſelves on each ſide of the neck of land which ſeparates Nombre de Dios from Panama, and had become a terror to the Spaniards. This captain being invited by the Engliſh commander, agreed to ſhare with him the dangers and advantages of the enterprize wherein he was engaged. Accordingly they ſet ſail together, and having touched at the Iſle of Pines on the night of the 28th of July, caſting anchor unperceived under the ſhore. Fearing that his men ſhould be diſpirited from the notions which they had conceived of the Spaniards being prepared for them, Drake reſolved on an immediate attack, landed without oppoſition, and poſſeſſed himſelf of the quay, which though fortified with ſix large pieces of ordnance, had but one gunner to ſerve them. He preſently afterwards engaged and defeated the forces drawn together to oppoſe him, obliging ſuch as he had taken priſoners to conduct him and his people to the governor's houſe, and to the ſtorehouſe, where they found treaſures to an amazing amount ‡. Yet the General, in the midſt of his ſucceſs was not without his apprehenſions that the retreat of the conquererors might be cut off, if they were not ſpeedy in executing and well prepared to enforce it. Their greedy deſire of emaſſing wealth was plainly an obſtacle to his plan; but at laſt, by promiſing to lead them to the king's treaſury, where there was more in amount, and yet leſs cumbrous in conveyance; he thus perſuaded them every one to return with his bar of ſilver to the market place, where a body of men had been left, who expreſſed their fears that the enemy might get poſſeſſion of the boats; but this proved a vain apprehenſion, and the commander led his troops forward, ſtill entertaining the deſign of plundering the royal treaſury, which was preſently entered by this adventurous company.

Lands at Nombre Dios.

But a wound which Drake had received in his leg at the beginning of the engagement, and which he had hitherto concealed, being now diſcovered, he was conveyed, to all appearance dead, on board of one of the boats; the plunderers ſeeing him in this ſituation, were glad to embark at break of day with what treaſure they could beſt carry off, and taking with them a ſloop they found laden with wines in the harbour, with which and the fruits of the country, they refreſhed themſelves at the Iſland of Baſtimento. From hence the Engliſh reſolved to return to the Iſle of Pines, were they had left their ſhips, and parted from Captain Rauſe, the latter not judging it proper to be any longer in their company.

Drake diſappointed by a wound.

But Drake, who had been cured of his wounds, notwithſtanding this reſolution of his colleague, ſteered along the coaſt, and endeavoured to ſurpriſe Carthagena, but convinced by the voluntary information of an old man whom he found alone in a frigate, and by the firing of warning guns, that the enemy was aware of him, he deſiſted from this dangerous enterprize, but took a ſhip of Seville, and two ſmall frigates, with letters of advice relative to his expedition, the intercepting which could not but be uſeful to him in his deſigns.

The coaſt alarmed.

Being now deſirous of deſtroying the Swan, as he feared that the project would be diſagreeable to the officers, who muſt be deprived of their commiſſions, being ſeldom at a loſs for artifice, he perſuaded the carpenter to bore holes in her bottom one night, and the next morning having rowed up to her and invited his brother on board, he pretended to be ſurpriſed at the hold filling ſo faſt with water, and in the end, urged

The Swan deſtroyed.

* Sixty-five fell into the Spaniards hands, and were put to the torture, and three burnt alive in the inquiſition. Only two of theſe lived to return home.

† Sir John Hawkins eſtabliſhed the ſlave trade to the coaſt of Guinea.

‡ It is ſaid that the ſilver was piled up in bars, the pile in length 70, in breadth 10, and 12 feet in height. It was here that the mules bringing the treaſure from Panama were uſually unloaded.

§ A Spaniſh gentleman came on board before they ſailed, to know whether their Engliſh arms were poiſoned, or whether their Captain was that Drake who had before been on their coaſts. To the former queſtion he received a negative, to the latter an affirmative anſwer.

urged the crew to set fire to her, and go on board the Pascha; by which conduct, he also found means the better to man his pinnaces.

The fleet sailed out next towards Darien, keeping clear of the coast, which had been so lately alarmed. Here they arrived in the space of six days, careening their vessels and taking in wood, water, and fresh provisions, after which they left it on the 5th of September, holding their course towards Rio Grande, and on the 9th of that month, were discovered by a Spaniard from the shore, who mistaking them for friends, made a signal for them to land. This they soon did, and when the man found his mistake he fled with precipitation.

A treaty with the Symerons.

What Drake had heard of the Symerons, inducing him to wish to treat with them, he had sent his brother Captain John Drake in search of them. By means of the negroes taken at Nombre de Dios, touching at the main land, two of these Symerons came on board his ship, two of the crew being left as hostages for their safe return. An interview being appointed with their leaders, Drake quitted this place where he had been well supplied with every thing, and to which he had given the name of Port Plenty, and was conducted into a secret bay, amongst a number of woody islands, extremely beautiful, and where they were protected by a narrow rocky channel from the fear of a night surprise. In this place a treaty was concluded on, and these fugitive negroes farther informed their new friends, that had they come sooner on that coast, they might have been supplied with gold, which was the principal thing that they sought after; but the rainy season now set in, prevented the possibility of procuring it from the bottoms of the rivers wherein they had lodged great quantities, in order to hide the treasure from their masters.

As it was now judged proper to remain in this secret situation during the rains, a fort was constructed in such a manner as the materials and situations of the English would admit of, in a place where in all probability little defence would be wanted. Drake however left his brother with a small force, and sailed for Rio de la Hacha, and in his way came to Carthagena, where a spy, as he afterwards was found to be, came on board, who would have persuaded the English to remain at anchor there in hopes of great assistance from him, but in reality, with a view of giving the governor an opportunity of raising the country.

An attempt to take the pinnaces miscarries.

This was on the 17th of October, and on the 20th two frigates endeavoured to surprise the pinnaces, but this design was discovered, and Drake still kept cruising along the shore while the hills were covered with armed men *, but he found at last that it was to little purpose; yet fortune so far favoured him, as to throw in his way a ship laden with provisions, of which he happily made prize, at a time when the scarcity of them was most sensibly felt by himself and all his company.

After this success, the commander determined to return to his brother and the Symerons; but he found that during his absence Captain John Drake had been engaged in an attempt which cost him and one of his countrymen their lives; this was an endeavour to board and take a Spanish frigate, that was well provided for defence. This fatal circumstance was the consequence of his complying with the repeated solicitations of his men to venture on what he thought and represented to them to be a mad and desperate undertaking.

Captain John Drake's death.

The men afflicted with a calenture.

At this time a malignant fever, called the Calenture, broke out among the men, and of this distemper Joseph Drake died, who was another of Mr. Francis Drake's brothers. In the mean time, tidings were brought of the arrival of the Spanish fleet at Nombre de Dios, and this was therefore the season when the treasures of Peru were to be transported over land from Panama to that port. This was an opportunity which it could not be thought one of Drake's disposition would lose. Though he had been deprived of 28 of his company by sickness, yet not at all dispirited, leaving a few men to guard his ship, he set out at the head of only 18 English and 30 Symerons, with a design of making himself master of this treasure. 1572

Drake sets out for Nombre de Diol.

Manner of the Symerons travelling.

These Symerons were extremely useful as guides. They were likewise very expert at killing with arrows and javelins of various sizes, wild boars, stags, and fowls, and with these helps, together with the profusion of fruits that they found on the banks of the rivers as they passed along, the adventurers found themselves well supplied with provisions, and being led for the most part through woods and lofty shades, marching at their ease, and reposing every day at stated times, they found nothing very tiresome in their journey.†

In their way they came to a town erected by these Symerons, which was built on the declivity of a hill fortified by a mud wall, and encompassed by a ditch. Here Drake was desired to stay, and a number of men promised to him in addition to his present force, but not judging it proper to accept these offers, he proceeded on his journey, the Symerons serving as guards and guides, clearing the way before the English.

On the 11th day of February, the company arrived at a hill, on the summit of which grew a lofty tree, to the top of which having ascended by steps cut for the purpose, they found an alcove, from whence both seas were to be viewed. At the sight of the great Pacific Ocean, on which as yet no vessel of his nation ever had sailed, Drake earnestly implored heaven to assist him in the purpose he then conceived of venturing on those seas in English ships, with the first favourable opportunity, a design which we shall find after his return home he spared no pains to accomplish.

The grass of the level country in this region growing as high as bulrushes, is obliged to be consumed by fire, and notwithstanding the conflagration, which obliges the cattle to fly or perish, and covers the ground with ashes, yet such is the strength of the soil in those parts, that within a month after this method has been used, the valley appears again to be entirely covered with fresh verdure. Such is the fertility of the soil upon this isthmus, which however, is so situated that there is great reason from the various changes of nature to conclude that it will one day, by earthquakes or the force of the watry element, be totally destroyed, and leave that free communication between the two oceans, which was was once vainly sought for there and found only by Cape Horn and the streights of Maghellan.

A Symeron being dispatched for intelligence, returned with the flattering tidings: That the treasurer of Lima would pass the next night with eight mules loaded with gold, and one with jewels, towards Venta Cruz, whither the company immediately directed their course, and having surprised a sleeping Spanish soldier, had their intelligence confirmed by the frightened captive. This man likewise cautioned them not to be deceived by the appearance of the carriers from Nombre de Dios, who were to meet the others by the way, and who had no gold in charge, though their beasts would be loaded with merchandise

* We have an account that Drake himself leaped on shore in defiance of their troops, an action which, if he was within the reach of their arms, was a most unpardonable rashness in one on whose life the success of this enterprise depended, and if he was out of danger from them, was totally vain, and seems to have been as ridiculous a bravado as ever we remember to have read of in history.

† At night they rested under wigwams, which were made by setting posts in the ground, with poles laid from one to the other, in the manner of a roof, thatching them with palmetto boughs and plantain leaves. In the vallies they left about four feet next the ground open; but on the hills where they were more exposed to the sharpness of the night air, these wigwams were thatched close to the ground, a door only being left and an opening to let out the smoke.

1573 and provisions. He then demanded protection, and requested, as he had dealt sincerely with the English, and could never dare to return to his own countrymen, that they would be so good as to allow him such a portion of the treasure as would maintain himself and family; which request he observed was but reasonable, as the English, if they succeeded, would be sure of seizing more gold and jewels than they could carry away. This was agreed to, and Drake heading the English, and Oxenham of Plymouth, to whose charge the riches of Nombre de Dios had been committed, assisting Pedro the Symeron in the command of the negroes, the two parties laid themselves flat in the grass at a convenient distance for attacking the convoy in front and rear, and every thing seemed to favour this bold undertaking.

But, as chance will frequently disconcert the most prudent measures, so this design of plunder was defeated by one of those accidents which it is not in human prudence to foresee.—Though express orders had been given not to meddle with such mules as came from Venta Cruz, but only with those which came forward from Panama, yet one Robert Pike, who was in liquor, and his companion, mistaking the former for the latter, put themselves in motion to be ready for an attack. Being discovered by the officer who accompanied the merchandise, he caused the carriers and their beasts to quicken their pace, a circumstance which neither Drake nor Oxenham observed.

Attempt on the mules loaded with treasure.

Lying still in their ambush, they soon after perceived the mules advancing from the road that led to Panama. These were instantly attacked in front and rear, and secured, as had been agreed upon. Two only were found laden with silver, and the rest with provisions. The drivers who were made prisoners informed Drake that the officer having reported that he suspected an ambush was laid for the gold, the treasurer ordered only two mules loaded with silver to proceed from Panama, the others being sent back, and six of those lately arrived from Venta Cruz put in their room. The experiment succeeded as we have found; the drunkenness of one of Drake's followers defeated the design, and the commander himself concluding that the country would be alarmed, was at first not a little perplexed what to resolve upon, where (his own people excepted) every one must be considered as an enemy. But one of Drake's best qualities for helping him at his need was presence of mind. In this exigence, at once perceiving the improbability of marching back in safety by the same way that he came, he persuaded his people and the Symerons to hasten forward to Venta Cruz, where they arrived after marching in great secrecy; yet they found the Spaniards not unappriſed of their coming. An action ensued; the militia were routed, and the Symerons could not be hindered from plundering the town; though Drake, who had always much of the specious appearance of virtue, took care to make a merit of preserving the ladies from affronts. He then continued his march towards the shipping, in the course of which the English were greatly assisted by the Symerons; as when one of the former fainted, two of the latter, who were very stout men, would carry him between them.

Frustrated by rashness.

Within five leagues from their ships they found a town which the Symerons had constructed while they were absent, one of whom being dispatched for that purpose, procured a pinnace to be sent to meet them, and on the 23d of February, Drake's whole company were joined, which junction was celebrated by a thanksgiving.

They now began to find themselves in want of provisions, and some of the Symerons had proposed a journey over land, in order to surprise the storehouse of one Pezaro near Veragua, whose slaves, as they said, brought him near 200lb. weight of gold every day. But this was not agreed to; on the contrary the two pinnaces called the Bear and the Minion, were manned; the former was sent for provisions towards Tolu, and Drake himself went in the latter towards the Cabezes, designing to intercept the treasure which was to be transported from Veragua and that coast to Nombre de Dios. As to the Symerons, he dismissed with presents such as chose to depart, giving orders for kind treatment to any that wished to remain. At the Cabezes he took a frigate, the pilot of which gave him intelligence that in the harbour of Veragua there was a ship which had on board above a million of gold. It is easy to be imagined that an adventurer whose object was plunder, was eager to attempt so rich a prize; but no sooner had he arrived in the harbour, than he heard warning guns fired, and answered by others along the coast, by which the pilot told him he might conclude his design was discovered; and accordingly he desisted from his enterprise.

In the mean time his other pinnace had taken a frigate with 28 fat hogs, and a quantity of poultry. This vessel they fitted up for war, and as a second attempt on Nombre de Dios was resolved on, he set sail with her and the Bear, towards the Cabezes. Arriving there withing two days, he found a Frenchman called Totu, with a ship of war; having supplied him with water, it was agreed upon that he should be an associate in the expedition. Proceeding for Rio Francisco, they arrived there on the 30th of March, the Frenchman accompanying them. After marching above twenty miles, they at length perceived an escort of three droves of mules coming from Panama, which consisted of 909, each mule carrying about 300lb. weight of silver. The French Captain and one of the Symerons were wounded in the attack, which ended in the adventurers making themselves masters of the treasure, a great part of which they hid in the thickets, and determined to return the same way that they came. In their retreat they left the wounded French captain with two of his men in the woods, and a third was missed on the march; who being intoxicated had not followed the guides, and consequently had lost himself in the intricacies of the country. Arriving at Rio Francisco on the 3d of April, when they went in search of their pinnaces, to their no small surprise they descried seven Spanish sloops, from which circumstance they concluded that news of their proceedings had been carried to Nombre de Dios, and were in great anxiety lest their pinnaces should be taken, and the crews perhaps be compelled to discover where their ships lay. Drake allowed that it might be possible the pinnaces might have fallen into the enemies hands; yet if this were so, the taking of the boats, the examination of the men, and the discovery of their ships, could not be the operation of a moment; he therefore urged that the case was not yet so desperate as at first it might appear. Nevertheless there were still such obstacles as it required the greatest extent of courage and presence of mind to overcome. They were not in possession of any boats, and to get by land to their shipping, they must pass over high mountains, through woods almost impenetrable, and even then would be interrupted by streams and rivers in their course. While the men were reflecting on these difficulties, their commander was devising the means to extricate himself from them, and to save his little company. He ordered a raft to be made of some trees which were then floating in the river, and embarked together with two Englishmen named Owen and Smith, and two Frenchmen, and after having sailed three leagues, happily discovered his pinnaces: Having hailed them, he resolved that they should anchor behind a point of land, in order to lie concealed, while he returned to the shore, and acquainted his men with his success. They rowed to Rio Francisco the same night, and all embarked with what treasure they could convey away, then sailing back, they returned to the frigate, and afterwards to the ship, where they divided their booty.

Some Frenchmen join the English.

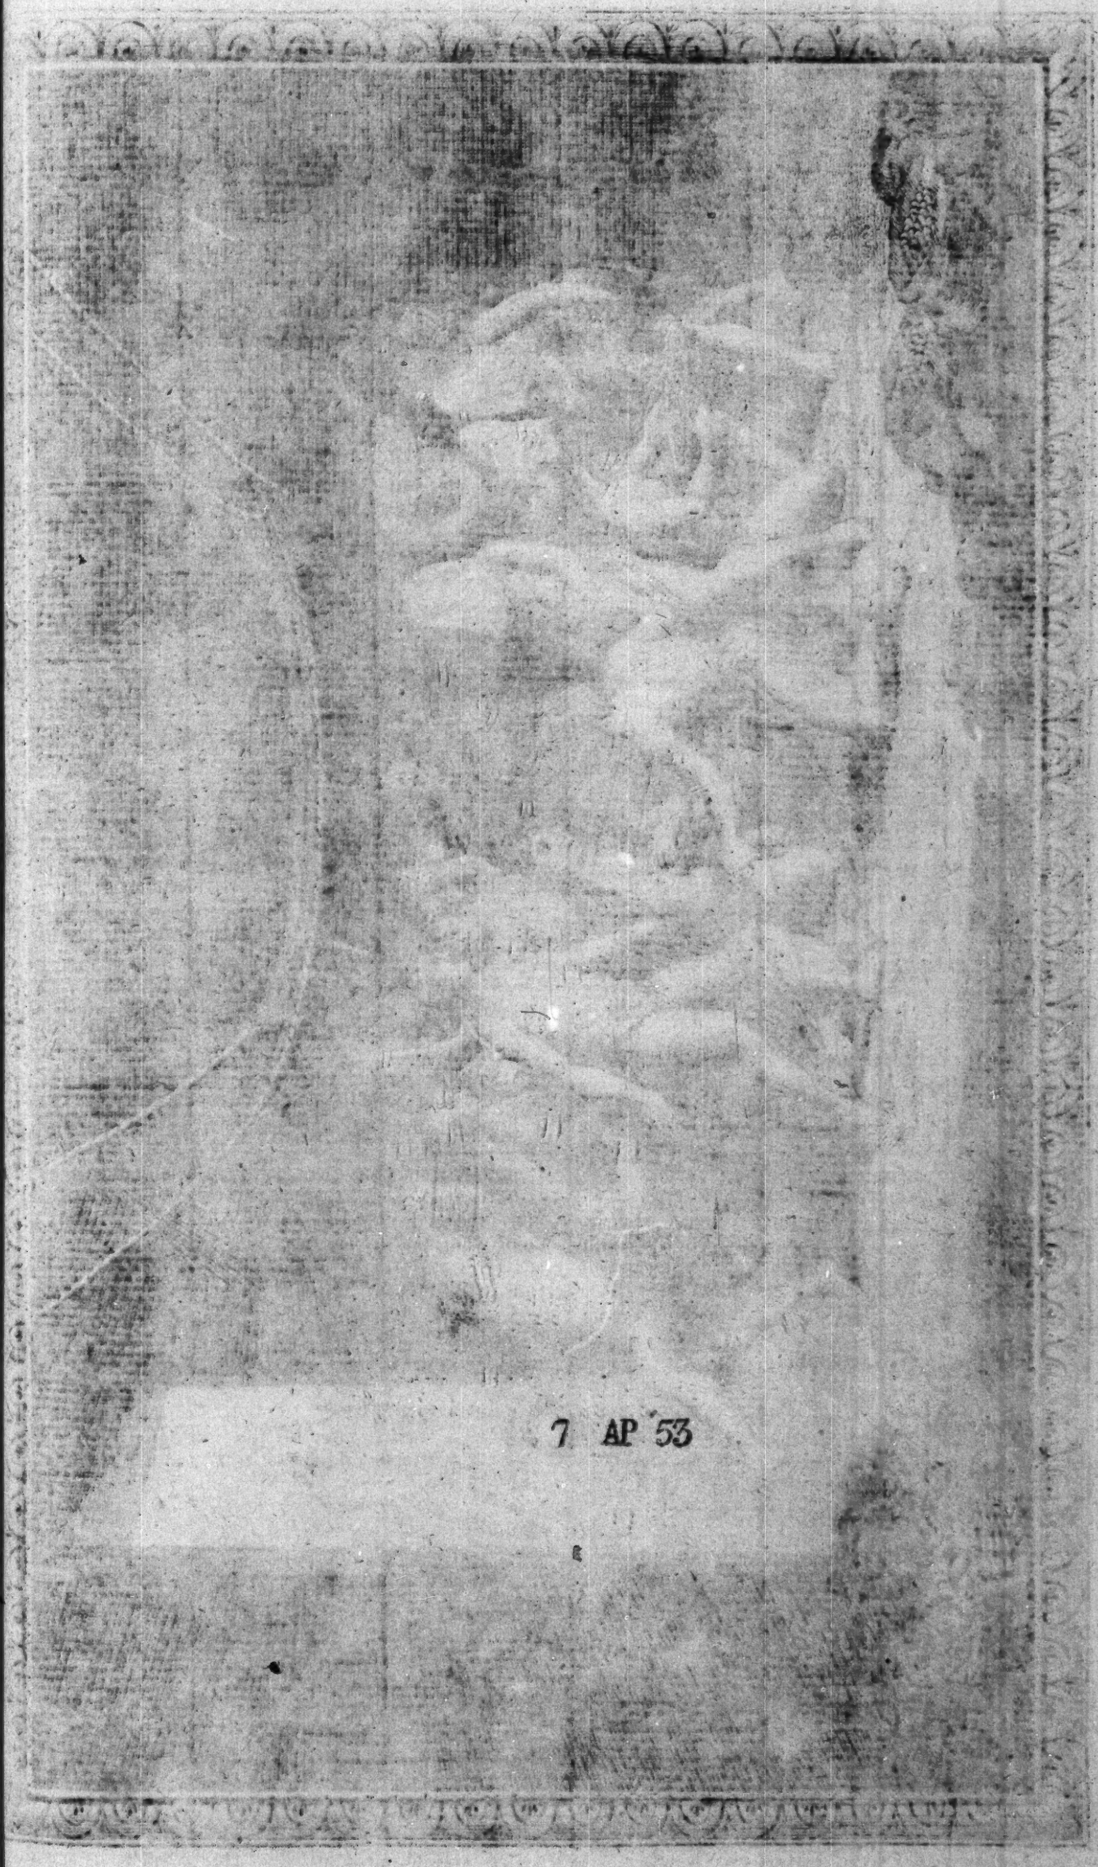
They seize on the silver coming from Panama.

Alarmed by the sight of Spanish vessels.

Drake's scheme for their deliverance.

The Frenchman's ship remained among the Cabezes, while the English were refitting; and during this interval of fourteen days, twelve Englishmen and sixteen Symerons travelled up the country in search of the French captain. They did not find him, but discovered

MARRIAGE-CEREMONIES *observed by the* INDIANS *of* PANAMA.



7 AP 53

1577

covered one of his countrymen who had ſtaid with his companion to attend their commander. This man told them that within half an hour after Drake's departure, a body of Spaniards ſurpriſed the wounded captain; the other Frenchman might have got away as well as he who related the ſtory, but endeavouring to ſecure a box of jewels, being already encumbered with gold, the weight effectually prevented his eſcape. As to the treaſure hidden in the ground, it appeared that the other Frenchman, who as we have already mentioned, was left drunk in the woods, being found there by the Spaniards, was forced by torture to confeſs where it was buried, by which they recovered far the greater part of it, having narrowly examined the ſpot for that purpoſe.

Account of the French captain's misfortune.

Being now convinced that his harveſt in theſe parts was pretty well over, the Engliſh commander having diſmiſſed the French and Symerons*, had the good fortune in his way to take a frigate laden with proviſions and honey, and left the coaſts of America, which he had ſo long been employed in plundering, or keeping in perpetual alarm, having beſides taken at ſea 100 veſſels of different ſizes, between Carthagena and Nombre de Dios†.

Drake having diſmiſſed the French and the Symerons, leaves the coaſt of America.

Notwithſtanding ſeveral diſappointments which theſe adventurers met with, it is certain that they muſt have acquired a conſiderable treaſure in this expedition, which having thus happily accompliſhed, they ſteered directly homewards, and after a proſperous voyage, arrived at Plymouth on Sunday the 9th of Auguſt, in the afternoon, where the congregation ran out of church to congratulate the adventurers on their arrival, and to gratify their own curioſity.

Arrives at Plymouth.

Drake, whatever might be his private character, how unjuſtifiable ſoever his depredations might be, poſſeſſing the ſpirit of adventure, for which the age wherein he lived was particularly diſtinguiſhed, acquired the good-will and reſpect of the people, and the notice of his ſovereign, whoſe hatred to Spain was implacable. This princeſs about four years afterwards thought proper to countenance an undertaking of his, for which it ſeems, on political accounts, ſhe never granted him a commiſſion, though it is ſaid that ſhe condeſcended to become a private adventurer.

When a man is thoroughly engaged in views of ambition or intereſt, nothing will ſeem hard to him that will give him a chance of gratifying his favourite paſſion. This was the caſe with Drake: having had a view of the great South Sea, he was reſolved that no human obſtacle ſhould oblige him to deſiſt from his endeavours of viſiting America again, and ſpreading his ſails upon that ocean. Indefatigable as he was in purſuit of this deſign, it was not however till the year 1577 that he collected a force ſufficient to man five veſſels, and by a pretended royal authority, appeared as admiral, or, as the phraſe then was, general of the ſquadron.

Preparations for Drake's voyage round the world.

The fleet conſiſted of the Pelican, of 100 tons, which he commanded, the vice admiral's ſhip the Elizabeth, of 50 tons, John Winter commander; the Marygold, of 30 tons, under John Thomas; the Swan, of 50 tons, Captain John Cheſter; and the Chriſtopher, of 15 tons, which was committed to the charge of the carpenter who was ſo compliant as to deſtroy the Swan, in the manner already related, in the former voyage.

Drake manned theſe ſhips, which were equipped (partly at his own expence and partly at that of others) with 164 ſailors, cauſing them to be well ſtored with neceſſary proviſions, and alſo plate for his own table, and failed not even to furniſh the cook-room with ſilver utenſils, partly to command what might be deemed a neceſſary reſpect, and perhaps partly to gratify a vanity which in ſome peculiar characters is found to be united with an avaricious diſpoſition.

This wary commander, notwithſtanding his fame had been blown abroad, yet conſidering that the difficulties to which his men had been ſubject in a former voyage, were not unknown, had engaged the ſailors whom he now got together for a voyage to Alexandria, nor were they made acquainted with his real deſign till they had reached the coaſt of Braſil.

Sailors engaged for a voyage to Alexandria.

All things being prepared for the voyage, Drake ſailed from Plymouth on the 15th of November, but afterwards was forced by bad weather into Falmouth, where he was obliged to ſtay refitting his veſſels till the 13th of December, when he took his departure with all the auſpices of a more proſperous voyage.

He ſails from Plymouth.

A ſtorm.

On the 27th of the ſame month the fleet came to an anchor at Mogadore, an iſland about a mile diſtant from the main on the coaſt of Barbary. Having, as before got ready the frames of his pinnaces, he began here to put them together. The Moors obſerving what was going forward, ſent two of their chiefs on board the admiral's ſhip receiving two of his people as hoſtages, who were extremely well treated by the commander, with a view of giving theſe ſtrangers a good opinion of the Engliſh nation.

But the next day this friendly intercourſe ceaſed. One John Frye leaping on ſhore from the ſhip's boat, which had been ſent as before, was made a priſoner, mounted on horſeback, and conveyed up the country. Though this man was afterwards diſmiſſed with apologies and aſſurances that the Moors had miſtaken the Engliſh for the Portugueſe, from which latter they expected an invaſion, yet the commander reſolved to make no longer ſtay here but departed on the laſt day of December, and after having taken ſeveral Spaniſh veſſels in his way, arrived at Cape Blanco, on the 17th of January, where the Engliſh and the natives carried on a friendly traffic to the convenience of both parties.

After this, having plundered and diſcharged their captives, they ſailed for the Cape Verd iſlands, and anchored before Mayo on the 27th of January, but could get no proviſions, becauſe the Portugueſe in thoſe parts had been forbidden to hold any intercourſe with them.

On the 31ſt of the ſame month they paſſed by St. Jago, where the Portugueſe who had diſpoſſeſſed the natives of a great part of the iſland, under pretence of traffic, lived very unhappy, on account of the inroads of ſuch of the aborigines of the country as having fled to their woods and mountains, were perpetually making incurſions upon their conquerors. As the fleet paſſed by this iſland, three pieces of cannon were diſcharged at them, though without doing execution. Yet in revenge for the inſult they conceived to be offered them, they took a Portugueſe veſſel laden with wines, ſetting on ſhore all the crew, except Nuno da Sylva, the pilot, whom they found afterwards very uſeful to them on account of his knowledge of the American coaſts.

About this time a difference happened between the commander and Mr. Doughty his friend, the occaſion and circumſtances of which have been differently related; but according to the beſt authorities it took its riſe in the improper conduct of Thomas Drake‡, which

* Theſe latter he rewarded by giving them the iron of the pinnaces he broke up at the Cabezes, knowing that thoſe people who were in their infant ſtate, thought no preſent of more value than a quantity of that metal. Their chief Pedro, however, being deſired to chuſe from any of the ſhips what he liked beſt, ſeems to have been more refined, for he fixed upon a ſcymitar ſet with jewels, which had been preſented to Drake by the French captain. However he inſiſted on giving four plates or quoits of gold for it, which the Engliſh commander at firſt refuſed, but being compelled to take it, threw it into the common ſtock, which was thought only an oſtentatious diſplay of his generoſity.

† He is ſaid to have been particularly careful not to deſtroy any of theſe but ſuch as were fitted out againſt him.

‡ One who was an eye-witneſs of the tranſaction, relates it in the following manner: "Captain Drake having boarded the "ſhip of Nuno da Sylva, and feaſted his eyes with the view of "the commodities, he committed the cuſtody and well ordering

1578 which his brother was ſo far from puniſhing or repreſſending, that from the moment he was informed of it, he conceived an implacable hatred againſt the accuſer. In the courſe of their voyage they came to Fogo, which has a burning mountain in the middle of it; the inhabitants are Portugueſe. Two leagues to the ſouthward they made Brava, which abounded with fruits of all ſorts, and was beſides well watered, but there being no good harbour was the reaſon for which they conceived that no inhabitants were to be found in ſo fertile an iſland. Here Drake watered, and then continued his courſe for Braſil, paſſing the equator on the 17th of February, after experiencing the inconveniences of calms and ſtorms which detained them for three weeks; nor did they reach the Braſilian coaſt till the 5th of April, having in the mean time (March 28) loſt ſight of one of their veſſels, with 28 men, and moſt of the freſh water on board, which happily being found again the next day, relieved them from their perplexity.

Fogo.

Brava.

During this interval the commander took a freſh occaſion to quarrel with Doughty, which, as the author of the narration obſerves, was on the following trivial account. "It chanced John Brown, the "trumpet, whether of purpoſe or of his own voluntary [will] to go aboard the Pelican, where, for that "he had been long abſent, the company offered him a "hobbey, among the which Maſter Doughty, putting in his hand, ſaid, Fellow John, you ſhall "have my hand, although it be but light, amongſt "the reſt; and ſo, laying his hand on his buttock, "which being perceived of John [Brown, the] trumpet, he began to ſwear wounds and blood to the "company, to let him looſe: For they are not all "(ſaid he) the general's friends that be here; and, "with that, turned him to Maſter Doughty, and "ſaid unto him, God's wounds, Doughty, what "doſt thou mean to uſe this familiarity with me, "conſidering thou art not the general's friend? Who "anſwered him, What, Fellow John! what moves "you to this, and to uſe theſe words to me, that am "as good and as ſure a friend to my good general as "any in this place? And I defy him that ſhall ſay "the contrary. But is the matter thus? Why yet, "Fellow John, I pray thee let me live until I come "into England. Thus John Brown coming again "preſently aboard the prize, had not talked any long "time with the general, but the boat went aboard, "and reſted not, but preſently brought Maſter "Doughty to the prize's ſide, General Drake ſitting in the midſt of his men, who hearing the "boat at the ſhip's ſide, ſtood up, and Maſter "Doughty offering to take hold of the ſhip to have "entered; ſaid the general, Stay there, Thomas "Doughty, for I muſt ſend you to another place; "and with that, commanded the mariners to row "him aboard the Fly-boat, ſaying unto him, it was "a place more fit for him than that from whence "he came. But Maſter Doughty, although he craved "to ſpeak to the general, could not be permitted."

The Fly-boat being ſoon after ſeparated, Drake laid this chance to Doughty's charge, pretending that he was a wizard, and whenever there was bad weather, he uſed to ſay that "it came out of Doughty's cap-caſe." *

Having ſteered after the ſtorm ſouthward towards the land, they came to a cape which they named Cape Joy, on account of the recovery of the veſſel that was miſſing. Here they took in water, but finding no inhabitants ran ſtill farther ſouthward into a harbour between two rocks, where the ſhips rode at anchor ſafely, till they choſe to proceed towards the river Plate, in 36° north lat. In their courſe they again loſt ſight of the Fly-boat, on which account Drake reſolved to contract the number of his ſhips. On the 13th of May ſailing along the coaſt, Drake diſcovered a bay, and went out in his boat to examine it, ſounding all the way. Here a ſtorm ſuddenly overtook him at the diſtance of about three leagues from his ſhips; one of which, however, commanded by Captain Thomas, ſailed boldly in to his relief, and took the admiral on board, lying ſheltered in the harbour while thoſe veſſels which were at ſea were ſeverally ſenſible of the effects of the tempeſt. As ſoon as it was over, however, the crews diſcovered where their commmander was, by the fires which he had lighted, and thus the companies joined again on ſhore.

They come to Cape Joy.

Drake in great peril in a boat.

They met with no inhabitants here but found two wigwams built in the manner the Symerons had uſed on their journey and alſo ſeveral dried fowls, among which were ſome oſtriches. They ſaw beſides a number of theſe large birds alive, which, though they could not fly, yet ran ſo faſt with the aſſiſtance of their wings, that there were none of them taken or killed by the Engliſh.

A deſerted coaſt.

From hence they departed on the 15th of May, and on the 19th came to an anchor in a more convenient harbour; the Swan which was ſeparated from the fleet, being found, Drake ordered her to be broken up, and the iron work ſtored for ſome future occaſion.

The Swan broken up.

They were now on an iſland at the diſtance of about a mile from the main, to which the ſea, at low water, was fordable. Here they ſaw a body of Indians, who by their geſtures invited them on ſhore. Drake therefore diſpatched his boat with bells, bugles, and other toys. The Indians on their landing ſent two men who made as if they would come to them, but ſtopped within a little diſtance, on which the Engliſh tied what they had brought to a pole, retiring as the Indians advanced. In return the natives left ſome of that ſort of feathers which they wore upon their heads, and a little bone carved and burniſhed, about ſix inches in length, ſeeming by their motions towards the riſing and ſetting of the ſun, and lifting their hands towards the moon which then ſhone over their heads, to intimate profeſſions of friendſhip. While they were buſied in theſe ceremonies, the Engliſh marched up the hill, but perceiving the natives rather frightened at their near approach, they retired peaceably, and thus encouraged the natives to come forward, who ſoon opened a traffic, exchanging arrows, feathers and bones, for any trifles with which they thought proper to preſent them, and in

"ing of this prize unto Maſter Thomas Doughty, as his good "and eſteemed friend, praying him in any caſe to ſee good "order kept, and whoſo ſhould be the breaker thereof, to give "him to underſtand of any ſuch, without exception of any.

"It thus chanced, that General Drake had a brother (not the "wiſeſt man in Chriſtendom) whom he put into this prize, as "alſo divers others. This Thomas Drake, as one more greedy "of prey than covetous of honeſty or credit, did not only break "open a cheſt, but did dive ſuddenly into the ſame, that Maſter "Doughty knew not how to diſcharge himſelf unto the gene-"ral, but by revealing it unto him; yet firſt Maſter Doughty "called Thomas Drake unto him, and ſhewed him his great "folly in this behalf, who yielding unto his fault, prayed "Maſter Doughty to be good unto him, and keep it from the "general; but he briefly told him he could not keep it, but "would deliver it with what favour he might. So at the ge-"neral's next coming on board the prize, Maſter Doughty "opened the ſame unto him, who preſently falling into a rage, "(not without ſome great oaths) ſeemed to wonder that Thomas "Doughty ſhould mean to touch his brother, and did, as it "were, aſſure himſelf that he had ſome farther meaning in this, "and that he meant to ſtrike at *his* credit; and he would not or "could not by God's life, as he phraſed it, ſuffer it. From this "time forth grudges did ſeem to grow between them from day "to day, to the no ſmall admiration of the reſt of the com-"pany; although ſome envying his former favour and friend-"ſhip with the general, and ſome, I think, doubting that his "capacity might reach too far, to the aggrandizing his credit "in the country, talked variouſly of the matter: however, "Maſter Doughty was put again into the Pelican. Thus "grudges, although they had not long reſted, yet were they "grown to great extremities, ſuch and ſo great as a man of "judgment would verily think that his love towards him in "England was more in brave words than hearty good will "and friendly love."

* Doughty was a gentleman bred, and a man of ſenſe and learning, whom Drake had invited in the moſt friendly manner, to accompany him in his undertaking.

in time became quite ſocial and familiar with their new gueſts *.

Theſe Indians were quite naked, except the ſkins of ſome beaſts that they threw over their ſhoulders occaſionally. Their hair, which was long, they rolled up with a plume of oſtrich's feathers, and here they ſtick their arrows, which were made of reeds, headed with flints; and their bows were about an ell long. They painted their bodies with various figures, eſpecially thoſe of the ſun and moon, by way of ornament. They had no canoes, nor other method of croſſing the water; and in the other iſlands which abounded with birds [moſt likely penguins] ſo tame, that entertaining no fears from man, having not been uſed to his tyranny, they ſuffered themſelves to be taken in the hand. Such a number of ſeals appeared likewiſe on theſe coaſts, that the Engliſh named the place where they lay, Seal Bay. The fleſh of this animal which the Engliſh had found to be wholeſom, ſerved the Indians for food, and they ſeem to have eaten it raw, as they were not obſerved to have any method of preparing their victuals by fire.

Seal Bay.

The ill uſage of Doughty on board the Swan.

The ſeparation of Drake's veſſels on an expedition like his was generally productive of a number of inconveniencies. When the Swan fly-boat had been ſeparated from the reſt on the Braſilian coaſt, the crew deſpairing of joining ever again, their companions began to fear leſt they ſhould be in want of proviſions. Here the maſter, (moſt probably the purſer) being an enemy to Doughty, and then apprehenſive of a ſcantineſs of proviſions, choſe to withdraw himſelf from Doughty's and Cheſter's meſs, the latter of whom had really been made captain of the fly-boat. To him Doughty applied, finding this overbearing man put them to ſhort allowance, while he rather augmented than decreaſed his own diet. Many words paſſed on this occaſion between the three perſons, and even ſome blows between the maſter and Doughty. The former viewing the latter in the light of one ſent on board in diſgrace, told him if he ever came home to enjoy any advantage from the voyage, "he would "be truſſed up." Adding, "Thou! wilt thou "have victuals? thou ſhalt be glad if we do not "meet the general, to eat that that falls from my "tail on the anchor fluke ere we get home again." The humanity of the declaration being equal to the politeneſs of the expreſſion, incenſed Doughty ſo much, that he urged Cheſter to behave as became a commander, adding, "Loſe nothing of that authority that the general committed unto you. If you will, we will put the ſword into your hands again, and you ſhall have the government." This caſe the writer ſays he will aver to be true; two or three perſons being ſworn to the articles; *and theſe were incorporated in the accuſation, on the ground of which he was to be beheaded.*

The Swan having joined the fleet, and being deſtroyed, as we have already noticed, Doughty was again taken on board the Pelican, where it ſeems what paſſed in the Swan was related in ſuch a manner as to aggravate matters, when high words enſued between him and the general, whom in his anger he told That he thought his word was to be believed as ſoon as his commander's oath; who then ſtruck him, and ordered him to be bound to the maſt, for the accompliſhment of which the maſter of the fly-boat took no ſmall pains." He and his brother John Doughty, were afterwards ſent on board the Canter, where he had reaſon to believe his life would be endangered †.

Declaration of one of the crew in Doughty's favour.

It is obſervable that while Mr. Doughty was thus perſecuted, one Thomas Cuttle, who had formerly been Captain of the Pelican under Drake, reſolved to go over to the main, wading with his piece in his hand through the ſhallow water which we have deſcribed. This man ſolemnly declared that he thought himſelf hardly uſed on Mr. Doughty's account, of whom he knew no harm, adding that he would rather truſt himſelf in the hands of the cannibals than endure ſuch hard treatment from the hands of the general ‡.

1578

Before they left this harbour, the admiral himſelf coming on board the Elizabeth, told the crew that he was to ſend there the two Doughties, men againſt whom he made heavy complaints as ſeditious perſons, wizards, and poiſoners, obſerving that they were the only obſtacles to a voyage wherein the meaneſt ſhip-boy might make a fortune, and gold would become as plentiful as wood in the fleet. After this, the two brothers being ſent on board, as it might be expected, were generally treated accordingly, only Thomas Doughty having agreed to pay the boatſwain 3l. for a cabin, which was moſt uncomfortably ſituated; the poor man loſt his office, and fell under the heavy diſpleaſure of the admiral, on this account.

The fleet ſailed on the 3d of June for the South Sea, and ſtopping in their way ſix days after at a little bay, they broke up the St. Chriſtopher, being a veſſel too ſmall to live in thoſe dangerous ſeas which they ſometimes encountered. As they proceeded, they found themſelves under a neceſſity of anchoring in another bay, with a deſign to recover the Portugueſe prize which they had not ſeen ſince the 27th of April. On the 18th, after prayers put up to Heaven for ſucceſs, they put to ſea, and the next day diſcovered the veſſel near Port Julian, which port they entered, on account of her proving leaky, and alſo to refreſh the crew after the fatigues they had undergone during their ſeparation. Two of the natives, of whoſe ſize Maghellan had left ſuch an enormous account, and whom Drake's people alſo thought to be ſomewhat gigantic, accoſted them when they landed, received whatever was given them, and ſoon after began ſhooting arrows with them for emulation; but, as might be expected, found themſelves greatly excelled in the uſe of the bow by their new gueſts.

They arrive at Port Julian.

Gigantic natives.

Their treachery.

But another of the natives appearing preſently after, ſeemed not at all pleaſed with the friendly reception which his countrymen gave the ſtrangers.—His perſuaſions were not without their effect; for afterwards one of the company being willing to ſhew this third Indian a ſpecimen of his ſkill, in attempting to ſhoot an arrow broke his bow-ſtring. The natives, not knowing of any other offenſive weapons which the Engliſh had, followed them as they were returning to their boat, and ſhowered their arrows upon them, wounding in the ſhoulder him who aimed the bow, and turning about he was pierced with another arrow in the breaſt. Oliver, the maſter gunner, who had begun the friendly conteſt, was not now backward in entering into this more ſerious one; he preſented his piece, and doubtleſs would have done execution among the aſſailants but that it miſſed fire, and the Indians immediately diſcharging another flight of arrows he was ſlain.—All was now ſurpriſe and confuſion; but Drake, who was poſſeſſed of uncommon intrepidity and preſence of mind in time of danger, encouraged his men, directed them beſt how to avoid the effect of their adverſaries weapons by ſhifting their place as they retreated, and by picking up their arrows and breaking them. At length taking the gun which had miſſed fire in Oliver's hand, he diſcharged it at the Indian who had killed the gunner, and the hail-ſhot with which it was loaded tearing open his belly, he fled with terrible outcries. This ſo intimidated the Indians, that they in conſequence of it let

* One of the natives having received a cap off the general's head, withdrew to a diſtance, and thruſt an arrow into his leg, letting the blood trickle down in Drake's ſight, which was doubtleſs a token of gratitude, and was interpreted by that commander as an emblem of that Indian's willingneſs to ſhed his blood in his ſervice.

† The Canter was a veſſel taken from the Spaniards on the coaſt of Africa.

‡ He purſued his deſign and went up the country, but firing his piece, in order to bring the natives to him, this being underſtood as a ſignal that he wanted to return, a boat was ſent which brought him back again.—But ſurely a declaration like this from one who was going to make ſo hazardous an experiment, ought doubtleſs to allowed of great weight in a caſe of this nature.

1578 let the Admiral withdraw his wounded friends, and the Engliſh remained on the coaſts for two months after this quarrel without experiencing from them any farther acts of hoſtility.

It was here that Mr. Tho. Doughty, againſt whom Drake had ſo long entertained ſo much hatred, was executed by his order, of which circumſtance there are various accounts. But the moſt circumſtantial, and that which agrees beſt in all its parts being to be found in the manuſcript from which our accounts are drawn, we ſhall here preſent that relation of this tragical adventure without abridging or interrupting his relation.

"On this iſland in Port St. Julian, paſſed many matters, which, I think, God would not have to be concealed, eſpecially for that they tended to murder; for he (Drake) ſpewed out againſt Thomas Doughty his venom. Here he ended all his conceived hatred, not by courteſy and friendly reconcilement, but by moſt tyrannical blood-ſpilling; for he was never quiet while he lived, who in wiſdom and honeſt government as far ſurpaſſed him, as he in tyranny ſurpaſſed all men. The world never committed a fact like unto this; for here he murdered him that, if he had well looked unto himſelf, had been a more ſure and ſtedfaſt friend unto him than ever was Pythias to his friend Damon, as I think the ſequel of this caſe will ſhew.

Trial of Doughty.

"The laſt day of June, the general himſelf, being ſet in place of judgment, and having the whole company brought on ſhore, and having Captain John Thomas ſet cloſe by him, who opened a bundle of papers that were rolled up together, wherein were written divers and ſundry articles, the which, before they were read, the general ſpoke unto the purport of them, and turning himſelf to Thomas Doughty, who was there preſent, being before brought thither more like a thief than a gentleman of honeſt converſation, he began his charge thus;—Thomas Doughty, you have here ſought by divers means, in as much as you may, to diſcredit me, to the great hindrance and overthrow of this voyage; beſides other great matters with which I have to charge you, the which, if you can clear yourſelf of, you and I ſhall be very good friends; whereof if you cannot, you have deſerved death: Maſter Doughty anſwered, it ſhould never be approved that he had merited ill by undertaking any villainy towards him.——By whom, quoth the general, will you be tried? Why, good general, let me live to come unto my country, and I will be there tried by her majeſty's laws. Nay, Thomas Doughty, ſaid, he, I will here impannel a jury on you, to enquire into thoſe matters that I have to charge you withal. Why, general, replied Doughty, I hope you will ſee your commiſſion be good: I'll warrant you, anſwered the general, my commiſſion is good enough. I pray you then let us ſee it, ſaid Maſter Doughty; it is neceſſary that it ſhould be here ſhewn; Well, quoth he, you ſhall *not* ſee it. Then addreſſing himſelf to the company, you ſee, my maſters, how this fellow is full of prating, bind me, his arms, for I will be ſafe of my life. My maſters, you that be my good friends, Thomas, Good, Gregory,——you there, my friends, bind; ſo they took and bound his arms behind him. Then he uttered divers furious words unto Thomas Doughty, as charging him to be the man that poiſoned my lord of Eſſex; whereas Maſter Doughty vouched it to his face, that he was the man that brought the general firſt to the preſence of my lord in England. Thou bring *me*, quoth the general, to my lord? See, my maſters, ſee here, how he goeth about to diſcredit me. This fellow, with my lord, was never of any eſtimation; I think he never came about him as a gentleman; for I that was daily with my lord, never ſaw him there above once, and that was long after my entertainment with my lord.

The charge againſt him read over.

"Then, in fine, was there a jury called, whereof Maſter John Winter was foreman. Then by John Thomas were the articles read unto them, even *once over for a laſt farewell*, for fear that men ſhould have carried them away by memory, all which appeared to conſiſt of words of unkindneſs, and to proceed of ſome choler when the priſoner was provoked, all which Doughty did not greatly deny: until at length came in one Edward Bright, whoſe honeſty of life I have nothing to do with, who ſaid, Nay, Thomas Doughty, we have other matters for you yet, that will a little nearer touch you. It will, i'faith, bite you to the griſkin. I pray thee, Ned Bright, ſaid the priſoner, charge me with nothing but truth, and ſpare me not. Then John Thomas read further for his laſt article to conclude the whole withal, That Thomas Doughty ſhould ſay to Edward Bright in Maſter Drake's garden, that the queen's majeſty and council would be corrupted. So Bright holding up his finger, ſaid, How like you this gare, ſirrah? Why, Ned Bright, ſaid Maſter Doughty, what ſhould induce thee thus to belye me? thou knoweſt that ſuch familarity was never between thee and me; but it may be, that I have ſaid, if we brought home gold, we ſhould be the better welcome; but yet this is more than I do remember. Then it came out, on further evidence, that Maſter Doughty ſhould ſay, that my lord treaſurer had a plot of the preſent voyage. No, that he hath not, quoth General Drake. The other replied, that he had, and had it of him. See, my maſters, ſaid Drake, what this fellow hath done, God will have this treachery all known; for her Majeſty gave me ſpecial commandment, that of all men my lord treaſurer ſhould not know it; but you ſee his own mouth hath betrayed him. So this was a ſpecious article againſt him to hurt his throat, and greatly he ſeemed to rejoice of this advantage.

"Then Maſter Doughty offered him, if he would permit him to live, and to anſwer theſe objections in England, he would ſet his hand to whatſo was there written, or to any thing elſe that he would ſet down. Well, once let theſe men, quoth the general, firſt find whether you are guilty in this or no, and then we will talk further of the matter: And then he delivered (after they had all taken their oaths, given by John Thomas) the bills of indictment, as I may term them, unto Mr. John Winter, who was foreman of this inqueſt. Then Maſter Leonard Vicary, a very aſſured friend of Maſter Thomas Doughty, ſaid unto him, General, this is not law, nor agreeable to juſtice, that you offer. I have not to do with your crafty lawyers, neither do I care for the law; but I know what I will do.——Why, quoth Maſter Vicary, who was one of his jury, I know not how we may anſwer his life. Well, Maſter Vicary, quoth he, you ſhall not have to do with his life; let me alone with that; you are but to find whether he be guilty in theſe articles that here are objected againſt him, or no. Why, very well, ſaid Maſter Vicary, then, there is, I truſt, no matter of death. No, no, Maſter, Vicary, quoth he. So with this the jury went together, finding all to be true, without any doubt or ſtop made, but only to that article that Edward Bright had objected againſt him; for it was doubted of ſome whether Bright were ſufficient with his only word to caſt away the life of a man. And truly it did argue ſmall honeſty in a man to conceal ſuch a matter if it had been ſpoken in England, and to utter it in this place where will was law, and reaſon put in exile; for an honeſt ſubject would not have concealed ſuch matter, which made ſome doubt of an honeſt dealing. But, to be brief, anſwer was made, that Bright was a very honeſt man; and ſo the verdict being given in, it was told to the general, that there was a doubt made of Bright's honeſty. Why, quoth Maſter Drake, I dare to ſwear that what Ned Bright has ſaid is very true, (yet within a fortnight after, the ſame Bright was in ſuch diſliking with him as he ſeemed to doubt his life; and having diſplaced him of the Pelican, and put him into the Marygold, he gave for reaſon, that himſelf would be ſafe, and he would put him far enough from him.) Thus having received in the verdict he roſe off the place, and departed to the water-ſide, were calling all the company with him, except Maſter Thomas Doughty and his brother, he there

He is declared guilty.

opened a certain bundle of letters and bills, and looking on them, said God's will, *I have left in my cabin that I should especially have had*, (as if he had there forgotten his commission:) but whether he forgot his commission or no, he much forgot himself, to sit as judge without shewing that he had any; but, truly, I think he shewed to the uttermost what he had: for here he shewed forth, first, letters that were written, as he said, by Master Hankins to my Lord of Essex for his entertainment; secondly, he shewed letters of thanks from my Lord of Essex unto him, and how much he had pleasured him; then read the letters that past from my Lord of Essex unto Secretary Walsingham in his great commendation; then shewed he letters of Master Hatton's unto himself, tending for the acceptance of his men John Thomas and John Brewer, for their well usage in this voyage; and lastly, he read a bill of her Majesty's adventure of a thousand crowns (but I most marvelled that so many noblemen and gentlemen did leave their letters in his hands, except it were to shew in this place for his credit.) So when he had all done, he said, Now, my masters, you may see whether this fellow hath sought my discredit or no, and what should hereby be meant but the very overthrow of the voyage; as first, by taking away of my good name, and altogether discrediting me, and then my life; which I being bereaved of, what then will you do? you will fain one to drink another's blood, and so to return again unto your own country: you will never be able to find the way thither. And now, my masters, consider what a great voyage we are like to make, the like was never made out of England; for by the same the worst in this fleet shall become a gentleman, and if this voyage go not forward, which I cannot see how possibly it should, if this man live, what a reproach it will be, not only unto our country, but especially unto us, the very simplest here may consider of. Therefore, my masters, they that think this man worthy to die, let them with me hold up their hands; and they that think him not worthy to die, hold down their hands; at the which, divers that envied his former felicity, held up their hands; some others again, for fear of his favourity, sticked not to lift their hands, although against their hearts; but some, again lifted up their hands and very hearts unto the Lord, to deliver us of this tyrannous and cruel tyrant; who upon the same, coming to his former judgment seat, pronounced him the child of death, and persuaded him withal, that he would by this means make him the servant of God: and said farther, if any man could, between this and next meeting, devise any way that might save his life he would hear it; and wished himself to devise some way for his own safeguard. Well, general, quoth he, seeing it is come to this pass, that I see you would have me made away, I pray you carry me with you to Peru, and there set me ashore. No, truly, Master Doughty, I cannot answer it to her Majesty, if I should so do; but, how say you, Thomas Doughty, if any man will warrant me to be safe from your hands, and will undertake to keep you sure, you shall see what I will say unto you. Master Doughty then calling on Master Winter, said, will you be so good as to undertake this for me? Then Master Winter said unto Master Drake, that he should be safe of his person, and he would warrant him, if he did commit him to his custody. Then Drake, a little pausing, said, See then, my masters, we must do thus; we must nail him close under the hatches, and return home again without making any voyage, and if you will do so, then speak your minds. Then a company of desperate bankrupts that could not live in their own country without the spoil of that, as others had by the sweat of their brows, cried, God forbid, good general! which voice was no less attentively heard, for there needs no spur to a willing horse. Thus telling Master Doughty to prepare for his death, and having given him one whole day's respite, to set all things in order, he rose and departed, promising that his continual prayers to God should not cease, that it would

Sentence of death pronounced on Doughty.

1578

please him to put it into his head how he might do him good; but he had so often before sworn that he would hang him, that, I think, at this present he meant to do him little good. Thus Master Doughty continuing all this night, the next day, and the second night in his prayers, except some small time that he used in settling his worldly business in some way, and distributing to such as he thought good, such things as he then had with him, was the 2d day of July commanded to prepare himself, and to make ready to die. Then Master Doughty, with a more chearful countenance than ever he had in all his life, to the shew, as one that did altogether contemn life; prayed him, that ere he died he might receive the sacrament; which was not only granted, but Drake himself offered to accompany him to the Lord's table, for the which Master Doughty gave him hearty thanks, never worse terming him than, My Good Captain! Master Drake offered him withal to make choice of his own death, and for that he said he was a gentleman, he should but lose his head, the which kind of death was most agreeable to his mind, in as much as he must needs die. And, truly, I heard say, that Master Drake offered him if he would, that he should be shotten to death with a piece, and that he himself would do that exploit, and so he should die by the hands of a gentleman. But, in fine, they together received the Lord's supper; the which I do ever assure myself that he did take with as uncorrupted a mind as ever did any innocent of the world; for he sure shewed himself to have all his affiance and only trust in God; he shewed himself so valiant in this extremity, as the world might wonder at it; he seemed to have conquered death itself, and it was not seen, that on all this day before his death, that ever he altered one jot of his countenance, but kept it as staid and firm as if he had some message to deliver to some nobleman. They having thus received the sacrament, there was a banquet made, such as the place might yield, and there they dined together, in which time, the place of execution being made ready, after dinner, as one not willing any longer to delay the time, he told the general that he was ready as soon as pleased him, but prayed him, that he might speak alone with him a few words, with the which they talked apart the space of half a quarter of an hour, and then with bills and staves he was brought to the place of execution, where he shewed himself no less valiant than all the time before; for here kneeling on his knees, he first prayed for the queen's majesty of England, his sovereign lady and mistress; he then prayed to God for the happy success of this voyage, and prayed to God to turn it to the profit of his country: he remembered also therein divers his good friends, and especially Sir William Winter, praying Master John Winter to commend him to that good knight; all which he did with so chearful a countenance, as if he had gone to some great prepared banquet, the which, I sure think, that he was fully resolved that God had provided for him; so at the last, turning to the general, he prayed him that he might make water ere he died, For, quoth he, the flesh is frail, and withal turned him about and did so; and coming again, said, Now truly I may say as said Sir Thomas More, that he that cuts off my head shall have little honesty [credit] my neck is so short; so turning him, and looking about on the whole company, he desired them all to forgive him, and especially some that he did perceive to have displeasure borne them for his sake, whereof Thomas Cuttle was one, Hugh Smith was another, and divers others; whereupon Smith prayed him to say before the general then, whether ever they had any conference together that might redound to his (the general's) prejudice or detriment. He declared it at his death, that neither he nor any man else, ever practised any treachery towards the general with him; neither did he himself ever think any villainous thought against. Then he prayed the general to be good unto the same Hugh Smith, and to forgive him for his sake. So the General said, Well, Smith, for

He receives the communion.

Dines with the admiral.

Master

1578 Maſter Doughty's ſake, and at his requeſt, I forgive thee; but become an honeſt man hereafter. So then Maſter Doughty embracing the general, naming him his good captain, bid him farewel, and bidding the whole company farewel, he laid his head to the block, the which being ſtricken off, Drake moſt deſpitefully made the head to be taken up and ſhewed to the whole company, himſelf ſaying, See this is the end of traitors."

He is executed

We have already obſerved that there have been various accounts of this matter. In one of theſe we find it related, that at Port St. Julian, Drake called a ſort of council of war or court martial, and ſhewed his commiſſion, by virtue of which the queen gave him power of life and death, which was ſaid to be delivered with theſe words from her own mouth: "We do account, Drake, that he who ſtrikes at thee ſtrikes at us." Here likewiſe it is pretended that he expoſed Mr. Doughty's bad practices from the time of their leaving England, appealing to the company for his cordial behaviour to the gentleman accuſed, ſupporting his charge by producing papers under his own hand, "*to which Mr. Doughty* [a circumſtance not very probable] *added a full and free confeſſion.*" Nor is what follows, at all more likely, viz. That the accuſed having it left to his choice to be executed on the iſland, where they then were, to be ſet on ſhore on the main land, or to be ſent home to abide the juſtice of his country; after a day's conſideration, gave his reaſons [to be ſure they muſt have been *weighty ones*] for chuſing to be executed at Port Julian, "and having received the ſacrament with the general "from the hands of Mr. Francis Fletcher, chaplain "to the fleet, and made a full confeſſion, his head "was cut off with an ax, by the provoſt marſhal, "July the 2d, 1578."

The execution of Doughty was followed by ſome inſtances of partiality againſt particular perſons, which at the ſame time that they marked the partiality of Drake, ſeemed ſtrongly to indicate his doubts relative to the expedition in which he was engaged, and wherein it appeared plainly enough that all the queen's concern was that of having condeſcended to advance a conſiderable ſum as a private adventurer.

The laſt proof which we ſhall here adduce to ſupport the opinions we have advanced we ſhall draw from this commander's ſpeech to his men on the 6th of Auguſt, a few days before he left Port Julian.

Remarkable ſpeech of Drake to his company.

"Commanding his whole company aſhore, and placing himſelf in a tent, one ſide of which was open, he called Maſter Winter on one ſide of him, and John Thomas on the other ſide; his men laid before him a great paper book, and withal Maſter Fletcher offered himſelf to make a ſermon. Nay, ſoft, Maſter Fletcher (ſaid he) I muſt preach this day myſelf, although I have ſmall ſkill in preaching. Well, all ye the company, are ye [all here] or not? Anſwer was made that they were all there. Then commanded he every ſhip's company ſeverally to ſtand together, which was alſo done. Then ſaid he, My maſters, I am a very bad orator, for my bringing up hath not been in learning, but whatſo I ſhall here ſpeak, let every man take good notice of, and let him write it down, for I ſhall ſpeak nothing but what I will anſwer it in England, yea, and before her Majeſty, as I have it here already ſet down.*

"Thus it is my maſters, that we are very far from our country and friends; we are compaſſed in on every ſide with our enemies, wherefore we are not to make ſmall reckoning of a man, for we cannot have a man if we would give for him ten thouſand pounds, wherefore we muſt have theſe mutinies and diſcontents that are grown amongſt us redreſſed; for, by the life of God, it doth even take my wits from me to think on it. Here is ſuch controverſy between the ſailors and the gentlemen, and ſuch ſtomaching between the gentlemen and ſailors, that it doth even make me mad to hear of it. But my maſters, I muſt have it ceaſe; for I muſt have the gentlemen to haul and draw with the marines, and the marines with the gentlemen; and let us ſhew ourſelves to be all of a company, and let us not give occaſion to the enemy to rejoice at our decay and overthrow. I would [fain] know him that would refuſe to ſet his hand to a rope; but I truſt, there is not any ſuch here; and as gentlemen are very neceſſary for government ſake on the voyage, ſo have I ſhipt them for that purpoſe, and to ſome further intent, and yet, though I know ſailors to be the moſt envious people of the world and ſo unruly without government, yet may I not be without them.

"Alſo if there be any willing to return home, let me underſtand of them, and there is the Marygold, a ſhip that I can very well ſpare, I will furniſh her to ſuch as will return, with the moſt credit that I can give them, either by my letter or any way elſe; but let them take care that they go *homeward*; for, if I meet them in my way, I will ſink them; therefore you ſhall have time to conſider hereof until to-morrow, for, by my troth, I muſt needs be plain with you; *I have taken that in hand that I know not in the world how to go through withal*; it paſſeth my capacity, it hath even bereaved me of my wits to think on it. [Well yet the voice was that none would return, they would all take ſuch part as he did.] Well then, my maſters, quoth he, came ye all forth with your own good wills or no? They anſwered all, Willingly.† At whoſe hands, my maſters, demanded he, take ye to receive your wages? At your's, anſwered the company. Then ſaid he, How ſay you, will you take wages, or ſtand to my good courteſy? To your courteſy, good captain, was the reply.

"Then he commanded the ſteward to the Elizabeth to bring him the key of the ſtores, the which he did. Then turning him unto Maſter Winter, he ſaid, Maſter Winter, I do here diſcharge you of your captainſhip; and ſo in brief he ſaid to all the officers. Then Maſter Winter, and John Thomas aſked him what ſhould move him to diſplace them? He aſked, in return, whether they could give any reaſon why he ſhould not do ſo? So willing them to content themſelves, he willed ſilence in theſe matters, ſaying, ye ſee here the great diſorders we are entangled into; and although ſome [meaning Doughty] have already received condign puniſhments, as by death, who, I take God to witneſs, as you all know, was to me as my other hand, yet you ſee, over and beſides the reſt, his own mouth did bewray his treacherous dealings; and ſee how, truſting to the ſingularity of his wit, he over-reached himſelf at unawares. But ſee what God would have to be done; for her Majeſty commanded that of all men my lord treaſurer ſhould have no knowledge of this voyage, and to ſee that his own mouth hath declared that he had given him a plot [plan] thereof. But truly, my maſters, and as I am a gentleman, there ſhall no more die; I will lay my hand on no more, although there be here who have deſerved as much as he: and ſo charging [charged] one Worrall, that was preſent, that his caſe was worſe than Doughty's, who, in Maſter Doughty's extremities, was one of Drake's conſellows, who [he] humbling himſelf, to Drake, even upon his knees, prayed him to be good unto him. Well, well, Worrall, ſaid he, you and I ſhall talk well enough of this matter hereafter. Then he charged one John Audley with ſome ill dealings towards him, but opened no matter, but ſaid he would talk with him alone after dinner.

"Here is ſome again (ſaid he) my maſters, not knowing how elſe to diſcredit me, ſay and affirm that I was ſet out on this voyage by Maſter Hatton; ſome, by Sir William Winter; and ſome, by Maſter Hankins;

* "But whether it were in his book or not (ſays the author) that I know not, but this was the effect of it, and very near the words."

† But we have already noticed, it was to ſail to Alexandria, and not with a view to the enterpriſe wherein they were now engaged.

kins; but these are a company of idle heads that have nothing else to talk of. And, my masters, I must tell you, I do know them as my very good friends; but to say they were the fitters forth of this voyage, or that it was by their means, I tell you it was nothing so. But indeed thus it was. My lord of Essex wrote in my commendation unto Secretary Walsingham more than I was worthy; but by like I had deserved somewhat at his hands, and he thought [reported] me in his letters, a fit man against the Spaniards for my practice and experience that I had in that [the Spanish] trade; whereupon indeed Secretary Walsingham did come to consult with his lordship, and declared unto him that for that her majesty had received divers injuries of the king of Spain, for the which she desired to have some revenge; and, withal he shewed me a plot [plan] willing me to set my hand, and to write down where I thought he might be most engaged; but I told him some part of my mind, but refused to set my hand to any thing, affirming that her majesty was mortal, and if it should please God to take her majesty away, it might be so that some person might reign that might be in league with the king of Spain, and then will [would] mine own hand be a witness against myself. Then was I very shortly after, and on an evening, sent for to her majesty by Secretary Walsingham; and the next day coming to her majesty, these or the like words she said: Drake, so it is that I would be gladly revenged on the king of Spain for divers injuries that I have received. And [as Drake asserted,] she said further that he was the only man that might do this exploit, and withal craved his advice therein, who told her majesty of the small good that was to be done in Spain, but the only way was to annoy him by his Indies.

"Then, with many more words he shewed forth a bill of her majesty's adventure of a thousand crowns which, however he said at some time before, that her majesty did give him towards his charges. He shewed also a bill of Master Hatton's adventure, and divers letters of credit that had passed in his behalf, but never let them come out of his own hands. He said also that her majesty did swear by her crown,—That if any within her realm did give the king of Spain hereof to understand (as she suspected but *two*) they should lose their heads therefore.

"And now, masters, said he, let us consider what we have done—We have now set together by the ears three mighty princes; namely, her majesty, [and] the kings of Spain and Portugal; and if this voyage should not have good success, we should not only be a scorning, or a reproachful scoffing stock unto our enemies, but also a great blot to our whole country for ever, and what triumph would it be to Spain and Portugal, and again the like would never be attempted.

And now, restoring every man again to his former office, he ended, shewing the company that he would satisfy every man or else he would sell all that he had, even unto his plate:——For, quoth he, I have good reason to promise, and am best able to perform it; for I have somewhat of mine own in England; and besides that I have as much adventure in this voyage as three of the best whatsoever; *and if it be so that I never come home, yet will her majesty pay every man his wages; whom indeed you and I and all come to serve*; and for to say you come to serve me, indeed I will not give you thanks; *for it is only her majesty that you serve*, and this voyage is only her fitting forth. So willing all men to be friends, he willed them to depart about their business.

The reader will easily perceive that how subtly soever Drake thought he had formed this speech (which might be well enough calculated to impose on men who were under his command, and being so far distant from their country, had no other dependance than on him for their future fortunes) yet it abounded with inconsistencies, and seems to furnish sufficient reasons to doubt the authority by which he acted, at the same time that it shews his own doubts and fears about the expedition in which he was engaged. 1578

The number of the ships being reduced to three, Drake quitted * Port St. Julian, and entered the streights of Maghellan on the 20th of August, in the intricate passage of which an island was discovered, to which the English gave the name of Elizabeth, in honour of their queen.——They came on the 24th to an island, where they killed 3000 penguins in one day.

At length they passed the Streights, which sometimes seem entirely shut up by capes and head-lands, yet the ships made good their passage.

Maghellan observed many harbours here, but remarked that in most of them no bottom was to be found, which however does not seem to appear to be an accurate account; the harbours being in general good, though the tides and blasts continually rushing in from various directions create the danger. The land on both sides rises into innumerable mountains; the tops of them were encircled with clouds and vapours, which, being congealed, fell down in snow, and increase their apparent height by hardening into ice; yet in the winter time, even at that season which answers to our February, they found the valleys in some places, green, fruitful and pleasant.

Anchoring in a bay near Cape Forward, Drake, imagining the streight quite shut up, went in his boat to endeavour to find some other passage out; and, and having found an inlet towards the north, was returning to his ships; but curiosity occasioned him to stop for the sake of observing a canoe or boat with several natives of the country in it. He could not, at a distance, help admiring the form of this little vessel, which seemed inclining to a semicircle, the stern and prow standing up, and the body sinking inward; but much greater was his wonder when upon a nearer inspection, he perceived it was made only of the barks of trees, sewed together with thongs or filaments of the seal skin in such a manner, that scarcely any water entered the seams of that little vessel. He found the people here well shaped, and painted like those who have been already described. On the land they had a hut built with poles, and covered with skins, in which they had water vessels and other utensils, made likewise with the barks of trees. Among these people natural sagacity and unwearied industry supplied the want of such manufactures or natural productions, as appear to us absolutely necessary for the support of life. Though the inhabitants were wholly strangers to iron and the use we make of it, yet instead of it, they substituted the shell of a muscle of prodigious size found upon their coasts. This they ground upon a stone to an edge that was so firm and solid, that neither wood nor stone were able to resist it; and with instruments made of shells, they were able to perform all their mechanical operations.

Thus Drake, though not at a favourable season, passed the Streights of Maghellan in the space of † 16 days, and after he had surveyed the country, having directed his course N. W. and entered the great South Sea on the 6th of September, intending to hold on his way towards the Equinoctial line.

But the very next day, after having observed an eclipse of the moon, the fleet was overtaken with so violent a storm, that the ‡ ships were in a manner left to

A terrible storm for a month.

* The Day before they weighed anchor we find he came on board the Elizabeth, and swore that he would hang thirty of his men, and repeated his charge against Worral, still seeming to retain that resentment against particular persons which he had promised to banish from his breast.

† None of our modern voyagers have been less than 36 days. Captain Wallis was four months in his voyage through these streights.

‡ The Marygold was separated from the rest of the fleet, during the continuance of this storm on the 30th of September. Having entered a harbour on the 7th of October, they were once more forced out to sea by a violent gust of wind, and Captain Winter was so much discouraged, that regaining the streights he made the best of his way to England.

1579 to the mercy of the winds, which after beating about in great diſtreſs for above a month, drove them 200 leagues out of their way, and they were forced at laſt into 55 degrees of ſouth latitude.

Here they diſcovered a number of iſlands, and came to an anchor cloſe by one of them for the ſake of refreſhing themſelves, where they found good greens and excellent water. Entering another bay, they met with ſome Indians in their canoes, croſſing along ſhore with whom the Engliſh held a traffic, exchanging for ſuch proviſions as they ſtood in need of, thoſe toys and baubles they found moſt valued by the natives.

Another tempeſt overtook them after their departure from theſe coaſts, and drove them to the very extremity of the South-American coaſt, where they ſaw for the firſt time the conflux of the weſtern and ſouthern oceans, and at length enjoyed the happineſs of a ſmooth ſea, to which they had ſo long been ſtrangers.

Drake now held his courſe for the 30th degree of ſouth latitude, ſteering, at the end of October, for the rendezvous appointed in caſe of ſeparation for his little fleet, having met with certain iſlands in his way, where he ſupplied himſelf with a great quantity of fowls. When he arrived at the deſired latitude, he found no ſhips, nor any ſafe port; he therefore proceeded till he came to Macao, where the Indians making a ſhew of friendſhip, and preſenting the Engliſh with two ſheep and ſome fruits, and ſhewing them a watering place, the latter came the next day with their barrels; when two of their company who were ſent before were ſlain in their way by the natives, who had alſo laid in ambuſh behind the rocks, from whence they diſcharged ſuch a ſhower of arrows into the boat, as wounded every one of the crew. The commander himſelf received a dangerous hurt by an arrow entering under his eye, while the ſituation of the Engliſh and the element itſelf fought ſo ſtrongly againſt them, that not one of the Indians (though they came cloſe to the boat) was killed or wounded by their weapons *.

Macao.

Ambuſh of the Indians.

The ſame afternoon they ſet ſail and came to an anchor on the 30th of November in Philip's Bay, where their boat's crew that had been ſent out upon diſcovery returned with an Indian of a graceful ſtature and complacent behaviour, whom they had made priſoner in the courſe of their expedition: uſing him well, and ſetting him on ſhore again, he perſuaded the natives to come and traffic with the Engliſh, who were thereby ſerved with what the country afforded, and afterwards accepted of this man as a pilot to conduct the fleet to the harbour, called by the Spaniards Val Parizo, in lat 33° 40′ S. near the town of St. Jago, where the adventurers were more plentifully ſupplied with proviſions and wines from the ſtorehouſes, and had beſides the good fortune to take a ſhip which had on board not only wines, but 60,000 pezoes of gold. They were at firſt taken for friends by the Spaniards, and invited to carouſe with them. But when the miſtake was diſcovered, and the place alarmed, the townſmen fled, inſtead of endeavouring to defend their property, which was left to the mercy of Drake and his men, who found a large booty in the chapel, and employed three days in ſecuring what they had amaſſed.

A rich ſhip taken.

Having conveyed the Indian to the place from whence they took him, after giving him a reward for his ſervices, intending to put their ſhip into ſome place of ſafety where they might build a pinnace for the convenience of running up creeks and harbours; for this purpoſe they ſailed into the bay near Coquimbo on the 17th of December. The town was inhabited by Spaniards, a hundred of whom came out againſt them on horſeback. Drake's men prudently retired, one only excepted, who obſtinately perſiſted in remaining on ſhore, and being ſlain by the Spaniards, after a ſtout reſiſtance, they ordered ſome of the Indians who attended them to the amount of 200, to behead and tear the heart out of his body in ſight of the Engliſh, who preſently quitted this place in ſearch of a more ſecure harbour.

Having found a bay, where they built their pinnace, Drake went to ſeek his companions, but returned in two days: the wind proving contrary. Landing afterwards at a port called Sarcipaxa, and having found a Spaniard aſleep with bars of ſilver lying by him, to the amount of 4,000 Spaniſh duckets, they took away the treaſure, leaving the guardian of it to his repoſe. Their next exploit on this coaſt was taking the burdens from the backs of eight Peruvian ſheep, (driven by a Spaniard) which loads were of ſilver, each of theſe animals carrying 100lb. weight of that metal in leathern bags acroſs his back. They found ſome Indian towns farther on, the natives of which viſited them paſſing the watry element ſitting on two ſeal-ſkins blown up with wind, which they managed very dextrouſly. Theſe people trafficked with them for glaſs and toys in the uſual manner of thoſe countries †. On the 20th of January they arrived at Mormorena, from which place continuing their courſe northward, on the 7th of the next month they came to Arica, which is ſituate in latitude 8° 36′ ſouth latitude ‡. Here they found three ſmall veſſels, on board of which there were 57 ſlabs of ſilver, about the ſize of a brick, and nearly of the ſame form, weighing near 20lb. each. The crews of the veſſels being all on ſhore, the Engliſh met with no reſiſtance, but made an eaſy prize of the treaſure. Drake did not think fit to attack the town, judging his numbers not ſufficient for the enterprize; he therefore ſailed to Chuli, after having ſtopped a coaſting veſſel, whoſe lading conſiſted of linen and cloaths, out of which he took ſuch articles as his men moſt wanted, and then ſuffered the Spaniards to proceed on their voyage.

From Arica an expreſs had been ſent with information of his being on the coaſt, which arriving two hours before he could reach the port, the maſter of a ſhip that had 300,000 pezoes of ſilver in bars on board, had thrown it into the ſea, as they were informed by an Indian that was left alone in the veſſel, the reſt of the crew being gone on ſhore for ſecurity. Drake hearing theſe tidings departed immediately for Lima, where he arrived on the 15th of February. He found a number of Spaniſh ſhips § in the harbour, but met with no reſiſtance from them, and had a good booty there, taking from one veſſel a cheſt full of rials of plate; and ſilk, and linen cloaths, to a conſiderable amount from other ſhips; the ſurpriſe the Spaniards were in, and the reputation of this extraordinary adventurer not ſuffering them to act as they might have done for their own defence, the conſequence of which might have been Drake's deſtruction.

But he reſted, not here; having being informed that the rich ſhip called the Cacafuego had ſailed three days before for Paita, he reſolved to go in purſuit of her; but finding afterwards that, inſtead of Paita, ſhe was

* The iſland was peopled by Indians who had fled from the Spaniſh conquerors of the continent of America. They ſeemed to have miſtaken Drake and his crew for Spaniards, on whom they conſequently endeavoured to revenge old injuries.

† Here Drake invited the Spaniards to traffick with him, which they accepted; and ſupplied him with neceſſaries, ſelling to him, among other proviſions, ſome of their ſheep, whoſe bulk almoſt equalled that of a cow, and whoſe ſtrength was ſuch, that one of them could carry three tall men on his back; their necks being like a camel's, but their heads like thoſe of our ſheep. They were the moſt uſeful animals of this country, not only affording excellent fleeces and wholeſome fleſh, but ſerving as carriers over rocks and mountains, where no other beaſt can travel; their feet being of a particular form, enabling them to tread firm on the ſteepeſt and moſt ſlippery places. On this coaſt, it is ſaid, the mountains were ſo impregnated with ſilver, that from one hundred weight of common earth, five ounces of fine ſilver might be ſeparated.

‡ At this port the Spaniards uſed to land their merchandiſe, and to embark the ſilver which was carried from thence to Panama, but after Drake's incurſion they altered their plan, carrying it over land to Lima.

§ Some writers ſay they were 30 ſail, others mention but 12; however there were ſome ſhips of force among them.

was gone for Panama, he altered his course accordingly, promising that the first man who espied her should have his gold chain, which reward was gained by his brother John. It was on the 1st day of March that they came up with this vessel, and after a slight resistance took her, when they found her so richly laden that it was the 6th day before they could bring away the treasure with which she was freighted. She had on board a quantity of jewels, 13 chests of money about 80 pounds weight of gold, and wrought plate to a great amount, besides six tons of unrefined silver. After the departure of the English from Lima, in pursuit of the Cacafuego, a Spanish writer * tells us that news was brought of Drake's being upon the coast; the governor having before assembled the force of the country to oppose him if necessary, finding he made sail and stood out of the harbour, ordered three ships with six pieces of cannon on board, and 250 men to be got ready to go in pursuit of him; but the time necessary for equipping these vessels, gave Drake the advantage of escaping them, and he came up with the Cacafuego, off Cape Francisco. Juan de Anton, the captain, seeing a ship coming towards him, with all her sails set, thought she might be sent with some message to him from the viceroy, and lay to, in order to receive her. He did not perceive his mistake till too late, when his attempt to escape proved vain, Drake pouring in the shot from his great ordnance fast upon him, which as he could not answer in the same way, he was obliged to strike. †

The commander having dismissed the Spaniards, stood off again to sea, and shaped his course to the westward; while three Spanish ships which were sent in quest of him by the viceroy of Peru, having been too late to come up with him, sailed with a view to intercept him at the streights of Maghellan. In the mean time this fortunate admiral, in his way, fell in with a vessel from the East Indies, whose lading consisted of china ware, silks, and cottons. The owner being on board, made him a present of a falcon wrought in solid gold, with an emerald of an extraordinary size set in the breast, and this) together with a gold cup that he received from the pilot, proved a ransom for the vessel, which was accordingly dismissed by the captors. ‡

Finding a convenient harbour in a little island which they made on the 13th of March, the English put in there, anchoring in five fathom water. On the 20th of the same month, their pinnace found a small coasting vessel that was passing by. They took out of her a quantity of sarsaparilla, butter, and other goods; in the room of which Drake put on board her the gold and silver from his own ship, which he wanted to heave, and refit for sea. This employed his people till the 26th, when they took in the loading again, and having taken in wood and water, they, together with the little Spanish frigate, put to sea again. They gave chace to a ship on the evening of the 6th of April, above two leagues from the main land, and boarded her the next day before the crew were up. They took great quantities of bale goods from this vessel; and among the persons found one called Don Francisco Xarate, who had intended to sail for Panama, and from thence to China, being charged with letters from the Court of Spain to the governor of the Phillippines, as also a set of sea charts for the voyage, which became very useful to the captor. ‖ A Spanish pilot, whom they took from this ship was likewise kept to direct them into some safe port, who accordingly brought them to Anguatulco on the 13th of April, where they remained till the 26th, and then proceeded to sea, having dismissed their Spanish pilot, and likewise Nuno da Sylva, whom they had brought from the Canaries. §

1579

When they landed at Anguatulco, the admiral marched his men immediately up to the town where the chief magistrate was then sitting in judgment on some Indians who were accused of having entered into a conspiracy to set fire to the place. These wretches had doubtless been sentenced to death, but for the arrival of the English, who made the judges and criminals alike their prisoners, and conducted them in procession to their commander's ship. When they were come on board, the judge was obliged to write an order to the commander to deliver up the town, where the conquerors found no small treasure. **

Surprises the Spanish judges at Anguatulco

Having succeeded thus far, these lucky adventurers considering that Fortune is often fickle, and being equally fearful of losing, as they were desirous of enjoying, what through so many perils and dangers they had acquired, began seriously to think of returning, while their commander represented the necessity of first finding out some harbour wherein they might refit, and also urged the great convenience as well as honour which would accrue if they could find out some shorter passage from one sea to the other, a matter, which he then saw no reason to deem impracticable.

They prepare for their return.

They accordingly sailed into a port in the Isle of Canes, when there they took in wood and water and prepared for the voyage, intending if possible to discover a north-west passage, but coming to lat. 43° the cold proved so intolerable to them who had so long been cruising in the warm climates, that they were obliged to lay aside their project and change their course.

Not discouraged by this disappointment, Drake resolved to put in execution the plan which he had before laid down in case of the failure of his first scheme; which was to steer for the Moluccas, and return by way of the Cape of Good Hope into the Atlantic Ocean. In pursuance of this design they spread their sails to the northern winds, and steering southward had arrived in 38° 30′ north lat. when they discovered a commodious harbour, in which they anchored on the 17th of June.

The next day a man in a canoe approached the shipping, who seemed to make a sort of oration in his language. He repeated his visits a second and a third time, and at the end of his last speech gave them a crown of black feathers and a basket filled with a sort of herb, that he threw into the boat, and in exchange for which he was not willing to receive any thing.

It was not, however till three days afterwards that the

* Lopez de Vaz.

† "There was in this ship (says the Spaniard in his account) 850,000 pezoes of silver, and 40,000 pezoes of gold, all which silver and gold was customed; but what treasure they had uncustomed, I know not; for many times they carry almost as much more as they pay custom for; otherwise the king would take it from them if they should be known to have any great sum. Wherefore every ship carries a bill of custom that the king may see it. All the treasures which Drake took was merchants and other mens goods, saving 180,000 pezoes of the king's. He had also out of this ship good store of victuals, and other necessaries which were to be carried from Panama, and was five days in taking out such things as they needed.

"This done, he sailed to the coast of New Spain, without going to Panama. The ships that were sent by the viceroy of Peru from Lima, arrived off Cape Francisco 20 days after Drake had taken the Cacafuego, and had intelligence by a ship coming from Panama, that he had taken a ship with silver and was not gone to Panama; whereupon the commander of the three ships thinking that Captain Drake had been gone for the streights of Maghellan, directed his course that way to seek him."

‡ Drake, however, knowing China porcelain to be a scarce commodity at that time in Europe, took four chests of that ware out of her, before he suffered her to depart.

‖ They also took a young negro girl, whom either the commander or some of his crew got with child, and afterwards cruelly deserted her.

§ In return for his services he was landed on the continent, and consequently left to the mercy of the Spaniards, who carrying him to Mexico, put him to the torture, to force him to make discoveries. Then he was sent to Spain, where, having told all that he knew, he was discharged and sent home in safety.

** They are said to have found there a great pot full of plate "as big as a bushel," some jewels, and a gold chain, the latter of which was taken from a gentleman who was intercepted while he was endeavouring to make his escape from the town.

1579 the commander chose to bring his ships, which stood in need of repairs, close to this friendly coast. Landing, in order to take out the lading, the English yet dubious of the sincerity of the natives, raised a fortification of earth, fenced with palisadoes, a work which the Indians, whilst it was going on, surveyed with admiration. The admiral, at length, convinced of their sincerity, having prevailed on them to lay aside their bows and arrows, presented them with linen and some other necessary articles, which were received by them with equal demonstrations of wonder and respect.

The Indians behaviour and ceremonies.

They returned two days afterwards, their numbers being greatly increased, stopping on the top of a neighbouring hill, and by their voices and gestures drawing the attention of the English, who conceived by their manners at the first meeting, and the loud noises they afterwards made, that they were inclined to pay them a sort of worship according to the custom of their country. Drake and his followers were confirmed in this opinion, by a long oration that one of the Indians now made, all of them bowing their bodies, at the end of it and repeating the word *Oh* as expressive of their approbation. Then they laid aside their bows, and the men coming down towards the tents thus unarmed, were kindly received by the English commander; while the women, who surveyed what passed at a distance, began to tear themselves with their nails, and throw themselves on the ground, in token of reverence to the strangers. Soon after came two ambassadors from the Hioh or king, who demanding certain tokens of peace, which request being granted, the king himself paid a visit to the settlement. A person preceded him bearing a kind of sceptre of black wood, ornamented with chains made of horn or bone, which they use as tokens of distinction. The monarch himself came next. His apparel was a coat made of skins, and on his head he wore a crown of feathers curiously interwoven. He had a hundred tall men for a guard. His attendants who followed him wore a dress somewhat resembling his own, and the common people brought roots and fish in baskets, which were contrived so as to be capable of holding water. Though the procession had every appearance of peace, and the natives, notwithstanding they were stout men, had no weapons adequate for defending themselves or assaulting others, their bows being too weak to be properly considered as warlike implements, yet Drake took the precaution of drawing up his men in order, while they approached, and when they stopped, the sceptre bearer began a sort of song and dance, the men accompanying him. But the women were observed to dance only, without joining in the song. In the mean time every look and gesture so fully denoted their peaceable designs, that the English admitted them into their camp, and after a repetition of their dance and song, another speech was made, the purport of which was the desire the king had of conferring his kingdom on Drake, who was accordingly crowned, had the title of Hioh given him, and was invested with all the insignia of royalty that were used in the investiture of sovereign princes in that country. He having gone through these ceremonies, took possession of the place for queen Elizabeth, and then the common people retiring, tore their flesh as before, in token of respect, a ceremony which they repeated till at last they were given to understand that it was highly disagreeable to their guests; at the same time that by proper applications they cured the wounds by which these poor creatures testified their love and submission. When these ceremonies were laid aside,

Drake takes possession of New Albion for the queen.

they still continued these visits, while Drake and some of his men, in return, went up the country, which they found fertile enough by nature at some distance from the sea shore, and full of large deer, and remarkable for a particular sort of conies*. The English found the houses of the natives like some already described to be nothing but holes dug to a convenient depth, with rafters meeting so as to form the roof at the top. The fire was made in the middle of each house, without a chimney, the smoke being suffered to issue out at the door. Rushes served these simple people instead of beds; the women wore nothing but each a petticoat of bulrushes, and the men in general went quite naked. They seemed ignorant of the useful arts of life, they took fish, but wanted not the assistance of nets, being so dextrous as to catch them in their hands whenever they swam near the shore.

Though it does not appear that the possession of this land, which was useful only to Drake by furnishing him with provisions and a resting place, could be of any great use to his country, yet he seems to have valued himself upon the acquisition, and before his departure, caused the account of the resignation of it to be engraven on a brass plate, and fixed up by way of memorial. The inhabitants greatly lamented the loss of these their guests, kept them as long as possible in their sight from the hills, and after they set sail, lighted up fires as if intended for sacrifices, which the English construed as the last token of respect they thought they could shew to such wise and beautiful strangers, who had deigned to honour them with their presence. Vanity might possibly have a share in some of these conclusions; however, when it is considered with what esteem next to veneration the Spaniards were at first received by the Americans, we may well credit, in general, the account given of the reception of the English in this hospitable country, to which the commander gave the name of New Albion, from the white cliffs that surrounded it.

They quitted this harbour on the 23d of July, and after having touched at some neighbouring islands, it was resolved in a general consultation to sail for the Moluccas, whither they directed their course on the 25th of the same month, steering westerly, without coming in sight of land, till they discovered some islands on the 30th of September in 20° north lat. from whence the inhabitants at first came to them peaceably to exchange provisions for European commodities, but at length growing insolent, Drake thought proper to give them an idea of his power by his ordnance, which, without hurting them, had the desired effect of preventing further insolence from the untutored savages. †

Sails for the Moluccas.

It was on the 3d of November that our adventurers arrived at the Moluccas, intending to touch at Teridore or Tidore: as they coasted along the island of Mutua, the viceroy of the king of Ternate paid them a visit recommending to them to make application to his master for supplies, and not to the king of Portugal, who was at enmity with him. The commander was accordingly prevailed on, and anchored on the 5th before Ternate. Three large barges with the viceroy and several of the principal nobility came out to conduct the vessel safe into harbour. The king likewise, having been presented with a velvet cloak in sign of amity, afterwards came in great state, and was received under the discharge of the cannon, the music striking up as he approached. ‡

This prince had guards who understood the use of fire-arms, though javelins, and bows and arrows were their principal weapons. He is described as a person of

* These are described as having bags under their chins which serve them to carry food to their young, with rats tails and paws like those of a mole.

† They at first brought fruits and other things of small value, and were contented with a regular exchange; but afterwards thinking slightly of the force of the English, a number of men in canoes were sent, who insolently took whatever they could lay their hands on, without giving any thing in exchange. It followed, that at last they were desired to keep away, on which they began hostilities with a shower of stones; but Drake in this instance shewed his moderation, by firing his great guns without hurting them, but the sound of which so affrighted them, that jumping into the water, they hid themselves under their canoes, for fear of these terrible engines, which indeed, might have been used for their destruction.

‡ He was so well satisfied with this mark of respect, that he invited the performers on board his own barge, in token of his approbation.

of a majestic mien and graceful aspect.—Those that attended him were dressed in cottons or callicoes, and some of them were of a venerable aged appearance. He withdrew when the ship came to an anchor, having given his subjects leave to traffic with the strangers, and promised to return within the space of two days *.

Description of the court of Java.

Drake having sent some gentlemen on shore, they were conducted to the castle †, and being introduced at court, found there near 1000 people. On each side of the outward gate there waited four old interpreters of other countries. Among the courtiers were 60 privy counsellors. When his majesty appeared on this public occasion he was dress in cloth of gold, and had his hair woven into golden ringlets; he had diamond rings on his fingers, and a gold chain round his neck. Near his chair there was a page with a fan set with sapphires, which was useful in moderating the heat of the weather, and he sat under a rich canopy, where he received the English in state, and with marks of honour and respect ‡.

On the 9th of Nov. the English quitted this harbour after having shipped between four and five tons of cloves, and sailing southward, put in at an uninhabited island which was pleasant, woody, and full of a kind of flies, which shone by night like fire. Here they put in to refit their ships which had become leaky and foul, and landing, stayed twenty-six days there to refresh themselves; where they found fruits of an excellent flavour, and a remarkable large sort of tortoises.

When the English took the Mulatto girl on board the Spanish vessel, as has been already mentioned, they also took a Negro lad, and it was on this island that they resolved to set them both on shore together, the girl not yet fifteen, being near the time of her delivery. To effect this cruel purpose, they found means to send both of them a great way up the country, and while they were far enough off, weighed anchor, and left the harbour on the 12th of December, abandoning them to their fortune, and they were never heard of more.

The ship strikes upon a rock.

In their course they fell in with a number of islands, from which just when they thought themselves disentangled, they struck on a concealed rock in the night of the 19th of January. The shock was so much the greater as the accident was unexpected. When the crew perceived their situation murmurs began to arise among them, and their commander escaped not some severe reproaches. Fletcher the chaplain in particular accused him, intimating that the men were likely to suffer for the crimes of their captain, an observation which severely hurt the latter; but he well knew this was no time to take up the matter, and therefore bore what in other circumstances would have called forth his resentment. As matters were now situated he rather strove to reconcile differences than to augment them, at the same time that he tried all means which prudence could suggest to surmount this difficulty. In the first place, as the vessel had not bulged on the rock, he lightned her by causing the guns and water-casks to be thrown overboard, and having recourse to the pump, found the water did not gain upon them. After this, he would have tried to bring her to with an anchor, but could find no place proper to fix one, as the rock rose perpendicular, and stood alone in the sea. This discovery however he was at no small pains to conceal; but at length having been stuck fast for 24 hours, he began with the rest, to lose all hopes of deliverance; on which account he gave his crew an exhortation to forgive all injuries and prepare themselves for the worst event. While they were in this situation, Fletcher administered the Sacrament to them all, and this confirmed their reconciliation. 1580

But when every one had given up the hope of escaping from this perilous situation, the wind suddenly changed, and blowing briskly from a different quarter heaved the ship off the rock, without doing her any considerable damage.

They come to Baratene.

Thus relieved, they proceeded slowly and cautiously, till they reached the island of Baratene §, where they repaired their vessels, and found the country fertile and possessed by handsome people.

Departing from thence they proceeded to the isle of Java, where they were well received by the king, who entertained Drake on shore, and gave him liberty to get what provisions they stood in need of, himself coming on board to survey the ship, which was victualled there; and had her bottom payed, to fit her for the voyage, after which the admiral departed, and was much mortified to find his company insisted on his immediate return home, while he entertained designs of a different nature.

It was now that he thought proper to shew his resentment against the chaplain: under pretence of his spiriting up the people to oppose him, he caused him to be made fast by one of his legs with a chain, and a staple knocked fast into the hatches, in the forecastle of the ship. He called all the company together, and then put a lock about one of his legs; and Drake, sitting cross-legged on a chest, and a pair of pantofles in his hand, he said, "Francis Fletcher, I do here excommunicate thee out of the church of God, and from all the benefits and graces thereof, and, I renounce thee to the devil and all his angels;" and then he charged him, upon pain of death, not once to come before the mast; for if he did, he swore he should be hanged, and Drake caused a *posey* to be written and bound about Fletcher's arm, with charge, that if he took it off, he should then be hanged; the posey was, "*Francis Fletcher, the falsest knave that liveth.*"

The people oblige him to return.

The commander, however, was obliged to comply with the desires of his people, and steering for the Cape of Good Hope, doubled it on the 15th of June, passed the line on the 12th of July, and arrived at Sierra Leona on the 22d, without experiencing those great dangers which were generally supposed to attend the navigation, and which the Portuguese thought it their interest to exaggerate. After two days stay at Sierra Leona, they once more spread their sails to favouring gales, the perils and difficulties of their undertaking being ended, and after a prosperous voyage fell in with the island of Ferrara on the 11th of September, and then proceeded for England in a direct course, all being impatient once more to behold their native country.

They entered Plymouth harbour on the 3d day of November, 1580, Drake having brought home an immense treasure, as well as gratified his own private pique, and his mistress's resentment against the Spaniards,

* However he did not keep his word, but sent his brother with an excuse. He also invited the commander on shore proposing to stay as an hostage; but Drake not chusing to go, sent others along with the king's brother, and kept the viceroy as a pledge for their safety.

† This fortress which did not appear to be of great strength, was formerly erected by the Portuguese, who settling there after murdering the king, had miscarried in their design of bringing the island under subjection.

‡ A Chinese gentlemen who reported himself to be descended from the imperial race, came on board Drake's vessel while they remained at Ternate. He said, that having been accused of some capital crime in his own country, not being able to clear himself by evidence, he was sentenced to an exile, the term of which was to be extended till he could return with some intelligence that might be honourable or advantageous to the empire. After an absence of three years, the fame of Drake had brought him from Tidore, in order to converse with one who had visited so many countries. The English commander ordered one of the company to recite twice over those occurrences which were most remarkable in the course of his voyage, and the exile thanking Heaven that he had met with so much information, departed well satisfied, in order to return to China, whither he strove in vain to persuade Drake to accompany him.

§ The island was governed by a number of rajas subject to one principal king, three of these having come on board together, by their favourable report, induced the monarch himself afterwards to honour the strangers with his presence. They found the Javans to be at once a warlike, sociable, happy people, not at all given to that pretty kind of thieving so common among the Indians in those parts; happy among themselves, and remarkably hospitable to strangers.

1585 niards, who were highly sensible of the affront, and waited but an opportunity to revenge the injury.

Drake knighted.

In token of her hearty approbation, on the 4th of April, in the following year, her majesty coming to dine on board Drake's ship, royally attended, after dinner conferred on the commander the honour of knighthood in reward of his services; though there were not wanting those that thought the breach with Spain, which would naturally follow the depredations that this adventurer had made on their Indian territories in the new world, would counterbalance all the wealth that had been acquired by this successful piracy. The Spanish writer already quoted (Lopez Vaz by name) says, "That Drake carried from the coast of Peru, 866,000 pezos of silver, equal to 866 quintals, equal to 100lb. weight each quintal, amounting to 1,139,200 ducats. He also carried away 100,000 pezoes of gold, equal to ten quintals, each quintal valued at 1500 Spanish ducats; and all this besides the treasure in the ship, which was not entered, consisting of gold, silver, pearl, precious stones, coined money, and other things of great value; he also rifled the ships from the Philippines, laden with spices, silks, velvets, and other rich merchandize, the value not known." By the above relation, the silver only at 5s. per oz. amounts to 259,800l. and gold to 48,000l. sterling. But other accounts make the value of the whole cargo brought home by the Golden Hind (for that was the name that Drake chose his ship, the Pelican, should be known by) amount to 800,000l. though that which was divided among the crew was only, 80,000l. The remainder was most likely to be disposed of at the court, and we can hardly doubt but that the queen was well recompensed for her "adventure of 1000 crowns." We have even the authority of history for an account of Queen Elizabeth's refunding a part of the plunder to the Spaniards, which could hardly have been the case if she had not been greatly benefited by this voyage. And indeed, the honour which she conferred on Drake at a time when he was not without enemies, and the people were divided in their opinions of his expedition seemed to verify what Mr. Thomas Doughty was charged so heavily for uttering, that "If they brought home gold, they should be the better welcome."

Drake who was thus honoured by his sovereign was the first captain that ever surrounded the globe, and lived to return home in safety from his expedition. The passage of Maghellan had so often been tried in vain, after the death of that unfortunate captain, that at length all men seemed to have laid aside the project *

till our navigator accomplished it, and attempted a north-west passage, which had never been the object of their search. All this contributed greatly to raise his fame, and his ship was ordered to be preserved as a memorial of the greatness of his undertaking.

Though we have thus accompanied this extraordinary man round the world, yet we cannot so far disappoint the curious reader as to leave him without a brief relation of the enterprises wherein he was afterwards engaged. As we have begun with his life, so we shall not finish our relation till that period when death, dropping the curtain, put an end to his mortal existence.

In the year 1585, our successful adventurer was employed by the queen as commander in chief on an expedition to the West Indies; wherein St. Jago, St. Domingo, Carthagena, and St. Augustine were taken. Two years afterwards, he was sent to Lisbon, but having had intelligence of a fleet assembling at Cadiz for the purpose of invading England, he sailed thither, and surprising the Spaniards, burned 10,000 tons of shipping and all their warlike stores, which was a heavy stroke, and severely felt by the enemy. He also fell in with, and took a rich ship on his return, called the St. Philip, which was coming from the East Indies. †

Repeated successes promoted Drake to honours. In 1588 he was advanced to be vice-admiral ‡, under Lord Effingham Howard, then high-admiral of England, who commanded the force destined to oppose the Spanish armada. Every one the least acquainted with history, knows the fate of that unwieldy armament, which was beaten back with disgrace, and the loss of some of the finest vessels, to appearance, of any at that time seen in Europe, and which had been for three years preparing in the ports of Spain for the long projected invasion of England.

Drake made vice-admiral.

Drake had his share in the honour of this victory, which however he hazarded in some measure by pursuing some of the hulks belonging to the Hans Towns, in order to gratify that desire of plunder so habitual to a man who had turned his attention chiefly to piratical enterprises §. Being intrusted to carry sights to direct the admiral, he missed him by his conduct, and yet made the most advantage of any by the success of the English arms ‖.

His conduct in the sea fight with the Spanish armada.

Thus far good fortune had attended him and his royal employer, who having a great dependance upon his abilities, a still greater on the terror of his name, and because he possessed a spirit in some measure, congenial to her own, sent him out next year as admiral of a squadron intended to place Don Antonio, a pretender to the

He undertakes an expedition to Portugal.

* A Knight of Malta called Gracca de Loaisa, with seven ships attempted to follow Maghellan's tract—his own ship returned to Spain, he passed the streights, but lost some of his vessels, and his own life—two of the vessels only reached the East Indies, where he and his men perished. The Genoese made an unsuccessful attempt of this kind in 1526. The famous Sebastian Cabot, in the Portuguese service, tried in vain to find the streights; and Americus Vesputius, from whom the continent of America received its name, had afterwards as ill success in the like undertaking. Simon de Alcasara with a strong squadron sailing with an intention to make his passage through the streight, was forced to return on account of a mutiny among his men, which put an end to his expedition.

† "Certain Jesuits (says Linoschoten a Dutchman then at Goa) came from the island of Japan, and with them three princes, being the sons of so many kings of that country, wholly apparelled like Jesuits, not one of them above the age of fifteen years, being minded by the persuasion of the Jesuits to visit Portugal, [Portugal and Spain were then both ruled by one sovereign] and from thence to go to Rome to see the Pope, thereby to procure great profit, privileges, and liberties for the people of that island. In 1584 they set sail for Portugal, and from thence travelled into Spain, where they were received with honour by the king and the Spanish nobility, and presented with many gifts—which the Jesuits kept for themselves. Out of Spain they went to see the Pope; that done, they travelled throughout Italy, where they were much honoured, and received many rich presents, by means of the great reports made of them. They returned to Madrid, where, with great honour, they took their leave of the king, who furnished them with letters of recommendation to the viceroy and all the governors of India. So they went to Lisbon, and there took shipping in 1586, and came to Goa in the ship called the St. Philip, [where both the princes and the Jesuits were received with great rejoicing] which ship, on her return to Portugal, was taken by Captain Drake, being the first that was taken coming from the East Indies, which the Portuguese took for an evil sign, because the ship bore the king's own name." It seems that bad weather having driven this vessel on her way to Goa into Mozambique, meeting with another vessel called the St. Laurence there, which was very much damaged, the former on her return put in again at Mozambique in order to take in the lading of the other ship, which was rendered unserviceable, which enabled her to make her voyage to Europe, about the usual time; and this fortunate circumstance contributed to Drake's success.

‡ He had under his command the Captains Martin Forbisher, Knolles, and other experienced officers.

§ In those of a more regular nature he was generally rather impatient of superiority, and not a very agreeable colleague. His deportment on this occasion however, did him more honour as appears from a letter to the lord treasurer, in which he observes, "That though the strength of the enemy outwent report, yet the chearfulness and courage which the lord admiral expressed, gave all who had the honour to serve under him assurance of victory."

‖ The admiral, by means of this misconduct of Drake, mistaking the lights of the Spanish commander for his, got into the middle of the enemy's fleet, in the night, from whence he happily escaped undiscovered. Drake afterwards acquired both honour and money by taking a large galleon commanded by Don Pedro de Valdez, who was supposed to have planned the invasion, who set him at first at defiance, but as soon as he heard his name surrendered to him upon his summons. In this ship besides valuable goods he found 50,000 ducats, which well rewarded him for his trouble.

the crown of Portugal, on the throne of that kingdom. The following is Rapin's account of that expedition.

"As the queen, (says the historian) was extremely frugal, and an undertaking against Spain could not but be very expensive, she so ordered it, that Drake and Norris took upon them to be at the charge, in hopes of making themselves amends by the booty they should meet with. So she only found them six ships of war, with a present of 60,000l. with leave to raise soldiers and sailors for the expedition. Drake had already tried the Spaniards in America, and in the channel, and was convinced they were more formidable in common opinion than in reality; wherefore joining with Sir John Norris, and some other private persons, they equipped a fleet, and embarked 11,000 soldiers, and 1500 marines. The Hollanders having also added some ships, the fleet consisted, according to Stow, of 146 sail, transports and victuallers included. Drake commanded at sea, and Norris was general of the land forces. They took with them Don Antonio, who hoped, by the assistance of the English, to be put in possession of his kingdom, where he pretended to have many friends.

"They sailed from Plymouth on the 18th of April, and soon after arrived at the Groyne, where landing their troops, they assaulted the lower town, and carried it by storm; but Norris having advice that the Conde de Andrada was approaching with a body of troops to relieve the place, suddenly raised the siege to march against him; and overtaking him, slew 3000 of his men. This done, he burnt several villages; and without returning to the siege, reembarked his troops, their principal design being against Portugal.

"Whilst they were sailing towards the coasts of that kingdom, they were joined by the earl of Essex, with some ships he had armed at his own charge, unknown to the queen. Some days after, they arrived at Panicha, a little town in Portugal, and, taking it, restored it to Don Antonio; from thence Norris marched to Lisbon, Sir Francis Drake promising to follow with the fleet up the Tagus. The army proceeded 40 miles without opposition; and encamping before Lisbon, took the suburbs of St. Catharine; but, as Drake performed not his promise, and the army wanted cannon and ammunition, it was resolved in a council of war to retire. This resolution was taken, because there was no appearance that the Portuguese were inclined to revolt, as Don Antonio had expected; and because there was no news of the succours he had boasted of from the king of Morocco. The army marching towards the mouth of the Tagus, met Sir Francis Drake, who had taken the town of Cascaes, and excused himself upon the impossibility of performing his promise; some days after the castle of Cascaes surrendering, it was blown up, and to make themselves amends for the charges of the expedition, the English seized sixty vessels laden with corn, and all manner of naval stores (to equip a new fleet against England) belonging to the Hans towns. Then they went and took Vigo, which was abandoned by the inhabitants, and firing the town returned to England."

The fleet returns without effecting the design for which it was sent out.

This expedition (it is added) did some damage to the king of Spain, but was of no benefit to Elizabeth; and the booty was not sufficient to pay for equipping the fleet; though Camden says they brought home 150 pieces of cannon and a great booty. Above 6,000 men perished in this expedition.

Sir Francis Drake's sun of glory appeared at this time to have been on the decline. Norris, the general of the land forces, made a heavy complaint against him, alledging that to his conduct alone the ill success of the enterprise was owing. Yet Hawkins and Drake seeming resolved not to abandon their design of distressing Spain, and enriching themselves as long as there was an opportunity, procured 26 of the queen's ships, which were equipped by private adventurers. From an armament so considerable, great matters were expected; but the commanders seemed to have forgotten that such a fleet could not be fitted out with as much secrecy as three or four vessels, nor proceed with so much expedition. The Spaniards received intelligence of their equipment; they heard their destination was to the West Indies, and found the means, by threatening a second invasion to get the ships detained till the 28th of August, before which time the plate fleet had arrived in safety, one ship only excepted, which had sprung her mast. The queen communicated these unwelcome tidings to the adventurers, advising them before they pursued their principal undertaking to attack Puerto Rico, by which means they might take the galleon, as they had lost all hopes of intercepting the flota. 1589

Another useless expedition.

Nor did their main design succeed according to their expectations, Sir Francis Drake pitching on a plan foreign from that of the undertaking. This plan was to make an attack upon the Canaries in their way. It was conceived crudely, and failed upon the trial. And, to add to the misfortune of this miscarriage, one of the English ships was taken by some of the Spanish frigates, whereby the principal circumstances of the intended attack were discovered: the enemy being forewarned, took care to prepare for their reception. It was on the 12th of November that the fleet came before Puerto Rico*, and the officers having been convened in a council of war, an assault on the shipping in the harbour was resolved upon. This had not the desired effect; no impression was made upon the fortifications of the place, and the English at last abandoned their design. They afterwards came to Rio de la Hacha, where they burned the town, and made some other descents upon the coast. At length arriving at the desired place, they landed their soldiers, who were to go across the isthmus to Panama, but after enduring a great deal of toil and fatigue, they came back without having been able to effect their purpose." And now, (says Fuller) began the discontent of Sir Francis Drake to feed upon him. He conceived that expectation of a mercileſs usurer, computing each day since his departure, exacted an interest and return of honour and profit proportionable to his great preparation, and transcending his former atchievements. He saw that all the good which he had done in his voyage, consisted in the evil he had done the Spaniards afar off, whereof he could present but small visible fruits in England. These apprehensions accompanying, if not causing, the disease of the flux, wrought his sudden death; and sickness did not so much untie his cloaths, as sorrow did rend at once the robe of his mortality asunder. He lived by the sea, died on it, and was buried in it."—"And thus (adds he) we see how great spirits having mounted to the highest pitch of performance, afterwards strain and break their credit in striving to go beyond it."—This account of the death of Sir Francis Drake bears the marks of authenticity. Disappointments of such a nature are not easy to be endured by men used to a series of successes, and borne up on the wings of popular applause. The commander, of whom we are writing, had great perseverance and fortitude in danger; but it will be easily perceived that this character was not without its defects.—Drake, was a man of great assiduity and industry, calculated not only to plan, but also to execute; but both the plan and execution must be solely intrusted to him, or small hopes were to be formed upon his endeavours for success. He was not, (as he himself declared) a man of *learning*; but all the world must own

Sir Francis Drake's death.

Observations on his character.

* Sir John Hawkins, had been seized with a disorder which proved fatal to him.—And on the very evening when that commander died, while the officers were at supper, a cannon-ball entered the cabin, which killed Sir Nicholas Clifford wounded two other gentlemen, (one mortally) and shot away the stool on which Sir Francis Drake sate, just as he was drinking success to the attack, which was ordered to be made the next day.

1596

own that he was a man of abilities. In the art of navigation at those times he had not his equal; we cannot find among the navigators of more modern date, in many respects any that can be considered as his *superior*. He was the first man that ever completed the circumnavigation of the globe, and returned with safety and honour to his own country. He passed the Streights of Maghellan in less time than any other commander had ever done. He sailed upon an unknown sea, guided by his own judgment more than any other help, as his countrymen being ignorant of the navigation in those parts, he could not have the benefit of sea-charts, nor the guidance of any thing but the compass, whose variation was one of the wonders of the age. Yet, amidst all these difficulties, he still proceeded, surmounted every obstacle, and stands upon record as one of the most able mariners that ever plowed the ocean.

We are sorry to say that here his praise must end. As impartiality guides our pen, we cannot give the tribute of applause to actions which are rather deserving of censure. The person in question, whatever some may have said or wrote of him, in the course of the voyage, most celebrated by his panegyrists, acted in a manner which, however it might be the fashion of the times, certainly deserved to be reprobated as cruel and unjust. Without a commission, without a war declared, he seized on the treasures of the king of Spain; and what was infinitely more reproachable, after surprising men asleep or unprepared, he pillaged private property, and became the terror of numbers of harmless people who entertained no ideas of the length to which his avarice would carry him, or the consequences which they were to apprehend from his mistress's resentment.

It would be absurd to deny this adventurer one jot of his merit as a naval commander—but this merit appeared only when he stood alone—His attachment to self-interest, joined to his impatience of controll, generally rendered abortive all schemes he was embarked in, when he had not the sole command; of which there was a striking instance in the miscarriage at Lisbon, wherein he was so justly complained of by Sir John Norris.

On the whole, however, catching the spirit and manners of those days, and being favoured by his sovereign, Sir Francis Drake maintained his reputation, and has been considered as a pattern to succeeding ages.

THE VOYAGES OF CAPTAIN THOMAS CAVENDISH,

The Second English Circumnavigator.

1586

Account of Captain Cavendish's family.

WE are not so much at a loss to give an account of Captain Cavendish [or Candish as he is called by some] as we have been to trace the family of other illustrious navigators mentioned in this work.——This gentleman was of an antient family, seated in Suffolk, and could trace his descent to the time of William the Conqueror.—His father left him in his minority, heir to three manors; but of this circumstance he made little advantage, being addicted to the extravagancies of the times, he presently ran out his estate, and finding himself reduced to unexpected necessities, determined to have recourse to the chance of the seas in order to mend his shattered fortune. This was the æra of adventure, and he took the advantage of it accordingly.

His connexion with Sir Walter Raleigh.

Mr. Cavendish was first concerned in a voyage that Sir Walter Raleigh projected to the New World; from which however the former reaped but little advantage, the experience excepted of what might be done in those parts to annoy the Spaniards, with whom the English were now at war. Having his mind bent upon embarking on an expedition of his own, and being encouraged by the late example of Sir Francis Drake, Mr. Cavendish, raising a sum of money upon his estate, built two ships and a bark at Harwich, which he proposed to employ on an expedition to the Spanish settlements in America.

He fits out vessels on his own account.

Having got all things in readiness with as much secrecy as the nature of such a business would admit, he embarked at Plymouth on Thursday the 21st of July in the year 1586, having with him, the Desire, a ship of 120 tons, the Content of 60, and a bark called the Hugh Gallant of 40 tons, taking on board various articles for trade, purchasing for the present only a small quantity of provisions, and privately taking in arms and ammunition, the better to cover his design, nor did any man on board know whither he was going, till after the embarkation*.

Embarks at Plymouth.

July the 26th, Captain Cavendish found himself 45 leagues from Cape Finisterre, where their little fleet fell in with five sail of Biscayners, with whom they engaged three hours, till night parted the combatants. They made the Canaries, on the first day of August, on the 15th were 50 leagues off Cape Verd, and on the 26th came into harbour at Sierra Leona, having ran by account 930 leagues in 36 days.

The fleet arrives at Sierra Leona.

Hearing by a Negro that came on board them, that there was a Portuguese ship within their harbour, the admiral sent the Hugh Gallant, which however could not get above 4 leagues up for want of a pilot, finding the navigation to be very dangerous.

This design thus laid aside, upon the day following being Sunday, several of the crew were sent on shore, who mixed among the Negros, and joined in their sports, with a view to gain intelligence, and as they were returning descried a Portuguese that had hidden himself among the bushes, whom they took and brought on board. By him they learned that the ship lay at the town, the passage to which by water he affirmed to be very dangerous. But the next day the captain landing with 70 men, they marched up thither, and burned two or three houses, taking what little they could find, while the inhabitants fled from them; but on the retreat of the English kept them in view, and discharged poisoned arrows at them from their woods and hiding places, by which three or four of the men were hurt, but at that time none died of their wounds.—A number of the crew afterwards landed at the watering place, and remained uninterrupted while they were washing their linen, but the next day as they were expected by the enemy, an ambush of Negros was laid for them, which was luckily discovered by the carpenter of the captain's ship—Yet they could not be so quick in returning to their ships but that several of them were again wounded with arrows, one of whom being shot in the thigh, breaking the weapon, and leaving the head of it behind, which he would not discover to the surgeon for fear of its being cut out; as the shaft was envenomed, he swelled, and died the next morning.—Notwithstanding this attack, many of the English went on shore again on the third day, and brought off fruits, and also caught plenty of fish, without meeting with any misadventure.

Skirmishes with the inhabitants.

* At first he raised but half his compliment of men, taking the rest on board at Plymouth. The vessel was built at Harwich, and he had the sole management of the whole preparation.

1586 ture. On the 6th they left Sierra Leona, ſteered for the Cape Verd Iſles, and anchoring about two miles off one of them about five the ſame evening, landed there. Upon this iſland they found there was a town whither the negros ſometimes came, but found no proviſion there. The reſt of the iſland appeared like one continued wood, and the ſpot on which the houſes ſtood was ſurrounded with plantain trees. Leaving this place on the 10th, they ſailed towards Braſil, and dropped their anchor between St. Sebaſtian and the main land on the firſt of November; there they remained about three weeks employing themſelves in building their pinnace; during this interval a canoe bound from Rio Janeiro to St. Vincent came in their way. There were on board ſix ſlaves and one Portugueſe, who knowing Chriſtopher Hare, maſter of the admiral's ſhip, having ſeen him in the Minion at St. Vincent, they let him proceed thither in hopes to have been viſited by an Engliſhman who reſided there, and to have had ſome proviſions ſent them. But the Portugueſe whom they charged with a letter to him, neither returning nor ſending any meſſage to them, they ſet ſail from this place on the 23d, and made the coaſt of America on the 16th of December, in lat. 47 degrees 20 m. ſouth bearing about ſix leagues to the weſtward.

Cavendiſh arrives at Port Deſire.

Still coaſting along ſhore, the next day they entered a harbour, to which they gave the name of Port Deſire. Here they ſaw two ſmall iſlands, on which were a vaſt nuimber of ſeals.* They found alſo plenty of fowls, ſome of which burrowed like rabbits in the ground, and were not able to fly, having on their pinions nothing but down, and feeding on fiſh, which they caught in the ſea.

As the harbour was convenient for making neceſſary repairs in their veſſels, the admiral reſolved to remain there ſome time for that purpoſe. While they were thus reſting in ſecurity, a man and a boy that went on ſhore were attacked and grievouſly wounded by a diſcharge of Indian arrows, which were made of canes headed with flint-ſtones; but the aſſailants, though amounting to about ſixty in number, fled when the admiral came up with about 20 men.†

Leaving Port Deſire on the 28th of December, they touched at an iſland three leagues off, where they ſalted the penguins which they had taken, and after falling in with an unknown rock, ſtood for the ſtreights of Maghellan, anchoring under a cape, which Cavendiſh lays down in 52° 45′ ſouth, till a great tempeſt was over, which rendered it dangerous for them to enter thoſe ſtreights. In the paſſage through, they took a Spaniard named Hernando, after which they anchored off Penguin Iſland, on the 8th day. On the 9th proceeding on their courſe SSW. they came to King Philip's city, which had been built by the Spaniards, which Mr. Prettie ſays had four forts, and every fort had in it one caſt piece that was buried in the ground, the carriages being ſtanding; Cavendiſh's men, however, digging for them, recovered them all, to their no ſmall ſatisfaction.

A Spaniard made priſoner.

Account of a Spaniſh town intended to command the ſtreights.

"They had contrived their city very well, ſays our author, and had ſeated it in the beſt place of the ſtreights for wood and water, they had built up their churches by themſelves; they had laws very ſevere among them, for they had erected a gibbet, whereon they had done execution on ſome of their company. It ſeemed unto us, that their whole living for a great ſpace was altogether upon muſcles and limpets; for there was not any thing elſe to be had, except ſome deer which came out of the mountains, down to the freſh rivers to drink. Theſe Spaniards came to fortify the ſtreights, to the end that no nation ſhould have paſſage through into the South Sea, ſaving their own only; but as it appeared, it was not God's will ſo to have it; for during the time that they were there, which was two years at leaſt, they could never have any thing to grow, or in any way proſper; and on the other ſide, the Indians often preyed upon them, until their victuals grew ſo ſhort, (their ſtore being ſpent which they had brought with them out of Spain, and having no means to renew the ſame) that they died like dogs in their houſes, and in their clothes, wherein we found ſome of them ſtill, at our coming, until that, in the end, the town being wonderfully tainted with the ſmell and ſavour of the dead people, the reſt which remained alive were driven to bury ſuch things as they had there in their town, and ſo to forſake the town, and to go along the ſea ſide to ſeek their victuals, to preſerve them from ſtarving, taking nothing with them, but every man his harquebuſs, and his furniture, that was able to do it, (for ſome of them were not able to carry them for weakneſs) and ſo lived, for the ſpace of a year and more, on roots, leaves, and ſometimes a fowl which they might kill with their piece. To conclude, they ſet forwards, determined to travel towards the river of Plate, there being only 23 perſons left alive, whereof two of them were women, which were the remainder of 400. In this place we watered and wooded well and quietly. Our general named this town Port Famine: it ſtandeth in 53° by obſervation to the ſouthward."

From hence the admiral ſailed to Cape Froward, and ſo continued his courſe. On the 22d he went with the ſhip's boat a league up a river on the banks of which in a plain country the Engliſh diſcovered certain ſavages who fed on raw fleſh, and whom, by their manners they judged to be canibals; and the writer of the voyage aſſerts "that they had lately preyed upon ſome of the Spaniards before mentioned. Theſe people endeavoured to draw the Engliſh farther up the river; but inſtead of being ſo deluded the admiral gave orders to fire upon them, in conſequence of which ſeveral of the ſavages were killed; and the fleet departing, came afterwards to the river St. Jerome, and then proceeded through the ſtreights, finding harbours at the end of every mile or two for 90 leagues, which he computed to be the length of the whole paſſage.

The fleet enters the South Seas.

Having effected their purpoſe thus far, they entered the South Sea, on the 24th of February (after being detained for a long time by bad weather and contrary winds). And now they began to entertain hopes of a more agreeable voyage, when on the firſt day of March, in lat. 49° 38′ ſouth, and 45 leagues from land, the Hugh Gallant was ſeparated from the other ſhips in a ſtorm, which continued till the 4th day, in the courſe of which time that veſſel proving leaky, was in danger of being loſt and it was not till

* Theſe ſeals, ſays Mr. Prettie, (who wrote an account of the voyage) are of a wonderful bigneſs, huge and monſtrous of ſhape; and for the fore part of their bodies, cannot be compared to any thing better than to a lion; their head, neck and fore part of their bodies, are full of rough hair, their feet are in the manner of a fin, and in form like unto a man's hand; they breed and caſt every month, giving their young milk, yet continually get they their living in the ſea, and live altogether upon fiſh; their young are extraordinary good meat, and being boiled or roaſted are hardly to be known from lamb or mutton. The old ones are of ſuch bigneſs and force, that it is as much as four men are able to do to kill one of them with great ſtaves; and he muſt be beaten down with ſtriking on the head of him, for his body is of that bigneſs that four men could never kill him, but only on the head; for being ſhot through the body with a harquebuſs, or a muſquet, yet he will go his way into the ſea, and never care for it at the preſent.

† Mr. Prettie deſcribing them, ſays "They are as wild as ever was a buck or any wild beaſt, for we followed them, and they ran from us, *as if* WE *had been the wildeſt things in the world.* We took the meaſure of their feet, and it was 18 inches long. Their cuſtom is when any of them die, to bring him or them to the cliffs by the ſea-ſide, and upon the top of them they bury them, and in their graves are buried with them their bows and arrows and all their jewels which they had in their life time, which are fine ſhells that they find by the ſea-ſide, which they cut and ſquare after an artificial manner; and all are laid under their heads. The grave is made with large ſtones of great length and bigneſs, being ſet all along full of the dead man's darts which he uſed when he was living: and they colour both their darts and their graves of a red colour, which they uſe in colouring themſelves.

1587 till the 15th of March that running in between St. Mary and the main, ſhe met with her conſorts, who had rid out the ſtorm at the iſland of Mocha, in 38° ſouth lat. where the Indians engaged ſome of the crew that landed for refreſhment, taking them for Spaniards, whom they accounted their mortal enemies.

Theſe Indians are deſcribed as fierce and warlike, coming from a place called Aranco, which they had defended from the Spaniſh power, though the place being reported to be full of gold was ſufficient to bring them perpetually into jeopardy from a cruel and rapacious enemy.

They touch at St. Mary's. Coming to the weſt ſide of St. Mary's iſland the admiral went on ſhore on the 16th at the head of between 70 and 80 men, who were met by the Indians headed by two of their chiefs. The Natives here

Account of the Indians there. were Chriſtians and had been brought into the greateſt ſlavery by the Spaniards who had however converted them to the Chriſtian faith. They conducted the Engliſh to a place where their maſters had erected a church, about which ſtood ſome ſtorehouſes full of ready threſhed wheat and barley, as good as any in Europe. Potatoes were likewiſe made up ready in order in the ſame manner. All theſe things were kept untouched till the Spaniards ſhould come for their tribute, who kept theſe people in ſuch ſtrict ſubjection, that though they had ſwine and poultry in plenty, yet they durſt not eat a pig or a hen themſelves. The Engliſh, taking advantage of theſe peoples idea, that they were ſubjects of the king of Spain, got themſelves plentifully ſupplied with proviſions here; after which they invited the two chiefs and feaſted them on board the admiral's veſſel, when they began to diſcover their miſtake, but ſeemed by no means to diſlike the ſtrangers for not being Spaniards. On the contrary, they endeavoured, as it was ſuppoſed, to make them underſtand by ſigns, that there was abundance of gold to be found in Aranco, being ſenſible that to point out one place where that metal was to be had, was the greateſt mark they could give of their friendſhip to any of the natives of Europe.

Whether the admiral did or did not well underſtand them, or whether he was unwilling from other motives to undertake an expedition to Aranco, it appears that he paid no regard to this intelligence but departed from this iſland on the 15th day of the month, and on the 30th came to the bay of Quintero which he computed to lie in 33° 50′ ſouth.

Bay of Quintero. Soon after the ſhips had come to an anchor in this bay, a man who kept cattle on an hill which commanded the road, who was aſleep when the veſſels came in, awaking preſently afterwards, mounted a horſe and riding off at full ſpeed, alarmed the country. In conſequence of this, three horſemen came down ſoon after the Engliſh had landed, and pretended to treat with two of them by means of Hernando the Spaniard, who was ſent to ſpeak to them. As they would not admit Cavendiſh's men to come near them, ſo the admiral was obliged to take what paſſed upon his report. He ſaid, that the reſult of the converſation was, that the Engliſh ſhould be furniſhed with proviſions; but being ſent again to bring this treaty to a concluſion, and left alone with his

The Spaniard eſcapes. countrymen, he got on horſeback behind one of them and rode up into the country: on this, the admiral finding that he had been deceived in this man, who had promiſed him very fair, ordered the crews to take in water, and reſolved to ſend in ſearch of the Spaniſh town, with a view to deſtroy it.

An expedition up the country. "The next day (ſays my author) Captain Havers accordingly went up into the country, on the 31ſt of March, with 50 or 60 men, with their ſhot and furniture with them, and they travelled ſeven or eight miles into the land: and as they were marching along, they eſpied a number of herds of cattle, of kine and bullocks, which were wonderfully wild: they ſaw alſo great plenty of horſes, mares, and colts, which were very wild and unhandled: there was alſo great ſtore of hares and conies, and of partridges, and other wild fowls. The country was very fruitful, with fair freſh rivers all along, full of wild fowls of all ſorts. They travelled ſo far, that they could go no farther for the monſtrous high mountains; they reſted themſelves at a very fair freſh river, running in, and along fair low meadows, at the foot of the mountains, where every man drank of the river and refreſhed himſelf: having ſo done they returned to their ſhips the likelieſt way they thought their [the Spaniards] town would be.

"So they travelled all the day long, not ſeeing any man, but they met with many wild dogs; yet there were 200 horſemen abroad that ſame day, by means of the Spaniard whom they had taken from them the day before, who had told them that their force was but ſmall, and that they were wonderfully weak; and though they did eſpy them that day, yet durſt they not give the onſet upon them, for they marched along in array, and obſerved good order, whereby they ſeemed a greater number than they were, until they came unto their ſhips that night again.

"The next day being the firſt of April, 1587, their men went on ſhore to fill water at a pit which was a quarter of a mile from the waterſide: and, being hard at their buſineſs, were in no readineſs, mean while, there came pouring down from the hills almoſt two hundred horſemen, and before our people could return to the rocks from the watering place, twelve of them were cut off, part killed, and part taken priſoners; the reſt were reſcued by the ſoldiers who came from the rocks to meet with them; for though only fifteen of them had any weapons on ſhore yet they made the enemy retire in the end, with the loſs of twenty-four of their men, after they had ſkirmiſhed with them for an hour." The Engliſh afterwards continuing at anchor, ſupplied themſelves with wood and water, and then departed out of the bay on the 5th of March, and alſo took a number of penguins on a little iſland at about a league diſtant. Having ſtocked themſelves with theſe birds they ſailed to a place called Morro Moreno, in 23° 30′ ſouth lat. where they found a convenient harbour.

At this place the admiral went on ſhore with 30 men, and the Indians, who were a peaceable ſet of people, came down with proviſions to meet them. Theſe people lived in a moſt ſimple manner, their houſes conſiſting only of a few ſticks laid acroſs, ſtanding upon others that were forked, and ſtuck in the ground, with boughs laid over them by way of covering. Their food was chiefly raw fiſh, which they often kept till it ſtunk. At the death of any one, they were accuſtomed to bury his bow and arrows with him. Their boats, like ſome we have before deſcribed, were made of ſeal ſkins blown up with wind, which ſerved them for the purpoſe of fiſhing.

They take a ſhip of 100 tons burthen. A ſmall bark coming out of Arica Road, was taken by the pinnace on the 23d. They alſo laid aboard a ſhip of 100 tons, but found in her neither men nor goods. In the mean time the fort fired upon them, and the whole power of the place being aſſembled, the Content ſtaying 14 leagues behind, to ſeize on ſome wine, Cavendiſh did not think proper to attack the town.

A flag of truce was afterwards ſent, to know of the Spaniards whether they would redeem their great ſhip; but they refuſed to enter into any treaty of ranſom or exchange, according to poſitive orders which they had received for that purpoſe from the viceroy at Lima.

A ſail coming from the ſouthward, the admiral ſent his pinnace and boats to take her, but ſignals being made from the town, this bark on board of which were ſome friars, was run on ſhore, and moſt of her cargo taken out before the Engliſh could come up with her. At length they took her and ſunk her and ſet the great ſhip on fire, and not being able farther to annoy the Spaniards, they departed from the harbour.

In their way they took another ſmall bark, on board which was one George, a Greek pilot, well

1587 acquainted with the coasts of Chili. They found also three Spaniards and a Fleming, all of whom had been sworn to throw overboard some letters of advice which they were carrying to Lima, in case of meeting with Cavendish. This they accordingly performed; but at last by the force of torture were obliged to confess their errand *.

The fleet came next to a bay near which there were three little towns. Here some of the crew landed, and plundered certain houses, in which they found bread, wine, poultry and figs; but the sea ran too high for them to land at the best of these towns, so they sailed from thence, having left the Content, which was the vice-admiral, at the island of Seals; and on the 10th of May the Hugh Gallant lost sight of the admiral's ship, which former vessel the next day put into a place where they found a river, and going on shore to take in water, luckily for them, as they were in want of provisions, they found near 500 bags of meal, of which they took what they thought proper for an immediate supply, and after experiencing some trouble before they could regain their boat, having at length happily got on board, they left this place on the 14th in the morning, and afterwards the Hugh Gallant, with only 16 men, took a large vessel that came from Guianil, of 300 tons burden, and manned with 24 mariners. The English took on board a Negro called Emanuel, and a pilot of the name of Gonsalvo de Ribas. Timber and provisions were the ship's lading, which they left leaky, after having taken away the foresail, besides what else they wanted, and sunk her boat. The fleet joined again on the 17th of May, when it appeared that the ship from which they had been separated, had taken two prizes, one laden with meal and marmalade, and the other with these articles, and a thousand hens, "besides one of these ships (says the voyager) was worth 20,000l. had it been in England, or in any other port of Christendom, where we could have sold it. We filled all our ships with as much as we could of these goods, burning the rest, and the ships [*their* ships] also, and set the men and women that were not killed ashore.

They find a seasonable relief.

Arrive at Paita.

After this the fleet came to Paita, where they anchored on the 20th day of the month.—There the admiral landing at the head of about 70 men, had some skirmishes with the townsmen, "At last, (says my author) the English drove them all to the top of a hill over the town, except a few slaves, and some others of the meaner sort, who were commanded by the governor to stay below at a place which was building for a fort, having with them a bloody ensign, and being in number about 100 men. Now, as we were rowing between the ships and the shore, our gunner shot off a great piece out of one of the barks, and the shot fell among them, and made them to fly from the unfinished fort as fast as they could run; but having got upon the hill, they, in their turn, shot among us with their small shot. After we were landed, and had taken the town, we ran upon them, and chaced them so fiercely for the space of an hour, that we drove them in the end away by force; and being got up the hill, we found where they had hid what they brought out of the town. We also found the quantity of 25lb. weight of silver, in pieces of eight, and abundance of household goods, and storehouses full of all kinds of wares. But our general would not suffer the men to carry too much cloth or apparel away, because they should not clog themselves with burdens; for he knew not whether our enemies were provided with fire arms, according to the number of their men, for they were five men to one of us, and we had an English mile and a half to our ships. Being come down in safety to the town, which was very well built, and kept very clean in every street, with a town house or guild-hall in the midst of it, and had to the number of two or three hundred houses at least in it, we set it on fire, and burnt it to the ground, and goods to the value of about five or six thousand pounds.—There was also a bark riding at anchor in the road, which we burnt and departed, directing our course to the island of Puna: On the 25th we arrived at that island, where is a very good harbour. There we found a great ship of 250 tons riding at anchor, with all her furniture which was ready to be hauled on ground, for there is a special place for that purpose. We sunk it, and went on shore, where the lord of the island dwelt, which was by the water-side, exceedingly well contrived with many singular good rooms and chambers in it, and out of every chamber was framed a gallery, with a stately prospect towards the sea on one side, and into the island on the other; with a magnificent hall below, and a very great storehouse at the end of the hall, which was filled with pitch and bast to make cables with; for the most part of the cables of the South sea were made upon that island. This great Cacique obliged all the Indians to work and trudge for him; he is an Indian born, but is married to a beautiful woman who is a Spaniard, by reason of his pleasant habitation, and his great wealth. And this Spanish woman his wife, is honoured as queen of the whole island, and never walketh upon the ground on foot, but accounteth it too base a thing for her: But when her pleasure is to take the air, or go abroad, she is always carried upon a sedan, [a sort of palanquin] upon four mens shoulders, with a veil or canopy over her, to shade her from the sun and the wind, having her gentlewoman still attending about her, with a great troop of the best men in the island with her.

They burn the town.

Their arrival at Puna.

"Both she and the lord of the island (with all the Indians in the town, were nearly fled out of the island before we could get to an anchor, by reason we were becalmed before we could get in, [they] were gone over the main land, carrying with them 100,000 crowns, which we knew by a captain of the island, an Indian, whom we had taken at sea, as we were coming into the road, being in a balsa or canoe, for a spy to see what we were.—On the 25th (adds he) our general himself, with certain shot and some targeteers, went over to the main unto the place where this Indian captain told us the Cacique, who was lord of all the island, was gone, and had carried all his treasure with him: But at our coming to the place where we went to land, we found newly arrived three or four great balsas, laden with plantains, bags of meal, and many other kinds of victuals. Our general marvelled what they were, and what they meant, asking the Indian guide, and commanding him to speak the truth upon his life. Being then bound fast, he answered, being much abashed [surprised] as well as our company were, that he neither knew from whence they should come, nor who they should be; for never a man was in either of the balsas: Yet he told our general before, that it was an easy matter to take the said Cacique and all his treasure, and that there were but three or four houses standing in a desart place, and no resistance:—and that if he found it not so, he might hang him.——Again, being demanded upon his life, to speak what he thought those balsas should be? He answered that he could not say what they were, nor from whence they should come, except it was to carry fifty soldiers, who he did hear were to go to a place called Guiaquil, which was about six leagues from the island, where two or three of the king's ships were on the stocks in building, and where there were continually an hundred soldiers in garrison, who had heard of us, and had sent for sixty more for fear of our burning the ships and the town.

"Our general, not any whit discouraged either at the sight of the balsas unlooked for, or at the hearing of the sixty soldiers, not until then spoken of, bravely ani-

* Though they threatened the Fleming, who was an old man, with death, and even put a rope round his neck, and began to hoist him up, yet he continued firm, dreading death itself less than perjury. Thus is this man honoured by the account of his enemies.

1587 animating his company to the exploit, went preſently forward, [it] being in the night, in a moſt deſart path through the woods, until he came to the place, where, as it ſeemed, they had kept watch either at the water-ſide, or at the houſe, or at both, and were newly gone out of the houſes, having ſo ſhort warning that they left their meat both boiling and roaſting at the fire, and were fled with their treaſure, or elſe [had] buried it where it could not be found. Our company took hens, and ſuch things as they thought good, and came away."

Cavendiſh's people afterwards went in the ſhip's boat to an iſland adjoining, whither the hangings and furniture of the Chriſtian Cacique's houſe were conveyed. There they burned a church, and took away the bells, and were afterwards attacked (on the 2d of June) by an hundred Spaniſh ſoldiers, with whom they ſkirmiſhed, according to their own account, killing 46 of the Spaniards, with the loſs of only 12 Engliſhmen. In the end, the latter ſet fire to the town, deſtroyed a number of the gardens and orchards, burned four ſhips, and departed.

They then ſailed towards Anguatulco, and took a new ſhip of 120 tons in their way, on board of which they found and made priſoner Michael Sanctus, a native of Marſeilles, one of the beſt coaſters in thoſe parts. At Anguatulco they landed, and burned the town and cuſtom-houſe, with a great deal of public and private property.

Arriving on the 24th at the haven called de Natividad, Michael Sanctus informed the Engliſh there would be a pinnace, but before they came thither ſhe was gone out on the pearl fiſhery. However, Cavendiſh's people took there a Mulatto, who was ſent with advice of their arrival, whoſe horſe they killed. They left him, but took his letters, ſet fire to two new ſhips, each of 100 tons burthen, which were building there, and ſo returned to their ſhipping.

The fleet afterwards touched at St. Jago, and came to a little bay called Malacca, a league to the weſtward of Port Natividad, and on the 9th day of the month, having come into the bay of Chacalla, Captain Havers going up the country with forty people, took three men with their wives and families; the women the Engliſh obliged to fetch them plantains, pine-apples, lemons, and oranges, and other fruits of the country, and afterwards ſent away their huſbands, keeping only one Diego a Portugueſe, and Sembrano, a Spaniſh carpenter.

Thus they proceeded to the road of Maſcatlan, and from thence to an iſland about three miles from that road, where they trimmed and refitted their ſhips, and digging in a ſandy ſoil, found water at the depth of three feet. Afterwards they ſailed for Cape St. Lucar, on the weſt ſide of California, which they fell in with on the 14th, where they found a bay, called by the Spaniards, Aguada Secara. They watered in a river which they found there, and kept off and on the cape with weſterly winds.

"The 4th of November, (ſays my author) beating up and down upon the head-land of California in 23 degrees 40 minutes to the northward, between ſeven and eight o'clock in the morning, one of the company of our admiral, who was the trumpeter of the ſhip, going up unto the top, eſpied a ſail bearing in from the ſea with the cape; whereupon he cried, with no ſmall joy to himſelf and all the company, A ſail, a ſail! With which chearful words, the maſter of the ſhip, and divers others of the company, went alſo up to the main-top, who perceiving his ſpeech to be very true, gave information unto our general of this happy news, who was no leſs glad than the cauſe required; whereupon he gave in charge preſently unto the whole company, to put all things in readineſs; which being performed, he gave them chace for three or four hours, ſtanding with our beſt advantage, and working for the wind; in the afternoon we got up to them, giving them a broad-ſide with our great ordnance, and a volley of ſmall ſhot, and preſently laid the ſhip aboard, whereof the king of Spain was owner, which was admiral of the South Sea, called St. Anna, and thought to be 700 tons in burthen. Now, as we were ready on the ſhip's ſide to enter her, there not being above fifty or ſixty men at moſt in our ſhip, we perceived that the captain of the Santa Anna had made ſights fore and aft, and laid their ſails cloſe on their poop, their mid-ſhip, with their forecaſtle, and not one man to be ſeen, they ſtanding ſo cloſe under their ſights with lances, javelins, rapiers, targets, and an innumerable quantity of large ſtones, which they threw overboard upon our heads, and into our ſhips ſo faſt, and being ſo many of them, that they put us off the ſhip again, with the loſs of two of our men who were ſlain, and four or five wounded. But for all this, we now trimmed our ſails, and fitted every man his furniture and gave them a freſh encounter with our great ordnance, and alſo with our ſmall ſhot, raking them through and through, to the killing and wounding of many of their men. Their captain, ſtill like a valiant man, with his company ſtood very ſtoutly unto his cloſe ſights, not yielding as yet. Our general, encouraging his men afreſh, with the whole noiſe of trumpets gave them the other encounter with our great ordnance, and all our ſmall ſhot, to the great diſcouragement of our enemies, raking them through in divers places, killing and wounding many of their men. They being thus diſcouraged and ſpoiled, and their ſhip being in hazard of ſinking, by reaſon of the great ſhot which were made, whereof ſome were under water, after five or ſix hours fight, ſet out a flag of truce, and parlied for mercy, deſiring our general to ſave their lives, and to take their goods, and that they would preſently yield. Our general promiſed them mercy, and willed them to ſtrike their ſails, and to hoiſt out their boat and to come on board; which news they were full glad to hear, and preſently ſtruck their ſails, hoiſted out their boat, and one of their chief merchants came on board, unto our general, and, falling down upon his knees, offered to have kiſſed our general's feet, and craved mercy. Our general pardoned both him and the reſt, upon promiſe of their true dealing with him and his company, concerning ſuch riches as were in the ſhip; and ſent for their captain and pilot, who, at their coming, uſed the like duty and reverence as the former did. Our general promiſed their lives, and good uſage. The ſaid captain and pilot preſently certified the general what goods they had on board, viz. 122,000 pezoes of gold; and the reſt of the riches that the ſhip was laden with were ſilks, fattins, damaſks, with muſk, and divers other merchandiſe, and great plenty of all manner of proviſions, with the choice of many conſerves, and ſeveral ſorts of very good wines. Theſe things being made known to the general by the aforeſaid captain and pilot, they were commanded to ſtay on board the Deſire, and on the 6th day of November following we went into an harbour, which is called by the Spaniards Aguada Segura, or Puerto Seguro.

The Engliſh engage and take a ſhip belonging to the king of Spain.

And in this place Cavendiſh ſet aſhore 190 Spaniards of both ſexes, where they were likely to have good accommodations, as there was a river of freſh water, and there were alſo numbers of hares and rabbits to be gotten. Beſides, the admiral furniſhed them with a ſufficiency of proviſions and arms for defence againſt the Indians, giving them the ſails of their ſhip to make tents, and a quantity of planks for the purpoſe of building themſelves a boat, which indulgence proved ſome alleviation of their misfortune.* The captain was afterwards diſcharged with a handſome preſent, after he and his Spaniards had been entertained with the ſight of ſome fireworks, which the admiral had cauſed to be played off in honour of the anniverſary of his miſtreſs's coronation, being the 7th

* It appears, however, that in ſharing the treaſure taken on board his veſſel, ſo much diſcontent aroſe that there was at length a mutiny, "which nevertheleſs (ſays the author) was pacified for the time."

7th of November; and left the harbour on the 19th, carrying with him two lads, who were natives of Japan, in the language of which country they could write and read fluently, and three boys born in the Manilla isles, the eldest 15, the next 13, and the youngest about nine years of age. He had also taken a Spaniard, whose name was Thomas de Ersola, who understood the navigation from Acapulco and the coast of New Spain to the Ladrones islands, on which account the English concluded he would be useful to them in the course of their voyage. Before his departure he burned the king's ship with 500 tons of goods on board, to the great satisfaction of all his company.

The wind now proving favourable they sailed from California, bending their course towards the Ladrones, and leaving the Content behind, she parted company from the fleet, and they proceeded without her, with favourable gales, till the beginning of January, and the 3d day of the month, made one of the islands called Guarsa, at a small distance from which a number of the natives came off in their canoes, which appeared to be constructed with a great deal of art, having images of their idols standing at the prows of them. These barks were about seven or eight fathoms in length, and about half a fathom wide, their heads and sterns being made alike. They had masts and sails, the latter of which were made of mats, in a square or triangular form, and they were able not only to go on before the wind, but also to make good their way against it. The people brought fish and potatoes, as also plantains, cocoas, and other fruits, for which they took iron and other things in exchange; but when the English had trafficked as long as they thought proper, they would not leave them, but kept swarming still about the ship, till one or two of the canoes were run down. The crews, however, saved themselves by swimming; as seemed to be the case afterwards, when the admiral ordered his men to fire at them because they would not keep off; these nimble people escaping by diving in the sea, into which they would fall backward with great expedition. The men were of an olive complexion, generally of a larger stature than the Europeans, and some of them wore their hair long, whilst others had it tied with a knot on the crown, according to each man's particular fancy.

Departing from hence the English fell in with Cabo del Spirito Santo, a cape or island at the distance of about 310 leagues from the isle of Guana. They found the land abounding in wood, and the inhabitants mostly Pagans. The distance from Manilla (the chief of the Philippines) was computed at about 60 leagues. Manilla was at that time inhabited by between 6 and 700 Spaniards, and was well planted, but these Spaniards resided in an unwalled town that had four block houses of no great strength. The place was rich in gold and silver, and had an advantageous traffic with Acapulco, as also with China and other parts.

After passing a streight between two islands, they came to another named Capul, where, as they found the bay convenient, they came to an anchor, and were presently visited by a canoe, on board of which was one of the principal caciques of the place, who took them for Spaniards, and brought them cocoas and potatoe roots, in exchange for which the islanders received at the rate of a yard of cloth for four cocoas, and as much linen for a basket of potatoe roots, the quantity of a quart; "which roots, says our author, are very good eating, and very sweet either roast or boiled"—a piece of information which our readers at this day do not want; but it is to be observed that potatoes were first brought hither from America, and at the period when Captain Cavendish made his voyage were but little known to the English. Here they were also supplied with hogs and poultry at the same rate as the Spaniards were accustomed to purchase them, and remained nine days before the island.* 1587

The natives were of an olive complexion, the cloathing of the men consisted only of a girdle about their waists, woven with plantain leaves, and a sort of apron which coming from their backs covers their nakedness, being fastened to their girdles before.†

The chiefs of this island as well as of a vast number of others whom Cavendish had made pay him tribute in hogs, potatoes, and poultry, were summoned on the 23d day of January, when having spread his ensign, with the sound of drum and trumpet he declared himself and his people to be Englishmen and enemies to the Spaniards, and paid them for all the articles which they had thus brought in, and these chiefs highly satisfied, promised in return all their services, in order to assist them whenever they should come again, to annoy and vanquish their enemies. This promise was received by the admiral with tokens of friendship, while the canoes rowed round his ship by way of diversion, and a piece was shot off at parting, which was matter of equal pleasure and surprise to these friendly people. The chiefs of the isles summoned by the admiral.

Departing from this place, the English sailed along the coast of Manilla, and in their way chased a frigate, and their boat took a canoe, in which were six Indians, who escaped by diving, and a Spaniard who was made prisoner. Soon after this, about 60 Spanish soldiers appeared on the neighbouring beach, who from the shore exchanged a few shot with them, but which did no execution. A vessel was likewise manned to take the boat, but the latter, by the help of her oars, got off, and regained the ship, bringing the Spaniard on board with them, but found him so simple a fellow, that they could get little or no intelligence from him.

In the mean time observing that the Spaniards had judiciously divided, and properly stationed their soldiers, the whole place being thoroughly alarmed, after lying all that night at anchor, the admiral gave orders to set sail, and passed between the two islands of Panama, and another called the Island of Negros, which was very large and inhabited by blacks; they at length gained an opening in a S. S. W. direction. The boat which had gone on before, then coming on board, and thus they ended their design upon Manilla.‡ The English disappointed at Manilla.

Cavendish now proceeded on towards Java, and having passed the streights between Java Minor and Java Major, anchored to the south-west of the latter, on the 1st day of March. Here taking some of the ships crew into the boat with a negro who could speak the Mooriſh language, he followed some of the inhabitants that were fishing in a bay. They ran on shore at first for fear of the English, but being called to by the negro, answered from the beach. These fishermen he informed that the English were in want of fresh water and victuals, and were also disposed to trade Arrive at Java

* While they were at anchor here, Nicholas Rodrigo, the Portuguese whom the English had taken in the great St. Anna, informed the admiral of a plot laid by a Spaniard, named Thomas de Ersola, (whom we have mentioned, they had taken for a pilot) to acquaint the people of Manilla by means of the islanders where the ship now lay, of the atchievements, designs, and situation of the English, advising them not only to strengthen their town, but to endeavour to send a force to surprise their enemies at Capul, which he thought might be effected. This writing was said to be locked up in the Spaniard's trunk; he was examined, found guilty, and sentenced to be hanged; pursuant to which sentence he was executed on the 16th of January.

† They had a strange custom of causing every male child to have a peg thrust through the upper part of his privities, the head of which peg had something like a crown cut on it. This was inserted in such a manner as to be put in and taken out at pleasure.

‡ They set the Spaniard on shore, by whom the admiral sent his compliments to the Spanish commander, desiring him to provide himself with a quantity of gold, as he (Cavendish) intended within a few years to see him at Manilla, adding, that he only wanted a larger boat, or he would have seen him at that time.

5

1588

trade with their king for diamonds or other rich jewels. They received a favourable anſwer from the fiſhermen, as to the article of proviſions; and after having furniſhed themſelves with wood and water, ſome canoes brought them freſh fiſh, oranges, and limes, giving them to underſtand, that if they would bring their ſhip nearer, they ſhould be more plentifully furniſhed. Accordingly the admiral weighed anchor, and ſtood in; but in his way was met by a canoe, ſent from the king, for which reaſon he ſhortened ſail, till the canoe came on board, and afterwards came to anchor again in the bay. This royal boat brought the kings ſecretary and his interpreter.* The former was all naked except about his waiſt, a broad arrow was wrought upon his breaſt; he went barefoot, but on his head wore a turban of died ſilk. He brought the admiral, a preſent conſiſting of hens eggs, freſh fiſh, and a hog, alſo ſome ſugar canes, and a clear wine, as ſtrong as aqua vitæ. Cavendiſh feaſted and entertained him with muſic, and gave him to underſtand that he and his men were of England, and had been trading to China, adding, that they were on their way to the Moluccas, and that their buſineſs at Java, was only to make certain neceſſary enquiries. In return, he learned that the Portugueſe had factors on the iſland who ſtayed there to traffic for ſugar, ſpices, and many other commodities.

The king ſupplies the Engliſh with proviſions.

On the 5th at break of day, the wind not permitting before, nine of the king of Java's canoes approached laden with proviſions, conſiſting of two oxen, ten hogs, a vaſt quantity of hens, ducks, and geeſe; beſides eggs, ſugar, cocoas, bitter limes, ſweet oranges, with wine, ſalt, and other articles. With theſe canoes came ſome of the king's officers. There were likewiſe two Portugueſe, dreſſed in looſe jerkins and hoſe, having on fine lawn ſhirts, but their legs entirely bare. Theſe people being ill affected towards the Spaniards, who held their kingdom in poſſeſſion, enquired much concerning Don Antonio, whom, as we have already obſerved, the Engliſh had a deſign of placing on the throne of Portugal, which deſign miſcarried partly by the ill conduct of Sir Francis Drake. Cavendiſh informing them that his queen was a firm friend to the king of Portugal, and enumerating his own exploits undertaken under her auſpices againſt the Spaniards, they were highly pleaſed with theſe tidings, and freely communicated to the admiral all that they knew relative to the policy, manners, and cuſtoms of the kingdom of Java, the ſubſtance of which account was to the following purport:

That the country was fertile, abounding in fruits as well as the neceſſaries of life, and that its commodities were well calculated for foreign commerce. That the king of that part of the iſland was called the Raja Balamboan, and was a perſon highly feared and reſpected by his ſubjects. Without his licence the common people durſt not bargain or deal for any thing with the people of another nation, on pain of death. They ſaid that the Raja himſelf was a man advanced in years, but entertained no leſs than 100 wives—his ſon and heir having 50. At the king's death it was cuſtomary to burn his body and preſerve the aſhes: five days after this ceremony, the wives were ſummoned to a particular place, where the principal one throwing a ball, wherever it fell they uſed to go all together, each having a dagger ready, then turning to the eaſt, they finiſhed the ſolemnity by ſtabbing themſelves, and, falling flat on their faces, thus received their death. As to the people; the men were obſerved to be of a ſubtle genius, and moſt deſperate in fight, ready to go on any enterpriſe, commanded by their king, who generally put them to death if they returned without accompliſhing his commands. If wounded in battle, they were often known to run upon the weapon which hurt them, reſolved on conqueſt or immediate death. The women were fair, and not without apparel, but the men went moſtly naked, and were of a tawny complexion.

Having entertained theſe Portugueſe in the moſt friendly manner, who are ſaid to have told him that if Don Antonio would come among them, there was no doubt of his having all the Moluccas and the Phillippine iſlands; they were diſmiſſed with a ſalute of ordnance, and the Engliſh ſailed on the 16th of march, for the Cape of Good Hope. "The reſt of March (ſays Mr. Prettie) we ſpent in traverſing that mighty and vaſt ſea between the iſland Java and the main of Africa, obſerving the heavens, the croſiers or the ſouth pole, the other ſtars, the fowls, which are marks unto ſeamen of fair and foul weather, approaching of lands or iſlands, the winds, the tempeſts, the rains, and thunder, with the alterations of tides and currents." On the 10th of May they met with a violent ſtorm; afterwards they ſaw land, which they took for the Cape of Good Hope, but which proved to be another cape between forty and fifty leagues ſhort of it, which is called Cabo Falſo, or Cape Falſe; and it was not till the 16th that they came in view of the extremity of the African continent, after having been nine weeks in their courſe from the iſland of Java. Having doubled the cape, they held on their courſe, and on the 8th of the ſucceeding month, they made St. Helena, where the admiral came to an anchor in 12 fathom water, on the NW. ſide of the iſland, on the 9th, about one in the afternoon, two or three cables length from the ſhore. The writer of the voyage gave the following account of the ſtate wherein he found it in the year 1588.

Cavendiſh arrives at St. Helena.

"This iſland (ſays he) is very high land, and lieth in the main ſea, ſtanding, as it were, in the midſt of the ſea, between the main land of Africa, the main of Braſil, and the eaſt of Guinea; it lies in 15° 48′ to the ſouthward of the equinoctial line, and is diſtant from the cape of Buena Eſperanza between five and ſix hundred leagues.

"The ſame day, about two or three o'clock in the afternoon, we went on ſhore, where we found an exceeding fair and pleaſant valley, wherein divers handſome buildings and houſes were ſet up, and one particularly, which was a church, was tiled and whitened on the outſide very fair, and made with a porch; and within the church, at the upper end, was ſet an altar, whereon ſtood a very large table ſet in a frame, having in it the picture of our Saviour Chriſt upon the croſs, and the image of our Lady praying, with divers other hiſtories, curiouſly painted in the ſame. The ſides of the church were hung round with ſtained cloths, having devices drawn on them. There are two houſes adjoining to the church, on each ſide one, which ſerve for kitchens to dreſs meat in, with neceſſary rooms and houſes of office. The coverings of the ſaid houſes are made flat, where is planted a very fair vine, and through both the ſaid houſes runneth a very good and wholeſome ſtream of freſh water. There is alſo over againſt the church a very fair cauſeway, made up with ſtones, reaching unto a valley by the ſea ſide, in which valley is planted a garden, wherein grow pompions and melons; and upon the ſide cauſeway is a frame erected, whereon hang two bells, wherewith they ring to maſs; and near to it a croſs is ſet up, which is ſquared, framed, and made very artificially of free ſtone, whereon is carved in cyphers what time it was built, which was in the year of our Lord, 1571.

"This valley is the faireſt and largeſt low plat in all the iſland, and is exceeding ſweet and pleaſant, and planted in every place, either with fruit or with herbs. There are fig-trees which bear fruit continually

* Our author ſays, "the ſecretary to the king and his interpreter lay one night on board our ſhip: the ſame night, becauſe they lay on board, in the evening, at the ſetting of the watch, our general commanded every man on board the ſhip to provide his harquebuſs and his ſhot; and ſo, with ſhooting off 40 or 50 ſmall ſhot and a facre, himſelf ſet the watch." This was no ſmall wonder to theſe heathen people, who had not commonly ſeen any ſhip ſo furniſhed with men and ordnance. The next morning we diſmiſſed the ſecretary and his interpreter with great humanity."

tinually and very plentifully; for on every tree you may see blossoms, green figs, and ripe figs all at once, and it is so all the year long: the reason is, that the island standeth so near the sun. There is also great store of lemon trees, orange trees, pomegranate trees, pome-citron trees, and date trees, which bear fruit as the fig trees do, and are planted carefully, and very artificially, with pleasant walks under and between them; and the said walks are over-shadowed with the leaves of the trees; and in every void place is planted, parsley, fortel, basil, fennel, annised, mustard-seed, radishes, and many very good herbs. The fresh-water brook runneth through divers places in this orchard, and may with very small pains be made to water any one tree in the valley. This fresh water stream cometh from the tops of the mountains, and falleth from the cliff into the valley the height of a cable; and hath many arms issuing out of it, that refresh the whole island, and almost every tree in it. The island is altogether high mountains and steep valleys, except it be on the tops of some hills, and down below in some of the vallies, where great plenty of all those fruits before spoken of do grow. There is much more growing on the tops of the mountains than below in the vallies; but it is very toilsome and dangerous travelling up unto them and down again, by reason of the height and steepness of the hills.

"There are also upon this island great store of partridges, which are very tame, not making any great haste to fly away, though one come very near them, but only run away and get up into the steep cliffs; we killed some of them with a fowling piece; they differ very much from our partridges which are in England, both in bigness and also in colour, for they are almost as big as hens, and are of an ash colour, and live in covies, twelve, sixteen and twenty together; you cannot go ten or twelve score paces but you shall see or spring one or two covies at the least.

"There are likewise no less plenty of pheasants in the island, which are also very big and fat, surpassing those which are in our country in bigness and in numbers in a company; they differ not very much in colour from the partridges before spoken of. We found, moreover, on this island, plenty of Guinea cocks, which we call turkeys, of a colour black and white, with red heads; they are much the same in bigness with ours in England; their eggs are white, and as big as our turkey's egg.

"There are in this island thousands of goats, which the Spaniards call cabritos, which are very wild. You shall see one or two hundred of them together, and sometimes you may see them go in a flock almost a mile long; some of them (whether it be the nature of the breed of them or of the country, I know not) are as big as an ass, with a mane like a horse, and a beard hanging down to the very ground: they will climb up the cliffs, which are so steep, that a man would think it impossible that any living creature could go there. We took and killed many of them for all their swiftness, for there are thousands of them upon the mountains. Here are, in like manner, great store of swine, which are very wild and fat, and of great bigness; they keep altogether upon the mountains, and will very seldom abide any man to come near them, except it be by mere chance, when they are found asleep, or otherwise according to their kind, are taken lying in the mire.

"We found in the houses at our coming, three slaves who were negros, and one who was born in the island of Java, who told us that the East Indian fleet, which were in number five sail, the least whereof was in burden eight or nine hundred tons, (laden with spices and calicut cloth, with store of treasure, and very rich stores and pearls) were gone from the said island, St. Helena, but twenty days before we came thither.

2

This island was found long ago by the Portuguese, and hath been altogether planted by them for their refreshment as they come from the East-Indies; and when they come, they have all things in plenty for their relief, by reason they suffer none to inhabit there, that might eat up the produce of the island, except some very few sick persons of their company, whom they suspect will not live until they come home; these they leave there to refresh themselves, and take them away the year following with the other fleet, if they live so long. They touch here rather in their coming home from the East Indies, than at their going thither, because they are thoroughly furnished with corn when they set out from Portugal; but are meanly victualled at their coming from the Indies, where there groweth but little corn. The wind is commonly off the shore at this island of St. Helena."

1588

St. Helena now belongs to the English; and it is to be observed, that in some respects it does not now answer the above description; neither is corn produced in the island, as will be noticed in the course of the voyages to the East Indies. The crew having refreshed themselves, and taken in wood and water at this island, of which they had conceived so good an opinion, and which by its situation must generally prove agreeable to mariners after so long a voyage, set sail on the 20th of June, steering directly homewards. They passed the equinoctial line in the beginning of July, and after lying becalmed from the 12th till the 15th of the same month, sailed before a constant north east wind to the latitude of 38° N. They afterwards came in view of Flores and Corvo, and sailing from thence for England, after weathering a violent storm, arrived safe at Plymouth on the 9th of September.—

Thus Cavendish accomplished his voyage round the world, in the course of which, like Drake, he did much mischief to the Spaniards, taking and destroying a number of their vessels, and keeping the American coasts in a continued alarm. This was the most fortunate voyage of that adventurer, who brought home a considerable treasure. Nevertheless we find him in 1591, engaged in another undertaking of the same nature, from whence he promised himself much, but which, from a variety of concurring circumstances, he found in the event, not at all answerable to his expectations.

Cavendish's second voyage to the South Seas.

Having collected together some of the ablest commanders, and a company of the stoutest mariners of the times, all things being prepared, they departed from Plymouth with two large ships, and three barks* on the 26th of August, holding on their course towards the Brasilian coast, and fell in with the bay of Salvador, on the 29th of November, after having been becalmed 27 days near the equinoctial line, a circumstance which probably contributed not a little to the difficulties and misfortunes that afterwards attended this unhappy expedition.

In a vessel which the admiral took in his way, he found nothing worth his trouble; except a friar that had hid himself in a meal tub; but the pilot of that vessel informed the English of their distance from Cape Frio, and from Santos. At an island called Placentia, they afterwards landed and plundered a few Portuguese houses, and before their arrival at Santos, the crew began to shew such a disorderly disposition, as gave but an ill presage of their future success.

However, they determined to make an attack on the last mentioned town, the Portuguese having informed them that it was but weakly defended. On this account also, the commander judged that the long-boat and shallop properly manned, would be of sufficient strength to undertake the business; but his men being all eager alike for plunder, it caused a very warm dispute upon this point, as only an hundred men were ordered to make the assault.

Cavendish however found means to appease this disturbance,

* The vessels were the Leicester, commanded by the admiral; the Roebuck, Captain Cocke, vice admiral; the Desire, Capt. Davis rear admiral; the Dainty, Capt. Cotton, and a bark called the Black Pinnace.

1592

turbance, and the design, which was well laid, was as luckily executed; for a party of English landing while the Portuguese were at mass, there was little resistance; those that had arms being obliged to deliver them, and the conquerors keeping them prisoners till the rest of their company came up. There were some, however, in the town who retired and betook themselves to flight, with whatever money or property they were able to secure *; nevertheless, besides sugars, meal, and other provisions, they found some gold and silver here, which was most greedily sought after in secret places by the plunderers. As to the prisoners, they were all discharged the day after the town was taken, except a few of the principal persons, † who were retained as pledges for the farther supplies of necessaries while the English remained in possession. And after a stay of two months (which seems to have been an imprudent waste of time) the admiral resolved to depart, so destroying many of the larger mills between Santos and S. Vincent, and having burned the latter, the fleet sailed out of the harbour on the 24th of January.

Cavendish takes Santos.

Directing their course towards the Streights of Magellan, a hard gale arose on the 7th of February, when they were near the river Plate, and increased by the 8th to a most horrible tempest, in which the fleet was separated; but it being generally understood that Port Desire should be the rendezvous in case of such an accident, (though it is disputed whether the admiral ever gave such an order) as Captain Davis in the Desire, had met with Cocke in the Roebuck at sea, and afterwards with the Black Pinnace, ‡ these vessels made that port, after having with great difficulty weathered the storm abovementioned. And being thus met again, having refreshed the men at this port, they sailed on the twenty-eighth day of March, Cavendish himself, according to Jane's account, having shifted from the admiral's ship, and come on board Captain Davis, with whom he continued till they entered the Streights. They were a considerable time detained beating off Port Famine, and when at last they doubled the Cape, they were kept about eight days in that port, and forced to subsist on muscles and what fruits they could find, as the natives, whom they sometimes saw, were not able to supply them with any thing better. While they were on their passage through these streights, they, like many other voyagers to those parts, experienced as much inconvenience from cold as from want of provisions. One Knivet, who afterwards passed through a series of strange adventures, lost several of his toes by the inclemency of the weather at Port Famine; and we find it related, that in the midst of this bad weather, and while the passage remained doubtful, all the sick men belonging to the Leicester, were set on shore in the woods, while the admiral remained on board the Desire; a circumstance which every one must own to be shocking to humanity.

He enters the Streights of Magellan.

Hardships endured there.

The difficulties which they had met with in this attempt, the incapacity of the ships to proceed, and every other concurring circumstance, occasioned the universal voice of the mariners to be in favour of returning to the coast of Brasil, instead of pursuing any farther the intended voyage to the South Sea, on which the admiral's heart had been set; and he was therefore obliged to yield to those whom he deemed a mutinous company, and on the 15th of May they set sail, in order to repass the streights, the admiral having returned to his own vessel.

Cavendish returns towards the Brasilian coast.

As China was an object of this voyage, it is said that the commander still deemed it not impossible for him to put his design in execution, thinking to sail thither by way of the Cape of Good Hope; yet here too he was over-ruled by the resolution of the mariners, and accordingly stood for the Brasilian coast. But on the 20th of May the Desire and the black pinnace were separated from him, which separation Cavendish charges upon Capt. Davis, but other accounts lay it upon the admiral's having altered his course, and give a circumstantial detail of the matter, the substance of which we have subjoined in its proper place.

The Desire is separated from the admiral;

Not long after, the Leicester lost the Roebuck in a storm, and not without much difficulty reached the harbour of St. Vincent, where some of the ship's company, being persuaded by an Indian, got permission to go on shore, to the number of 30, neglecting the advice of their commander not to trust themselves too far up the country, were attacked by 80 Portuguese and 300 savages, and massacred to a man, the Indian only returning with the tidings, whose intelligence relative to the provisions to be got in the country, had led them into this fatal error, some wounds that he had received in the conflict bearing testimony to his honesty and to their imprudence.

And also the Roebuck.

As the admiral had thus lost 30 men and his boat besides, he had great reason to regret this accident, he had however the good fortune to take an old boat from the Portuguese, which made some small amends for his loss; but what more contributed to comfort him was the appearance of the Roebuck in this bay; yet on examination, he found her in such a shattered condition that he could not at that time expect much assistance from such a consort.

The Roebuck found.

He still ardently wished for an opportunity to revenge himself upon the Portuguese, but as on the Brasilian coast the harbours are mostly barred, so as not to admit any vessels of burden, so he found that a design he entertained of battering the town could not be accomplished, and all that was in the power of the English was to destroy a few farm-houses.

The Portuguese next proposed to the admiral the taking or battering of the town of Spirito Santo, but he was not able to bring the ships over the bar, and they had thoughts of departing, when they discovered three ships at anchor near the town, which the admiral proposed cutting out in the night. His advice was not followed then, but over-ruled by the murmurs of his men. The next day, however, they insisted on being sent to do what was then become impossible. Approaching with their two crazy boats in the face of the enemy, and landing to attack the town, whence they were fired on, they were repulsed with disgrace, two thirds of them were slain, together with Captain Morgan, who was sent to head them, and whom they forced to proceed in this desperate enterprise. All those that returned brought back nothing but unprofitable wounds, as the reward of their rashness. §

Cavendish's men attack Spirito Santo.

Cavendish leaving this place, sailed for the island of St. Sebastian, and in his way thither, the Roebuck ‖ which he had so lately regained, voluntarily parted from him in the night, taking away both the surgeons, and above double the proportion of victuals necessary for the 46 men that she had on board.

The Roebuck again parts company with him.

Notwithstanding all this, yet Cavendish had not laid aside his purpose of returning to the streights; but as it may easily be imagined, this ship's crew who were never highly pleased with the project, now put a down-

* The need in which the English stood of provisions, seemed to have been the principal motive for this undertaking; but according to some accounts, Captain Cocke was so negligent, that he suffered the Indians to carry out what the inhabitants could not have secured, so that when Cavendish himself came on shore, eight or ten days afterwards, this circumstance obliged him to endeavour getting by intreaty what before he had in his power, and, after all, to re-embark without the very things for the sake of which he had caused the town to be surprised. As Harris observes, that the Indians were very friendly to the new comers, so it is possible that the former found means thus to deceive the latter, under the mask of friendship, and afterwards to make a merit of supplying them with part of what they had before taken away.

† Jane says only four poor old men were kept as hostages.

‡ The other pinnace (the Dainty) made the best of her way to England, leaving her captain on board the Roebuck, the crew taking with them all the provisions, and even his wearing apparel.

§ He left 80 men, and had 40 wounded in this attack.

‖ Jane says the men expected that he intended to burn that vessel.

a downright negative upon the reſolution. Threatenings were vain, and he could have but little to promiſe, ſo was under a neceſſity of abandoning his favourite ſcheme, and ſteering towards St. Sebaſtian, 200 leagues to the weſtward of Spirito Santo, when he had no more than one caſk of water left.

The Portugueſe kill a number of his men.

Being ſeparated from the Portugueſe at this iſland only by a ſmall creek, and ſuſpicious of his own people, he was in the moſt diſtreſsful ſituation that could be imagined, and, as to the former (led on as it is ſaid by an Iriſhman belonging to his ſhip) they came over one night and killed and took priſoners a number of his men, moſt of whom were ſick and wounded, and then retiring, left parties of Indians, ſo diſpoſed amongſt the trees and buſhes that they were perpetually annoying the remains of the Engliſh, that they were forced to depart before they had taken in ſo much wood and water as was deemed neceſſary for their voyage.

The crew counteracts the admiral's deſires.

This little remnant ſo much dreaded their commander's deſign of returning to the ſtreights of Maghellan, that having overſhot St. Helena, they could not be perſuaded (for the admiral ſeems to have loſt all command) to ſteer the coaſt to the ſouthward, but inſiſted on ſailing directly to England, whither as it appears, he never lived to return. *

As the commander complained much of the conduct of Captain Davis, of the Deſire, ſo were not the captain and crew of that veſſel in general backward in juſtifying themſelves from the imputation. And ſince the reader may be curious to know what befel her after her ſeparation, we have here ſet down the principal events extracted from one who wrote a regular account of the voyage.

Account of their diſtreſt ſituation and voyage to England.

After having related, journal-wiſe, all that paſſed till their entrance into the ſtreights of Maghellan, he proceeds to obſerve, That after having doubled Cape Froward on the 18th of April, Mr. Cavendiſh being on board the Deſire, the ſhips were forced by the fury of the ſtorm to put into a little cove, about four leagues from the cape, where they had continual tempeſts, and ſnow, and their men died of cold and famine, and the ſick were put on ſhore, as we have already ſeen. "In theſe great extremities of cold and ſnow (he adds) Mr. Cavendiſh aſked our captain's opinion, becauſe he was a man that had good experience of the N. W. parts, in his three ſeveral diſcoveries that way, when employed by the merchants of London. Our captain told him that this ſnow was a matter of no long continuance, and gave him ſufficient reaſon for it, and that thereby he could not much be prejudiced or hurt in his proceeding. Notwithſtanding he called together all the company, and told them, that he purpoſed not to ſtay in the ſtreights, but to depart upon ſome other voyage, or elſe to return again for Braſil: but his reſolution was to go for the Cape of Good Hope. The company anſwered, that if it pleaſed him, they did deſire to ſtay God's favour for a wind, and to endure all hardneſs [hardſhip] whatſoever, rather than to give over the voyage, conſidering they had been here but a ſmall time; and becauſe they were within 40 leagues of the South Sea, it grieved them now to return; notwithſtanding, whatever he ordered, that they would perform. So he concluded to go for the Cape of Good Hope, and to give over this voyage. Then our captain, after Mr. Cavendiſh was come on board the Deſire, from talking with the company, told him, that if it pleaſed him to conſider the great extremity of his ſituation, the ſlenderneſs of his proviſions, with the weakneſs of his men, it was no courſe for him to proceed in that new enterpriſe. For if the reſt of your ſhips (ſaid he) be furniſhed anſwerable to this, it is impoſſible for you to perform your determination; for we have no more ſails than maſts, no victuals, no ground tackling, no cordage more than is overhead, and among 75 perſons, there is but the maſter alone that can order the ſhip, and but 14 ſailors; the reſt are gentlemen, ſerving-men, and artificers; therefore it will be a deſperate caſe to take ſo hard an enterpriſe in hand. Theſe perſuaſions did our captain not only uſe to Mr. Cavendiſh, but alſo to Mr. Cocke. In fine, upon a petition delivered in writing, by the chief of the whole company, to the general, he determined to depart out of the ſtreights of Maghellan, and to return again for Santos in Braſil."

1592

And accordingly, we find that they ſet ſail on the 15th, Cavendiſh being then in the Deſire, but on the 20th they parted from him, after he had gone again on board the Leiceſter, of whoſe crew he once had ſo ill an opinion, that he declared he was inclined to ſtay in the Deſire.—Of the ſeparation, which the admiral deemed to be wilful, we have the following account: "That being athwart of Port Deſire, in the night as they ſuppoſed, the general ſteered his courſe," and thus he was loſt: "For (adds he) in the evening he ſtood cloſe by a wind to ſeaward, having the wind N. N. W. and we ſtanding the ſame way, the wind not altering, could not on the next day ſee him; ſo that we then perſuaded ourſelves that he was gone for Port Deſire to relieve himſelf, or that he had ſuffered ſome miſchance at ſea, and was gone thither to remedy it." This being the general opinion, notwithſtanding they had no boat nor anchors, nor cables fit to truſt to, they went thither. There they arrived on the 20th of May, and ſuffered many difficulties; though they were ſomewhat relieved by getting good freſh water unexpectedly, and lived on muſſels and ſmelts, in order to preſerve their proviſions. While they lay there, the author tells us, that "the general having in their ſhip two peſtilent fellows, who had entered into a plot to murder the captain, and maſter, and their friends, into which they had drawn the reſt of the company, he adds, "There were marks taken in his cabin how to kill him with muſquets through the ſhip's ſide, and bullets made of ſilver for the execution."—But as ſoon as the boatſwain heard of this plot, he diſcovered it to the maſter, and ſo it came to the captain; yet James Parker and Edward Smith, the two leaders of this intended mutiny were puniſhed only with admonitions; and as it appeared that the ſource of the miſchief was derived from a reſolution, of the captain to take the pinnace, and go in ſearch of the admiral, when he found that the ſhip's company were all moſt violently bent againſt the undertaking, he deſiſted, giving them good words for their bad, and concluded his controverſy with Parker and Smith, by ſaying, "The Lord judge between you and me—which, ſays the author, came to a moſt ſharp revenge, even by the puniſhment of the Almighty." After this the captain deſiring they would ſet their hands to an account of their loſing the admiral, and of the extremities to which they were reduced, they agreed to the propoſal, in conſequence of which a paper was drawn up in the following words:

"The teſtimonial of the crew of the Deſire, touching the loſing of their general, which appeareth to have been utterly againſt their meanings.

"The 26th of Auguſt, 1591, we whoſe names are here underwritten, with divers others, departed from Plymouth, under Mr. Thomas Cavendiſh our general, with four ſhips of his, viz. The Leiceſter, the Roebuck, the Deſire, and the Black Pinnace, for the performance of a voyage into the South ſea. [After

* In his letter to Sir Triſtram Gorges, which was written not long before his deceaſe, after mentioning the death of a couſin of his, he ſays, "What with his grief occaſioned by that event, and the continual trouble endured among ſuch hell-hounds, (his ſhip's crew) I wiſhed myſelf upon any deſart place in the world, there to die, rather than thus baſely to return home again; which courſe I had put in execution, had I found an iſland which the charts make to be eight degrees to the ſouthward of the line. I ſwear to you I ſought it with diligence, meaning (if I had found it) there to have ended my unfortunate life. But God ſuffered not ſuch happineſs to light upon me; for I could by no means find it; ſo was forced to come towards England."

1592 ter recapitulating the chief events that had happened in their course, the memorial proceeds thus] On the 21st of May, being athwart of Port Desire, 36 leagues off the shore, the wind then north east and by north, at five of the clock at night, we suddenly cast about, lying north-east, the fleet following the admiral, our ship coming under his lee, shot a-head of him, and so framed sail fit to keep company. This night we were severed, by what occasion we know not, whether we lost them or they us. In the morning we only saw the Black Pinnace, then supposing the admiral had overshot us. All this day we stood to the eastward, hoping to find him, because it was not likely he should stand to the shore so suddenly. But [thus] missing him, towards night, we steered to the shoreward, hoping by that course to find him.

On the 22d of May at night, we had a violent storm, with the wind at north-west, and we were forced to hull, not being able to bear sail; and this night we perished our main trossel trees, so that we could not use our main top-sail, lying most dangerously in the sea. The pinnace likewise received a great leak, so that we were inforced the next day to seek the next shore for our relief. And because famine was like to be the best end [that we could otherwise expect] we desired to go for Port Desire, hoping with seals and penguins to relieve ourselves, and so to make shift to follow the general, or there to stay his coming from Brasil. The 24th of May we had much wind at north. The 25th was calm, and the sea very lofty, so that our ship had dangerous and foul weather. The 26th our fore-shrouds broke; so that if we had not been near the shore, it had been impossible for us to get out of the sea.

"And now, being here moored in Port Desire, our shrouds are all rotten, not having a running rope, whereto we may trust, and being provided of only one shift of sails, all worn, our topsails not able to endure any stress of weather; neither have we any pitch, tar, or nails, nor any store for the supplying of these wants, and we live only upon seals and mussels, having but five hogsheads of pork within [on] board, and meal three ounces a day, with water to drink.

"And forasmuch as it hath pleased God to separate our fleet, and to bring us into such hard extremities, that only now by his mere mercy we expect relief; though otherwise we are hopeless of comfort, yet, because the wonderful works of God in his exceeding great favour towards his creatures, are far beyond the scope of man's capacity; therefore by Him we hope to have deliverance in this our deep distress. Also, forasmuch as those upon whom God will bestow the favour of life with return home to their own country, may not only remain blameless, but also to manifest the truth of our actions, we have thought good, in Christian charity, to lay down under our hands the truth of all our proceedings even until this time of our distress.

Given in Port Desire, the second day of June, 1592.

Having put their hands to this paper, they began to set themselves to work upon such things as were most necessary for their preservation.——Accordingly they set up a forge, to make bolts, nails, and other iron works; and also made ropes out of their cables. The others were employed in procuring smelts for them. They also found an island abounding with seals, whither they sent the pinnace, and were highly satisfied when a quantity of them was taken.

On the 6th of August having kept watch from the high lands in order to discover the admiral, but in vain, it was resolved to go for the Streights of Maghellan, where his vessel could not pass by them if she came that way. Accordingly they set sail, and after encountering a storm, and other difficulties, made the streights, where they found the weather extremely cold, yet they describe the people on the neighbouring shores as going naked, painting their bodies like the ancient inhabitants of Britain, and generally living in the woods and wilds of these comfortless regions, where now it was the very middle of winter.

Anchoring in a cove about 14 leagues from the South Sea, by account, they stayed a fortnight for the admiral; but the men dying fast through cold and famine, the master of the vessel advised to enter the Pacific Ocean, and to steer directly for the island of Santa Maria, which advice being followed, (not without a view of meeting with Cavendish, who, as they concluded, must pass by that island, they set sail on the 13th of December, but were forced back again on the 14th, and returned to a cove about three leagues from the South Sea. However they went forward again as soon as the wind permitted, and, with the loss of an anchor in a storm, came once again in view of the desired ocean. Here a dispute arose; some of the company wishing to go again to Port Desire, and to be set on shore there, while others wished to proceed. "Whereupon (says Jane) the captain said to the master—Master, you see the wonderful extremity of our estate, and the great doubts among our company, of the truth of your reports, as touching relief to be had in the South Sea. Now, good master, forasmuch as you have been in this voyage once before, with your master the general, satisfy the company of such truths as to you are best known, and you, the rest of the general's men, who also have been with him in his first voyage, If you hear any thing contrary to the truth, spare not to reprove it, I pray you.—Then the master said, if you think good therefore to return, I will not gainsay it; but this I think, if life may be preserved by any means, it is proceeding for at the Isle of Santa Maria, I do assure you of wheat, pork, and roots enough. Also I will bring you to an isle where pelicans be in great abundance; and we shall have meal in great plenty, besides a possibility of intercepting some ships upon the coast of Chili and Peru. But if we return, there is nothing but death to be looked for [expected] Therefore do as you like, I am ready; but my desire is to proceed. These his speeches being confirmed by others that were in the former voyages, there was general consent for proceeding, and so, on the second of October we put into the South Sea, and were free of all land."

But whilst all were agreed in pursuing this counsel of the master of the vessel, the elements fought against them. That very evening a gale sprang up which increased with such violence that the crew on board the ship were informed by those in the pinnace, that the latter had no hope left of outliving the storm, but being themselves reduced to great extremity, and in view of a lee shore, they were obliged to abandon her with all on board to their fate, and the next night lost sight of her for ever.

Thus they proceeded, lashed on by tempests, and drifting fast upon a dangerous shore. But on the 10th of October the sun suddenly shining out bright, gave the captain and master an opportunity of discovering their true situation, and consequently of finding the true course they must shape for the recovery of the streights. Yet though this at first encouraged the mariners, it could not properly be considered as matter of great consolation to those who were rather subject to the course of the winds and waves than to the guidance of their own skill and judgment. And thus indeed it happened, that the less danger was only passed and the greater was yet to come, a most striking picture of which being drawn by the author already quoted, we shall give it here in his own words. "On the 11th of October (says he) we saw Cape Desealdo, the cape on the south shore, (the north shore being nothing but a company of dangerous rocks, isles and shoals.) This cape being within two leagues to the leeward of us, our master greatly doubted that we should not double the same, nevertheless, being a man of good spirits, he resolutely made quick dispatch, and set sail." Our sails had not been half an hour on board [hoisted] but the foot-rope of our foresail broke, so that nothing held but

the oylet-holes. The ſeas continually broke over the ſhip's poop, flew into the ſails with ſuch violence that we ſtill expected the tearing of our ſails, or overſetting of the ſhip; and beſides, to our utter diſcomfort, we perceived that we fell ſtill more and more to the leeward, ſo that we [believed we] could not double the cape. We were now come within half a mile of the cape, and ſo near the ſhore, that the counter-ſurf of the ſea would rebound againſt the ſhip's ſides, ſo that we were much diſmayed with the horror of our preſent end. Being thus at the very point of our death, the winds and the ſeas raging beyond meaſure, our maſter veered ſome of the main-ſheet; and, whether it was by that occaſion or by ſome current, or by the wonderful power of God (as we verily think it was) the ſhip quickened her way, and ſhot paſt that rock, where we thought we ſhould have been ſhored. Then between the cape and the ſhore there was a little bay, ſo that we were ſomewhat farther from ſhore; and when we came unto cape, we yielded unto death: yet the father of all mercies delivered us, and we doubled the cape about the length of our ſhip, or very little more; being ſhot paſt the cape, we preſently took in our ſails, which only God had preſerved to us; and when we ſhot in between the high lands, the winds blowing trade, without an inch of ſail, ſpooned before the ſea, three men not being able to guide the helm, and in ſix hours we were put 25 leagues within the ſtreights, where we found a ſea anſwerable to the ocean."

A narrow eſcape.

This was indeed an unexpected eſcape, but the unfortunate crew of this weather-beaten veſſel were far from being near the end of their trouble. In the midſt of this wintry climate, which ſtiffened their ſinews with cold, to add to their other misfortunes, they were almoſt devoured with the moſt loathſome vermin, that not only ſwarmed about them, but alſo burrowed in their fleſh. On this account, having laboured to clear their veſſel from water, it was judged proper to put into one of the coves with which it has been noticed that theſe ſtreights abound. This was accordingly done for the refreſhment of the men, and they ſtayed till the 21ſt of October, when they again put forward into the channel, with tolerable good weather. But theſe inclement regions before night produced another tempeſt, and the veſſel owed its ſafety only to the care of the captain, who had drawn ſo accurate a plan of the ſtreights, at his firſt paſſage through them, that being properly attended to, it guided her through all the intricacies of that channel in a moſt gloomy and tempeſtuous night.

While they were at anchor on the coaſt, the boat being ſent in fair weather to collect a quantity of the birds from whence that land takes its name, one of the uſual ſtorms aroſe, and the birds were obliged to be thrown overboard, leſt they ſhould be loſt.

The interval had given them time to clear their ſhips from water; but the crews were ſtill in a diſagreeable ſituation, and even in the midſt of theſe wintry regions, were almoſt eaten up by the moſt loathſome vermin. Thus diſtreſſed, they had put into one of the coves of the channel, where they ſtayed till hunger forced them out in favourable weather; but the ſtorm ſoon ſucceeded, in the midſt of which, by means of a chart drawn by the captain, the ſhip was conducted through what the author calls "The Hell Dark of Night," where the channel was not in ſome places above a league broad.

Having eſcaped this danger at Penguin Iſland, where they had nearly loſt their boat, at the ſame time that their veſſel was driving on a lee ſhore, but both theſe difficulties being ſurmounted by their induſtry and reſolution, at length on the 27th of October they got free of the Streights of Maghellan.—Their boat being ſent to the ſhore, "Parker, Edward Smith, and twenty others, (ſays Jane) were appointed to ſtay upon the ſhore for the killing and drying of theſe penguins, and the captain promiſed after the ſhip was in harbour to ſend the reſt, not only for expedition, but alſo to ſave the ſmall ſtore of victuals then in the ſhip. But Parker, Smith, and the reſt of their faction ſuſpected that this was a device of the captain's to leave his men on ſhore, that by theſe means there might be victuals for the reſt to recover their country; and when they remembered that this was the place where they would have ſlain their captain and maſter, ſurely (thought they) for revenge here will they leave us on ſhore; which, when our captain underſtood, he called God to witneſs that revenge was no part of [had no part in] his thoughts: They gave him thanks, deſiring to go into the harbour with the ſhip, which was granted. So there were only ten left upon the iſle, and [on] the laſt day of October we entered the harbour, (our maſter, at our laſt being here, having taken careful notice of every creek in the river) in a very convenient place, upon a ſandy ooze ran the ſhip aground, laying our anchor to ſeaward, and with our running ropes, moored her to ſtakes upon the ſhore, which he had faſtened for that purpoſe, where the ſhip remained till our departure. On the 3d of November, our boat, with water, wood, and as many as ſhe could carry, went for the iſle of Penguins; but being deep, ſhe durſt not proceed, but returned again the ſame night. Then Parker, Smith, Townſhend, Purpet, with five others, deſired that they might go by land, and that the boat might fetch them when they were againſt the iſle, it being ſcarce a mile from the ſhore. The captain bade them do what they thought beſt, adviſing them to take weapons with them; for (ſaid he) although we have not at any time ſeen people in this place, yet in the country there may be ſavages.—They anſwered, "That here were great ſtore of deer, and oſtriches; but if there were ſavages they would devour them." Notwithſtanding, the captain cauſed them to take weapons with them, carlivers, ſwords and targets: ſo the 6th of November, they departed by land, and the boat by ſea; but from that day to this day, we never heard of our men. The 11th, while moſt of our men were at the iſle, only our captain and maſter, with ſix others, being left in the ſhip, there came a great multitude of ſavages to the ſhip, throwing duſt in the air, leaping and running like brute beaſts, having vizards on their faces like dog's faces, or elſe they had dogs faces indeed. We greatly feared leſt they would ſet the ſhip on fire, for they would ſuddenly make fire, whereat we much marvelled: they came to windward of our ſhip, and ſet the buſhes on fire, ſo that we were in a very ſtinking ſmoke; but as ſoon as they came within our ſhot we ſhot at them, and ſtriking one of them in the thigh, they all preſently fled; ſo we never ſaw more of them. Thereby we judged that theſe canibals had ſlain our nine men."—"When we conſidered (adds the author) who they were that were thus murdered, and found that they were the principal men who would have murdered the captain and maſter, with their friends, we ſaw the juſt judgment of God, and made a ſupplication to his Divine Majeſty to be merciful unto us."

1591.

During the time that the Engliſh remained in this bay, they found on examining the river that they could go no farther than twenty miles up. Upon the Iſle of Penguins, the crew took a quantity of thoſe birds, which they dried and ſalted, and much rejoiced that they could lay in ſuch a ſtore of proviſion. They alſo took gulls and other birds, and eggs, as well as many ſeals; and found a quantity of the herb called Scurvy-graſs, which uſing train oil for butter, they fried with eggs, and found it very wholeſome, removing the chief diſorder among the men.

Twenty thouſand [a number almoſt incredible] of penguins were taken, 14,000 of which only the mariners were able to bring on board, and had well nigh loſt their ſhip by the uncertainty of the winds and tides.

They afterwards ſtood for the Braſilian coaſt, having been reduced to the allowance of five ounces of meal in a week, to be ſerved twice, three ſpoonfuls

1593 of oil for a man three days in a week; for two days a pint of peaſe for each man. Five penguins for four men every day, and ſix quarts of water for the ſame number of people.

Arriving at the Iſle of Placentia in Braſil, on the 30th of January, twenty-four of the crew went towards the ſhore with the captain; but it was not till the next day that the company landed, hoping to take the Portugueſe inhabitants in their beds, and there to get Caſſavi meal, and what elſe they could find; but the Portugueſe had raiſed their own houſes to the ground, and were fled up the country. The ſhip was afterwards brought into a creek, where they moored her to the trees, and found water and all conveniences for hooping their caſks, a guard being always kept for the protection of ſuch as were employed about their neceſſary buſineſs. On the 5th of February the captain ſent the cooper to gather hoops, and provided a guard as uſual, himſelf ſeeing the weapons delivered. Notwithſtanding which, all his precautions could not prevent that miſchief of which the writer of the voyage aſſerts, that ſome of the crew had a pre-ſentiment *.

A maſſacre. "All the forenoon they laboured in quietneſs, and when it was ten o'clock, the heat being extreme, they came to a rock near the wood's ſide, (for all this country is nothing but thick woods) and there they boiled caſſavi-roots, and dined. After dinner ſome ſlept, others waſhed themſelves in the ſea, all being ſtripped to their ſhirts, and no man keeping watch, no match lighted,† and not a piece charged. Suddenly, as they were thus ſleeping and ſporting, having got themſelves into a corner, out of ſight of the ſhip, there came a multitude of Indians and Portugueſe upon them, and ſlew them ſleeping; only two eſcaped, one very ſore hurt, the other not touched, by whom we underſtood of this miſerable maſſacre. With all ſpeed we manned our boat, and landed to ſuccour our men: but we found them ſlain and laid naked in ranks one by another, with their faces upward, and a croſs ſet by them; and withal we ſaw very great pinnaces come from the river of Janiero, very full of men; who we ſuſpected came from thence to take us."

The number of the ſhip's crew was now reduced to 27 perſons, though ſhe departed from England with 76. They could take in no more than eight tons of water for want of caſks, and yet if they ſtayed with a view to overcome this difficulty, the ſhip being made faſt to the trees, they were in fear leſt their moorings ſhould be cut, or the enemy ſhould make ſome ſudden attack upon them from the ſhore. Having condoled with each other upon their misfortune here, and at Port Deſire,‡ they reſolved at laſt to leave this fatal ſhore, and rather truſt themſelves to the mercy of Heaven than remain expoſed to the danger which as they concluded threatened them every moment.

Proceeding to Cape Frio, they met with contrary winds, that proved the more hard on account of their want of water, which was, however, ſeaſonably ſupplied by plentiful ſhowers of rain, and their ſpirits began to revive, when a new misfortune came upon them.

The fleſh of the penguins, which had kept well in the colder climates, began to corrupt as this unhappy company approached the warmer latitudes. A moſt loathſome worm bred in them, which not only ſpoiled their proviſions, but did them otherwiſe much miſchief. Notwithſtanding all their endeavours to get rid of theſe animals, they multiplied ſo faſt and were ſo extremely voracious, that they devoured every thing but iron, their wearing-apparel, linen, and woollen, and even their boots were eaten, and their fleſh bitten by them, nor did the timbers eſcape them, inſomuch that the captain and his crew feared they would eat through the ſide of the veſſel. Having paſſed the equator in this diſagreeable ſituation, the crew were next attacked with a diſtemper, which is thus deſcribed: "In their ancles it began to ſwell, from thence, in two days, it would be in their breaſts, and then fell into their lower parts, and there did ſwell moſt grievouſly and moſt dreadful to behold; ſo that they could neither ſtand nor go. The captain in this extremity, declared that there was nothing which he deſired ſo much as a ſpeedy diſſolution. At this time ſome died in the ſevereſt pain, and others in a frenzy." The anguiſh of the captain indeed was more mental than bodily ſuffering, as, excepting a boy, he was the only perſon in health on board the veſſel. By this time only 16 of the company remained, and on five of them only, as being ſound perſons, was all the dependance for labour and ſafety, the captain and maſter helping to work the ſhip, which, for want of better tending, was in a woeful condition, and the ſprit-ſail and top-ſail ſhattered in pieces. Yet thus they ſtill held on their courſe, "and thus (ſays the author) without victuals, ſails, or men, God guided us into Ireland." They arrived at Beerhaven on the 11th of June, 1593, and there ran the ſhip on ſhore, the Iriſh helping to fit her for floating, where the captain left the maſter and ſome of the crew to keep the veſſel, and five days afterwards he and ſome others of the company took their paſſage in an Engliſh fiſhing boat to Padſtow in Cornwall.

Such were the miſeries endured in this unfortunate voyage, in the courſe of which, things falling out ſo adverſe, thoſe who have ſtudied the book of human nature will not much wonder to find the commanders and the men falling out among themſelves, and with each other. By the laſt-recited account it ſeems, however, that Mr. Cavendiſh had not ſo much occaſion to blame Capt. Davis, as he, in the height of his vexation, might imagine. The manner of the latter's parting from the former, and the pains he took in endeavouring to rejoin him, together with other circumſtances which the judicious reader muſt have noticed in the courſe of the relation, all tend to corroborate this opinion, though not adopted by the diſappointed admiral.

Out of five ſhips that went out, only three came back from this expedition, namely the Dainty, that parted company with him in the South Sea, the Deſire having on board but 26 men, though originally manned with 150, and the admiral's own ſhip, of the number of men loſt from which we are not exactly informed, but it ſeems that not above fifty in all returned in ſafety.

Reflexions on the undertaking. When theſe things are conſidered, and the accounts here given are compared, it will not be much matter of wonder that Cavendiſh's men were ſo unwilling to expoſe themſelves to reiterated dangers. It is one thing to be bold in attempting the atchievment of a new but difficult adventure, it is another, after repeated repulſes to return to the charge, and combat with ill fortune through mere raſhneſs, when there is no neceſſity to renew the attempt. This ſeems to have

* "Many of the men (ſays he) had dreamed of murder and of ſlaughter, one ſaying to another, This I [laſt] dreamed that thou were ſlain.—Another anſwered, And I dreamed that thou were ſlain."—A circumſtance which, he obſerves, had occaſioned the captain to be more than ordinarily careful for the ſafety of his men.

† The pieces in uſe in thoſe times were let off with matches, firelocks being a more modern invention.

‡ The writer of the account from whence ours is extracted, adds here, "And conſidering what they were who were loſt, we found that all thoſe who had conſpired the murdering our captain and maſter were now ſlain by the ſavages, the gunner only excepted." There is nothing wonderful in this and ſome other ſimilar remarks made by thoſe who wrote in that age, eſpecially when we reflect that, even at this time, men cannot disjoin the idea of a particular providence from that of dealing the judgments of heaven wherever they think proper.—In this caſe, at leaſt, the reſt of the crew ſeem to have been involved in difficulties and diſtreſſes, and ſome of them, as we find in the ſequel, died a more miſerable death on board, than their companions had met with on ſhore from the Portugueſe and ſavages.

have been the error of our adventurer, who likewiſe appears to have entertained ſome little prejudices and partialities, not at all conſiſtent with the extenſiveneſs of his undertaking.

As to the expeditions he undertook, they were ſimilar to others, which engaged the high ſpirits, and enriched ſome of the ſucceſsful plunderers of the maiden reign. Private ſubjects of one ſtate endeavouring to plunder another, tho' ſanctified by cuſtom, is doubtleſs a barbarous method of carrying on a war. At the period of which we are writing, the Spaniards had an evident diſadvantage in the conteſt, and their ſubjects in the New World ſeverely felt the conſequences. As to Captain Cavendiſh, he fell a ſacrifice to that deſire of wealth and honour which forced him on a ſecond voyage to thoſe parts, where the ſucceſs of his firſt undertaking had furniſhed him with the means which if well managed, might probably have inſured him the enjoyment of a competence in peace and ſecurity in his native country. 1598

THE VOYAGE OF OLIVER VAN NOORT.

THE voyage of Oliver Van Noort and his company was performed by the ſhips Maurice, Concord, Henry Fredric, and Hope; the two former of which ſailed from Rotterdam on the ſecond of July, and having reached the Engliſh coaſt, remained there waiting for the latter till the 13th of September, and then departed thence upon their grand expedition, having taken on board an Engliſh pilot, of the name of Melliſh,* who proved very uſeful to them in the courſe of their undertaking.

The Dutch fleet leaves the Engliſh coaſt.

Having paſſed between Teneriffe and the Gran Canaria, they proceeded ſouthward till they came in ſight of the coaſt of Guinea, on the 3d of November. Afterwards, arriving at Prince's Iſland, they ſent in their boats and demanded a ſupply of proviſions, which a negro who met them at their landing made them believe would be readily granted. But while they were treating about this matter, a great number of them were ſuddenly cut off by a party that lay in ambuſh; they were purſued to their boats, which were alſo attacked, and the admiral's brother was killed in the engagement. The Dutch, in return, reſolved to attack the caſtle; but as they found the experiment too dangerous, they contented themſelves with burning the enemy's ſugar houſes, and having ſupplied themſelves with freſh water, ſailed to Cape Gonſalvo, where they met with two veſſels of their country.† Paſſing the iſland of Annabon on the 1ſt of January, they held on their courſe till leaving Cape Frio, they ſtood for Rio de Janeiro, where they arrived on the 9th of Feb. from whence after ſome loſs of time and men, by means of the Portugueſe they went to St. Sebaſtian. There they found no fruits but were accommodated with a good harbour, and plenty of wood and water.

Proceeding on their courſe, on the 14th of March a ſtorm overtook them, which ſeparated the vice-admiral and Hope from the other ſhips. The winter in thoſe latitudes approached; the ſcurvy prevailed, and fearing the extremities to which they might be reduced, the admiral reſolved to put into St. Helena, but the fleet could neither make that iſland nor the Aſcenſion; they only reached a very barren ſhore, where they could get nothing but ſome fowls which they knocked down with clubs. Departing from thence, they were carried to the Braſilian coaſt; but the Portugueſe not permitting them to land there, they proceeded to the iſle of St. Clara, where there was little elſe to be found but herbs and a ſort of ſour plumbs, which in about a fortnight cured their ſick, a circumſtance that at that time yielded them ſome conſolation.

Arrives on the coaſt of Braſil.

Intending for the ſtreights of Maghellan, they ſtood for Port Deſire, which at laſt they reached, and furniſhed themſelves with fiſh and penguins in great plenty, from an iſland to the ſouthward of that port.

Sailing up the rivers, they ſaw a number of beaſts reſembling ſtags and buffaloes, as alſo oſtriches and their neſts. The admiral afterwards landed to view the country, ordering thoſe that were left to guard the boats, not to ſtir from them; but theſe men diſobeying the orders of their commander, fell into an ambuſcade of Indians, by which means three of them were killed, and one was wounded. Theſe ſavages are deſcribed as tall men, and having their bodies painted, carrying ſhort bows, from whence they ſhot arrows headed with ſtone.

Still holding on their courſe, they endeavoured to enter the ſtreights, but were continually driven back by tempeſts. They loſt their anchors, broke their cables, and were viſited by ſickneſs, at the ſame time that diſputes and contentions prevailing among them, rendered their ſituation every day worſe: and thus they ſpent near 15 months from their firſt departure, before they were fairly got into the ſtreights of Maghellan.

On two iſlands near Cape Naſſau, on the 5th of November, the Dutch perceiving ſome men who ſhook their weapons at them by way of defiance, landed and purſued them to a cave, which they defended ſo ſtubbornly, that the aſſailants could not enter till every one of the ſavages was ſlain. The treaſure which theſe people were ſo fully determined to preſerve or periſh in the attempt was—their wives and children, whoſe lives the conquerors were ſo indulgent as to ſpare—becauſe they had nothing to hope from their deſtruction, nor to fear from their ſafety. Four boys and two girls being ſelected from among the children were brought on board the ſhips, where they were kindly entertained.

"One of theſe boys (according to Harris) having learned to ſpeak Dutch, gave them this intelligence, that the greater of theſe two iſlands was called Caſtemme, and the tribe that inhabited it Enno; that the ſmaller iſland was called Talcke; and that both were well ſtored with penguins, whoſe fleſh was their food, and whoſe ſkins their cloathing; and as for their habitations, they had none but caves; that the adjoining continent abounded with oſtriches, which alſo ſerved for food; that they were diſtinguiſhed into ſeveral tribes, which had their ſeveral diſtinct reſidences. The Kemenetes, that dwelt in Kaeſay; the Kennekin, Karamay; the Karaiks, in Morina;—all which people were of the common ſize, but broader breaſted; and painted all. The men tying the pudenda up with a ſtring, and the women covering thoſe parts with penguin ſkins; the former wearing long hair, and the latter ſhaven; but both theſe ſexes naked except a cloak of penguin ſkins, reaching to the waiſt. That there was alſo a fourth tribe of them, called Tirimenen, that dwelt in Coin; and theſe were of a gigantic ſtature, *being ten or twelve feet high*,

* Mr. Melliſh had been with Captain Cavendiſh in his voyage round the world.

† By the crews of theſe veſſels, Noort's people were informed of the misfortune of Captain Cleerhagen who was loſt with moſt part of his company on Princes's Iſland. They had likewiſe tidings of the voyage of Peter Veerhagens, who had entered the river of Congo, and putting in at this place had buried 38 of his people.

1600

high, and were continually at war with the other tribes."

[The reader will be the better enabled to form a judgement of the reality of the exiſtence of giants on the Patagonian coaſts, when he compares theſe accounts of the ancient voyagers with thoſe of the circumnavigators of the preſent age; for which reaſon, we ſhall for the preſent forbear any comments upon the ſubject.]

The admiral ſet ſail on the 29th for Port Famine; where he found no mark or remains of St. Philip's city (which has been already mentioned as raiſed by the Spaniards in order to command the ſtreights) a heap of ſtones only excepted, which might ſerve for a memorial of the ill fate that attended that undertaking. Not finding this place convenient for watering, the ſhips departed on the 1ſt of December, and the next day doubled Cape Froward, from whence paſſing into a large bay, they caſt anchor.——And here they found the ſhip of Sebald de Wert, one of Veerhagen's company, which had been driven back with another veſſel from the South Sea. The captain told them he had been in the ſtreights upwards of five months, that out of 100 men he had but eight remaining, and had put in there, while the reſt of the fleet proceeded, his veſſel not being able to ſuſtain the ſtorm in the ſouthern ocean. Leaving this place the admiral ſteered for Maurice Bay, in which he perceived that ſeveral rivers diſgorged themſelves, and obſerved that it extended far eaſtward.——"In the mouth of theſe rivers (ſays our author) were vaſt quantities of ice, which ſeemed never to melt the year round; for though this was near the midſummer ſeaſon in that ſouthern climate, yet the ice was ſo thick that at ten fathoms ſounding they could not reach the bottom of it. The land alſo ſeemed to be a heap of broken iſlands, which the height of the mountains made appear like one firm and continued piece.

Diſtreſſes of the Dutch in the ſtreights of Maghellan.

In this place they loſt two of their people, whom the ſavages killed while they were picking muſſels, on which food they chiefly ſubſiſted, and all the company had at once hunger and ſtorms to contend with during their continuance in theſe inhoſpitable regions.

From one bay to another the ſhips ſhifted their ſituation, but in general only to encounter freſh difficulties; till on the laſt day of February, they were at laſt relieved from theſe troubles, by paſſing Cape Deſire, and making in their way to the South Sea, which they entered with 147 men, but on the 12th they loſt the vice-admiral's veſſel, and not being able to recover the ſight of her, they went to La Mocha, an iſland in the 38th degree of ſouth latitude, which is remarkable for a high mountain, the top of which is cleft, and from thence pours a ſtream of water into the valley. Here they found an Indian town, the houſes of which were built of ſtraw. The natives bartered maize, ſheep, and other proviſions, for knives, hatchets, and the like; and entertained their gueſts at their ſimple habitations with a liquor called *Cici*, which was made of maize ſteeped in water, and held in great eſtimation amongſt them.——The Dutch accounts ſay that the men there are allowed to buy as many wives as they can afford. In caſe of murder, the kindred of the perſon ſlain, pronounce ſentence and execute juſtice on the murderer, as all public courts of law are unknown among them; notwithſtanding they are not always equally rigid in theſe matters, as it is ſometimes poſſible by treating with *cici* to eſcape puniſhment. The cloathing of theſe people is made of the wool of a large ſort of ſheep, of which they are very choice, and which are alſo uſeful to them in the carriage of heavy burdens.

The Dutch came next to St. Mary's Iſland, in lat. 37° 15′ S. gave chace to and took a ſhip laden with meal. They were told by this pilot that two men of war were waiting for them at Arica, where they were expected by the enemy, who had ſome intelligence of their deſigns, and the Engliſh pilot perſuaded them not to attempt going to St. Mary's, where Simon de Cordes, having being invited on ſhore, was ſlain with 23 of his people by the Indians, the Spaniards endeavouring to get his ſhip into their hands, and giving notice all along the coaſt of the arrival of the Dutch in thoſe parts.

Afterwards they ſailed to Val Paraiſo where they heard news of the captain of the Flying Hare, one of Veerhagen's company, who was led into a ſnare, and made priſoner by the enemy.* Here the Dutch took two ſhips, ſome Indians were alſo ſlain, but the Spaniards had quitted the place. From thence they proceeded to St. Iago, where they heard of the wars between the Spaniards and the natives of Chili, who had taken the town of Baldivia, putting the inhabitants to the ſword. They entered the bay of La Gueſco, on the 1ſt of April, and after remaining there about ſix days, quitted that harbour, and ſtood for Morre Moreno. They came in view of the rich city of Lima, on the 25th. And here it is ſaid "They came to underſtand the vaſtneſs of the treaſure which the Spaniards had *robbed* them of [a ſtrange perverſion of language] and which otherwiſe they had found in thoſe ſhips they took at St. Iago. For by the pilot's confeſſion, there were no leſs than 52 cheſts of gold thrown overboard, each cheſt containing four arobes and 500 pots, and each pot ten or twelve pound; and not only this public, but every man's private treaſure was as prodigally flung away, they not caring which way it went, whether to the bottom of the ſea or the bellies of the fiſhes, ſo the Dutchmen might be never the better for it. This gold came from St. Mary's iſland, where three or four rich Spaniards engroſſed all to themſelves, keeping two thouſand Indians ſtarving in the mines."

They come in view of Lima.

Departing from hence the fleet made the Ladrones, where the company got a ſupply of cocoas and other fruits, keeping a wary eye upon the nimble fingered natives. Coming to Bagla Bay, they got proviſions by pretending they were Spaniards. From hence, paſſing the Iſle of Capul, they proceeded towards the Manilla; and, in their way, took a junk of China which had ſtore of victuals on board, and was bound to the very place whither they wanted to be directed. From the maſter of this veſſel they got the following intelligence, "That there were then at Manilla two great ſhips that came every year from New Spain thither, and a Dutch ſhip alſo that was bought at Malacca; that the town was walled, and had two ſhips riding before it for its better ſecurity. He mentioned the vaſt trade carried on from China thither, and ſaid that two ſhips laden with iron and other metals, as well as proviſions, was expected to arrive from Japan.——Holding on their courſe, they made the iſland of Luſſon (which is deſcribed as being about the ſize of Great Britain) after having taken a bark laden with hogs and poultry, deſigned for the Indian tribute to the Spaniards. At this iſland they alſo took one of the Japan ſhips of 250 tons burden, and, on the 9th of May fell in with two veſſels, whoſe cargoes conſiſted of hens, hogs, and aqua vitæ.

Arrive at the Ladrones.

Falling in with the Manilla fleet on the 14th, a ſmart engagement enſued, in the courſe of which the Dutch admiral was boarded by the Spaniards, and on the very point of ſtriking to the Spaniſh admiral, when the former threatening to blow himſelf and his men up with the veſſel, rather than it ſhould be yielded to the enemy, deſpair giving them freſh courage, upon this declaration they exerted ſo much vigour, that they drove back the Spaniards, and boarded, and at laſt ſunk the admiral. In this engagement the Dutch loſt their pinnace, which was taken by the enemy's vice-admiral, and had beſides five men ſlain, and twenty-ſix wounded; while by their account it appeard that the Spaniards loſt ſome hundreds, that periſhed partly in the fight, and partly

An engagement with the Spaniards.

* This circumſtance the captain obſerved was owing to the wrong placing of the iſland in the maps.

6

drowned,

drowned, and knocked in the head after the fight was over."

After this engagement the Dutch fleet ſailed for Borneo, 180 miles from Manilla, lying in the 5th degree of north latitude. Here they arrived on the 26th, and putting into a large bay, ſent to aſk the king's permiſſion to trade there; but that prince would enter into no treaty with them, till he was ſatisfied they were not Spaniards; afterwards they trafficked for pepper with the Patarees, a people of Chineſe original. But at length they found that the Borneans wanted to ſurprize them, having fitted out an hundred veſſels called Praws, for that purpoſe, who pretended to bring them preſents from the king; but the Dutch being on their guard, threatened them with a diſcharge of their ordnance if they did not keep off. This threat had the deſired effect; and thus they eſcaped the meditated miſchief.

Treachery of the Borneans detected.

They found the iſland to be one of the largeſt in thoſe parts, the people all were warlike, and all ranks going armed; even the women were bold enough to reſent an affront with the point of a javelin.—Before they left Borneo on the night of the 4th of January, four of the natives attempted to cut their cables, but being diſcovered and ſhot at, they eſcaped, and leaving their praw behind them, it fell into the Dutchmens hands.

A Japaneſe junk that they ſpoke with in theſe latitudes told them of a great Dutch veſſel which bad weather had forced into Japan, only 14 of her crew remaining, and which veſſel they concluded to be Veerhagen's admiral.

Having but one anchor remaining, and the cable very much worn, they were happy in taking a junk from Jor, in which they found a ſkilful pilot, of whoſe ſervices they ſtood in great need, being ſurrounded with iſlands, and ſhoals, and in an unknown ſea.

Thus proceeding with caution, they arrived at Jortan in Java on the 28th, and heard tidings of Dutch ſhips at Bantham. The king of that part of the iſland they were informed had conquered Balambuan, a little iſle to the ſouthward but a ſhort time before their arrival.

Departing from Java, they ſteered for the cape of Good Hope, and in their way ſaw a Portugueſe veſſel of 600 tons faſt between the ſhoals. This ſhip it was ſaid, was going to Amboyna, in order to engroſs the trade there.

Having left Java on the N. E. they proceeded on their voyage, and on the 24th of April at night they ſaw a light which they reckoned to be about four miles north-weſt of them, which much ſurpriſed them as by account they were 36 leagues from land. But the next day they found themſelves in 34° 45′ S. lat. the weather being calm. At night they ſaw a light, and the next morning they diſcovered land to the north-eaſt of them, which was the Cape of Good Hope.

From thence they ſteered for St. Helena, where they arrived on the 26th of May, and having refreſhed themſelves with what the iſland afforded, they departed on the 30th, and again croſſed the Line, in their way to Holland, where they arrived in ſafety in two months and fourteen days, caſting anchor before Amſterdam, on the 26th of Auguſt. 1601

The fleet in which Sebald de Wert was, of whom we made mention, conſiſted of five ſhips, called the Hope, the charity, the Faith, the Fidelity, and the Good News; Sir Jaques Mohu, was the admiral, Simon de Cordes, the vice-admiral; Benningham Beckholt, and Sebald de Wert were captains of the other veſſels. They ſet ſail from Amſterdam June 27, 1598. Account of Sebald de Wert's expedition.

The admiral dying, when the fleet had reached the Cape Verd iſles, Simon de Cardes ſucceeded him in the command. From thence they proceeded to Guinea, with intention to trade. A French ſailor came on board them while they were on this coaſt, who offering to do them ſervice with the Negro king, Sebald de Wert was ſent to his majeſty, whom they found ſeated on a throne about a foot high, and dreſſed in ſomething like a gaudy ſuit of livery. But the place was barren of proviſions, ſo that the admiral was obliged to dine upon his own, under the pretext of ſhewing his majeſty his country fare, to whom he drank in Spaniſh wine; and this great prince found the liquor ſo agreeable to his palate, that he drank till he was carried away aſleep. Two buffaloes, a boar, and a few fowls were all they could get there; ſo they left the place on the 8th of November, and after touching at Annabon, ſailed for the ſtreights of Maghellan in the beginning of January, and entered them at Penguin Iſland, on the 6th of April.

Having anchored in a bay 54° ſouth, on the 15th of April, they remained there till the 23d of Auguſt, in the courſe of which time, they loſt 100 of their company. On May the 7th, while they were employed in taking gudgeons, they were attacked by ſome of the gigantic ſavages, whom they repulſed with their ſhot, killing ſome of them; which they afterwards revenged by the death of three Dutchmen.* Some of the natives of theſe inhoſpitable regions defaced a monument left by the admiral of a ſociety in which he was engaged with ſix of the principal perſons; which was called *The Fraternity of the Golden Lion*; and likewiſe pulled the dead out of their graves and horribly diſmembered them. They left the ſtreights on the 3d of September, but were ſeparated on the 7th, Captain de Wert was obliged to ſtay, the Faith and Fidelity were alſo left behind, and in the midſt of ſickneſs, tempeſts, and unnumbered difficulties reached the ſtreights, where they met with admiral Van Noort, whoſe ſituation did not put it in his power to relieve his diſtreſſed countrymen. At laſt they had the ſatisfaction of leaving the ſtreights on the 22d of January, 1600, and arrived in the Maes, on July 14, 1601.†

THE VOYAGE OF GEORGE SPILBERGEN.

The admiral ſails from the Texel.

THIS admiral, with a fleet of ſix ſhips, ſailed from the Texel on the 8th of Auguſt, and paſſing the Canaries on the 11th of October, ſteered for the coaſt of Braſil, which they came in view of on the 13th of December, and on the 20th of the ſame month, came to the Iſland of Grandes; on the 30th one of the ſhips in company called the Hunter, engaged with the five barks of Portugueſe and Indians as they heard by the firing, and preſently came up to help her; but a freſh ſupply reinforcing the enemy, the Dutch were obliged to ſheer off. Lying ſtill before this iſland, a conſpiracy was diſcovered, for which two perſons who were found guilty, were executed in the beginning of the new year. After they left this place, 1614

The admiral ſails from the Texel.

* According to the Dutch, the weapons which theſe ſavages uſed, were darts, with heads the roughneſs of which reſembled ſaws, ſo that there was no relief for a perſon hurt by one of them till it was cut out of the wound.

† In the courſe of their voyage they diſcovered three iſlands without the Streights, to which they gave the name of the Sebaldine Iſles.

1615 place, they ſailed to St. Vincent, and took a bark which they burned; 18 Portugueſe whom they had made priſoners, being refuſed by their countrymen to be exchanged for a ſmaller number of Dutchmen with ſome goods taken in the prize which were offered into the bargain.

A mutiny. After having weathered a dreadful ſtorm on the 7th of March, holding on their courſe, a mutiny on the 21ſt broke out, which was quelled by the commanders. They entered the Streights of Maghellan on the 24th of the ſame month, but the winds and tides forcing them out again, they could not re-enter till the 2d of April. In the latitude of 54 degrees, they gave the name of Pepper-Haven to a place where they found the bark of the trees in taſte to reſemble that ſpice. They trafficked with the ſavages, exchanging knives, and ſuch ſort of commodities for a kind of pearl; but theſe people ſoon after ſlew two of their men, having ſurpriſed a company of them on ſhore.

At length, on the 6th of May they made good their paſſage into the South Sea, where they met with a dreadful ſtorm, by which they were much endangered, as they were in fear of ſplitting on ſome iſlands lying near.

Proceeding in the Pacifie Ocean they came to La Mocha, (which place had been fixed upon for a rendezvous in caſe of ſeparation). Here they trafficked with the natives, whom they found to be a warlike people, furniſhed with military ſtores, and enemies to the Spaniards. Here likewiſe the Dutch were ſupplied with ſheep and poultry. Coming on the 28th to St. Mary's Iſland, they were invited on ſhore by a Spaniard, but finding by the appearance of ſome ſoldiers, that foul play was intended, they declined the invitation, and kept the Spaniard priſoner. Landing afterwards, when they approached the town, the people retired, ſetting the church on fire; the Dutch did the ſame by the houſes; and four Spaniards were ſlain, and two Dutchmen wounded in a ſkirmiſh.—Here they took 500 ſheep and ſome poultry, and afterwards ſailed to meet three Spaniſh veſſels which they underſtood were ſent out in queſt of them.

After having paſſed Arica, on the 2d of July, and on the 16th taken a ſhip with ſome valuable commodities on board, they were met by the royal fleet of Peru, of eight ſail, commanded by Rodrigo de Mendoſa, which they engaged, ſunk the vice-admiral and one of their ſhips called the St. Francis, totally defeated the enemy, and ſo much damaged the admiral's ſhip, that ſhe alſo went to the bottom, after the fight was over. By this misfortune the king of Spain loſt a vaſt ſum expended on the ſhips and their preparation. The commander in chief died of his wounds, and it ſeems that "all the Spaniards who were not killed in the fight or drowned in the ſea, *were diſpatched by the Dutch*, who, on their part had 40 men ſlain, and 58 wounded. After this fight, the fleet ſailed for Callion de Lima, in purſuit of the Spaniſh admiral's ſhip, not apprehending that ſhe was ſunk at ſea. Purſuing their courſe for Callion de Lima, the Spaniards ſhot at them from the ſhore, and were very near ſinking one of the Dutch veſſels, called the Hunter, with a 36 pounder, having an army of horſe and foot on ſhore, which the viceroy himſelf commanded.

The Spaniards defeated in a ſea-fight.

On the 8th of Auguſt they came to Paytos, where they landed 300 men, after having battered it with their great guns. The people, notwithſtanding the ſtrength of their fortifications, had fled to the mountains, taking their property with them, ſo that the Dutch found nothing but bare walls left them.

Of the Spaniſh dominions in that part of America, Pedro de Madrigo, of Lima, had given them the following account.

State of the Spaniſh dominions in America.

"That Peru, Chili, and Terra Firma, were under the command of one and the ſame viceroy, which office was continued for ſix or eight years —that the profits of it were 40,000 ducats per annum; with 1000 pezoes for the extraordinary expences of entertainments at the feaſts of Chriſtmas, Epiphany, &c. and likewiſe Eaſter; and 2000 pezoes per annum, when he ſet out the ſilver fleet.—That the viceroy lived in all the pomp and ſtate of a king, not ſtirring out without his guard of penſioners, and if he went far, he was waited on by 100 lances, and 50 muſkets.—That there were in Panama, Quito, Carlos, and Lima, certain courts erected for the judging of all cauſes, civil and criminal, appeal being made to the Oviidores in civil matters, and to the Alcaids in criminal, both which offices were ſupported by a yearly ſtipend of 3000 pezoes; and there was a fifth court of this nature too, eſtabliſhed in Chili.—The city of Lima (the city of Kings) was honoured with the reſidence of the viceroy and the arch-biſhop; it ſtands in a pleaſant valley, extended a mile and half in length, and three quarters in breadth, and was then reckoned to contain 100,000 inhabitants, beſides foreign merchants. It had four large market-places, and a circado filled with 2000 Indian artificers.—It had plenty of large buildings dedicated to religion, and other pious uſes: here were the churches of St. John, St. Marcellus, St. Sebaſtian, and St. Ann. The monaſteries of St. Francis, St. Dominick, St. Auguſtine, and of Our Lady de Los Meriedes, each of which had two cloiſters of friars of their order, and no leſs than 250 religious within the bounds of every conſiderable monaſtery. There were two colleges of Jeſuits; the five nunneries of the Incarnation, Conception, Trinity, St. Joſeph, and St. Clare. The hoſpitals of St. Andrew, for the laity; of St. Peter, for the clergy; of St. Ann, for the Indians; of Charity, for women only; of S. Spirito, for ſailors; and of S. Lazaro, for incurables. There were likewiſe in the city two colleges, the King's College, and that of S. Tonne; in the former 24 ſtudents were maintained by the king, and in the latter as many by the arch-biſhop. There were reckoned 200 doctors of all faculties here, 400 maſters of arts, and 1000 inferior ſtudents. Here were alſo the king's treaſury, and a court of inquiſition; beſides the grand office of the cruſada, or court of the pope's bulls, with officers and penſions proportionable to the former. There were reckoned in the city, and the ſuburbs of it, above 20,000 ſlaves; and it was defended by a garriſon of eight companies of foot, and as many of horſe. Situate two leagues from the ſea, the walls of it were waſhed by a river, that ſometimes ſo much ſwelled by great rains, as to carry away the ſtone bridge of nine arches. The Indians who lived here were free as well as the Spaniards, only they paid every ſix months, two pezoes, alſo a hen, eight rials, and a piece of cotton or woollen cloths. The next port of Lima was Callao, in which were about 800 inhabitants.—He added, that Potoſi was famous for its ſilver mines, and there was a good trade thither from Arica, of beaſts, wheat, meal, maize, and axicoca, an herb for chewing: and for carriages they made uſe of a ſort of ſheep, that were formed ſomething like camels. There was a deſcent of 400 ſteps down into the mine, in which, as dark and deep as it was, there were above 20,000 Indians continually at work; and 100 more employed in grinding and carrying, and other things relating to the ſilver trade. This place was ſo cold, that nothing would grow for four leagues compaſs round about, but a certain herb, which they call yeho. It was reported too, that in Potoſi (beſides the other inhabitants) there were 1500 gameſters, that lived merely by their wits, and were obliged to a pack of cards for maintenance. That not far from thence was Chuquiſaca, adorned with religious houſes like Lima, and had a biſhoprick worth 30,000 ducats per annum. That at 70 miles diſtance lay the ſilver mine called Eruco; and about 180 Spaniſh leagues diſtant was the fair haven of Arica, in the way to which lay many villages well inhabited.——That there was another ſilver mine, as cold as Potoſi, that lay near Puna, called Chocola Choca, about which lived 5000 Spaniards.——That Cuſco had a biſhop, monks,

and two colleges, with ſome 600 ſtudents, and 6000 Spaniſh inhabitants——That Arequippa had about 2000 inhabitants, and was honoured with the reſidence of a biſhop, and a corrigidore——That St. Iago was the chief city of Chili, which was enriched with a gold mine——That Baldivia was celebrated for the ſame, and Coquimbo for its plenty of braſs——That Auroca was no very rich town, but it was defended by a fort, in which a company of Spaniards always lay in garriſon.

They took two ſtrange birds of the eagle kind in the iſland called Leubes, and an Indian veſſel, by which means a quantity of dried fiſh was added to the proviſions of the company. They put to ſea again on the 21ſt of Auguſt, and on the 23d anchored before Rio de Tumba. Afterwards they intended to put back to the Iſle of Coques, in latitude 5° ſouth but could by no means attain their end. A continuation of bad weather left their ſhip at the mercy of the elements: and it was not till the 1ſt of October that they anchored in the haven of Acapulco.

They traffic with the Spaniards at Lima.

Here a flag of truce being hung out, they trafficked with the Spaniards, receiving proviſions in exchange for priſoners, and, what was remarkable enough, the viceroy's nephew Hernando, came on board to take a view of his enemies ſhipping. Sailing from hence they took a bark intended for the pearl fiſhery, and anchored in a port in the latitude of 19° north on the 1ſt of November: after an engagement with the Spaniards on the 11th, they ſailed for the Nativity, where having got what refreſhment they wanted, they departed on the 20th, ſteering for the Ladrones, whither they came on the 23d of January. 1615

On the 7th of February they arrived at the Ladrones, where they found the Indians unwilling to trade with them, becauſe they knew them not to be Spaniards; and after having taken ſeveral barks in theſe ſeas, they held on their courſe homewards, paſſing by Mindanao, but not coming cloſe in with the ſhore for fear of the dangerous ſhoals upon theſe coaſts*.

Thus proceeding, after touching at Ternate, the Dutch fleet came to Jacatra on the 15th of September, where the veſſels were refitted, when they underſtood that they were in no danger from the Spaniſh fleet ſent before to the Moluccas, the preparation of which had taken up four years, as the admiral was no more, and the ſhips had retired to the Manillas. Here they met ſome ſhips of their own country full of Spaniſh treaſure; and on the 20th of October fell in with the Concord, a ſhip of Horne, which was joined to their little fleet. The Naſſau came to Bantham from Mocha, on the 10th of November, and on the 12th of December the Amſterdam, and the Middleburgh, came thither from the Streights of Malacca. The admiral ſetting ſail with theſe, touched at St. Helena on the laſt day of March, and having compleated his voyage, arrived at Zealand in the month of July, 1616. They arrive at Zealand.

THE VOYAGE OF WILLIAM CORNELISON SCHOUTEN, OF HORNE.

1615

THIS voyage was undertaken on the ideas only of Iſaac Le Maire, a merchant of Amſterdam, and William Corneliſon Schouten of Horne, that there was yet another paſſage to be found to the South Seas beſides that diſcovered by Maghellan†. For the purpoſe of making this experiment, two ſhips were equipped, called the Unity, of 360 tons, and 65 men, the one commanded by the adventurer, whoſe voyage is the ſubject of our relation, the other called the Horne, of 110 tons, of which John Corneliſon Schouten was maſter. Being properly provided with guns, ammunition and proviſions, the Unity came to the Texel on the 27th of May, and her conſort joined her on the 3d of June, 1615. From thence they proceeded on their voyage, touching in their way at Dover, and having ſailed by the Canaries, paſſed the tropics of Cancer on the 15th of July. Anchoring at Cape Verd, they procured a ſupply of freſh water, and departed on the firſt of Auguſt, and on the 21ſt of the ſame month made the high land of Sierra Leona. And, after getting clear of the ſhallows, anchored at the iſland of Madrabomba, which the Dutch deſcribe as full of bogs, and marſhes, a habitation for wild beaſts, where they live uninterrupted by mankind. From thence they came before the village in the road of Sierra Leona, where, having given a pledge for their good intentions, the natives carried on a traffic with them, and the woods on ſhore furniſhed the crews with lemons in abundance.

Schouten embarks.

The fleet comes to Madrabomba.

The ſhips ſailed from Sierra Leona, on the 4th of October, and the next day, being in 4° 27″ ſouth lat. a ſtrange incident happened, which is thus related: "This day at noon they were ſurpriſed with a violent ſtroke given to one of their ſhips in the lower part of it. No adverſary appeared, no rock was in the way to be encountered with; but while this amuſed them, the ſea all about them began to change colour, and looked as if ſome great fountain of blood had been opened into it. This ſudden alteration of the water was no leſs ſurpriſing than the ſhock ſuſtained by the ſhip. But of the cauſe both of the one and of the other they were equally ignorant till they had come to Port Deſire, and had there ſet the ſhip upon the ſtrand, in order to make her clean. Then they found a large horn, both in form and magnitude reſembling an elephant's tooth, ſticking faſt in the bottom of the ſhip: it was a firm, ſmooth, and ſolid body all over, there being no cavity or ſpungy matter in the midſt of it, but all over as compact and denſe a ſubſtance as it appeared in the exterior parts. It had pierced through three ſtout planks of the ſhip, and razed one of her ribs." It was afterwards concluded that this horn which had entered half a foot into the veſſel's bottom, leaving as much more on the outſide, had belonged to ſome monſtrous fiſh, that having made an aſſault upon the ſhip, was unable to withdraw its weapon, which breaking in the attack, occaſioned ſuch an effuſion of blood as diſcoloured the ſurrounding ocean. A ſtrange ſhock.

On the third of November they ſaw Aſcenſion Iſland, and the company having been appriſed of the deſign of this voyage, to which before they were ſtrangers, the veſſels ſteered for Port Deſire, but when they came to 47° 40″ ſouth lat. miſſing the channel, they ſailed into a crooked bay, which from the num-

* In theſe parts their beſt proſpect was nothing but a range of hills covered with ice. They ſaw a vaſt quantity of penguins, and ſuch numbers of whales that they were obliged to be very cautious in their ſteerage, leſt they ſhould run foul of their enormous bodies.

† The ſtates of Holland had forbidden all their ſhips, except ſuch as belonged to the Eaſt India company to paſs to the Indies, either by the Cape of Good Hope or the Streights of Maghellan, which prohibition ſet the invention of ſome to work to find another paſſage. Le Maire and our adventurer, in conſequence of ſuch a notion entered on this ſcheme, and the latter embarked in this expedition.

1615 number of ſmelts taken there, they called Smelts Bay, and there they were near loſing the Unity. But this danger paſt, they anchored in the haven of Port Deſire, on the 8th of November, in 20 fathom water, but the ground being ſlippery ſtones, the ſhips drove from their anchors, and both were likely to be loſt, the Unity lying with her ſide on the clifts, and the horn being ſtuck in ſuch a manner that a perſon might walk under her at low water. Yet a flood and favourable weather brought them both off, beyond the expectation of thoſe on board. The next day they proceeded farther up the river, where they found abundance of ſea mews, and furniſhed themſelves with ſome thouſands of the eggs of thoſe birds. Two days afterwards they ſaw oſtriches and a kind of harts upon the coaſt, and, according to the report of theſe voyagers ſome burial places were found wherein were depoſited bones of an unuſual ſize, which apparently had belonged to the gigantic natives of the country. And here while they were endeavouring to clear the horn, burning reeds under her bottom, ſhe took fire by accident, and was totally conſumed; the guns, anchors, and iron-work, however, were ſaved and put on board the other veſſel.

On the 15th of January the Unity ſailed out of Port Deſire, but being becalmed, was obliged to anchor before the haven, which Schouten left with the firſt fair wind, in order to proſecute his intended diſcovery. On the 20th he ſaw Steencroſs Drive, and being 20 leagues to the ſouthward of the Maghellanic Streights, by account, ſteered ſouth by weſt, and the next day ſaw land to the weſt and weſt ſouth weſt, and afterwards to the ſouth; and the north wind made them take in their top-ſails while they were lying by an eaſt ſouth eaſt courſe, to get above the land. Coming cloſe with the ſhore to the eaſt, on the 25th, they called it Staten Land, and to that which lay weſtward they gave the name of Maurice-Land. The land upon the ſouth ſide of the paſſage at the weſt end of Maurice Land, appeared to tend weſt ſouth weſt, and ſouth weſt, being a craggy ſhore as far as was within view.

Thus proceeding they found themſelves in a fair way for ſucceeding in the diſcovery, which was at length put out of doubt by obſerving the high land to the ſouth of the ſtreights of Maghellan to end in a point or cape, to which they gave the name of Cape Horne, and laid it down in 59° 48′ ſouth lat. and the ſtreights they had ſailed through were termed the Streights of Le Maire, who, as we have ſaid, ſailed with Schouten upon the expedition. Having loſt ſight of land, they perceived a large ſwell from the ſouthward, and a blueneſs in the ſea, that indicated the conflux of thoſe two mighty oceans, which here meet one another and extend their mighty arms to circle the vaſt continents of this habitable globe.

During their paſſage through theſe new diſcovered ſtreights they had a ſeries of blowing weather, and a foggy air, and when they loſt ſight of land were ſtill forced to encounter with heavy gales. But having ſurmounted all theſe difficulties, and gone as far as 59° 25″ ſouth, they were at length enabled to hold a northward courſe, and on the 12th of February had the ſatisfaction of ſeeing the Maghellanic Streights to the eaſtward of them, on which they celebrated their ſucceſs in a cup of good wine, and preſently forgot all former difficulties.

From hence they reſolved to ſteer for Juan Fernandez, which they reached on the 1ſt of March, at noon, and reckoned it to lie in 33° 48″ ſouth lat. but though they were pleaſed with the appearance of the land, yet not being able to bring the ſhip up to an anchor cloſe by it, they departed, having taken a quantity of fiſh, and ſupplied themſelves with freſh water. Having paſſed the tropic of Capricorn, on the 3d of April, at which time the flux raged among them, on the 11th they came to an iſle, to which they gave the name of Dog Iſland, lying in 15° 12″ ſouth. Their only refreſhment here was ſome herbs, and they named the iſland after a ſet of animals like dogs (probably of the Peruvian breed) which could neither ſnarl nor bark. "On the 14th about ſun-ſet (ſays our account) they came within a league of a large low iſland, from whence a canoe advanced to meet them, the men naked, with long black hair, and their bodies of a reddiſh colour. They made ſigns to the Dutch to come aſhore, and called to them in their language, and though they anſwered them in their own, the Spaniſh, Molucca, and Javan tongues, yet the Indians underſtood them not; ſo that both ſides were in the dark as to each others minds. When they got up to the iſland and ſounded, they found no bottom, neither was there any change of water, though they were within a muſket ſhot of the ſhore. Here the Indians and they had another unintelligible conference, but the former could not be perſuaded to come up to the ſhip by any ſigns the Dutch could make to invite them to it, as neither would the Dutch go aſhore to them, though ſtill they kept pointing, while neither ſide underſtood one word that was ſpoken by the other.

"Sailing afterwards 10 leagues to the north-weſt, to get above the land, they coaſted the next morning along ſhore, where they perceived ſeveral of thoſe naked people calling to them (as they gueſſed) to land. Preſently after one of the canoes came towards the ſhip, but would not come up to it, yet ventured towards the ſhallop, where the Dutch and thoſe Indians fell to their myſterious converſation again.

"The Dutch gave them beads and knives, and ſeveral things that pleaſed them, which kindneſs emboldened them at laſt to come a little nearer the ſhip, but ſtill they would not go aboard her, but got back into the ſhallop. Neither had they any great reaſon to be fond of their company there, for they were a parcel of light-fingered fellows, having much the ſame degree of conſcience and honeſty as thoſe at the Ladrones. They liked iron as the Ladronians did, and they loved like them to ſteal it. The very nails of the cabin windows and the bolts upon the doors could not keep their places for them, but they would have them off; this was found to be true, by an inſtance of one of them, who had cunningly ſlipped into the ſhip, and pulled out all the window-nails, which for ſecurity's ſake he had ſtuck into his hair. Nay, they were ſo very impudent, that whatever they laid hands on was their own (tho' the owner looked on all the while) if he did not recover his right by force. When the Dutch gave them ſome wine, they drank the liquor and kept the cup, ſo when they threw out a rope to bring them to the ſhip, they would neither uſe the rope nor return it. And their qualities were not more odd than the figure they made; for (beſides that they were all naked, except the pudenda, which they covered with a piece of mat, their ſkin was all over figured with ſnakes, dragons, and ſuch like vermin, which were very ſignificant emblems of their own ſubtle and miſchievous natures."

The Dutch having a mind to try if any thing were to be done with them, or to be gotten in the iſland, ſent their ſhallop with eight muſqueteers and ſix ſwords-men beſides other company of the ſhip. They were no ſooner landed than 30 of theſe people ruſhed out of a wood upon them, armed with great clubs and ſlings and long ſtaves; they would have ſeized the ſhallop and taken away the ſoldiers arms; but the muſqueteers letting fly amongſt them, kept them from the ſin of robbery at that time, and forced them to be honeſt whether they would or not. This iſland they called the Iſle without Ground, becauſe they could not anchor there: it was not broad, but long, and full of trees, which the Dutch gueſſed to be cocoas and palmettos. It was a white, ſandy ground, and lay in 15° ſouth, about a hundred leagues from Dog Iſland.

Leaving theſe people, whoſe language they could not underſtand, and of whoſe manners and morals they had ſo bad a ſpecimen, the Unity departed, and in her courſe paſſed two iſlands, to one of which they gave the appellation of Water Iſland, on account of its

low and marshy situation, and named the other Fly Island, from a quantity of flies, which surrounding some of the crew who landed and went into the woods, became a mere pest to them and their companions at their return. It was about four days before they got rid of this plague of flies, and with an hearty good will set sail from Fly Island, where, previous to this inconvenience, a wild man, (which one would think was no very extraordinary sight in those parts) had struck a panic into their company.

The Dutch take an Indian bark.

At the distance of about 1510 leagues by account from the coast of Peru, in 15° 20′ south lat. they took a bark, the crew of which would not strike when two pieces of ordnance were fired at them, but yielded to the shallop with 10 musqueteers on board, most of the men throwing themselves into the water, and the rest with their women and children surrendering to the conquerors, who used them well (according to their own relation) dressed their wounds, entertained them on board the ship, and sent all that they had taken prisoners freely back again. The bark these Indians were in, the Dutch say, was formed in the following manner: "It consisted of two canoes fastened together, in the midst of which were laid two broad planks of red wood, to keep out the weather, and several others went cross from one canoe to the other, which were made very fast and close above, and hung a good way over on both sides. At the end of one of the canoes on the starboard side, there stood a mast with a fork in the end of it, where the yard lay; the sail was made of mats, and the ropes of such stuff as the fig-trails in Spain consist of. They had neither compass, chart, nor any furniture for the seas, but only a few fishing hooks, the upper part of each of which was stone, and the other black bone, tortoise-shell, or mother of pearl." What was still more extraordinary, we are told that they had no occasion for fresh water, as, besides having recourse to the liquor of a few cocoa nuts, not only the men and women, but even their smallest children could drink with satisfaction out of the sea which flowed around them. The Dutch saw another of these barks on the 11th of the same month, which sailed so fast, that few Europeans could out go her. That day they made two islands, at one of which they anchored. They reckoned it to lie in 16° 10″ south lat. and from the number of cocoas growing on the shores, denominated it Cocoa Island.

Cocoa Island.

Here they met with a people who seemed willing to trade and exchange provisions and other commodities with them; but like some of the other islanders in those parts, they found them treacherous enough when they had an advantage. These savages afterwards boarded the shallop in order to take her, and laughed at the first discharge of the musquetry, but the second being better directed, they were convinced of the execution which fire-arms could do, and taught better manners. After this they were as troublesome in their importunities to trade with the Christians, as before they had been in their attempts to rob and murder them. Admiring much at the ship's strength, they not only climbed up her side like clustering bees, but dived under her, and examined her bottom.

The Dutch were well enough pleased with this traffic, which was carried on in a friendly manner, and the king of the savages sent them a hog by the way of present, for which he had taken nothing in return; his son also was kindly entertained on board the ship, though his majesty declined coming in person. Yet notwithstanding all this, on the morning of the 13th, a vast number of large vessels and canoes, containing about 800 Indians surrounded the Dutch ship. Having in vain endeavoured to deceive the Christians by pretending that they came only to direct them to a place where they might be accommodated, these savages gave a sudden onset, the king himself who was present, leading the way, and pushing his vessel so forcibly on to the attack, that the heads of two of his canoes were dashed in pieces with the shock. But the great ordnance of the Dutch playing upon them, as well as the small arms, they were glad to desist from their purpose. This place the Captain called Traitor's island; yet at the very next isle which he came to, he found much the same sort of treatment, and would have lost his shallop but for the spirited resistance of the crew.

1616

Traitor's Island.

When they came under 16° 5′ south latitude, on the 18th of May, it was resolved to steer in such a manner as to fall in southward with New-Guinea. In consequence of this resolution, they directed their course N. N. W. and on the 19th they saw two islands, to one of which they came on the 21st, where they were defied by some Indians coming in two canoes from the shore; but having chastised the insolence of those savages by a discharge of their guns, which killed two of their company, they heard no more of them, but the next day received from their countrymen a supply of cocoas, ubes roots, and roasted hogs, for which beads, knives and nails were given in exchange. The habitations of these Indians, which were full in view, were ten or twelve feet in height, about 25 in compass, and thatched with leaves; their bed was dried herbage, and a club made the whole of their furniture, as well as their defence against their enemies. The Dutch exchanged hostages with these people, sending three of their principal men in the room of six Indians, whom they retained. The king, who seemed to entertain an idea of good faith, caused great respect to be paid to his guests on shore, and would not suffer any of his subjects to disturb such of the crew as came to water.*

But after all, there was very little to be gotten on this island, as the Indians themselves had not at that time a plenty of hogs, for which the Dutch chose chiefly to barter. And besides, it appeared (though the king and his company even set their tiaras of feathers on the heads of two of the Dutchmen)† yet they wanted their guests to be gone; for they would have bought their absence with 18 hogs and a quantity of cocoas, and would have engaged them in a war with the king of the other island. Though all this time both prince and people continued their marks of respect to the Christians, kissing their feet, and laying them cross their necks, in token of awe and veneration. The account of these voyagers, says——"The 30th was made a day of solemnities, by the coming of the king of the other island to visit the king of this. He came with a train of 300 of his naked Indians, that had bunches of green herbs stuck about their middles, of which they prepared their drink: And that he might be sure to be welcome, he also brought 116 hogs along with him. When these two princes were within sight of each other, they began to bow and scrape, and muttered out certain prayers to themselves: When they met, they both fell down with their faces flat upon the ground, and after several very strange gestures used, they got up upon their legs, and walked away to the seats provided for them; where, after they had muttered some more prayers and bowed very reverently to one another again, with much ado they sat down under a canopy provided for them. And now to make the strange king the more welcome, a messenger was dispatched to the Dutch ship, to get drums and trumpets ashore; so the trumpets sounded, and a march was beat up, to the very great entertainment of the two kings. After this they prepared for a solemn banquet; and in order to it, began to make ready their liquor,

Strange ceremonies of the Indians.

* One of the natives detected, was pursued and severely beaten by the king's officers, who said that if his Majesty had known the matter, the offender would have lost his head. This and much more might possibly be accounted for by the fear wherein they stood of the Dutch fire-arms, which was such that the king, though desirous to hear the ordnance go off, and apprised of the effect, yet ran into the woods with all his courtiers, as soon as he heard the discharge.

† These crowns were made of red, green, and white feathers; each of the king's council had one of the doves sitting by him upon a stick.

1616 liquor which they did in this ſlovenly manner: There came into the preſence a company of fellows, with a good quantity of cana, (the herb of which they make their drink) each of whom having crammed in a mouthful of it they began to chew together; having chewed it a while they put it out of their mouths into a large wooden trough, and poured water upon it, and fell to ſtirring and ſqueezing it, and having preſſed out all the goodneſs, they preſented it in cups to the two kings. They were ſo civil likewiſe, as to offer the Dutch ſome of it who were ready to vomit at the ſight of the preparation. As for the eating part of the entertainment, it conſiſted of ubes roots roaſted, and hogs dreſſed after a very *nice* manner. They had ripped up the bellies, and taken out the guts of them; and then putting hot ſtones into their bellies, and ſinging off the outſide hair, without any farther dreſſing, or cleanſing, they were fit for the king's table. They preſented two of theſe hogs to the Dutch, with all the form and ceremony they uſed to their kings, laying them firſt upon their heads, and then kneeling with much humility, left them at their feet. They gave them beſides, eleven more alive; for which they received a preſent of knives, old nails, and beads.—— Theſe people were of a dark yellow colour, ſtrong, and well proportioned bodies, ſo tall and big, that the largeſt amongſt the Dutch would have been matched by the leaſt of them. Some wore their hair curled, ſome frizzled, ſome tied up in knots; and ſome had it ſtanding up-right on their heads like hogs briſtles, a quarter of an ell high. The king, and ſome of his courtiers, had long locks hanging down below their hips, bound up with a knot or two, but the women were all cropped cloſe; and beſides, were very ugly figures, being ſhort and ill ſhaped, and their breaſts hanging down to their bellies. Both ſexes went naked all to the pudenda: They ſeemed to be a people wholly void of devotion, and all worldly care and prudence, living juſt as the inferior animals do upon what the earth itſelf produced, without the ſolicitations of art and induſtry. They neither ſowed nor reaped, nor bought nor ſold, nor did any thing for a livelihood, leaving all to the care of nature, which if it failed at any time they muſt ſtarve; and they had as little regard to the laws of decency and modeſty too as to thoſe of civil prudence and policy, for they made uſe of their wives openly, in the greateſt aſſemblies; even before their king too as much as they reverenced him"——In their manners, in many of theſe particulars, the reader will find a ſtriking reſemblance with thoſe of the Indians mentioned by our modern circumnavigators.

Horne Iſland. To this place the Dutch gave the name of Horne Iſlands, and called the bay Unity Bay, from whence they ſet ſail on the firſt day of June, and for 20 days ſaw no land, but on the 21ſt of the ſame month, diſcovered a low iſland, ſome of the natives of which came off in a canoe, and were in manner and appearance much like the Indians already deſcribed, except that they had bows and arrows, which were the firſt weapons of that ſort that Schouten's company had ſeen ſince their entering the Pacific Ocean. Theſe people gave theſe ſtrangers to underſtand by ſigns, that there was more land, and a likelihood of better convenience farther to the weſtward; and the latter ſhaped their courſe according to this information. On the 24th they fell in with three iſles, which they called the Green iſlands, and ſaw another on St. John the Baptiſt's day, to which they gave his name. Diſcovering, at the ſame time very high land to the ſouth weſt; they concluded it to be the point of New Guinea, and ſtood for it. Having reached it by noon, they coaſted along ſhore, and the ſhallop being ſent to ſound, was aſſaulted by the natives, as was alſo the ſhip the next day; but the Dutch having the victory in both conteſts, theſe ſavages who before would not underſtand their ſigns, nor anſwer to their kind offers, became more intelligent and tractable, ranſoming a priſoner taken in the night, at the price of 10 hogs, and ſupplying the ſtrangers with what they wanted by way of barter.

New Guinea.

The Dutch departed on the 28th, ſtill ſailing with the point of this iſland in view, and alſo ſaw ſeveral more. On the 30th ſome other Indians, in appearance more peaceable and modeſt, came to them in their canoes; and on the firſt of July they anchored between an iſland about two miles in length, and the firm land of New Guinea.

Here the ſhip was ſurrounded by about 25 canoes manned with thoſe people who had before ſeemed of ſo peaceable a diſpoſition, but who now came to try their ſtrength in war, in which conteſt, as in moſt of the like nature, the Europeans preſently gaining an evident advantage by means of their fire-arms, the aſſailants were defeated, and the Dutch were ſuffered to proceed unmoleſted. Thus continuing their courſe on the 6th they ſaw a very high hill to the S. S. W. which they thought to be the hill Geemanapi in Banda, but found their miſtake, ſoon after diſcovering three other hills, ſome of which were volcanos, on which account they gave the place the name of Vulcan's Iſland. "The iſland (ſays the writer of the voyage) was well inhabited, and full of cocoas, but there was no anchoring there. The people were naked, and extremely fearful of the Dutch, and their language ſo very different from all thereabouts, that none of the blacks they [the Dutch] had with them, could underſtand them. There appeared more iſlands north and north weſt; but they held their courſe to one that lay north weſt by weſt, whither they came that evening. The water there they obſerved to be of divers colours, green, white, and yellow, which probably was the effect of the mixture of ſome rivers, becauſe it was far ſweeter than the ſea water, and was full of leaves and boughs of trees, and ſome had birds and crabs faſtened upon them."

Volcanos.

The next iſland they came to, was inhabited by a people called Papoos, remarkable for nothing but their ill features, which were not at all ſet off by the uncomely ornaments of rings in their noſes, rows of hogs teeth worn round their necks, and ſuch ſort of ſavage finery. In ſhort, their appearance was ſuch as diſguſted even to loathing, a people not very curious in the arts of dreſs, and who have never been remarked for nicety of taſte amongſt the European nations. The houſes of theſe ſavages were elevated on ſtakes about nine feet above the ground, a cuſtom amongſt many of the Indian nations, who live as if they were in continual fears of a general deluge.—Leaving the country of the Papoos, the Dutch came to another iſland, from which they were frightened away, not by the deformity of the people, but by the dear rates at which they valued ſuch proviſions as they had to diſpoſe of. And now Schouten's fleet, ſtill proceeding, yet remained in uncertainty, whether they had really been all this while on the coaſt of New Guinea or not, the charts not agreeing with their obſervations.

Papoos.

As they ſailed, on the 15th, along ſhore of two iſlands, on which obſerving abundance of cocoa trees, the captain diſpatched a party properly armed, in the ſhallop and the boat, to procure ſome of the fruit, but, notwithſtanding all the advantage of their fire-arms, theſe were ſo roughly handled by the Indians, that they were obliged to return without having effected their purpoſe. Afterwards the ſhip came to an anchor at the ſmaller iſland, where a number of the crew landed, and burned ſeveral houſes of the natives, who afterwards came and made peace with them, bringing fruits of divers kinds, and being preſented with beads and toys, the difference was amicably adjuſted. Matters being thus accommodated, we find, "They continued trading for cocoas, bananas, caſſanie [caſſavi or caſſada] and papede, of the former they got as much as came to 50 nuts, and two bunches of banana a man. This papede and caſſanie are alſo Eaſt-India commodities; and the latter particularly is alſo admirably good in the Weſt-Indies, and far beyond what they met with here. The people made all their bread of it, and baked it into large round cakes for that purpoſe. They called their own iſland Moa, which was the moſt eaſterly, the other, over againſt

A party of the Dutch repulſed by the Indians.

They are reconciled with them.

against it Jufoh, and the farthermoft about fix leagues from New Guinea, Arimoa. Theſe people had probably been viſited by ſome Europeans before, as they had Spaniſh jars and pots, and were not ſurpriſed at great guns, as the other Indians uſually were, nor ſo curious in looking into the ſhip as abſolute ſtrangers to ſuch a thing might be ſuppoſed to be.

Proceeding by the land in a north weſt they came on the 21ſt at noon into lat. 10° 13″ north, and anchored near a cluſter of iſlands where they had tempeſtuous weather, and after their departure were overtaken by ſome canoes of Indians, who like the former ſeemed to be no ſtrangers to the Europeans; but were larger and of a more yellow complexion than thoſe of Moa. They brought a fruit like prunes, cocoas, and bananas, to barter, and others brought porcelain ware. They wore glaſs beads, and ear-rings, and were armed with bows and arrows. The next day they ſaw another iſle which they called Schouten's Iſland.

Schouten's Iſland.

Effects of an earthquake felt at ſea.

On the 29th as they were holding on their courſe, they felt a very ſenſible ſhock, which alarmed the ſhip's company, who thought no leſs than that the veſſel had ſtruck upon ſome unknown rock or ſhoal, but finding themſelves evidently clear of all ſuch dangers, and not being able to get ground upon ſounding, they reaſonably concluded that it was an earthquake which had thus ſhaken the watry regions. And when they put into a great bay the next day, the ſhock was repeated, and a moſt dreadful thunder-ſtorm enſued with torrents of rain, which probably preſerved them from the pernicious effects of the lightnings that glared around them.

In this variable weather, they had twice paſſed the equinoctial line; and, on the third of Auguſt, being in 35″ north lat. conceived that they had reached the end of New Guinea, having ſailed 230 leagues along the coaſt.

They now ſaw two iſlands to the weſtward, from whence came ſeveral canoes with tobacco, rice, and Indian beans. The people of theſe parts ſpoke the language of Ternate and the Malayan tongue, and ſome were acquainted alſo with the Spaniſh. Some were cloathed with looſe ſilks about their waiſts, others wore breeches, and the Mahometans among them had ſilken wreaths about their heads, which were alſo covered with fine black hair, and they were extremely fond of wearing rings of gold and ſilver. Linen appeared to be what they moſt wiſhed to receive in exchange for their commodities, notwithſtanding they bartered them alſo for beads and toys. The people were natives of Tidore, and this was Gilolo, as it was afterwards found, though the Indians were particularly careful not to tell the name of their country. The Dutch kept ſailing round the land with various weather; and, on the 18th, ſpoke with the crews of two canoes that had hung out a ſignal of peace. Theſe men were of Ternate, and informed them that an Engliſh ſhip, and a Dutch pinnace had lain three months in the road of Soppy to which they offered to conduct the ſtrangers, coming themſelves from a village which bore the ſame name. On the 19th they ſailed into a ſandy bay, where they bartered for Indian commodities, and for poultry, lying about a cannon-ſhot from the ſhore. And about the middle of the next month proceeded on their courſe to Ternate, whither they ſaw another veſſel which proved to be the Morning Star, ſailing with all expedition. The ſhallop which had lain in a creek with that veſſel reported the intelligence that 10 ſhips were waiting at the Manillas with a view to intercept the Spaniſh fleet that was bound for Ternate. They alſo learned that Peter Bot, on his return, was wrecked with four veſſels off the iſland of Mauritius, only one of the four eſcaping deſtruction. Schouten next came to Jacatra, and paſſing by the iſland anchored within the harbour. Here they loſt one of their crew, being the firſt man that death had deprived their ſhip of, and which, with two that the Horne loſt, made up the whole number that died during the whole voyage. 1601

Schouten comes to Jacatra.

But while the captain was here refreſhing his men, he little thought of the misfortune that awaited him. The Eaſt-India Company, who looked with an envious eye upon all adventurers but thoſe of their own aſſociation having (as has already been obſerved) obtained a prohibition, preventing any others from paſſing to the eaſtern countries by the Cape of Good Hope, or the Streights of Maghellan, were not at all pleaſed with the ſucceſs of Schouten's undertaking. In conſequence of this diſpleaſure, the ſhip and goods of this unfortunate captain were ſeized by order from the preſident of the company, coming from Bantam to Jacatra while he lay there. It was in vain to remonſtrate; he was told he might complain at home, (the reader will imagine to how little purpoſe) he was therefore obliged to put up with the injury. His ſhip's company afterwards diſpoſed of themſelves according to their various inclinations. While ſome went into the company's ſervice, others ſailed for their own country on board the Amſterdam, and the Zealand, under Admiral Spilberghen's command. And they had been but 17 days on their voyage when Le Maire, their principal merchant, died, and, on New Year's Day, the Amſterdam loſt ſight of the Zealand. His ſhip ſeized

They doubled the cape on the 6th of March, and made St. Helena on the 31ſt of the ſame month, where they again found and joined company with the Zealand. On the 24th of April they paſſed the equinoctial line; and at length came into Zealand on the firſt of July, with the honour of having ſucceeded in the attempt, but deprived of all the profit which they might and ought to have reaped from the undertaking.

The conduct of the Dutch government in this caſe appears to have been as impolitic as it was unjuſt. To give ſuch an unlimited encouragement to monopolies, can never be the intereſt of any commercial nation, and to deprive any man or ſet of men of the fruits of their labours muſt be a great bar to check others in the courſe of uſeful improvements, at the ſame time that it ſtamps indelible diſgrace upon the ſtate that authoriſes ſuch monſtrous oppreſſion.

The Hollanders, however, ill as they uſed their countrymen upon this occaſion, ſeem to have been proud of the diſcovery; while Schouten may be ranked among the number of thoſe projectors, who without ſerving himſelf, has contributed to the benefit of ſociety.

THE VOYAGES OF CAPTAIN DAMPIER,

With the BUCCANEERS of AMERICA.

THE Buccaneers of America were a ſet of people collected generally from among thoſe of low origin, or of deſperate fortunes, who from ſmall beginnings roſe into ſome conſequence in naval hiſtory, being rather famous, however, for the miſchiefs which they did the Spaniards in the new world, than from any benefit that Europe received from them, or indeed for any profit that moſt of them ſecured for themſelves; their irregularities, their want of officers properly commiſſioned, their perpetual diſſenſions among themſelves, often contributing to defeat their ſchemes, and generally hindering them from enjoying without interruption, what they had hazarded their lives to acquire.

1680 These men, however, such as they were, became a perpetual plague to the Spaniards in their settlements, when (following the example of Drake, Cavendish, and others already mentioned) they always found means to plunder and annoy. At first, they fitted out only small vessels, but in time as their company grew stronger, they became more daring, and entering the South Seas, ranged the Spanish main to the no small terror of the inhabitants.

We cannot here forbear observing that this was one of the *happy* effects of the discovery of the American continent in favour of the Spaniards, who neither deserved nor well knew how to preserve this acquisition to their own real advantage. Instead of growing greater, Spain since that æra has decreased in power, nor can all the gold of Mexico and Peru, restore to her that weight which she once had in the balance of Europe, whom the discovery of America has doubtless tended to aggrandise as well as refine, and many of whose states have reaped more solid advantages from it than the Spanish nation, whose vast supply of gold drawn from those parts has only made that metal cheaper on the one hand, while, on the other, it has constantly invited foreigners to plunder her richest settlements on an extensive coast, for the defence of which her greatest power has often proved inadequate.—But to return to the Buccaneers: Those people generally entertained some of the Moskito men on board their vessels, of whom the following is a true description:

"The Moskitos are a set of Indians that inhabit the main between Honduras and Nicaragua. They are tall, well-made, raw-boned, lusty, strong, and nimble of foot, long visaged, have lank, black hair, look stern, are hard favoured, and of a dark copper-coloured complexion. They are but a small nation, the same perhaps that Drake calls Symerons. They are very dextrous at throwing the lance, fisgig, harpoon, or any manner of dart, being bred to it from their infancy; for the children imitating their parents, never go abroad without a lance, which they throw indifferently at almost every object that falls in their way, till, by constant practice, they became masters of the art. They next learn to parry a lance, arrow, or dart; and the training of them to this exercise is in this manner: Two boys place themselves at a small distance, and throw light blunt lances at each other; one throws the lance and the other parries, alternately. He that parries holds a small stick in his right hand with which he turns aside the lance that is darted at him, and by constantly practising in this manner, they at last become so dextrous, that they will shoot arrows at each other, and parry them as fast as they are shot. This they will do with a small stick no bigger than the rammer of an ordinary fowling-piece. Before they arrive at manhood, they become so dextrous, that they disregard the arrows of their enemies; and, unless they are poured thick upon them, and come more than one at a time, they will suffer not one in a thousand to hit them. They are no less expert at striking of fish, and two or three of them will, in those seas, maintain a ship's company of 100 men. Turtle and manatee are their principal pursuit; the former will commonly weigh 600lb. and two Moskito men will strike two of them a day while the season lasts, for many days together.

The manatee is known also by the name of the sea cow, and is struck with a harpoon, so contrived by the Moskito men as to be thrown with a long stick; but they are very cautious of discovering their art even to the English."

Captain Dampier who was engaged with these buccaneers, is the person whose exploits we are about to relate, and who having circumnavigated the globe, deserves a place in this department of our work. He was descended from a family of good reputation in Somersetshire; but it does not appear that his parents were blest with the gifts of fortune. At their death he was removed from a grammar school to an English one, where he learned writing, &c. which are often found more necessary than what is called a learned education. Being afterwards placed with a master of a ship at Weymouth, he made a voyage to France, and when he returned from thence was employed in the Newfoundland fishery, where his station for the summer proved not at all agreeable. But after his arrival in England, leading what is generally termed a life of indolence, which by no means insured the favour of his friends, he retired for some time into the country. Having at length, however, fallen again into the company of some mariners, he was once more persuaded to try his fortune, and made a voyage to Bantam*, in the course of which his curiosity led him to acquire a knowlege of navigation, which proved of use to him in the course of his future life.

The year after his return, he spent his time at home chiefly with his brother, but afterwards entered on board the British fleet, then employed in the wars of King Charles II. with the Dutch. Having been in two engagements, falling sick, he had no part in a third, after his return from which, he was sent with the sick and wounded to Harwich, where he remained till the end of the Dutch war. But he no sooner recovered his health than he began to think of embracing a sea-faring life again.

He was however, for some time diverted from this resolution, by an offer which one Col. Hellier made him of going to Jamaica in quality of a superintendant of his plantation. But a six-months trial tired him of this employment. He afterwards turned logwood-cutter, and coming to England in 1678, went back to Port Royal in Jamaica the next year upon a mercantile scheme, by which it seems he was a considerable gainer. It was at this time a gentleman of the name of Hobby persuaded our adventurer to embark on a trading voyage to the Moskito shore, of the natives of which coast we have already given a particular account. Sailing from Port-Royal in Jamaica with Captain Hobby, they fell in with Coxen, Sawkins, Sharp, and some others of the Buccaneers at the west end of the island. These having a design upon the Isthmus of Darien, most of those engaged by Captain Hobby, preferring plunder to trade, resolved to go with them, and Dampier at last was engaged among the rest, though, it seems, he took three or four days to consider of the matter.

Being all agreed, they put to sea soon after Christmas, and holding on their course towards Porto Bello, landed near Golden Island on the 5th of April. Captain Sawkins was chosen their leader, and the Buccaneers, to the number of between three and four hundred men, marched towards Santa Martha, on the Pacific Ocean, which though they took, yet they were disappointed, and consequently fell to disputing among themselves, and they parted company in consequence of these contentions.

As the design upon Panama was looked on by some of the company to be worth attempting, a body of them went forward and made an attack upon Puebla Nova, in which attempt, however, they were defeated, and Sawkins their commander was killed; while Coxen went to the North Seas, and there continued his depredations. After the death of Sawkins, Sharp was elected to the command, but the company not being pleased with their choice displaced him, and chose Captain Watling to succeed him. Under his conduct an attack was made upon Arica, which proved unsuccessful, and he experienced the same fate with Sawkins, falling in the action. After this, as it was not probable that the Buccaneers could accomplish any of their schemes without keeping a proper subordination; having had experience of this truth, they proceeded to another election, when it appeared that some were for restoring the former commander, while others as vehemently opposed the measure. At length it was agreed that

* In this voyage he appears to have been only in the station of a foremast man.

Affecting interview of two MOSKITO-MEN,
one of whom had been left Three Years on the Island of Juan Fernandez by Capt.n Dampier.

Pollard sculp.

that these parties should separate, and it being put to the decision of lots, which of them should keep the ship, Dampier's party proved unfortunate. This company consisted of 44 armed men, a Spanish Indian, two Moskito Indians, and five slaves taken in the South Seas. They had the ship's long-boat, and two canoes, with two patararoes, and some ammunition. With this preparation and a small proportion of provisions, they undertook to sail to Santa Martha, and from thence to travel by land to the North Sea; and having parted company with Sharp on the 13th of April, they made good their landing in the bay of Panama on the first day of the next month. But in the river called Santa Martha, up which they were to proceed, was a vessel of force which had been ordered thither on purpose to intercept them. Nevertheless their situation being such as would not admit of their being discouraged at a difficulty of this kind, they struck out a new track which was attended with much trouble and danger, yet at length they succeeded so far as to get safe to the opposite shore. Beginning their journey over land on the first of May, in the space of 22 days they completed their purpose, in which time they travelled 34 leagues, passing over high mountains through unfrequented vales, and fording through or swimming over deep and dangerous rivers, or passing them by such bridges as necessity prompted them to find out, and opportunity furnished them with the means of supplying. It is a just observation that there are in the mind and body of man particular powers which at certain conjunctures only can be called forth; and this is a maxim which was never more fully verified than in the circumstance of these people, who upon a hostile shore, unfurnished with a number of things apparently necessary for the undertaking, and having no resources left but in themselves, were yet found equal to the task of effecting a passage which scarcely any set of men upon the principles of mature and deliberate reason would ever have thought of undertaking.

In effect, they arrived on the north coast, and Dampier was amongst the first of the company who reached the promised shore. They immediately embarked on board the ship of Captain Tristrian, a French commander, and within two days joined eight other Buccaneering vessels, the adventurers who were embarked in them, having then a design of going on another expedition over land to Panama. But the danger attending such an undertaking being represented to them, they resolved to lay aside that scheme, and to proceed to make an attack upon Spanish Town, up Carpenter's river, for which purpose the ships sailed successively. That on board of which Dampier was, arriving at the place of rendezvous, found an English captain there whose name was Wright, and who had lately taken a Spanish tartan, that with 12 armadilloes, or small frigates of war, had been in quest of the pirates. All those who had come a tedious journey over land, joined in requesting him to fit out this tartan for them, promising still to act under his command, and on that condition their proposal was agreed to. As the expected remainder of the fleet did not arrive at the appointed time, it was justly concluded that they had been taken or dispersed by the armadilloes already mentioned. This conclusion leaving them at liberty to pursue their own particular designs, Captain Wright stood for Carthagena, and being joined by Captain Yankey, they took a prize laden with sugar and tobacco, and the ship by vote fell to Yankey, whose vessel Wright took, which was better than his own. After this the booty being shared, the commanders parted, Captain Wright sailing to the Caracca coast, and Captain Yankey a different way. The former took three barks, one laden with hides, another with European commodities, and a third with earthen wares. Captain Yankey sailing with one Cook on board, who, as quarter-master, was to be second in command according to the buccaneer custom, having taken a Spanish prize, he claimed the command; in consequence of which, all who were so

disposed were free to join him. There were some among them who had come over land from the South Seas, all of whom chose to follow his fortune; but the Frenchmen joining, plundered the vessel of goods, money and arms, and then left them on the Isle of Vacca, Captain Tristrian only taking on board about nine of them, among whom were the Captains Cook and Davis, who were carried into Petit Guavres, and found means to make themselves masters of the ship, and sailed to Vacca, where their companions came on board. Afterwards they made a prize of two vessels, with which they resolved to plunder the Peruvian coasts. All these ships arriving at Virginia, Dampier, and those who travelled over land, joined them there, and set sail in the prize commanded by Captain Cook, from Achamack river, on the 23d of August, and after weathering a violent storm came to Cape Verd, whence, after refreshing themselves, they proceeded to Sal, and thence by advice to Mayo, where the inhabitants refused to traffic with them on account of the treacherous dealing of one Captain Bond, who afterwards surrendered himself to the Spaniards, and taught them by fitting out fire-ships to annoy his countrymen. Departing from thence they came to the African coasts, after having got what supplies they wanted, they sailed for the Streights of Magellan, but having a contrary wind, doubled Cape Horne; after this they had a storm which continued from Feb. 14, till March 3. Yet by the 17th of the month they came to latitude 48° south, by means of a favourable gale. On the 19th, they met with a ship which at first they supposed to be Spanish, but afterwards found to be an English one, commanded by Captain Eaton. These vessels kept company to the island of Juan Fernandez. 1682

As soon as Captain Cook's ship was moored, Dampier was eager to go ashore to look for a Moskito man, whom they had left in this island, when they were driven from it in the year 1681, by three Spanish men of war, Dampier, being at that time in the ship commanded by Captain Watling, just after Captain Sharp was displaced. This man, when Captain Watling drew off his crew, happened to be in the woods hunting for goats; and the ship was under sail before he came back. Dampier was curious to know whether this Moskito man was yet alive, and if he was, how it had fared with him; and it seemed that the Indian was no less anxious to enquire after his friend, when he perceived the ships that were approaching were English ships. The poor fellow had observed them the day before when first they came in sight, and judging about what time they would come to an anchor, he had killed three goats, and gathered greens, ready to dress as soon as the company should be at liberty to come on shore. He was already upon the beach before the ships could be well secured, and was seen by one of his countrymen who happened to be on board, and it was no small pleasure to mark the excessive joy of these two Indians at their meeting. The Moskito man belonging to the ship was named Robin: he on the island Will. Robin was the first who leaped on shore, and running to Will, threw himself flat on his face at his feet, and who helping him up, and embracing him, fell flat in like manner with his face at Robin's feet, and was by him taken up and embraced as before. The surprize, the tenderness, the solemnity of the interview, which was exceedingly affectionate on both sides, was admired even by the crew of Buccaneers, who were spectators from the ships of what passed on shore. "When Dampier, who was his old friend, came up, Will was no less transported with joy to see him than to meet his countryman, but he expressed it in quite another manner: other friends too he met with among the crew who knew him, and they were all overjoyed at meeting so unexpectedly; for these men are very much beloved on board the ships wherever they sail, for their readiness to assist in whatever service they are put upon. When the ceremonies of congratulation were over, and they had time to make enquiries, he told

1683 told them that he was ſeveral times ſought after by the Spaniards, who knew that he was left upon this iſland; becauſe when the ſhip ſet ſail he was in ſight of the ſhore, and was ſeen by them before he could ſecret himſelf; but as he was continually upon the watch, and had diſcovered a ſafe retreat, they never had been able to find him. He had with him, he ſaid, his gun and his knife, a ſmall horn of powder, and a few ſhot. Theſe being ſoon ſpent, he contrived a way, by notching his knife, to ſaw the barrel of his gun in ſmall pieces, with which he made harpoons, lance-heads, hooks, and a long knife; heating the pieces firſt in the fire, which he lighted after the Engliſh manner, by ſtriking his gun-flint againſt the back of his knife: The iron, when it was hot, he hammered with ſtones, and formed it into various ſhapes to which he had occaſion to apply it. By continued labour and perſeverance, he had worked himſelf ſuch a complete ſet of inſtruments, for killing and catching his proviſions by land and water, as ſurpriſed the people when they were brought out for their inſpection. But (ſays Dampier) it is no more than theſe Moſkito men are accuſtomed to do in their own country, where they make their own fiſhing and ſtriking inſtruments, without either forge or anvil: and other Indians are ſtill more ingenious; for they make hatchets of a very hard ſtone, with which they cut down trees, make their canoes, and frame their houſes.

"Poor Will had built himſelf a little houſe about a mile and a half from the ſhore, which he had made warm and convenient, by lining it with goat-ſkins. He had likewiſe raiſed himſelf a couch about two feet above the ground, which he had alſo made ſoft with the fur of the animals he caught, and with the down of the young birds (for he could catch no others) which he occaſionally met with and plucked. Cloaths he had none; for he had worn them to rags among the buſhes and brambles, through which he was often obliged to purſue his prey. He had been on the iſland about three years, and in all that time had never converſed with any human being. He had ſeen Spaniards, but he always took care, after the firſt, that none of them ſhould ever ſee him."

The Buccaneers ſtayed on this iſland till the 8th of April, and then ſailed towards the Equinoctial line, and afterwards coaſted along from the iſland of Juan Fernandez to the 10th degree of ſouth latitude. On the 3d of May they took a ſhip laden with timber; and at the ſame time learned that the Spaniards were appriſed of their being in the ſouth ſeas, and where they had moſt reaſon to expect their viſits, had taken ſome pains to prepare for their reception.

A deſign on Truxillo abandoned.

After having formed a judgment of the ſtate of the coaſt, from the intelligence given them by their priſoners, they determined on attacking Truxillo, but having taken certain veſſels with flour bound to Lima, (in which they found a wooden image of the Virgin Mary, and a mule intended as a preſent from the viceroy at Lima to the preſident of Panama) as they found by a letter taken on board, that Truxillo was fortified; they laid aſide their deſign, and reſolved to go for the Gallapagos iſlands with their prize. Accordingly they ſailed thither, where they got together 500 packs of meal, which they laid up, to ſerve them for a ſea-ſtore, while they had plenty of turtle to anſwer their preſent occaſions.

From thence they ſailed for Ria Lexa, where they were given to underſtand there was much treaſure to be taken. An Indian priſoner promiſed to conduct them thither, to whoſe ſincerity theſe adventurers thought proper to truſt, with a deſign, however, to touch at the Iſland of Cocoas, in 5° 40′ ſouth lat. where they meant to depoſit ſome part of their meal, one of the ſtouteſt ſhips which had it on board being taken with them for their purpoſe; but they were forced to ſteer for the continent, not being able, with all their ſkill, to reach the intended port, and on their way loſt Captain Cook, whoſe death diſconcerted them, and whom they reſolved to bury in Caldera Bay.

Anchoring there, while ſome of the crew were digging the grave, three Indians entered into diſcourſe with them, who being afterwards ſeized on, proved to be ſpies ſent from a town about 36 miles diſtant. Turning this artifice of the Spaniards upon themſelves, the mariners diſcovered, after a cloſe examination that the very men who had been ſent to watch their actions, were capable of directing them to a ſpot where plenty of live cattle might be obtained.—It is eaſy to conceive that this piece of intelligence was attended to, and accordingly one of the priſoners being pitched on for a guide, 24 of the company ſet out upon the expedition, the ſucceſs of which will be ſeen by the following brief account:

"After a march of about four miles, they came in ſight of a Savannah, where numbers of cattle were feeding; of which ſome [very wiſely] were for killing as many as they could carry away, whilſt others were determined to ſtay all night, with a view to drive them into the pens, in order to ſupply the ſhips at once, before the owners were appriſed of the deſign. This reſolution ſeeming prevalent, Dampier with many of the company withdrew, taking the Indian guide back with them. The buccaneers fall into an ambuſh.

"In the morning when theſe drovers were expected to return with the cattle, none came; and as it was conſequently feared ſome diſaſter had befallen them, the boats were manned and ſent out to look for them. As they were rowing along, ſome of the company eſpied a number of people wading up to the middle in water, and approaching them, ſoon perceived that they were the very perſons whom they were in queſt of, and therefore made all haſte to take them on board. Had they not been thus eſpied in time, they muſt in all probability have periſhed, as the tide would have ſwallowed them up in the ſpace of an hour. It ſeems that they had been ſuffered to ſleep all night unmoleſted; but, in the morning, when they were ſcattered about among the cattle, and driving them to the pens, were ſurpriſed by the ſudden appearance of about 60 Spaniſh ſoldiers, well armed, who placed themſelves in a convenient ſituation to cut off their retreat. Alarmed at this unexpected ambuſh, they made haſte to join in a body, reſolving to ſell their lives dear if they found it impoſſible to make their eſcape. Accordingly, they looked round them, in order to diſcover an opening to ſome other part of the ſhore than that againſt which their ſhips rode, at the ſame time giving the enemy now and then a volley of ſhot to keep them at a diſtance. The Spaniards, generally not over eager to come to a cloſe engagement, kept themſelves ſheltered behind the buſhes, diſcharging only ſome random ſhot at thoſe who retreated, which luckily did not take place. In this cautious manner the ſmall band ſlowly proceeded towards the beach where Captain Cook had been buried. Then looking about for their boat they ſaw her in flames by the water's ſide, where they had grounded her the night before. Their hope of retreat now appearing to be quite cut off, the Spaniards with a view to make ſure of their ſurrender, having poſted themſelves in ſuch a manner as to cut off all communication with the ſhips, this little company conceived themſelves to be devoted to deſtruction; when fortunately, they eſpied a rock juſt riſing above the water, at the diſtance of about 100 yards from the beach. Rejoiced at this ſight, they all determined to commit themſelves to the mercy of the ocean [their cauſe was ſcarcely good enough to depend on that of *Heaven*] rather than to fall into the hands of the Spaniards. With this reſolution they ruſhed all together into the tide, holding faſt one by another, and determined that if one was loſt all ſhould periſh. In this manner they reached the rock, where they had continued for ſeven hours, when they happened to be diſcovered (in the manner already related) and their companions were ſuffered by the Spaniards to releaſe them without the latter firing a gun. They are relieved.

This was indeed a lucky eſcape, but the Buccaneers could not forget that it had been a vain attempt

to come at what, by this time they ſtood in great need of; but they durſt not hazard a ſecond enterprize of that nature, and therefore weighed anchor, and ſailed for Ria Lexa, which is known by a high peaked volcano. A little iſland, whereon the Spaniards kept an out-guard, was the firſt object of the freebooters. They ſurpriſed this guard, but from the intelligence gained from their priſoners, underſtood that the place was too well defended for them to make an attack upon it with any reaſonable hopes of ſucceſs. Abandoning this deſign therefore, they ſteered for the Gulf of Amapalla, where they careened their ſhips, having firſt agreed that Captain Davis ſhould go before with two canoes, in order to gain intelligence, which was accordingly done, as ſoon as they approached the gulph. On the firſt night Davis reached an iſland on which there was a town called Mangera, but he could not find it till the next morning, and when he found it, all the Indian inhabitants were fled, a friar only excepted with two boys, who ſhared his fortune. From this friar the captain underſtood, that there were ſeveral Indian villages in the gulph, but only three towns that had churches, and only one white man beſides himſelf who acted as a ſecretary to the Spaniſh government in theſe parts. In conſequence of this information, Captain Davis took with him the friar and the boys, and approached the eminence on which Amapalla was ſituated. While they were gaining the aſcent, the ſecretary, who was attended by the Indian chief, hailed them. Captain Davis ſaid they were Spaniards, ſent to clear the coaſt, and that their ſhip being foul, they were come thither to refit, and to demand the aſſiſtance of his majeſty's Indian ſubjects. The following account includes all the circumſtances of their proceeding:

Their adventure at Ria Lixa.

"They were bidden welcome, and received with every poſſible mark of reſpect, both by the ſecretary and the Indian inhabitants; and, after the firſt ſalutations were paſt, they were conducted to the church, where all buſineſs of a public nature was tranſacted. Accordingly, the friar entered firſt, and was followed by Davis and moſt of the by-ſtanders; but one or two of the Indians loitering behind, were puſhed in by Davis's men; they then ſuſpecting ſome miſchief, ſprang back again, and the reſt of the Indians followed their example, leaving Davis and the friar looking at one another in high conſternation, ignorant of the cauſe that had occaſioned the deſertion; while thoſe who had ſo ſtrangely cauſed it, fired upon the innocent Indians, for flying. In this confuſion the ſecretary was ſlain, undeſervedly meeting his death from his pretended friends. Davis's deſign was, when they were all at church, to have ſhut them in, and to make his own terms; but there was no need of practiſing farther treachery with them, for notwithſtanding all this brutality, the Indians ſhewed them every kind of civility, helping them to repair their ſhips, hewing down timber for them, and bringing it to the docks. They furniſhed them alſo with cattle and proviſions from the main, and aſſiſted them in carrying aboard wood and water. All this time the friar and his two lads were kept priſoners, and it was feared, when they were ready to ſail, that they would have carried them off; for theſe Indians had a great veneration for their prieſt. He had learned their language, and was very uſeful to them both by his kind offices and admonitions."

On the 3d of September, however, they ſet ſail, and left the friar and his two lads on ſhore, to the great ſatisfaction of the Indians: and the two companies having quarrelled, they were reſolved to purſue different courſes. Captain Davis directed his courſe along the main of Peru, and coaſting along the continent of South America, at length came to the Iſland of Plata; while Eaton, who had ſailed in a different direction, at laſt being in want of water, came to the ſame iſland (where Drake had formerly ſhared the plunder of the Cacafuego). Eaton's men ſaid that in their courſe they had met with thunder and lightening ſo dreadful that they feared every moment to be involved in elemental fire. This captain propoſed an accommodation, but when he found it was rejected, remained only one night off the iſland.

1684

Captain Davis's people the next day made an attack upon Manta, at about eight leagues diſtance. The place was deſerted by all the inhabitants, an old woman excepted, whom the Buccaneers brought off. By her means they underſtood, "That a great many ſtrangers had come over land from the north ſea; that they ſtill were in canoes and periagoes, and that the viceroy had commanded all the Spaniſh trading ſhips on the coaſt to be burnt, to prevent their falling into the hands of the enemy.

Theſe tidings being heard, Davis thought proper to return to the Iſle of Plata; and ſoon after arrived the Cygnet, an Engliſh ſhip, originally fitted out for trade by the London merchants. This veſſel was commanded by Captain Swan, from London, and intended for trade; but trade being ſtopped, he was prevailed upon to ſell his goods by auction, and to join the adventurers whom he had fallen in with by accident. The new-comers were headed by one Harris, who had the command of a bark under Swan. They regretted now that Captain Eaton had been ſuffered to leave them, and therefore fitted up a ſmall veſſel, which they ſent after him, to invite him and his crew to return and ſhare their fortunes.

They are joined by Capt. Swan.

After this the ſhips ſailed to Payta, and came into the road on the 3d of November, having fallen in with a ſhip of 400 tons, by which means they were informed that the viceroy had given orders for fitting out ten frigates to be employed in checking their depredations. When they landed at Payta, they found that the inhabitants had deſerted the place, and what was worſe, had not left a day's proviſion in the town. By a letter left by thoſe on board the bark ſent in ſearch of Captain Eaton, they underſtood that he had been there and burned a ſhip the week before, after which he ſailed weſtward, ſo that they concluded he was gone homeward by way of the Eaſt-Indies.

After this information, being under apprehenſion that ſome of the Spaniſh frigates might fall in with them, they examined their arms and ammunition, put every thing in order, and burning Captain Harris's bark, becauſe ſhe was a heavy ſailing veſſel, they fitted up another ſmall bark to ſerve as a fire ſhip, and having made all neceſſary preparations, ſailed for Lobas. They found that Captain Eaton had been there alſo, and heard that their bark was gone to Plata, which was the place of rendezvous appointed. Then they departed for the bay of Guiaquil; which runs in between Cape Blanco on the ſouth ſide, and Point Shanday on the eaſt; and in the bottom of the bay lies the Iſle of St. Clara.* The ſhips kept to the ſouthward in entering the port to avoid the ſhoals on the northern ſide, where they ſay a large wreck is ſunk†. The houſes at Puna, ſtand upon poſts ten or twelve feet high. They are thatched with Palmetto leaves, and their chambers are well boarded. They reckoned 7 leagues from Puna to Guiaquil, which latter they found was conſidered as a principal port in the ſouth ſeas. From this city are exported hides, tallow, ſarſaparilla, and other drugs, cocoas, and woollen cloth made at Quito. The buccaneers took a veſſel laden with this cloth, the maſter of which told them of the watch at Puna, and informed them

* The appearance of this iſland is like that of a corpſe in a ſhroud, the Eaſt end repreſenting the head, and the Weſt the feet.

† A perſon who came from the Spaniſh coaſt with a patent to fiſh for wrecks, was reported to have taken up ſome of the plate; but dying, the patent expired. The cat-fiſh, a wound from whoſe fin is mortal, ſwarming round the iſlands, rendered the attempt dangerous to the Indian divers, who were otherwiſe very expert at recovering what was loſt in thoſe ſeas.

1684 them that three ships with 1000 negros on board were to sail from Guiaquil, all of which they fell in with and took; but the town was alarmed, and when these adventurers made their attack it was so ill conducted for want of proper discipline and a regular commander, that it could not but fail of success.—The assailants were divided in two bodies, but these by no means co-operated with each other. Captain Davis's people accused Captain Swan of cowardice, because when he found how much they were exhausted he had advised a retreat; in consequence they all proceeded, having two Indian guides, one of whom was fastened by a string to one of Captain Davis's men who was a great boaster, but his courage failing him, as it seems, when he came within musquet shot of the town, he cut the string and the Indian ran away.—Then he cried out that somebody else had cut it on purpose to let the guide escape. This circumstance so much disheartened the people, that they would advance no farther. Accordingly having dressed a cow and taken a view of the forbidden ground, they embarked for Plata, taking 40 of the ablest men out of the negro ships, and turning the rest adrift. Thus ended their hopeful expedition, in which by misconduct they lost an opportunity of enriching themselves, and returned much dissatisfied with the repulse with each other.

When they arrived at the place of rendezvous they there found their bark in waiting, but the crew of her almost starving, having been in search of the ships from Plata to Lobas and back again. During the absence of their companions, who seemed to have paid little regard to them, these wanderers had made a descent upon Santa Helena, where they took some maize, and by the help of that and some birds, had made shift to keep themselves alive. The bark was now given to Captain Swan for a tender, and after a quarrel that happened between the crews, which was adjusted by the captains, an attack on Lavelia was resolved upon, and they set sail on the 23d of December, to put their design in execution.

In their way, they surprised a small village called Tomaco, and there took one Don Diogo de Pinas, a Spanish knight that came thither in a vessel from Lima, on board of which they seized about a dozen jars of wine, and let the vessel depart.——Happening afterwards to fall in with the Panama packet boat, and recovering the letters the crew had thrown over-board, by means of a buoy that had been fastened to the box, they found by the contents of them, that the president of Panama had received orders to hasten the Plate fleet from Lima, which occasioned them to change their course, and alter their resolution. They stood therefore for the gulph of Panama, and on the 23d anchored in the harbour of Galleria, and having cleared the barks, sent them to cruise in the gulph.—Four days afterwards one of these brought in a prize laden with fowls, salt beef, and corn, and having put their ships in order, sailed into the channel to intercept the Plate fleet. While they were here, they sent the Spanish knight upon his parole to the president with a letter. He was killed by some accident, but the next day they sent another letter, which being delivered, about 40 Spaniards were released, and English prisoners returned in their stead. Anchoring before Tobago, they had afterwards a narrow escape from destruction;—a person who pretended to be a merchant from Panama, came to them, and offered to trade with them secretly; his proposal being accepted, a bark came out in the night as had previously been agreed upon. But notwithstanding she hailed the ships with the proper watch-words, the buccaneers had the precaution to order her to cast anchor. This not been complied with by those on board, they were fired upon by the ships. In consequence of this act of hostility, finding their scheme detected a few minutes before it was ripe for execution, the crew quitted their bark, and immediately set fire to her, taking to their canoes. The ships immediately cut their cables, as they now perceived that this pretended smuggling vessel was a fire-ship, which without effecting the intended mischief, drove burning towards Tobago. She had been fitted out by Captain Bond*, who had surrendered to the Spaniards, and her direction was against Captain Davis's ship, which with difficulty escaped her; but about the same time the people on board Captain Swan's vessel observed a small float on the water which appeared to have a man in it, coming towards them; but observing that he was discovered, he dived, and they saw no more of the float, which they supposed had been furnished with some combustibles which were intended to be fastened to the rudder of Swan's ship. This danger being over, the ships returned to their buoys in the morning, where they perceived a number of canoes and privateers, and presently found that they were furnished with birds of the same feather as themselves. In effect, they contained a company of French and English buccaneers who were come into those parts to try what plunder they could get. They were commanded by two captains, the one named Grenet, the other Lequie, and reported that 180 Englishmen under the command of Captain Townley still remained on the isthmus; the French having the flour prizes given them, the English were taken on board Captain Davis and Captain Swan's ships, and, soon after, Captain Townley arrived, having taken two prizes, and learned from the prisoners, that the Lima fleet was ready for sailing. Falling in with a bark belonging to one Captain Knight, which had lost him at sea, she was taken by Captain Swan, and given to Harris in lieu of that which had been burned on account of her heavy sailing. They were now in high expectations of making their fortunes, but the following account will shew how much they were disappointed.

While the fleet from Lima was thus anxiously expected, some letters were intercepted that contained the instructions to the commanders which course to take. In consequence whereof the captains of the buccaneers held a consultation in what manner to steer, in order to intercept them; but while they were yet undetermined, word was brought that the Spanish fleet was advancing, and, as it should seem, to give them battle. This news was by no means agreeable. Such a mingled crew being but ill suited to stand a regular engagement. However, there was now no alternative, either they must fight or run away, in which case being taken singly, they probably would all be destroyed; but by fighting some might chance to escape. The Spaniards were fourteen in number, of which the admiral carried 40 guns, and 540 men; the vice admiral 40 guns and 400 men; the rear admiral 36 guns and 360 men; one ship of 24 guns and 300 men; one of 18 guns and 250 men; and one of eight guns and 200 men: they had likewise two fire-ships, and 6 ships with only small arms, some periagoes and tenders, having eight hundred men among them. The English who were to engage them, consisted of 10 sail; these were the only ships of force, the others being furnished with none but small arms; Captain Davis's ship of 36 guns and 156 men, mostly English; Captain Townley had 120 men, all English; Captain Grenet 308 men all French; Captain Harris 100 men, mostly English; Captain Branley 36 men, some English, some French; Swan's tender, eight men; Townley's bark eighty men; and a small bark

They surprise Tomaco.

Their vessels endangered by a fire-ship.

They are worsted by the Spanish fleet.

* Captain Bond steering for the south seas, and meeting with Captain Eaton, was prevailed on by his pilot to join company; but this very man getting on board Captain Eaton's ship persuaded him to drop his old commander, which was accordingly done after two nights sailing together. Bond thus deserted by the person whom he wanted to direct his course in the south seas, went for Porto Bello, where he surrendered himself to the governor, and was sent to the viceroy of Lima, and afterwards employed in checking the designs of the Buccaneers upon the American coasts.

bark of 30 tons made into a fire-ship, with a canoe's crew in her; the number of men altogether amounting to 960.

The Engliſh, notwithſtanding the ſuperiority of the enemy, reſolved to begin the attack, having the advantage of the weather-gage, which gave them the choice either to fight or run. Accordingly, about three in the afternoon they bore down right before the wind, on the enemy, who kept cloſe upon a wind to meet them; but night came on without any thing material being done on either ſide.

When it grew dark, the Spaniſh admiral put forth a light as a ſignal for the fleet to caſt anchor, and preſently hoiſted a light on his top, which, after continuing there an hour, was taken down, and in a little time hoiſted again, the Engliſh being ſtill to windward, were not aware of this ſtratagem,; for the Spaniard, knowing what conſequence it was to gain the weather-gage, hoiſted the ſecond light upon the top-maſt of one of his barks, and edged away ſilently himſelf, followed by his capital ſhips, and, as ſoon as it was day-light, appeared to windward of the Engliſh. This was ſuch an unexpected ſtroke, as left them no other courſe to take but to fight or fly. Things being thus ſituated an unequal engagement began. Captain Townley being hard preſſed by the enemy made a bold puſh through a narrow gut that parted the iſles, and was followed by ſeveral of the ſmaller ſhips, by which means they eſcaped. Captain Harris was chaced to the weſtward; and Captain Davis maintained a running fight all day round the bay of Panama, with the loſs only of a ſingle man. At night, the Spaniards gave over the purſuit, and ſuffered the Engliſh to rendezvous at the ſame iſlands from whence they ſailed the day before to begin the attack.

The 30th, the Spaniards, without purſuing their victory, continued their courſe to Panama, and the Engliſh ſet ſail to the keys of Quibo in ſearch of Captain Harris, that being the place appointed to rendezvous in caſe of being diſperſed. Here they caſhiered the French captain, who never came into the engagement; and having found Captain Harris they held a conſultation about what courſe they ſhould in future purſue.

The reſult of all was, That they ſhould attempt ſomething upon the coaſt, ſince they had no farther chance of gaining any thing conſiderable upon the ſeas; and, after being joined by Captain Knight, who when he went in queſt of them, thought to have found them in poſſeſſion of all the Spaniſh treaſures; they ſailed for Ria Lexa, the neareſt port to Leon, with eight veſſels, having on board 640 men, and well provided with canoes for navigating the rivers.

They quitted their ſhips when they arrived within 24 miles of the ſhore, to the number of 250 men embarked in canoes, which had a very difficult and dangerous paſſage, but nevertheleſs landed without the loſs of a man, marching forwards in three diviſions. The foremoſt of thoſe conſiſting of 80 men under the conduct of Captain Townley, defeated a body of Spaniſh horſemen, entered the town, and drove the main body of the Spaniards before the other two parties came up. In the mean time the governor of Leon had formed an encampment near the town, and intended to aſſemble what forces he could, and fall upon the invaders. But a merchant of the name of Smith being taken among the ſtragglers, and carried before this commander; on examination, ſo far exaggerated the forces of the buccaneers, that he laid aſide all thoughts of that ſort, and ſent a flag of truce with propoſals for ranſoming the city.

But here the avarice of the free-booters out-going their reaſon, they demanded to ſuch an extravagant amount, as the governor perhaps had it not in his power to make good—and in conſequence the town was ſet on fire. In the mean time a Spaniſh gentleman was releaſed on his promiſe of ſending 150 oxen to Ria Lexa, which promiſe he faithfully fulfilled. 1684

They deſtroy Leon.

On the 16th of June they reached that place, and having forced a body of Spaniards from their intrenchments, and cut a boom laid acroſs the river, entered the town where they found nothing but 500 ſacks of flour, and ſome pitch and tar; ſome of the crew, whether by order, or of their own will, is not known, ſet fire to the houſes before they departed. After this expedition the Captains Davis and Swan, reſolved to ſeparate; Townley, with the two barks, accompanied Swan, while Knight and Harris reſolved to follow the fortunes of Davis*. When this ſeparation took place, Captain Davis ſtood for the Peruvian coaſts, but Swan went weſtward, intending to ſail home by way of the Eaſt Indies. On board his ſhip Dampier entered, chuſing rather to go with him than with Davis, whoſe voyage was likely to be confined within a narrower circle.

Ria Lexa is ſet on fire.

A ſickneſs which it was ſuppoſed they had caught at Ria Lexa, and a courſe of tempeſtuous weather marked their voyage to Guatimala, which they came in ſight of on the 14th. On this coaſt a high volcano, appears with a double peak. From between theſe peaks fire and ſmoke iſſue forth with moſt dreadful roarings; yet the inhabitants were not afraid to reſide even at the very foot of the mountain†. The city is ſituate at the diſtance of about eight leagues from the South Sea, and about fifty from the North, and is remarked for the rich commodities which the neighbouring hills produce. It is famous for anatta‡, ſilveſter, and cochineal. The volcano is to be ſeen at the diſtance of 75 leagues from the ſea. Thence they ſailed to the latitude of Togantabeque, and Captain Townley, with 100 men attempting to land on the coaſt the ſurges beating at the bottoms of the ſandy hills, proved very unfavourable to that purpoſe. Thus diſappointed, he coaſted along, the ſhips ſtill following his people who were in canoes, which the captain reſolved to run on ſhore, but overſet them in the attempt. A man or two they loſt, and others had broken bones: however the landing was made good, and their boats hauled on ſhore, though moſt of their ammunition was damaged by the wet, but they could diſcover no town on the coaſt, ſo that they were totally diſappointed in their expectations, and, what was worſe, returned even without any proviſions, and thus continued their courſe to Tangola. They next came to Guatulco, (or Anguatulco) where they came to an anchor, and intended prowling up the country, but after having travelled a few miles, though they ſecured ſome Indian guides, they found only a little village where ſome Vanellos were drying.—There was neither gold nor ſilver to be got there, nor any intelligence that might encourage the freebooters to proceed, they had therefore no inclination to ſtay here longer than to recover their ſick, and to prepare all things for the continuance of their voyage to parts more favourable to their wiſhes. In the interim they ſent four canoes before them, with orders to take what priſoners they could, and to wait for them at the Port of Angels; and following, on the 12th, they met with two of them in a very diſtreſsful ſituation. It ſeems the crews had miſtaken the harbour, and the boats were overſet on the beach. They reported that the other two canoes had left them on the 9th in the night, and, as it was afterwards found, had rowed as far as

Guatimala.

A fruitleſs expedition.

* The ſhips were commanded by Davis, Swan, Townley, and Knight; and they had beſides, a fire-ſhip and three tenders.

† How fearleſs ſoever the inhabitants of Guatimala might be, it is certain that they are ſometimes viſited by earthquakes, one of which, ſome few years ſince, deſtroyed numbers of people, overthrew their habitations, and made dreadful havock in the country.

‡ The Anatta is a red dye made from the flowers of a ſhrub. Silveſter is the ſeed of a fruit, ſomewhat reſembling the prickly pear; and Cochineal has been found to be a collection of inſects, bred in a ſort of fruit of the ſame ſize. The Cochineal and Silveſter produce a ſimilar dye, but the former is held in the higheſt eſtimation.

1685 as Acapulco. However they joined the ships when they came before the harbour, from whence there was an extensive prospect of a beautiful country. The brows of the hills were shaded with lofty trees, the plains, and savannahs watered by streams and rivulets, and the banks crowned with flowering shrubs, which exhibited a most agreeable picture. Here they landed at the grazing seat of a Spanish gentleman, from whence the people were all fled, but they found salt and maize in great plenty. On this coast also they got poultry, hogs, and cabaritos, and took as much of every thing they wanted as they were able to bring off. The harbour lies in 15° of north latitude.

Leaving Port Angels, they came to anchor, in 16 fathom water, under a small rocky island about six leagues to the westward. The next day they were greatly embarrassed by the following circumstance: "They weighed and continued their course; and, being a-breast of a small lagune, whence the missing boats had a few days before taken a quantity of fish, they lay to, and sent in a boat with twelve men to bring off a more ample supply. The Spaniards, on marking the trim of the ships, suspected their intent, and concealing themselves behind a rock at the narrow entrance of the lagune, discharged a volley of small arms at the boat just as it passed the place of their ambuscade, by which five of the crew were dangerously wounded. Alarmed at this sudden attack, and finding it impossible to retreat, because of the narrowness of the channel, they pushed forwards into the lagune, where they could lie out of gun-shot till the enemy dispersed, or till they should be relieved by the vigilance and valour of their own people. In this situation, however, they continued two days and three nights, till at length, Captain Townly, fearing some disaster had befallen them, manned his canoes, and beating the Spaniards from the rocks, opened the sufferers a free passage to the sea. Their joy was the greater, as the pains of the wounded men began to grow intolerable; and, had they not been relieved, they must in another day, nay perhaps in a few hours, have died in the greatest agonies. This lagune lies in lat. 16° 40″ north.

Having passed by a rock called the Algatross they found that the Spaniards had erected a breast-work a little to the westward; whence, however, they were driven, and the buccaneers made good their landing. At about three leagues distance from the entrance of the river they came to a house wherein they found a Mulatto servant who offered to guide them farther up the river, where they might get plenty of cattle and maize, and told them that a stout ship from Lima was then at Acapulco, whither Captain Townly, who wanted a better vessel, was eager for sailing in hopes to exchange his own for it; but Swan thought it more proper to insure provision, that they might wait well provided for the Manilla ship, which was expected off the southernmost point of California, in her way to Acapulco. The matter being put to the vote, it was decided in favour of Captain Townley's proposal, and accordingly the ships set sail on the 5th upon this expedition. At the distance of 12 leagues the captain embarked with 140 men on board, and a number of canoes, with a view to take the ship by surprize; but had not sailed above four leagues before they met with a dreadful tornado. Having escaped the dangers of this storm, they were driven into Port Marquis, about a league from Acapulco, where they stayed to refit their furniture, and in the night of the succeeding day, rowed softly into the harbour of Acapulco.* In order to prevent being heard, we find, "They hauled in their oars, and paddled softly by the castle; then struck over to the town, and found the ship riding between the breast-work and the fort, about 100 yards from each."——

Attempt to take the Lima ship defeated.

When they had well viewed her, adds Dampier, and consulted the danger of the design, they thought it impossible to accomplish it; therefore they paddled softly back again, till they were out of command of the fort; and then they attempted to land, but were opposed by a company of Spanish soldiers, who fired at them, and kept them at a distance from the shore till day-light; when taking a view of the town and castle, and not liking their appearance, they returned on board tired, hungry, and heartily mortified at their disappointment.—Finding that nothing was to be done there, the ships sailed from Acapulco, and continued coasting along the shore to the westward. The land which is low towards the sea, rises gradually to a very great height, and it is hazardous to land, though at a mile's distance there is a good anchorage. As they proceeded thus they discovered a small river, at the entrance of which 170 of their men being landed, were guided by an old Mulatto woman to a farm-house, where they found 60 mules laden with flour, cheese and chocolate, which they readily eased of their burdens, as also some oxen, which together with 18 cows, that they afterwards took they cured, and conveyed on board, the lading of the caravan being carried safely to their ships, which quitted the harbour on the 21st, where they had so happily accommodated themselves with provisions.

Holding on their course, they came in sight of the volcano of Colima, in lat. 15° 56″ north, on the 28th day of the month. At the foot of this burning mountain lies the town of the same name, and all the surrounding valley, according to the Spanish description, is remarkably beautiful; but as the surf ran so high as to prevent the buccaneers from making any attempt to land there, they proceeded to Sallagua, in lat. 18° 52″ north.—Here two hundred men being landed, engaged and defeated a body of Spaniards, and going up into the country, were informed the road they had taken led to the city of Oarrah, and that the party they had defeated, were sent to escort some passengers from India, that were expected to land in Sallagua Bay, from on board the Manilla ship; a piece of intelligence which hastened their departure, in order to meet with the long expected vessel.

Volcano of Colima.

With this view they steered for Cape Corientes, which they came in sight of on the 11th of December. In their passage Captain Dampier was afflicted with a dropsy and an ague, which he found to be common disorders on this coast. In the mean time provisions growing scarce, Captain Townly's bark was sent to examine the coast to the westward of the cape, but returned on the 17th without having brought any intelligence. And all the ships which had been properly stationed, sailed for the Island of Chametly, about, 18 leagues to the eastward. Being arrived, they caught a number of rock fish, and Captain Swan returned to his station off the cape, 60 men being sent to a village to procure provisions. The canoes returning on the 24th, reported, that they had rowed to the Bay of Val d'Iris, or Valderas, where they found a most beautiful and fruitful country, on attempting to seize some of the cattle that were feeding at large in the savannahs, they had a skirmish with a body of Spaniards some of whom were horsemen. They repulsed them, but not without the loss of four Englishmen killed, and two much wounded, after which they returned without attempting any thing farther. On Christmas-day they took three Jew fish, and on the 28th Captain Townley brought 40 bushels of maize, and thus they continued cruising till the 1st of January, when they steered towards Valderas, and anchoring that night in 60 fathoms water, landed the next day, and being divided into two bodies, one party kept watch while the other seized and killed the cattle; so that within five days they had salted beef enough for two months provision.

The

* The port of Acapulco is distinguished by three hills, that in the middle rises like a sugar-loaf, the most westerly of the other two has two hillocks on its top. Acapulco lies in lat. 17° north, on the western side of the American continent. Its trade is to the East-Indies and to Lima, in which three ships are regularly employed.

7 AP 53

The time which they thus employed in victualling, as Dampier obſerves, they ſhould rather have ſpent in cruiſing if they had properly conſidered the nature of their enterprize, which, he affirms, proved unſucceſsful on that account.

The Captains Swan and Townley, now parted again; the former reſolved to ſteer eaſtward, and took with him a Moſkito chief and three of his men, who left Swan's ſhip in order to go with him that he might have an opportunity of ſetting them on ſhore at ſome convenient place on the coaſt, from whence they might travel over land to the other ſea. Captain Swan (with whom Dampier continued) held his courſe intending for a weſterly navigation, and before night he paſſed Point Pontique, in lat. 20° 50″ north, about a league from whence lie two iſlands of the ſame name. To proceed with the relation—"On the 14th they came in ſight of a ſmall white rock, in lat. 21° 15″ north, which at a diſtance, ſeemed like a ſhip under ſail. From this place the land ran ſtill northerly, the ſea tumbling in with ſuch violence upon the ſhore, that, for many leagues together, there was no landing, but they found good anchoring as far as the Iſland of Chametly. Theſe iſlands are ſix in number, and different from thoſe of the ſame name on the eaſt of Cape Corientes, being a little within the tropic of Cancer, and not above three leagues from the main. On theſe iſlands grows a fruit called the penguin, of which there are two ſorts, the yellow and the red; the yellow grows on a thick ſtem, about a foot high, the leaves are narrow, and about half the length of the ſtem edged with prickles. The fruit grows out from the top of the ſtem in two or three cluſters, 16 or 20 in a cluſter. It is round and in ſize like a ſmall pullet's egg; the outer coat is thick and tough, and the pulp in the inſide is full of little black ſeeds. The red penguin is in ſhape like a little nine-pin, grows upon ſtools from the ground in cluſters of 60 or 70 on a ſtool, ſtanding upright like the leaves of a houſe-leek, and is ſmaller than the yellow; they are ſurrounded by leaves a foot and a half long, edged with prickles like the former. Theſe have a ſharp, pungent taſte, and are wholeſome; but thoſe who eat too freely of them, find them very heating. In the Bay of Campeachy one can hardly range the plain for their prickly leaves."

Paſſing from hence, Captain Swan, with 150 men, in 12 canoes, entered a lake called Rio de Sal, to the N. N. W. of Chametly. He landed ſome of his men at a grazing farm, and they perceiving two Indians, wounded one of them with their ſmall ſhot, who being brought on board, informed them that there was an Indian town, ſituate on a ſavannah, where was plenty of cattle at the diſtance of about four leagues. In conſequence of this intelligence they prepared to ſet out for the place deſcribed; but, on their way, were attacked by a body of Spaniſh horſe, but theſe were defeated by the Engliſh, who were nevertheleſs afterwards much embarraſſed by a ſtratagem of the enemy. Their way lay through a country abounding with that ſort of high graſs, which has already been mentioned as growing commonly about the Iſthmus of Darien; to this the Spaniards ſet fire, and it was not without great difficulty that the conquerors eſcaped the fury of the flames that every where ſurrounded them. In the mean time, their oppoſers had leiſure to recollect themſelves, and concert meaſures for making ſome more effectual ſtand. This they endeavoured to do at the village towards which the Engliſh marched the next day, and found it garriſoned; but the want of fire-arms among the Spaniards, and the remembrance of their late defeat had ſuch an effect upon them, that having loſt ſome of their officers, they retired, and left the place to the Engliſh, who had only one man killed, and their ſurgeon much wounded in this ſecond engagement. A few leagues from hence, they were informed of two rich gold mines, but they were more inclined to plunder the village and ſtore themſelves with proviſions than to go in ſearch of this treaſure. The captain with 80 men made another excurſion on the 2d of February, to ſeek for the river Roſario, at the entrance of which he landed, and having marched to an Indian town, took away 90 buſhels of maize, and ſome other proviſions, making no attempt upon the gold mines which it ſeems were not above two leagues from the town; the next day the ſhips came to an anchor at the mouth of the river, in lat. 22° 51″ north, and on the 7th the captain, with his company, came on board, having but a ſmall quantity of any proviſions in proportion to the number of his crew (the beef they had ſalted at Valderas excepted) and therefore a party was ſent on the 8th in ſearch of Oleta River, but they found it not, and returned without effecting any thing. 1685

They next anchored near the river St. Iago, up which 70 men ſailed on the 11th to examine all the creeks and inlets, and to get what intelligence they could relative to the neighbouring country. Theſe people having taken an Indian who was ſet to watch a field of maize were informed by him that there was a town called Santa Pecaque, about the diſtance of four leagues, and offered to guide them thither, where he ſaid there was plenty of proviſions. Upon this information 140 men were embarked in canoes, and proceeded with the Indian guide, about five leagues up the river, landed in the night, and the next morning entered the town, which they found entirely deſerted.—As they had not been deceived, in regard to the quantity of proviſions to be found there, they acquainted their captain with their ſucceſs; he immediately ſet out for the place, and on his arrival, uſed all his endeavours to keep ſome order among the men, who now thought of nothing but plunder, and ſeemed not to be under any apprehenſions of an enemy in their ſituation, though thoſe that had been left to guard the canoes in their abſence had been attacked by the Spaniards and loſt one of their people in the engagement. Nay, ſo infatuated were theſe plunderers, that though there was intelligence of a thouſand men being aſſembled to fall upon them, yet they would not depart with what they had got, but reſolved ſtill to return at different times to St. Pecaque till there ſhould not be a ſingle load of proviſions left in the town. Nor would they either be prevailed on by command or perſuaſion to march in a collected body. The conſequence was that a party of 50 of them, with as many loaded beaſts, proceeding in a line, each man leading his horſe, fell into an ambuſh laid for them by the enemy; and when Captain Swan, with another party, hearing the firing, came up in order to ſupport them, he found them all ſtripped of their arms and plunder, and weltering in their blood, a ſcene which ſtruck him with horror, and quite damped the ſpirits of the ſurvivors, though the Spaniards ſatisfied with this revenge, retired and ſuffered the reſt unmoleſted to repair to their ſhipping.

Fifty of Captain Swan's men cut to pieces.

St. Pecaque, in their expedition to plunder which town, the followers of Swan ſo ſeverely ſuffered, is ſituate on a ſpacious plain at the ſide of a wood, and has a ſquare in the middle, where the houſes are neatly built, and furniſhed with balconies. It is but ſmall, but has two churches, the Indians are moſtly Chriſtians, and, at that time, it was accounted to be the conſtant reſidence of about 70 white families, beſides the carriers from the mines who came thither occaſionally, and the merchants of Compeſtella.

Deſcription of St. Pecaque.

The Buccaneers not thinking it expedient after their late check, to attempt any thing farther upon this coaſt, ſhaped their courſe for Cape St. Lucar, on the Iſland of California, but could not reach their port, and were obliged to put in at the Maria Iſlands, in lat. 21° 40′ north, and at the diſtance of 40 leagues from the cape, for which they intended.*

Captain Swan leaves the coaſt.

* Dampier, who, as we have obſerved, had long been afflicted with the dropſy, was here cured by ſtripping himſelf naked, and lying down upon the hot ſand for half an hour. To a profuſe ſweat occaſioned by the exceſſive heat he attributes the ſucceſs of this remedy, which actually reſtored him to his health.

1685 At their first coming hither they lived only upon seals, but in a few days were supplied with turtle, conies, and pigeons, and while the crew were working upon the ships, the officers employed themselves in surveying the stores, as Captain Swan declared his design of coming home by way of the East-Indies. This declaration caused a division of the company, some applauding, and others condemning the measure. On the whole, it appeared that many difficulties were likely to attend this scheme. At the utmost, they had but 60 days provision on board—the maize rated at little more than half a pint a day for each man, besides that the rats were continually devouring a part of it. From Cape Corientes to the nearest land (the Island of Guam) was accounted 7000 miles, and that island was subject to their mortal enemies the Spaniards. On these considerations, nothing could have prevailed on the majority of the adventurers to proceed on this voyage but a promise which they, in a manner, extorted from Captain Swan, to endeavour to intercept the Manilla ship, by the taking of which they reckoned they should make them amends for all the difficulties and dangers they had sustained in the course of their South Sea expedition.

Takes his departure for the East-Indies.

All things, however, being now agreed, (the Cygnet) Captain Swan, with 100 men, the bark, Captain Teat, with 50, took their departure from Cape Corientes, on the 31st of March. At noon the next morning, they were carried by variable winds to the distance of about 30 leagues from the cape, and then by a fresh gale were carried into the course of an E. N. E. wind, which continuing, they proceeded with all the sail they could spread, and had frequent observations; but in a track of 6700 miles in latitude, saw none of the islands, such numbers of which lie in the same latitude on the other side of the line.—Though every thing seemed favourable to their wishes, a constant wind carrying them on with great swiftness, yet when about three weeks had elapsed, the mariners began to grow impatient, and insisted upon having their allowance enlarged, with which requisition Captain Swan was obliged to comply, notwithstanding the imprudence of it was evident, as there was still a danger that the wind might fail them, or that they might not get supplies when they should arrive at Guam. The allowance, when so enlarged, was 10 spoonfuls of maize for each man. Some of the ship's company did not drink above once in nine or ten days; some not in twelve, and there was one who did not drink in seventeen days, and then said that he was not thirsty.

But this spare diet so heavily felt by most of the crew that were in health, contributed to the establishment of Dampier's health, who was strengthened by it. He was not, however, one of those who could subsist without drink, (a thing almost incredible in those latitudes) on the contrary, though he had been so severely afflicted with the dropsy, he drank three times in a day, and continued mending daily. At this time we are told of an instance of severity in Captain Swan, which in such a situation might well have been omitted. He ordered a man found guilty of theft to receive three lashes with a two inch rope from every one on board, himself setting the example by giving the first stroke.——This strictness in punishing robbery by a buccaneer captain, who, as such, might be considered in the light of a common plunderer was rather extraordinary; but with all Captain Swan's faults, it must be observed that he was led into buccaneering with some reluctance, and seemed all along desirous of quitting that bad employment, as soon as opportunity should offer. As to his general line of conduct it appears to have been dictated by a spirit of discontent, arising from the disagreeable circumstances in which he found himself with a company of men who were head-strong and ungovernable, and whose object was nothing but plunder, while he had his views still fixed upon trade, to which they had an utter aversion.

The murmuring of the mariners increasing, Swan had endeavoured to persuade his people that though it was no less than 7200 miles from Cape Corientes to Guam, by the Spanish account, yet they might run it in 50 days, as Drake and Cavendish had done before them, adding that by the English account it was but 5700 miles; but this only served for a temporary expedient, for, when they had run down this reckoning, the men began to be quite mutinous, and to throw out bitter invectives against their commander. During their course, they had hitherto seen neither fowl, bird, or insect, except once when at the distance of 4975 miles from Cape Corientes they saw rushes, which they imagined might have come from some neighbouring land, but they fell in with none, in consequence of these tokens. Impatience of the crew.

Swan was now obliged to change his manner of reasoning;——he observed that it was still probable the Spanish reckoning might be right, and as they had still the continuance of the breeze if it lasted but a few days longer they would be likely to see an end of their hardships. Thus encouraged, they proceeded with some little hopes, which were kept alive by their having some rain on the 18th of May, the clouds settling in the west, and giving tokens of their approaching land. The barks being three leagues advanced before the ship, on the 20th, ran over a shoal where there was only four fathoms water, and numbers of fishes were seen swimming about upon the shoal. On this Captain Teat lay by, to speak with the ship, and coming on board, reported what he had seen. They were in 12° 55′ north latitude, and, clapping on a wind, steered to the northward, as Guam was laid down in 13° north in the Spanish charts, yet as no such shoal as they had just passed was noticed by them, there was yet a room to doubt whether they were in the right track. Trusting therefore the event to fortune, they followed the most probable course, and to their great satisfaction, saw the island of Guam, at the distance of about eight leagues at four in the afternoon,—"And happy it was, says Dampier, that we got sight of it before our provisions were gone, of which we had but enough for three days more, for, as I was afterwards informed, the crew combined to kill Captain Swan and eat him when the victuals were gone, and, after him, all of us who were accessary in promoting the voyage." Such was the savage disposition of these men, whose behaviour had all along been sufficient to sour a milder temper than that of their commander, whom though they did not kill and eat at sea, yet they afterwards found means to abandon to his fortune, as will be seen in the sequel. They discover land.

Guam is one of the Ladrone islands, which Dampier places in lat. 13° 21′ north, computing the meridian distance from Cape Corientes to be about 7302 miles, supposing the south seas to be 25 degrees broader than it is generally computed. This island is about 36 miles long and 12 broad. There was a Spanish fort of six guns, with between 20 and 30 soldiers in garrison, commanded by a governor, with one or two subordinate officers. They found the climate healthy, and the people active and ingenious, being particularly expert in building and navigating their boats, which would run 24 miles within the hour. A Spanish friar and three Indians came on board as soon as they had cast anchor; and being received with great civility, and acquainted that the English came thither in a friendly manner to purchase provisions; the captain was informed that they were rather scarce at that time upon the island, but that the governor would supply them to the best of his power. To him they sent letters with a present, and in the mean time, a boat of theirs which was dispatched to purchase cocoa nuts came back laden to their satisfaction. Afterwards the governor sent the captain half a dozen hogs, a dozen of musk melons, and as many water-melons; and gave orders to the Indians to assist them in fishing and gathering fruits, and to take bread-fruit for them every day. But while they were carrying on this friendly intercourse, the Manilla ship coming in sight, was warned to bear away, in doing which she struck They arrive at Guam.

upon

upon a ſhoal, and might have fallen into the hands of the adventurers, but that Swan found means to prevent his men from attempting this enterpriſe. They ſtayed at Guam all the remainder of May; on the 30th of the month the governor ſent the captain a jar of bread made of fine flower, two jars of pickled mangoes and pickled fiſh, ſome hogs, and a quantity of rice, and was furniſhed with powder and ſhot in return, and preſented a fine Engliſh dog, to which he had taken a particular fancy. Swan was likewiſe deſirous of the governor's letter to the merchants of Manilla, with a view to trade, but this was a ſecret which he did not communicate to his men.

They miſs the Manilla ſhip.

As to the friar, the commander gave him an aſtrolabe, a large teleſcope, and a braſs clock, who in return for the civility ſent the captain ſix hogs, a pig, ſome buſhels of potatoes, and half a hundred weight of Manilla tobacco.

The ſhip and bark being plentifully provided with all things that the iſland afforded, having on board cocoa nuts, bread-fruit, and 50 hogs in pickle, ſet ſail from Guam on the 2d of June, ſteering for Mindanao, which is the principal of the Philippine iſlands. They arrived on the coaſt about the middle of June, but not coming to that ſide of the iſland where the principal town was ſituated, they courſed round the land, till the middle of next month, before they came to an anchor, which as ſoon as they had done, they fired ſeven guns, and were anſwered by three from the ſhore. A raja, and one of the emperor's ſons afterwards coming on board, demanded who they were, and being anſwered that they were Engliſh, were bid welcome to the iſland, at the ſame time they were aſked whether their intention was to ſettle a factory. This at firſt ſurpriſed Captain Swan; but it ſeemed that one Captain Goodluck had been there before, with propoſals of that kind from the Engliſh Eaſt India company.

They anchor before Mindanao.

At the time that they lay before Mindanao, the prince of one of the neighbouring iſlands privately ſent his nephew to Captain Swan to invite him to come and ſettle in his dominions; but for ſome unknown reaſons, no regard was paid to this propoſal. In the mean time, it was foreſeen that the weſterly monſoon which was near approaching, would oblige the ſhips to continue in the port; on which account Capt. Swan, having laid aſide all thoughts of continuing his piratical depredations, reſolved to take pains to ingratiate himſelf with the ſultan of Mindanao, to whom accordingly he ſent rich preſents, nor were his chief miniſters forgotten upon the occaſion. Theſe civilities had a very good effect; the preſents were graciouſly received, and the ſultan had an hour's converſation with Mr. Moore (who had ſailed from London in quality of a ſupercargo) in the courſe of which he aſked many queſtions by means of a Spaniſh interpreter. Captain Swan was the next day invited on ſhore, with whom alſo the king diſcourſed much, and once more demanded whether the Engliſh were come to ſettle there in conſequence of the letters he had received from the Eaſt India company. This converſation, as may be eaſily imagined, was very entertaining, Swan deſcribing to the ſultan the adventures he had gone through, and the various countries he had ſeen, and the Indian prince entertaining him with accounts of the nature and produce of his country. After Captain Swan left the royal preſence he was entertained by Raja Laut, the ſultan's uncle, with a banquet of boiled rice, fiſh, and fowls, after the Eaſt India faſhion. In order to ſhew the raja's regard for the captain, the latter was given to underſtand, "That while Mr. Goodluck reſided in that city, he had been robbed by a ſervant belonging to Raja Laut, and that the fellow abſconded till Mr. Goodluck took his leave; but that he now returned, and was ready to be delivered up, to be puniſhed in ſuch manner, and with ſuch ſeverity, as crimes of the like nature are puniſhed with by the laws of England. But Capt. Swan told him, that in his country none but the injured party could proſecute the criminal; and as the man had committed no offence againſt him, he could take no cogniſance of his crime. The raja heard him with aſtoniſhment; and, to ſhew that the princes of Mindanao were far from countenancing ſuch practices, he cauſed the fellow to be ſtript naked, tied to a poſt, and expoſed a whole day with his face to the burning ſun; while the moſkitos continually tormented him, without a poſſibility of being able to bruſh them off, a kind of torture that few are hardy enough to ſurvive. This condeſcenſion was followed by a like offer from the captain, of delivering up every one of his men who ſhould offend againſt the laws of the Mindaneians; but the miniſter returned the compliment, and left the puniſhment to the captain himſelf, who, upon the leaſt complaint, puniſhed his men with a ſeverity that ſhewed more of revenge than of juſtice. Among thoſe who felt the effects of his indignation was Captain Teat, his chief mate, who commanded the bark that accompanied him in his run acroſs the ſouthern ocean; and others who had offended him on board he remembered, now he had the countenance of the court on ſhore."

Captain Swan entertained by Raja Laut.

1685

All this time Captain Swan was greatly honoured by the chiefs of the iſland, and the water running low, a number of the natives aſſiſted his men in lightening the ſhip to float her up the river, and moor her ſecurely. The natives came on board, and the Engliſh, in return were invited on ſhore, where they were well entertained, and many of them formed connexions with the beſt families of the iſland. In the mean time the young women were not wanting in diſplaying attractions, which to ſailors come on ſhore from ſuch a voyage, could not but be agreeable. Thoſe who had gold, as is always the caſe in ſuch circumſtances, had the preference, and the females generally took care they ſhould pay well for their favours. As there were artificers who worked in the gold and jewelling way on the iſland, they took care to come in for their ſhare of the advantage, making thoſe who beſpoke toys for their miſtreſſes give a ſufficient price for their love-preſents. When they took the ingots of gold preſented by the Engliſh for exchange, they gave them juſt what ſum they pleaſed:——Thus ſome got 16 or 18 dollars an ounce, while they put others off with 12; and even the price of neceſſaries was advanced after the arrival of theſe adventurers at Mindanao. The captain himſelf, though generally ſuppoſed by his people not to be of the moſt generous diſpoſition, yet gave countenance in a great meaſure to the diſſipation of his followers. The ſultan's palace, or that of Raja Laut, was his conſtant reſort, eſpecially the latter, where ſome of his followers who were not poſſeſſed of any property came, and were entertained with victuals dreſſed up in the ſame manner of the natives, who made no uſe either of knives or forks, but crammed themſelves with as much as their mouths would hold. To the hoggiſh cuſtoms even of the loweſt of theſe people, the voyagers could have no objection while they were received hoſpitably, and made no doubt but they were entertained at free coſt. Some apologies were made to the commander on account of its being the Ramadam or Lent in thoſe parts. On this account likewiſe there was a ſuſpenſion of the diverſions of the country, the people being Mahometans.

The expected rains coming on in the month of Auguſt, with ſtormy weather, the river ſwelled and large trees driving down upon the veſſels, they were in perpetual danger of driving on ſhore. The ſeaſon ſuſpended buſineſs as well as pleaſure, in the city, which ſtood in the midſt of water, without any other communication between the houſes, while the inundation continued, in which caſe the poſts whereon their dwellings were erected, proved very ſerviceable in ſecuring them from the effects of the water.

Having paſſed the Ramadam, and waited for the ſubſiding of the waters, Raja Laut entertained Captain Swan, with ſome of the dances of the country; thoſe who were employed in them, performing to vocal muſic, which from ſlow went on to ſwift time,

1686

The captain entertains the Indians.

and the dancers moved their heads, arms, and bodies with amazing quickneſs, their legs and feet being but little employed in theſe fantaſtic meaſures. In order to return this compliment, Captain Swan, who always wiſhed to impreſs on the iſlanders a high idea of his own conſequence, gave them a dance after the Engliſh manner, to which the ſultan, the chiefs, and their women were invited. The room being hung with ſilks, adorned with gold and ſilver lace, and illuminated with a great number of wax candles, made ſuch an appearance as aſtoniſhed the Indians. After the dancing was over, they were unwilling to withdraw, though their appetite as well as their ſight had been feaſted, ſavoury diſhes and ſweetmeats having been provided for the purpoſe. It was near daybreak when the ſultan retired, and his women reluctantly accompanied him. — Raja Laut and his female train ſtaid after his majeſty was departed; and wine was drank among them, notwithſtanding the prohibition of the Mahometan law. This entertainment furniſhed great matter of converſation among the Mindaneians, who of all the dancers they had ſeen, liked none ſo well as one Jack Thacker, a common ſailor, who had learned to dance horn-pipes at Wapping, with which he had exceedingly diverted them.—The Raja enquiring who he was, one of his meſſmates told his highneſs that he was an Engliſh nobleman, who travelled merely for his diverſion, adding that the reſt were gentlemen who had left England from a deſire of travelling. Captain Swan hearing of this, vexed perhaps at the impoſition, and conſulting an ill ſupported dignity rather than the dictates of good-nature, exhibited on this occaſion another inſtance of ill-timed ſeverity. He cauſed this man, who, it is ſaid, was ignorant of what had been reported of him, to be ſtripped of his fine clothes and laſhed in the preſence of the Raja.

This prince, who had ſo long been conſidered by the Engliſh, and particularly by their commander, as their beſt friend, when they prepared for their departure, gave ſome tokens of his inſincerity. Examining the bottoms of the veſſels, they found that of the bark to be eaten by the worms into holes like the cells of a honeycomb, and unfit for ſervice, the ſhip being ſheathed, had only her falſe bottom deſtroyed. In theſe circumſtances, application was made to the Raja, for planks to renew the ſheathing of the latter, who coming down to view it, ſeemed much diſconcerted, obſerving, this was the firſt ſhip he had ſeen with two bottoms. This gave occaſion to ſuſpect that he wiſhed the ſhip had been rendered unſerviceable as well as the bark, by which means he might have had her guns, as he had ſeen a Dutch ſhip thus diſabled, that could never put to ſea again. His never appriſing Captain Swan of the danger which he could not but be acquainted with, confirmed the ſuſpicion. As to the natives, they generally hauled their veſſels upon the beach, to burn their bottoms, and let them lie there till they were wanted again. It was about the middle of November that the Engliſh began to examine their veſſels, and having repaired the ſheathing, and put the ballaſt, ſtores, and guns on board, the month of December was taken up in their neceſſary employment, and it was the beginning of January when they began to fill water. At this time they applied to Raja Laut to furniſh them with buffaloes, which he had promiſed them ſhould not be wanting. Theſe buffaloes, being wild, he pretended every day to take his men out to hunt them, but, on their return, their gueſts were always given to underſtand that they had not met with ſucceſs. Nor did Captain Swan himſelf ſeem very eager to ſet ſail. In return for lead and iron ſold to the Raja he expected a certain quantity of rice and beef; but the Raja, had not fulfilled his agreement. He had beſides borrowed 20 ounces of gold of the captain, but would not return it; charging him a greater ſum for his own and his mens board. Thus things went ill on ſhore, and all was ſtill worſe on board, where the majority were for continuing

The Raja's conduct ſuſpected.

their piratical ravages; ſome were for getting home as ſoon as poſſible, and ſome having formed connexions with the natives, would willingly have ſtayed at Mindanao. In the midſt of this Babel of confuſion, thoſe who wiſhed to return home, purchaſed a veſſel, deſigning privately to depart for Borneo, where they underſtood they ſhould meet with an Engliſh factory; and from thence they ſuppoſed they might find an eaſy paſſage to England. But the deſign was diſcovered, and thoſe concerned in it were threatened to be puniſhed as deſerters. Another ſet of male-contents withdrew and concealed themſelves, in order that they might be left behind in the country. In the mean time, thoſe who continued on board the ſhip ſent iron on ſhore, to be exchanged for honey and arrack, the latter of which intoxicating them, added to their diſorders.

Diſorders among Capt. Swan's crew.

Repreſentations had been made to Captain Swan, that in order to ſettle all theſe diſturbances, it was highly neceſſary for him to declare himſelf, and it is highly probable that if he had exerted his good ſenſe upon the occaſion, and ſettled matters on board inſtead of attending ſo much to his intereſts on ſhore, he might ſtill have brought matters to a happy iſſue. A day was, however, fixed (the 13th of January) when he promiſed to come on board and ordered the whole crew to attend him; but two days before his gunner going on board for ſomething, which the captain wanted, his journal fell into the hands of John Read, an artiſt, who finding the mutinous behaviour of the crew noted in it, and particularly the conduct of a nameſake of his, a Jamaica man, this journal was handed about, and the conſequence was, that the whole ſhip's crew, ſtimulated by Captain Tent, ſwore that they would never ſail again under their old commander. This reſolution being taken, moſt of them were for departing immediately, but neither of the ſurgeons was on board.

The next morning they ſent to deſire the preſence of the ſurgeons, on pretence of a man's having broken his leg. The chief ſurgeon did not come, but ſent his mate, Mr. Herman Coppinger, and Dampier went with him. Having ſo far effected their purpoſe, they diſpatched their canoe to the ſhore to bring away all who choſe to come on board without making Swan acquainted with the matter. On the 13th in the morning, they weighed and fired a gun, whereupon Mr. Nelly, the chief mate, was ſent to demand the reaſon of this proceeding. They ſhewed him the journal, and complained heavily of the captain's treatment. By him, however, they were perſuaded to wait for the captain, though they declared againſt a reconciliation. But Captain Swan, whoſe character was reſerve and diffident either choſe not to truſt himſelf with thoſe who conceived he had injured them, or diſdained entering into a conference with men whom, from his heart, he hated and deſpiſed, and who had ſo often given proofs of their wiſhes to ſhake off all authority.

Their ſtratagem.

However that might be, he and 36 others were left behind in the town. When to theſe were added 16 who died, as ſome ſuppoſed, of poiſon, and ſeveral who deſerted, the number of thoſe that departed was reduced from 150 to 80, who ſet ſail on the 14th of January, at three o'clock in the afternoon, reſolving to truſt to themſelves for the chance of their future fortunes.

They ſet ſail without their commander.

On the 17th they anchored in a bay on the weſt ſide of a ſmall iſland, where they proceeded to the election of their officers.* Having ſupplied themſelves with water, they afterwards continued their courſe: in their way they ſtruck upon a rock, on which they lay for two hours, but being heaved off by the riſing of the tide, got clear of the danger, with the loſs of a piece of their rudder. They anchored afterwards at the north weſt end of the Iſland Mindera, and here a canoe with ſome Indians coming up with them, told them

* On this occaſion John Read, the Jamaica man, was choſen captain, Thomas Teat, maſter, and Henry More, quarter-maſter.

them that if they had any intention of trafficking with the Spaniſh merchants they might obtain for a trifle a recommendatory letter from a certain friar which would be ſerviceable to them had they been inclined to ſuch an honeſt occupation. But they were differently diſpoſed. Havock and ſpoil were their delight, they therefore declined this offer, and proceeded on their courſe to Luconia, which they reached on the 23d of February, where they took a Spaniſh bark, bound for Manilla, laden with rice and cotton cloth. The maſter of this veſſel was boatſwain to the Acapulco ſhip that paſſed by Guam, and he was the perſon who related by what means ſhe had eſcaped them there, with the reſt of the circumſtances already mentioned. This piratical crew now determined to go to Pulo Condore, to wait there for the Acupulco ſhip which generally arrives at Manilla about the latter end of the month of May. They caſt anchor at Condore on the coaſt of Cambodia,* on the 14th of March, and on the 16th entered a harbour where they careened their ſhip, being aſſiſted by the Indians, who brought them hogs and turtle in exchange for rice, of which they had a great quantity in ſtore. While they were thus employed, two men who were ſuppoſed to have been poiſoned at Mindanao, died, and when they were opened by the ſurgeon, their livers were found dry and black, ſomewhat reſembling pieces of cork. The reaſon Dampier aſſigns for the Mindaneians thus poiſoning the Engliſh was, that ſome of their gueſts had made too free with their wives, and the huſbands thereupon took this method of revenging themſelves.

They ſail for Siam.

From Condore they ſailed for Siam on the 21ſt of April, being piloted thither by an old Indian who was converſant in the Malayan tongue. Thus conducted, they arrived in the bay of Siam after a run of three days: Their intention here was to get ſome dried fiſh; but being diſappointed in that particular, they left the place on the 21ſt of May, and returned to Pulo Condore. In their courſe they overtook a Chineſe junk, which accompanied them all the way, and by her crew they were told that the Engliſh had a factory at a place called Silleber, on the iſland of Sumatra. When they reached the place of their deſtination, Read obſerving a Malayan veſſel at anchor within ſhore, ſent a canoe to know from whence they came, at the ſame time giving his men a caution not to truſt themſelves with the ſtrangers, but to hail them from the canoe. But they, as regardleſs of his advice, as many of them had been of their old commander's, went on board unarmed. The conſequence was that the Indians ſuddenly falling upon them, ſtabbed five or ſix with their ſhort daggers. The reſt jumped overboard and reached the boat, and amongſt them one Daniel Wallis who knew nothing of the art of ſwimming, nor ever ſwam before or after that time; yet he got to the boat as well as his companions. This alſo is another inſtance to illuſtrate that maxim of thoſe hidden powers in man which are never known till they are exerted upon ſome preſſing emergency. At this place Herman Coppinger went on ſhore with an intention of ſeparating himſelf from the ſhip's company whoſe manners and proceedings were by no means agreeable to him; but Read ſent an armed party to bring him on board again; and thus his deſign was defeated. They remained on this iſland, being detained by bad weather, till the 4th of June, and then departed, after having taken on board a Malayan Portugueſe from the junk, as an interpreter, and at laſt, they weighed anchor with a contrary wind. Ten days they expected its ſhifting, ſo as to carry them to Manilla; but at laſt perceiving all their hopes were vain, they directed their courſe towards Prata, in the 20th degree of north lat. with the idea of fiſhing up ſome of the treaſure ſaid to be loſt in the China ſhips that had been caſt away there. But they could not make this iſland, the wind driving them to that called St. John's on the coaſt of China, where, however, they were ſupplied with hogs and buffaloes. 1687

They abandon their deſign on the Acapulco ſhip.

Some of the ſhip's company went over to the continent, but found nothing there that anſwered their expectations: And on the 3d of July they left St. John's, weighing anchor with a gentle gale; but the next day began a moſt violent ſtorm, the wind blowing from the north-eaſt. This tempeſt continued to increaſe till midnight. At that diſmal ſeaſon, the clouds poured down all their torrents, the thunders roared, the lightenings flaſhed inceſſant; and the ſea itſelf reſembled a ſheet of liquid fire, except when at intervals the moſt horrid darkneſs reſted upon the ocean. In the mean time the riſing ſurges at one moment were ready to lift the ſhip to the clouds, and the next threatened to plunge her for ever in the gulphs beneath. The ſeas continued breaking ſhort upon the veſſel, which laboured dreadfully in this conflict of the fighting elements. The rails of the head were carried away by a breach the waves made over them, and by the ſame ſurge the ſheet anchor, though ſtrongly laſhed was diſlodged, and ſtriking againſt the bows of the veſſel, was expected to pierce through her planks. To prevent this, they were obliged to ſteer before the wind; and having once taken this courſe they could by no means alter it while the ſtorm continued, but were obliged to be driven juſt whither the winds and ſeas impelled them. The violence of the tempeſt continued till four in the morning, when it abated, and the ſailors ſaw that well-known meteor called a Corpus Sant, ſhining like a ſtar at the maſt-head, in which caſe it is reckoned a favourable token; but if it appears on the deck, is deemed a very bad ſign; for which concluſions there may be philoſophical reaſons aſſigned; but ſea-faring men never give themſelves the trouble to inquire into them. A dreadful tempeſt.

The gale though ſtill ſtrong, ſubſided by degrees into a perfect calm. So that, after ſcudding before the wind till ſeven in the morning, they then lay to under their mizzen till eleven. Then the gale died away; but ſtill the heavens wore a lowring aſpect, ſuch as preſaged another ſtorm, which accordingly came on from the ſouth-weſt, attended with violent ſhowers and the ſhip was once more obliged to be driven before the wind, till ten at night, when all was calm and tranquil again. Having referred to their charts, they were now of opinion that the beſt courſe they could take would be to ſteer for the iſlands called Piſcadores, ſituate in 23° north lat. and by the 20th of July they came in ſight of them. As they knew nothing more of theſe iſlands than their name, they were ſurpriſed to find a ſpacious harbour, and to ſee a number of junks paſſing and repaſſing. As ſoon as they had anchored, and attempted to land, a Tartarian officer aſked who they were, and to what port they were bound. Being anſwered, that they were from England, and in diſtreſs, they were given to underſtand that they ſhould be furniſhed with what they wanted, but that they muſt not come on ſhore. Accordingly they were ſupplied with the beſt of proviſions, and ſtayed till the 29th, when they departed, after the captain had preſented the governor with a ſilver-hilted rapier, a carbine, and a gold chain, in return for his civility.

The Engliſh then directed their courſe to a cluſter of iſlands which lie between Formoſa and Luconia, the place on which their hearts were ſet, and arrived in ſight of them on the 2d of Auguſt. They found them well inhabited, and ſtored with goats and ſwine, but by no means abounding in poultry. Theſe iſles not having received any names before, Read gave them the general name of Baſhee iſlands. Baſhee Iſles.

The accounts of this voyage inform us that the ſituation of their towns were very remarkable "They were built on precipices on every ſide inacceſſible but by ladders placed at the end of the ſtreets, which ran

* Dampier obſerves that among the productions of the cluſter of iſlands upon this coaſt, there is a tree three or four feet in girt, from which the natives draw a juice that when boiled becomes exactly the ſame as our tar, poſſeſſing all its qualities.

1687 ran in parallel lines, whereon the houſes roſe in ranges one above another, till they ended at laſt in a ſingle row. The inhabitants were acquainted with the uſe of iron, and had a ſort of yellow metal, like gold, among them, which they exchanged for it; but unfortunately Dampier could get none of it, becauſe he had nothing to give in return. They were very ingenious, had large fiſhing boats, and lived in a different manner from any whom theſe Buccaneers had ever ſeen. In regard to their food, they were ſo far from being nice, that they would gather up the goats ſkins and goats paunches, which the ſailors threw away and after ſinging would broil and eat the former, and having ſtewed the other without much trouble in cleanſing, would mix it with raw fiſh, and ſtrewing it with ſalt, make a ſtrange ſort of ſalmagundy. But the paunches of the ſwine they did not chuſe to eat. They ſeemed to be very cleanly in their perſons, and were good-natured, and ſo honeſt that they would take nothing but what was given to them; neither were they ever made angry with ſtrangers, though cauſe ſufficient was frequently given; nor did they quarrel with each other. They had this praiſe, that no provocation could make them angry, nor any temptation induce them to tranſgreſs the rules of honeſty.

Theſe Indians conſtantly ſupplied the ſhips with hogs, goats, potatoes, and the fruits of the country; where Read having remained till the veſſel was accommodated with proviſions and their caſks filled with water, after a ſtay of a month, and ten days, prepared to ſail on the 24th of September, when, juſt as they were ready to ſet ſail, a tempeſt forced them to cut their cables, and though ſix of their beſt hands were left behind, to put to ſea in the utmoſt confuſion.

Thus driven by the winds, they ran under their bare poles, nor were they able to return to their ſtation till the firſt of October, when their men were brought on board by the natives, who had been remarkably kind to them in the abſence of their companions, endeavouring, however, to perſuade them to adopt the Indian cuſtoms, and offering each the choice of a wife, with a little piece of land, and planters implements by way of a dowry. For their care and humanity they were rewarded with three bars of iron, which was the only ſort of metal that they coveted. The crew by this time began to be heartily tired of their voyage, and deſirous to return; but Read and Teat ſtill wiſhed for opportunities to try their fortune. However, finding the men determined to ſtay no longer on thoſe coaſts, they perſuaded them (for there was no ſuch thing as commanding) to have patience till they ſhould arrive at Cape Comorin, after which every man ſhould be at liberty to take his own courſe if he diſapproved that of the commander. This point being ſettled, they propoſed to coaſt along the eaſt ſide of the Philippines, and to keep ſouth to the ſpice iſlands, for fear of meeting Engliſh or Dutch ſhips, and ſo paſs into the Indian Ocean near Timor. With this deſign they proceeded on their voyage, on the 3d of October, leaving the iſland of Luconia on the weſt and quitting all thoſe golden projects with which once they had flattered themſelves. And thus they ſtood on to the ſouthward till they came in ſight of the Iſland of St. John, on the coaſt of Mindanao, and, on the 16th came to an anchor on the ſouth-eaſt ſide of that iſland.—Having thus conducted our adventurers once again to the ſame country, where they left their captain, we will here give a ſhort ſketch of the iſland, and the manners of its inhabitants before we proceed with our narrative.

They return to Mindanao.

The Iſland of Mindanao lies in 7° of north lat. yet by means of the gentle ſea breezes in the day and the cooling land winds at night, the air is generally temperate, and the country fruitful and covered with a perpetual verdure. The hills abound with gold, and the plains are watered by rivers and ſprings. The lawns are interſperſed with groves and trees, ſome of which yield a cooling ſhade, whilſt others are more uſeful, producing food for the natives of that happy climate. Deſcription of the iſland.

Their houſes, as we have already obſerved, are all built upon poſts, and even the ſultan's palace has but one floor though it has a number of apartments, ſtands upon 180 poſts, and is 20 feet above the level of the ground. The roofs of all their dwellings conſiſt of palmetto leaves. As to the area beneath their houſes they conſider it as a ſort of common ſewer, into which all manner of filth is thrown, and remains there till the violence of the currents, which are ſometimes ſo ſtrong as to overturn the houſes, carries it away. The iſlanders bathe conſtantly every day, and are very clean in their perſons, uſing generally the ablutions of the Mahometans, and holding ſwine in abomination. Bread fruit, rice, ſago, plantains, cocoa nuts, and other fruits of the country form the chief part of their diet. Beef and fowls are more rarely uſed, and conſidered rather as dainty diſhes than common or ſubſtantial food. The people in general are low of ſtature, with ſmall heads, and of a copper complexion. The women are fairer than the men, but their noſes are ſmall and flat, which renders them on a near approach, rather diſagreeable. They were found to be extremely amorous, and fond of white men, who could ſcarcely walk the ſtreets without being invited and almoſt forced into their dwellings. Their hair is black and long, and they are better dreſſed than the men. The habit generally worn conſiſts of a looſe jacket and a petticoat. The jacket ſleeves are wide at the ſhoulders, but cut in the ſlope to the waiſt, where they are extremely ſtraight and tight. Silks and fine calicoes are uſed for cloathing by the higher ſort of people, but for the lower ranks an ordinary ſort of cloth called Saggen, which is woven from the plantain tree. They had ſhip-builders, carpenters, ſmiths, and goldſmiths, among them, who work by no means contemptibly conſidering the ſimple nature of the tools which they employ.* There is only one moſque in Mindanao, which is not much reſorted to. In the room of a clock they notify the hour by means of a vaſt drum kept in the moſque for that purpoſe, which is bell-ſhaped and placed over a large cavity, and the head of it is covered with braſs. This inſtrument is called a Gong, and is attended by a number of perſons who relieve each other watching by night and day. Theſe people have a ſtick, which has a ball at the end of it; with this at certain intervals they ſtrike the gong, and the ſound that proceeds from it is loud enough to be heard through all the town. The natives make uſe of circumciſion, which is not performed among the common people till about the age of twelve, but the princes of the blood undergo this operation (which is attended with much ceremony) at the end of eight days.

With regard to the trees and fruits of Mindanao, the following is a ſummary of the account given of them in this voyage. On the hilly ground the natives cultivate potatoes, yams, melons, and many other vegetables, and rice grows in the marſhy grounds. They make a ſort of bread out of the pith of ſome of their trees as well as extract a pleaſant drink from the ſap of others. Here are found cloves and nutmegs; alſo oranges, plantains, bananas, betel nuts, durians, and cocoas, beſides the bread-fruit of which we have made mention.

As to the plantain, Dampier prefers it to all the reſt

* Captain Dampier ſays the ſmiths bellows are conſtructed in the following manner: The inſtrument is compoſed of two hollow cylinders, like large wooden water-pipes: they are cut flat at both ends, about four feet long, placed upright at the diſtance of about four feet from each other, on a ſtone hearth, before the fire. A pipe is placed within two inches of the bottom of each, which project like a cock towards the fire, bending in ſuch a manner that the pipes from both cylinders meet and end in one before they reach it. Being fixed firm, a man keeps up a perpetual blaſt with two light bruſhes, made of feathers which they work alternately like two piſtons, nor have they any other vice or anvil than a large ſtone or the but-end of an old cannon. The carpenters have neither planes nor ſaws, yet by perſeverance they continue to ſplit and ſmooth their boards very neatly, and the work proves more durable, the grain of the wood remaining unbroken.

reſt, calling it the king of fruits. "The tree that bears it is between three and four feet in circumference, and riſes about ten or twelve feet high. When at its height, there ſprings from the top a ſtem about the ſize of a man's arm, round which the fruit grows in cluſters in ſhape, not unlike the Turky cucumber, the coat of which is of a yellow colour when ripe. The incloſed fruit is of a delicate flavour and melts in the mouth like marmalade, [when over-ripe it has a taſte ſomewhat like that of a mellow pear]. It is highly eſteemed by all Europeans, and all their ſettlements are furniſhed with plantain walks, ſome families ſubſiſting wholly upon that fruit. The bonance [or banana] differs but little from the plantain except in ſize, being ſmaller and leſs luſcious.

"The nutmeg and clove-trees are rare in this iſland, but thoſe that grow are large and fine. The natives diſcourage their growth, for fear of exciting the jealouſy of the Dutch who have monopoliſed the whole trade for ſpices, and who keep a company of armed ſoldiers in pay to cut down the ſpice trees in the uninhabited iſlands, leſt the European nations ſhould avail themſelves of their plenty. In ſome of the eaſtern iſlands, it is uſual to ſee, at the ſhedding time, cloves lying three or four inches thick under the trees.

"Of the betel nut all the eaſtern people are immoderately fond. It is the fruit of a tree that grows like a cabbage-tree, to the height of ten or twelve feet, without either leaf or branch, and then ſends forth ſhoots on every ſide, among which the fruit is found in cluſters, on tough ſtalks, about the bigneſs of a man's finger. It is larger than a nutmeg and rounder; they cut it in quarters, (when green) wrapping each quarter up in an Arkca-leaf, and chewing both together. It taſtes rough, dyes the lips red, and makes the teeth black.

As to the durian it grows on trees like apple-trees, and are in ſize as large as pompions, covered with a rind, which, when ripe, opens and ſends forth a ſtrong ſcent, not unlike that of roaſted onions: It divides into chives, each about the ſize of a pullet's egg, the inſide of which is of the conſiſtence of cream, and if not eaten in its prime, there is no enduring its rankneſs. The jacca differs very little from the durians; except the inſide of the former is yellow, and that of the latter is white."

To return to the thread of Dampier's narrative, he ſays, That while they lay in the bay they had intelligence by means of the young prince whom we have already mentioned as coming from a neighbouring iſland, that Captain Swan* and his people remained ſtill at Mindanao, and had acquired great honour in the wars of Raja Laut, though thoſe who had deſerted him always pretended to doubt the courage of their commander. It ſeems he had offered 40 ounces of gold for a ſhip to convey him from the iſland, but the Raja (a circumſtance not uncommon among the the eaſtern princes) would not ſuffer his departure.

The prince of Meangis having promiſed to give Read a handſome reward for conveying him to his own iſland, the Engliſhman promiſed to wait three days, during which time Dampier, who approved not the behaviour of his companions to their old captain, took occaſion to try how far there was any likelihood of reſtoring him to his command. His firſt trial with a party that was on ſhore filling water, gave him hopes of ſucceſs, as they ſeemed well enough affected to his project, and were intreated to take no notice of the matter; however it happened unluckily that one of them though he appeared very zealous for the cauſe betrayed the matter, and the conſequence was that Read immediately took meaſures for his departure, and weighing anchor, on the 2d of November ſet ſail, and ſtood to the weſtward, without waiting for the prince, who was to have come on board that day. 1688

On the 9th the wind changing they came to Ubes, in 3° of north lat. and anchored in a ſandy bay. Here they found a ſort of creeping vine, the leaves of which being pounded and boiled with hog's lard proved a cure for ulcers. The people being informed of its uſe, filled their cheſts with it, and found they were not deceived in their ideas of its virtues. They ſet ſail on the 30th to the ſouthward, and in the afternoon met with a violent tornado, and ſaw a water ſpout. Afterwards they continued proceeding ſlowly till, on the 4th of December they came up with the north-weſt end of the iſland of Bouton, where they found an Indian that brought them to a harbour where they ſaw the ſultan, who gave them liberty to purchaſe ſome turtle, which proved very ſerviceable to them.† Having taken leave of him they ſet about weighing up their anchor, but as it had ſtuck in a rock, they were obliged to be contented with the cable only, and ſteered to the ſouth-weſt, ſailing by ſome iſlands where the natives beat drums in the night during their paſſage. In their courſe towards Timor they paſſed by Omba, and ſteered to the ſouthward, with a deſign to touch at New Holland. They fell in with this coaſt on the 4th of January, in 15° 6′ ſouth lat. and came to a point, from whence the land tended eaſt and ſoutherly for 10 leagues. They fell in upon the weſt ſide, of which part of the country (uncertain whether an iſland or continent) Dampier gives the following deſcription. They arrive on the coaſt of New Holland.

"The land is of a dry ſandy ſoil, deſtitute of water, except you make wells. There are divers ſorts of trees, but the woods are not thick, nor trees large. Moſt of them were dragon trees of the ſize of apple-trees.—We compared the gum with the gum dragon [Tragacanth] we had aboard, and found it the ſame. We ſaw no trees that bore fruit. We ſaw no animal nor any track of animal but one, and that was of the ſize of a maſtiff-dog. Few land birds, and none bigger than a black-bird; few ſea fowls; few fiſh, (turtle and manatee excepted.) The inhabitants are the moſt miſerable people in the world; without houſes, without cloathing; without conveniences of any kind; and ſetting aſide their human ſhape, very little different from brutes. They are tall, ſtrait-bodied, thin, have ſmall limbs, great heads, round foreheads, and large brows; their eye-lids are alway half-cloſed; they have great bottle-noſes, full lips, wide mouths, and two fore teeth in the upper jaw wanting in all of them; but whether they draw them out or not, I know not. They are long viſaged, without beards, of an unpleaſing aſpect, with no one graceful feature in their faces; their hair black, ſhort and curled like the negros, and their colour coal-black. They live in companies, 20 or 30 men women and children together; their food is fiſh, and their manner of catching them is in weirs, acroſs little inlets of the ſea, in which every tide leaves ſome; they have no inſtruments to take great fiſh. In other places they fiſh for cockles, muſcles, periwinkles, but of theſe there are but few; of what they catch all partake alike; all watch the tides, for all depend upon the ſea for their ſupport; the earth producing neither herb, root, pulſe, or any ſort of grains. Theſe poor creatures have a ſort of weapons conſiſting of a piece of wood, ſhaped ſomewhat like a cutlaſs, and a long ſtraight pole with a ſharp end hardened in the fire; with theſe they made a ſhew of frightening us; but on firing one gun they all ran away frightened‡."

Dampier tells us that, wretched as the appearance of

* He and his men (we are told) ſtayed a long time at Mindanao; Harthop and Smith, his merchants died in theſe remote parts; Meſſ. Nelly and Rofy, his mates, got their paſſage to Batavia in a Dutch ſhip, and from thence at laſt came ſafe to Europe.

As to the commander he was run down and drowned, as he was trying to get on board a Dutch veſſel. This was done by the natives, by order of his old friend Raja Laut, and was probably owing to the avarice of the Indian, as well as to his deſire of keeping an experienced European in his country.

† The ſultan alſo preſented Read with a boy who had a double range of teeth, one ſet within the other in each jaw.

‡ The reader will find this account to be different in many reſpects from that given by Captain Cooke, who touched here in the Endeavour. It is however to be obſerved that he viſited the eaſtern ſide of the iſland.

1688 of these natives were, the crew made acquaintance with them, and gave them meat. This they devoured readily enough, but paid no regard to the ship, nor any thing that they saw about them, appearing to be quite devoid of that sort of curiosity which might naturally be expected upon such an occasion.*

Finding that nothing was likely to be had here, they quitted the coast on the 12th of March, intending at first for the Isle of Cocoas in the 12th degree of south latitude; but the wind proving unfavourable to their design, they stood for the isles on the west of Sumatra. On the 28th they came to an island where they killed several of the birds called Boobies, and men of war's birds, and also found a large animal in shape like a crab, without claws, which burrowed in the ground after the manner of rabbits, and proved to be excellent meat. Leaving this island, they held on their course, and came in sight of Sumatra on the 7th of April, and on the 17th made an island named Triste, where they supplied themselves with turtle. As they were cruising among these islands, they chaced and took a praw of Achin, laden with cocoa-nuts, and cocoa-nut oil, with four men on board, whom they detained prisoners, and, boring a hole in the bottom of the praw, sunk her, after they had taken out of her what they thought fit. The men thus taken shewed them all the channels and openings which led to Achin, where the English had a factory.

About 40 leagues to the N. N. W. of Sumatra they fell in with one of the Nicobar islands, the inhabitants of which were an independent people, trading with any nation that came among them. Ambergris and fruits were the commodities in which they traded, but the ambergris they were very apt to adulterate. The island of Nicobar lies in 7° 30′ of north latitude.

It was here that Dampier at last found means to bring his scheme to bear, of leaving these pirates, to whose conduct he had so great a dislike. Indeed their behaviour was in every respect such as none but the worst of men could approve. Their desertion of their commander which they justified on principles of retaliation was cruel, and contrary even to those rules which Buccaneers for the sake of order should observe. It is true that Captain Swan did not act prudently in suffering them to remain together at liberty to urge each other to mischief. But it is most probable that being highly embarrassed by the loss of his bark, into which he might have put some of the most mutinous of his crew, and then dropped their company, and finding himself deceived in Raja Laut, he scarcely knew which way to proceed. He had thus lost his hopes of trading with the 5000l. which he had in his hands, the money resulting from the sale of commodities which he had been led to put up at auction, when this motley crew forced themselves upon him for the purpose of buccaneering, and thus disappointed in his aims, he was unsettled in his resolutions, and began at last to be unwilling to trust himself with those who gave tokens of the depth of former resentments. When all these things are considered, it may be said that his death was, in effect, occasioned by the disorderly conduct of his crew. But, to return to Dampier: having considered his own situation and the disposition of his companions, he concluded that it would not be easy for him to make his escape; he resolved therefore to ask Read to set him on shore at this island as soon as he found that the ship was about to sail, and Read consenting, with a view of getting rid of one who was continually finding fault with his conduct, our adventurer quickly collected all his moveables, and persuaded some of the crew to row him on shore in the ship's canoe†. Accordingly he was landed in a sandy bay, and had reason to think he was now fairly delivered from his disagreeable associates. But in an hour's time Teat came with an armed force to fetch him on board again. When he entered the ship, he found all there in confusion, many others insisting on being set on shore likewise, among whom was Coppinger the surgeon, who jumped into the boat with a gun in his hand, threatening to fire it on those who should endeavour to prevent his purpose, but they were so fully determined not to lose so useful a person, that one of them ventured his life to get the gun from him, and others following, he was once more brought on board. Read, however, when matters were quiet, consented to let Dampier be carried on shore, together with one Mr. Hall, and Ambrose a sailor. The four prisoners taken from the praw, and the Portuguese from the Chinese junk being also left at Nicobar before the ship departed, they all joined company; and these eight persons determined to row to Sumatra, at the distance of forty leagues, for which purpose they bought a canoe of the natives for an axe, (with which the man who rowed the Englishmen on shore had presented them on parting) and having on board a sufficient quantity of provisions, embarked for this purpose on the 10th of May, 1688. Dampier is left at Nicobar.

But almost as soon as they had put to sea, their canoe overset. However as they were near the shore they swam to it in safety. The chests and fire-arms were recovered, and the powder being sealed up was preserved from the wet, but the books and papers of the English were much damaged by the sea-water. While they were employed in drying these, the Achinese were not idle: they provided a stout mast and a sail for their boat, and to prevent her from being again overset, they furnished her with out-leaguers, a sort of beams or poles which are placed across the body of the canoe, which project a yard or two over the sides, and are united at the extremities by transverse boards, joined to the end, which while they remain firm will never suffer the boat to sink or overset.

Their little vessel, not much bigger than a wherry, being thus fitted up, they next thought of recruiting their provisions, for which purpose they were obliged to have recourse to a different part of the island, where some disputes at first arose between the English and the Indians, which Dampier by his prudent management found means to accommodate, and having brought the natives into good humour again, the provisions were accordingly obtained.

Dampier has observed that there is not a people on the face of the earth that he should be afraid to approach unarmed and alone, provided no previous injury had been done them by any of his company unprovoked. For, he says, that an European has it always in his power to insinuate himself into the favour of the most savage people by some slight, by shewing them some toy, by smiles and submission, or even by shewing them the method of lighting a match with a flint and steel. As they are apt to lie in ambush and kill by surprise, he says, the only danger is from their first onset, and if that can be avoided, the fiercest of them may be brought to be as gentle as a lamb. This observation is generally true; but it is a rule to which we conceive there are some exceptions, as, if the accounts of voyagers may be credited, there are some barbarians of such a ferocious disposition as neither force nor kindness can tame. And besides, in the ideas of some, the very attempt of any man or set of men to land upon their coast may be considered as an indication of an intended injury, which they imagine they ought to resent.

Be that as it may, Dampier succeeded so well in his endeavour at Nicobar, that nothing farther occurring to prevent the adventurers from pursuing their

6

* Dampier endeavoured to persuade the men to go to some English factory, but was threatened to be set on shore for having suggested such a scheme, as soon as Read was informed of the proposal.

† Besides Dampier's wish to leave Read and his crew, he had also at first an idea of establishing a trade for ambergris with the natives of Nicobar, and thus gaining a considerable fortune; as, by rowing with the natives, mixing among them and conforming to their manners, he thought he should find the secret of their getting and preparing this valuable commodity.

their project; the Engliſh, Portugueſe, and the Achineſe, committed themſelves in their canoe to the mercy of the watry element.

The wind at their firſt ſetting out, was favourable, the weather hot, and they proceeded, rowing and ſailing occaſionally, Dampier and Mr. Hall taking turns at the helm. Yet after two days labour, they found that they had got no more than four leagues from Nicobar. On this they changed their courſe, but a contrary current oppoſing them, they found that they had made but little way on the third day.

Having thus miſſed of improving the fair weather, they were threatened on the 18th with an approaching ſtorm. The wind began to riſe, the ſky was clouded over, and a circle round the ſun gave token of their danger. In this ſituation, having conſulted what was beſt to be done, they determined to furl the ſails, to ſettle the yard about three feet above the boats ſide, and ſtand before the wind to whatſoever land might be right a-head of them. Theſe preparations being made, they waited with very uneaſy apprehenſions the expected tempeſt.

A dreadful tempeſt.

About noon the gale came on, and continued increaſing for many hours. In the mean time the ſea ran mountain high, and perpetually threatened by breaking over the canoe, to ſend her to the bottom of the deep. But her out-leaguers, which we have already deſcribed, effectually prevented her overſetting, and the thinneſs of her body, with a high ſtern and narrow prow, cutting the waves, inſured her ſecurity. Even the ſeas that broke over her were ſo divided, that inſtead of coming down with a thundering weight ſufficient to ſever her frame, the water fell only in ſhowers which could not ſink a veſſel ſo ſecured, and which was baled out by the Achineſe, who laboured chearfully while Dampier and his friend Hall were attentive to every circumſtance that could leſſen the apparent danger. Notwithſtanding what we have obſerved of thoſe fortunate circumſtances that contributed to the ſafety of this little veſſel, yet when the ſituation of theſe adventurers is conſidered, the reader will eaſily perceive that they had the greateſt occaſion to be under the moſt terrible apprehenſions, and the more ſo, as had their out-leaguers failed them in ſuch a ſea, the canoe could not have lived a moment. The evening of this day was dreadful, and no leſs dreadful was the operation which this ſcene had upon the minds of thoſe who were embarked on this tempeſtuous ocean. In times of danger a multitude of ideas ruſh into the head, a thouſand feelings affect the heart of man, which in proſperity are totally unknown, in times of tranquility are not attended to. Dampier who had paſſed through many perils, found himſelf here quite at a loſs to maintain his fortitude, as the following deſcription of the ſtorm and of his own feelings will ſufficiently evince.

"The ſky (ſays he) looked very black, being covered with dark clouds, the wind blew hard, and the ſea was already roaring in a white foam about us: a dark night coming on, and no land to ſhelter us, and our little ark in danger to be ſwallowed up by every wave; and what was worſt of all, none of us thought ourſelves prepared for another world. I had been in many imminent dangers before now, but the worſt of them all was but a play-game in compariſon with this. I muſt confeſs that I was in great conflict of mind at this time. Other dangers came not upon me with ſuch a leiſure and dreadful ſolemnity. A ſudden ſkirmiſh or engagement was nothing when the blood was warm, and ruſhed forward with eager expectations; but here I had a lingering view of approaching death, and little or no hopes of eſcaping it: And I muſt confeſs, that my courage that had hitherto kept me up, failed me here, and I made very ſad reflections on my former life, and looked backward with horror and deteſtation upon actions which before I diſliked, but now I trembled at the remembrance of them. I had long before this repented me of that roving life, but never with ſuch concern as now. In this temper of mind, we ſubmitted ourſelves to God's good providence, taking all the care we could to preſerve our lives. Mr. Hall and I took turns to ſteer, and the reſt took turns to heave out the water; and thus we provided to ſpend the moſt doleful night I ever was in. About ten o'clock it began to thunder, lighten, and rain; but the rain was welcome to us, having drank up all the water we brought from the iſland. The wind at firſt blew harder than before; but, within half an hour, it became more moderate, and the ſea aſſuaged [abated] of its fury. And then by a lighted match, which we kept burning on purpoſe we looked on our compaſs, to ſee how we ſteered, and found we varied but little from our courſe and finding our veſſel lively enough with the ſmall ſail that was aboard, we began to bear up to the true point, to which our views were directed. But about two in the morning, we had another guſt of wind, with thunder, lightning, and rain, which obliged us again to put before the wind. The hard rain ſoaked us thoroughly that we had not one dry thread about us, and the cold rain chilled us extremely, for any freſh water is much colder than the ſea-water, and much more unwholſome for man's body. 1689

"In this wet, ſtarving condition, we ſpent the tedious night. Never did poor mariners on a lee-ſhore more earneſtly long for the dawning light than we did. At length the day appeared, but with ſuch dark, black clouds near the horizon, that the firſt glimpſe of dawn appeared dreadful. We continued our courſe before the wind till eight o'clock in the morning of the 19th, and then one of our Achineſian friends cried out, *Pulo Way*. We thinking the fellow had ſaid *Pull away*, were at a loſs to conceive his reaſon; but preſently, obſerving his motions, we found he pointed to his companions, to ſhew them land. We, dropping with wet, cold, and hungry, were overjoyed at this ſight. It bore ſouth, and the wind was ſtill at weſt, a ſtrong gale; yet with our ſmall ſail, no bigger than an apron, we changed our courſe, and bore up to it. Here our out-leaguers did us good ſervice; and, though our boat's ſide was preſſed down very much, we could brook it well enough; and the next day we ran to the mouth of a river in the iſland of Sumatra, called Paſſage Jonca, where all fell ill of fevers, of which ſome died; and I that ſurvived was a whole year before I recovered my ſtrength."

Having reached the ſhore the Engliſh were kindly entertained by the natives, as the Achineſe had given theſe Indians to underſtand that the ſtrangers were priſoners on board the piratical veſſels as well as themſelves, and had been ſet on ſhore altogether, the truth of which latter part of the information ſeemed to confirm that of the former.

In this place the natives uſed many endeavours to perſuade Dampier and his companion Mr. Hall, to ſtay in order to improve them in the art of building and navigating veſſels; but it will readily be conceived that people who had gone through ſo much abroad were not willing to liſten to ſuch propoſals. On the other hand as there was an Engliſh factory at Achin, they made it their choice to be conveyed thither, and embarking on board a veſſel provided accordingly, they arrived there in three days. At Achin the two Engliſhmen were received with great kindneſs, and entertained by an Iriſh gentleman of the name of Driſeal, but Dampier's ill health ſtill continuing, he had recourſe to a Malayan profeſſor of phyſic, who gave him ſuch a ſtrong medicine as procured 60 evacuations in one day; this ſeemed to be adopting a ſort of dangerous if not deſperate remedy; but our adventurer who ſeems to have had the ground-work of a good conſtitution to carry him through, bore it all, and afterwards gathered ſtrength daily. Dampier's reception at Achin.

The Achineſe were reſtored to their families, but the Portugueſe died the day after their arrival, and Ambroſe the ſailor lived but a little while after him. Dampier when he found his health growing better, undertook to ſail to Nicobar with one Captain Bowry. Dampier's voyages in the E. Indies.

1690 Bowry*. Accordingly they embarked and set sail from the road of Achin, in the beginning of the month of June, but a storm obliged them to return; and Captain Welder at this time arriving at Fort St. George engaged Dampier to go with him on a voyage to Tonquin, his description of which, as well as of the city of Malacca [or Malakka] we have here omitted, as they will be found more at large in the subsequent part of this work, which treats of voyages to the East Indies.

They left the river of Tonquin in the month of February, standing away to the south, the shoals of Brasil being on the larboard, and the coasts of Cochinchina, Campa and Cambodia on the starboard, the latter of which Dampier describes as a low, woody country, somewhat like Tonquin, situate on a large river, which rising in the north, passes through a large tract of land, and empties itself into the sea near the Isle of Condore. Thence they steered westward, and passed through the streights of Malacca, and after a short stay there, made for Achin, where Dampier had first landed, with whose account of the country we shall here present our readers.

Description of Achin. "This kingdom, (says he) is the most populous of all the petty kingdoms in the Isle of Sumatra, and extends fifty or sixty miles from the north-west to the east. Near the north-west end of Sumatra stands the Golden Mountain, within two leagues of the city of Achin, which mountain may be seen at the distance of 40 leagues at sea. The road of Achin is inclosed by a range of islands, the easternmost of which is called the Isle of Way, a circumstance that accounts for the Achinese in Dampier's canoe having called out *Pulo Way*, Pulo signifying an island in their language.

"Plantains, bananas, durians, citrons, oranges, and most of the fruits known in the torrid zone, grow in the island, as likewise rice and pepper; camphire also and gold, are found in the kingdom of Achin. Their land animals are elephants, bullocks, deer, hogs, goats, horses, porcupines, monkeys, squirrels, lizards, and serpents, &c. Of tame fowls they have only dunghill fowls and ducks; but the woods afford macaws, parrots, paroquites, pigeons, and turtle doves of divers sorts; and the sea and rivers furnish them with plenty of fish.

"The inhabitants of the kingdom of Achin are originally Malayans, speaking the same language [with them] with very little difference, being of the same Mahometan religion, and of the same temper. For the rest;—they are of a middle size and well shaped;—Their complexion is dark like the rest of the Indians; their hair lank and black; with black eyes, tolerable good noses, thin lips, and black teeth. They are naturally lazy and idle, and the poorer sort are addicted to theft, but good-natured to strangers. They build their houses on posts: Their common food is rice; but the better sort eat fowls, fish, and buffaloes flesh, seasoned with garlic and pepper, and dressed with pickles. The poor wear a pair of breeches only, and a turban; the rich a cap fitted to their heads, and a piece of silk thrown over their shoulders; also a pair of sandals, but no stockings.

"The city of Achin, the metropolis of the whole kingdom, is seated on the banks of a river two miles from the sea; not far from the north west end of the Isle of Sumatra." "It contains (adds Dampier) about 8000 houses, much larger and better furnished than those of Mindanao, and inhabited, besides the natives, by the English, Dutch, Danes, Portuguese, Chinese, and those of Guzarat. The chief trades of Achin are carpenters, goldsmiths, blacksmiths, and fishermen; the last of whom are the richest and most in number. Their gold mines are near the golden mountain; none but Mahometans are permitted to go thither; these carry such commodities, through very difficult ways, as are wanted by the miners, in lieu whereof they bring back gold. The English are highly esteemed here; such of the Hollanders as are free merchants may trade hither; but the Chinese outdo all the rest; many of them dwell constantly in the city, the rest come with the ships in June, and take up their shops in the Chinese quarter, where they sell their commodities, for two or three months. They do not much frequent the mosques, yet are very zealous in their religion. They are very strict and short in the administration of justice; for as soon as a criminal is brought before the magistrate he is either acquitted or punished upon the spot. Theft is punished with the cutting off a hand or a leg, the stump they bind up tight with a piece of leather or bladder, to stop the blood. Such as deserve death are generally impaled: but those of a noble extraction have the privilege to fight for their lives with their usual weapons, which, however, stand them in little stead; for the whole multitude fall upon them and dispatch them in an instant.

"The kingdom is governed by a queen who is elected out of the royal family. She must be a maid, and is in a manner confined to her own palace; the management of all affairs belonging to twelve Oronkey's, or great men of the kingdom." The captain observes, that there was mention made of a king in James the First's time, yet he was sure that in later years Achin had been governed by queens, and that there was an election for a new female sovereign during his voyage to Tonquin, that occasioned a civil war, which, however, was at last settled to the new queen's advantage. He says the weather at Achin is much the same as in other countries to the north of the line; and so are the dry and wet seasons, and the floods, and the river running only a short course for ever overflows its banks and the city. It seems they frequently wash in this river, both upon a religious account and in respect to health. "For my part (adds he) I can assert, by my own experience, that it cured me of the flux, that had afflicted me so long before, which I attributed to its cooling quality, of which I found the effects in my bowels, as often as I washed in the river. The heat is not so excessive here as at Tonquin, for they are constantly refreshed every twenty-four hours by the sea and land breezes."

From Achin, Dampier set sail as mate to Captain Minchin, who had purchased a vessel there, and made a voyage to Malacca, in the course of which nothing remarkable occurred; they arrived in safety, loaded their ships and departed.

Island of Dinding. On their return, they touched at a Dutch island near the continent, called Dinding. They found it inhabited only by Dutchmen, who had a fort there, without bastions, in extent about 12 feet square, standing in a small creek defended by 14 guns and a garrison of 30 soldiers. Here the governor treated the English kindly, and invited them to supper; in the midst of which they were disturbed by an alarm that was spread of the approach of a number of Malayans from the continent; but this turned out to be a false report. The next day they set sail, and returned to Achin about the beginning of November.

During Dampier's stay at Fort St. George, a vessel laden with clove-bark from Mindanao, arrived there having on board one Mr. Moody, in quality of a supercargo.—The reader may remember our having made mention of a prince of Meangis who had solicited Read to carry him from Mindanao to his own country. This prince and his mother having been driven off their own coast in a tempest, had been seized at sea by some Mindanean fishermen, who sold them as slaves at Mindanao. Mr. Moody being at that time on the island, his attention was attracted by the curious manner in which this Indian prince was painted; he therefore purchased the royal slave with an intention of bringing him over to England. But the governor of Fort

Account of the India prince

* Captain Bowry was the person who sent the letter from Sumatra to Mindanao, where he supposed an English factory then subsisted, while his countrymen concluded from that letter there was then one at Sumatra.

Fort St. George, offering this gentleman the place of chief of Indrapore, in the room of one Mr. Gibbons, who had lately reſigned, he endeavoured to engage Dampier to go with him as his gunner, and to encourage him to comply made him a promiſe of purchaſing a veſſel to carry the prince and his mother to their country, of which he would ſend him as a commander, and alſo give him power to eſtabliſh a trade at Meangis. Dampier thought this ſuch an offer as he ought by no means to reject, and accordingly embarked for the new ſettlement.

The weather was fair and pleaſant till they came to the weſtern coaſt of Sumatra, when a ſtorm ariſing drove them into the harbour of Bencouli. Here they were well received, and our adventurer being offered the place of gunner of the fort, accepted of it with Mr. Moody's leave, who was not ſure that he could accompliſh the promiſe he made of ſending him with the prince to Meangis.

Moody alſo aſſigned him a half ſhare in the two ſlaves, who remained with him at Bencouli, while the new chief repaired to his ſtation at Indrapore, Dampier, however, at length grew weary of his ſtation, and made application for his diſcharge to the governor and council: the latter thought his requeſt reaſonable, and the former made no objections; but that was at a time when there was no veſſel to be obtained, to carry him home. Afterwards, when the ſhip called the Defence, Captain Heath, which was bound for England, came thither, he at firſt found excuſes, and at laſt peremptorily refuſed to let Dampier go. It ſeems that this ſhip before her arrival at Bencouli, touched at Indrapore, Moody had conſigned his half ſhare of the ſlaves to Goddard, the chief mate of the ſhip who in vain joined all his intereſt to that of the captain in order to prevail on him for our adventurer's diſcharge, Moody having been previouſly acquainted with his deſign, of returning home. In conſequence of his aſſignment, the prince of Meangis who was reduced to the ſituation of a common ſlave, was put on board the Defence. He was but juſt recovered from an infectious diſtemper, of which his mother had died in India, and at her death he had given ſuch an example of filial affection as well deſerves remembrance among the more refined and civilized people of Europe.

Inſtance of filial affection in an Indian.

This Indian, who was known by the name of Yeoly or Jeoly, was conſoled as much as poſſible by Dampier, on the loſs of his parent; yet it was feared that he would not long ſurvive her. A grave was therefore, immediately dug in order to hide the body from him, which was ſhrouded in a piece of fine new calico; but the ſon could not be ſatisfied till he ſaw all her cloaths wrapped round her, together with two new pieces of chintz, given her by Mr. Moody, ſaying, as they were hers, ſhe muſt have them. At laſt ſhe was interred in a very ſolemn manner, but it was long before her ſon ceaſed to grieve for his mother's death.

The governor continuing inflexible, Captain Heath ſecretly agreed that Dampier ſhould be received on board his ſhip, provided he could make his eſcape. This adventurer who had no other chance for reviſiting his native country, depended intirely on the captain's honour in which dependence he was not diſappointed.

Dampier eſcapes from the gaol.

When the letters were put on board, and all things in readineſs for ſailing, proper notice being given, Dampier after many eſſays got away about the middle of the night and creeping through one of the port-holes of the fort eſcaped to the ſhips boat, which carried him on board; and on the 25th of January, the captain ſailed for the Cape of Good Hope. 1691

They had at firſt fair and favourable weather and the proſpect of a ſucceſsful voyage; but they had not been long at ſea before a ſtrange diſtemper ſtole upon the crew, which proved ſo univerſal, that there was hardly one to be found who did not experience it in a greater or leſs degree, ſo that the people were generally unable to work the ſhip when neceſſity required their utmoſt exertion.* While they were in this condition, they were ſeaſonably relieved by the humanity of the captain, who having brought ſome jars of tamarinds from India, diſtributed them daily among his crew, at this time of general ſickneſs and diſtreſs.

Captain Heath's humanity.

But the wind coming foul, and the paſſage which had already been a long one, being likely to prove ſtill more tedious, Captain Heath, calling all his men together, deſired the opinion of every individual relative to what was beſt to be done in the preſent exigency. The reſult was, that notwithſtanding the wind was unfavourable, they ſhould ſtill proceed towards the Cape.

But now another difficulty aroſe:—to put this reſolution in force, it was neceſſary for thoſe who were in health to exert themſelves in an extraordinary manner, in order to ſupply the place of thoſe that were ſick on board. Here the captain's policy appeared as conſpicuous as his humanity had been in the inſtance juſt related. He promiſed a month's extra pay to every one who would engage to aſſiſt on all occaſions, when required, whether it were his watch or not. The propoſal was firſt embraced by the officers, and then all the men capable of duty entered into the ſame engagement.

This ſalutary expedient had the deſired effect. And (ſays Dampier) "In a ſhort time it pleaſed God to favour us with a fair wind, which being improved to the beſt advantage by the inceſſant labour of thoſe new-liſted men, wafted us in a ſhort time to the cape; and being brought ſafe to anchor by the aſſiſtance of 100 Dutch ſailors, who unbent the ſails, and did every thing for us they were required to do, the ſick were preſently ſent on ſhore, where they remained for ſix weeks, and all but three or four recovered."

They took their departure from the cape in company with the James and Mary, and the Joſeph, Eaſt-Indiamen, ſhaping their courſe towards St. Helena, and in their way were incommoded with a ſwelling ſea, ſoon after they had doubled the cape, which Dampier obſerves was a token "That the ſouth-weſt winds were violent in the higher latitudes towards the ſouth pole [where it was almoſt the middle of winter] we having found clear weather all the while." They arrived at St. Helena on the 20th of June, from whence, after four or five days ſtay, they ſet ſail for England, and without meeting with any thing remarkable, after a proſperous voyage, arrived in the Downs on the 16th of September, in the year 1691.

Thus Dampier returned in ſafety to his country; but this was a bleſſing denied the prince of Meangis. This unfortunate Indian, it ſeems, was ſold to people who carried him about the kingdom for a ſhow, and told a number of ridiculous tales about him, which it was not in his power to contradict.† After having experienced all the viciſſitudes of this roving life, prince

* One of the cauſes of this diſtemper, according to Dampier, was their bad water, which they filled from a river into which ſeveral ſtreams emptied their dregs in the dry ſeaſon. He alſo mentions another circumſtance, namely, its being ſtowed among the pepper in the hold, which rendered it ſo hot that a man could ſcarcely hold a bottle filled with it in his hand. Either of theſe cauſes, though ſo widely different might have produced very diſagreeable effects; the firſt ſeems, however, to have been the moſt probable ſource of the evil.

† Among the reſt, they told a tale of his having a beautiful ſiſter at Mindanao, whom the ſultan took to his bed. They ſaid alſo, that the paint with which he was adorned was a ſecurity againſt venomous creatures. Both theſe reports were equally falſe. With regard to the colouring, it ſeems that he was painted all down his breaſt, between his ſhoulders, on his thighs, and round his legs and arms like bracelets. Dampier obſerves, that he could not liken the drawings to the form of any animals; but, he adds, "They were very curious, full of great variety of lines, flouriſhes, chequered work, and innumerable convolutions; keeping a very graceful proportion, and appearing very artificial, even to the wonder of all that beheld him." According to this account it ſeems that this prince was marked after the manner called *Tattowing*, in uſe among the natives of New Zealand.

1703 prince Jeoly died at Oxford, an inſtance of the inſtability of fortune.

Another voyage. Dampier, who (as the reader will remember) had never yet been advanced to the ſtation of a commander, was ſo much recommended by his voyages, that he was afterwards employed by the government, to make diſcoveries, in which line, however, he does not ſeem to have met with any great ſucceſs. Sailing from the Downs on the 14th of Jan. 1698, in his majeſty's ſhip the Roebuck with 12 guns, and 50 men, and 20 months proviſion on board, he proceeded till he fell in with the coaſt of New Holland,, where little was found beſides what Dampier had before ſeen and deſcribed when his voyage round the world was publiſhed. They ſaw on this coaſt no other land animal than a ſort of racoon, that differs from thoſe in the Weſt Indies chiefly in the ſhape of their legs, which being ſhort before, they jump as they run along; and a ſort of lizards which having legs ſo formed that they can walk either forward or backward, and being without a tail, ſeem to have two heads, tho' philoſophers are of opinion that there is not ſuch a double formed animal in nature. Here Dampier was much diſtreſſed for want of water, and while he was on ſhore digging a well, he was attacked by ten or twelve of the natives. A young man being ſurrounded by three of them, and wounded with a lance, it was thought proper to ſhoot amongſt them. When a gun was fired over their heads, thoughit made them ſtart at firſt, had not the deſired effect; however, when a man fell by another diſcharge, they exhibited ſigns of dread and aſtoniſhment, and fled precipitately from the ſcene of action. There was one among the ſavages who were in this engagement, that had the appearance of a chief. He was neither ſo tall nor ſo agreeable as the reſt, but was more active and courageous. He had a white circle painted round his eyes, and a white ſtreak down his noſe from his forehead to the tip of it. This ſeemed to be done not to make him appear more beautiful to his friends, but more terrible to his enemies. In this ſecond voyage, Captain Dampier confirms what he ſaid in his firſt, That the natives of New Holland are the moſt diſagreeable people he ever ſaw, while Captain Cook gives a quite different account of them. In endeavouring to reconcile theſe different relations it will ſeem ſtrange that there ſhould be ſo great a difference between the people inhabiting the eaſtern and weſtern coaſts of the ſame land; yet we have no authority for diſputing the authenticity of either of theſe accounts.

In September 1699, Dampier left this diſagreeable coaſt, when he could neither find freſh water nor a harbour proper for careening his veſſel, and arrived at Timor on the 15th of the ſame month, where he was ſupplied with water and proviſions, by the chief of the Dutch factory, and was alſo well entertained by the Portugueſe ſettled there. From thence he ſailed to New Guinea, where finding the land divided into two parts, he gave the name of New Britain to the eaſtern ſhore. On his return, he touched again at Timor, and from thence ſailed to Batavia, where he took in ſupplies. Thus provided, he proceeded for the Cape of Good Hope in October, and having doubled it continued his voyage to S. Helena, where he arrived on the laſt day of January, 1700.—In his courſe homeward his veſſel ſprung a leak, and he was forced to run her a-ground at Aſcenſion Iſland. There the crew landed, and took on ſhore their proviſions. Afterwards they diſcovered a fine ſpring of water, and remained on the iſland till ſome Engliſh men of war touched there, which were convoying the Canterbury Eaſt Indiaman, and theſe brought them home at laſt to England. The reader may here perceive that no ſucceſs attending this voyage was ſufficient to engage a man to embark in another; but Dampier was of a roving diſpoſition, and not eaſily diſconcerted by diſappointments.

Still wiſhing to be diſtinguiſhed in his profeſſion, it was not eaſy for ſuch a one to reſiſt the opportunities that offered to gratify his darling paſſion. Accordingly, in the year 1703, we find him again employed, in conſort with Capt. Pulling in an expedition to the South Seas. Each of theſe had a ſhip of 26 guns under his command, manned by 120 men. Dampier's ſhip was called the St. George, and Pulling's the Fame: they had a commiſſion from Prince George of Denmark, the Lord High Adm. of England, to proceed againſt the French and Spaniards, and were victualled for nine months; but the expedition, as it ſeems, partaking of the nature of thoſe fitted out by private adventurers, though countenanced by a government commiſſion, began in the firſt ſetting off to give tokens of thoſe diſagreements which are common in theſe caſes among the commanders and officers of ſhips under this predicament. They had not got out of the Downs before ſome differences aroſe between the captains, in conſequence of which Pulling ſet ſail alone. Dampier thus left to take his own courſe ſtopped ſome time on the coaſt of Ireland, where he was joined by the Cinque Port Galley, commanded by Captain Charles Pickering: ſhe was of 90 tons burden, and carried 16 guns, and 63 men.

Our voyager ſet ſail from Kinſale in Ireland on the 11th of September, 1703, little doubting of the ſucceſs of the projects he had formed, which were—— If poſſible to ſurpriſe the Spaniſh galleons at Buenos Ayres; if they ſhould miſs of them to ſail through the Maghellanic Streights, and cruiſe on the coaſts of Peru for the Baldivia ſhips, which carried gold to Lima; or if they ſhould fail in both theſe enterpriſes, then to endeavour to intercept on the coaſts of Mexico the Manilla ſhip that annually comes to the town of Acapulco. Dampier embarks again.

Dampier's ſhip, and Pickering's galley arriving at the Madeiras, they were given to underſtand that the galleons had left Buenos Ayres, and were then at Teneriff; and thus they found the firſt part of their ſcheme had proved abortive. As they had no time to loſe, on receiving this intelligence, the two veſſels proceeded on their courſe to the Iſland Le Grand, on the coaſt of Braſil, where the captain of the galley died, and Lieutenant Stradling was choſen to command her.

They ſailed from this iſland on the 8th of December, and doubled Cape Horn on the 20th of Jan. and the two veſſels parted company in a violent ſtorm, then Dampier changing his direction, and ſteering northward, proceeded towards Juan Fernandez. Anchoring in the great bay there, the St. George met with her conſort, and they continued at the iſland till the 29th, refitting their ſhips, when deſcrying a ſail, they put to ſea and came up with her; Dampier fought her about ſeven hours, after which ſhe ſheered off, the galley having taken little part in the engagement. Returning to Juan Fernandez the next day, they narrowly eſcaped from two French men of war, and left their anchors, cables, and five of their men, with a ſet of ſails; all of which they could but ill ſpare behind them.

The Baldivian ſhips were the next object they had in view; but the Baldivian ſhips were ſailed, and the gold was ſecured. Thus diſappointed, they determined to attack the town of Santa Maria, in the gulph of Panama; but their intention having been diſcovered by the Spaniards, an ambuſcade was laid for them; four were killed, ſome wounded, and the reſt were glad to ſave themſelves by flight. Thus ended that expedition. The commanders diſpirited by their ill ſucceſs, were now ready to part from each other, when, luckily for them, a large ſhip came to an anchor cloſe by them, which was deeply laden with flour, ſugar, brandy, wine, marmalade of quinces, and ſalt; alſo a quantity of linen and woollen cloth. They boarded and took her, and were happy in this ſupply, which came at a time when five green plantains was the allowance for ſix men. Notwithſtanding this the captains determined to ſeparate from each other; and within three days afterwards Captain Dampier fell in with a Spaniſh ſhip of war, which it ſeems had been fitted out with a view to take him; but the two ſhips parted in the night by conſent, af-

ter a ſmart engagement. Not long after this, the dæmon of diſcord raging among them, Clippington, our voyager's firſt lieutenant ſeized the ſhip's tender, with the ſtores, ammunition, and 21 of the men, and when he had cleared the iſlands, gave an invitation to all that choſe to follow his fortunes to come on board; and it is likely Dampier would have been left almoſt alone, had it not been for the hopes formed of his laſt project, that of attacking the Manilla ſhip, which kept thoſe remaining on board his ſhip ſtill ſteady to him. Clippington too had the generoſity to reſtore all the powder and ammunition, except what he wanted for his own uſe. In the mean time, Dampier took a ſmall bark laden with plantains in the bay of Taccames, which he named the Dragon, and deſigned to keep her for a tender. The maſter of this bark was named Chriſtian Martin, born in Spain, but having been taken priſoner when a boy, was brought up in England. Him they ſecured, and proceeded on their laſt grand project to attack the Manilla ſhip, which they came up with on the 6th of December, and bearing down on her, gave her ſeveral broadſides before ſhe could bring her guns to bear, which threw the crew into great confuſion. It was now that their priſoner Captain Martin gave them ſuch advice as had it been followed would probably have ſecured their prize; for he adviſed them to lay their veſſel aboard immediately, before the Spaniards could have time to recover from their diſorder. If a proper authority had been exerted, and the ſeamen on board the St. George diſpoſed to obey inſtead of wrangling among themſelves, the ſcheme might have taken effect; but inſtead of this, there were two parties, the one for following Martin's advice, the other againſt it. In the mean time the Spaniards got out a tier of 24 pounders, whoſe weight was too much for the Engliſh veſſel. After having received a ſhot between wind and water in the powder-room, by which two feet of her planks were driven in on each ſide of the ſtern, the St. George was beaten off with diſgrace, and all the golden projects of the adventurers were at an end. —The mariners were, however, prevailed on to cruiſe for ſome weeks upon the Mexican coaſt, and paſſed the ports of Acapulco, Port Angels, Anguatulco, and many other places, but met with nothing of any conſequence, and therefore the people grew more and more impatient every day.

Is diſappointed in his deſign on the Manilla ſhip.

Account of Read's adventures.

At this time a number of the men projected a deſign of returning home by way of the Eaſt-Indies. The encourager of this party was Mr. Funnel, the chief mate, who commanded the Spaniſh prize. The owner's agent dividing the proviſions between them, Funnel ſeparated himſelf and 33 men from Dampier, and having watered at Amapalla prepared for his voyage. The other party conſiſting of 27 perſons remained with their old commander; but of the adventures they met with we have no other accounts except that Dampier returned home in ſafety, but publiſhed no account of this voyage. As for his chief mate, and thoſe who ſailed under his conduct, they quitted the Gulph of Amapalla on the firſt of February, 1705. On his return, his veſſel was ſeized by the Dutch, the effects confiſcated, and moſt of the crew confined and half ſtarved. Funnel being releaſed however, got ſomething like a redreſs, though by no means what he had a right to expect. With two of his company, he embarked for Europe, on the 2d of November, and arrived in the Texel in July the next year. After viſiting the principal towns in Holland he returned to England and publiſhed his voyage, from whence the accounts of this laſt expedition of Dampier are extracted. 1705

As the reader may be curious to know what became of Read and Teat our adventurer's old companions in his voyage with Captain Swan, it may be proper to obſerve that after Dampier's return to Achin from his voyage to Malacca, he met with one Mr. Morgan, that had formerly belonged to the Cygnet, but was then on board a Daniſh veſſel, who gave him the following account of them: "That when they left Nicobar, they ſteered for Ceylon, but not being able to weather that iſland, they went to the coaſt of Coromandel, where they began to form new projects, which not ſucceeding, Read's people left him. Morgan and Coppinger, with ſome others, entered into the Daniſh ſervice, two or three others repaired to Fort St. George, but the main body went up the country and inliſted in the Great Mogul's ſervice, where a few of them continued orderly for ſome time; but Oliver, the quarter-maſter, and a party with him ſoon left the camp, and rambled about, plundering and robbing the villages. He added, that Captain Read having thus loſt the better half of his men, after having taken rice and water on board, ſailed again, ſtill intending for the Red Sea. Off Ceylon he had taken a rich Portugueſe ſhip and plundered her of what he liked; but not being able to bear up againſt the weſterly winds, he ſtood for Madagaſcar. There, after various adventures, Read with half a dozen of his followers, ſlipping away from the reſt of the company, embarked for New York. Teat, who ſucceeded to his command, having joined Captain Knight, their old companion, they ſailed ſome time in company; but as the Cygnet proved leaky, Knight got away from her, on which ſhe returned to Madagaſcar, and ſunk at laſt in the Bay of St. Auguſtin."

Such was the end of all the ſchemes of Captain Swan's piratical crew, from whom our voyager ſo luckily ſeparated himſelf at Nicobar. Of his other undertakings we have given a ſummary of all that was worth notice as far as our authorities extend. Of the latter part of his life we have no account. We have followed him through all his buſy ſcenes, and have endeavoured to repreſent him to the reader ſuch as he appears to have been, one of a ſpirit rather reſtleſs, with a thirſt for gold, to which, however, [if we ſet aſide the depredations he committed in common with others on the Spaniſh coaſts] he does not ſeem to have ſacrificed his idea of ſtrict honeſty. With a bluntneſs of manners he ſeems to have joined no ſmall ſhare of humanity; and more than once we find him expreſſing in high terms his diſapprobation of cruelty and injuſtice. A deſire of knowledge ſeems to have been one of his predominant paſſions, and this he had many opportunities to gratify, but in his wiſhes to attain riches he ſeems generally to have been diſappointed. On the whole, Dampier, though not the beſt calculated to command, appears to have been a man of good natural parts, and was certainly a very able navigator.

THE VOYAGE OF MASTER COWLEY, ROUND THE WORLD.

1684

COWLEY, as well as Dampier was engaged in a league with the Buccaneers of America. His firſt ſetting out was in the ſame prize wherein Dampier ſailed from Virginia under the conduct of Captain Cook; and during his life, he continued to ſerve him in quality of maſter, after which he ſailed with Captain Eaton into the South Seas. The account of his voyage is written by himſelf, from which the ſubſequent relation is extracted.

He ſailed from Cape Charles in Virginia, in the Revenge, Captain Cook, in the month of Auguſt, 1683, under an idea of navigating the ſhip to Petit Guavres, whither he accordingly directed his courſe; but was ſoon given to underſtand, as he quitted the ſhore, that the veſſel muſt be brought to Guinea, from whence, as ſoon as a ſhip could be gotten, they were to ſail into the Pacific Ocean.

Standing for the Cape Verd Iſlands; when they came to St. Nicholas, a conſultation was held, the ſubject of which was, whether they ſhould ſail directly for the South Seas, in the ſhip they had, or whether they ſhould proceed to Guinea, to accommodate themſelves with a better, as had been at firſt intended.

It was at laſt concluded that they ſhould try the road of St. Jago, one of the Cape Verd Iſlands, and if they could there find a veſſel that might ſuit their purpoſe, they ſhould immediately endeavour to make prize of her.

A deſign of taking a Dutch ſhip miſcarries

"On our approach to this iſland (ſays Cowley) on the eaſtern ſide, we deſcried a large ſhip from the maſt head, which proved to be a Dutch Eaſt Indiaman, of 50 guns, and, as we afterwards learned, of 400 men, moſt of whom were on ſhore; but ſeeing us ſtand towards the road, they inſtantly repaired to their poſts, clapped a ſpring upon their cable, heaved their broadſide to us, run out their lower tier of guns, and made themſelves ready to receive us. We had now advanced too near; but marking their force, and that it was in vain to attempt a conqueſt, we put before the wind, and ſailed directly for the coaſt of Guinea, where we had no ſooner arrived than we fell in with a new ſhip of 40 guns, which we boarded and carried away. Upon examination, we found her well ſtored with brandy, water, and proviſions; and, in order to furniſh her with other neceſſaries from our old ſhip, we put into Sherborough, reſolving to put into no other port till we ſhould come to the the Iſland of Juan Fernandez."

Their firſt deſign being thus accompliſhed, they ſteered for the Braſilian coaſt, and afterwards came into 47° ſouth lat. "Where (ſays our voyager) we found land never before diſcovered. It proved an uninhabited iſland, to which I gave the name of Pepy's Iſland, and at which ſhips may conveniently wood and water, having a good harbour where a thouſand ſhips may ride in ſafety. On this iſland we ſaw plenty of fowls, and round it there is no doubt of fiſh, but it blowing a ſtorm we could neither dare approach it, nor examine its coaſts."

Pepy's Iſland.

They now ſtood to the ſouthward, intending not to attempt the Maghellanic ſtreights, but to make Terra del Fuego, where finding great riplings, and being apprehenſive of danger, they determined to attempt the paſſage diſcovered by Bartholomew Sharp in 1681, and to ſail round all, leaving Staten Land to the north. They came abreaſt of Cape Horn on the 14th of February, "where chuſing Valentines, and diſcourſing of the witchcraft of women, there aroſe a ſtorm which continued till the laſt day of the month, and drove the veſſel into latitude 60° 30' ſouth."* According to the notions entertained in thoſe days, they concluded that talking of the wiles of women at ſea was very unlucky diſcourſe. However the wind coming to the ſouth in the beginning of March they were carried into a warmer latitude. Steering northward, they met with the Nicholas, Captain Eaton, in the 40th degree of ſouth latitude, in conſort with whom they ſailed to the iſland of Juan Fernandez, which was the place where the Moſkito men met each other, as has been related in Dampier's account.—From thence they ſailed north-north-eaſt, till they made the high land of Arica, in 18 degrees ſouth latitude. Being before the bay, they held a conſultation whether they ſhould enter, the reſult of which was that they ſhould proceed to Cape Blanco, and wait there for the Plate fleet coming to the bay of Panama.† In their way they took a ſhip laden with timber, having 30 men on board, with which they ſailed to Lobos, and afterwards reſolved on an attack upon Truxillo; they alſo made prize of three ſhips laden with flour and ſweet-meats, and afterwards lay by at the Gallapagos or Inchanted iſlands, as the reader has ſeen in Dampier's relation.

They came to an anchor in a very good harbour towards the northernmoſt end of a fine iſland under the Equinoctial Line, where there was plenty of fiſh and land tortoiſes——Cowley adds, "That there were fowls of various ſorts, and ſo tame (ſays he) that at firſt they would often light upon the hats and ſhoulders of our men, as they walked abroad; but not being able to ſatisfy their hungry appetite by catching them alive, the ſailors ſo ſcared them by frequently firing upon them, that they became at laſt like other birds, very ſhy. Cowley called this the Duke of York's Iſland, and to another which he obſerved when viewed in various directions to aſſume a different ſhape, he gave the name of Cowley's Inchanted Iſland.—It was on the Duke of York's Iſland alone that he found freſh water.

Sailing from hence the firſt land they made upon the main was Cape Treſpontew, where the Captain died. The ſecond day, ſays he, three Indians came down, whom our men brought on board. Being ſtrictly examined concerning the ſtrength and opulence of Ria Lexa, they gave very ſatisfactory anſwers; but, while they were under examination, our long-boat being ſent on ſhore to get beef, a party of Spaniſh Indians came down, and ſet their boat on fire, and drove their crew for ſhelter to a rock, where they were forced to remain till we ſent another boat with 20 men to ſecure them. We retained the three Indians, and led them, with ropes about their necks, as guides to conduct us afterwards to Ria Lexa; but one of them having got his neck out of the collar, made his eſcape, and alarmed the town; ſo that our men returned very much diſcouraged at this ſecond diſappointment."

Cowley afterwards mentions their having careened their veſſels in the bay of Amapalla, where Captain Davis and Cook's ſucceſſor parted from Captain Eaton, and our voyager accompanied the latter. They then ſteered for Cape St. Franciſco, and coming to Payta, they ſet two ſhips on fire that were lying at anchor there, the Spaniards refuſing to ranſom them.

Standing

* Cowley ſays, he found the weather ſo cold there, that they could drink three quarts of burnt brandy a-piece without being at all intoxicated.

† By this determination they miſſed of a ſhip with 300 tons of ſilver on board, then lying in Arica Bay.

Standing W. N. W. they came almoſt as low as the rocks of St. Bartholomew, and at laſt having paſſed the rocks, went for the Iſland of Guam.

They arrive at Guam.

"It was on the 14th of March (ſays Cowley) that we ſaw land. When we arrived, we had a very ſickly ſhip, no man being free from the ſcurvy. At twelve o'clock we were in latitude 13° 2′ north by obſervation. The next day we ſailed about the ſouth-weſt part of the iſland, and came to an anchor in a fair bay from whence we ſent a boat aſhore with a flag of truce; but, on landing, we found that the natives had burned their houſes, and had fled. However, our men felled ſome cocoa trees, and brought a hundred or two of the nuts on board, to refreſh the crew. In the mean time, a party of Indians ruſhed from behind the buſhes, and in a hoſtile manner threatened to attack us; but we made ſigns of friendſhip, and one of the Indians returned to the wood, and having peeled a ſtick ſo as to make it appear white, he came forward, when one of his companions perceiving that he had no cap, to compliment our people, called him back, and preſented him with one for that purpoſe. From Sunday the 15th, till Tueſday the 17th, we continued a free trade with the Indians; but, on that day, our men going over to a ſmall iſland on the weſt ſide of Guam, the Indians fell upon them with ſtones and lances, which occaſioned a fray, wherein four of the Indians were killed upon the ſpot. Two days after, the governor, who was a Spaniard, came to a point of land near the ſhip, and ſent a letter, written in Spaniſh, French, and Dutch, demanding in the name of the king his maſter, Who we were, whither we were bound, and from whence we came? Our anſwer was written in French [importing] that we were employed by ſome gentlemen in France upon the diſcovery of the unknown parts of the world. On the return of the meſſenger, the governor ſent a letter of invitation to the captain to come on ſhore, with which he inſtantly complied, and was received under a triple diſcharge of cannon from the fort, which was anſwered by the ſame number of guns from the ſhip. They ſoon came to a good underſtanding. Our Captain made an apology for killing ſome of the Indians in his own defence, and the governor anſwered, That if he had killed them all, he ſhould have eſteemed the favour the greater. We were afterwards told that the Indians on the ſmall iſland were in rebellion."

The governor's civility.

Mutual civilities now paſſed between the governor and the Engliſh. A Spaniſh Captain was ſent on board who continued 24 hours in the ſhip. He brought 10 hogs together, with potatoes, plantains, and other fruits of the country, and the captain in return made the officer a preſent of a rich ſword, and ſent the governor a diamond ring.

A captain, a jeſuit, and a friar, were afterwards ſent on board with a requeſt to Captain Eaton to ſpare the governor ſome powder; four barrels were accordingly ſent, and an offer was made him of four great guns, which offer he declined with great politeneſs, but accepted the powder, and ſent a box with 1600 pieces of eight, deſiring the captain to pay himſelf out of the money. However the box was returned with the money untouched, but the governor afterwards ſent a very valuable preſent to the captain.

In the mean time the Engliſh went out every day chacing the Indians with licence to kill and deſtroy them. But it ſeems that the latter finding they were not Spaniards, became ſo tractable as to do all that could be expected from them. But ſome time after when the Engliſh thought that all was peace, "The Indians (ſays Cowley) made ſigns for as many of our men as choſe it, to come on ſhore and ſee them haul the ſeine. Our men, not ſuſpecting any deſign, manned the boat, and went to look at them: But while they were amuſing themſelves with the ſport, the Indians had very artfully brought their ſeine round the boat with an intention to draw it on ſhore, and thereby entangle both boat and crew; but the ſailors diſcovering the plot, gave the Indians no time to put it in execution; for being provided with fire-arms, they fired amongſt the thickeſt of them, killed a great many of them, and drove the reſt away. 1685

Cowley adds that "Theſe Indians are large of ſtature, ſome of them being ſeven feet and a half high. He ſays they go ſtark naked and never bury their dead, but leaving them in the ſun to rot. They have no arms but ſlings and lances, the ſharp ends of the latter are pointed with dead mens bones, being cut like ſcoops, and jagged at the edges like ſaws, if a man happens to be wounded by them and is not cured in nine days, he certainly dies. Our people took four of theſe treacherous ſavages priſoners, bound them and brought them on board; but they had not been long amongſt us before three of them leaped into the ſea, and with their hands tied behind them, ſwam away like fiſhes. However we ſent a boat after them, and found that a ſtrong man at the firſt blow could not penetrate their ſkins with a cutlaſs."—He adds, "One of them, in my judgment, *received forty bullets in his body before he died*, and the laſt of the three that was killed, ſwam a good Engliſh mile, not only with his hands tied behind him, but with his arms pinioned, before he expired."

The Engliſh here had good encouragement for deſtroying the Indians, as the more harm was done to theſe people, the better the Spaniſh governor was pleaſed, who, the day after the affair abovementioned, ſent the captain a preſent of 30 hogs, and ſome of the fruits of the country.

They leave the iſland.

When they had rigged their veſſel, and taken in wood and water, they prepared for their departure, weighing anchor on the firſt of April, and having received the governor's laſt preſent on the 3d. On the 4th they ſet ſail, and proceeded till they came to a cluſter of iſlands, lying to the northward of Luconia; where they perceived no inhabitants, but ſaw ſome goats, and found a great many nutmegs. From hence they ſteered for Luconia, and afterwards came up with Cape Mindato, where the ſouth-weſt monſoon overtaking them, they were forced to go for Canton in China. There they might have taken 13 Tartarian veſſels, full of rich goods, of which the Tartars had plundered the Chineſe two years before, but they being under no command refuſed to attack them. From Canton they proceeded for Manilla, in queſt of the ſhip that annually ſailed thither, but though they came in ſight of her, ſhe eſcaped them by ſwift ſailing, which was no ſmall diſappointment. Afterwards they bore away for an iſland to the north of Luconia, intending to remain there till the wind would permit their ſailing for Bantam, which they knew not had been taken from the Engliſh by the Dutch. At this iſland they ſupplied themſelves with goats, guanoes and fruit, and found an Indian who gave them a direction to a place where there was plenty of cattle. As ſoon as the wind was fair, they proceeded to the ſouthward, and in the tenth degree of north latitude, were ſo much intangled among a cluſter of iſlands, that they expected to be wrecked, but happily eſcaped that danger, and held on their courſe to an iſland at the north end of the Borneo. There they hauled the ſhip on ſhore, ſet up a tent and fortified themſelves, erecting a battery on ſhore. At firſt the natives were very ſhy of them, having never ſeen any white people, and having met with one of their canoes full of women, among whom was the queen of the country, all that were on board leaped into the ſea at ſight of the ſtrangers; but theſe being taken up, and treated with kindneſs, the people by degrees grew more familiar, and ſupplied the Engliſh with ſuch fruits as the iſland produced, beſides trafficking with them for muſk, civet and bezoar, while they ſtayed in the country.

Cowley ſeparates himſelf from Captain Eaton's crew.

Towards the end of the year, they left this place and ſteered for Timor.—There finding the crew mutinous and not under command of their captain, Cowley, one Hill, and eighteen others, bought a large boat, in which they ſailed to Java. The wind not proving favourable to carry them to Batavia, they went to Cheriboa, a Dutch factory, to the eaſtward of that place, where the Dutch governor received them

1685 with kindneſs. The worthy perſons beforementioned now divided themſelves into three parties, two of which concluded to ſail for the Bay of Bengal, but the third remained with Cowley. Conſidering that Batavia was the Dutch magazine in India, they repaired thither and met with an agreeable reception, and I (ſays the author) with Mr. Hill, and another friend, who were all my party, were promiſed our paſſage to Europe in their Eaſt India fleet. At this time the general was ſending five ſhips of war with ſoldiers, in order to procure ſatisfaction from the king of the iſland, for the ſlaughter of a party of 80 Hollanders. Theſe ſhips, however, were firſt deſigned againſt Sillebar, an Engliſh ſettlement on the weſtern coaſt of the iſland of Sumatra, but the outrage abovementioned, had cauſed the Dutch to change their purpoſe.

The Engliſhmen at Batavia hearing thoſe tidings, would willingly have gone to Sillebar; but this was what the Dutch would not ſuffer; and they ſeized a ſloop which had been bought for that purpoſe, the prime coſt of which they returned, but according to a law forbidding the ſubjects of the republic in India to ſell a veſſel to any foreigner, they puniſhed thoſe that tranſgreſſed it; and Cowley, together with Mr. Hill, and another friend embarked on board the Solida Indiaman, bound to Holland, and ſaw their old commander's ſhip coming in, juſt as they were going out of the road. The wind not being fair, they turned down to Bantam to take in proviſions, and from thence ſteered to Prince's Iſland, where they lay three weeks, and then ſtood for the Cape of Good Hope. In their courſe thither the Dutch loſt their captain who died on the 27th of May, at which time they found they were coming in with the land in 30° 2″ of ſouth lat. and on the 3d of that month at night they came to an anchor at the cape in nine fathom water. The following is Cowley's deſcription of the place, and of the natives of the country.

His deſcription of the Hottentots.

"This day (ſays he) four of the natives came down to the city, dancing naked, and offering their wives to the Hollanders for bits of tobacco [other voyagers have obſerved that they are ſevere in puniſhing adultery]. They were the filthieſt men I ever ſaw. The next day my two friends and I walked about the town in which were about 100 houſes, built very low to ſave them from the boiſterous gales of wind, that blow here, in the months of December, January, and February: but the Dutch have here a ſtrong caſtle, with 80 guns well mounted, and a ſpacious garden with walks, and planted with almoſt every kind of fruit, flowers, and herbs.—This was the greateſt rarity that we ſaw at the cape. We walked, moreover, without the town, to the village, inhabited by the Hodmandods [Hottentots] ſo called by the Hollanders. Theſe people are ſaid to be born white, but make themſelves black by anointing their bodies, and expoſing their infants to the ſun and ſmoke. Their houſes or huts are built round (like the cabins in Ireland of the *wild Iriſh*) with the fire-place in the middle, round which they lie in common, covered only with the ſkins of ſome beaſt, and without any other bed than the aſhes of the wood on which they dreſs their meat. They eat any thing that is foul, and will gather from the dunghill the offal that is thrown out by the Dutch, to feed their dogs. Their men are not at all jealous of foreigners; but will beat their wives unmercifully for lying with their neighbours. When the women marry, they cut off a joint of the middle finger, and if the huſband dies, ſhe cuts off another joint, and ſo many men as they marry, ſo many joints they loſe. They are ſuppoſed to worſhip the moon, becauſe at the full and change they aſſemble in great numbers, dancing and rejoicing when ſhe ſhines, but howling and lamenting when they are deprived of her light.

It happened while we were at the Cape, that one of the natives drank himſelf dead at the fort, of which his countrymen getting intelligence, they aſſembled about him, and with oil and milk endeavoured to recover him; but finding all their efforts vain and that they could perceive no ſpark of life remaining, they began to make preparations for his funeral, which they performed in the following manner: They firſt brought knives and ſhaved him from head to foot. Then, digging a hole in the ground they carefully placed him in a ſitting poſture, with his body and head erect, and his legs and thighs ſtretched out horizontally, and preſſed down ſtrait. This being performed, they propped him up in this attitude with ſtones; and then came a company of their women to howl over him, who accompanied their lamentations with a hideous ſhrieking, as if death had appeared before them in the ſhape of a monſter, and was ready to devour them. After their time of mourning was over, they filled up the hole with earth, and covered it over with green turf."

While they ſtayed at the cape, the people there were employed in cleanſing and ſcowering the ſhip, in ſhifting the maſts, and trimming the rigging; and having taken the wood and water they departed on the 15th of June, having three ſhips in company, the Solida and the Critſman that came together, and the Ireland that came from Bengal.

On the 16th there was much feaſting on board the veſſel, the captains of the other ſhips being invited, and while they were thus employed (Cowley ſays) they were alarmed by a ſtrange voice crying, *come help, come help! a man overboard!* The veſſel being brought to, they ſought in vain for the drowned perſon; nor was there a man miſſing on board any of the veſſels. On which they drew a concluſion founded on the moſt groſs notions of ſuperſtition, that this circumſtance (probably the contrivance of ſome wag among them) was occaſioned by the lamentations of the ſpirit of ſomebody that had been drowned by accident in thoſe latitudes.

They threw overboard an old Dane on the 4th of July, who died the night before, without any one's knowing that he had been diſordered, and his cheſt would have been plundered by ſome of the crew, but that they diſputed among themſelves about ſharing the booty; ſo that the matter coming to the captain's ears, he ſecured the effects for the benefit of the family of the deceaſed.

Having paſſed Aſcenſion Iſland, on the 20th of July, they found themſelves in 15° of north latitude.—"And now (ſays our voyager) a council of war was called upon our captain. The accuſation was, that he had formed a conſpiracy with five men more to murder a perſon of quality and his lady, with ſome other paſſengers on board, and that when the murders were accompliſhed, they were to ſeize upon their riches and run away with the ſhip. The purſer was the chief accuſer; but, upon examination the whole charge ſeemed ſo improbable (and the man who broached the ſtory denying, upon trial, what he had before ſo confidently affirmed to the purſer) the captain was honourably acquitted, and the villain puniſhed.

On the 2d day of Auguſt the captain died of a pain in his bowels, and his ſteerſman was promoted to the command in his room, though not without oppoſition. On the 19th of September Cowley ſaw land, which he ſuppoſed to be the Iſle of Shetland, but the Captain would not be perſuaded, till about ſix in the evening the Critſman's people let go the flag, they having by that time likewiſe ſeen the land.

On the 22d they came up with the Iſle of Farley, and on the 25th Cowley ſays they had the wind all round the compaſs. Before their arrival in Holland Cowley and his friends would willingly have gone on board an Engliſh ſhip, that they ſpoke with in their way to be carried to their own country, but the Dutchmen inſiſted on bringing them to Helvoetſluys, where they arrived on the firſt of October, having been ſeven months on their paſſage from Batavia thither. After a ſhort ſtay there, one of Cowley's companions died, and he went to Rotterdam, from whence he got his paſſage in the Ann yacht to England.

It

It will be obſerved that we have here ſelected thoſe circumſtances in Cowley's account, which in general were not to be found in Dampier's, or were not related exactly in the ſame manner. As to his hiſtory, we have no other traces than thoſe which are to be found in this voyage. He appears to have been a ſkilful navigator, not much given to wrangling, and does not ſeem to have approved of the ſchemes of the Buccaneers, as he quitted them as ſoon as he had an opportunity. It is to be remembered, that though he is complimented by ſome with the name of Captain Cowley, yet he never was in a higher ſtation than that of maſter, in which he acquitted himſelf to the general ſatisfaction of his employers. 1685

ACCOUNT OF THE VOYAGE OF JACOB ROGGEWEIN.

AS in the voyages of the circumnavigators, particular notice is taken of the iſlands in the South Seas, and ſome of a more modern date have been undertaken for the purpoſe of making diſcoveries in theſe parts, ſo we have throught proper here to preſent the reader with the account given by Jacob Roggewein, a Dutchman, of a new diſcovered iſland.

Roggewein ſets out on a voyage of diſcovery.

This navigator was furniſhed by the Dutch Eaſt-India Company, with three veſſels, called the Eagle, the Tienhoven, and the African galley. With theſe he ſet ſail from Amſterdam on the 16th of July in the year 1721, and came in ſight of Braſil towards the latter end of November. After a ſhort ſtay at Rio Janeiro, the Dutch went in ſearch of Hawkins's Land, ſuppoſed to lie in lat. 30° ſouth, but could not find it, and meeting with a ſtorm in lat. 40° the Tienhoven was ſeparated from the other veſſels. But about the beginning of January they diſcovered a large iſland about 200 leagues in circumference lying in 52° ſouth lat. 95° weſt long. about 80 leagues diſtant by computation, from the American coaſt. This land to which he gave the name of Belgia Auſtralis, is the ſame which is now known by the name of Falkland's Iſland. He left this iſle to the windward, and having paſſed the Streights of Le Maire, on the 24th came to Juan Fernandez, which being the place of rendezvous appointed, Roggewein there luckily found the Tienhoven, and after three weeks ſtay, prepared to proceed on this voyage, going in ſearch of Davis's Land, but he could not diſcover any ſuch place.*

Afterwards, being in 27° ſouth lat. they ſaw many birds, and other ſigns of land but met with none till they had ſailed 12 leagues farther, when, on the 6th of April, being Eaſter-day, they came up with an iſland which they concluded to be unknown before to any European, to which, according to the day on which it was diſcovered, they gave the name of Eaſter Iſland. The moſt remarkable parts of this relation being exactly copied from the Dutch account, we ſhall, in general, give them in the author's own manner, whereby the reader may be the better enabled to form his judgment of this diſcovery. "As ſoon (ſays he) as the anchors were ready to drop, we obſerved at a diſtance a neat boat of a very remarkable conſtruction, the whole patched up together out of pieces of wood, which could hardly make up the ſize of half a foot. This boat was managed by a giant of twelve feet high, who exerted all his ſtrength to eſcape us—but in vain; for he was ſurrounded and taken. His body was painted with a dark colour. We tried with ſuch ſigns and words as are uſed here and there among the iſlands of the South Sea, to get ſome intelligence from him, but could not perceive that he underſtood any thing. Wherefore we permitted him to go into his boat again and depart. Two days afterwards, the whole ſea was covered with the ſavage inhabitants of this iſland, who came ſwimming round the ſhip in ſuch multitudes that we neither could, nor did we think it adviſeable to land. They clambered like cats up the ſhip's ſides, with the utmoſt aſſurance, and came on board, where they did not appear to be in the leaſt afraid of us; but they ſeemed very much ſurpriſed at the largeneſs and extent of our ſhip and rigging, and could not conceive the meaning of all that they ſaw: but their curioſity was chiefly engaged by the great guns which they could not enough admire, and which they frequently ſtruck their hands upon, to try if they could lift them up, and carry them off; but when they found that ſuch logs, by ſuch an attempt, were too heavy for them, and would not be moved, theſe overgrown fellows ſtood abaſhed, and were in appearance, very much out of humour. They no ſooner came aboard, than we immediately found that they were naturally as thieviſh and nimble-fingered as the inhabitants of thoſe iſles to which voyagers have affixed the name of the Iſlands of Thieves, from the great propenſity of the people to rob and ſteal, if they were not beaten from it. Ruſty nails, old iron, and whatever they could catch or lay hold on, was equal to them, with which they jumped overboard. They attempted with their nails to ſcratch the bolts out of the ſhip, but theſe were too faſt for them. 1721.

"Theſe huge fellows at laſt came on board in ſuch numbers, that we were hardly capable of keeping them in order, or keeping a watchful eye upon their motions, ſo that fearing they would become too many for us, we uſed our beſt endeavours to get rid of them in a friendly manner; but they not ſeeming inclinable to leave us, we were obliged to uſe harſher methods,

* The following is the relation given given us of that diſcovery. The writer of the voyage ſays "They were ſailing from the Gallipagos under the line, to the ſouthward, without intending to touch any where till they came to the iſland of Juan Fernandez. In their way thither at ſea, in 12 deg. 30 min. ſouth latitude they felt the ſhock of an earthquake, which was at that time ſeverely felt at Callao, where the ſea ebbed ſo far from the ſhore that the channel was ſuddenly dry, and, returning with irreſiſtable violence carried the ſhips in the road above a league up the country, deſtroying man and beaſt for 50 leagues along the coaſt and doing much miſchief at Lima.

"Having recovered from our fright, (ſays the writer) we ſteered ſouth by eaſt half eaſterly, till we came to latitude 27 deg. 20 min. ſouth, when about two hours before day, we fell in with a ſmall, low, ſandy iſland, and heard a great roaring noiſe, like that of the ſea beating upon the ſhore, right a-head of the ſhip, whereupon the ſailors, fearing to fall foul upon the ſhore before day, deſired the captain to put the ſhip about, and to ſtand off till day appeared, to which he conſented. So we plied off till day, and then ſtood in again with the land, which proved a ſmall flat iſland, without the guard of any rocks: we ſtood in within a quarter of a mile of the ſhore, and could ſee it plain for it was a clear morning, not foggy nor hazy. To the weſtward about 12 leagues, by judgement, we ſaw a range of high land, which we took to be iſlands, for there were ſeveral partitions in the proſpect. This land ſeemed to reach about fourteen or ſixteen leagues in a range, and there came here a great ſtock of fowls. I and many more of our men would have made this land, and have gone aſhore at it, but the captain would not permit us. The ſmall iſland bears from Copaypo almoſt due eaſt, 500 leagues from the Gallipagos, under the line, 600 leagues.

Dampier ſays, "Captain Davis told me lately, That after his departure from Ria Lexa, he went, after ſeveral traverſes, to the Gallipagos, and that, ſtanding from thence ſouthward for wind, to bring about Terra del Fuego, in 2 deg. 27 min. lat. ſouth, about 500 leagues, from Copaypo, on the coaſt of Chili, he ſaw a ſmall ſandy iſland juſt by him, and that he ſaw to the weſtward of it a long tract of pretty high land, bearing away to the north weſt, out of ſight. Notwithſtanding this deſcription, the more modern navigators, as well as Roggewein, have not been able to find Davis's Iſland.

1721 methods, and drive these savages out of the ships by force.

Easter Island. "On the 10th of April, we made for the island with our boats well armed, in order to land and take a view of their country; where an innumerable company of savages stood on the beach, to guard the shore, and to prevent our landing. They threatened us mightily, by their gestures, and shewed an inclination to await us, and turn us out of their country; but, as soon as we, through necessity, gave them a discharge of our musquets, and here and there brought one of them to the ground, they lost their courage. They made the most surprising gestures in the world, and received their fallen companions with the utmost astonishment, wondering at the wounds which the bullets had made in their bodies; and then they hastily fled, with a dreadful howling, dragging the dead bodies along with them: So the shore was cleared, and we landed in safety. These people do not go naked as other savages do; every person is cloathed in different colours of cotton and worsted, curiously woven or striped. But nothing misbecomes them more than their ears, which are abominably long, and in most of them hang upon the shoulders, so that though they themselves look upon this as the greatest ornament, they appeared very uncouth to us, who were not accustomed to such, especially as there were in them such extravagantly large holes and openings, that we could easily put our hands in them.

"Thus far (adds he) my narrative will gain credit; because it contains nothing uncommon; yet I must declare that these savages are of *a more than gigantic size*: they measured, one with another, *the height of twelve feet*; so that we could easily without stooping, have passed between the legs of these sons of Goliah. According to their height, so is their thickness; and they are all, one with another, well proportioned, so that each could have passed for a Hercules: But none of their wives came up to the height of the men, being commonly not above ten or eleven feet. The men had their bodies painted with a red or dark brown, and the women with a scarlet colour. I doubt not (says the voyager) but most people who read this voyage, will give no credit to what I relate, and that this account of the height of these giants will probably pass with them for a mere fable or fiction: But this I declare, I have set down nothing but the real truth, and that this people, upon the nicest inspection, were in fact of such a surpassing height as I have here described."

Giants there.

The writer says that the Gods of these savages were two large stones; one was excessively broad, and lay upon the ground. Upon this the other stood, which was so large, "that seven men with out-stretched arms, would hardly have been able to incircle it, and besides this thickness it was fully as high as three men," so that it seemed wonderful (thus as strong as these people were) how they could have contrived to place them one upon another." There was a sort of head carved on the top of this stone which was adorned with a garland that was set somewhat in the manner of inlaid work. By what the Dutch could understand, one of these idols was called *Taurico*, and the other *Dago*, as by these words they address them. They paid great regard to these idols, clapping their hands and jumping, when they approached them; and being in great terror when the great guns were fired among them, they applied, as it should seem, to one of their gods for assistance, shouting and howling out Dago! Dago! whose succour they thought so necessary in that time of danger.

The islanders idols.

After having experienced a great storm while they lay before Easter Island, they departed from thence on the 12th of April; and on the 20th of May they fell in with a number of shoals and small islands, among which the galley struck and went to pieces, but the crew were saved, and they were distributed among the other ships. The highest of these islands had been named by Schouten, Water-Island, on account of the springs and streams with which it abounded.

They leave the island.

There was no safe anchorage here, and neither palmettos nor cocoa trees growing on the island, was the reason, as the Dutch conceived, it was uninhabited. Five of their people however went on shore there, and voluntarily remained behind, not chusing any longer to follow the fortune of their companions.

They passed by the Island of Flies on the 25th of May, and were visited by those disagreeable guests already mentioned in Schouten's voyage. And on the 29th they passed among a number of rocks and islands, in latitude 15° 17′, from some of the latter of which they saw a smoke ascend, from which the voyagers concluded them to be inhabited; but they had no opportunity of going on shore.

"On the first of June (continues the narrator) in 15° 47′ we came in sight of an island hitherto unknown to, and unlooked for by any European. Hither we went in our boats in order to take a view of it, and to procure refreshments; when the inhabitants who saw us approach from afar, came down upon the shore to make us return, and to prevent our landing. They are people of an excellent shape, well proportioned, and comely in person; and what is surprising, their skin is as clear and white as that of a native of Holland. They seemed to shew a resolution to stay for us; for as soon as we came near, they jumped like madmen into the water to meet us, and pushed with great cruelty with their weapons, which consisted of spears and lances, whose points were armed with a very sharp wood as hard as iron; wherefore being obliged to save ourselves, and preserve our lives from this hostile attack, we fired upon them with our muskets, which made these savage warriors immediately to take to their heels, and obliged them to look out for a place of safety; for as soon as they had tasted the deadly effects of these weapons, they turned their backs upon us, and fled to a high steep rock, which they scrambled up like monkeys, with incredible swiftness.

From thence, being convinced of our superior force, they gave us to understand, that all hostilities should cease on their part, and they would treat with us as friends; and on our side, we used every means to allure them to us, being in the utmost want of all manner of refreshments. Every thing succeeded according to our wishes; they brought us their commodities, consisting of cocoa nuts, and a certain bitter herb of the taste of Dutch cresses, which is found here in great plenty. For these we gave them in exchange several trifles and trinkets; such as small looking-glasses, glass beads of all colours, combs, bells, and a number of such toys of little value, with which they were as well and even better pleased, than we were with the cocoa-nuts and bitter herbs, which however were much more agreeable and useful to us in our present condition than gold and silver, as we thereby enjoyed a remarkable benefit and amazing relief against the scurvy, which had already brought us into a most deplorable situation.

"Although it appeared by these mutual exchanges that these savages were got into a good understanding and friendship with us, we soon discovered that this was no more than a feigned reconciliation, serving only to deceive us and make us the more easily fall into their snares, with which villainous inclinations almost all the inhabitants of the islands lying in those seas are infected: For as some of our people (in order to view and make a farther discovery of the country) were passing betwixt the rocks and cliffs along a straight and narrow path, to see the form and condition of the place, they were met by an old grey-headed man who, although he neither understood them nor they him, endeavoured by many signs and motions to make them sensible that they were not in safety, and that it would be better for them to return: he pointed to the road that brought them thither; and the better to make them understand the secret ambush and the approaching danger, he took up a stone from the ground and threw it down before him. How well soever our people aught to have understood from this, that those

barbarians

barbarians would attack them from the tops of the rocks with ſtones, yet they paid no regard to the ſigns and admonitions of the good old ſavage, but marched forward, truſting to their arms. They had not gone far before a dreadful ſhower of ſtones came pouring upon them from all quarters, when they leaſt thought of it, with ſuch violence, that many of our people were thereby lamed and wounded without being able to make reſiſtance in defending themſelves or driving the ſavages from above them, who had made their aſſault from too ſecure a place; ſo that our people were conſtrained to ſlacken their pace, contrary to their inclinations, and return back with their wounded heads, being very well pleaſed, however, that they had eſcaped ſo well.

"Theſe people (he adds) as I have obſerved, are comely and well-proportioned in their perſons, and wear as an ornament pearls of a large ſize in their ears. About their necks and bodies they wear as a ſingular ornament, the ſhells of pearl oyſters. As we received great benefit and relief from our ſickneſs by means of the bitter herb which is found here in great plenty, and was given us by the ſavages, in exchange for our toys, ; ſo this new diſcovered iſland was by us chriſtened by the name of the Verkwikkings Iſland.

"After this adventure with theſe roguiſh ſavages no delay was made there, but we got again under ſail; and becauſe the proviſions leſſened gradually from day to day, and the diſorder, notwithſtanding the relief from the bitter herbs continued to increaſe to the great grief of us all; it was reſolved, in a council of the principal officers, to return home by the Eaſt Indies. We then lay up to latitude 15° 47′ ſouth, and according to our reckoning 224° 13′ longitude, being then about 1200 leagues from the eaſt of Peru.

"On the 12th of June we were in latitude 15° 16′ ſouth, and on the 14th we diſcovered two iſlands which we could not approach near enough to take a proper view of, by reaſon of the rough and ſtrong ſea; but, on the other hand, we had this ſatisfaction, 1708
that the inhabitants came to take a view of us, and kept hovering about the ſhips in a number of boats of ſuch neat and exquiſite workmanſhip, as is almoſt incredible that any thing of this kind ſhould have been found among ſavages; they being of ſuch an artful conſtruction, the furniture ſo pretty, and the form ſo neatly adorned with a number of the moſt curious carved figures, that it is impoſſible for the imagination to conceive any thing more elegant; and really their carved image work (which was the greateſt ornament of theſe boats) was ſo exquiſite, that I much doubt if there are many engravers in Europe capable of producing more curious workmanſhip. The people in theſe fine boats were armed with darts, and had their heads adorned with green leaves, and their bodies cloathed with reeds. This iſland got the name of Bauman's Iſland, from a captain of that name. It was very pleaſant and delightful to behold, fruitful, and ſurrounded with trees, among which the palmetto ſhewed itſelf. Savages in curious boats.

On the 15th, we came in ſight of an iſland about ſeven miles in length, lying in lat. 13° 40′ ſouth. Many of us felt a longing deſire to touch at this iſland, in hopes of procuring ſome refreſhment; but it was deferred, and we purſued our voyage without landing, in order to ſave time, becauſe our miſeries and inconveniencies daily increaſed, and the diſorders from many cauſes increaſed alſo.

On the 18th of July we perceived many iſlands, and among the reſt New Zealand, which we computed to be in extent about 300 leagues, being under 6° ſouth latitude, and longitude 166°."

The commander purſuing his courſe homeward by way of the Eaſt Indies with as much expedition as poſſible; nothing farther was done worthy of notice, nor was the exiſtence of a ſouthern continent proved or diſproved by thoſe who had undertaken this voyage.

THE VOYAGES OF CAPTAIN COOKE.

CAPTAIN DAMPIER, notwithſtanding the ill ſucceſs he had met with in the South Seas, on his return to England endeavoured to engage the merchants of London in fitting out ſome veſſels, to make prizes of the Manilla ſhip, which was a favourite project of his, that he thought might ſtill be brought to bear. Failing, however, in his attempts in the metropolis he repaired to Briſtol, where he perſuaded nineteen gentlemen and merchants to form an aſſociation for this purpoſe; and accordingly two private ſhips of war were prepared, whoſe officers conſiſted of perſons of experience, or ſuch as were highly intereſted in the undertaking: the crews were put under better reſtrictions and regulations, and the veſſels in general better provided againſt accidents, than moſt of thoſe that had been employed in ſuch undertakings. Beſides this, rewards were held out to the men, ſuch as might encourage them to behave with ſpirit, and 30l. was awarded to every ſailor that ſhould loſe a limb in the ſervice. The ſhips were named the Duke, and the Ducheſs. Captain Woodes Rogers commanded the firſt, which carried three hundred tons, thirty-ſix guns, and 103 men, and Captain Stephen Courtney had the command of the other, which was of 270 tons, and carried thirty guns, and 151 men. The former of theſe commanders was a man who had a peculiar art of keeping his authority and preſerving his influence over the ſeamen, and was one who had been a conſiderable loſer by the French, and entertained a ſort of diſlike to that people. The latter was a perſon of rank and fortune, was of an amiable diſpoſition, and had contributed largely to the undertaking. There was on board the Duke one Mr. Thomas Dover, who was well known for his recommendation of quickſilver, ſomewhat more than 40 years ago, in a little book called "Dover's Laſt Legacy to his Country") he was ſecond in command to Captain Rogers, as was Captain Cooke to Captain Courtney, on board the Ducheſs: Cooke was an experienced ſeaman who had been twice taken priſoner by the enemy, and now ventured his perſon and whole fortune on this expedition, and Dampier was made pilot of the Duke; both ſhips being provided with proper, legal commiſſions to cruiſe againſt her majeſty's enemies in the South Seas.*

All things being prepared, they left Kingſroad on the firſt of Auguſt, in the year 1708, and came to an anchor in the Cove of Corke, on the 4th of the ſame month, where they took in refreſhments, changing ſome of their men, and enliſting others, till the firſt of September. Then they ſet ſail again, and proceeded on their voyage in company with the Haſtings man of war. The veſſels ſail from Kingſroad.

* The inſtructions of the owners were "To repair to Ireland, for proviſions, and then to proceed immediately on their voyage, and to ſend any prizes they might chance to take in their way either home or to America. They were ordered to keep together, and to act in concert, and to undertake nothing of conſequence without deliberating on the matter in a council of officers of both ſhips." And above all, they were inſtructed mutually to aſſiſt each other in regard to proviſions, water, &c. ſo that thoſe in one veſſel ſhould never be in want while there was any ſupply remaining.

1708 war. But they had only been nine days at sea before some of the crew took occasion to mutiny, of which circumstance our voyager gives the following account:—"On the 10th of September (says he) we saw a sail, which we chaced and came up with, she happened to be a Swede, bound for Cadiz; and though from several circumstances there was reason to suspect that she had contraband goods on board, yet it being difficult to prove it, and being in haste, we dismissed her. This caused a mutiny on board the Duke, headed by the boatswain and three inferior officers, who persuaded the men not to give her up. Captain Rogers confined the authors of this disorder, in which there was not one foreigner concerned. He put ten of the mutineers in irons, a sailor being first soundly whipped for exciting the rest to join him; others less guilty, he punished and discharged; but the officers continued armed, fearing what might happen, the ship's company seeming too much to favour the mutineers. They had afterwards a great deal of trouble with these fellows, who did more mischief when in irons than before, by stirring up the men to release them, pretending, That they suffered in the cause of the crew, and therefore the crew ought to rise and release them. This determined the captain to make some examples, but not to irritate them too much. He therefore began by removing the boatswain from his office, and appointing another in his room, without intending any thing farther. But, on the 14th, this intestine storm rose higher than ever; for then a sailor, with the best part of the ship's company at his heels, went up to the captain and demanded the boatswain out of custody. With this man the captain desired to speak alone; and, when he came upon the quarter-deck, the officers seized him, and caused one of his chief comrades to whip him."

A Swedish vessel taken.

Her dismission causes a mutiny.

It was by such punishments as these that the combination was at length broken. As to the boatswain, they sent him home in irons; the rest of the prisoners were released upon a proper submission; and the captain even restored the petty officers to their places ordering them to be obeyed as before, and giving charge that none should reproach them for their former error. In this manner all things were quieted and the two vessels proceeded on their voyage, and on the 15th, being to the southward, and to the eastward of Madeira, they bore away for the canaries. Thus proceeding, on the 15th they took a small Spanish bark bound from Teneriff to Fuertoventura, having sundry sorts of goods and passengers of both sexes on board. "The next day, says our author, we bore away for Oratavia Road, where we stood off and on, and sent away the prize's boats with one of our owners agents, a priest, and the master of the prize, to treat about the ransom of her, and to get wine, provisions, and other necessaries, for the refreshment of both the ships. About eight the next morning, a boat came from the town, with a letter from the English merchants residing there, wherein they expostulated with us for making prize of the bark; alledging that there was a free trade agreed to, in these islands, between her majesty of Great Britain and the kings of France and Spain, which was so religiously observed by the latter, that they had caused an English ship taken there by a French privateer, to be restored; and farther representing the danger that might arise to themselves, (living by permission in an enemy's country) if the bark were not given up, for which reprisals would be made on them; as also that we should be answerable at home for interrupting the settled commerce. This letter was signed by the consul and three capital merchants. Our captains immediately returned for answer, That having no instructions relating to the Spanish vessels trading among those islands, they could not justify releasing the ship on their bare opinions, without some order or proclamation of her majesty; the English being protected there only on anchoring ground, and the bark being taken on the open seas; that in case Mr. Vanbrugh, [who had not returned] was not restored, they would carry away all the prisoners they had, and if they [the English merchants on shore] apprehended any detriment to the factory, they might ransom the bark, and seek their redress in England. They concluded with desiring dispatch, as they had no time to lose, and added, that upon sending back Mr. Vanbrugh, they would release their prisoners. At night another letter came in answer, from the consul, importing, that the English men of war were civilly received there, and never committed any hostilities; and that it was strange we should insist on ransoming any Spaniards, who were never made prisoners in England or elsewhere; and the governor there delivered up to him any English prisoners that were brought in by Spanish privateers: wherefore he insisted that those in our custody should be dismissed, and the bark discharged, on accepting a present of wine in return. With this from the consul at the city of Laguna, came another letter from the merchants at Oratavia Port, much the same in purport, only offering to pay to the value of 450 pieces of eight, the sum demanded for the bark, in wine, brandy, sugar, oil, barley, and greens, to prevent incensing the natives against them, not doubting but that reparation would be made them in England. Our captains replied by threatening to cruise among the islands, to avail themselves for their loss of time, and to cannonade the town of Oratavia, unless they received immediate satisfaction.

Disputes about a Spanish prize

"On the 22d, at four in the morning, we stood in for the shore, making a clear ship. But soon after we saw a boat coming with our owner's agent, and Mr. Cross, one of the English merchants, bringing five butts of wine and other refreshments. We lay off the town, took the goods out of the prize, sold the bark to Mr. Cross, and put the prisoners on board her. Thus ended this troublesome business, which being unanimously approved of at a council of officers of both ships, we proceeded on our voyage, and seeing a sail to the westward gave chace to her; but night coming on we lost her. On the 24th we crossed the tropic of Cancer, and the Sunday following performed the ceremony of dipping the men of both ships, who had not crossed it before—a ceremony that causes a good deal of mirth among the common men.

"On the 30th we passed by St. Lucia, one of the Cape Verd Islands—by eight in the morning came in sight of St. Vincent, and about eleven, anchored in ten fathoms water, within the rock. As we knew the island not to be inhabited, we were not a little surprised to see some people on shore; and, in order to learn who they were, and what their business was, I armed the pinnace and went on shore; when we found them to be Portuguese, come from the island of St. Anthony, to catch turtle, who told us we might wood and water here. This island lies in 16° 58′ north lat. and in 25° 36′ west long. from the meridian of London. There are on it Guinea hens, hogs, and goats, and about the shore plenty of fish. In the woods there are spiders as large as little birds, whose webs are not easily broken through, being woven with a substance nearly as strong as ordinary thread."——

During the time they lay at St. Vincent's, other disturbances arose among the crew, with regard to plunder. Having an opportunity to trade, all were alike wishing to have something to exchange. On this account there was nothing but murmuring in the ships about the effects which had been taken in the prize. In order to settle this point, such articles were formed, as without doing any injury to the owners, were deemed most proper for inspiring the seamen with courage and constancy. These being adjusted, all the people returned with chearfulness to their duty, two or three of the Duke's men only excepted, who escaped and remained on shore. Among these was the linguist, who was supposed to have staved behind against his will, having neglected to come on board, according to the notice sent him, they, in return, set sail without him.

Other disturbances.

On the 8th of October the ship set sail for Brasil, but fresh differences arose among the men on their passage thither; and, at length, as one mode of accommodating them, it was resolved to send Mr. Page, who was second mate of the Duchess, to serve on board the Duke, and that Mr. Ballet should come from the Duke to serve, in his stead, on board the Duchess. Page refusing to obey the order, force was used to compel him to obedience, and when he was brought on board the Duke, he was accused of mutiny. Being permitted to go to the head for a necessary purpose, he jumped overboard, with a view of swimming back to his old ship again; but was taken up, tried and punished.

They crossed the equator on the 27th, and the 14th of November made Cape Frio, on the coast Brasil. Coming to an anchor on the 18th at the Isle of Grande, one of the men going from the ship without leave, and giving the first lieutenant foul language, and threatening soon to be revenged, he was put in irons, when his mess-mates demanding that he should be released, or that they would share his punishment, seven of them went voluntarily into irons.

"On the 21st (says our voyager) I went on shore in the pinnace, with a present to the governor, and to acquaint him that we were friends. At our first landing, they fired several shot, taking us for French, but afterwards made an apology, and received us civilly. On the 23d, two of the mutineers were whipped, and put in irons again. On the 24th four of the eight men in irons were released on their submission; and two men went on shore, designing to leave the ship, and having bargained with a canoe to carry them to the main, they were, by mistake, put ashore at a different part of the island, where, finding themselves on an uninhabited coast, they began to relent, and, after staying a night in the woods, where they were terrified with the roaring of wild beasts, they came in sight of the ship, and made signs of repentance, humbling themselves in the most suppliant manner, and on their knees with their hands lifted up, endeavoured to move compassion. After some time, the boat went off and brought them on board, where they were confined in irons till the next day, and then released." On the 25th two Irishmen stole away from the Duke, and secreted themselves in the woods as the two seamen had done from the Duchess. About four the next morning, the watch on the quarter deck espied a canoe, and hailed her to come on board. The rowers not answering, but striving to escape, the Duke's pinnace pursued the canoe, fired into her, and mortally wounded one of the Indian rowers. He that owned and steered the canoe was a friar, and had a quantity of gold on board, which, after running the canoe on shore, he had just time to hide before the Duke's pinnace reached the land. A Portuguese who was in the canoe, having no gold to lose, would not follow the example of the friar, but on the contrary, knowing the English to be friends, called him back, who, on his return, was carried with the wounded Indian on board the Duke, where the poor man was dressed by the surgeons, but died in a few hours. The officers in both ships were very sorry for this unfortunate accident, entered their protest against it, and caused the man to be buried on shore in a very solemn manner. The friar, however, who had lost his gold was not to be appeased, but threatened to seek for justice in Portugal or England. In rowing the ship about the easternmost part of the island, we espied the Duke's two men waiting for a canoe to carry them over to the main; and two of our lieutenants manned the boat, and landing the men in a convenient place to get behind them to prevent their escaping to the woods, they rowed to the place where the fellows were seen to lurk.—When the latter found themselves beset, they endeavoured to fly, but being intercepted, they were brought on board, put in irons, and sent to their own ship, where they were afterwards severely punished.

The principal officers of both ships went on the 27th to the town of Angra dos Reys, on the main; carrying along with them their ship's music. They were kindly received by the governor and fathers, who with their servants were the principal inhabitants, as they did not see above 60 low built houses in the town. The governor received them at the guard-house with 20 men under arms, and entertained them with a dinner, sweetmeats, and rum. It being a festival, he and the fathers asked the English to go and see their Franciscan church, whither they went accordingly; and their musicians being seated in the gallery, played in concert with the church music, and, after divine service was over, walked with them in procession, each carrying a large wax candle in his hand. After this they were brought to a large hall, where the fathers entertained them with fish, fruits, and sweetmeats. The English were told that 15 miles up the country there were gold mines, more profitable than those of Mexico and Peru, but it was observed that the Tupayans inhabiting the inland plains were a race of men taller and stronger than the Portuguese, unconquerable and having an utter aversion to labour. 1708

The officers entertained at Angra dos Reys.

The ships weighed anchor on the last day of November; but a tornado coming on, they thought fit to take the shelter of the island till it abated, when, on the 1st of December, both ships sailed out of the bay to proceed on their voyage. On the 23d they made an island in lat. 51° 25' by account, which they supposed to be Falkland's Island.

They are in great danger at sea.

On the 5th of January they had a violent gale of wind at north-east. "At two in the afternoon of this day (says my author) we reefed both courses, then lowered our fore-yard, and lay by till five, at which time our waste was filled with water, and we expected the ship to sink every moment. We got down our fore-yard as well as we could, and loosed the sprit-sail to veer the ship, which at last we accomplished, but in veering we thought we should have foundered with the weight of water that was in her waste. Thus we scudded before the wind, the Duke following, and, at nine, shipped a sea in the poop, as we in the cabin were going to supper. It beat in all the cabin windows and bulk-head, and heaved the first lieutenant half way between the decks, with several muskets and pistols that hung there, darting a sword that was against the bulk-head of the cabin through my man's hammock and rug, that hung against the bulk-head of the steerage; and had not the bulk-head of the great cabin given way, all we who were there must inevitably have been drowned before the water could have been discharged. Our yaul was staved on the deck, and it was a wonder that many were not killed by the shutters, the bulk-head, and the arms that were driven with a prodigious force. But providence delivered us from this and many other dangers, only one man or two were hurt, and some bruised, but not one rag of dry cloaths was left us; our chests, beds, and bedding being all soaked in sea-water. Next day the storm abated, and we continued our course, coasting very far to the south, where we endured much cold, by which our men were greatly affected, insomuch that a third part of both ships companies fell sick, occasioned, as I suppose, by their having been wet and cold, being in south lat. 61° 48'. On Monday the 17th by a good observation, I found that we were got round Cape Horne, Terra del Fuego, and the Streights of Maghellan, and to the northward of Cape Vilerdos. On the 19th I reckoned we were to the northward of Port St. Stephen, on the coast of Patagonia in the great South Sea. On the 31st, at eight in the morning, we made the island of Juan Fernandez, where we designed to wood and water. In the afternoon, Captain Dover went off in the pinnace to get some provisions, and in the evening saw a fire on shore, which made us conclude there were ships in the road, as we were assured the island had no inhabitants: we therefore made the signal for the boat to return, and she accordingly came on board about twelve o'clock at night. On Tuesday we rowed and towed into the great bay, and came to anchor in 50 fathom

1708

50 fathom water. All this day we had a clear ſhip, expecting a rencounter; but were much diſappointed when, inſtead of a valuable prize, we diſcovered an odd figure of a man, who had been the ſole reſident on the iſland for four years. His name was Alexander Selkirk, a Scotchman, who had been maſter of the Cinque Ports, the ſhip that accompanied Dampier in his voyage to the South Seas, and was, as Dampier ſaid, one of the beſt men in her. Captain Rogers immediately agreed with him to be his mate. It was this man who made the fire in the night when he ſaw our ſhips, which he judged to be Engliſh. During his ſtay here, he ſaw ſeveral ſhips paſs by, but only two came to an anchor. As he went to view them, he found them to be Spaniards, and retired from them, upon which they ſhot at him. Had they been French, he would have ſubmitted; but he choſe to riſque his dying alone on the iſland, rather than fall into the hands of the Spaniards, becauſe he apprehended they would either murder or make a ſlave of him in the mines; for he feared they would ſpare no ſtranger that might be capable of diſcovering the South Seas. The Spaniards had landed before he knew what they were, and they came ſo near him that he had much ado to eſcape; for they not only ſhot at him, but purſued him to the woods, where he climbed to the top of a tree, at the foot of which they charged their pieces, and killed ſeveral goats hard by, but went off without diſcovering him. He told us that he was born at Largo, in the county of Fife, and was bred a ſailor from his youth. The reaſon of his being left here, was a difference between him and his captain, which, together with the ſhip's being leaky, made him willing rather to ſtay here than to go along with him at firſt; and when he was at laſt willing to go, his Captain would not receive him. He had been at the iſland before to wood and water, when two of the ſhip's company were left upon it for ſix months, till the ſhip returned, being chaced from thence by two French South-Sea ſhips. He had with him his cloaths and bedding, with a firelock, ſome powder, bullets, and tobacco; a hatchet, a knife, a kettle, a bible, ſome practical pieces, and his mathematical inſtruments and books. He diverted and provided for himſelf as well as he could; but for the firſt eight months he had much ado to bear up againſt melancholy, and the terror of being left alone in ſuch a deſolate place. He built two huts in pimento trees, covered them with long graſs, and lined them with the ſkins of goats, which he killed with his gun as he wanted, ſo long as his powder laſted, which was but a pound; and that being almoſt ſpent, he got fire by rubbing two ſticks of pimento wood together upon his knees. In the ſmaller hut, at ſome diſtance from the other, he dreſſed his victuals, and in the larger he ſlept; and employed himſelf in reading and ſinging pſalms, and praying, ſo that he ſaid he was a better Chriſtian while in this ſolitude, than ever he was before, or than he was afraid, he ſhould ever be again. At firſt he never eat any thing till hunger conſtrained him (partly for grief, and partly for want of bread and ſalt) nor did he go to bed till he could watch no longer. The pimento wood, which burned very clear, ſerved him for both fire and candle, and refreſhed him with its fragrant ſmell. He might have had fiſh enough, but could not eat them for want of ſalt, becauſe they occaſioned a looſeneſs, except cray fiſh, which are as large as lobſters, and very good. Theſe he ſometimes broiled, and at other times boiled, as he did the goat's fleſh, of which he made good broth. He kept an account of 500 that he killed while there, and caught as many more which he marked on the ear, and then let them go. When his powder failed he took them by ſwiftneſs of foot; for his way of living, and continual exerciſe cleared him of all groſs humours, ſo that he ran with wonderful celerity through the woods, and up the rocks and hills, as we perceived, when we employed him to catch goats for us. We had a bull-dog which we ſent with ſeveral of our nimbleſt runners, to help him to catch goats; but he diſtanced both the dog and the men; caught the goats, and brought them to us on his back. He told us that his agility in purſuing a goat was once likely to have coſt him his life: he purſued it with ſo much eagerneſs that he caught hold of it on the brink of a precipice, of which he was not aware, the buſhes hiding it from him; ſo that he fell with the goat down the precipice a great height, and was ſo much bruiſed with the fall, that he narrowly eſcaped with his life; and when he came to his ſenſes found the goat dead under him. He lay there about 24 hours, and was ſcarcely able to crawl to his hut, which was about a mile diſtance, or to ſtir abroad again in ten days. He came at laſt to reliſh his meat without ſalt or bread. He had a conſtant ſupply of good turnips, which had been ſown there by Captain Dampier, and had now overſpread ſome acres of ground. He had good cabbage from the cabbage-trees that grow wild upon the iſland, and ſeaſoned his meat with the fruit of the pimento, which is the ſame with the Jamaica pepper, and ſmells deliciouſly. He found alſo a black pepper called Malageta, which was very good to expel wind and to ſtrengthen the ſtomach. He ſoon wore out all his ſhoes and cloaths by running in the woods; and, at laſt, being forced to ſhift without them, his feet became ſo hard, that he ran every where without difficulty; and it was ſome time before he could wear ſhoes after we found him; for not being uſed to any ſo long, his feet ſwelled when he came to wear them again. After he had conquered his melancholy, he diverted himſelf ſometimes with cutting his name upon the trees; ſometimes with contrivances to vary and increaſe his ſtock of tools; and ſometimes, in clear evenings, in counting the ſtars. He was at firſt much diſturbed with cats and rats that had bred in great numbers, from ſome of each ſpecies which had got on ſhore from ſhips that had put in there to wood and water. The rats gnawed his feet and cloaths while he ſlept, which obliged him to cheriſh the cats with goat's fleſh, by which means many of them became ſo tame, that they would come about him in hundreds, and ſoon delivered him from the rats. He likewiſe tamed his kids, and to vary his diverſions, would ſometimes ſing and teach them to dance. So that, by his natural flow of humour, and the vigour of his youth, being now but thirty years old, he came at laſt to conquer all the inconveniences of his ſolitude, and to be very eaſy. When his cloaths were worn out, he made himſelf a coat and a cap of goats ſkins, and which he ſtitched together with little thongs of the ſame, that he cut with his knife. He had no other needle but a nail, and when his knife was worn out to the back, he made others of ſome iron hoops that were on ſhore, which he beat thin, and ground upon ſtones. Having ſome linen cloth by him, he ſewed himſelf ſome ſhirts with a nail, and ſtitched them with the worſted of his old ſtockings, which he pulled out on purpoſe. He had his laſt ſhirt on, when we found him on the iſland. At his coming on board us, he had ſo much forgotten his language for want of uſe, that we could ſcarcely underſtand him; for he ſeemed to ſpeak his words by halves. We offered him a dram, but he would not touch it, having drank nothing but water ſince his being there, and it was ſome time before he could reliſh our victuals. He could give us no account of any other product of the iſland (except what has been here mentioned) but ſome black plumbs, which were very good, but difficult to come at, the trees which bear them growing on high mountains and rocks. The officers that went firſt on ſhore were invited to his retreat; but the way to it being very rugged and intricate, only a very few of them had curioſity enough to viſit it. He had an irreconcileable averſion to an officer on board the Cinque Ports, who, as he was informed, was on board the Duke, but not being a principal in command, he was prevailed upon to wave that circumſtance, and to accompany Captain Dampier, for whom he had a friendſhip. He was very uſeful while the ſhips ſtayed at Juan Fernandez, in ſupplying them with freſh pro-

Extraordinary account of Alexander Selkirk.

visions, and facilitating the business of taking in wood and water. He said he had seen snow and ice in July, which is the middle of winter in that climate, but the months of September, October and November, are inconceivably pleasant; the air being perfumed with a fragrance that cherishes and revives the spirits, and has a wonderful effect upon animals as well as men, which Selkirk remarked by their playfulness and plumpness. He particularly directed us to a plant not much unlike feverfew, of a most grateful and cordial scent, with which we strewed the tents of the sick, and who were thereby much comforted, and their cure facilitated. We gathered many bundles of it, and dried them in the shade, and sent them on board.

A general council of officers was held on board the Duke, on the 14th of February, when several useful regulations were agreed to, and among the rest, two inspectors were sent out of the Duke, on board the Duchess, to take account of what prizes she might make, while two of her people were sent on board Captain Rogers for the same purpose; and the pinnaces, which had been fitted up while they lay in the bay, being launched, they departed, and passed the tropic of Capricorn, and afterwards had the sea as smooth as a pond; whereupon the men were ordered to attend prayers twice every day, at the same time that gaming was privately prohibited.

They now concluded to bear away for Lobos, intending there to supply themselves with boats, to land at Guiaquil: but seeing a sail in the afternoon, they gave chace, took her, and found that she was from Guiaquil, and was bound for Cheripe, in order to take in a lading of flour, to pay for which they had 50l. on board, and nothing else of value. By the people of this vessel they were told, that Guiaquil had been lately burned; that the Jesu Maria, lately a man of war, was coming thither from Lima to be rebuilt, and that another ship was expected from Panama or Payta: These people added, that they had not heard of any men of war or privateers being in those seas. Continuing their course after this information, they made Lobos, and anchored in the road on the 16th in the evening.

"Here they fitted up the prize, (says my author) and it was agreed upon that I should go out in her with 33 men to cruise in company with the Duchess; and with that view, she (the prize) was new named, and called The *Beginning* Galley. At day-break, on the 26th, we came up with a ship which they saw standing to the southward, and found her to be a bark of 50 tons, from Guiaquil to Truxillo with timber and cocoa-nuts. It was agreed that Captain Courtney should stand in with her in the night, and that I should continue to cruise till farther orders, which on the 27th I received, and the same evening came to an anchor by the Duke and Duchess, in Lobos Road. The next day the prisoners being examined, reported that a ship of 36 brass guns was expected from Lima, with the viceroy of Mexico and his mother on board; and that they were bound to Panama. Upon this intelligence, it was resolved in full council to cruise in quest of this ship, and, if she escaped, to attack Guiaquil.

The sick men from both the ships were put on board the prize, which was named The *Increase* Galley, and the carpenters built a boat while they lay at Lobos; and on the 31st of March they left Lobos with a design to cruise to the windward of Payta. On the first of April, they took a large ship of 400 tons from Panama, having 50 or 60 blacks on board, and the next day they took another prize having about 100l. in plate on board and some timber.—On the 9th it was resolved in council to prepare for an attempt upon Puna and Guiaquil, and it was also agreed, that the Captains Rogers and Courtney should each command a company of seamen, and Captain Dover a party of landmen: That Captain Dover should give the word of command the first night, and that the other two captains should take their turns. Mr. Vanbrugh, the owners agent, was removed from the council on the 10th, on charge of killing the Indian, as also engaging on all occasions to vote with Captain Rogers, and disobeying orders. 1708.

The plan for attacking Guiaquil being settled, on the 12th, the fleet sailed for that harbour, and the commanding officers chose their parties, Captain Dover taking the mariners, and the Captains Rogers and Courtney two parties of sailors, 75 men in each: Captain Dampier commanded the artillery, and was to form a body of reserve. The whole number amounted to 238 effective men. The Captains Cooke and Fry had the care of the ships and prizes, having 226 Indians and blacks on board, besides a small body of sailors.

"On the 15th (says my author) we saw a sail near the shore, and having little wind, the Duke's boat commanded by Captain Fry, and ours by myself, made directly for her, going off in such haste that neither of us had the swivel guns we used to carry, nor our full compliment of men. The Duke's boat nearing her first, she put out Spanish colours, fired a gun, and hoisted her Spanish flag at the maintop-mast head. The Duke's boat then lay by for us to come up. We saw the vessel was French-built, and, by the description the prisoners had given us, concluded it must be the ship we had been so long cruising for; which was to carry the bishop. Our ships being almost out of sight, and the Spaniards so near the coast, we resolved to lay her on board on each bow, and accordingly fell to it. The dispute was hot for a long time, we keeping a constant fire, and the enemy returning it, who killed two of Captain Fry's men, besides wounding one of his, and two of mine. One of the killed was Mr. John Rogers our second lieutenant and brother to Captain Rogers. The Duke's boat, finding the enterprise desperate, bore away; and some time after, we did the like. But Captain Fry having put some of his men on board us, given us some powder and shot, and taken in our wounded, I made again to the chace, resolving to keep her from the shore, and rather than fail, to clap her aboard. The Spaniards perceiving our design, edged off to sea, and we followed them. Our ships came up apace; and the Duchess having fired a shot or two, the vessel struck her colours, and surrendered. The men begged for good quarter, and we promised them all civility. A vessel taken near the shore.

This ship came from Panama, and was bound for Lima, to be fitted out for a man of war. There were 70 blacks, and many passengers, with a quantity of pearls on board. The lading consisted of bale goods, and some things belonging to the bishop; but they had set him with his attendants on shore at Point S. Helena; from whence he was to go to Guiaquil by land. While the French possessed this vessel, she was called La Lune d'Or. She was of 270 tons burden, and commanded by Don Joseph de Arizabella.

After having taken a small bark laden with flour, the boats rowed to Puna, and came to a grappling close under the land. The English seized the governor of the island, and sent a detachment along the shore, to cut in pieces all the canoes and barks, that there might not be any alarm given at Guiaquil, whither the transports rowed, and, at eleven at night, were so near as to hear one centinel call to another for fire to be brought. Then perceiving that they were discovered, they rowed to the other side, where they saw a fire made. They likewise heard the alarm-bell rung, and saw a fire lighted on the hills. On this, the boats came to a grappling, when the officers had such a hot dispute about the propriety of landing that night, that they were heard on shore. It was at length agreed, that it was best to stay till day-light, as they did not know the ground.

"Accordingly (says the writer) on Friday the 22d our forces being all joined, we sent a flag of truce with the captain of the French ship, and another prisoner to the Corrigidor, who asked him our number, which the captain magnified. The Corrigidor suggested that we were mere boys, but the captain replied, he would find we were men; for we had

fought

1708.

fought him bravely in our open boats, and killed one of the commander's brothers, and killed and wounded others; and therefore advised him to agree for the ranſom of the town. On Saturday the pinnace went up the river after ſome veſſels, and brought ſix of them to anchor by our barks; and we alſo took poſſeſſion of two new ſhips, of about 400 tons each. We then went aſhore with a flag of truce, and the governor came on board to agree for the ranſom of the town and ſhips; but this not being then concluded, he promiſed to meet the captain at ſeven in the evening, but was not ſo good as his word. But on Sunday he came off again to treat, and our captain would have ſeized him for having forfeited his word; but he alledging that it was incompatible with his coming with a flag of truce, was ſet aſhore again, and all things were made ready for the attack.—Accordingly, the men landed, and being commanded to proceed, they went on with ſo much bravery, that the Spaniards fired only their firſt volley, and fled, our people preſſing, and purſuing them to their cannon, which they ſoon deſerted, the gunner only who was an Iriſhman, ſtanding by them till he was wounded in four places, of which wounds he ſoon after died. Our men then marched in a body through the towns, drove out the enemy, and placing three guards in three churches, ſet fire to ſix houſes adjoining the wood, leſt the enemy ſhould annoy our guard, which was within piſtol ſhot. All the night they kept firing out of the woods at our centinels, but did them no harm. In the mean time the Dutcheſs's pinnace, commanded by Lieutenant Connely, went up the river, landed at every houſe, took the plate, and what elſe of value they found, and had ſome ſkirmiſhes with the enemy, in which one of our men was wounded. In the night of the 25th one of our centinels ſhot another who was going from his poſt, and did not anſwer when challenged three times, [this man died on the 29th]. Our firſt lieutenant's piſtol went off by his ſide, and wounded him in the leg; and another of our men was alſo ſhot through the foot by one of our own people; moreover, our ſurgeon cut off a man's arm that had been hurt by one of our grenade ſhells, which broke in the bark when fired out of the cohorn. The afternoon was ſpent in ſhipping off proviſions from the town, and diſpoſing all things, in caſe of an attack in the night.

They attack Gaiaquil.

The Spaniards agree to ranſom the town.

At laſt the town was agreed to be ranſomed for 30,000 dollars, and hoſtages were given for the performance of the articles which were in part fulfilled.

While they were thus waiting, Captain Rogers went on board the French ſhip, to carry her to Puna, thinking to diſpoſe of her cargo and ſome of the blacks, and to bring down ſome proviſions; but he returned again on the 5th of May, the Spaniards having bought none of her cargo: however, they had 24,000 dollars of the ſtipulated ſum, upon which the governor of Puna was diſcharged, but the three hoſtages were kept. A boat came with about 3000 dollars in money and plate, and the crew ſaid that the remaining 3000 would ſoon be ſent, together with 12,000 more for the purpoſe of purchaſing goods. But conceiving this to be only a ſtratagem deſigned to keep them till the men of war arrived from Lima, they ſent their priſoners on ſhore, detaining, however, the three hoſtages, and ſailed out of the bay, with all poſſible expedition. The *Beginning* galley being of no other uſe when they had better veſſels, they ſold her to the Spaniards for the value of fifty pounds in pearl, gold chains, &c. On board of her they put the priſoners, but kept pilots and a man that could ſpeak Engliſh, the preſident of Panama's ſon and the hoſtages.

The Engliſh leave the bay.

This done, they ſailed for the Gallapagos, having 100 men ſick on board, and among them Captain Courtney. Having fallen in with theſe iſlands, they ſent on ſhore for water, but could find none in any they ſearched, though Cowley found good water in one of them which probably they miſſed upon this occaſion. They found, however, a quantity of turtle, large rock-fiſh, and guanoes, the latter of which were obſerved, in general, to be larger here than in the Weſt Indies.

A council being holden, it was reſolved to run into the iſland of Plata, to water, and ſo to come off again, to avoid meeting with two French ſhips, one of 60 the other of 40 guns, and the Spaniſh men of war which they had reaſon to believe were in queſt of them. A little before this, they loſt Mr. Hatley, who was in one of the prizes, having on board ſcarcely any water or proviſions, and being without a boat. They never heard of him more; and with him they loſt five or ſix white men, four blacks, and an Indian.

They loſe one of their prizes.

Afterwards they reſolved to ſail for Gotgona, and on their way, were alarmed with a report of a deſign of piracy being formed among the priſoners and blacks; but the former proteſted they knew nothing of the affair, however, as ſome of them ſaid, that a matter of the kind had been talked of, though not in earneſt, in order to prevent or break their combination, they were diſperſed into different veſſels. On the 5th of June the Engliſh took a veſſel from Panama to Guiaquil, laden with iron and other merchandiſe; on board of which, amongſt other paſſengers of note, was the governor of Baldivia. And when they came into the harbour of Gorgona, the pinnace alſo took a bark of 50 tons called El Soldado, which had on board in gold chains and money, to the value of five or ſix hundred pounds, deſigned to purchaſe for her cargo ſalt, brandy, and ſome other goods.

While they remained in this harbour, they plundered a ſettlement oppoſite to them on the main, where they ſet moſt of their priſoners on ſhore, got ſome beeves, hogs, and Indian corn, and procured certain merchants to purchaſe ſome of their blacks. Here they fitted up the veſſel called the Marquis, which carried 20 guns, ſix white men, and 16 blacks. The command of her was now given to Captain Cooke.

By means of the crew of another bark of 70 tons which they took on the 18th of Auguſt, they underſtood that five or ſix ſhips had been ordered after them, two of them being French, of 48 guns; and ſome Spaniſh of the ſame force; and that the whole coaſt was alarmed with the news of the progreſs of the Engliſh in thoſe parts.

They next came to Tacames, and anchored within the bay on the 24th of Auguſt, from whence the Dutcheſs's pinnace was ſent to get water, but returned without ſucceſs.

Tacames.

The village called Tacames has only ſeven houſes and a church. It ſtands in a bay about ſeven leagues to the northward of Cape Francisco. The houſes are conſtructed of ſplit bamboes, and covered with palmetto leaves; they ſtand on poſts, inſtead of ſtairs, having a piece of timber cut in notches to aſcend by. The men employ themſelves in killing wild ſwine, with bows and arrows, and ſtriking fiſh with their lances, at which they are very dextrous. The women have only a piece of baize tied about their middles, and carry their children at their backs. They are under the authority of the Spaniſh prieſts, and are not permitted to trade without licence. A letter of leave, however, being obtained, the Engliſh went on ſhore to the houſes for cattle, and continued to trade, and take in wood and water till they were ſufficiently ſupplied.

"In return for the civility of theſe fathers, ſays Captain Cooke, I ſent, as a preſent to the church of Tacames, four large images, one of which was of the Virgin Mary with our Lord and Saviour in her arms: and I believe Captains Rogers and Courtney alſo gave them ſomething to adorn their church."

They ſailed from hence on the laſt day of Auguſt with the wind at ſouth-weſt, and on the 9th of September made one of the Gallapagos Iſlands. Here they caught a number of turtle, but found no water. And here alſo they ſaw ſeveral jars, and ſome of the rudder of a veſſel which they would have gueſſed to be Captain Hatley's veſſel from which they were ſe-

parated, as has been already mentioned, but that the rudder seemed too small to confirm the supposition. Setting sail again on the morning of the 15th, they found the weather cold, owing (as they supposed) to the chilly southern winds prevailing in these parts though the sun appeared just over their heads.

At a general consultation which they held on board the Duke, it was resolved to steer to the islands Marias, and from thence to go on a cruise for the Manilla ship, which they had heard was worth 2,000,000l. sterling.

They made the Islands Tres Marias on the 4th of October; these islands being then at the distance of about 16 leagues. On the 6th they got under the lee of them, when a boat was sent on shore to procure water and turtle, but the surf prevented their getting either.

"Before our coming to this place (says the Captain) we discovered the white rock which Dampier saw, and took it for a ship; on the sight of which the Duchess let go the bark she had in tow, telling her to make the best of her way to the middle island; under the lee of which both the Duke and Duchess came to an anchor on the 7th and 8th, and I might have been there as soon, had I not seen the bark six or seven leagues to leeward. It was fortunate that I came in time to relieve her; otherwise she must have perished, having neither wood nor water on board, and not being able to make against the wind and current, to reach the land. I bore down to her, supplied her wants, and took her in tow, till the 20th in the morning, when the middle island bearing north, distant about seven leagues, we saw a sail coming from the island before the wind, which proved to be the Duchess, that came in search of us, and was glad to find us safe; she brought us water and turtle, and told us there was game enough on the island, if we could bear up to it. Captain Courtney took us in tow, to help us in the sooner, having cleaned his ship's bottom before he set sail, to come to our assistance. On the 11th, I came to an anchor, after much trouble and fatigue, in plying so long against the wind and current. Seven of Captain Rogers's best blacks this day left him, and ran away. We continued till Monday the 24th, when a general council was holden, at which it was resolved to sail to Cape St. Lucas, to cruise for the Manilla ship, all our ships being now very well fitted, wooded, watered, and provided with turtle. Several warm debates happened in council among our chief officers; and Captain Dover quitted the Duke and went on board the Duchess, by his own free choice. I endeavoured (adds our author) to accommodate these differences, but to no purpose, which gave several of us great concern.

Marias Isles described.

Of the islands above-mentioned and their productions we have the following description: "The islands of Tres Marias, abound with animals of various kinds, and the shores with fish, among these the sea and land turtle may be accounted of most use to navigators. Of the sea turtle there are various sorts; as the green, which are the sweetest and best; the hawk's-bill, which are very good; and the logger-head, which the sailors never refuse when the others are not to be caught. The method of taking them is by turning them upon their backs.

"The land turtle lives constantly on shore, feeds upon grass, moves very slow, and when an enemy approaches, covers itself under its shell, squatting close to the ground, from which it is not easily discernible, appearing like a bare patch without verdure. The shells of these animals are so hard, that a man may tread upon them without hurting them. Their flesh is very good and nourishing. They will live five or six weeks without food and appear to be never the worse. They lay round eggs, about the size of a hen's, which are very good to eat. Some of the sea-turtle taken in the bay where they anchored had 200 eggs in them. Our men lived almost wholly upon turtle, and their eggs, from the time they went first to the Gallapagos, till their departure for the East Indies, saving their ship-provisions till their run across the South Seas.

1710

"At these islands our men caught plenty of fish called old wives. They have very small mouths, large eyes, and a high fin on the back. The colour of the body is a deep blue, the fins of a lighter colour, tipped with yellow. Others are of an ash colour on the back, and white under the belly. The rock-fish we caught in the Islands of Tres Marias were large, had great mottled fins, yellow backs, red bellies, and red and black tails. Another fish our men caught was the cavallo, in shape not much unlike the dolphin, with a large eye, black back, white belly, and a long streak from his gills to the middle of his tail, and was about the size of a mackerel. A small fish we found there, about six inches long, was very delicious; the back was of an Indigo blue, a deep yellow streak running from the gills to the tail, the belly white, and the tail forked: it seemed peculiar to these islands, and wants a name.'

Of the animals, the racoon was the most plentiful. It has a large black eye, whiskers, and a nose like a pig, tail and feet like a rat, a brownish fur on its back, and a white belly.

Of the venomous creatures the scorpion is the most noxious, its tail is jointed, with a small sting at the tip; it has two claws like those of the lobster, and its head and feet have a near resemblance to those of the same fish.

Among the singing birds found in these islands the cardinal bird was seen in the greatest abundance. It is a very beautiful bird, with scarlet feathers, and on his head the male has a tuft of the same colour. They are of the same kind with those we call the Virginian Nightingale; but the Spaniards call them cardinal birds, from their scarlet feathers.

"Among the vegetables we found the magney plant, or silk-grass, of which the Indians make ropes, sails, sacks, and all their curious netting. It also yields a liquor of which they make wine, honey, and a good balsam. The liquor as it comes from the plant is as sweet as sugar; after standing it becomes a wine and will intoxicate powerfully. It has thick, juicy leaves, not unlike those of the house-leek, but grows up to a considerable height. And when it has stood about six years, the Indians cut out the middle leaves, leaving the heart of the plant hollow, which of itself fills with the juice, and is every morning, during the season taken out and preserved. Of this juice the Spaniards make spirits; and it is so universally used in one shape or other by the Spaniards or Indians in New Spain, that the duty arising from it in one year is said to have amounted to 110,000 pieces of eight, at the port of Angels alone. The prickly tree found on these islands is esteemed a great curiosity. The trunk of it is angular, and covered with prickles; is of a pale green, and yields a gum which the druggists call euphorbitum, which is said to be powerful in removing pains in the head.

They sail from Cape St. Lucas.

The vessels sailed for Cape St. Lucas, on the second day of October at two in the afternoon, spreading themselves, lest the Manilla ship should escape them; and on the 21st, the Marquis (which had been leaky before) sprung two great leaks and broke the collar of the fore-stay, on which the captain wore ship to fix the stay, and then hauled up after the other ships, and stopped the leaks. Thus they proceeded, having varied their stations as they judged convenient for the accomplishment of their plan, nothing of consequence occurring till the 13th of December, which day was marked by a general consultation to enquire into the state of the stock on board the ships, when it appeared that only three months meat at short allowance, and two months bread remained on hand. In this situation, there being no appearance of the Manilla ship, though the time when she was expected elapsed, it was agreed to refit the ships and make the best of their way across the Pacific Ocean, so as to insure their passage to Juan Fernandez; the Marquis therefore wanting more repairs than any of the

1719. ...ness was ordered into harbour, while the Duke and Duchess were to cruise a few days longer.

For this purpose, Captain Cooke bore away for Puerto Seguro, and on the 15th at midnight entered the harbour. The captain proceeded to business on the 16th, his first orders being to begin cruising again as soon as possible, but these orders were countermanded afterwards, on account of the necessity there was that before the ships departed from the American coast, they should rendezvous together.

This place is inhabited by about 200 Indians, living in huts made of boughs of trees and reeds, built like a bower, with a fire in the middle, round which they lie and sleep. They all go naked, except that the women have short petticoats made of silk and grass, or else of pelicans or deer's skin. The men are strait and well limbed, live by fishing and hunting, and value knives, scissars, nails, or iron, beyond gold and silver. They have long black hair, and are of a dark-brown complexion. The women are very ordinary, and employ themselves in gathering and grinding corn, and in making fishing-lines. They are very honest and very civil. They assisted in fitting up the ships, and took nothing away, but what was given them. The English, at their first coming, got some pearls among them, but never could see any afterwards. Signs were made to them to bring gold, but they pointed up to the mountains. They used bows and arrows, and even some of the boys were so dextrous with them as to kill birds flying.

On the 22d of December, the Manilla ship was engaged, and taken by the English, but the sea-breeze preventing Captain Cooke who was behind the rest from coming up to the assistance of his consorts, he surveyed the fight from the shore. Captain Rogers gives the following account of the engagement.

A Manilla ship is taken.

"At day break, we saw the chace upon our weather-bow, about a league from us, the Duchess a-head of her to leewards, near about half as far. Towards six in the morning, our boat came on board, having kept very near the chace all night, and received no damage; but told us the Duchess passed by her in the night, and she fired two shot at him; but they returned none. We had no wind, but got out eight of our oars, and rowed about an hour, when there sprung up a small breeze, I ordered a large kettle of chocolate to be made for our ship's company, having no spirituous liquors to give them, then we went to prayers, and before we had concluded, were disturbed by the enemy's firing at us. They had barrels hanging at each yard-arm, that looked like powder-barrels to deter us from boarding them. About eight o'clock we began to engage her by ourselves, for the Duchess being to leeward, and having little wind, did not come up. The enemy fired her stern-chace upon us first, which we returned with our fore-chace several times till we came nearer, and went close on board each other, then we gave several broad-sides, plying our small arms very briskly, which they returned as thick for a while, but did not ply their great guns with the same alacrity. After some time, we shot a little a head of her, lying athwart her hawse, close aboard, and plied her so warmly, that she struck her colours two-thirds down. By this time the Duchess came up, and fired about six guns, with a volley of small shot, but the enemy, having submitted, made no return. We sent our pinnace on board and brought the captain with the officers away, and having examined them, found there came another ship out from Manilla with them, of larger burden, having about 40 brass guns mounted, and as many patararoes; but they told us they lost her company about three months ago, and reckoned she was got to Acapulco before this time, she sailing better than this ship.

"This prize was called by the sounding name of Nostra Signiora de la Incarnacion Desengenio, Sir John Pitcherty commander. She had 20 guns, 40 patararoes, and 193 men on board, whereof nine were killed, ten wounded, and several blown up with gunpowder. We engaged them three glasses, in which time we had only myself and another man wounded. I was shot through the left cheek; the bullet struck away the upper part of my upper jaw, and several of my teeth, part of which dropped down upon the deck, where I fell; and the other, an Irish landman was slightly wounded in the hip. They did us no great damage in our rigging, but their shot disabled our mizen mast. I was forced to write what I had to say, to prevent the loss of blood, and because of the pain I suffered by speaking.

"On the 23d of December, after putting our ship to rights, we stood in for the harbour, which was distant about seven leagues, to the north-east. Our surgeons went on board the prize, to dress their wounded men. About four in the afternoon, we came to an anchor, and received the compliments of all on board the Marquis, on our sudden and unexpected success, which gave us no small satisfaction. We found that ship in good condition, and ready to sail; all the men on board her were brisk and eager for action. At eight in the evening, we held a consultation on the two great points; first, What should be done with the prisoners and hostages? and next, How we should act with regard to the other Manilla ship, which we thought at least there was a great probability of taking? With respect to the first, we proposed (as the hostages from Guniqui were men of honour, and as we had good reason to believe that the Chevalier Pitcherty being brother to the famous M. du Casi, was the same) to make the best terms we could with them, and set them at liberty. Accordingly, we put a part of the goods on board the bark into the prize, and then offered the remainder with the bark, together with what remained unpaid of the ransom, for 6000 pieces of eight, and to take the chevalier's bill, payable at London for the money. This they accepted, and gave us an acknowledgment, at the same time, that they thought it a good bargain. When this was settled, we had nothing more to do than to provide for our own security, and to look after the other galleon.

"I was very desirous of going out with the Duchess, adds Captain Rogers, to cruize for her, but there having been some reflexions cast, on account of the Duchess's not engaging our last prize so soon as it was thought she might have done, Captain Courtney was absolutely bent on going out with the Marquis; and the officers of both ships voting for this in council, my proposal was over-ruled, and we were forced to stay in the harbour against our will. It was, however, agreed that we should put ten of our best hands on board the Duchess, and on Christmas-eve she and the Marquis sailed."

Things being thus settled, on the 25th of December about eight in the morning, being two leagues off Cape St. Lucas, they saw a sail, distant about seven leagues, which they concluded to be the other Manilla ship. At this time the Duchess was two leagues to the westward, and both gave chace. It was twelve o'clock at night before the Duchess got along side and began the engagement. This veiled fought her bravely for about four glasses, and then Captain Courtney lay by, to secure his masts, and shot his rigging, which were much wounded and shattered. The Marquis could not come up, not being so good a sailor as the Duchess. On Monday, the 26th, as soon as it was day, (says Captain Cooke) we saw the Spaniard's flag, and knew him to be the admiral of the Manilla. At eight we perceived the Duke coming out to us. At two in the afternoon we got along side of the enemy; but the wind shifting, could fetch no nearer than about half a musket shot to leeward of her. She then fired two shot at us, and we returned a broadside and a volley of small arms, beginning the combat with three cheers.

They engage the other galleon.

"When we had fought two glasses, the Duchess came up under her stern, and raked her fore and aft, and then fell a-stern again, we still continuing hot at her for five glasses. Then we weared, and stood to the westward, to fetch nearer up to her, for firing so many guns had laid us to leeward. The Duchess went

went up, and engaged again very briskly for half an hour, and then ſtretched a-head of her. We could perceive many ſhot in her between wind and water.—At five we tacked, and raked her fore and aft with our ſtarboard broad-ſide. By this time it grew dark, and we fell a-ſtern to ſpeak with the Dutcheſs, and to get more ammunition, we having but three rounds of ſhot for moſt of our guns left. At eight, I went on board the Dutcheſs, and found her much diſabled in her maſts and rigging, and had ſeven men killed and wounded. Captain Courtney and I agreed to be yard-arm and yard-arm with the enemy in the morning; he to lie on the bow, and I on the quarter; and if he boarded, I was to clap him aboard, and enter my men over him. Being ſupplied with more ammunition, I returned on board the Marquis, both of us keeping cloſe under the Spaniard's quarter, and firing guns all night, to annoy the enemy, and to give the Duke notice where we were. Before day, the Duke joined us. The chace, miſtaking him for her conſort, had made ſignals all night, and edged away to meet him; otherwiſe the Duke could not have come up, there being but little wind, and that contrary. Then we all three agreed to fall upon the enemy at once, as ſoon as it was light; but while we lay athwart her hawſe, thoſe ſhot that miſſed the enemy, flew through the Duke's maſts and rigging, which obliged the Duke to change his ſtation, and to draw up along-ſide, cloſe on-board her, where he kept up a warm ſtout fire of round ſhot, all other ſort proving ineffectual, becauſe of the ſtrength of the ſhip's ſides, which no other ſhot would penetrate. And as none of the Spaniards appeared in ſight, but all kept to cloſe quarters, it was in vain to make uſe of ſmall arms, except now and then, when a man appeared, to obſerve our ſituation, and to keep an eye upon their enſign.

"In this manner, the Dutcheſs lying upon her hawſe, the Duke along her broad-ſide, and the Marquis athwart her ſtern, we kept pelting her for four glaſſes; in the mean time, the Duke received a ſhot in his main-maſt, which much diſabled it; and, in ſhifting, both he and the Dutcheſs came cloſe back under the enemy, and had like to have been all on board her. The Duke, in endeavouring to recover his ſtation, received a fire-ball, which lighting upon his quarter-deck, blew up a cheſt of arms and cartouch boxes, all loaded, and ſeveral cartridges of powder in the ſteerage, by which means Mr. Vanbrugh our agent, and two others were very much burnt: The Dutcheſs, going to laſh the enemy, was forced to caſt off, and get clear, for fear of being ſet on fire. The enemy fired at us all three at once, but ſlowly, ſeldom miſſing our maſts and rigging, and ſometimes hulling us. After lying half an hour along the chace's ſide, the Dutcheſs lay by to ſtop her leaks, and to ſecure her foremaſt, being very much diſabled, having 25 men killed and wounded, and the rigging much ſhattered. Captain Rogers ſome time after, lay by, to ſecure his maſts. Then I lay athwart the enemy's hawſe, till I had fired three broad-ſides, ſome odd guns, and ſeveral volleys; then gave another broad-ſide, and ſome volleys into her ſtern. The Duke came up again, and fired ſeveral guns; and both fell a-ſtern the chace, keeping under ſail, and ſtanding to the weſtward. We knotted ſome of our rigging, and ſtopped our leaks made with 12 pounders. Our main-maſt was diſabled alſo; the ſails and rigging much ſhattered; but the enemy aiming to diſable my maſts, I had the good fortune to have only my ſecond mate and ſome others blown up with the powder. The ſhip was once ſet on fire by the enemy's ſtink-pots, but we ſoon put it out. About eleven, I wore ſhip, and deſigned to have attacked the enemy again; but ſeeing the Duke and Dutcheſs lying by, the one with a traiſt in his enſign, and the other with a Spaniſh jack, (the ſignals to ſpeak with one another) I brought to.—Captain Courtney came on board of me, and we both went on board the Duke; where we conſidered the condition the three ſhips were in, the maſts and rigging being much damaged, in a place where we could get no recruit. That if we engaged the chace again we could propoſe to do no more than what we had already done, which, it was evident, did no great hurt; becauſe we could perceive that few of our ſhot entered her ſides to any purpoſe, and our ſmall arms availed leſs, there being not a man to be ſeen above board; that the leaſt thing in the world would bring the Duke's main-maſt, and likewiſe the Dutcheſs's fore-maſt by the board, either of which by its fall might carry away ſome other maſt, and ſo leave us a perfect hull for the enemy, and nothing to command our ſhip with. That if we went to board the enemy, we ſhould run a great hazard, in loſing a great many men, with little hopes of ſucceſs, they having above treble the number on board to oppoſe us, and there being now in all our three ſhips not above 120 men fit for boarding; and thoſe but weak, having been very ſhort of proviſions: So that if we had boarded her, and been forced off, or left any of our men behind, the enemy by that means would have known our ſtrength, and then gone into the harbour, and took poſſeſſion of the prize in ſpite of all we could have done to prevent it. Beſides, our ammunition was very ſhort, having only enough to engage a few glaſſes longer. All this being ſeriouſly conſidered, and knowing the difficulty we ſhould have to get maſts, and the time and proviſions we muſt ſpend before we could get them fitted, we reſolved to forbear attempting her farther; ſince our battering her ſignified little, and we had not ſtrength enough to board her. Therefore we agreed to keep her company till night, and then to loſe her, and make the beſt of our way into the harbour to ſecure the prize we had already taken. We had engaged firſt and laſt about ſeven hours; during which time they had on board the Duke but eleven wounded men; among whom was the captain, for the ſecond time, who had part of his heel-bone ſtruck out with a ſplinter, and all under his ancle cut above half through with the ſame. On board the Dutcheſs, they had eleven killed, and more than that number wounded; and on board us [the Marquis] only two men ſcorched with gun powder.—The enemy's was a brave, lofty, new ſhip, named the Virginia, and this the firſt voyage ſhe had made. Her burden was 900 tons, and her complement of men 450, beſides paſſengers, 150 of whom were European pirates, who having now got all their wealth on board, were reſolved to defend it to the laſt. The gunner, who had a poſt at Manilla, was an expert man, and had provided for her defence with great ſkill. He had filled up all the ſpace between the guns with bales to ſecure the men. We ſhattered her ſails and rigging very much, ſhot away her mizzen yard, and killed two of the men out of the tops, which was all the damage we could ſee done, though we could not have placed leſs than 500 ſhot in her hull.

"Theſe large ſhips are built at Manilla, of excellent timber that will not ſplinter, and their ſides are thicker and ſtronger than thoſe of ſhips of the ſame burden conſtructed in Europe. Had we been together at firſt, and boarded her, perhaps we might have taken her; but after her netting and cloſe quarters were fixed, ſhe valued us but little. We might, indeed, at the expence of one of our ſhips, have burnt her; but that was objected to, not only from a principle of humanity, but becauſe we had goods of great value on board all our ſhips. The enemy had heard at Manilla that there were two ſhips fitted out at Briſtol, to cruiſe in the South Seas, and that Captain Dampier was their pilot. They had therefore provided for their defence accordingly. However, to do them juſtice, they fought gallantly, and, had the two ſhips been together, it is more than probable that neither of them would have been taken; but, as it happened, had not our unreaſonable ſquabbles prevented our falling out together, the chance would have rather been in our favour. Yet this misfortune, inſtead of leading to a reconciliation, ſerved only as a foundation for new diſputes."

1710

They are forced to abandon their deſign.

Thus

1716 Thus ended their second attempt with the loss of some brave sailors, and to the great regret of the officers, who thought by their success to crown their fortunes; but who now thought of nothing but returning home with what they had already got with all possible expedition. They were delayed by the necessary repairs of their ships, and taking in wood, water, &c. till the 7th of January; after which they were well enough satisfied to find as much bread on board the prize as joined to their own stock, would serve them on their run to Guam, at short allowance.

"About this time (says Captain Cooke) a warm contest arose concerning the appointment of a commander of the Manilla ship, which was looked upon as a trust of no small consequence. Captain Dover, being an owner, desired he might command on board her. Captain Rogers, and several officers of the council contended, That as Captain Dover was wholly unacquainted with the navigating part of the business, the command should be given to Captain Try or to me; but as I had already the command of the Marquis, I declined any further charge, and voted for Captain Dover; at the same time recommending Captain Fry and Captain Stretton to act under him, against which Captain Rogers and his officers entered their protest. However, on the 9th of January, in a full council, it was carried against them, and voted by a great majority, that the Captains Fry and Stretton should both act in equal post in the sole navigating the Bachelor frigate (for that was the name now given to the Manilla prize) and in fighting her, if occasion should require, under Captain Dover, who at the same time was restrained from interrupting them in their business; but charged to be careful of what was in the ship, and to see that nothing was acted on board contrary to the interest of the owners and captors. The matter being thus qualified, the nominal command given to Captain Dover, and the executive power vested in the naval officers, Captain Rogers withdrew his protest, and the council proceeded to the choice of inferior officers, appointing Alexander Selkirk, master, and Joseph Smith, chief mate. They also agreed to furnish her complement of men by selecting 30 from the Duke, 25 from the Duchess, and 13 from the Marquis; which, with 36 Lascars taken on board her, formed a tolerable crew of more than 100 mariners. This business being fully settled, and the Island of Guam pitched upon as the place of rendezvous in case of separation; on the 10th of January, we weighed anchor, and run out at midnight. At twelve the next day, Cape St. Lucas bore north, distant about five leagues. We steered away for some days south-west by south, till we got into the trade winds, and then our course was uniform.

Description of the natives of California.

"All the natives of California (continues our author) that we saw during our stay at Puerto Seguro, did not amount to 300. They had large limbs, were very strait and tall, and of a much darker complexion than any that we had met with in the South Seas. Their hair was long, lank, and black, and hung down to their hips. The men were all stark naked, but the women had a covering about their waists, made of silk grass, fringed and knotted. All of them that we saw were old and wrinkled: perhaps they concealed from us their maidens, for reasons that need not be explained. The language of the natives was guttural, very harsh and unpleasant. They seemed to covet nothing that we had, except axes, saws, and knives, and even those they did not steal. Their huts were low, and wholly made up of branches of trees, and seemed rather a kind of temporary covering than settled dwellings. While we lay in port, they subsisted chiefly on fish, and though they made use neither of nets nor lines, yet they had a method of striking them with lances, that was very dextrous, and at which they were very expert. They were, besides, most excellent divers, and instead of canoes, made use of rafts. They were very civil and inoffensive, and were observed to pay great respect to one among them, whose head was adorned with feathers, very artificially combined, and who probably was their wizard or cunning-man. Some of them had strings of pearls, or parti-coloured shells so prettily intermixed, that though we had glass beads and other shewy trinkets, yet they paid no sort of attention to them, but prized their own ornaments above every thing but cutting instruments. Their arms were bows and arrows, with which their boys could shoot flying. They grew very familiar with us while we staid, and came frequently to gaze at the men while they cut wood and filled water, but never offered to assist in any thing like labour. They get fire, like other Indians, by rubbing two sticks together, which [in that country] kindle almost instantaneously."

Departing from this harbour, the crew were soon afterwards put to short allowance; but, in the article of bread, were relieved by the Bachelor, as a large quantity had been found on board that vessel concealed among some sweetmeats. On the 10th of March they made Saroua, one of the Ladrones Islands, and came in sight of Guam the same evening. The next day the vessels came to an anchor in the port of Umatta, at the distance of about a mile from the houses, in 13° 30′ north lat. by estimation. Here they went in, at first, under French and Spanish colours. They saw several of the islanders boats, but none would go on board, till being off the anchoring place, there was one sent by the Spanish governor, desiring to know who they were, and what they wanted there. On this, the interpreter was dispatched with a letter, the purport of which was, that they were British subjects, driven thither by necessity; that they wished to purchase provisions, &c. which if they could obtain in a friendly manner, they would act with all civility, if not they should proceed according to the rules of war. A very agreeable answer was sent by Don Juan Antonio Pimental, the Spanish governor, and they were furnished with maize, rice, oxen, hogs, poultry, and other necessaries in plenty, and at very reasonable rates.

Civilities of the Spaniards at Guam.

While they remained there, mutual civilities passed between the governor, the British officers, and the gentlemen of the island.—They found the variation in these parts only half a point to the eastward, though in their run across the great South Seas they had it 12°; "The reason (says our author) I take to be the unevenness [spheroidal figure] of the globe, and its unequal mixture of much matter, differing in itself as to the magnetic quality; having large and stony mountains, spacious vallies, deep seas, long-continued continents, with mighty scattered rocks of loadstone, iron mines, and other magnetic substances."

Description of the nation.

"The natives of Guam are of a dark complexion, not so black as the Indians of California; they are in general, (says he) the largest and best limbed men I ever saw and some of them hairy and very strong. The women are strait and tall, and in the neighbourhood of the Spaniards, go decently cloathed; but in the remote parts of the island, they go quite naked. They are said to be man-eaters, and have no settled way of worship, but every one pays a kind of adoration to they know not what. The island is plentifully supplied with cattle, and might be made the garden of the world, if the Spaniards were not as idle as the Indians; but as nature spontaneously produces sufficient for sustenance, they avail themselves but little of cultivation. Of all the works of art for which the Indians are remarkable, the paroas [praws] or boats, of this island are certainly the most wonderful, as they exceed in swift-sailing every other vessel yet seen throughout the world. It is said they will sail *twenty leagues an hour*." This is surely an exaggerated account; yet the captain of the Spanish guard said, he would lose his head if they did not perform it.

They left the Island of Guam, on the 21st of March, steering away west by south, with a moderate breeze from the north-north-east. This continued to waft them along for some weeks; but bad weather overtook them by the middle of April. The gale was so strong that most of their main shrouds, their stays

and running ropes gave way before it; and the yard coming by the board, wounded the firſt lieutenant in ſuch a manner that his recovery was doubtful. "Moſt of our ſails (ſays Captain Cooke) were alſo ſplit, but being ſupplied with new ſhrouds by Captain Courtney, I bent new ſails, but found the ſhip very leaky. The Duke and Dutcheſs too ſuffered much by the tempeſtuous weather; the Batchelor ſplit her ſails; but being otherwiſe ſtoutly built and rigged, nothing but running againſt a rock could hurt her. I had no conception of meeting with ſuch boiſterous weather ſo near the line, which proved as bad as that we encountered in ſurrounding Cape Horne, with this difference only, that the one was intenſely cold, and the other intolerably hot. And being now croſſed by violent winds [which experience has proved, with ſudden ſqualls and alternate calms, to be common near the line at the equinoctial ſeaſon] ſometimes lying by, ſometimes ſcudding before the wind, and unable to purſue our direct courſe, our proviſions began to fail. The ſhips, beſides, were leaky, and our men began to be ſickly, with exceſſive labour and hard living.

Bad weather at the equinoctial line.

"A general council therefore was called, in order to conſider what was beſt to be done in our preſent condition, when it was agreed to endeavour to make the iſland of Talao, or that of Ternate; or if neither of them could be reached, then to put into ſome port of Mindanao. Proceeding thus, on the 2d of May we obſerved a circle round the ſun, and were apprehenſive of more bad weather. In the night we paſſed by Talao, without ſeeing it; and Captain Dampier, who had been twice in theſe ſeas before, gave out, that if we could not reach Ternate, it would be impoſſible for us to get refreſhment on the coaſt of New Guinea, which proved true; yet it was with the greateſt difficulty that the men could be prevailed on to ſubmit to ſhort allowance. On Monday, having had tempeſtuous weather, we perceived that a ſtrong current had driven us to the eaſtward, and to our aſtoniſhment we found the land in ſight to be Cape Noba, a promontory at the eaſt end of Gilolo, bearing ſouth-ſouth-eaſt, diſtance 15 leagues. Perceiving now that we could not get to the iſland of Ternate, nor to that of Mindanao, we reſolved to make the beſt of our way through the ſtreights of Gilolo; but notwithſtanding all our efforts, we continued failing amongſt a cluſter of iſlands (moſt of them uninhabited, but all capable of producing ſpices) during the whole month of May, without being able to ſupply ourſelves of any of their refreſhments. On the 29th of May, we came in ſight of the iſland of Ceram, as we then thought, but afterwards found it to be the iſland of Bouro.

"On the 25th we came in ſight of a low iſland right ahead of us, and about noon, obſerved an opening, which when we came near we found to be a paſſage between two little iſlands that almoſt joined. They were very full of green trees; and by the ſea-ſide we beheld many groves of cocoa-nut, plantain, and other fruit-trees, which exhibited a very pleaſant appearance. In a capacious bay we likewiſe took notice of a little town, and ſaw ſeveral of the inhabitants paſſing and repaſſing along the ſhore. We ſent in our boats for proviſions and pilots, and the Duke and myſelf turned up towards the village; but on ſounding, found no ground. The natives informed us that there was a bank oppoſite to the land mark, where we might anchor. Abundance of people came off with Indian wheat, cocoa-nuts, yams, potatoes, poultry, and ſeveral beautiful birds, which they exchanged for knives, ſciſſars, and other toys, being very civil, and, to all appearance, honeſt. They are Mahometans; of a middle ſtature, and tawny, but the women are fairer than the men, having long, black hair, their mouths, lips, and noſes remarkably ſmall. The women were decently covered, but the men, in general, were naked. The iſlands were named Canhava and Wanthut. But theſe not anſwering our purpoſe, we agreed to ſteer for Bonton, where we arrived on Monday the 29th of May, and the ſame day Captain Dampier, Mr. Connelly, and Mr. Vanbrugh, went with a preſent to the king of Bonton; at the ſame time requeſting him to ſupply us with proviſions and to ſend us a pilot to carry us to Batavia.

1710

"On the 30th a parca [or praw] came from the king with one of his nobles on board, and a pilot to carry us into harbour. He put on an air of importance, and aſked, How we durſt come to an anchor there, without leave from the great king of Bonton? However, he brought each commander a piece of his country cloth, a bottle of arrack, ſome rice in baſkets as a preſent from the king; as alſo a letter from the officers we had ſent on ſhore, giving an account that they had been well received, and that the town where the king reſided was large, walled, fortified, and defended after the European manner, with a number of heavy cannon. Another preſent was returned, and five guns fired by every ſhip at the meſſenger's going off, at which he ſeemed very well pleaſed. Our people trafficked with the natives for poultry, maize, pompions, papas, lemons, Guinea-corn, &c. and gave them in exchange, knives, ſciſſars, old cloth, and old nails. The people were civil, but our officers making a longer ſtay than they intended, we began to ſuſpect that the Moors had detained them, as they are very treacherous. However, we heard from them every day, and at length the Dutcheſs's pinnace came down with Lieutenant Connelly, who told us they had purchaſed four laſt of rice, which coſt 600 dollars, and that Mr. Vanbrugh was detained for the payment of the money. The next morning it came, and was equally diſtributed among the four ſhips, ſome great men coming to deliver it, and receive the money. The town of Bonton is very populous; and by it runs a fine river, but it is barred ſo that ſhips of burden cannot approach it. About 50 iſlands are tributors to this king who gives audience in a chair of ſtate covered with ſcarlet cloth, and is always attended by a guard of nine men, armed after the European manner, with muſquets and ſcymitars. He has beſides four or five ſlaves, who ſit at his feet, and are ready whenever he commands to do the moſt ſervile offices. The petty princes and great men ſit on his left hand, and the ſtrangers ſtand before him."

Bonton.

Having ſupplied themſelves with all that the town afforded, and the officers that had been to wait on the king, being returned, the Engliſh weighed anchor, and as no pilot was to be had there ſet ſail without one, at four in the afternoon. "Captain Dampier (ſays our author) pretended to be acquainted with the paſſage, and mentions the ſame in his book, but now he remembered nothing of it but the ſtory. On the 9th we came in ſight of Solayo, lying cloſe to the iſland of Celebes, and inhabited by Malayans, who are tributaries to the Dutch. Between the iſland of Solayo and the ſouth end of theſe are three ſmall, low iſlands, and the beſt paſſage is between that which lies next to Solayo and a little one lying to the northward of it. It is very dangerous going to the ſouthward of Solayo, the Dutch never daring to attempt it." They made prize of a country veſſel on the 10th and brought her maſter on board the Dutcheſs. He was a Malayan, who came laſt from Bonton; and, for a good reward, undertook to pilot them to Batavia, on condition that they ſhould keep the matter a ſecret from the Dutch. Theſe conditions were agreed to, and the veſſels paſſed through the ſtreights of Malucca, and then ſteered to the weſtward, the pilot's boat attending them till they paſſed the laſt ſtreight, and then bore away for Macaſſar. They came to an anchor in Batavia Road, on Tueſday the 20th of June 1710, according to the Engliſh reckonings; but by the Dutch account it was Wedneſday the 21ſt of June. As ſoon as the veſſels dropped their anchors, the Dutcheſs fired 13 guns; but the ſalute was not returned till the next morning, when the commander ſent an apology by his boat, and fired gun for gun with every ſhip. Afterwards the commander went on ſhore, and, having waited on the Shebander, was introduced to

1711

the governor, who received them with a great deal of civility, and having examined their commissions, and enquired about the success of the voyage, though, not being king's ships, they would not admit of their leaving down at Oreret, yet gave them leave to careen at the Island of Hern, at no great distance, and also allowed of their hiring some Malayan caulkers in order to be employed in the business of stopping their leaks.

"As the Marquis was in the worst condition, (says Captain Cooke) she was ordered to be laid down first; but upon examination, she was judged unfit to proceed upon the voyage; and therefore was unladen and put up to safe. We then hove down the Duke and Duchess, and found their sheathing much worm-eaten; but otherwise not much damaged; the Bachelor wanted no repairs but in her rigging. The weather was extremely hot during our stay at this city: many of our men and officers fell sick; and I was among the number. The master of the Duke, the gunner of the Duchess, and several of the common men, fell a sacrifice to this unfriendly climate. One Read, a young man belonging to the Duchess, venturing to swim, had both his legs snapped off by a shark, which at the second bite, before we could get him on board, cut him in two in the middle, and put an end to his misery. During our stay, though we had the run of the markets, we found it very difficult to procure provisions, to lay in a stock to serve us till we should arrive at the Cape of Good Hope, and therefore were obliged to purchase live cattle, and to kill and pickle them ourselves. All manner of traffic, except for provisions, was prohibited with the natives or inhabitants of the city, upon the severest penalties, to avoid every occasion of dispute with the East-India companies of both nations: and having settled all our affairs in a very amicable manner, new rigged our ships, and disposed of the men belonging to the Marquis among the other ships, we began on the 15th of December to prepare for sailing, when I was appointed second captain in the Duchess, and Mr. Ballot, master; Captain Pope, first lieutenant of the Duke, and Mr. Selkirk, master; Captain Dampier second captain in the Bachelor, and Mr. Rhoiman, master. On the 20th of September we repaired on board, but before we were ready to sail, it was the 14th of October; when, about six in the morning we weighed anchor; but in the afternoon the sea-breeze overtook us, and we were forced to return.

"On the 19th we made sail with a fresh breeze, and at two in the afternoon, came to Java Head, when two English gentlemen came off to us to demand the release of a man that had concealed himself unknown to the officers, on board the Bachelor, and who was given up without opposition. In the mean time, while the gentlemen were in conversation with the officers, a party from the ship went off to buy fowls, for which they gave in exchange knives, toys, and other trifles, which the natives valued more than money. On the 23d the gentlemen took their leave; and the party that went off to truck for fowls having reported that there were buffaloes to be had for shooting, another party was sent off to bring some on board; but they returned without success. They came in sight of whole herds, but so exceedingly wild, that it was impossible to come within musket shot of them. One of the party, who had ventured to follow them into the woods, was surprised by a tyger, that was within an hundred yards of him before he thought proper to make his retreat; and he was pursued by the creature so closely, that had he not reached the water, he must have been devoured. His companions fired more than twenty shot at the tyger before he went off, and which he did at last sorely wounded."

They arrive at the Cape.

From hence they made sail on the 26th, steering for the Cape of Good Hope, and arriving there in safety, came to an anchor in Table Bay, and the officers going on shore were well received by the Dutch. While the English stayed at the Cape, their time was employed in taking in wood and water, and refitting their vessels. And here the captains wrote their owners an account of their voyage, and expressed their intention of returning home in company with the Dutch fleet, which arrived, to the number of 12 sail, on the 22d of February.

Mr. Vanbrugh, the owner's agent, and Mr. Appleby, with some others, died here; many were sickly, and all impatient to set sail for England, which however, they were not able to do till the month of April. Then the whole fleet, consisting of 25 sail of English and Dutch vessels left the Cape, and steered for S. Helena, where they arrived on the 3d of August. The description of this island by our voyager, is like that of many others who pursued the same track, and were doubtless well enough pleased at having such a port to touch at to relieve the sick, and breathe a while from their toils. The captain owns, however, "that the residence in a place so lonely in the middle of a vast ocean, remote from all communication with the world, has rather the appearance of living in exile than in a land of freedom." Were some of those who have written in such a romantic manner of the beauties of this isle to reside on it a twelvemonth, instead of remaining there only a few days to refresh themselves, it is probable they would give us another sort of description of a place, of which may be truly asserted what the Romans once said of Britain, "That it is entirely divided from the rest of the habitable world."

The fleet left Santa Helena on the first of May, and made the island of Ascension on the 7th of the same month. On the 27th two Dutch sailors dying, were committed to the ocean. About this time, all the flag-ships struck their flags; and the admiral hoisted a broad pendant. This was done, that if an enemy should come in sight, they might be taken for a squadron of Dutch men of war.

Thus they proceeded, without any thing remarkable happening, except a mutiny, for which two Dutchmen who were the ring-leaders were whipped and put in irons; and the Bachelor's pinnace having her back broken on the 26th of June by the ship running foul of her; but all on board were saved.—The fleet sailed on till they came into 60° of north latitude, "where (says our author) we had no night, but cold, drizzling weather, yet nothing to compare to the cold in the same latitude south, in going round Cape Horne, for there the cold was so intense, that many of our men sickened; yet we were here and at Cape Horne much about the same time, allowing for the difference of the climates.

"On the 14th (continues he) we came in sight of Bera, and spoke with a Danish ship bound to Dublin, which informed us that the war still continued, and that he had spoken a day or two before, with a squadron of Dutch men of war, and three victuallers, lying off the island to wait for us; so that by keeping between that and Fair Island, we could not possibly miss of seeing them. The next day we came in sight of them; when all the fleet saluted the commodore, and he made the signal for all the commanders to come on board of him for sailing orders. The Captains Courtney and Dover went accordingly, and were well received, and given to understand that they might be supplied with what provisions they stood in need of, on paying for the same, having, he said, brought victuals from Holland for the purpose. We lay off Shetland some days, and caught ling and cod in abundance; during which time the Shetlanders came off to us, and brought fowls and sheep, which we purchased at a much cheaper rate than of our Dutch victuallers.

"At length our ship's company grew sickly, having been more than three months in our passage from the Cape to this place, and we were besides very peevish and quarrelsome among ourselves; now we came near home, jealousies arose about embezzlements. The agents had been to the Duke, and demand the gold, plate,

plate, pearl, and jewels on board; and they returned not very well satisfied with their reception. But, while these disputes were at their height, orders were given to set sail. In the mean time, letters were dispatched to London and Amsterdam, acquainting our owners with our progress, and present situation, and desiring their instructions, to regulate our future proceedings.—In consequence of these dispatches, the writer says, "A general letter was received from our owners, dated Bristol, June 6, 1710, in which they acquainted us, That the East India Company was incensed against us, and had appointed a secret committee to inspect their charter, as to privileges; and that they were resolved to take all advantages, in case of the least infringement of what they pretended to be their exclusive right of trading to the East Indies. This letter likewise recommended the greatest caution, on our part, with regard to the Dutch East India Company; or else from that as well as from our own, they had reason to fear all possible obstruction. It was, therefore, most strictly enjoined, That neither officer nor sailor should, on any pretence whatsoever, be suffered to take any goods on shore, nor were we to allow any stranger to come on board to purchase the least trifle, for that if any such thing should be proved, the whole cargo would be forfeited. It was a great relief to us, when, on the 5th of August, Mr. Hollidge, one of our principal owners, came on board us; for though we kept the strictest watch, it was hardly possible to prevent the sailors from running things ashore in the night. On this gentleman's arrival, it was judged necessary to draw up a short account of our voyage from the journals of the respective commanders, to which all the officers and most of the seamen voluntarily swore and set their hands." It was not till the 30th of September that the English sailed from the Texel, under convoy of the Essex, Canterbury, Medway, and Dullidge, and anchored in the Downs, on the 2d of October, 1711. The produce of the cargo and treasure in the ship was supposed to amount to near 400,000l. and after law-suits and every other kind of trouble and expence, 170,000l. clear remained. 1711.

Mr. Hatley whom they had lost with his little crew near the Gallapagos island was supposed with them to have perished, but it fell out otherwise; they made directly for the main, and coming to Cape Passao they surrendered themselves to the enemy. The persons to whom they submitted were not European Spainiards, and had no ideas of the laws of nations (laws which though originating in peace, are still preserved by civilised people amidst the horrors of war). These half Christians whipped their prisoners, and with their tortures would probably have ended their lives; but that the Spanish priest interfering, rescued them, and thus ended their sufferings. Mr. Hatley being afterwards carried to a Spanish settlement was civilly treated, and was set set at liberty as soon as peace was proclaimed between the two nations.—

Such was the end of this expedition, which, though greater matters might have been expected, yet all things considered, it must be confessed that the commanders did whatever lay in their power to promote the business, and to benefit their country.

THE VOYAGES OF THE CAPTAINS CLIPPERTON AND SHELVOCK.

THE voyage of the Captains Rogers, Courtney, and Cooke, which we have just related, though not crowned with all the success which they at one time expected, was yet so advantageous to those concerned in it, that it revived the spirit of privateering, and gave rise to the undertaking which we are about to treat, and for which the persons concerned took occasion from a war subsisting between the emperor and Spain, to apply to the Imperial court for a commission to countenance an expedition, which they meant to fit out against the Spaniards, who were not at that time in actual war with England.

The person who was first thought on to command the vessels prepared for this purpose, was Captain George Shelvock, who had been thirty years in the royal navy, wherein he had arrived at the rank of first lieutenant. He was politic in his manners, and appearance, was of a winning address, but not insensible of his own merit. It is probable if he had been finally intrusted with the command, as at first intended, the voyage might have proved a fortunate one; but several concurring circumstances intervened to alter the disposition of it, and in consequence the main intention of those concerned was defeated, as will be seen in the sequel.

The captain received orders to repair to Ostend, with the Speedwell, and there, as soon as the commission was obtained, to take on board the proper complement of Flemings, which were to give colour to the expedition, and then to join the Success, which lay in the Downs, under the command of Captain Mitchel. The names of the ships were also to be changed; the Success was to be called the Prince Eugene, and the Speedwell the Starenberg.

Captain Shelvock had orders to lay in such a quantity of spirituous liquors as he should judge sufficient for the use of both ships. In the fulfilling of their commission it seems, however, that the captain did not act intirely to the satisfaction of the owners, who thought the voyage already too long delayed. And when the Flemish soldiers arrived, they were found so insolent, that it was judged proper to return the imperial commission, and to proceed without them. 1719.

The plan of the voyage being thus altered the owners next determined to lay aside the design of constituting Captain Shelvock the commander in chief. By this time war with Spain was declared, and as they conceived no other accomplishment necessary than that of knowing the business whereon he was to be employed, and having an acquaintance with the western coasts of America, they cast their eyes upon Captain Clipperton (or Clippington). To this man, a rough, blunt sailor, known to some of the owners, and recommended by other merchants, they resolved to intrust the conduct of the expedition. Captain Shelvock, however, was continued captain of the Speedwell, Captain Mitchel was appointed second in command to Captain Clipperton, and Mr. Hatley second Captain to the superseded commander.

Unanimity was strongly recommended in their instructions, though the very basis of it seemed to be removed by this proceeding, and dissensions arose between them before they quitted England. The vessels, however, (after waiting three months for fair weather at Plymouth) set sail on the 13th of February. Captain Clipperton's ship, called the Success, carried 36 guns and 180 men, and the Speedwell, Captain Shelvock's vessel carried 24 guns and 106 men. The latter of these ships had on board the whole stock of liquors, whilst her consort had almost all the other stores necessary for the voyage. Fresh gales, squalls, and rain, accompanied them after they left the Channel. And on the 19th a storm began which obliged both the vessels to take in their top-sails. Captain Shelvock, it seems, had spoken with Clipperton, and desired him to take some of the liquor on board, that he might strike down some of the guns into his hold, which Clipperton and Shelvock sail from Plymouth.

1719 which he said would enable him to sail better. But this his desire was not attended to. On the 20th a signal was made for the Speedwell to bring to, which was obeyed, and the vessels were under their bare poles by about eleven at night. On the 20th, however, in the afternoon, the storm abating, the ships unaccountably separated, Clipperton, when he made sail, steering S. by E. and Shelvock N. W. By this strange management, which each commander afterwards laid to the charge of the other, Clipperton was left to proceed on his voyage without liquors and without his consort. Thus situate, he resolved to steer for the Canaries, the place of rendezvous agreed on between them, and having taken in wine at Gomera and cruised about ten days near the islands, he departed for those of Cape Verd, and anchored on the 21st at St. Vincent.

Are separated.

Canary Isles described.

The Canaries, of which we have so often spoken, are supposed to have been denominated the Fortunate Islands, by the ancients, on account of their fertility. They are eight in number, and the largest of them, called Great Canary, is far distant from the others. It contains 9000 inhabitants, and is the seat of the bishop, the council royal, and the inquisition. There is a mountain on the Teneriff called the Pike of Teneriff, esteemed to be one of the highest in the world. It is reckoned three days journey to the top of it, which is generally covered with snow. The Island of Ferro is one of the larger isles; but there is no water to be found on it, except in few places, by the sea-side; to supply this want, however, in some measure, there is a sort of tree in almost all parts of the island, which is pretty large, is full of leaves that are always green, and covered with a little cloud that wets the leaves with its dew, so that a fine dew drops from it into little pails, wherein it is caught by the inhabitants, and is sufficient in quantity to water the cattle as well as supply the people. These islands were called Canaries, or Dog-Islands, by the Spaniards, who on first discovering them, in 1402, found no other creatures upon the land. They abound with wine, which is transported into all parts of the world.

Clipperton cruised ten days likewise about the Cape Verd Islands, but seeing no probability of meeting with his consort, he departed. And it was afterwards with difficulty that he prevailed on his men to continue on the voyage to the Streights without the assistance of spirituous liquors to comfort them in their course.—These islands are generally supposed to be denominated from the Green Cape of Africa, which is opposite to them; others think they were called the Green Islands, on account of the surrounding sea being covered so thick with a green herb, that the water can scarcely be seen; and it requires a strong wind to carry a vessel through it. This weed produces a berry, somewhat like white gooseberries, whence it comes is unaccountable; it cannot arise from the bottom, as the sea is there unfathomable, and the neighbouring lands yields no such production.

Cape Verd Islands.

They left St. Vincent's on the first of April, and by the 29th of May found themselves in 52° 15′ of south latitude, being then off Cape Virgin in the north point of the entrance of the Maghellanic streights, into which they sailed the next day, and sent their pinnace ashore on the main to get fresh water from a river which was then frozen up. Here they saw flocks of geese and ducks, but all appeared very shy. The surgeon's mate having been left on shore by accident for one night, was brought on board the next morning almost dead with cold. Anchoring at Queen Elizabeth's Island, they found plenty of smallage, an herb which greatly relieved those who were afflicted with the scurvy. They found also plenty of wild fowl and fish, and having filled their casks with water, they held on their course.

They afterwards came into a fine bay, to which they gave the name of No Bottom, on account of the depth of the water there. The trees on the shore were high, and their boughs were loaded with snow, which formed but a dismal prospect. While they lay here a canoe came off to them, having four Indians on board, who were of a middle stature, their foreheads were low, their faces broad and round, their hair lank and short. They had no other cloathing but a piece of skin about their waists, round which they had likewise a circle of a bright azure hue. They were very jealous of their females; nor could they be prevailed upon, on any account, to suffer a woman who was among them to come on board. The captain gave them some bread and cheese, and also offered them a dram of brandy, though the latter was then so scarce amongst the English. They devoured the bread and cheese, but would not taste the brandy. They had bows and arrows, and some fishing tackle: they stayed two hours, and on their departure made signals of their design to return. The pinnace being sent on shore the next day, came back with the Indian canoe in the evening, laden with muscles, which the natives had given them in exchange for bread, knives and toys. They appeared to Clipperton's men to be a harmless people, and one of his crew that had been left on shore lived among them two nights and a day, and met with very kind treatment.

In the mean time the ship's company grew sickly, and one or other of them generally died every day. About the beginning of July the weather was rather moderate; on the 8th of this month they buried their master-gunner, and caused a strong plank to be driven at the head of his grave, whereon was this inscription, "Mr. William Pridham, gunner of the Success, deceased July 7, 1719, in this Streight, and was buried here."—Captain Mitchell, and Lieutenant Davidson went in the pinnace to Terra del Fuego, on the 20th, to make discovery of the passage that a French Tartan is said to have gone thro' into the South Sea in May, 1713, and to try if there were any anchoring beyond Cape Quad. They returned on the 29th, having found the passage, but so narrow that it was deemed hazardous to go that way. They however found several good bays to the north-west of Cape Quad, to anchor in.

They proceeded on their voyage on the first of August, meeting with the usual dangers and difficulties on their passage, and, arriving on the 18th in the South Seas, steered directly for Juan Fernandez, it's usual to refresh themselves. They came to this island on the 7th of September, where they searched in vain to find some tokens of the Speedwell. After having cruised for a month in these parts, Captain Clipperton preparing for his departure, caused the following inscription to be cut on a tree fronting the landing place, "Captain John W. Magee, 1719." Magee was a surgeon on board the Success, and well known to Captain Shelvock and his company. The reason of making choice of his name, was in order to blind the Spaniards in case they should read the inscription. All means were used here for the recovery of the sick, who were set on shore for this purpose, but a dejection prevailed, owing to the reflexion of having no cordial to revive their drooping spirits. They found the weather at this time changeable, and much rain fell while they stayed near the island. They took abundance of goats, so as to serve them for future store, as well as for present use; and they salted a great number with salt which they found ready made on the island. They wooded and watered here, and cleaned their ship; Clipperton, by this time apprehending that he should be obliged to proceed on his cruize alone. As to the Speedwell, he declared it was his opinion that she was lost.

Before they took their departure from hence, four of the ship's crew betook themselves to the mountains, with a view of remaining upon the island, but two of them were made prisoners by the goat-hunters, who before they surrendered, were obliged to fire at them several times.

They prepared for sailing on the 7th, previous to which Captain Mitchell went on shore, and erected a cross, at the foot of which he buried a bottle, containing a letter addressed to Captain Shelvock, direct-

ing him to another place of rendezvous, and appointing a proper signal whereby they might know each other in case they should meet at sea. The commander then weighed anchor, and sailed northward, till he got into the parallel of Lima, where he intended to act, though he had lost 30 of his men, and some uneasinesses had already broken out among the crew in regard to plunder. They took a small vessel on the 25th of October, which proved to be a sloop of 40 tons, laden with sand and rubbish for manure, having on board seven Indians and two negros. In this bark they found nothing worth taking except two jars of eggs, as much treacle, and two pieces of eight. The next day they met with a ship called the St. Vincent, of 150 tons, with two friars, 161 Indians, and four negros on board. She was laden with wood from Guiaquil. Another prize they took on the 30th day of the same month, was a large ship, called the Trinity, of 400 tons, which had been taken by Captain Rogers, ten years before, when Guiaquil was plundered by that adventurer. Her cargo was valuable, and she had a great many passengers on board. On the 2d of November they took a fourth prize, which was a vessel of 70 tons, having on board the countess of Laguna, and several other passengers. They likewise found a great deal of money, and two jars of wine and brandy. The captain gave the countess her choice of staying in the prize, or coming on board the Success. She chose the former, and an officer was sent with orders to suffer none but her own domestics to enter her cabin.

Captain Clipperton was now much weakened by the detachments he had made to take care of his prizes. Yet he was still bent on making more. Discovering a pink of 200 tons, on the 12th he bore up to her, and the vessel struck to him. Lieutenant Sarjeantson was then sent on board with eight men to take possession of her. He immediately ordered all those whom he saw into the great cabin, and posted a centinel at the door. After this, thinking all things secure, he went down with some of his men into the ship's hold, to examine her lading, when a concealed party fell upon the captors, knocked down him and his party, and ordered them to be bound. In the mean time those in the cabin had secured the centinel; and thus the ship was recovered, owing to the artful management of the captain, who guessing that his opponent could not send any great number of men on board him to take possession, had ordered 12 of his passengers, under the conduct of a French boatswain, to conceal themselves in the hold, and then to rush out, on a certain signal, and secure the English, which stratagem succeeded, as we have seen according to the common expectation.

Stratagem of a Spanish captain.

But as soon as the Spaniards had thus retaken the ship, they made for the shore with so much haste and so little caution, that they ran their own vessel upon the rocks, where she was lost; but when the captain perceived the danger, he ordered all his English prisoners to be unbound, and every man saved himself upon the rocks. They were however secured on shore, and sent to to the viceroy of Lima.

His vessel is lost.

As soon as Clipperton knew that he had lost his prize and his men likewise, he determined to release his Spanish prisoners, by which means there would necessarily be a saving of his provisions, as well as a chance for his people to be better treated, when the enemy knew that their countrymen had not been ill used when in his power. In his way to the island of La Plata, he took another prize of 200 tons, having on board 30 Spaniards, and 40 negros. This vessel was called the Cayetan, and most of the Spaniards were passengers. By this time the captain knew that the coast was alarmed, and understood that two men of war, one of 50, and the other of 30 guns, had been fitted out to cruise for him. As for the goods on board, he had good reason to believe they would fetch no price in Europe, and in those parts where he now was, he did not see any likelihood of their being ransomed. On this account, he concluded, a thought which had once suggested itself to Captain Rogers, of sending a cargoe of those goods to Brasil; for this purpose he made Mr. Mitchell commander of the prize bark wherein the countess of Laguna had been taken, mounting her eight guns and sparing 13 Englishmen and ten negros, accommodating him with provisions and necessaries, and putting on board a cargoe of European commodities valued at 10,000l. dispatching him for the Brasilian coast. After this he presented his other prizes to the Spanish prisoners, taking out of them such things as he thought proper, only detaining the captain of one of them to serve him as a pilot. 1720

Thus disincumbered, Captain Clipperton now prepared to return to cruise in his former station. As they were thus holding on their course, on the 4th of December they fell in with, and took a bark called the Rosary. Having taken what they pleased out of her, they let her go, after they had cut her main-mast by the board, in order to prevent her overtaking. On the 27th they looked into Guanaco Bay, and finding two ships at anchor there, fired a shot at each, but they made no return; whereupon, sending their boats on board, they found the people had quitted them, leaving nothing but some bread and a few jars of water behind them. After this the English hung out a flag of truce, and fired two guns at intervals of half an hour. They were answered from the shore, but nobody appearing to treat about the ransom of the vessels, they set them on fire, and departed for the Gallapagos islands, intending to remain there till the alarm occasioned by their progress should subside. Accordingly they put their design in execution, and arrived at the Duke of York's Island under the Equinoctial Line, where they cleaned their ships, and found water, in which latter circumstance, as we have already related, Captain Rogers had been disappointed. On the 21st of January they took a vessel called the Prince Eugene, bound for Lima, and having the Marquis de Ville Roche on board, which struck on their firing the first gun. A priest, who was on board the prize, having got leave to go on shore at the island of Velas, on his promise of persuading the inhabitants to traffic with them for some cattle; he returned on the 16th with a herd of black cattle, some fowls, and fruit, which he brought as a present to the Marquis; but he said the governor would not permit the inhabitants to trade with Captain Clipperton's people. He added, that Captain Mitchell had been there, and had got some cattle, but 200 men being got together, had forced him to retreat. The very next day it appeared by some intercepted letters that the Marquis was tampering with the people on shore to seize the ship's boat when it next came for water. On this account that nobleman was confined for some time, but on the 20th he was suffered to go on shore with his lady, their only child remaining as an hostage for their return.

The Marquis de Ville Roche taken.

Accordingly, they came on board on the 14th of April, and the governor with them, when Clipperton having agreed with them about their ransom, the lady and the child were set on shore, the marquis remaining as an hostage for the performance of the articles, which were never fulfilled. They sailed to Amapalla on the 20th, with an intent to water there, but being disappointed, repaired to the Isle of Tygers, and afterwards on the 9th of June to Gorgona, for the same purpose. On the 24th they took, the second time, the St. Vincent, which was now commanded by Don Clement de Andrada, and was laden with timber and cocoa-nuts; and on the 11th of August they anchored at the island of Lobos de Mar with their prize. Here they set up tents on the shore, and cleared their vessel, and here the crew, who had already begun to murmur, appeared much discontented. They blamed their captain for proceeding on his undertaking without his consent; they arraigned his conduct with regard to the marquis, from whom they firmly believed neither he nor they would ever receive any advantage, and at length some of the malecontents,

1721 contents, (being stirred up by one James Roch, the ship's corporal) formed a plot for seizing Clipperton and his officers, and running away with the ship; "that if they must still go through more hardships," it must be, as Roch said, for their own benefit rather than for that of the people. But the plot being discovered, two of them were severely punished, and the rest pardoned on promise of future amendment.

They took a fishing boat, with a large quantity of salt fish on the 17th; on board of this vessel they put 38 Spanish prisoners, and sent them away. But they found the St. Vincent, which was left at anchor under the Isle of Lobos, driven on shore and sunk. On the first of November they entered the bay of Conception, where having missed of a prize by her out-sailing them, they went for Coquimbo, and in their way, took a ship laden with cloth, sugar, and tobacco. But they had no sooner come in full sight of the harbour, than they were perceived by three men of war, which were lying there with their top-sails loose, which immediately cut their cables, and made after them. The Success and the prize immediately hauled their wind, and bore away, the former escaped by good sailing, though narrowly pursued by the two Spanish ships, but the latter fell into the hands of the enemy. There were taken in her, Mr. James Milne, Clipperton's third lieutenant, and 12 men. Don Blas de Lesso, who was governor of Carthagena, when attacked by Admiral *Vernon*, was the captain who took the prize, which he imagined to have been the privateer. He was so much enraged at this disappointment, that in the heat of his anger he struck Mr. Milne on the head with the flat of his sword; but afterwards recollecting the impropriety of his behaviour, sent for his prisoner, and was so generous as to ask his pardon for the affront, and finding him stripped by the soldiers, ordered him a new suit of cloaths. When at Lima he procured his liberty, and paid for his passage to Panama, where he made him a present of a jar of wine, and another of brandy, and after giving him 200 pieces of eight sent him home to his own country. Such an instance of generosity in an exasperated enemy, deserves to be had in honourable remembrance.—But to return to Captain Clipperton. He and his people were much dispirited with this loss, and their ill humours were kept alive by continued dangers and disappointment. They attacked a ship on the 16th, which bore away from them after having fired a few guns, which was a happy circumstance, as this was a ship of force, and which was intended to cruise for Captain Shelvock; but knowing this not to be the vessel which he was in quest of, and not being acquainted with her strength, the Captain, whose name was Fitzgerald, did not think proper to continue the engagement. Being in want of provisions, they continued cruising to the north; but as they met with little success, they resolved to go once more to the Gallapagos islands for refreshment, after having set on shore the remainder of their Spanish prisoners.

While Clipperton's people were indulging their ill humours, the captain himself fell into a practice too common with people who know not well how to bear up against misfortunes. He gave himself up to drinking in such a manner, that at length he was scarcely ever seen sober, or free from the bad effects of this ill course, which, at this time, he so imprudently adopted. It was on the 4th of December that they perceived themselves near the islands which they were in quest of; but through some unaccountable mistake or ill contrivance, they could neither find fresh water nor an anchoring place. On account of this disappointment they sailed for the isle of Cocoas, so often mentioned in our accounts, with the greatest expedition. They came in sight of it on the 17th, and all that could be spared went on shore, on the 18th, when a sort of bark was built for the entertainment of the sick, at the same time that Clipperton did all he could for the recovery and encouragement of the men. They prepared for sailing on the 27th of January, but when the men were mustered, three Englishmen and eight negroes were missing; and it appeared that they chose to remain on that unfortunate island.

Arriving on the coast of Mexico, Clipperton's people discovered a sail, to which their pinnace gave chace, and the vessel immediately struck. She proved to be the Jesu-Maria, which was then commanded by Captain Shelvock; and the report they received was, "That he had no more than 40 men alive; that he had lost the Speedwell at Juan Fernandez, where they had built a bark out of the wreck, that they had coasted along Chili and Peru, till they came to Pisco near Lima, where they took this prize; that they had no regular command among them; that they had chosen a quarter-master by a majority of votes; and that they had quite broken their articles with their owners, and had shared all among themselves. Captain Shelvock came on board on the 27th; the boat brought Captain Dod, who was said to have been ill used on account of his attachment to the owners; six chests of pitch and dammer with two barrels of tar; and six slabs of copper were sent on board by Captain Shelvock, to whom Clipperton spared 24 quarter-deck guns, some great shot, a compass and other necessaries. His people likewise bought cloaths, shoes, hats, &c. and here Hendric and Dod deserted Captain Shelvock, intending never more to sail with their commander. It was designed to attempt the Manilla ship before she entered Acapulco. This determination was made in the burying of March; on the 13th they again met Captain Shelvock, when, according to Clipperton's account, that gentleman rejected a proposal he made of burying all former miscarriages in oblivion, and acting together for the benefit of the owners; whereupon the Success proceeded without him, and it being resolved to return home by way of the East Indies, the vessel sailed immediately for Guam.

After a run of 53 days they reached that island, and anchored off Umatta, on the 13th of May. The pinnace being sent with a flag of truce to the governor, in order to obtain provisions; a quantity of chocolate cakes, cattle, bread, sugar, greens, &c. were sent them, with a favourable answer, and the governor's health was drank by the whole ships company. But the Marquis de Ville Roche having agreed about his ransom, going on shore accompanied with the first lieutenant and doctor, a foundation was laid for a dispute which was near proving fatal to Clipperton and all his crew. For after the English had taken in wood, water, and provisions, in exchange for which they furnished the governor with arms and ammunition, the latter sent them a letter, on the 15th, wherein he demanded the restoration of the Marquis's jewels, some consecrated plate, and two negros that were Christians. At the same time he desired a certificate under the captain's hand, that peace was proclaimed. Clipperton's answer was That from the people on board the last prize taken on the coast of Chili, he had heard that England and Spain were at peace; but he assured the governor if he did not send the ransom, and return Messrs. Godfrey and Pretty whom he had detained on shore, within 24 hours, the English would burn the ship in the harbour, destroy all the houses on the shore, and do whatever damage they could among the islands. Instead of complying with his demands, the governor caused a battery to be erected, from whence the Spaniards fired at the pinnace. As to the ship, she ran aground between the fire from the battery and that from the vessel in the harbour, in endeavouring to get her off, she went foul of the rocks. Thus they lay exposed to the fury of the enemy, whilst their captain was so much in liquor that the officers were obliged to chuse Mr. Cook, *pro tempore*, to the command in this exigency. In the mean time they had their first lieutenant, Mr. Davidson, killed, and three men wounded; and it was not without great difficulty that, having lightened their ship, they towed her off with the pinnace, and, just as they got her afloat, the enemy firing at her from their battery, raked them

The Success roughly handled at Guam.

The SUCCESS *wedged on a Rock, being at the same time between the fire of the* SPANISH FORT *at* UMATA, *and a* SHIP *in the* HARBOUR.

7 AP 53

through between wind and water, killed one man and wounded two others. At length they got her to sea, but in a mangled condition, and went off on the 30th with the loss of both their bow anchors and cables, the stern and kedge anchors, four hawsers, four of their lower deck guns, and 19 barrels of powder. They had remained a mark for the enemy near 50 hours, and had the vessel not got clear before morning, it was thought she must have sunk outright. When they had done all in their power to repair their damage they were obliged to depart, and leave Mr. Godfrey and Mr. Pretty behind them, Clipperton having lost his faithless Marquis, together with all hopes of his ransom.

Having passed the Bashee Isles on the 20th of June, they came on the 1st of July to some other islands, not laid down in the charts; but not being able to learn their way to Macao, nor to get a pilot, they sailed to Amoy, which lies in the province of Tonquin, where they anchored on the 8th, and were presently boarded by ten custom-house officers, who demanded what the ship was, and what was their business in those parts. They were answered, That the ship belonged to the king of Great Britain, and that she put in there in order to obtain provisions and necessaries. The next day there was a mutiny among the crew, who demanded immediately to shore the prize-money, Mr. Cook claiming 30 shares to himself as first lieutenant, he having succeeded Mr. Davidson in that post. The men went on shore at will, and refused to work till they had their money, which (those on shore taking their part) Clipperton was at last obliged to grant them.

The men share their prize money.

The distribution being made on the 16th of September it amounted to 419 dollars for each foremast man, no reserve being made for those who had the misfortune to be taken prisoners, for the representatives of those that were dead, nor for the two gentlemen who had served on board the Speedwell.

The share of the owners, in ready money, wrought plate, gold, and jewels, amounting to 7000l. sterling, Clipperton shipped on board the Queen of Angels, a Portuguese vessel, commanded by Don Francisco le Vero; but she was burnt at Rio Janeiro, on the 6th of June 1722. And out of the effects, the salvage being deducted, no more than 1800l. remained.

Having left Amoy, where they paid no less than 1700 dollars for port charges, they held on their course to Macao, where he found the Portuguese captain who had undertaken to carry what belonged to the owners to Brasil. Here the crew met with an opposition; for this captain declared in favour of their commander. On this, Captain Cook and another officer went to consult one of the principal proprietors what measures were proper to be taken for bringing home the ship. After his return, she was surveyed and condemned; but being sold for 4000 dollars, Clipperton, who did not think it was dangerous to make a voyage in her, agreed with those who bought her, for his passage in her to Batavia. The Success's crew now shifted each for himself. As to Captain Mitchell and his crew, they were now pretty well convinced that these were killed, or taken, or lost at sea. Twenty of Captain Clipperton's men intending to go in a Chinese vessel to Canton, were taken by pirates: Mr. Taylor, the chief mate, and some others, got safe to Canton in an armed boat, from whence they got a passage home, and arrived safe in London in May, 1722. Captain Clipperton came to Batavia in the Success, and got his passage home in a Dutch East-Indiaman. He arrived at Galway in Ireland, in the beginning of July, 1722, but broken with toils and disappointments, died in about a week after his arrival.——

Captain Shelvock's voyage.

Captain Shelvock having written a very particular and circumstantial account of his voyage we shall for the most part deliver the relation in his own words, omitting only such passages as are immaterial, and such occurrences as have been already noticed. The reader has been informed of the separation of the two commanders, which Captain Shelvock says was unavoidable. He adds, that the men were so terrified by the storm, that had not his officers appeared armed, they would have seized the ship and returned to England. And the very next evening after this mutiny was quelled, he says Mr. Hatley, his second captain, was near throwing all in confusion again, telling him on deck, that he had private orders from one of the owners, and from Captain Clipperton, to take the charge of the ship upon himself; but being asked, "Whether he had a private commission too," answered only in terms of reproach. Captain Shelvock thus proceeds in his account: 1722

"We had a very tedious voyage to our first place of rendezvous, the Canary Islands, and did not arrive there till March 17, when having finished our cruise without any thing remarkable happening, except taking an open boat with salt and wine, and having heard nothing of the Success; on March the 29th we took our departure from the island of Ferro, in hopes of meeting with Captain Clipperton among the islands of Cape Verd; and we took our prize along with us. But in our passage, my people began again to murmur; and one Turner Stevens, my gunner, very gravely made a proposal to me in the hearing of all the other officers, that we should go cruising in the Red Sea, "For (said he) there can be no harm in robbing those Mahometans; but as for the poor Spaniards (continued he) they are good Christians, and it would doubtless be a sin to injure them." Upon this I ordered him under confinement, and the man, afterwards having threatened in a very outrageous manner to blow up the ship, I, at his own request, discharged him as soon as we arrived, together with my chief mate, who had likewise been guilty of many and great misdemeanors.

On the 14th of April we made the isle of May, and running along shore, we saw a wreck, which we were told was the Vanzittern Indiaman, Captain Hide, that three weeks before had been cast away. I endeavoured to avail myself of this accident to supply the necessaries we stood in need of, but could procure nothing but two or three sheathing boards. At this place I sold our prize for 150 dollars to the governor, and we filled all our water casks, and gave our ship a very good heel. Six of my people having deserted, I applied in vain to the officer on shore to deliver them up to me; but threatening the master of a Portuguese ship to make reprisals, he brought me two of them that happened to be the best. They fell on their knees, and asked pardon, assuring me the governor on shore had seduced them, his design being to send the bark I sold him on Vanzittern's wreck, where he said they might all make their fortunes; so I lost the other four. Finding I could neither hear of the Success, nor get what might be serviceable in this place; and having read in Frezier's voyage, that in the island of St. Catherine on the coast of Brasil, in lat. 27° 30′ south every thing might be had that we stood in need of, I concluded it would be best for me to put in there. On the 20th of April, we sailed from the Island of May, having wrenched the drum head of our capstan in weighing anchor, which took us up the remainder of the day to repair. We were 55 days in going to St. Catherine's, during which little remarkable happened, except that on the 5th of June we saw a ship stemming with us, and spoke with her. I ordered the five-oared boat out, and sent Captain Hatley in her, to enquire after news, and gave him money to buy tobacco [this was among the articles of which the Success had got the whole on board her, as the Speedwell had all the strong liquors. However, Mr. Hatley said he could get no tobacco, and laid out the money in china ware and sweetmeats, and other things, to the displeasure of Captain Shelvock]. On Friday, June 19, we made the Island of St. Catherine, and at ten the next morning anchored in ten fathom water; the Island of Gall bearing E. N. E. distant two leagues, and the easternmost point of St. Catherine E. by S. distant four leagues. The first thing

1722

thing I did was to send the carpenter on shore, with all the people that could be useful to him in felling of trees, and sawing them into planks, and to order the cooper and his crew to trim the casks, and fill them with water. Those who remained on board I employed in different services. Mean while the inhabitants came off to us every day with the product of the place, which we purchased with salt.

He meets with a vessel at sea.

On the 2d of July we were alarmed at break of day, by the appearance of a large ship at anchor, four or five miles below the place where we lay. I sent an officer in the launch, well manned and armed, to see what he could make of her, and put my ship into the best posture of defence I could. About noon my launch returned, and brought word that this ship was the Ruby, formerly an English man of war, and now one of M. Martinet's squadron; that she came from the South Seas, and was commanded by M. la Jonquiere; that he, his officers, and seamen, to the number of 420 were all French, and though in the Spanish service, they had not the least design to molest us. My lieutenant became thus punctually informed, by a direct breach of orders, in going aboard, and his temerity might have cost me very dear; for, had they been enemies, I should have lost 25 of my best hands. But their return confirmed the truth of his story, yet it was a great misfortune, that I had not, to the best of my knowledge, one man of experience or capacity sufficient to enable him to perform the common duty of an officer. The next day the Ruby turned up towards us, and the captain sent one of his lieutenants and a priest, to assure me of his friendship, and to desire I would dine with him, which I did, and met with a very handsome reception, with offers of what money I would have on my bills on London, or in general, any thing else his ship afforded. He informed me that the Spaniards in the South Seas had advice of our two ships, and that they talked of fitting out some men of war to receive us.

About this time there was a report spread that Hatley had taken a bribe of the master of the Portuguese we met on the 5th of June, or had robbed him of 80 or 100 moidores, had given ten to his cockswain, and six to each of his boat's crew, not to divulge it. I charged him with what had been said against him: his answer was, He had done nothing he was ashamed of, or that he could not justify. All I could do, was to protest against him, and I gave the protest to Captain Clipperton in the South Seas. On the 6th of July, M. la Jonquiere, accompanied by several of his officers and passengers, came to dine with me; but in the midst of our entertainment, my boatswain took it into his head to create a disturbance, because he had not been invited into the cabin as a guest. He first assaulted Mr. Betagh, the captain of marines, and then Mr. Adams the surgeon. This outrage, which was supported by a party he had formed, being by the help of my officers and French gentlemen, pretty well quieted, M. la Jonquiere declared, that if they persisted in their disobedience, he would see the ringleaders punished by carrying them home in irons; and as they grew a little quieter, he expostulated with them, and appealed to themselves, whether they did not think it monstrous for people to behave themselves in such a manner. The next morning I was informed that the authors of the disturbance were most of them sorry for what had happened the night before, attributing it to having too much liquor. I was glad to hear this, and therefore passed it all over, with only threatening how I would manage them if ever they were guilty of the like again. I had resolved to punish the boatswain in the severest manner; but I was prevailed on not to do it, he, in very humble plight, asking my pardon, and begging I would not use any severity towards him. He said it was drink that had made him mad, and withal desired I would give him leave to go home in the French ship. This I willingly agreed to, he being a very odd sort of a fellow, and always incensing the people against the number of officers, whom he termed bloodsuckers.

July 15, we saw a great ship plying into the harbour's mouth; but when she discovered us, she made the best of her way out again. This possessed M. la Jonquiere with a notion of her being our consort, and put him in a hurry to be gone. Accordingly, when the night came on, he weighed, and put to sea the next morning, and, at his departure saluted me with five guns. Three Frenchmen belonging to me went away with him, but I had two Frenchmen and one Morphew an Irishman, in lieu of them: during all this time our carpenter went on but slowly in the woods; and, at last, when we came to ease the stern all over with thick plank, we could not find (to my astonishment) any nails for that use. I was now told that the first carpenter and his crew, had sold most of the stores before the ship came to Plymouth, which was before I commanded her.

On the 25th of July came in a ship called The Wise Solomon of St. Maloes, of 40 guns, and about 160 men, commanded by M. Dumain Girard, and bound to the coast of Chili and Peru, to trade. She was the same ship we saw before, and had spoke with the Ruby at sea. This gentleman [M. Dumain Girard] I soon perceived, notwithstanding a little forced civility at his first arrival, was a designing mercenary man, and full of all the deceit and vanity ascribed to his nation. Desiring him to spare me some nails, he readily answered he would, but at the same time, gave me to understand that he could not afford them for less than 30 dollars a hundred, which sum I was forced to give him: I likewise bought of him 60 cheeses, and 300 weight of butter; so that it was well for me that I had some money from one of the Ruby's people. This done, I now thought of making a quick dispatch from this place, when there came a letter from my ship's company to me, with articles annexed to it for the immediate division of prize-money which they said they were resolved to insist on, alledging, that they knew by woeful experience how they were used on board the Duke and Duchess; that they were never paid more than half their due, and that they had been well informed what a paymaster, a certain gentleman would make, if ever their fortunes should fall into his hands. They were so very importunate with me to comply with their articles, that both myself and all my chief officers thought it would be best and most adviseable to sign their papers with them, rather than run the risque when they should get out to sea, of their proceeding to acts of piracy. As soon as they had gained their point they expressed great satisfaction, and promised to be always ready to hazard their lives in any undertaking that I should think conducive to the ends which we were fitted out for. On the 3d of August came in the St. Francisco Xavier, a Portuguese man of war, of 40 guns, and 300 men from Lisbon, bound to Macao in China, commanded by Captain La Riviere, a Frenchman. I made no doubt but that Captain Hatley's affair would be reported to this gentleman; and therefore I told Hatley that I expected he would go and vindicate himself to the Portuguese captain, to prevent any disturbances that might arise on his account. To which he readily replied he would. Hatley, at his return, told me that the captain seemed to be angry with him for thinking he could harbour any ill thought of a gentleman bound on a voyage which, to his knowledge could hardly fail of ensuring the largest expectations.——Three of my men deserted on the third of August, and the mate and his party went up to the Portuguese plantations in search of them. It being almost midnight, the inhabitants were alarmed, and planted themselves in ambuscade, in order to destroy them as they came back. No sooner had they returned into the boat than they heard them rushing out of the woods, crying "Kill the dogs, kill all the English dogs." This outcry was instantly followed by a volley of small arms, which wounded three of my men, two through the thigh, and another through the arm. I sent a letter of complaint by Hatley to the captain of the Portuguese man of war

in the harbour; but Hatley, at his entrance into the ſhip, was furiouſly aſſaulted by Emanuel Manſa, (the captain of the iſland) who cried out that this was the man who had committed ſo many inſolencies towards them, and had made it a practice to abuſe and affront him with the opprobrious name of cuckold. Upon this exclamation the ſhip's company ſided with Manſa, and fell upon Hatley, and would certainly have uſed both him and his boat's crew very ſeverely, had not the captain and his officers, with much difficulty, prevented it; for the Portugueſe ſeamen were exaſperated to ſuch a degree, that it is more than likely they would have murdered him, had they not been timely hindered. The captain, in his anſwer to my letter, expreſſed his ſorrow for what had happened, but ſaid that the people were without law, and it was not in his power to puniſh them, adding, that they were wild, and lurked in the woods, and that ſeeking revenge would only expoſe my men to butchery. He aſked my pardon for the ill uſage my officer had met with on board his ſhip; but withal gave me to underſtand there could be no greater provocation to the people of that nation, than that which Hatley was accuſed of by Manſa; that his ſhip's company had got Hatley amongſt them before he knew; and, that he was obliged to call his prieſt to his aſſiſtance before he could get him out of their hands; and in a very handſome manner touched upon Hatley's ſtory. I made no long ſtay after this diſaſter, but took my departure from the northernmoſt point of St. Catherine's on the 9th of Auguſt, and on the 19th Mr. La Port, my third lieutenant, broke his leg. From the time we left St. Catherine's, we had, for the moſt part, ſqually weather. As we advanced to the ſouthward, my people's ſtomachs increaſed to ſuch a degree, that the allowance which the government gave in the navy was not ſufficient to ſatisfy their hunger. Some of my officers, in particular Mr. Betagh, my captain of marines, who had been purſer of a man of war, and was a man whom I had a great regard for, was the champion for an addition of allowance at my table; for, he told me that he had orders from the adventurers, to eat with me, and what was my table, if I did not eat better than the cook? He did not ſtop here, but, urged by his intemperance, and finding me unwilling to ſquander away our proviſions without knowing where or when we might get any more, he at length had the inſolence to tell me publicly 'That 'the voyage ſhould be ſhort with me;' which he often repeated. I ſhould have had reaſon to fear it, had he been capable of commanding; but, for his puniſhment, I excluded him both from my meſs and the great cabin. Upon this, finding I was in earneſt with him, and fearing ſome heavier puniſhment, he ſent me a letter, aſking my pardon for what he had done; upon which I reſtored him in a handſomer manner than he afterwards deſerved, as will be ſeen by the ſequel. On the 19th of September, about midnight, I perceived the water to be diſcoloured all at once; and, upon heaving the lead, we found ourſelves to be in 26 fathoms water, I ſtood off again to ſea, but we did not deepen our water in the running of five leagues. This ſeems to be a bent very near to the entrance of the Streights of Maghellan. I had a fine opportunity of going through theſe ſtreights; but Captain Clipperton in his plans pretended, out of the abundance of his judgement and experience, that the Streights of Le Maire, would be the beſt navigation, though he himſelf paſſed through the Streights of Maghellan. From this, I might have conjectured, that he, who never was fond of having a conſort with him, deſigned to make uſe of this as a likely expedient to ſeparate himſelf, for he was a man that would do any thing, though ever ſo diſhoneſt or inhuman.

Outrage of the Portugueſe.

On the 13th of September, the fog clearing up, we had a full but melancholy proſpect of the moſt deſolate country that can be conceived, ſeeming no other than continued ridges and chains of mountains, one within another, perpetually buried in ſnow. Towards noon we were becalmed within three leagues of the mountains called the Three Brothers; ſo named from their equal height, near reſemblance, and proximity to one another. Till now, we had not been ſenſible of any helps or hindrances by currents; but this afternoon we were hurried with incredible impetuoſity into the ſtreights, and juſt as we had gained ſomewhat more than the mid-paſſage, the northern tide came ruſhing upon us with a violence equal to that of the tide which had brought us in, and, to our great aſtoniſhment, drove us out of the ſtreights again at a great and extraordinary rate, notwithſtanding we had a freſh and fair gale with us at N. W. Upon the ſhifting of this tide to windward, there aroſe ſuch a ſhort, and, while it laſted, ſo hollow a ſea, and ſo lofty withal, that we alternately dipped our bowſprit and poop lanthorns into the water. Our ſhip laboured in the moſt alarming manner, and became inſenſible of the guidance of her helm; but at midnight the tide ſhifted, and we got through the ſtreights without ſeeing the land on either ſide, and, in the morning, had a very good offing to the ſouthward. We had found it very cold before we came this length; weſterly winds of themſelves would have been ſufficiently piercing, but they were always attended with drifts either of ſnow or ſleet, which continually beating on our ſails and rigging, caſed the maſts and every rope with ice, ſo that there was no handling them. It was common with us to be two or three days together lying to, under our bare poles, expoſed all the while to the aſſaults of prodigious ſeas, much larger than any I had ever obſerved before. The winds reigning thus tempeſtuouſly, without intermiſſion, in the weſtern board, we had ſtretched away into 61° 30′ ſouth lat. where we were in continual dread of falling foul of iſlands of ice, and where we found the variation to be 21° 6′ to the north-eaſtward. As we were furling the main-ſail, on the 3d of October, one William Camell cried out that his hands were ſo benumbed he could not keep his hold; but before thoſe that were next him could lay hold of him he fell into the ſea; and the ſhip making freſh way, and the ſea running high, we loſt ſight of him before we could bring to.

1722

In the 22d of October, at eight o'clock at night, we carried away our fore-top maſt, and the next morning we rigged another. We crept by very ſlow degrees, after we had ventured to tack and ſtand to the northward, in hopes to weather our way into the great South Seas; and indeed it may be averred, that from the time we paſſed the ſtreights of Le Maire till we had the firſt ſight of the coaſt of Chili, we had been continually diſtreſſed by the wind, and diſcouraged by the bad weather. November 10, we ſaw the coaſt of Chili, diſtant ten leagues, the latitude, by obſervation, 47° 28′ ſouth, [Captain Shelvock, who was by this time in want of wood and water, here mentions his not being able to reach the iſland of Juan Fernandez, the common rendezvous of paſſing into the South Seas, and where he might have met with Captain Clipperton, but notwithſtanding all he ſays about the matter, it is probable he had no great deſire to ſail in company with one whom he thought not ſo well qualified as himſelf to conduct the expedition. He thus reſumes his narrative.]

Surrounded with doubts and apprehenſions leſt we ſhould be obliged to advance too far on theſe coaſts, without a competent ſtock of proviſions, one Joſeph de la Fontaine, a Frenchman, aſſured me that if I would go to the iſland of Chiloe, which was at that time a little to the northward of us, there was no place for our purpoſe like it in all the South Seas; that the towns of Chacao and Calibuco, the firſt on the iſland, and the ſecond on the continent, were rich places; that the former was the uſual reſidence of the governor, and that at the latter there was a wealthy college of Jeſuits, and that there were conſiderable magazines kept up, which were always well ſtocked with proviſions of all kinds. On theſe conſiderations, I formed a reſolution of going to Chiloe; and on the 30th of November we entered the channel, with an intent

1722 tent to ſurprize the towns of Chacao and Calibuco: But immediately after we had come to, the windward tide made out with prodigious rapidity, which inſtantly cauſed a great ſea, the wind increaſing at the ſame time, the channel all about us appeared like one continued breach. In the midſt of this, our ſhip laid a great ſtrain upon her cable, which unfortunately parted, and we loſt our anchor. We paſſed by two commodious bays, and at length we rounded a point of land out of the tide's way, where we were commodiouſly ſheltered from all inconveniences; and the next morning I ſent my ſecond lieutenant to make a diſcovery of the town of Chacao and Calibuco, and Captain Hatley at the ſame time, to find out a watering place. He ſoon returned again, and brought with him an Indian, who gave us hopes of a ſufficient ſupply of all we wanted, but afterwards came in the evening to tell us the country was forbidden to furniſh us with any thing. The lieutenant not being yet returned, the information made me apprehend the enemy had taken him, and by that means learned who we were. However, on the 3d of December, a Spaniſh officer came to us in a piragua, rowed by eight Indians. As ſoon as we had ſight of the piragua I hoiſted French colours; and when the Spaniard came on board, I told him ours was a homeward bound French ſhip, called the S. Roſe, and that my name was Le Janis le Breton. Under this notion he ſtaid with us all night, and the next morning departed, not ſeeming to ſuſpect us. I wrote to the governor by this gentleman, ſignifying, that I wanted a ſupply of proviſions, to carry me back to France, and received for anſwer, a complaint againſt the violences of our men, in killing their ſheep, and driving away their cattle; by which I knew they had ſeen my lieutenant; and I was in deſpair of ever ſeeing him or the people who were with him any more. I therefore ſent a meſſage to the governor, ſignifying, that proviſions I wanted, and proviſions I muſt have, and that very ſpeedily; and that all the force of Chacao, Calibuco Carelmapo, or Caſtro, ſhould not frighten or deter me from ſupplying myſelf. Soon after there came a piragua with a meſſage, ſignifying that if I would ſend an officer to Chacao, they would treat with me. But I gave him for anſwer, that I would treat no where but on board my own ſhip, and farther, that it was now too late, ſince I had already diſpatched 80 men to take all they could find. Soon after this, the pinnace arrived, which I had ſo long given over for loſt, with all her crew, but they were ſo much terrified that I had no hopes of their being fit for ſervice in any reaſonable time. The officer had no excuſe for not returning as ſoon as he got ſight of the town, but that the tide hurried him away at unawares, and that in the night he had forgot that he had a grappling in the boat, to come to with, till the tide ſhifted. I ſaid but little, and only made the officer ſenſible of his miſmanagement, which had been the ruin of the advantageous views I might have had in taking either Chacao or Calibuco.

By the 16th of December we had our decks full of live cattle, ſuch as European ſheep, hogs, poultry, beſides wheat, barley, potatoes, maize, and Indian corn; and, in ſhort, I computed that I had added one month's proviſions to what remained of our Indian ſtock, and that without the leaſt moleſtation from the enemy. The next day we began to unmoor, and at noon we weighed, and ſailed out with the wind at W. S. W. The day before we departed, one of our men made his eſcape into the woods. It was beyond all diſpute that this fellow would give a full account of us. This, added to the ill conduct of my lieutenant, together with the contrary execution of all my orders by thoſe officers whom I had hitherto intruſted in affairs of importance, made me deſpair of ever having any thing done to the purpoſe; and, on this occaſion, I could not forbear reflecting on the conduct of ſome gentlemen in England, who blindly made uſe of their intereſt to prefer perſons to poſts for which they were utterly unfit.

I ſailed from Chiloe with a deſign to go ſtrait to the iſland of Juan Fernandez, but was prevented by my people, who were poſſeſſed with notions of vaſt advantages to be made by going to the port of Conception. It was our Frenchman, who had been ſo inſtrumental in our attempt in Chiloe that was the cauſe of this. Finding his accounts hitherto tolerably juſt, they once more liſtened to him; and every one of my ſhip's company who would ſay any thing at this juncture, did not fail to ſpeak his mind ſomewhat inſolently; particularly William Morphew, one of the men I had out of the Ruby, and who had been in theſe ſeas ſeveral years, took upon him to tell me that it would not ſignify much whether we arrived two or three days ſooner or later at Juan Fernandez. That I was a ſtranger here; but that the Frenchman and himſelf were well acquainted with theſe parts, and that every body hoped I would be adviſed, and go to the port of Conception, and not put a mere punctilio of orders in the balance againſt a certainty of ſucceſs, if we were ſo happy as to arrive in time at that port. Conſidering how eaſily they might be brought to throw off all command, and how little I was able to help myſelf alone, I complied with them [as people are eaſily perſuaded to what they like] and on December the 23d we arrived in the bay, from whence I ordered the boats well manned and armed to go up in the night, to ſurpriſe what veſſels might be in the harbour, and to make what obſervations they could concerning the place. Captain Hatley returned about noon with the pinnace, and informed me that he had taken the Solidad de Anday of 150 tons (the only ſhip in the road or port) which was lately come from Baldivia, laden with timber, but had on board only the boatſwain, an old negro, and four Indian boys. He took alſo a ſmall veſſel of 25 tons, near the iſle of Quiriquine, which belonged to a prieſt who had been gathering fruits, and was now made a priſoner in her, together with four or five Indians. This veſſel we found very uſeful, and called her the Mercury, being well built, and ready on all occaſions to look into the port. There was another ſmall veſſel that paſſed within piſtol-ſhot, but Captain Hatley never once offered to follow her, or bring her to. He truly ſaid he did not mind [obſerve] her, though his boat's crew all agreed ſhe was full of men. This veſſel was bringing advice of us from Chiloe. I did not fail to reprimand him for this, but to no effect. Captain Shelvock arrives at Conception.

On the 20th of December, the prieſt being very ſolicitous to ranſom his bark, he left the ſhip in the morning, and, in my pinnace rowed by Indians, went a-ſhore to get money for that purpoſe. At noon, Mr. Brooks, the firſt lieutenant, brought down the ſhip we had taken, and anchored her about half a mile ſhort of us. The boatſwain of her had not been on board above two hours before he gave me information of a veſſel laden with wine, brandy, and other things, bound to the iſland of Chiloe, lying at anchor in the bay of Herradura, about two leagues to the northward of us. Hither I ordered Mr. Randal, our ſecond lieutenant, with the boatſwain of the Solidad, and 25 men to go; with poſitive orders not to ſet a foot on ſhore, or make any hazardous attempt whatever. But the next evening they returned with a diſmal ſtory, that they went into the bay, and finding the veſſel hauled dry on ſhore, the officer ordered the people to land, and bring away what they could out of her; but their career was ſoon ſtopped; for they had no ſooner got upon the bank, than they diſcovered the enemy ruſhing out furiouſly upon them. They all eſcaped except five, who were overtaken in ſhoal water, and they all agreed that thoſe five were cut to pieces. The Spaniards came down upon them, preceded by 20 or 30 horſes abreaſt, linked to each other. Theſe were two deep, then came the enemy, mounted, and lying upon their horſes necks, driving the others before them. They were not once ſeen to ſit upright in their ſaddles, except when there was no danger, or to fire their muſquets.—This new addition to our misfortunes quite diſpirited the greateſt part of my ſhip's company. A Skirmiſh there.

company. Nothing was now heard but murmuring, and curſing the South Seas, and declaring if this was making their fortune, they had better ſtaid at home, and begged about the ſtreets; but juſt as I was expoſtulating with Mr. Randall, who conducted this unfortunate undertaking, I was agreeably ſurpriſed with the ſight of a large ſhip, which we ſaw coming about the northernmoſt point of the iſland of Quiriquine. It was almoſt dark, and ſhe could not perceive what we were, ſo that ſhe ſtood towards us without fear. As ſoon as ſhe approached near enough, I hailed her, to which ſhe returned no anſwer, and I fired into her. This was no ſooner done, than ſhe came to, and called for quarter. She was called the St. Fermin, and came from Calao, burden about 300 tons, and was laden with ſugar, melaſſes, rice, coarſe French linen, and ſome cloaths of Quito, together with a ſmall quantity of chocolate, and about 5 or 6000 dollars in money and wrought plate. I ſent Mr. Hendric (the agent for prizes) to inſpect her lading, and to order every thing he could find valuable out of her, and the ſhip's company ſent their agent likewiſe. In the afternoon they returned, and brought all the bales, boxes, cheſts, portmanteaus, &c. that were in her; and alſo all the rice, with a large quantity of ſugar, melaſſes, and chocolate, and about 7000 weight of good ruſk, with all her cables and ſtores. Don Franciſco Larrayn, her captain, deſired to ranſom his ſhip, to which I willingly conſented, and ſuffered him to go in his own launch for that purpoſe. On the 30th there came a boat with a flag of truce, which brought word that three only of our people were killed in the ſkirmiſh at Herradura, the other two wounded, but in a fair way of recovery, and that the boat had brought advice of us, as I ſuſpected, from the iſland. The officer brought me ſeven jars of very good wine, as a preſent from the governor, with a letter full of civility, but written with a great deal of craft. He therein deſired to ſee my commiſſion, and then he would treat with me according to the law of arms. I therefore ſent Mr. Betagh to Conception, with a copy of my commiſſion, the declaration of war, &c. and ſoon after he returned with a Flemiſh Jeſuit, a Spaniſh lawyer, an Engliſhman, and a Scotchman. The Jeſuit aſſured me he was only come to pay his reſpects to me, and to do his utmoſt to promote the affair of the ranſom, and bring it to an immediate concluſion. Therefore, the firſt thing I did was to ſhew my commiſſion to the Engliſhman, who read it in Spaniſh. The Jeſuit then told me that the captain of the St. Fermin and Solidad, had reſolved to give me 12,000 dollars, and the Mercury included, inſtead of 16,000 dollars, which I had inſiſted on for the St. Fermin only. To this I poſitively anſwered, that all their perſuaſions, artifices, and pretences, ſhould never make me agree with them. We had taken, in the St. Fermin, ten large ſilver candleſticks, each of them weighing about 25 pounds ſterling. The holy father, in a very ſuppliant manner, repreſented to me that they were a legacy to his convent, and ſaid he hoped I would make no diſpute of ſo noble a charity. I offered to let him have them for their weight, which conſidering the great price they pay in thoſe parts for the faſhion of wrought plate, was a very advantageous offer; but he ſaid they never bought any thing for ſacred uſes; and that, as the workmen put a great deal of alloy into plate, it would be difficult to determine the different value of the dollars and the candleſticks:——So, after many needleſs diſputes, both about this and the ranſom of the ſhips, the Jeſuit and the reſt affirming that the captain of the St. Fermin, &c. were not able to raiſe above 12,000 dollars, there was nothing done. Two days paſſing without any news from the governor, I began to be certainly convinced that they had ſomething in view more than the accommodation of the ranſom; but on the 4th, my two wounded men came on board, and brought a letter with them, importing, That as the priſoners were now ſent back, the governor hoped no difficulty would remain to prevent my ſending on ſhore all the priſoners belonging to him. [But the Captain hearing no further news from the town, he burned the ſhips, and at length ſet ſail to Juan Fernandez; and whilſt they were on their way the plunder was ſold before the maſt, and the men had their reſpective ſhares allotted them. They arrived at the iſland, in the middle of January, and found the name of Magee cut on the tree, as has been related in Clipperton's voyage. The writer here takes occaſion to exclaim againſt the commander for not having left him any directions, which he ſays was a ſign that he never intended they ſhould join again; however he could not but be certain that the Succeſs had been there, and leaving the iſland, ſet ſail to the northward.] 1723

On the 21ſt of January (continues he) having a deſign to look into Copaipo, as I went along ſhore, I ſent Mr. Dodd, the ſecond lieutenant of marines, with eight men, as a reinforcement to the Mercury's crew; and the next evening they left us, ſteering for the land, whilſt I kept a proper offing, to prevent our being diſcovered. The next day the officer returned, and told me he had looked into the port, but could ſee no ſhipping there; on which I made him ſenſible of his error, and ſent him to the right place, which was about ſix leagues to the northward of us, and ordered him to be ready to look into Caldera by day-light the next morning. They did ſo, and ſaw nothing; but inſtead of making uſe of the land-wind to come off to me, they kept along ſhore till the ſea-breeze came on, and could not come to me till the morning after, by which means they hindered me of almoſt a whole day and night's ſailing; and in this vexatious manner were all my orders executed. On the 5th of February, I diſpatched Mr. Brooks a-head to diſcover if there were any ſhipping in Arica, and the next day I had ſight of the head-land of Arica, and the iſland of Guano, with a ſhip at anchor on the northern ſide of it. I ſaw the Mercury ſtanding out of the bay, by which I judged the ſhip was too warm for her, and therefore made all poſſible haſte to get up to her with our ſhip. When I came into the port, I found that the veſſel was already taken, and the Mercury only accidentally went a-drift. This prize was called The Roſario, of about 100 tons, laden with cormorant's dung, which the Spaniards call guana, and which is brought from the iſland of Iquique for the culture of the agi or cod-pepper, in the vale of Arica. There was no white face in her but the pilot, to whom I ſent, to ſee if her owner would ranſom her. At ſeven o'clock in the morning I received a letter from the owner, expreſſing his poverty, and declaring his readineſs to comply, to the utmoſt of his power; and the honeſt man was as good as his word. I agreed upon reſtoring him his ſhip and ſix negros, for 1500 pieces of eight, and he was ſo punctual and expeditious, that at ten the next night he brought the ranſom agreed for. Soon after the receipt of this, we took a veſſel of about ten tons, as ſhe was coming into the road with a cargo of dried fiſh and guana, within a mile of the town. The maſter of this bark likewiſe came off upon a balſe [one of the ſeal-ſkin boats already deſcribed.] On this he brought off two jars of brandy, and 40 pieces of eight for his ranſom, which, conſidering his mean appearance, was as much as I could have expected. One part of his freight was valuable, which was the dried fiſh.——

Saling from Arica, Captain Shelvock fell in again with the Wiſe Solomon, in the road of Hillo, who ſeeming determined to protect certain veſſels that were with him, the Engliſh made no attempt upon them, but proceeded on their voyage, a moiety of the money taken at Arica being divided among them on the 2d of February; and on the 22d of the ſame month, they came a-breaſt of Callao, but attempted nothing.—

On the 26th, ſays Captain Shelvock, the officers in the Mercury deſired to be relieved; and it being Captain Hatley's turn to go in her, he propoſed to me that he might continue along ſhore, till we had got the length of Lobos, in 7° ſouth lat. I could not but approve of this, conſidering the probability there was

1723 of his meeting with the Panama ſhips; and every body being well pleaſed, I added to their complement of men, and gave them a month's proviſions, mounted two of our quarter-deck guns on the Mercury, and lent Captain Hatley my pinnace. As ſoon as every thing was ready for their departure, Captain Betagh, whoſe duty it was to relieve the marine officer in the Mercury, being unwilling to go on this party, addreſſed himſelf to the people, and with a fearful countenance ſaid, that he and they who were to go with him were ſent for a ſacrifice, and many other expreſſions tending to create a general mutiny. I now imagined no leſs than that he was about to act what he had threatened me, when he told me it ſhould be a ſhort voyage with me; and therefore I deſired to know of the ſhip's company, who amongſt them was of Betagh's opinion? Their anſwer, with one voice, was, "None." This done, I ordered the Mercury alongſide, and Hatley and Betagh went on board of her; putting off from us, they gave us three cheers, and ſtood right in for the land, in latitude, by obſervation, of 10° 9′ ſouth. The very next day, they took a ſmall bark laden with rice, chocolate, wheat flour, and the like. The day following they took another. On the 7th day of their abſence they made themſelves maſters of a ſhip of near 200 tons burden, worth 150,000 pieces of eight. Fluſhed with this ſucceſs, it ſeems Betagh prevailed on Hatley and the greater part of the people with them, to lay hold of the opportunity, and go to India. But they had no ſooner clapped their helm a-weather, than they ſaw a ſail ſtanding towards them, which in effect proved to be a Spaniſh man of war, that caught them, and put an end to their India voyage. The Engliſh priſoners were treated but indifferently; but it appears that Betagh, who was of their religion, and of a nation that the Spaniards affect to be fond of, was made an officer, and uſed very reſpectfully. This he certainly deſerved, at their hands; for he gave them an account of the whole ſcheme of our voyage, and not only informed them of what we had done, but alſo of what I deſigned to do; ſo that they did not doubt but I myſelf ſhould be in the ſame hands very ſpeedily. We ſaw a ſail at anchor in the roads of Guanacho, on the 29th day of February; and at eleven in the morning we came up and anchored along-ſide of her. There was nobody on board, but two India men and a boy, who informed us that there was a rich ſhip in the Cove of Payta.

March 21, at three in the afternoon, we ſaw the Pena Oradado, or the *Hole in the rock*; and in an hour afterwards, we entered the Cove of Payta with French colours flying. There we found only a ſmall ſhip at anchor, with her foremaſt cut, and her main-topmaſt unrigged; but the taking of this town being conſidered in the ſcheme of our voyage as a matter of great importance, I conſulted with my officers concerning the propereſt methods of going about it, at two o'clock the next morning I landed with 46 men, leaving Mr. Coldſea, the maſter, and ſome others, to bring the ſhip nearer in, that we might the more expeditiouſly embark the plunder we might get, being now on ſhore, I marched up to the great church without meeting any oppoſition; and indeed I found the town entirely deſerted by the inhabitants. At day-light we ſaw what ſeemed great bodies of men on the hill, on each ſide of us, who I expected, when they had viewed our ſtrength, would have paid us a viſit; but I found that as we marched up towards them, we drove them before us. The remainder of the day was ſpent in ſhipping off what plunder we had got, which conſiſted of hogs, fowls, brown and white garavanahs, Indian corn, wheat, flour, ſugar, and as much cocoa nut as we were able to ſtow away, with pans, and other conveniences for preparing it; ſo that we were ſupplied with breakfaſt meat for the whole voyage, and were full of proviſions of one kind or other. In the afternoon a meſſenger came to us, to know what I would take for the ranſom of the town, and ſhip; to which I anſwered, That I would have 10,000 pieces of eight, and thoſe to be paid in twenty-four hours, if they intended to ſave either. But the governor gave me to underſtand, in plain terms, that he neither could nor would ranſom the town, and did not care what I did with it, ſo I ſpared the churches. Having received this negative anſwer, I got every thing ſerviceable out of the town, and inſtantly ordered it to be ſet on fire; and the houſes being extremely dry, conſumed away apace. But no ſooner was Payta in a blaze, than thoſe on board made ſignals for me to come off, and kept inceſſantly firing towards the mouth of the harbour. On this I ordered all my hands off, and went firſt on board myſelf in a canoe with three hands only; but before I had got half-way, ſaw a large ſhip lying with her fore-top ſails a-brack, and with a Spaniſh flag flying at her fore-top-maſt head. At this proſpect two of my three people were ready to ſink, and when I looked back on the town, I could not forbear wiſhing that I had not been ſo haſty. As the admiral was coming in with all his ſails ſpread, Mr. Coldſea, by the aſſiſtance of the few on board, fired at him ſo ſmartly, that he ſtopped the enemy's career. The Spaniard apprehending he ſhould have hot work with us, brought his ſhip to, that he might put himſelf into a condition of making a vigorous attack upon us. This inactivity of the enemy gave me an opportunity of getting on board, and ſuffered my men to come off, about 50 in number; but the Spaniard was within piſtol ſhot before they had all got into the ſhip; upon which we cut our cable, but our ſhip falling the wrong way, I had but juſt room enough to ſail clear of him. Being now cloſe by him, his formidable appearance ſtruck an univerſal damp on every one's ſpirits; and I myſelf could foreſee nothing but that we ſhould be torn to pieces by him, and longed for an opportunity to try our heels with him, while our maſts were ſtanding. I expected every minute that he would board us, and upon hearing a ſhout among them, I concluded they had now come to that reſolution; but I preſently ſaw that the occaſion of this joy was their having ſhot down our enſign ſtaff, upon which, they ſeeing our enſign trailing in the water, were in hopes we had ſtruck; however, I ſoon undeceived them by ſpreading a new enſign in the mizzen ſhrouds. Upon this ſight they lay ſnug, and held their way upon our quarter. At laſt, deſigning to do our buſineſs at once, they clapped their helm well a-ſtarboard, to bring their whole broadſide to point at us, but their fire had but little effect, they muzzled themſelves, and all ſtood faſt with us. This gave me time to get both a-head and to windward of him, before he could fill his ſails again. And now I found that if our maſts, which were by this time but ſlenderly ſupported, would bear what ſail we had aboard, we ſhould ſoon ſteal away from him. After this, he was in a great hurry to get his ſprit-ſail yard fore and aft, threatening us very hard, and plying us with his fore chace; but we were ſoon out of his reach, and all hands were immediately employed in repairing our damages. This ſhip was called the Peregrine, of 56 guns, with upwards of 450 men on board her. During this action, we had not a man killed or wounded, although the enemy often hulled us and once in particular, a ſhot coming into one of our ports, diſmounted one of our guns between decks, tearing off the nut of the gun, and breaking it into a great many pieces, which flew fore and aft, in the midſt of a crowd of people, but without hurting any of them. Our ſtern was much ſhattered, and our rigging much diſabled. Our main-maſt was a little wounded, yet ſtood a long while with only one good ſhroud to ſupport it. Our foremaſt fared little better, yet I kept all the canvas, except the main-top-gallant-ſail at hard-bat's end. An unlucky ſhot took the bow of our launch, as ſhe lay upon the quarter, and ſet fire to ſome cartridges of powder, which were negligently left in her, and which blew away her moorings; and we loſt her. Seeing a great ſmoke ariſe from the quarter, at firſt I imagined ſome

They burn Payta.

accident had happened within board. In ſhort, in about three glaſſes, we got clear of the admiral, who tacked and ſtood in for Payta, and we ſhortened ſail. A narrower eſcape from an enemy could not well have been made, conſidering the vaſt difference between us as to force. The Spaniard had 56 guns, as has been ſaid, and we, on the contrary, had but 20 mounted; they 450 men, we, on our part did not exceed 75; and 11 negros and two Indians were included in that number. He had farther this great odds over us, of being in a ſettled readineſs, whilſt we were in the utmoſt confuſion. As for our ſmall arms, they were wet and uſeleſs to us; and what was more, in the midſt of the engagement, one third of my people inſtead of fighting were hard at work to make farther preparation for an obſtinate reſiſtance, if we had been puſhed to extremities; and, particularly the carpenter and his crew, were buſy in making ports for ſtern-chaſe guns, which, as it happened, we made no uſe of. Upon the whole, we had the good fortune to eſcape this danger, which was the more to be dreaded, becauſe, as we had ſet fire to the town, they were probably exaſperated, on account of the churches which I never intended to deſtroy; and if we had fallen into their hands, they might have given us but uncomfortable quarters. At the beſt, however, it cannot but be allowed to have been a moſt unfortunate affair. The loſs of my boat and anchor was irreparable, and may be ſaid to be the cauſe of that ſcene of trouble which will take up the remainder of this narrative; for we had now but one anchor, that at Payta being the third we had loſt and we were beſides deſtitute of a boat of any kind. At five the ſame evening, we ſaw a ſail under our lee-bow, which I took to be the prize that we had left to cruiſe for us near the Saddle of Payta, and we therefore ſtood to the weſtward all night, and the next morning we ſaw two ſail a-ſtern of us. I tacked, and ſtood towards them, and, in a little time could ſee that one of them was ſtanding in for Payta, while the other kept ſtemming with us; but the nearer I approached her, the leſs I liked her, and could not but think it adviſeable to put my ſhip about and crowd ſail from her. However, ſhe gained upon us, and advanced near enough to ſhew us ſhe was the Brilliant, the admiral's conſort. She was a French-built ſhip, of 36 guns, manned with people of that nation and other Europeans. She was handſomely rigged, which is rare to be ſeen in thoſe parts, and ſailed almoſt two feet for our one; ſo that notwithſtanding we had a calm almoſt all the heat of the day, ſhe neared us apace. But night coming on I made uſe of the old ſtratagem (I thought it might be new here) of turning a light adrift in a half tub, inſtead of a boat, darkening one part of the lanthorn, that it might appear the more like a ſhip's light, and then immediately altered my courſe. As the day broke, I hauled all my ſails, and in full day-light could perceive nothing of the enemy. This was the ſhip wherein Betagh was ſo much reſpected; and by his advice it was, as I have been told, that the admiral ordered his conſort to ply up to windward to Lobos, our firſt place of rendezvous, while he himſelf came to Payta, in ſearch of us. This ſeparation, though intended as a ſure method to catch us, very fortunately proved to be the means of our preſervation. Being thus cloſely purſued, I took an offing of thirty leagues from the ſhore, and then brought to, in order to conſider what I had beſt do. I was ſtill in the dark, as to my conſort, an embargo, as I was told at Payta, was laid on all ſhipping to leeward, for the term of ſix months, our prize, which I deſigned to make a fire-ſhip of, was taken by the Brilliant, and I was ignorant what was become of the Mercury.

In the midſt of all this peril and perplexity, I called my officers together, to let them know that it was my opinion, as we were then circumſtanced, we had a better proſpect to windward than to leeward; that on the coaſt of Chili we ſhould not be in the leaſt ſuſpected, and ſhould at the ſame time, in the moſt effectual manner, eſcape the enemy's men of war; that after taking in water at Juan Fernandez, we might cruiſe out the whole ſeaſon off the Ports Conception, Valparaiſo, and Coquimbo; where, among the ſhipping we might be ſtocked with anchors, cables, boats, and a veſſel to convert into a fire-ſhip, on which I greatly depended. All this being univerſally approved of, we ſtretched away to the windward. My intentions, after this, were fixed upon the coaſt of Mexico. There I propoſed to run to the height of Tres Marias, and California, as the moſt likely places to meet with the Succeſs. Theſe two places would have been commodious, the firſt for ſalting of turtle, and the laſt for wood and water, and for laying myſelf in the tract of the Manilla ſhip, which if I ſhould have had the fortune to meet with, and a fire-ſhip with me, I would have tried what I could have done with her. [As they were purſuing their courſe, Captain Shelvock's people found a leak in the powder room; which ſpoiled all the powder except ſix barrels; the leak, however, being ſtopped they proceeded on their voyage.]

1720

On the 11th of May, continues the Captain, we ſaw the iſland of Juan Fernandez. Here I plied off and on, till the 21ſt a hard gale aroſe, and brought with it a tumbling ſea, ſo that in a few hours our cable, which was never wet before, parted, and inevitable ſhipwreck appeared before our eyes. But Providence ſo far interpoſed in our behalf, that if we had ſtruck but a cable's length farther to the eaſtward or weſtward of the place where we did, we muſt all certainly have periſhed. Our main-maſt, fore-maſt, and mizzen top-maſt went all away together; and happy it was for us that they did ſo; for, by making them ſerve by way of raft, and by the help of thoſe who were on ſhore before the wind came on, we were all ſaved except one man. In the midſt of this ſurpriſe, the firſt thing I took care of, was my commiſſion, and, remembering the powder to be uppermoſt in the bread-room, I got moſt of it up, with about ſeven or eight bags of bread. Theſe we ſaved, as the ſhip did not go to pieces immediately; however, in a few minutes after ſhe ſtruck, ſhe was full of water. We ſaved, notwithſtanding, two or three compaſſes and ſome of our mathematical inſtruments, and books. When we firſt got on ſhore, we were without any thing neceſſary for our relief; not ſo much as a ſeat whereon to reſt our harraſſed limbs, except the cold ground, which was to be our bed and pillow.—In the evening all the officers came to conſult with me how we ſhould get ſome neceſſaries out of the wreck; and having, by this time, lighted a fire, we wrapped ourſelves in what we could get, laid ourſelves round it, and, notwithſtanding the badneſs of the weather, ſlept very ſound. But the next morning, getting up with the firſt glimpſe of day-light, we looked at each other like men awaked out of a dream; ſo great and ſo ſudden was the melancholy change in our condition, that we could ſcarcely truſt to our ſenſes. I went immediately among the people, to ſet them about the work we had reſolved upon the night before; but they were ſo far ſcattered that there was no getting them together, or we might probably have regained all our beef and pork. This opportunity was loſt by their eagerneſs to build huts and tents, in order to ſettle themſelves for good; for, while they were thus employed, a furious gale of wind came on, which deſtroyed all the proviſions in the ſhip, except one caſk of beef, and one of Farina de Pao, which were waſhed whole on the ſtrand. I had ſaved 1100 dollars, belonging to the gentlemen adventurers, which were kept in my cheſt in the great cabin; the reſt being put in the bottom of the bread-room for ſecurity, could not poſſibly be come at.—I found a very commodious ſpot of ground, about half a mile from the ſea, on which I ſet up my tent. There was a fine run of water within a ſtone's caſt of it, on each ſide, with firing near at hand, and trees proper for our uſe. The people ſettled within call about me, in the beſt manner they could; and having ſecured ourſelves

Captain Shelvock ſuffers ſhipwreck

1720

againſt the inclemencies of the weather, we uſed to paſs our time in the even round a great fire, roaſting cray-fiſh in the embers.

I now began to think of building ſuch a veſſel from the wreck as might carry us all off at once from this iſland; and, for that purpoſe, conſulted with the carpenter, but was aſtoniſhed at his anſwering, "That he could not make brick without ſtraw," and walking away from me in a ſurly humour. From him I went to the armourer, and aſked him what he could do towards building a ſmall veſſel for us. He anſwered, That he hoped he could do all the iron work; that he had with much labour got his bellows out of the wreck, and that he did not doubt but we ſhould find a great many other uſeful things when we came to ſet about a ſearch for them in good earneſt. [In effect after much trouble the captain perſuaded them to ſet about the bark, but they went on with the work juſt as they pleaſed; and one among them of the name of Morphew, in the name of the company uſed his commander with much inſolence. They were divided into parties, but this diſagreement among themſelves at length brought them back in ſome degree to their duty, and after paying the carpenter a ſum of money agreed on, the veſſel at length was finiſhed, but patched up in a ſtrange manner to ſerve the preſent exigency. In the mean time the boat was completed which had been begun by the armourer; this boat was employed in fiſhing, and a quantity of conger eels was cured for a ſupply of proviſions.]

A bark built out of the wreck.

But now (continues our voyager) having done all we could when we came to put in water, to try the tightneſs of our work, it was followed by an univerſal outcry of "A ſieve! A ſieve!" I was afraid the people would have deſpaired, and deſiſted from uſing any farther means; but in a little time, with inceſſant labour, we repaired the ſhip's pumps, and fitted them to our bark, and the next ſpring-tide, which was on the 5th of October, we found means to launch her. As ſhe went off the blocks, I named her *The Recovery*; though I was ſadly afraid of hearing ill news from thoſe a-float in her; but all proved indifferently well: and I knew it to be dangerous to lie here long, eſpecially having no other anchor than a great ſtone and a ſlight rope to hold her with, while the leaſt puff of wind might have driven her upon the rocks, and deſtroyed her; we therefore got all the water off that day, which we did ſo much the eaſier and quieter becauſe the caſks were ready ſtowed in the hold. Our veſſel had two maſts, and was about 20 tons burden; and, to my great ſatisfaction, I found that one pump conſtantly working kept her free. The next day we got every one on board, and embarked, leaving behind us eleven or twelve who had deſerted us. They were deaf to all perſuaſions, and, in ſhort, ſent me word, They were not yet prepared for the other world; ſo they, together with the like number of blacks and Indians, remained on the iſland.

Shelvock's deſcription of the iſland.

This iſland enjoys a fine wholeſom air; inſomuch that out of 70 of us that were on it for the ſpace of five months and eleven days, not one of us had an hour's ſickneſs, notwithſtanding we fed on foul diet without bread or ſalt. For my own part, I muſt acknowledge the bounty of providence; for altho' I loſt much of my fleſh; yet from being before very corpulent, and almoſt crippled with the gout, I became one of the ſtrongeſt and moſt active men on the iſland.—On the tops of ſome of the mountains here, are plains covered with groves of Italian laurel. Palm-trees are likewiſe found in moſt parts, growing in ſmooth joints like a cane, to the height of 30 or 40 feet: what ſeamen call palm cabbage, is the very ſubſtance of the head of this tree, which being cut off, there is found incloſed in it a white and tender young cabbage; but for every one that we got, we were obliged to cut down a fine lofty tree. The northern part of the iſland is very well watered, and the water keeps well at ſea, and is as good as any in the world. Down the weſtern peak deſcend two caſcades, to appearance at leaſt 300 feet perpendicular, which, with the palm-trees that grow up cloſe by the edges of them, exhibit a very grand and romantic proſpect. We might have found goats enough on the mountains, if we had been able to follow them, and cats were ſo numerous that there was hardly ſuch a thing as taking a ſtep without ſtarting one. Thoſe whoſe ſtomachs could bear their fleſh for food, found a more ſubſtantial relief from hunger by one meal of it, than by four or five from that of fiſh.

The Spaniards, who firſt ſtocked this iſland with goats, endeavoured afterwards to deſtroy theſe goats by dogs, which are likewiſe very numerous; but the former have many inacceſſible places of refuge where no dogs can follow them; and ſtill continue to afford a ſpecial ſupply to ſtrangers.

Sea lions and ſeals there.

While we were here, it was the ſeaſon for the ſea lioneſſes to come to land, to bring forth their young. Theſe have bodies of a monſtrous bulk, being from ten to twelve feet long, and nearly as much in circumference. I may venture to affirm that, one with another, they would yield each a butt of train oil. They are ſo indolent, that as ſoon as they have gained the land, they fall aſleep, and in that condition remain for a month ſo torpid, that one might fire a piſtol at their heads without diſturbing them: But where the ſea lioneſſes lie, as they do in companies after they have yeaned, to give ſuck to their young, there is always an old ſea lion of the largeſt ſize inceſſantly on the watch; who at the approach of an enemy, makes a hideous roaring, threatening death to him who ſhould be ſo hardy as to moleſt his charge; and, in truth, were they not ſo unwieldy, they would be deſperate creatures to encounter. We were accuſtomed to walk among them without dread; for all but theſe that were to take care of the young were buried in the profoundeſt ſlumbers. On the land they ingender, and bring forth their young, who ingender alſo before they go off, againſt the next ſeaſon; ſo quickly do they increaſe and propagate. The ſeals here may be properly called ſea wolves from the reſemblance their heads bear to thoſe of wolves, differing in that particular from thoſe of the northern hemiſphere, where their heads are more like the dog's. They are naturally ſurly, and ſnarl in a very angry manner, on the approach of any body. Two fins compoſe their tails; and with theſe they get along much faſter than the ſea lions.

Every thing one ſees or hears on this iſland is different from what is elſewhere to be found. The very ſtructure of the iſle, in all its parts, appears with a certain ſavage, irregular beauty not to be expreſſed. The ſeveral proſpects of lofty, inacceſſible hills in the day, and the ſolitarineſs of the gloomy, narrow valleys in the night, added to the mixed, confuſed noiſe of the ſurge, continually beating againſt the ſhore, the tumbling of the waters from an immenſe precipice; the roaring of the ſea lions, and ſea wolves, whoſe voices are more or leſs ſhrill or hoarſe, according to their youth or age, compoſe ſo wild and horrible a medley, that the ſtouteſt man muſt be long accuſtomed to it, before he can taſte the ſweets of refreſhing ſleep, or wholly diveſt himſelf of terror.

We ſet ſail (continues the captain) on the 6th of October, having nothing to ſubſiſt on at ſea but ſmoked conger eels, one caſk of beef, four live hogs, with three or four buſhels of farina. We were forty in number, crowded together, and lying upon bundles of the eels, with no convenience of keeping the men clean, nor any thing to defend us from their abominable ſtench; nor was there a drop of water to be had, without ſucking it out of the caſk through a pipe, which being uſed promiſcuouſly became intolerably nauſeous. The unſavoury morſels daily eaten amongſt us, created perpetual quarrels, every one contending for the frying-pan. All the convenience we had for firing was only a half-tub filled with earth, which rendered our cooking ſo tedious, that we had a continual noiſe of frying, from morning till night.—Thus we traverſed the ocean; happy, however, in the

the thought of being once more afloat, and cherishing the hope that something would speedily fall into our hands like to it; for not having above six inches free board, and our bark tumbling prodigiously, the water continually ran over us; and having only a grating deck, and no tarpaulin to cover it, our pumps could but just keep us free.——

[Upon the fourth day of their new expedition they fell in with a Spanish vessel called the Margarita, which they attacked with vigour, but were three times repulsed. All night they lay by to provide slugs, ammunition being extremely scarce, and when dispositions were made in the morning for boarding the Spaniard, with a resolution of carrying their point or submitting to superior force, a fresh gale springing up, bore the enemy away from the English, and left them to their own disagreeable reflexions. In their engagements with this ship the gunner was killed, and the first lieutenant, the master, and one of the sailors were wounded.]——

"Our condition (says the captain) now grew worse and worse, for soon after we had parted from this vessel, a hard gale came on, which lasted for four days without ceasing, during all which time, we had not an hour's hope of living a minute. We were obliged to scud away under bare poles, with our yaul in tow, and, having but a short piece of boat-rope, on the descent of every sea, we were in the greatest danger of having the bark's stern broken by the violence of the boat's precipitate fall after us; and once, in particular, a great hollow sea was near throwing her on our deck which would immediately have put an end to our voyage. The excessive fright into which our people were put by this storm, made many of them form a resolution of going on shore with the first opportunity. In this extremity, calling to mind Mr. Frezier's account of Iquique, I mentioned the surprisal of that place to the crew, which being universally approved of, we directed our course thither. It was three weeks before we got this length, and having nothing to ride the bark with, we were obliged to keep the sea with her, while the boat went between the rocks, and was received by some Indians on the strand with a kind of welcome. The men being landed, went to the lieutenant's house, broke it open, and rummaged the whole village, where they found a booty more valuable at that time than gold and silver. It consisted of about 50 bushels of wheat flour, 120 of calavances [or garavances] some jerked beef, pork, and mutton, some thousand pounds weight of well cured fish; a good number of fowls; some rusk, and four or five days eating of soft bread, together with five or six jars of Peruvian wine and brandy; and, to crown all, they had the good fortune to find a boat near the shore, to bring off the booty, which otherwise would have been of little use to us, our own boat being already sufficiently laden with the men. The settlement of Iquique consists of about forty scattered, ill-built houses, which scarcely deserve that name, and a small church. There is not the least verdure to be seen in or about it, nor does it afford of itself the least necessary of life, not even water, which the inhabitants are obliged to fetch in boats from Pisagua, ten leagues to the northward.

Captain Shelvock sails for Iquique.

They plunder the village.

By two Indian prisoners that we took here, we were informed that the lieutenant's boat was then at Pisagua, and that it would not be long before her return. However, being determined to make some attempt in the road of Le Nasco, in lat. 16°; and at Pisco in 13° 45′ south, we set sail; and the very morning we came off the Sierra, or high-land of Le Nasco, two hours before day-light we fell in with a large ship, the circumstances of our engaging her were much the same with those we had with the Margarita. We met both at the same time in the morning, and whilst in pursuit, had the misfortune of being becalmed. We struggled with this last for six or seven hours, and were at last obliged to leave her, because the sea-breeze came on so strong, and the sea ran so high, that had she been of no force, our slight bark must have gone in pieces before a third part of us could have entered her. The ship was called the St. Francisco Palacio, carrying 700 tons, eight guns, and ten patararoes, and was well manned, and provided with small arms. This last repulse was made a pretence for much murmuring: many despairing of ever being able to take any thing as our condition was, were for surrendering to the enemy who was all the night becalmed near us. To prevent their design, I took care to remove the two boats out of their power, by ordering two men into each of them, such as I thought I could trust, and to cast off from us at a little distance, so that none might escape in them. But, notwithstanding the confidence I had in these four, the two in the best boat ran away with her; and, the next day I was informed that the lieutenant and Morphew had made a party too strong for me to oppose, to go away with the boat that was left; but, it blowing fresh the next night, they were prevented from executing their design. 1720

The next day we stood into the road of Pisco, as I had designed, where we discovered what appeared to be a large ship. We bore down to her, with a resolute despair, and laid her athwart the hawse; but, to our great satisfaction, we met with no resistance, and were received by the captain and his officers with their hats off, in the most submissive manner, asking for quarter. Before we came up, I had ordered our boat to intercept theirs, which, was going on shore. The men clapped her on board, but not holding fast, they fell astern, and could not fetch up with her again; so that in this boat we lost every thing that might have been valuable in the prize. She was a good ship, of about 200 tons, called the Jesu Maria, almost laden with pitch, tar, copper, and plank, but nothing else. The captain offered me 1600 dollars for her ransom, but, in my condition, I could not give ear to the proposal. He informed me that the Margarita had been arrived some time at Callao, where she had given a full account of us; that the captain of her and three more were killed in the engagement, and the priest and several others were wounded; he said she was ready to put to sea again, with an addition of ten guns and 50 men, to cruise for us, and moreover, that the Flying Fish, a frigate of 28 guns was already out with the same intent. Upon this advice, having cleared our bark we gave her to the Spanish captain, and, as soon as the breeze sprung up, we weighed and went to sea, and in going out met with our boat, which left us in the night: they edged towards us, imagining us to be Spaniards, by which means we got them again. The two fellows in her were almost dead, having had nothing to eat or drink for three days, and had just been ashore to kill seals, in order to drink their blood. They had no excuse for themselves, but that they fell asleep, and the faint breezes of the night had wafted us away from them.

They take the Jesu Maria.

Pisco being forty leagues to the windward of Callao. I kept close hauled till I had gained two degrees offing, and kept that distance till we had got well to the northward of Callao, and hauled in again for the land, a little to the southward of Truxillo, and looked into the roads of Malabriga and Cheripe; but seeing no ships at those places, I passed between the islands of Lobos de Tierra and the continent, and, on the 25th of November we found ourselves near the Saddle of Payta, where, having made some prisoners, I examined them concerning the condition of the town, which they answered was very poor at present, having neither money nor provisions in it, and shewed me a small bark on the shore, which Captain Clipperton had sent in a little while before with some of his prisoners, which had given them such an alarm, that every thing had been again removed into the country. This unwelcome news did not hinder us from keeping on our way, with our Spanish colours flying, till we came to the place of anchorage. No sooner was our anchor down than I sent away Mr. Brooks with both the boats armed with 24 men; no more of them, however, appeared than those who rowed, and

1720 two or three ſitters in each, the reſt with their arms lying in the bottom of the boat. Thus they advanced towards the town, without giving the leaſt umbrage to the inhabitants, who were ſo thoroughly perſuaded of our being Spaniards, that when the people landed, they found the children playing on the beach, who ran away at the ſight of armed men. In an inſtant the whole place was in confuſion; the town was deſerted, and nothing left in it, but a few bales of coarſe cloth, about 500 of dried dog fiſh, two or three pedlars packs, and a trifling quantity of bread and ſweet meats, ſo that we unluckily had but little employment for our boats. As we lay at anchor, we took a boat with about 50 jars of Peruvian wine and brandy. The maſter of which told us he was come by ſtealth from Callao, there being orders that none but ſhips of force ſhould ſtir out. This man was the firſt that acquainted me with Captain Hatley's being taken. From this place we directed our courſe for the iſland of Gorgona, in the bay of Panama, and in our paſſage thither built a wooden ciſtern, big enough to hold ten tons of water, wherewith to ſupply our want of caſks, as without the help of ſome ſuch contrivance, we ſhould have but little hopes of ever being able to return home. In our way, we made the iſland of Plate, Cape St. Francis, and Gorgonella; and on the 2d of December we came to an anchor to the leeward of the northernmoſt point of Gorgona, within leſs than a quarter of a mile from the ſhore. Here we had the advantage of filling our water caſks in the boat, the water running in ſmall ſtreams into the ſea, and cut down our wood at high-water mark; ſo that in leſs than 48 hours we had done our buſineſs here, and hurried away to ſea for fear of theſe who might be in queſt of us.

Having got out of the track of the enemies, we conſulted on the beſt methods of proceeding, when the majority were for going directly over to the coaſt of Aſia. Upon which we changed the ſhip's name to the Happy Return, and applied all our endeavours towards abandoning theſe coaſts; but the winds and currents were averſe to it; and thoſe who oppoſed our departure clandeſtinely, did ſo much damage to our ciſtern, that the greateſt part of our water leaked out. This, together with continual contrary winds and dead calms, which detained us till our proviſions were much exhauſted, rendered us incapable to undertake ſo long a run; and therefore to furniſh us with what we wanted, I propoſed a deſcent on the iſland of Quibo, in lat. 7° 40′ north, where, by Captain Rogers's account, I gueſſed there muſt be people who lived in a plentiful manner on the products of the country.

On the 13th of January, we anchored between Quibo and the Iſle of Quivetta, in a ſandy bay, commodious for wooding and watering. The morning after our arrival, we ſaw two large piraguas rowing in for Quivetta with Spaniſh colours flying, and after a little debate whether it would be prudent for us to attack them in our boat or not, it was now reſolved at all hazard, to go after them in our yawl. This enterprize was commanded by Mr. Brooks, who found the men on ſhore, and brought away their piraguas, and two priſoners, the one a mulatto, the other a negro: The reſt ſought for refuge in the woods. The mulatto mortified us very much, by telling us that a veſſel laden with proviſions had paſſed by us in the night; but, to make amends, promiſed to conduct us to a place where we might ſupply ourſelves without any hazard, provided we were not above two or three days about it. No news could be more welcome to us; wherefore we were very briſk in getting off our wood and water; and on the 19th of January, we got ſafe in between Mariato and the iſland of Sebaco, and anchored in ſix fathom water, over againſt a green field. Our guide deſired we might be going three hours at leaſt before day light, and ſaid that we ſhould be in good time at the plantations. Accordingly I embarked at two the next morning in our own boat, and ordered the two lieutenants in the two piraguas, leaving my ſon and a few men with him to take care of the ſhip. Our guide carried us up ſome part of the river S. Martin, and out of that into ſeveral tarunches of very curious creeks, among mangroves, where we had not room to row, which made me ſuſpect he had no good deſign in his head; but we landed juſt at day break, in a fine ſavannah or plain, and, after a march of about three miles, came to two farm-houſes, the owners of which had made their eſcape, except the wife and children of one houſe. The place anſwered the man's deſcription, being ſurrounded by numerous herds of black cattle, hogs, and plenty of fowls of all ſorts; and here we found ſome dried beef, plantains, and Indian corn, and were ſupplied with a wholſome breakfaſt of hot cake and milk, a diet we had been long unacquainted with. When it came to be broad day, I ſaw our ſhip cloſe by us, upon which I aſked our mulatto how he came to bring us ſo far about? He anſwered, There was a river between us, and he did not know whether it was fordable or not. I therefore ſent ſome men to try, who found it was not above knee-deep. Wherefore, to avoid the trouble of carrying our plunder ſo far as we had been led, I ordered our boats to row down the river S. Martin, and to come to the beach over-againſt the ſhip. We had not been long here before the maſter of the family we were with, being anxious for their ſafety, returned, and made an offer of as many of his black cattle as we ſhould think fit to require, which offer we kindly received; and he brought us the number we thought we could ſave; for having but little ſalt, and not being able to ſpare water, to keep them alive when at ſea, all our demands were moderate; and the few we required were killed as ſoon as they were carried on board. Their fleſh we preſerved, by cutting it into long ſlips of the thickneſs of a finger, and then ſprinkling it with ſo ſmall a quantity of ſalt, that we did not uſe above four or five pounds to an hundred weight: Then letting it lie together two or three hours, we hung it up to dry in the ſun, which perfectly cured it, and that better than it could have been done any other way. Having done all we propoſed in coming here, we departed, with our decks full of fowls and hogs, among which there was one with its navel, or ſomething like it, on its back. The Spaniards ſay, that when wild in the woods, this is a terrible animal.

Their meeting with Clipperton.

On the 25th of January, we made a ſail about two leagues to the leeward of us. We gave her chace till we found ſhe was of European ſtructure, when, fearing ſhe might be one of the enemy's ſhips of war, I clapped on a wind, and, in half an hour after, it fell calm. Soon after we ſaw a boat rowing towards us which proved to be the Succeſs's pinnace, commanded by Mr. Davidſon their firſt lieutenant. Our firſt interview was attended with equal aſtoniſhment on both ſides: he could hardly believe that he ſaw us in ſo mean and forlorn a condition, and I could ſcarcely believe that the Succeſs (if in being) had been all this while wandering up and down theſe ſeas. I entertained him with a rehearſal of the conſtant run of misfortunes which had befallen us in the long interval ſince we ſeparated near the coaſt of England, till our preſent meeting that day. He on his part, entertained me with ſeveral remarkable incidents, which had happened to them in the courſe of their voyage.

[At this time Mr. Davidſon, in ſhort, gave a relation of all that had paſſed on board the Succeſs, from the time of their ſeparation; in the courſe of which narrative, according to Captain Shelvock's account, Clipperton loſt many opportunities of benefiting his owners; but we have already remarked how glad theſe commanders were of finding matter of complaint againſt each other. While they were thus diſcourſing, a gale ſprang up, and they bore down to the Succeſs. The reader has ſeen Clipperton's account of this matter, we ſhall now give him Captain Shelvock's relation of their various meetings in the South Seas.]

Here, ſays he, I gave Captain Clipperton and Mr. Godfrey the agent general, the whole hiſtory of my

voyage hitherto, and expected that I should have been treated by them as one belonging to the same interest; but found I was mistaken; for they were unwilling to have any thing to do with me, since my ship was lost. However I conceived that he could not be so inhuman as to deny me the supply of such necessaries as I wanted, and he could conveniently spare. The answer I had to this was, That I should know more of his mind the next day. Amongst the rest of the discourse I had with him, he told me he was just come from the island of Cocoas, that his people were sickly and at short allowance. Upon this, I offered my service to pilot him to Mariato, which was not above thirty leagues distant from us, where he might refresh his people, and supply himself with what he wanted. But this was not accepted, he being resolved to make the best of his way to Tres Marias, where he said there was turtle enough to be had. So I left him for that night. The next morning, as I was going on board of him with some of my officers, he suddenly spread all his canvas, and crowded away from us who were in the boat; upon which I returned to our ship, and made signals of distress, and fired our gun several times, which was not regarded by him, till his very officers cried out on his barbarity; and, at last, he brought to. When I had sailed up to him (being exasperated at such inhuman treatment) I sent Mr. Brooks my first lieutenant to know the reason of his abrupt departure, and to tell him that we stood in need of several necessaries, which if he was not inclined to give, I would purchase of him. Upon these terms, he spared me two of his quarter-deck guns, sixty round shot, some musquet balls and flints, and a Spanish chart of the coast of Mexico and part of India and China, a half-hour and a half-minute glass, a compass, and about 300 weight of salt; but, with all the arguments I could use, I could not prevail on him to spare us the least thing out of his surgeon's chest for the relief of Mr. Coldsea our master who had been ready to die of his wounds received in the engagement with the Margarita, for above three months past. When this was concluded, I again asked him, if I could be of any service to him, and assured him, I had a pretty good ship under foot, though she made but a poor figure, and believed I could hold him way, and that he knew our cargo was pretty valuable. To all this he answered, That if I had a cargo of gold, he had no business with me, and that I must take care of myself. Mr. Hendric the agent, and Mr. Rainer and Mr. Dodd, lieutenants of marines, seeing but little prospect that we should ever get home, and being weary of the work imposed upon them, desired I would let them go on board the Success, for a passage to England, which I complying to, they went on board accordingly, and Clipperton left us to shift for ourselves, near the island of Cano. Having purchased this supply, I was for going to the southward into the Bay of Panama, to try our fortune there, but the majority opposed me through fear, and were for going to Tres Marias, to salt turtle there, and then to stretch over to India. We directed our course thither, and a few days after, met with the Success, in quest of Sansonnate, where they expected to receive the Marquis of Villa Roche's ransom. That nobleman had been some time a prisoner with them, and his wife was now at Guatimala, a city within thirty leagues of that port. We ranged close under their stern, and asked how Captain Clipperton and the rest of the gentlemen did; but it was not thought proper to return an answer: Without any concern, he steered one way and we another. After this, calms and contrary winds and unaccountable currents, reduced us to a very small allowance which we were obliged to diminish daily, and should have been in greater distress than ever, had it not been for the turtle which we took upon the surface of the water; we had a continual look-out for them, and they were easily known at a great distance, by the number of sea-birds that perched on their backs. Upon sight of these, we used to lay aside the advantages we might have made of the wind, to embrace the opportunity of prolonging our provisions. Upon the whole, though we lost some of our way in pursuit of turtle after this manner, it was not the greatest inconvenience that attended us; the dressing of it made a greater consumption of our water, the quantity of which decreased upon us very suddenly, by the continual use of it in boiling the turtle with plantain flour. This relapse into a state of famine, threatening us with a certain and speedy perdition, if means were not used to avert it, made me propose the plundering of some small town, as we coasted along the shore. Guatulco was the nearest port; but the very morning we were steering in for this place, at sun-rise we saw a sail a considerable way to the leeward of us. We thought it would be better to take this ship than to venture on shore; and therefore we bore down to her, and she, in the end proved to be the Success. We now met with a double baulk, both as to our hopes of Guatulco, and the ship; for we were, by this accident, got so far to the leeward of Guatulco, that it was needless to beat up so far against the wind upon an uncertainty, when we had a gale, that had it continued, would have carried us to some better port. 1720

But the winds were only a few hours propitious, and, succeeded by perpetual contrary gales, destroyed all our hopes, and brought us down to a small earthen plate of calavances, [or garavances] for 24 hours, which not being sufficient to keep us alive, we had recourse to the remainder of our smoked congers, which had for some months been neglected, and lain soaking and rotting in the bilge water. They were certainly as disagreeable food as ever men eat. Under these calamitous circumstances did we meet with the Success a fourth time, near the port of Angels; and, after having made the appointed signal, we stood so near to one another, that, to use the seaphrase, a biscuit might have been tossed from ship to ship, but we did not change a word with each other; for, Captain Clipperton, as I have since been informed, had ordered all his officers and ship's company to take no notice of us: and though he was so truly sensible of the difficulties and hazards we had to cope with, if our design was to go for India, that he said, the child that was born the day before, would be grey-headed with age before we should arrive there, (by that expression intimating that it was impossible for us to do it) yet, notwithstanding he, without any remorse could see us on the brink of suffering the greatest hardships our ill fortune could load us with, and not lend us a helping hand to deliver us from the impending ruin.

Thus surrounded on all sides by present want, and threatening disasters, we, on the 12th of March, being off the port of Acapulco, saw a ship between us and the shore: I bore down to her, till, perceiving her to be a large European built ship, with Spanish colours flying, I concluded she was the Peregrine, which, as I had been informed, had carried the prince of S. Bueno, who had been viceroy of Peru, to this port, in his way to Spain. With these suspicions, being as yet unwilling to run ourselves immediately into the enemies clutches, I hauled my wind again, which he seeing, pulled down his Spanish, and hoisted an English ensign, and made the signal agreed on between Clipperton and me for knowing one another. Had they been in any other part, I should have been so far from any thoughts of such a change in him, that I should have looked on all his signals as the artifice of the enemy; who might have acquainted themselves with them by the information of such of our men as they had taken prisoners; but now, making no doubt that it was he, I bore down to him, and, being come along-side, he sent Mr. Cooke, his second lieutenant in his yawl, with an obliging letter to me, to inform me that he was cruising for the homeward-bound Manilla ship, and desiring that I would assist him in the enterprise, and come on board of him the next morning, proposing an union of the two ships companies. I was very well pleased with this offer, and,

1721 and, without hesitation, sent him word that I would be with him early. In the mean time, I read over his letter publicly to my people, and exhorted them to consider the great benefits that would accrue to us on all sides from it, upon which they all expressed the most resigned willingness to join in the undertaking. But as Clipperton had used us so unhandsomely before, they desired I would get them some security for their shares, signed by Captain Clipperton, Mr. Godfrey the agent, and the rest of the officers. I went on board, and, according to their request, Captain Clipperton and Mr. Godfrey immediately drew up an instrument fully worded for the purpose, and they, and all the other officers signed it. This was all my people wanted to make them easy.

We then proceeded upon our main business, and, after mature deliberation, it was thought most adviseable, that I should send the greatest part of my men on board the Success, as soon as we saw the Manilla ship, come out of Acapulco, and leave only a boat's crew with me in case I should have occasion to make use of my ship as a fire-ship, or a smoker, which we jointly proposed to do, if we found the enemy too hard for us; and it was determined to board her at once, as we should otherwise have much the worst of it, on account of their superior weight of metal, and the better capacity of their ships, which are built very strong, to bear a cannonading. Clipperton assured me, he was certain of the time when she would sail from the port, which the Spaniards say is always within a day or two after Passion-week, of which we had a fortnight yet to come.

Before I returned to my own ship, I acquainted Captain Clipperton with our slender stock of provision, but particularly with our shortness of water; he told me he had 80 tons of it on board, and he would spare me as much of it as I would have, or any thing else his ship afforded. I had now the pleasure of being restored to my command in as regular a manner as ever; every one, from the highest to the lowest, expressing the satisfaction he had in the prospect before us; but Morphew, that ringleader of all disorders, fearing my resentment, thought it was the best way to insinuate himself into the favour of the Captain and officers of the Success, which he did effectually, by an humble, submissive outward deportment, and prevailing presents, in short he had his end, and left me; but, the next morning, Mr. Rainer, who acted with us afterwards as captain of marines, came on board of us, to visit his old shipmates, and so continued.

Thus we cruised in good order, and with a great deal of hope, until March 17, when, towards evening, Clipperton, contrary to his usual custom, stretched a-head of us about two leagues, without lowering so much as his top-gallant-sail for us to come up with him: I could not but be a little startled at this, as being quite contrary to his usual method. However, I kept standing after him, as I thought, in the night, till we were almost in with the breakers on the shore, which, of course, obliged us to tack, and stand out to sea again, admiring all the time that we had had no sight of any ship near us; which laid me under the most terrible apprehensions, considering the bad condition we were in, for want of water, and the vast distance we were from any place where we could expect to get a recruit of it, having now no choice left, but either to beat up 200 leagues against the wind, to go to Tres Marias, or bear away a much more considerable distance for the gulph of Amapalla, or the Island of Cocoas.

But notwithstanding our distress, I kept our cruising station for him two or three days, at last it was resolved to bear away to the first convenient place to water at; and, in troth, it was time; for we were now above 40 men, who had but three butts of water for a run of 300 leagues, and upwards, on a coast subject to long calms, variable winds, and uncertain currents.

It was afterwards told me, that the night Clipperton left us, he assembled all his officers, and told them it was his intention immediately to quit the coast. His officers remonstrated to him on the barbarity of doing this without acquainting Captain Shelvock with his intentions, and sparing us some water, but he put off their serious expostulations with an inhuman sneer, saying, That if I should, through want, be obliged to surrender to the enemy, I should only share the same fate that, perhaps, some others had met with before me.

Thus this man, perhaps, through an excess of mean-spiritedness, and dreading the engagement with a ship that was always known to defend itself with some obstinacy, neglected as fine an opportunity as most of our nation have ever had, of taking this ship, which, (as I was informed by some Spaniards from Manilla, when I was in China) came out of Acapulco, about a week after we left the cruise. [The reader will observe, what a different account of this transaction is given by Captain Clipperton, and will probably conclude, on the whole, the commanders were once more heartily weary of one another.]

On the 30th of March in the evening, we entered the road of Sansonnate, and, as the sun set, saw a ship at anchor there. It being a moon-light night, I sent the first lieutenant, with some of the best hands, to discover what this ship might be. On his return, he informed me, she was a large one, of one tier of guns at least; I nevertheless continued to ply in all night, and prepared for action. At day-light we found they had hoisted a jar of powder, containing about ten gallons, with a lighted match, at each main and fore-yard arm, and at the bowsprit end, with design to let them fall on our deck, if we boarded them. This contrivance, if it had taken effect, would have soon made an end of both ships, and of all that were in them. Seeing them so desperate in their preparations, I expected a warm dispute with them; and, by what I could see, they were in all points, by much superior to us in strength.

At eleven in the morning, the sea-breeze came in, and ran us upon them very fast, whilst, our small arms were briskly and effectually employed to break their powder jars, before we came on board them, which we did without delay, and, after the exchange of a few shot when on board of each other, they submitted.

This ship was called the Sacra Familia, of 300 tons, six guns, and 86 men, besides a great number of small arms, with some grenade shells and shot. She had been, some time arrived from Callao, laden with wine and brandy; but had now nothing in her but fifty jars of gun-powder, and a small parcel of rusk, and jerked beef: in short she could hardly be said to be worth the trouble we took, and the risque we ran for her, but she was reputed to be a better sailor, and was visibly better fitted out than our own; therefore I changed ships, and we all went on board our prize, which was equipped in the warlike manner we found her, and commissioned, on purpose to take us. Shelvock takes another ship.

A merchant (the escrivan of the ship) being on board, desired we would sell him the Jesu-Maria, which we agreed to, and sent him on shore to raise the money for that purpose. At night he came off with another Spanish gentleman, and brought us a letter of advice from the governor on shore, signifying that there was a treaty of peace on foot between their Britannic and Catholic Majesties, which was what we had not before heard of. However, I sent to the governor, signifying that I should be very glad to see the proclamation and articles, and that thereupon I should be ready to obey the commands of my sovereign. So we came to an agreement with the governor to lie in the road till he sent to Guatimala (50 leagues distant) for those papers, provided he would supply us with water and provisions. On the 5th of April, the governor sent on board two papers, which by the best interpretation we could get of them, did not appear to us to be in the form of proclamations. We told those who brought the papers on board, that we were in great want of an interpreter; upon which they said there were some Englishmen at Guatimala, whom they would send

for, if we would ſtay three days for them, and that they would ſupply us with water and proviſions for that time; which we agreed to, and they deſired we would ſend our boat on ſhore every morning for a ſupply: accordingly we ſent her on the 7th of April, with our firſt lieutenant, Mr. Brooks, and five men. This officer, men and boat, the governor detained under a flag of truce, and, at night, ſent off a ſmall boat with two of our men, with a letter from himſelf, and another from Mr. Brooks. The governor's letter ſignified, That if we did not deliver up our ſhip to him, he would declare us pirates; and Mr. Brooks by his, informed me, it was his opinion that the governor was endeavouring to bully me into a ſurrender, having ſpoken very ambiguouſly of a ceſſation of arms. Notwithſtanding which, I ſent the governor a letter ſignifying, that if we could be ſecured of a ſafe and ſure conduct for ourſelves and effects to Panama, and from thence, by the way of Porto Bello, be conveyed to any of our Britiſh plantations, we would come to a farther treaty, which if he intended, he was deſired to ſignify by firing two guns as ſoon as he had received this advice, and by ſending back my officer and men; and if not, neceſſity would oblige us to ſail. At three in the morning (the governor having ſhewn no ſignal, nor ſent any word) we weighed our anchor, yet lay to, in the bay, till ten, but then made ſail, being forced thereto for want of water; having, however, no other intent, in caſe of the certainty of a peace, than to deliver up the ſhip we were now in, at the firſt convenient port, as was ſignified to the governor by letter.

Being now got out to ſea, we reduced ourſelves to a pint of water for 24 hours each man, and directed our courſe to the gulph of Amapalla, which was about thirty-five leagues to the E. S. E. of this place, in order to get a freſh ſupply. The loſs of my officer and boat's crew ſenſibly diminiſhed the number of white faces; and we ſhould have been ſo much weakened by it, that we ſhould never have been able to manage this great ſhip with her heavy cotton ſails, if we had not taken with us our negro priſoners who proved to be very good ſailors. The loſs of our boat was alſo a very great inconvenience to us; but as I only thought of taking in water enough to ſerve us to Panama, where we were fully reſolved to ſurrender, if it was really peace, I imagined we might make ſhift without her, and get ſuch a quantity as we might want in two or three days time. The winds were favourable, and we arrived there on the 10th following, in the evening. As ſoon as we entered the gulph, we found ourſelves in the middle of ſeveral ſmall iſlands, one of which was the iſland of Tygers, where we expected to find water, but our expectation proved vain; for, after a hazardous and fruitleſs ſearch not only on that, but on ſome of the greateſt of the other iſles, there was not the leaſt drop of freſh water to be found on any of them. In this miſerable condition, threatened on all ſides with inevitable deſtruction, unfit for the ſea, fearful of truſting ourſelves in the cruel hands of the inhabitants on ſhore, quite diſpirited by the continued courſe of misfortunes, which had hitherto been our conſtant attendants, but above all, lamenting this unhappy baulk, in not finding water where we ſo much expected it, which had reduced us to ſuch extremity as we had never known before; in ſhort, ready to ſink under the burden of our calamities, we weighed our anchor on the 13th of April before day-break, and ſtood out from this gulph. And now, having the open ſea before us, I brought my people to the obſtinate reſolution not to ſurrender on this part of the coaſt, let the conſequences be never ſo miſerable. Upon this unanimous agreement, without 40 gallons of water in the ſhip, and no other liquids to ſupply the want of it, we came to ſo ſmall an allowance as half a pint of water for 24 hours; and even this allowance was too large, there being no place that we knew of where we could get any more, nearer than Quibo, to which iſland, (about 200 leagues diſtant from us) we ſhaped our courſe; but having very uncertain winds, and weather, we were 13 days at this allowance. Our ſufferings from the extremity of thirſt are hardly to be conceived; ſome drank their own water, to allay the burning heat within them; but though they moiſtened their mouths, it increaſed their miſery: ſome drank large draughts of ſea-water, which was near putting a period to their lives, whilſt others eat juſt enough of the calavances moiſtened with water, to ſuſtain life; and theſe ſuffered the leaſt. 1721

At length we were fortunately relieved, by falling in unexpectedly with the iſland of Cano, in latitude 9° north; where ſeeing a run of water, Mr. Randall, without dreading the dangerous ſurf, paſſed through the breakers; and, to the unſpeakable joy of the company, ſoon returned with his jars filled; but as he could not bring off more than 60 or 70 gallons, I took care to reſtrain our people to the proper uſe of it; allowing to each man only a quart for their immediate uſe; and I was the more ſtrict in this diſtribution, becauſe Mr. Randall aſſured me the breakers were ſo dangerous that he believed we ſhould not be able to get any more. Being willing, however, to make another trial, the next day I ſent the boatſwain to endeavour to procure a further ſupply; but after waſting the whole day, in ſearch of a ſmooth beach to land upon, he could not ſee one ſpot where he could venture on ſhore. Therefore, thinking we had ſtock ſufficient to carry us to Quibo, I weighed anchor, and, in ranging the iſland, I accidentally diſcovered a ſmooth beach, where the boat getting on ſhore, the crew filled nine jars, which laſted till we arrived at Quibo, where we anchored, at the ſame place we had twice anchored at before. Here we conſulted about ſurrendering ourſelves to the Spaniards, being within 80 leagues of Panama, a place of little or no ſtrength towards the ſea, and but little frequented by the enemy's ſhips of war, where we could treat with them at a diſtance, and be truly informed how affairs ſtood in Europe. During our deliberations, we wooded and watered at leiſure; and ſome ſearched the woods for fruits to refreſh us, by way of preventing the ſcurvy, which we had been all along leſs ſubject to than any ſhip I ever ſaw or heard of in ſuch long runs. Thoſe who were thus uſefully employed, brought us papas, guavas, caſſia, limes, and a ſmall kind of white, ſour plumb, which was much eaten, and admired by moſt of us; but, by its violent operation, put a ſtop to our proceedings for ſome days. However, we ſoon recovered without any bad ſymptoms, made an end of wooding and watering, and ſet ſail, fully determined to ſurrender at Panama [So after did they change their minds in regard to this circumſtance.] In our way we paſſed by a great many ſmall iſlands; but the moſt remarkable were, Montuoſa, Sebaco, and the Iſle of Picara, which lies on the weſtern ſide of Quibo.

On the 15th of May, a ſmall bark taking us for Spaniards, bore down to us, the maſter of which was in the greateſt conſternation when he found his miſtake, but recovered when he heard we were bound to Panama to ſurrender, and readily offered his pilot thither; his veſſel called The Holy Sacrament, being bound to that port, laden with dried beef, port, and live hogs, and as ſhe was leaky, deſired I would take her in tow. I was glad this bark fell into our hands, and ready complied with his requeſt; becauſe, if we found the governor of Sanſonnate's account to be falſe, we might be thoroughly enabled, by this help, to go to India. In the mean while it had remained a point yet undetermined, which ſhould be the perſon intruſted with the flag of truce; for my people having known much treachery, were apprehenſive that the perſon who might be ſent, would only or chiefly make good his own caſe and that of his friends to the governor, and not care what became of the men. At laſt, my ſon was judged the fitteſt to go, as he would ſurely return, if it were only for my ſake. Other difficulties were ſtarted that could not be ſo eaſily removed, notwithſtanding which, we kept on our way fully fixed in our reſolution.

On the 17th of May another ſmall bark came down upon

1721 upon us, but having ſtood pretty near to us, ſhe bore away again, and ran on ſhore directly, at the hazard of the lives of every ſoul on board. This otherwiſe unaccountable behaviour gave us good reaſon to believe that the governor of Sanſonnate's account of a ceſſation of arms was groundleſs.

On the 15th of May we ſaw a ſail a-head of us ſtanding along ſhore; and being deſirous of ſpeaking with her, I let go the bark we had in tow, and made all the ſail we could after her. We gained very little upon her all the day, but had, nevertheleſs, got a great way a-head of our bark, wherein were 4 of our own people and 5 Spaniards. However, notwithſtanding night came on, all our ſail was kept abroad, and next morning we were within gun-ſhot of her. I immediately ordered our colours to be ſpread, fired a gun to leeward, and ſet a man to wave a flag of truce; but, on ſight of our Engliſh enſign ſhe fired at us, and ſo continued to do, with her decks full of men, abuſing us with the groſſeſt appellations. I made no return till I came cloſe upon her quarter, and then I ſent one of their countrymen to the bowſprit end, to inform them, in Spaniſh, That we were bound to Panama, and deſired to treat peaceably with them, and hoped at leaſt they would have ſome regard to the white flag which they ſaw flying, but they ſtill continued their fire; and preſuming, as I ſuppoſed, by our quiet behaviour that we were unable to defend ourſelves, they were preparing to board us, which I no ſooner perceived than I gave them ſo warm a ſalute that they ſteered round off from us. We juſt miſſed getting hold of them; but, it falling almoſt immediately calm, we continued our engagement for the ſpace of two or three hours. At length, a breeze wafting us nearer to them, we found that as faſt as we approached, ſo faſt did their courage cool. Their captain, however, ſtill bravely encouraging his people, and expoſing himſelf in the openeſt manner, was ſhot through, and dropped down dead, on which his people immediately and with one voice, cried out for quarter, and put an end to the diſpute. Mr. Randall and two or three more went on board the prize, and found the priſoners in the moſt ſubmiſſive poſture, aſking for mercy, which was granted, though they had no great reaſon to expect it, after their direct breach of the laws of arms and nations, in firing at a flag of truce.

The moſt conſiderable priſoners being brought on board, informed me, that their ſhip called the Conception de Recova, belonging to Callao, was of 200 tons burden, and laden with flour, loaves of ſugar, bales of boxes of Marmalade; jars of preſerved peaches, grapes, limes, and the like. She mounted ſix guns, and had upwards of 70 men on board. In this engagement only the Spaniſh captain and a negro were killed and one or two ſlightly wounded. On our part, our gunner was ſlightly wounded by a piſtol ball, and our main-maſt had a ſlight piece carried out of its ſide. We had now about eighty priſoners on board, of all colours, though we ourſelves were but 26. Among theſe priſoners were ſeveral of note, particularly Don Baltazzar de Abarca, Conde de Roſa, an European nobleman, who had been governor of Piſco, and was now upon his return to Spain, together with Captain Morel who had formerly been taken by Captain Rogers. They were all treated with the utmoſt civility; and this they the more wondered at, becauſe, from a ſelf-conviction of their own ungenerous behaviour to us, they could not but expect to have been dealt with quite otherwiſe.

The winds and calms prevented our joining the Holy Sacrament (the prize we had left behind us) till the 22d of May, when we bore down to her, and were ſurpriſed to find no ſoul on board, but her decks and quarters covered with blood. By many circumſtances it plainly appeared that the Spaniſh crew had butchered thoſe who had been left to aſſiſt them, while they were aſleep; otherwiſe it could not have happened that five unarmed Spaniards could have overpowered four Engliſhmen completely provided with arms for their defence. It is very probable, however, that theſe murderers paid with their lives, the loſs of thoſe lives they had taken away; for, being above four leagues from the land, and having no boat with them, they probably jumped into the ſea on our approach, fearing, if they fell into our hands, to meet the vengeance due to ſo horrid a crime. That part of the deck which was dyed with gore they endeavoured to cover, by throwing the flocks and ſtuffings of beds over it; ſo that till theſe were removed, the blood was not to be ſeen. This tragical accident put a damp to the pleaſure we had enjoyed for a day or two paſt, on the account of our late prize. Our priſoners, at ſuch a ſad and ſudden change, began to be alarmed, and looked at one another as if they all expected to be the victims of our revenge upon this unhappy occaſion. On the other hand, I was fearful leſt theſe apprehenſions ſhould urge them to ſome deſperate attempt. In this dilemma, I ordered all the priſoners into the ſtern gallery, except the nobleman and ſome of the chief officers, and a guard to be kept in the cabin. The Spaniſh gentleman obſerving this, let fall ſome expreſſions, whereby I perceived they were afraid I intended to proceed to ſeverities towards their people; but I aſſured them, that if I were of ſo revengeful a nature, the laws of my country forbade my indulging it; that I acted under my king's command, and that the natural abhorrence our nation had to barbarity, might quiet their fears, and make them perfectly eaſy. They then, on their part, in the moſt ſolemn manner, diſclaimed the moſt diſtant thought of an attempt upon our lives, and aſſured us, on their honour, that they never ſhould be able to make a juſt return for the generous treatment they had met with. It was however prudent to ſecure our priſoners of the meaner ſort; and, when we had ſo done, we hauled the Holy Sacrament along-ſide of us. She was half full of water, and the greater part of her dried beef was wet and ſpoiled. We alſo took out of the Conception a twelve month's proviſion of bread, flour, ſugar, and ſweetmeats, and a like proportion for the Succeſs, which I expected to find at the Tres Marias, being then a ſtranger to Clipperton's faithleſs deſertion. I likewiſe took from them their launch and their negros; for, conſidering we had a large ſhip, and a run of 175° of longitude to ſail, which was little leſs than half way round the world, I thought we could do no other than to reinforce ourſelves with theſe blacks; and indeed we afterwards found that we ſhould never have reached the coaſts of Aſia without them.

Having thus ſupplied ourſelves with every thing the Conception afforded, I ſuffered our priſoners to return to their own ſhip; but the chief of them would not leave us till they had drawn up a writing which they ſigned, wherein they acknowledged the circumſtances of our engagement, in the manner I have already related. In ſhort, no people, circumſtanced as we were, could part in a more friendly manner than we did.

Thus were we put by our deſign of ſurrendering, and were going to take a long voyage to Aſia. Our ſtrength was indeed conſiderably augmented; for we had 15 guns, and ammunition ſufficient to ſupply them: But before we proceeded any farther, it was neceſſary to get in a full ſtock of water. The iſland of Quibo was hazardous for us, being too near Panama, it was therefore determined to ply up to Cano, where we ſoon did our buſineſs. In our paſſage thither, the ſweet-meats of all kinds, which we had taken out of our late prize, were divided among the meſſes. It happened that one of the ſailors one day complained that he had a box of marmalade which he could not ſtick his knife into, and deſired it might be changed. I opened it, and found it a cake of virgin ſilver, moulded on purpoſe to fill ſuch boxes; and being very porous, it was nearly the ſame weight as ſo much marmalade. In overhauling the reſt, we found five more of theſe boxes. This was a contrivance to defraud the king of Spain of his fifths, which he claims in all the ſilver taken out of any of the mines of Peru. We

1721

Methods of the Spaniards to conceal their treasure.

doubtleſs left a great many of theſe boxes behind us; ſo that this deceit ſerved them in a double capacity to defraud their king's officers, and blind their enemies.* I muſt here obſerve, that every thing we took in the Conception was divided amongſt us, according to the Juan Fernandez articles, and that I had no more than ſix, inſtead of ſixty ſhares. They would not ſo much as allow me the money I had laid out at St. Catharine's, which was upwards of 100l. I had ſome difficulty to perſuade them to run to the northward ſo far as California, and was obliged to uſe many arguments to prevail upon them to believe that the harbour of Puerto Seguro was the only port of ſecurity where we could ſafely lay down and refit our ſhip; but having at laſt obtained their conſent, I weighed from Cano, ſteering to the northward, and had favourable gales for 48 hours, but then came on the conſtant, or what may be called the trade winds on this coaſt, which were as contrary to us as they well could be. I was willing to try how far off theſe winds might prevail, which in my opinion, may be called the eddy of the true trade wind, whoſe courſe may be prevented by the interpoſition of the vaſt mountainous continent. Accordingly, I found that, at the diſtance of ſixty leagues, we had light, variable breezes, and that at the diſtance of between ſeventy and eighty leagues, the wind ſettled at E. N. E. and N. E. I therefore kept at this diſtance from the land, till we had run up to the height of 20° north lat. In all this paſſage we were not in the leaſt ſenſible of any currents, and entirely out of the way of certain riplings and over-falls of water, which we frequently met with near to the land, and which often ſurpriſed us when we were becalmed in deep water. In our courſe we were accompanied by vaſt ſhoals of fiſh, and were continually incommoded by numerous flocks of the birds called Boobies, making our ſhip their reſting place, and fouling our ſhips and yards with their dung, as faſt as we could clean them. However for change of diet, ſome of my people made ragoûts of them, and the ſmokers made ſtems for their pipes of their large wing-bones.

We fell in with Cape Corientes in the beginning of the month of Auguſt, and were carried away to the Tres Marias by a hard gale at ſouth, and came to an anchor under the lee of the middle iſland, but could ſee no ſign of the Succeſs having been there. After a tedious ſearch on all the three iſlands for freſh water, there was nothing like a ſtream on it that we could find. This was the more extraordinary to us, as one or two of our late navigators reported that freſh water was to be found there in plenty. It might have been ſo when they were there, but we were unfortunate enough to ſeek when there was none to be found. After employing three days in a fruitleſs ſearch, I ſtretched over for the coaſt of California, and arrived there on the 11th of Auguſt. The inhabitants, as ſoon as they diſcovered us, made fires all along the ſhore, as the ſhip ran by them; and, towards the evening, it falling calm, two of them came off to us on a bark-log, but were a long while before they would accept of our invitation to come on board of us. At length they ventured in, when, in a moment, ſeeing our blacks promiſcuouſly ſtanding together with the white men, they with very angry countenances, ſeparated them from us, and would hardly ſuffer them to look at us. They talked to us with great vehemence, but we could comprehend no more of their meaning than that they rejoiced to ſee us. Night coming on, they took their leave, and we gave them a knife or two, an old coat, and ſome other trifles, which ſeemed to pleaſe them very well. They expreſſed themſelves by ſigns in ſuch a manner, that we could gueſs they gave us repeated invitations to go on ſhore with them. On Sunday the 13th of Auguſt, at day-break we found ourſelves near Puerto Seguro, ſurrounded by numbers of ſmall embarkations of the inhabitants, while the ſhore was crowded with Indians, whoſe numbers viſibly increaſed by multitudes, which flocked together from the adjacent parts. Our anchor was no ſooner down, than they came off to us in ſhoals, ſome few on their bark-logs, but moſt of them ſwimming, talking, and calling out to one another in a confuſed manner, but ſuch as plainly ſhewed how deſirous they were to come to us. Our ſhip was in an inſtant full of theſe ſwarthy gentlemen, quite naked; and among the reſt was their king or chief man, who unexpectedly delivered to us his batton or enſign of royalty, which I immediately returned to him. This man, notwithſtanding the wildneſs of his appearance to us, had a good countenance, and his behaviour had ſomething that was engaging in it. I was at firſt at a loſs how to entertain our numerous gueſts; but at length I thought of regaling them with ſome of our liquid ſweetmeats, which we had in great plenty. Theſe they liked extremely, and the ſpoons, which were moſtly ſilver, they returned with great honeſty. Having thus commenced a friendſhip with them, at day-break the next morning our boat went on ſhore to cut wood and fill water; and before the ſun was up, we were again crowded with our former gueſts, who ſeemed as if they would never be weary of gazing at us. I ordered a great boiler to be carried on ſhore, with great ſtore of flour and ſugar, and a negro cook, who was continually boiling of haſty pudding for the numbers of ſpectators on the beach; and it really behoved us to keep in their favour, for on ſeeing a few of our men rolling great and cumbrous caſks of water over the heavy ſand, it inclined them to help us. To this may be added a ſenſe of the kind treatment they met with from us, and the particular readineſs of their chief to ſerve us, by ſhewing his people a good example; for, after Mr. Randall, my lieutenant, he himſelf took up the ſecond log of wood, to carry to the boat, and was immediately followed by 300 men, who encouraged by his example, all took to the work, repaying our civilities with their ſervices; and every day they were more and more fond of us.——Meanwhile the rumour of our arrival was ſpread through all the neighbouring parts; and ſome of the clans, different from thoſe that inhabited the ſhores, came daily to take a view of us. Thoſe who came from any diſtance in the country, could not ſwim; and that they were different from thoſe we had firſt ſeen on our arrival here, appeared by their manner of painting themſelves, and ſeveral other little diſtinctions that were viſible among them; but they all united to aſſiſt us; nor were any of them idle but the women, who uſed to ſit in companies on the ſcorching ſands, waiting for their ſhare of what was going forward, which they received very thankfully, and without quarrelling.

Having done all our buſineſs here in the ſpace of five days, on the 18th of Auguſt we prepared for our departure in the afternoon. We employed the morning in making a large diſtribution of ſugar amongſt the women. To the men we gave a great many knives, old axes, and old iron, which we had taken in our prizes. Theſe were the moſt uſeful to them, and of which they ſtood moſt in need; in return for which, ſome of them gave us bows and arrows, deer-ſkin bags, live foxes, ſquirrels, and the like. A great many of the men ſtaid in the ſhip all the while we were purchaſing our anchor, and it was not till we were under way that they all jumped overboard to join the lamentations of their countrymen on ſhore.

The men in this ſouthern part of California are tall, ſtrait, and well made; their limbs are large; their hair is black and coarſe, and barely reaches down to their ſhoulders. Their women are of a much

* An affair, as vexatious as this, the captain ſays, was diſcovered too late, on board a prize taken by the Succeſs, where they found a conſiderable quantity of virgin ſilver in the form of bricks, plaiſtered over with clay, which had been dried in the ſun; (the only conſiſtence they give their bricks in theſe parts) a great number of theſe had been thrown overboard as rubbiſh, nor was it diſcovered what they were till they came to the four or five laſt pieces of this curious compoſition.

1721 smaller size; their hair is much longer than the mens, and with it some of their faces are almost covered. The men go quite naked, and have not the least thing to cover any part of them except their heads, round which they wear a band of red and white silk grass, which hangs down to their knees, and have either a deer's skin, or that of a large bird curiously wrapped round their shoulders. Nothing can be more wild and savage to look at than these people at first sight: but there is a wide difference between what they seem and what they really are; for, by all we could discern in their behaviour towards one another, and in their deportment towards us, they are endued with great good nature. They seem to lead a careless life, and to enjoy every thing in common among them: having nothing but their daily food to provide, they are strangers to those numerous gratifications, the want of which multiplies distresses among nations more civilised and more refined. Their contentment makes them honest, for they never offered to steal the things most useful to them. In a word, they seem to pass their lives, according to the notions we have of the purest simplicity of the earliest ages of the world, before discord and contention were heard of among men. Having no enemies, they live in perfect peace and harmony with one another. Hunting and fishing are their only employments, except making the instruments, they use in these pursuits, which are the simplest that can be. They have no canoes, and go to sea on bark-logs; but they are the most expert divers I ever beheld. By their simple manner of living, and their continual exercise, they live to a great age, and yet, what is surprising, they do not appear to be very numerous, considering the extent of their country. Their only enemies are the wild beasts; and of these there are plenty in the woods and forests. They do not seem to be so jealous of their women as they have been represented; for we had the company of some hundreds of them, young and old, without any restraint from the men. Two things were remarkable, that they never would suffer us to take snuff, but would earnestly take it from us, whenever we attempted it; nor would they ever suffer us to look through a spying-glass, which I had frequent resort to, to see how our work of wooding and watering went on. In these two instances they always took upon them to controul us, and in these two only, the causes of which we could never learn. They go out to sea on the bark-logs above-mentioned, which are only composed of five logs of a light wood made fast to each other by wooden pegs, rowing with a double paddle; and with their harpoons (which are made of a sort of hard wood) the strike they largest albicores, and bring them in when struck. This was altogether surprising to us, who had so often experienced the strength of that fish, and the difficulty of getting them into our ship, when either hooked or struck. One would imagine, that as an Indian had struck one of these Albicores, it would run away with him and his bark-log; but they either strike them so as to give them a mortal wound, or have some particular way of managing them; for they struggle and resist in vain. When we were in this port, it was apparently their fishing season; but by the number of deer-skins one sees among them, it is natural to conclude they have also their season for hunting. The skins of their deer are grey, and so are also those of their foxes and squirrels, of all which it is likely they eat indifferently, as of most other animals that become their prey. Of birds we saw scarcely any among them except a few pelicans. What these Indians use instead of bread, is very remarkable. It is a small black seed, of an oily substance, which they grind, much in the same manner as we do our chocolate. The look of these black lumps or rolls, so made up, is not very inviting, yet the taste is not very disagreeable. When they want to drink, they go to the river.

—Their arms are bows and arrows, the former are about six feet in length; the arrows seem to be somewhat too long for the bows. Their bow-strings are made of deer's sinews, and their arrows are composed of a hollow cane, for two thirds of their length, the other third next the point, is of a heavy kind of wood, with a piece of flint, and sometimes with a sort of agate, the edges of which are indented or cut in teeth like a saw. They made no manner of shew of their arms to us; and it was rarely that we saw them in the hands of the men. The women had them in the woods, in search of game, which may there be presumed to be some part of their employment. Upon the whole, they may be said to be a happy people.

Sailing from Puerto Seguro, as already mentioned, we took our departure from Cape St. Lucas on the evening of the 18th of August, designing for Canton in China, the most likely place to meet with English ships homeward bound. On the 21st we discovered an island bearing W. S. W. about 110 leagues distant. I endeavoured to get in with it; but, night coming on, I could not lose time to view it. This isle my people called after my name. From hence we steered gradually into the parallel of 13° north lat. but had our course stopped for two or three days by westerly winds. We were astonished at such an unforeseen delay, and began to dread that we might meet with many such reverses of winds in this passage; nor could we conjecture or conceive the cause of them. In the midst of this, the usual trade-wind prevailed again, and delivered us from the fears and apprehensions in which we had been involved upon the occasion. With this we proceeded on our passage, keeping the parallel of 13° north lat. except when we judged ourselves to be near the shoals of St. Bartholomew. We then ventured to sail a degree more northerly, and so continued to do for a run of 60 or 70 leagues.

[A fortnight after they left California, Captain Shelvock's people who had hitherto enjoyed their health, grew sickly. This he attributes to the quantity of sweet-meats eaten by the crew; and to the dried beef half devoured by the ants, cock-roaches, and other vermin.—The latter is the most probable; and perhaps a great number of the distempers that afflict voyagers and travellers in the warmer climates are owing to the baleful effects of insects, their eggs or excrements, swallowed in corrupted meat, or bad water. At this time they lost their ingenious armourer, who had been so useful to them in constructing their boat, and with a sickly crew they had likewise a leaky vessel.]

Under these circumstances, continues the captain, we met with bleak and dismal weather, with tempestuous winds, flying and varying all round the compass. These boisterous gales raised such a tumbling sea, and our ship laboured so much in it, that the knee of her head, and her whole beak-head became loose; so that the bowsprit fetched away, and played with the motion of the ship, which it continued to do all the time that we were out at sea, and till we arrived at Canton. Our mainmast stood for some time without shrouds on the larboard side, till we could unlay our best cable to make more, having knotted and spliced the old shrouds till our labour was in vain. In the midst of all this sickness and distress, I myself was taken violently ill, and had no hope to recover, till a fit of the gout gave me some relief. Great was our want of every thing fit or comfortable for persons in such a state of sickness; yet, about the beginning of October we passed by Guam; and, though upon the very brink of perishing, we durst not venture in, fearing that the inhabitants should take the advantage of our weakness, and make some attempt upon our lives. From Guam we directed our course for the island of Formosa. And now, though the length of our voyage was decreasing very fast, yet our sickness was increasing upon us in a much greater proportion; and most truly it may be said, that both our ship and ourselves were no longer fit for the sea. It was the 3d of November before we had sight of the island, and the 10th before we could get any sort of directions to inable us to reach our intended port. At length, as we were passing through

They pass by Guam, and come to Formosa.

through a very narrow channel, between a couple of islands, a fisherman took notice, by our cautious manner of working that we were strangers, and made signals to us to bring our ship to, till he came up to us; when we made him understand in general that we were bound to Macao, and he then made a sign that he would conduct us thither, if we would give him as many pieces of silver as he counted little fishes out of his basket, which amounted to sixty. We accordingly counted out forty dollars into a hat, and the next day he took us into charge and anchored us safe in the road of Macao near the river of Canton.

[As we have given our readers in Capt. Clipperton's voyage, the relation of his affair at Guam, we shall here present them with Capt. Shelvock's account of that business, which he says, he had from several of the Success's people that came off to him while he was in these parts.]

Shelvock's account of Clipperton's affair at Guam.

They told me (says he) that their commander Clipperton, left me designedly, that they went directly to Guam, where they were very well refreshed, and supplied with provisions; that their captain sold the governor a great quantity of powder and shot, and several other valuable things; and that he permitted his prisoner, the Marquis of Villa Roche, to go on shore there; That Mr. Godfrey the agent, and a marine officer, went to settle the accounts for what supply of things they had had; and that, as soon as they were landed, and the boat come off again, Captain Clipperton weighed with his ship, in order to attack a ship of 20 guns from Manilla, that had lain quietly in the road with him all the time. In approaching her, he ran his own ship a-ground, and soon found that the enemy was prepared for him; his condition being then desperate, and supposing the loss of his ship inevitable, he had recourse to his cask of brandy, and took so abundantly of it that he fell on the deck, and snored out his time in a heastly manner, whilst his first lieutenant, Mr. Davidson, in his stead, undertook the command of the ship, which he bravely executed till he was killed. He was succeeded by Mr. Cook the second lieutenant, who made a handsome resistance, and got the ship afloat again, after she had lain on the rocks forty-eight hours. It was added that their thus losing the Marquis Villa Roche, and also Mr. Godfrey the agent-general, together with the officer that went on shore, gave the ship's company so much distaste, that they would not suffer him to have the command of them any longer, but locking him up in his cabin, chose Captain Cook to take charge of the ship. It seems, they had much bad weather between Guam and Amoy in China, to which last place they got with great difficulty, and there made a dividend of all they had taken, half to the owners, and half to the ship's company. Clipperton designed for the streights of Malacca; but his people, fearing he had no good intent, would go no farther with him than Macao, that being a Christian port. Upon their arrival there, the governor ordered Clipperton into custody. It seems he had broken prison formerly from thence, being confined upon having ran away with Dampier's commission, and one of his prizes.* But upon producing his majesty's commission for the Success, they gave him no further trouble, and only contented themselves with fleecing him a little. Here he sold the Success for 1000l. sterling. [The different relation of facts given by these voyagers, can only be accounted for by the channel of information, and by the inveterate hatred which they bore to each other. In the circumstances just related, it is probable the account given in Clipperton's voyage and confirmed by Mr. Taylor his chief mate, is more to be depended on than that which Captain Shelvock de-

1721

livers by hear-say, and has possibly exaggerated with all the bitterness of a rival commander.]

About noon, on the 12th of November, (continues he) a pilot came off to us, and we immediately weighed, and entered the river of Canton, where finding the Bonita and Hastings, two English coasting ships, I anchored, and sent off an officer, to desire them to instruct us how to behave ourselves in this port, and to acquaint me with the customs of it. To this they answered, That since the Cadogan and Frances, two European ships, were arrived at Wampo, they would advise me to send up to their factories at Canton, to acquaint them with our arrival, and with the reasons that obliged me to come into that river; which I accordingly did the next day. I now thought I was going to rest a little from my labour; but, to my misfortune I suffered as much here, all circumstances considered, as I had in any former part of my voyage: for, the evening we anchored at Wampo, where the English ships commonly lie, there happened an accident that gave occasion to much trouble. One of my men, being in a hurry to remove his effects on board the Bonita, was stopped by a Hoppo, or custom-house officer, that wanted to make a search. The fellow being in liquor, and fearing they would take away the silver he had with him, fired a musquet at the pursuers, and killed the officer. Early the next morning the corpse was laid at the door of one of the English houses or factories, where Chinese officers appointed for that purpose, waited for the first considerable Englishman that should come out, without regard to whom this act of violence and murder was to be imputed. It happened that one of the supercargoes of the Bonita was the first that came out; him they seized, put him in chains, and led him, by way of example, about the suburbs of Canton. All that could be said or done by the most considerable of the Chinese merchants that were in commerce with the English, availed nothing, till my man who committed the fact was delivered to them, and soon after the Bonita's supercargo was released. It is the custom at Canton to exact a certain sum of money from all ships that come there, according to their measurement, which is divided into rates or portions of first, second, and third. I therefore every day expected the Hoppo to come to measure my ship, but was given to understand that I must go up to Canton, before that could be done, though even at the hazard of my life. I accordingly went, and staid two days at the Cadogan's factory, during which time I was hourly alarmed by such stories as made me fear that I should, indisposed as I was, be dragged away from my bed, and put in irons: but, at the end of two days, I was obliged to go down again into the ship, to be present at the measurement, and a day afterwards the Hoppo came, with a numerous retinue, and seemed to do his business very quietly, but would not let me know what was the sum he intended to exact. This gave me much trouble; for I began to think the Chinese, through a false representation of that great riches had an intention to gratify their love of money, by a heavy imposition, and in this I was not mistaken. I had not been here many days before I was deserted by all my officers, and ship's company who were continually employed in removing their effects from on board my ship to some of the Europeans, without my knowledge, as I was then confined to my bed. My officers were engaging the Indian gentlemen in their interest, and left me and my son, with a few negros, to look after the ship. In short, my people had so many ways of disposing of their effects, that it was impossible to oblige them to do what I should have thought justice to the gentlemen in England and to myself. In a word, they were

* The reader will observe here, that Captain Clipperton, or Clippington, whose voyage we have related, was the same man who, with a bark of ten tons, having two masts, two square sails, and two patararoes, left Captain Dampier, in the year 1704, on the coast of Mexico, and, after insulting Ria Lexa, undertook to sail in her round half the globe. He took in provisions at the Philippines, then he sailed to Pulo Condore, and from thence came to Macao, where, as Captain Shelvock affirms, half his crew were hanged for pirates, and afterwards found means to get on board an East-Indiaman at Canton, and thus got his passage home, arriving safe in England in the year 1707.

1721 were all soon recovered of their illness by the assistance they met with here, and were become their own masters. The gentlemen who presided over the trade, so little considered our case, that *they had half a mind* to refuse me a passage in one of their ships; and, in effect, I was treated by them almost as one enemy might treat another, in a neutral port. The Captains Hill and Newsham, when they first came to see me, were astonished at the ruinous appearance of my ship; and, when I had given them a short history of my voyage, and desired they would receive me with my effects, they answered, That since they plainly saw my ship was in no condition to stir any further, upon paying our passage they would entertain us as soon as we pleased. This I depended on, and expected we should have no farther trouble than to remove ourselves at any time; but, on the contrary, I found that I had ignorantly applied to the wrong persons, and that my address should have been to the supercargoes; by which means I was then neglected, while the English captains were ordered to fall down with their five ships, five or six miles below us. Thus was I left destitute in the company of five foreign ships, whose captains perceiving my own countrymen so careless of me, were so kind as to offer me their service, and assisted me with what they could: Had it not been for them, I know not what I might have suffered, for I was under perpetual alarms left the Chinese should seize my ship.——Having found my error in applying to the captains, and not to the supercargoes, I sent a letter to them, not to *desire*, but to *demand* a passage for me, my officers, and ship's company, which I was sensible they could not refuse; and indeed they did not; but their condescension was accompanied with a charge to the English Captains not to receive any thing belonging to us, except it was consigned to the East India company in England. This was an article which my people utterly rejected, vowing that they would as soon throw what they had into the sea, as comply with such a demand. For my part, it gave me no concern, being conscious to myself that I had infringed none of their privileges. At the same time that I was acquainted with their intention of receiving us as passengers, I was also informed of the Hoppo's demand for anchorage in the river, which was no less than 6000 tahel; and, to quicken me in the payment of this exhorbitant sum, there was a penalty of 500 additional tahel for every day that we failed in the payment of it. In short, there were no means by which I could evade this unconscionable imposition; and as it was a day before I could possibly send the 6000 tahel up to Canton, they required 500 tahel more, for neglect of payment. So that they received from me, upon this extraordinary occasion, the full sum of 6500 tahel, equal to 2166l. 13s. 4d. of our English money. This, it was apprehended, was about six times as much as the Cadogan paid, which was the largest English ship there, and measured a third more than mine. It was now high time to get out of my ship: but, before I quitted her, I sold her for 2000 tahel, which money, and the rest of my effects, were consigned to the East India company. Towards the latter end of December, I sailed in the Cadogan, commanded by Captain John Hill, in company with the Frances, Captain Newsham, who sailing better than we, left us as soon as we were out at sea. Captain Hill finding his ship very tender, put into Batavia, where we continued about ten days, and were informed there were several pirates in those seas. Therefore, when we departed from Batavia, we joined the homeward bound Dutch fleet in Banum Bay. The commander promised to assist us in wooding and watering at Mew-Island, the water at Batavia being very bad: But, on our joining Captain Newsham, in the Streights of Sunda, the Dutch made it a pretence for leaving us before we got the length of Mew Island, and Captain Newsham also deserted us the same evening, so that we were left to ourselves.

For several days we continued at Mew Island, during which time several boats came off to us from Princes Island, and brought us turtle, cocoa nuts, pine-apples, and other fruits. Some of the people having seen wild cattle grazing near the strand, went on shore to kill them; but before they had advanced near enough, they discovered a small tyger, and saw the track of an old one; whereupon they returned to the boat. From Mew Island we had a very pleasant passage to and about the Cape of Good Hope, which was greatly owing to Captain Hill's good conduct, in coming in with the land be-times upon the easternmost part of the bank, and keeping a moderate distance from the land, which I think never exceeded a degree, and sometimes we even made the land itself. In this course we did not take in our top-sails above twice; once for a squall, which was over in an hour's time, and another time, being threatened by the appearance of bad weather, Captain Hill made all the necessary preparations to receive it; which being done, he stood in for the land; and, in a few hours we had fair weather and a favourable gale, and all our small sails set at the same time that there remained great appearance of foul weather to the southward, which continued for several days afterwards. Though the Frances and the Dutch ships had seven days the advantage of us by leaving us in the streights of Sunda, yet we gained the cape as many days before the Frances, though she sailed so much better than we did; and, as to the Dutch ships, there was no appearance of their arrival when we left the Cape. The officers of our ship, by comparing their accounts with those of some of the gentlemen belonging to the Frances, found that she had suffered a great deal of bad weather, whilst we, who were about ten leagues to the northward of them, or nearer the shore, enjoyed fine pleasant weather, and a fair wind, continually, till we arrived in the Table Bay, which was in the latter end of March. This I should think of sufficient weight for any other to pursue the same track. Here we found Governor Boon, in the London East-Indiaman, and some others, bound for England. From the Cape we had an agreeable passage to St. Helena, and from thence to England. We anchored under Dungeness on the 30th of July, and the same night some of the supercargoes and passengers, with myself, hired a small vessel to carry us to Dover, whither we came early the next morning, and the same day proceeded towards London, where we arrived on the first of August. Thus ended a long and unfortunate voyage of three years, seven months, and some days, in the course of which we sailed very considerably more than round the circumference of the earth, and went through a great variety of dangers, both at sea and on shore.

Such was the end of this expedition, from which the owners promised themselves so much, and which as we have seen was defeated chiefly by the dissension that prevailed between the commissioners. Shelvock appears to have been the ablest of the two, but displeased with the slight cast upon him in the preferment of Clipperton to the command he seems to have been implacable in his resentment. The account we have taken of his voyage, as written by himself, shews him to be an experienced mariner, and an observer of men and manners. Both he and Clipperton in this voyage contributed to extend the nautical knowledge of the navigators of their age and country.

THE VOYAGE OF COMMODORE ANSON, ROUND THE WORLD.

A War with Spain being resolved upon in the year 1739, two expeditions were planned by Sir Charles Wager, then at the head of the Admiralty, Captain Anson then out on a cruise, was ordered to return with his ship the Centurion, to command the one; and Mr. Cornwall was designed to conduct the other. As the scheme was first intended, two strong squadrons were to be fitted out, Captain Anson was to take on board three independant companies of 100 men each, and Bland's regiment of foot (who was himself to command the land forces) and was to sail round the Cape of Good Hope, to Manilla, in the island of Luconia; while Captain Cornwall was to proceed round Cape Horne, into the South Seas, there to range the coasts of Chili, Peru, and Mexico, and when he had gotten the treasures in those parts into his possession, he was to join Captain Anson at the Philippine Islands; then they were to act in conjunction, as occasion might offer, or wait for orders from government to proceed on fresh enterprizes.

It was the 10th of September, before Captain Anson arrived in town. By the 13th of the same month, he received orders to take under his command the Argyle, Severn, Pearl, Wager, and Trial Sloop, and to proceed to victual them with the utmost expedition. They were ready to take the troops on board by the end of December; but when Captain Anson attended the board in January, he was told that the intended Manilla expedition was laid aside, but that to the South Seas, being still intended he should command the squadron. It was not, however, till the end of June that he received his majesty's instructions, nor did he sail till the latter end of September, by which unaccountable delay it appeared afterwards that the Spaniards got full intelligence of his strength and destination.

At length, however, the squadron was prepared for sea. It consisted of five men of war, a sloop, and two victualling ships, namely, The Centurion, of 60 guns, 400 men, as commodore; the Gloucester, of 50 guns, and 300 men, Richard Norris, Esq; commander; the Severn, of 50 guns, and 300 men, the Hon. Edward Legg, commander; the Pearl, of 40 guns, and 250 men, Matthew Mitchell, Esq; commander; and the Wager of 28 guns, and 160 men, the Hon. John Murray, commander, besides which the commodore had two victuallers, the Industry and Anne pinks, the larger of which was of 400, the smaller of about 200 tons burden. The troops were ordered to be taken on board at St. Helen's, but their numbers and strength were diminished by the delay before-mentioned. The deficiency in the crews amounting to 300 men, was made up only by 100 people sent from the hospitals, and a party of marines, who had never been at sea. Instead of the three independant companies, and Bland's regiment of foot, as had been designed, they had 400 invalids from Chelsea, many of whom perished upon the voyage before they arrived at the scene of action. The accounts we have of this voyage, are two, the one written by Mr. Thomas, the mathematical master on board the Centurion, and by the Rev. Mr. Richard Walters, who has explained many circumstances, and from these relations ours will chiefly be extracted.

"Being quite ready, says our author, about the beginning of 1740, we put to sea three different times, but as often put back by contrary winds, and stormy weather. At last, on Thursday the 18th of September, we sailed in company with the Lark and St. Albans, two of his majesty's ships of 13 guns each. The king's ships which joined us here were, the Dragon, the Winchester, the Chatham, and South Sea Castle, and near 200 sail of merchantmen, under convoy, some of which were bound to the Mediterranean, and others to North America. We had at present the command of the whole fleet; and, this afternoon, seeing a ship to the S. W. we made the Dragon a signal for chasing; but she proved one of our own ships, too far a-head of her station. On Monday the 22d we saw two sail to the westward, and sent the Trial sloop to speak with them. They were Dutch ships, bound to Curacoa with soldiers for garrisons there. The Winchester, and South Sea Castle, with the merchant vessels under their convoy, parted from us on the 25th. And on Monday the 29th the Dragon, St. Albans, and Lark, with the merchant ships in their charge for the Mediterranean, did the same; and we had now no ships left in company but our own proper squadron. The next day we spoke with a Dutch man of war bound from Malta for Amsterdam. On the third of October we spoke with two English merchant ships, and on the 8th with a French sloop from Rochelle. On the 13th died one Philip Merrit, a common sailor, who was the first man that we lost on the voyage. At six o'clock in the morning of the 16th, we saw land, bearing W. N. W. at the distance of about six leagues; and, at four in the afternoon we anchored in Fonchale Road, abreast of the town, and about half a mile from it. During this whole passage, we had almost continual contrary winds, and boisterous, uncertain weather, by which means a passage that is very commonly made in ten or twelve days, took up thirty-eight. Our business in this place was only to take in water and wine, and some private stock; but soon after our arrival, we were informed that they had seen from the island to the westward, about 16 or 18 sail of ships, for several days together, which were supposed to be a junction of French and Spanish ships of war; and, as we had reason to imagine that our expedition had been long known, there was little room to doubt but that those ships were designed to intercept and destroy us before we could attempt any thing to the prejudice of Spain. On these tidings, the commodore sent out an English privateer that lay in the road, with one of his own officers, to see if they could discover them at sea, and what they were; but she returned the next day without having made any discovery. Captain Norris, at his own request, on account of his ill state of health, with the commodore's consent, quitted the command of the Gloucester, in order to return to England. The Gloucester was hereupon given to Captain Mitchell, the Pearl to Captain Kidd, the Wager to the Hon. Captain Murray, and the Trial sloop to Mr. David Cheap, our first lieutenant; and as one of the lieutenants of the Gloucester had quitted with Captain Norris, our two mates, who had long depended on the commodore, were promoted to be lieutenants on this occasion. On the afternoon of the 4th we weighed, and put to sea, with all the squadron under our command. An English sloop that lay in the road, saluted us with nine guns, which we returned with five. On the 6th of November, at four o'clock in the evening, we saw Palma, in 29° of north lat. and 19° 44 west long. from the meridian of London. The same day we spoke with a French ship from Marseilles, bound to Martinico, and the next morning with a Dutch ship bound to Batavia, the metropolis of the Dutch settlements in the East-Indies. On the 11th, about four in the morning, we crossed the northern tropic, for the first time in this voyage, in long. 24° 24' west from London. The Anne pink fired a gun, and hoisted a red flag at her fore-top-mast head, to give us notice of it. The next day all the lieutenants of

1740

1741 the ſquadron were, by a ſignal, ordered on board the Centurion; and orders were given to unload the Induſtry pink, and each ſhip to take on board from her their reſpective quotas of proviſions; in purſuance of which we immediately began to unload her, lying by in the day, and making an eaſy ſail in the night. On the 19th, having unloaded and diſcharged the Induſtry, ſhe parted from us at eight in the evening, in order to proceed for Barbadoes, whither ſhe was bound; but the commodore having entered into a new contract with the maſter of the Anne pink, ſhe was detained with us for his majeſty's ſervice, our ſhips being too much incumbered to admit of taking on board any more proviſions at this time. We croſſed the equinoctial line on the 28th, about five in the morning, in 28° 15′ weſt long. from London, obſerving the variation of the compaſs to be 34′ eaſt.

On the 2d of December, at eight in the morning, we ſaw a ſail to the N. W. to which we gave chace. At night we loſt ſight of her; next morning we ſaw and chaſed her again, but quitted her in the afternoon. We imagined this ſail to be a tender belonging to the Spaniſh fleet, ſent purpoſely to gain intelligence of us; but, on our arrival at the Cape of Good Hope, in our return home, we learned that ſhe was the Eaſt-India Company's packet, bound for the iſland of St. Helena.

[Thus they proceeded on their voyage, anchored on the 17th, at ſeven in the evening, at the iſland of St. Catherine, and ſent a lieuteuant on ſhore to compliment the governor, and deſire a pilot to carry them, who returned a civil anſwer, and their requeſt was granted.]

Accordingly, ſays my author, we weighed and ran up the harbour, and, about noon, anchored in five fathom and an half water, in a place they call Boon Porto; but being ſtill too far from the watering place, we weighed on the 20th about eleven in the morning, and ran farther up between St. Catherine's, and the main-land of Brazil, and, in the afternoon, anchored and moored in five fathoms, about two miles from the watering place. The ſame evening our firſt lieutenant went on ſhore, with materials for building a tent to ſhelter the people who were to be employed in watering. Our ſhip's crew beginning to be very ſickly, tents were erected on ſhore, one for every ſhip, to which the ſick were ſent, with proper ſurgeons to attend them. The agents for victualling were ordered to procure what proviſions we could expend during our ſtay here, which they accordingly did; but though their meat, which is altogether beef, was both cheap and plentiful, it was, for the greateſt part, carrion, and ſcarcely fit to be eaten. The men throughout the whole ſquadron began to drop off apace with fevers and fluxes, probably occaſioned by the violent heat of the climate, and the bad air, which is ſtagnated in this woody country. We continued here, wooding, watering, and overhauling our rigging, till Sunday the 18th of January, during which time we had ſhort, variable, uncertain weather, with thunder, lightening, and exceſſive heat. While we lay here, we gave our ſhip a thorough cleanſing, ſmoked her between decks, in order to deſtroy the vermin, and waſhed every part with vinegar, which I mention, becauſe it is abſolutely neceſſary in all ſhips, the ſtench of ſo many ſick perſons being noiſome in hot climates. Before we arrived at this iſland, from the deſcriptions of M. Frezier, a French author, and ſome other perſons who had been on the ſpot, we had received ſuch accounts as, together with the climate wherein it is ſituated, gave us very great ideas of its fruitfulneſs, and hopes of a plentiful ſupply of every thing that we wanted for a long run; but we found ourſelves miſerably miſtaken in almoſt every article we expected.

As here are ſeveral fine, ſandy bays, we had very good fiſhing, with a ſeine for mulletts, old wives, ſting-rays, maids, turbots, and other flat fiſh, baſs, &c. Saſſafras is here in great plenty, guiacum is reported to be plentiful likewiſe; but I ſaw none of it, nor heard of any perſon who did, during our ſtay. Rum and ſugar they have in ſmall quantities, but very indifferent and dear. The inhabitants are a mixture of Portugueſe and Indians incorporated together, and appear to be very poor, idle, lazy, ignorant and rude. I believe the original of the Portugueſe here was chiefly from felons, who fled hither from other parts of the Brazils, to ſhelter themſelves from juſtice; they were, till lately, without any regular form of government, except a chief, choſen from among themſelves, who was more like a captain of robbers than the commander of a colony. When we came there, they had ſome European ſoldiers, and a governor from Rio Janerio, called Don Joſſe Silva de Paz, a very expert engineer, who underſtood one part of his buſineſs very well; namely, the advantage which accrue from new works to thoſe who are intruſted with the care of erecting them: for, beſides a battery on a neck of land that narrowed the channel to a little more than a quarter of a mile; there were three other forts carrying on for the defence of the harbour, neither of which was completed.

The country (including the main and the iſland) is mountainous, and overgrown with thick woods, and thoſe ſo much intangled with the under-growth of briars, brambles, and the like, that in moſt places they are ſcarcely penetrable. Theſe woods are reported to be full of tygers, which makes any excurſion into the country dangerous, unleſs one goes well armed; and even then much caution is neceſſary.—They have here ſome hogs and fowls, but I believe not in great plenty. In the woods are monkeys, apes, armadilloes, and other wild creatures, as alſo parrots, paroquites, and other ſorts of birds proper to the climate. Alligators are ſaid to be plentiful in the lakes, and yet we ſaw none of them. The country ſeems to have a good ſoil, and to be capable of improvement, were the inhabitants more civiliſed and induſtrious. On the 29th we diſcovered a ſail in the offing, on which the eighteen oared barge was manned and armed, and was ſent under the command of the ſecond lieutenant of the Centurion, to examine her before ſhe arrived within the protection of the fort. She proved to be a Portugueſe brigantine from Rio Grande, but though the officer behaved to the maſter with the greateſt civility, yet the governor took offence at our ſending our boat; complained of the violation of the peace, and made that a pretence for ſending Don Piſarro the moſt circumſtantial intelligence of our force and condition, as we afterwards learned, by letters intercepted in the South Seas.

We left this iſland on the 18th of January, having had a melancholly proof how much the healthineſs of the place had been over-rated by former writers; for we found that though the Centurion alone had buried twenty-eight men ſince our arrival, the number of the ſick had increaſed to ninety-five; and three men died this very day.

Before our departure, the commodore took every precaution to prevent a ſeparation; but, conſidering that, in ſuch boiſterous ſeas as we were about to encounter, he himſelf might be diſabled, he called the officers together, and, in a full council ſo ordered it, that if but one ſhip eſcaped, the expedition ſhould not be abandoned. Proper places of rendezvous were appointed; the time was ſettled for ſtaying at theſe places; and if the commodore did not arrive in that time, the captains were ordered to put themſelves under the command of the ſenior, and to proceed without farther delay.

We had very ſtormy weather with thunder and lightening on the morning of the 22d, and the Trial carried away the head of her main-maſt: A thick fog ſucceeding, we ſoon after loſt ſight of the Pearl, the Trial, and the Anne pink. In the afternoon, however, we joined company with the Trial and the Anne, but the Pearl was ſtill miſſing. From this time, to the 15th of February, we had very variable weather, moſtly foggy, from 35 to 39 degrees of ſouth latitude, the reſt of the weather being a mixture not much

The ſhips ſeparate.

much unlike ours in England in the month of October, except that we had often thunder and lightning. Being paſt the lat. of 36° we obſerved the current which had hitherto ſet ſoutherly, was now to the northward and the great river of Plata being between 35° and 36° ſtrengthens my conjecture, that thoſe currents are occaſioned by the flux and reflux of that mighty river. On the 13th of February we ſaw the land very plain, and, at four in the afternoon of the ſame day, found ourſelves within four miles of Cape Blanco, on the coaſt of Patagonia, in 12 fathom water; on which we hauled off, and ran along the coaſt. At five the next morning we ſaw the land from weſt by north to ſouth-weſt, half-weſt, which I believe to have been the harbour of Port Deſire. The northermoſt land in ſight was Cape Blanco, and the ſouthermoſt, Penguin Iſland.——

We anchored on the 17th in the evening, about 18 leagues ſhort of the harbour of Port St. Julian, where Drake touched in his voyage, and where Mr. Doughty was condemned and executed, on pretence of a conſpiracy to murder him and ruin the expedition; from whence a ſmall iſland within the harbour is to this day called the Iſland of True Juſtice. The next morning we ſaw a ſail at S. by E. which we believing to be the Pearl, made the ſignal for the return of all cruiſers; but ſhe not minding or not ſeeing it, the Glouceſter was ordered to chace, and returned, to our great ſatisfaction, with her at two in the afternoon. The Pearl's company informed us, that their commander, Captain Dandy Kidd, died on the 31ſt of January, and that they were chaced on the 7th inſtant, by five large ſhips, which they believed to be Spaniſh men of war, and were ſometimes within gun-ſhot of them, though they never fired, having endeavoured to decoy, the Pearl, by hoiſting a broad red pendant, like that of the Engliſh commodore, at the admiral's main top-maſt head, and hoping by that means to inveigle and make ſure of their prey. Captain Mitchell thus decoyed, narrowly eſcaped the enemy, by running through a ſpace of water, where the tides or currents making a great rippling, the Spaniards, who thought it was rocky and broken ground, were afraid to follow her. Theſe we ſuppoſed to be the ſquadron of Admiral's Piſarro, who got ſo great a name for bringing the flota ſafe home, the preceding year, by eluding the vigilance of our ſquadrons then waiting off Cadiz, and was therefore looked on as the moſt proper perſon to be ſent to intercept us. We were now, on the 18th, ſailing along ſhore for the harbour of St. Julian, I found the tide to ſet in here north and ſouth, about a mile an hour. The time of flowing, on the full and change days, is N.E. by E. and S. W. by W. neareſt. We ſent one of our boats with an officer on ſhore, to ſound, and endeavour to diſcover the mouth of the harbour. At ſix in the evening, we came to an anchor in twelve fathom water. At eight the lieutenant returned, having found the harbour, we ſent our boats aſhore, to make farther diſcoveries, and to endeavour to get ſome freſh water, and others to procure ſalt. We continued here till the 27th, during which time we ſtaved moſt of our empty caſks, in order to clear our ſhips as much as poſſible, and got up, and mounted ſuch of our guns as we had before put down in the hold, in order to eaſe the ſhips; for now, not knowing how ſoon we might meet with the Spaniſh ſquadron, it was neceſſary to have them all in readineſs. We could find no freſh water here, and but a very ſmall quantity of ſalt, and no other refreſhments whatever, all the country, as far as we could diſcover, being quite barren and deſolate. We got ſome proviſions out of the Anne victualler, on board each of the other ſhips, repaired the Trial's maſt, and aſſiſted her and the victualler to overhaul and new fix moſt of their rigging. Having loſt the hopes of a ſupply of water, we were put to the allowance of one quart a man for one day, and three pints for another, alternately; but conſidering our paſſage had hitherto proved extremely ſtormy, and a dead time of the year coming on very faſt, it was thought proper in order to keep the people in as good heart as poſſible, to give them whole allowance of all other proviſions, which was ordered accordingly. Here we farther ſecured our lower deck guns, by nailing quoins under the trucks, in caſe the tackles, breachings, or iron-work might give way, or fail in the ſtormy weather, which we had reaſon to expect. Here the commodore removed the Hon. Captain Murray into the Pearl, in the room of Captain Kidd, and Captain Cheap into the Wager, in the room of Captain Murray. He advanced Mr. Charles Saunders, his firſt lieutenant, to be commander of the Trial ſloop, in the room of Captain Cheap, and made Mr. Piercy Brett firſt lieutenant of the Glouceſter, ſecond lieutenant of his own ſhip. The Trial being prepared, and the Pearl which had thrown about 14 tons of water overboard, when chaced by the Spaniards, being ſupplied from the other ſhips, we prepared to proſecute our voyage. 1741

This harbour of Port St. Julian is a barren harbour, fit only to receive ſmall veſſels. We lay off in the road about two miles from the mouth of it. It is not to be ſeen open from where we lay, one point ſhutting in another; and before any ſmall ſhip or veſſel pretends to venture into the harbour, they ought to ſend in their boats at low water, and ſix poles or buoys at the end of the ſhoals, which in a manner block up the paſſage. The country around is pretty much on the level, except a few hillocks to the northward, and a pretty high one in the bay, which bears W. S. W. from the place where we lay at anchor. The latitude of Port S. Julian is 49° 10′ its longitude from London 69° 48′ weſt, and the variation of the compaſs 17° 20′ e.... We had uncertain weather here, with much rain, ſome ſnow, and generally a thick fog, with ſo much wind and ſea as made us ride hard, and haſtened our departure from this uneaſy ſituation. Sir John Narborough and others write that they have often ſeen and converſed with the inhabitants of this and other parts of Patagonia, and have given wonderful deſcriptions of them; but as we ſaw none of them, I have nothing to ſay of that ſort; nor indeed do I think there is any thing in this wild part of the world worthy of the leaſt notice.

On the 27th, at ſix in the morning, we made the ſignal, weighed, and put to ſea; but the Glouceſter being long in weighing her anchor, and the weather proving thick and hazy, we ſoon loſt ſight of her; and, at one in the afternoon, tacked and lay by for her coming up. At ſeven, we fired a gun, as a ſignal for her, and ſoon after ſhe joined us, having broken he main yard in the ſlings.

Previous to our leaving this port, a council was held on board the Centurion, at which all the officers by ſea and land attended; when it was propoſed by the commodore that their firſt attempt ſhould be on the town of Baldivia, the principal frontier of the diſtrict of Chili. To this propoſition of the council unanimouſly agreed; in conſequence of which, new inſtructions were given to the captain of the ſquadron, by which they were directed, in caſe of ſeparation, to rendezvous at the iſland of Nueſtra Senora del Seccoro, and there to cruiſe for ten days; after which they were ordered to repair to the height of Baldivia, and there, 30° and 40° 30′ to continue cruiſing 14 days longer; and, if in that time they were not joined by the reſt of the ſquadron, they were then to quit that ſtation, and direct their courſe to the iſland of Juan Fernandez.

On the 5th of March, in the morning, we paſſed by the ſtreights of Maghellan, ſo near, that we ſaw them very plainly; the northermoſt point of which, known by the name of Cape Virgin Mary, I found to be in 52° 28′ of ſouth lat. and long. from London 70° 55′ weſt, variation of the compaſs 18° 50′ eaſt. The ſoundings when it bore S. W. by S. at the diſtance of eight leagues, from 32 to 50 fathoms, the bottom black grey ſand and mud.

The afternoon of this day being very bright and clear,

1741 clear, with light breezes, inclinable to be calm, moſt of the captains took the opportunity of the favourable weather to pay a viſit to the commodore, but while they were in company together, they were all greatly alarmed by a ſudden flame which burſt out on board the Centurion, and which was ſucceeded by a cloud of ſmoke. However, they were ſoon relieved from their apprehenſions, by receiving information that the blaſt was occaſioned by a ſpark from the forge lighting on ſome gunpowder and other combuſtibles, which the officers were preparing for their uſe, in caſe we ſhould fall in with the Spaniſh fleet, and that it had been extinguiſhed without any damage to the ſhip.

In the morning of the 6th, we ſaw the land of Terra del Fuego, conſiſting of high, craggy hills, towering above each other, moſtly covered with ſnow; with deep, horrid valleys, ſome few ſcattered trees, no plains, nor one chearful green, through all the horrid proſpect; ſo that the whole may not improperly be called The Land of Deſolation; and I much queſtion whether a more dreary proſpect is to be ſeen in any other part of the habitable earth; for voyagers ſay this is inhabited; but ſurely its inhabitants muſt be the moſt miſerable of human beings. This evening we lay by, that we might not overſhoot the Streights of Le Maire in the night, though I believe, had we kept on, and paſſed round Staten Land, and a ſmall iſland or two, which lie to the eaſtward of thoſe ſtreights, and, together with Terra del Fuego, frame them, it might have been more to our advantage than paſſing through them. The 7th, at eight in the morning, we were very near a point of land on Terra del Fuego, called Cape St. James, bearing E. S. E. another called Cape St. Vincent, S. E. half E. the middlemoſt of the Three Brothers, being three high hills on this land Monte Gorda appearing above, farther up in the country and bearing ſouth from us. It is by theſe marks that the mariner knows he is near the Streights of Le Maire, and indeed we began to open them in this poſition. By noon we were almoſt through them, being aſſiſted by a very ſtrong tide, with much rippling, and which made to the ſouthward ſomewhat before ten o'clock in the morning. The courſe through is almoſt directly ſouth, and there are no ſhoals nor rocks in the paſſage, from whence any danger may be incurred, the only thing to be feared is the tide's turning, after the ſtreights are entered, in which caſe the veſſel will certainly be hurried back again, and can have no paſſage there till the next turn of the tide. The breadth of this paſſage appears to be about ſix or ſeven leagues, and its length about ſeven or eight. The ſtreight lies in 55 degrees ſouth latitude, longitude 67° 30' weſt from London; the ſoundings from 43 to 58 fathoms; the bottom black ſand and pebbles.

In paſſing through, our joy was increaſed by the brightneſs of the ſky and the ſerenity of the weather, which was indeed remarkably pleaſing; for though the winter was now advancing a-pace, yet the morning of this day, for its brilliancy and mildneſs gave place to none we had ſeen ſince we had left England. But we here found, what was conſtantly verified by all our obſervations in theſe high latitudes, that fair weather was always the fore-runner of a ſucceeding ſtorm, and that ſun-ſhine and tempeſt followed one another like light and ſhade. We had ſcarcely reached the extremity of the ſtreights when the ſerenity of the ſky, which had ſo much flattered our hopes, was all at once obſcured; the wind ſhifted to the ſouthward, and the ſea began to ſwell to an aſtoniſhing height. Before night the tempeſt aroſe, and the tide, which had hitherto favoured us, turned furiouſly againſt us; ſo that inſtead of purſuing our intended courſe, we were driven to the eaſtward, by the united force of wind and current, with ſo much precipitation, that in the morning we found ourſelves ſeven leagues to the eaſt of the Streights of Le Maire. From this time, we had ſuch a continual ſucceſſion of tempeſtuous weather as ſurpriſed the oldeſt and moſt experienced mariners on board, and obliged them to confeſs that what they had hitherto called ſtorms were inconſiderable gales, compared with the violence of theſe winds, which raiſed ſuch ſhort, and at the ſame time, ſuch mountainous waves, as greatly ſurpaſſed in danger all ſeas known in any other parts of the globe; and it was not without reaſon that this unuſual appearance filled us with continual terror; for had any one of thoſe waves broke fairly over us, it muſt in all probability, have ſent us to the bottom. Nor did we eſcape with terror only; for our veſſel inceſſantly rolling gunwale to, gave us ſuch quick and violent motions that we were in perpetual danger of being daſhed againſt the maſts or ſides of the ſhip: And though we were extremely careful to ſecure ourſelves from theſe ſudden ſhocks, by graſping at ſome fixed body, yet many of our people were forced from their holds, ſome of whom were killed, and others greatly injured: In particular, one of our beſt ſeamen was carried overboard, and drowned, another diſlocated his neck, a third was thrown into the main-hold, and broke his thigh, and one of our boatſwain's mates broke his collar-bone twice, beſides other accidents of the ſame nature. Theſe tempeſts, ſo dreadful in themſelves, (even though unattended by any other unfavourable circumſtance,) were rendered more miſchievous to us by their inequality, and the deceitful intervals which they at ſome times afforded; for though we were often obliged to lie to for four days together under a heavy wind, and were frequently reduced to remain at the mercy of the waves, under our bare poles; yet now and then we ventured to make ſail, with our courſes double-reefed, and the weather proving more tolerable, would encourage us to ſet our topſails; after which the wind without any previous notice, would return upon us with redoubled force, and, in an inſtant, tear our ſails from the yards; and that nothing might be wanting to aggravate our diſtreſs, theſe blaſts generally brought with them a great quantity of ſnow and ſleet, which caſed our rigging and froze our ſails, thereby rendering them and our cordage brittle and apt to ſnap upon the ſlighteſt ſtrain, adding inexpreſſible difficulty and labour to the working of the ſhip, benumbing the limbs of the people employed in handling the ſails, or handling the ropes, and making them incapable of exerting themſelves with their uſual activity, and even diſabling many by mortifying their fingers and toes. And now, as it were, to add to the finiſhing ſtroke of our misfortunes, our people began to be univerſally afflicted with that moſt terrible, and at ſea, incurable diſeaſe, the ſcurvy, which quickly made a moſt dreadful havock among us, beginning at firſt to carry off two or three a day; but ſoon increaſing, and at laſt carrying off eight or ten; and as moſt of the living were ill of the ſame diſtemper, and the little remainder who preſerved their health better, were quite worn out with inceſſant labour, I have ſome times ſeen four or five dead bodies, ſome ſown up in their hammocks, others not; lying about the decks, for want of help to bury them in the ſea.

[In ſhort, the voyagers met with nothing but difficulties and dangers, ſplitting their ſails, and having their ſeamen killed or diſabled in almoſt every gale. The Pearl and Severn were ſeparated from the fleet on the 10th of April, and from that time they ſaw no more of them, but afterwards, by letters taken on board ſome of the Spaniſh ſhips, they heard of the arrival of thoſe veſſels at Rio. On the 23d of the ſame month, they loſt ſight of the Glouceſter, Wager, Trial, and Anne, being all the remainder of the ſquadron. The Wager ſuffered ſhip-wreck at the Iſland del Seguro, the reſt joined the commodore at the Iſland of Juan Fernandez. The bad weather, with ſome few intervals ſtill continued. On the 8th of May the commodore ſaw the main land of Patagonia, as alſo ſeveral iſlands, one of which he took to be Seguro, which owing to Sir John Narborough's agreeable

The Pearl and Severn and other veſſels are ſeparated from the fleet.

agreeable description of it* was appointed for the first place of rendezvous for the fleet in the South Seas.

This (says my author) was an unhappy appointment in its consequences, for when the people, already reduced to the last extremity, found this to be the place of rendezvous, where they had hoped to meet the rest of their companions with joy, and saw what a miserable part of the world it appeared to be, their grief was succeeded by despair; they saw no end of their sufferings, nor any door open to their safety. Those that had hitherto been well, and in heart, were now full of despondency, fell down, sickened, and died; and, to sum up this melancholy part, I verily believe that our touching on this coast, the long stay we made here, and our hindrance by cross winds, which we should have avoided in a direct course to Juan Fernandez, lost us at least 60 of as stout and able men as any in the navy. This unspeakable distress was still aggravated by the difficulties which we found in working the ship, as the scurvy had destroyed, in all, no less than 200 of our men, and had, in some degree, affected the whole crew. Indeed, it were endless to recite minutely the various disasters, fatigues, and terrors, which we encountered on this coast. All these went on increasing till the 22d of May, at which time the fury of all the storms that we had hitherto experienced, seemed to be combined, and to have confirmed our destruction. In this hurricane almost all our sails were split, and great part of our standing rigging was broken. About eight in the evening, a mountainous sea took us on our starboard quarter, and gave us so prodigious a shock, that several of our shrouds broke with the jerk, by which our masts were in danger of coming by the board, and our ballast and stores were so strangely shifted, that the ship heeled afterwards two streaks apart. It was a most tremendous blow, and we were all thrown into the utmost consternation, from the apprehension of instantly foundering. Our deplorable situation no longer allowing any room for deliberation, we stood for Juan Fernandez; and, to save time, which was now very precious, (our men dying, four, five, or six in a day,) we endeavoured to hit the island on a meridian course. On the 28th of May, being nearly in the parallel in which it is laid down, we expected to have seen it; and indeed the commodore was persuaded that he did see it; but all the officers being of opinion that it was only a cloud, to which the haziness of the weather gave too much colour, we made sail to the eastward, and, by so doing lost above 14 days in recovering our westing again. This was a most fatal disappointment; for in this run we lost above 80 of our men, most of whom would probably have been saved, if the commodore's advice had been attended to. On the 8th of June, at six in the evening, we at last saw the island, bearing north by east, half-east, about 15 or 16 leagues off. On the 10th, at two in the morning, we anchored in 56 fathom water, close under the north-east part of the island. At ten in the morning of the 11th, with much labour and difficulty, we weighed our anchor, and, at noon, happily moored our ship in the great bay, about a mile from the shore, in 52 fathom water, to our inexpressible joy; having been from St. Catherine's in the Brazils to this place, 148 days on such a dreadful and fatal passage, as I believe very few other persons ever experienced. At two in the afternoon, the Trial appeared in the offing; on which we immediately sent some hands on board her, by which assistance she was brought to an anchor between us and the land. We soon found that the sloop had not been exempted from calamities similar to those which we had so severely felt; for her commander, Captain Saunders, waiting on the commodore, informed him, that out of his small complement he had buried 34, and those who recovered were so universally afflicted with the scurvy, that only himself, his lieutenant, and three of his men were able to stand by the sails. The same day we got out our long boat, and sent her on shore, with materials for building tents for the sick, and with orders to bring on board some water. On the 17th the Trial came again to an anchor, and moored: This day and the next, we sent on shore the remainder of our sick people, the whole number now on shore being 135, many of whom as they were too far gone in the scurvy died, to the number of sixty. We now began to send on shore materials for the tents, for the coopers, sail-makers, and some of the officers; we sent also a copper oven, which we had with us for baking soft bread for the ship's company, and the smith's forge, for making or repairing such iron-work as was necessary. After a short interval of relaxation, all hands were busily employed in cutting large quantities of wood for the ship's use, some in making charcoal for the smith, and for a farther store; the bakers in preparing bread; the coopers in making up and cleaning the casks for water; the sail-makers in mending the sails and making others. Some were fishing for the sick, and others were otherwise employed. Here being great plenty of fine fish, all to be taken by the hook, two or three people could never fail to take as much in about two hours, as all the ship's company could eat. Besides we took great quantities for salting and curing; and some private persons who had hooks and lines, fished for themselves, and caught enough for their own use, and to give to those who had none. In the mean time, the people on board were employed in cleaning the vessel, which was in a very filthy condition, and in stripping the masts, and overhauling the rigging. One of the boatswain's mates, (with some assistants) having run up a rope-walk on shore, was employed in making what small cordage we might want; others in watering; in short, in every thing that might contribute to put us in as good a condition, and in as short a time as possible; and as fast as the sick recovered, they were put on the like employments.

1740

They meet with the Trial at Juan Fernandez.

At first sight of this island it appeared with a most unpromising aspect, being extremely mountainous, rugged, and irregular; but, on our near approach it improved upon us; and, when we were landed, we found all the vegetables which are usually esteemed to be peculiarly adapted to the cure of those scorbutic disorders that are contracted by salt diet, and long continuance at sea; for here were water-cresses, wild sorrel, and Sicilian radishes, in profusion. These vegetables (not to mention the turnips which now abound in every plain with the fish and flesh we got here) were not only extremely grateful to us, but were likewise very refreshing to the sick, and contributed not a little to the recovery of those who were not already too far advanced in the disorder to admit of relief, and to the restoring of others to their wonted vigour, who though not apparently under the malignancy of the distemper and its baleful concomitants, were yet greatly debilitated by continual watching and anxiety of mind, from which not one on board was exempt.

During the time of our residence here, we found the inland parts of the island no way to fall short of the sanguine prepossessions we had first entertained in its favour: For the woods which covered most of the steepest hills and precipices, were free from all bushes and underwood, and afforded an easy passage through every part of them; and the irregularities of the hills and precipices in the northern parts of the island, necessarily traced out, by their various combinations, a great number of romantic valleys, most of which had a stream of the clearest water running through them, which tumbled in cascades from one rock to another, as the bottom of the valley, by the course of the neighbouring hills, was at any time broken into a sharp and sudden descent. Some particular spots occurred in these valleys, where the shades and fragrance of the contiguous woods, the loftiness of the overhanging rocks, and the transparency and frequent falls

* He had been there in the height of summer; whereas winter was approaching, when Anson arrived in those parts.

1740 falls of the neighbouring ſtreams, preſented ſcenes of ſuch elegance and dignity, as could with difficulty be rivalled in any other part of the globe. It is in this place that the ſcenes of ſimple nature may perhaps be ſaid to excel all the fictitious deſcriptions of the moſt animated imagination. The ſpot where the commodore choſe to fix his reſidence, exceeded in beauty any thing that words can be ſuppoſed to repreſent. It was a delightful little lawn that lay on an eaſy aſcent, at the diſtance of about half a mile from the ſea, and was probably the very ſpot whereon Captain Shelvock had pitched his tent twenty years before. In front there was a large avenue cut through the woods to the ſea-ſide, which ſloping to the water with a gentle deſcent, opened a proſpect to the bay with the ſhips at anchor. This lawn was ſcreened behind by a tall wood of myrtle, ſweeping round it in the form of a theatre, the ſlope on which the wood ſtood, riſing with a much ſharper aſcent than the lawn itſelf, yet not ſo much but that the hills and precipices without land towered conſiderably above the tops of the trees, and added to the grandeur of the view. There were beſides, two ſtreams of chryſtal water, which ran on the right and left of the tent, within an hundred yards diſtance, and were ſhaded by the trees that ſkirted the lawn on either ſide, and completed the ſymmetry of the whole.

It is aſtoniſhing (continues the writer) that among all the voyagers who have viſited this iſland before us, and who have obliged the world with deſcriptions of it, none of them have mentioned a charming little bird, that with its wild, various, and irregular notes inchants the ear, and makes the woods reſound with its melody. This untutored choriſter is ſomewhat leſs in ſize than the gold-finch, its plumage beautifully intermingled with red and other vivid colours, and the golden crown on its head ſo bright and glowing, that when ſeen in the full light of the ſun, it ſurpaſſes all deſcription. Theſe little birds are far from being uncommon or unfamiliar: They perched on the branches of the myrtle trees ſo near us, and ſang ſo chearfully, as if they had been conſcious that we were ſtrangers and had come to bid us welcome. Beſides the above, there is another little bird unnoticed by any former writer, and which ſeems likewiſe to be peculiar to the iſland, and is conſequently without a name. It is ſtill leſs than the former in ſize, but not inferior in beauty, though not ſo muſical. The back, wings, and head, are of a lively green, intermixed with ſhining golden ſpots, and the belly is a ſnow-white ground with ebony coloured ſpots, ſo elegantly varied, that no art can imitate. To the catalogue of birds mentioned by former writers, ſhould alſo be added blackbirds and thruſhes very like thoſe of England, and owls, but of a very diminutive ſize. Of four-footed animals we ſaw none but cats, rats, dogs, and goats, and of the latter but few, as the dogs of various kinds, gray-hounds, maſtiffs, pointers, ſpaniels, and mungrels, have thinned them in plains, and driven them to inacceſſible mountains; yet ſome were ſhot by the hunters, and were preferred by them to the beſt veniſon. Among thoſe preſented to the commodore were two or three venerable through age, which had been marked more than thirty years before by Sulkirk.

We once had an opportunity of obſerving a remarkable diſpute between a herd of theſe animals and a number of dogs; for going in our boat into the caſtern bay, we perceived ſome dogs run very eagerly upon the foot, and being willing to obſerve what game they were after, we lay on our oars ſome time to view them, and at laſt ſaw them take a hill, where looking a little farther, we obſerved, upon the ridge of it, an herd of goats, which ſeemed drawn up for their reception. There was a very narrow path ſkirted on each ſide by precipices, in which the leader of the herd poſted himſelf fronting the enemy, the reſt of the goats being ranged behind him where the ground was more open. As this ſpot was inacceſſible by any other path except that where this champion had placed himſelf, the dogs, though they ran up hill with great alacrity, yet, when they came within about 20 yards, found they durſt not encounter this formidable Goliah; for he would infallibly have driven the firſt that approached him down the precipice; they therefore laid themſelves quietly down, panting, and did not offer to ſtir while we were in ſight. Theſe dogs have multiplied prodigiouſly, and have deſtroyed moſt of the cats as well as goats: the rats, however keep poſſeſſion, and were very troubleſome gueſts in the night, when they generally paid us their viſits. It is not eaſy to determine in what manner ſuch a number of dogs ſubſiſt, as they are much more numerous than all the other four-footed creatures upon the iſland. Our people were inclined to think they lived in a great meaſure upon the young ſea-lions and ſeals, and ſupported their opinion by the report of the ſailors, ſome of whom killed the dogs for food, and ſaid they taſted fiſhy: and indeed there is hardly any other way of accounting for the ſubſiſtence of theſe animals; for, as has been ſaid, they have already deſtroyed all the goats in the acceſſible part of the country; ſo that there remain now only a few, among the crags and precipices, where the dogs cannot follow them. Theſe are divided into ſeparate herds of twenty or thirty each, which inhabit diſtinct faſtneſſes and never mingle with each other: by theſe means we found it extremely difficult to kill them; and yet we were ſo deſirous of their fleſh, that we diſcovered I believe, all their herds; and it was thought, on comparing their numbers, that they ſcarcely exceeded 200 upon the whole iſland. The dogs had deſtroyed the pardellas likewiſe, ſo that there was not one of them to be ſeen: we found, indeed, their boroughs in the earth, which leaves no doubt of their being in plenty there in Selkirk's time, as well as cats, of which there is now ſcarcely one left alive. Fleſh-meat being very ſcarce, our people, tired of fiſh, though excellent in its kind, at length condeſcended to eat ſeals, which, by degrees they came to reliſh, and called them lamb. Of theſe, it being their breeding time, and of the ſea-lions the numbers were incredible. Theſe animals have frequently furious battles among themſelves, principally about their females; and we were one day ſurpriſed by the ſight of two animals, which at firſt ſeemed different from all we had ever obſerved; but, on a nearer approach, they proved to be two ſea-lions that had being goring each other with their tuſks, and were covered with blood, with which they plentifully abound. This led us to watch them more cloſely; and one was obſerved larger than the reſt, and from his driving off other males, and keeping a great number of females to himſelf, he was humorouſly ſtyled the Baſhaw. To this pre-eminence, however, he had not arrived without many bloody conteſts; for on our people's attacking him in the midſt of his ſeraglio of females, being overpowered after having made a deſperate defence, the ſigns of his bravery appeared in numerous ſcars on every part of his body.

We had now been ten days on this iſland, when ſome of our people diſcovered from an eminence a ſhip to the leeward, with her courſes even with the horizon, without any other ſail abroad but the main-top-ſail; from whence it was concluded ſhe was one of our own ſquadron; but the weather being hazy, no definitive determination could be formed concerning her. She diſappeared for ſome days, and we were all under the deepeſt concern, fearing that the weakneſs of her condition had diſabled her from working to windward, and that all on board had periſhed. We continued our employ till the 20th, when we ſaw the ſhip again, and, on her near approach, could diſtinguiſh her to be the Glouceſter; and, making no doubt of her being in diſtreſs, the commodore ſent our boat on board her with water and refreſhments. We found her in a miſerable condition, having not many more than an hundred people alive, and almoſt all thoſe helpleſs with the ſcurvy; their water ſo very ſhort, that they were obliged to allow but a pint a day to a man, and the continual ſtaws off the land, together with their

being disabled in their sails and yards hindered them from getting into the bay. The next day we sent them a fresh supply of fish, greens, and water, and men to help to work the ship; soon after which the flaws drove them off again, and the ship appeared no more till the 30th, when she fired a gun, and made a signal of distress. She continued in this manner off and on, sometimes in sight, and sometimes not, till the 23d of July; during which time, though we often relieved the people on board with water and other necessaries, yet their sufferings were insupportable and their whole complement was by this time reduced to 96 men, all of whom must have perished in a few days more, had not the wind proved favourable to bring them into the bay; but providentially a fresh gale sprung up from the sea, which brought them to an anchor. We immediately sent men on board to assist in mooring the ship, and continued our assistance during our stay at this place.

The Gloucester joins them again.

On the 5th of August the commodore sent the Trial sloop to search the island of Little Juan Fernandez, lest any of the squadron should have mistaken that island for the place of rendezvous, and might remain there, in expectation of meeting with the rest of the ships. On the 15th, the Anne pink, which had been separated from us, with the rest of the squadron, on the 23d of April, appeared in sight. Her arrival gave us new spirits, she being principally laden with provisions, and we were immediately ordered full allowance of bread. This ship had been about two months in a safe harbour, on the main land, near the same parallel with del Soccoro, whither she had been directed by Providence, and where she lay in security, and enjoyed plenty, and her people, sixteen in number being freed from their fears of shipwreck, very soon recovered their wonted vigour, having experienced none of those hardships which were endured by the rest of the fleet. They told us they had seen some Indians, and, once took one of their canoes, with a man, a woman, some children, a dog, a cat, &c. but the day after this capture, all escaped, the dog excepted, in the ship's boat, and left the canoe in her stead. Those Indians, they said, understood a few Spanish words, and probably might have some little correspondence with the Spaniards of Chili, or their nearer bordering Indians, or some of the fathers for propagating the faith, might sometimes have been among them. The principal refreshment the crew met with in this port were wild nettle-tops, celery, and sorrel; cockles and muscles of an extraordinary size; and good store of sheep, geese, and penguins. They judged the place to lie in lat. 45° 30′ south, and might be known by an island which faces it, which the inhabitants call Inchin, and by a river in which they found some excellent fish. The Anne pink was the last that joined us at Juan Fernandez. The remaining ships of the squadron were the Severn, the Pearl, and the Wager store-ship. The Severn and Pearl, which parted company at Cape Noir, (as has been already observed) put back to the Brasils, so that of all the ships that came into the South Seas, the Wager alone was missing. [Of the fate of this ship a relation will be given before the conclusion of this voyage, as also of the expedition of the Spanish admiral Pizarro, who by this time was set out to intercept the English squadron.]

They meet with the Anne pink.

On the 22d the Trial returned from searching the island of Little Fernandez, and reported it to be about 20 leagues distant from the place where we lay, being about three leagues in compass, very mountainous, and having some woods, and good runs of water; with multitudes of goats, fish, sea-lions, seals, as with us; but no ships were to be seen, nor the marks of any having been there. While we were at Juan Fernandez, we began, and pretty far advanced a wharf for the better landing and embarking such necessaries as we had occasion for. We kept two ovens employed in baking bread for the ship's companies, two Smith's forges for repairing old, and fitting new iron work, and continued making charcoal for future use. The commodore likewise ordered the carpenters to take a careful survey of the Anne pink, the master of which set forth that she was in so rotten a condition, as not to be able to proceed or return, without very considerable repairs; which representation, upon a survey, being found to be true, the commodore purchased her materials at a fair valuation, and ordered her to be broken up, and her crew to be put on board the Gloucester, that ship not having hands enough left to navigate her, much less to fight her, in case of an attack from the enemy. 1740

We reckoned this island (Juan Fernandez) to be in 33° 40′ south lat. and in 87° 37′ west lon. from London. The distance from the main continent is 150 leagues, and the compass, by the best accounts of those who have been round it, is about 12 or 13 leagues. There are two small and very commodious bays within the points, which form a large one where we lay; one to the eastward, the other to the westward of us, and no doubt several others in other parts of the island. The variation, by an observation taken on the morning of the 2d of July, was 8° 4′ half-east. It was reported that the south-west end of the island was more level than that where we resided, and the goats more numerous, but wood scarcer.

On Tuesday, Septe er the 8th, at noon, we saw a sail, bearing N. E. by E. and perceiving by our glasses, that she could be none of our squadron, nor was an English built ship, we fired a gun, as a signal for getting all our people on board; and having taken several men out of the Trial, bent our sails, set up our rigging, and slipped our small bower cable; and at six in the evening we weighed, in pursuit of her. In the morning of the next day we got down our stumps, which are generally set up in bad weather instead of top-gallant masts and yards, rigged them and bent their sails. At eleven the same morning, we mustered and quartered the ship's company. At noon the island of Juan Fernandez bore half south at distance eight leagues. The two next days we saw nothing of the chace, nor any thing remarkable.

On Saturday, September the 12th, at five in the morning, we saw a sail to the windward, which bore down to us; and about two leagues distance, she hauled up the lee clue-garnet of her main-sail, and fired a gun, which we supposed to be a signal concerted between her and others that came out in her company; but we not answering nor regarding it, she hauled close on a wind, and stood from us, endeavouring to escape; upon which we gave chace; but the weather sometimes proving hazy and foggy, we were in danger of losing sight of her. About nine in the morning we tacked, and at noon coming within gun shot, we fired five shot at her rigging, to bring her to; but she keeping on her course, we fired four more, on which she struck her colours, and surrendered without making any opposition. This ship, however, happened not to be the same that we went out after. She proved to be a rich merchant ship, having on board 18,000l. in dollars and plate, with some jewels and abundance of gold and silver twist; but the bulk of her cargo consisted of sugars and bale goods, most of the latter European, but from the produce of the country. She was called the Nuestra Senora del Monte Carmelo, was of about 500 tons burthen, and was commanded by Don Manuel Zamora, and had on board thirteen passengers, most of them persons of fortune, amongst whom was the governor of the city of S. Jago, the capital of Chili. She came from Callao in Peru, and was bound for Valparaiso in Chili, where those ships annually trade, exchanging silver in return for gold and corn, the latter being very scarce in Peru. Some of the prisoners informed us, that if we had taken this vessel on her return from Chili to Peru, we should have met with as much gold in her as we had now found silver. She had on board her, in the whole, fifty-seven persons, many of them Indians and black slaves, who were afterwards very useful to us in assisting

1740 ſifting towards the ſhip's duty. She had been 27 days from Callao, and wanted not above two days to complete her voyage when we took her.

[In this ſhip the commodore found an account of the miſadventures of the Spaniſh admiral Piſarro's ſquadron, who in his courſe, had met with two ſhips which they ſuppoſed to be Engliſh, but the ſea ran ſo high, that they could not pretend to purſue them. Theſe ſhips were ſuppoſed to be the Pearl and Severn. As to the reſt they found that the Spaniard had been forced to put back, but heard alſo that he had ſent advice to the viceroy of Peru concerning them, intimating, That though he had been forced back, yet poſſibly the Engliſh, who were obſtinate enough to perſiſt in deſperate undertakings, might come into theſe ſeas; but knowing experimentally what they muſt have ſuffered in that dreadful paſſage, he doubted not but that they muſt be in a very weak and defenceleſs condition; he therefore adviſed the viceroy to fit out all the ſtrength of ſhipping that he could, and to ſend them to cruiſe at Juan Fernandez, where it was likely that they might meet their enemy; in which caſe he farther adviſed that the Spaniards ſhould not waſte the time in a diſtant cannonading, but board the Engliſh ſword in hand, which, in their weak condition was likely to prove an infallible method of taking them.]

This, (ſays our author) was a well laid ſcheme, and, in purſuance of it, the viceroy equipt three ſhips at Callao, one of 54, one of 30, and one of 20 guns, all double manned with the choiceſt men they could poſſibly procure, and ſent them to wait for us accordingly. Thoſe ſhips arrived at Juan Fernandez ſome time in May, and continued till about June the 6th, when, imagining that we muſt be either put back or loſt, they quitted their ſtation, and ſailed for the port of Conception in Chili, and, by theſe means, we luckily miſſed them: had it happened otherwiſe, as we arrived there with only our ſingle ſhip, in ſuch a defenceleſs condition, and had they put their orders in execution with any tolerable degree of reſolution, we muſt, in all human probability, have fallen into their hands. Our priſoners informed us further, that thoſe ſhips, during their cruiſe, had met with a ſtorm, in which they had received ſo much damage, that it muſt be at leaſt two months before they could again be fit to go to ſea,; the whole of this intelligence was as favourable as we could have wiſhed; and now we were at no loſs to account for the freſh marks that we found at Juan Fernandez, of that iſland's having been lately viſited by ſome white people.

On Sunday the 13th, having got on board moſt of the priſoners of note, and all the ſilver, we made ſail for Juan Fernandez; and the weather proving very moderate, at ſix in the evening that iſland bore N. W. by N. at the diſtance of five leagues. At ſix the next morning we fired three guns, as a ſignal to the ſhips in the bay. At four we anchored, got in our ſmall bower cable, which we had ſlipped at leaving the place, and moored our ſhip. The 15th we employed in watering, and ſetting up our rigging, in order to purſue our voyage. And this day, the commodore being informed that ſeveral merchant-ſhips were now purſuing their trade without fear of any ſurprize, the trial was ordered out on a cruiſe, and proceeded immediately. On the 16th we got up a new top-gallant maſt, and wanting ſome cordage we were ſupplied with it from the Glouceſter. This and the following days until the 19th, we ſpent in getting every thing ready for ſea with the utmoſt expedition. The 19th we ſent 28 of our priſoners on board the Glouceſter, ſhe being weakly manned, and theſe priſoners being good ſailors. We likewiſe ſupplied the prize with two months proviſions of all ſorts, at full allowance, for 20 men; put all the guns belonging to the Anne pink on board of her; and, having left orders with Captain Mitchell, of the Glouceſter, to burn the pink, together with her uſeleſs ſtores, and appointed him his ſtation off the town of Payta, (where the ſhips between Lima and Panama generally touch to deliver part of their cargoes to be diſperſed through the inland parts of Peru) with orders to ſail to that ſtation as ſoon as poſſible; we weighed, and took leave of our winter reſidence, in company with the prize, which the commodore had fitted up to cruiſe againſt the enemy. The 21ſt at four in the evening, we had the laſt ſight of this iſland, it then bearing from us W. by N. at the diſtance of 17 leagues. The remaining days, until the 24th, we had variable and uncertain weather, in which we ſplit our main-top-ſail and fore-ſail, and received ſome other ſlight damage.

The 24th, at five in the evening, being ſomewhat hazy, we ſaw two ſail to windward, on which we cleared ſhip, in order to be ready to engage; the largeſt of the two ſhips bearing down upon us. At ſeven ſhe came ſo near, that we hailed her in Spaniſh, and ſhe anſwered in Engliſh, and told us, that ſhe was a prize taken by the Trial, and that her conſort was the Trial itſelf, which was very much diſabled. At eleven the next morning, there being a hard gale, and high ſea, the Trial fired two guns as a ſignal of diſtreſs, and bore away before the wind, and we after her. The ſame day at half an hour paſt noon, we ſpoke with her, and found ſhe had ſprung her main-maſt, and that her main top-maſt had gone by the board; and as we were all of us ſtanding to the eaſtward next morning, with a freſh gale at ſouth, ſhe had the additional misfortune to ſpring her fore-maſt, ſo that now ſhe had not a maſt left. This was a great obſtruction; for now we had intelligence by the Trial's prize, that there were many ſhips at ſea richly laden, and that they had no apprehenſions of being attacked by us, having received intelligence that our ſquadron was either put back, or deſtroyed. Therefore in the courſe of 28 hours, which we were detained in waiting upon the Trial, I am perſuaded we miſſed the taking many valuable prizes. The reſult was, that a council being called, and all the officers convened together on board our ſhip, it was there concluded that, in her preſent condition, the Trial could be of no farther ſervice; and the commodore, being reſolved to ſeparate the ſhips in order to cruiſe upon the coaſt to the greateſt advantage, gave orders to Captain Charles Saunders, the commander, to burn the Trial, and in her room commiſſioned the Trial's prize for his majeſty's ſervice, with the ſame commander, officers, and people. This ſhip was called by the Spaniards the Nueſtra Senora de Arinzazie; but, being now commiſſioned for his majeſty's ſervice, ſhe was henceforth called the Trial's prize. She was the largeſt ſhip we took in thoſe ſeas, being between five and ſix hundred tons, and laden with bale goods, ſugar, and other commodities to a conſiderable value, and about 5000l. in ſpecie and wrought ſilver.

On the 28th, at nine in the morning, we parted with the Trial and both the prizes. And on the 30th we ſaw the main land of Chili. This day we began to exerciſe our people with ſmall arms, which was the firſt time we had done it ſince we came into thoſe ſeas, and which we continued at all proper opportunities during the voyage.

On the firſt of October we came in ſight of the high land of Valparaiſo, bearing N. E. half E. at the diſtance of about 14 leagues. This city lies in the latitude of 32° 58′ ſouth, its longitude from London is by my account 80° 37 weſt. On the 5th, the commodore, being informed that there were murmurings amongſt the people, becauſe the prize-money was not immediately divided, ordered the articles of war to be read; and, after that, remonſtrated to them on the danger of mutiny, and ſaid he had heard the reaſon of their diſcontent, but aſſured them their properties were ſecured by act of parliament as firmly as any one's own inheritance, and that the money, plate, &c. were weighed, and marked in public; ſo that any capable perſon, if he pleaſed, might take an inventory of the whole. He then read an account of the particulars, and told them they might (if they

pleasure) make choice of any person to take an inventory for them, or buy their parts; which spread a visible joy and gave content to every one.

We continued cruising off the coast of Valparaiso till the 8th, when, at twelve at night we broke the main topsail yard in the slings, on which we unbent the top sail, and got down the broken yards. At ten in the morning we saw the high land of Choupa, and over it the Cordillera mountains, being part of that long ridge of mountains called the Andes, which run from one end of South America to the other, appearing excessively high, with their tops covered with snow. We crossed the south tropic to the northward on the 14th, and from this time till we were some degrees to the northward of the equator, met with nothing but fair weather and a smooth sea.

The 21st, at noon, the high land of Morro Quemado bore E. by N. at the distance of four leagues; and here we continued cruising off and on till the 2d of November, when, about six in the morning, we saw two sail of ships standing towards us, upon which we made a clear ship, and immediately gave them chace, when we soon perceived that they were the Trial and Centurion prizes. As we had the wind of them, we brought to, and hailed their coming up, when Captain Saunders came on board, and acquainted the commodore that he had cleared the Trial, pursuant to his orders, and having shuttled her, he remained by her till the sunk; but that it was not till the 4th of October, that this was effected, by reason of the great swell and hollow sea, that, during his attendance on the sloop, they were all driven so far to leeward, that they were afterwards obliged to stretch a long way to the westward, to regain the ground they had lost. He added that in their cruise they had met no prize, nor had seen any vessel on all the coast. At four in the afternoon, of the 5th instant, we discovered the high land of Barlnca, and half an hour after we saw a sail to the northward, to which we gave chace, and cleared our ship for engaging; and at ten in the evening, coming up with her, we fired eight guns, and took her. She came from Guiaquil, and was bound for Callao, with timber, cacao, cordage, tobacco, and a small trunk of bale goods, all of little value to us, but a considerable loss to the Spaniards. She was called the Santa Teresa, and was commanded by Don Bartolo Urunaga, having between 30 and 40 people on board, passengers included, and five or six women besides children. Our third lieutenant, two other officers, and a party of sailors were sent on board to take care of her; and our other prizes being far astern, occasioned by our chacing this ship, we lay by till four the next morning, and fired a gun every hour, as a signal for their joining us.

On the 12th of this month, at five in the morning, we saw a sail, to which we gave chace; but there being very little wind, we manned and armed our barge, pinnace, and the Trial's pinnace, and sent them to take her, and at eight they boarded and took her, and brought her to us at half an hour past ten. She was called the Carmen, commanded by Signor Marcus Marina, and came out of Payta the day before. She was bound to Callao, and laden with iron and cloth. We found an Irishman on board named John Williams, who pretended to be a prisoner amongst them, and with much seeming joy entered with us. He informed us, that amongst other ships in the port of Payta, they left in the road a bark which was taking in 400,000 dollars, with which she would sail for Panama, in a day or two at farthest; and the Spanish prisoners on being examined, confirming the intelligence, and farther giving some account of the strength of the place, the commodore resolved to attack it that very night, and made preparations accordingly. Mr. Thomas Simmers, mate of our ship, with one midshipman, and about ten or twelve men, were sent to command and take care of this last prize. At ten at night we sent our barge and the Trial's pinnace to attack the town of Payta, and to take it by surprize. They had 49 men well armed, and were commanded by the Lieutenants Brett, Dennis, and Hughes, who had orders, if possible, to secure the governor of Payta, and send him prisoner on board, in order to procure a supply of provisions, and a ransom for the town. At half an hour past eleven we sounded, and found 43 fathom water, the ground mud, the island of Lobos bearing N. N. E. at the distance of three or four miles. At seven in the morning, Point Orado, being the point that forms the Bay of Payta, bore S. S. E. two miles distant, and the town of Payta, at the same time, began to open in a direct line with it, distant about four miles; soon after which we saw our British colours flying on the castle. At ten, the Trial's boat came on board, laden with gold and silver coin, wrought plate, jewels, and rich moveables. The crew informed us, that they took the town about two in the morning; and that though the Spaniards had some time before been apprised of our intent, yet they made a very faint resistance, having fired but two guns from their castle before our men landed, and a few small arms afterwards; and then they all quitted the town with the greatest precipitation. The governor and his family made their escape in so much haste, that his lady was handed out of a window with no other clothes to cover her but her shift. All the inhabitants fled in the like confusion; except some women and children. In this action we lost one man, Peter Obrian, the commodore's steward, who was shot through the breast by a musquet ball; and had two wounded, namely, Arthur Lusk, a quarter-master, and the Spanish pilot of the Teresa, whom we had made use of as a guide; the first through the fleshy part of the arm, near the shoulder, the second through the wrist, but neither dangerously; and I have had it reported from several officers then on shore, that our men ran to the attack, and fired in so irregular a manner, that it was, and still remains a doubt whether those were not shot by our people rather than by the enemy. Payta, at the time of the attack, had a fort with eight guns mounted, which commanded the town and harbour; and the balcony of the governor's house, which again commanded that fort, and several other houses were lined with armed men, of which there might be about 400 in the town; but these people having enjoyed a long peace, and being enervated by luxury so customary in those parts, their arms in a bad condition, and no person of experience or courage to head them, it is no wonder that they made so small a resistance, and were all driven out of the town in less than half an hour, by only 49 men, but I believe the noise of two drums which we made use of, together with the suddenness of the surprise, contributed to intimidate them, and facilitated our success.

On our getting possession of the castle, our commanding officer very inconsiderately ordered the guns to be thrown over the walls, which accordingly was executed; but some time after, reflecting on the ill consequence which might attend that proceeding, he ordered two of them to be got up and remounted.

This town contained 140 or 150 houses; We found in it two churches, which, together with the governor's house and castle, were the only remarkable buildings. There were several large store-houses full of rich European goods, all which were destroyed when we let the town on fire. This afternoon we employed in getting off the plunder, and provisions of hogs and fowls, which were here in great plenty. On the evening we anchored in ten fathom water, the town bearing from us S. by E. half E. at about three miles distance, not being able to get farther in, by reason of the flaws of wind from off the land.

From this time to the 15th we were employed in getting on board the plunder, which chiefly consisted of rich brocades, laced clothes, bales of fine linens and woolens, and the like; together with a great number of hogs, as also some sheep and fowls, cases of Spanish brandies and wines, a quantity of onions, olives, sweet-meats, &c. all which the sailors hoped would have been equally di-

1741 vided among the ships companies, but they found themselves disappointed.

We found in the road one ship, two snows, one schooner, and two quarter galleys, all which we took possession of. The 14th in the morning, we saw a bark-log, as they call it, being a sort of raft, made of the stumps of trees, fastened together, overlaid with poles, and covered with small twigs twisted mat-wise, with several people in her coming along shore, from the southward, she had a sort of mast and sail in her, and at first sight we knew not what to make of her; and none of our boats being on board, we sent the Carmen's boat with Mr. Langdon, a midshipman, who commanded in the second place on board that ship, and some armed people to pursue them, who perceiving it put on shore, and made their escape over the rocks. Mr. Langdon took their bark-log, which he found to be laden with dried fish, which we suppose they were carrying to Payta for a market. This evening the Spaniards, who had all along appeared in great numbers from the hills, and were now considerably increased, making a show of warlike preparations as if they designed in the night to attack our people in the town, they thereupon barricaded the streets, and kept very strict watches, to prevent a surprise. Several negros delivered themselves up, desiring to be made prisoners, that they might have some food, and more especially water, to keep them from perishing; for the country thereabouts being for many miles round quite barren and sandy, without either water or any other thing necessary for life, and the nearest town to them, named, as I think, Santa Cruz, whence relief might be got, being a day and a half or two days journey off, the people who had left the town were in a starving condition, and we had melancholy accounts of several dying among them chiefly for want of water during our small stay; and yet so greatly were they infatuated or frightened, that they never offered to treat for the ransom of the place, which if they had done, I believe it would not have been destroyed; in which case they might have secured to themselves not only their habitations, but provision and water enough (till they could have got a fresh recruit) which we should, on that condition, have readily left them.

The town seems to be very unhappily situated on that and some other accounts. They having no water but what is brought them by land carriage from several leagues off; so that they are obliged to keep very considerable quantities by them in earthen jars, not only for their own use, but for the ships which frequently touch here, where they likewise often unload, and take in fresh cargoes. They are in the same case as to grain, bread, and almost all other necessaries of life; and lie so open to an enemy, that the town has been often taken and ruined by the English, Dutch, and French; all which inconveniencies, one would imagine, should tempt them to change their situation: but then the convenience of their trade is so great, being the only proper place they can pitch on for a mart between Panama and Peru, that they prefer this lucrative convenience to all other considerations.

Among the slaves who had desired to be entertained in our service, was one, who, having been a slave in Jamaica, had, on the death of his master, obtained his liberty, and thereupon entered himself a servant to one of the South-Sea Company's factors, whom he accompanied to Porto Bello and Panama, and there got into the service of a Spanish gentleman, who took a great fancy to him, and with whom he went to Lima in Peru, where his master likewise dying, left him a very considerable legacy; but the power being now in the hands of his executors, they not only defrauded him of his legacy, but made him a slave a second time. He was now at Payta with one of his masters, on his passage from Lima to Panama, when he took this opportunity to come over to us; and being a handy fellow, and accustomed to wait upon gentlemen, he was immediately taken into the commodore's service, came with us into England; and, I believe, continued with him to his death. This person gave us some information of the designs of the Spaniards on shore, and told us that we had killed one or two of them, and wounded several others; but this account was never, that I know of, farther confirmed.

The 15th in the morning, we sent on shore all our Spanish, and several Indian prisoners, keeping all the blacks, and some of the Indians, to assist in working the ships, &c. To the blacks, who were all or the most of them slaves, was promised their liberty in England, in case they would stand by and assist us against our enemies the Spaniards; which they all promised very cordially; but we could soon discover, that notwithstanding their seeming condescension, most of them would much rather have continued in their old master's service, than to sail to accept of liberty with us; not that I believe those people were in love with slavery, but then it must be on their own terms, the Spaniards in those parts being in great fear of the Indians, whom, though they have subdued, and seem to have incorporated among them, they dare not trust, but keep these blacks as guards, and use them well. The truth is, those Indians have still preserved, by tradition, from father to son, the memory of the great cruelties which the first Spaniards exercised in those parts, and are angry enough at their present hard usage. They look on themselves as the natural lords of the country, and the Spaniards as covetous intruders, and cruel and inhuman tyrants; and want only opportunity to make them sensible of their resentment, and to recover their lost country and liberty. It is on this account that the Spaniards are very kind to their black slaves, whom they cherish and encourage highly, and look on them in the same light as a standing militia, always ready to arm against those Indians; so that, though the negros in all other plantations in the West-Indies are ever ready for revolts and rebellions, these, on the contrary, are always ready to defend their kind masters with their lives. In effect, they live very easy, are favoured by the Spaniards, and scorn and insult the poor Indians, who in return hate and detest both them and their masters; that being all that is left in their power.

This day an order was given to Mr. Brett, the then commanding officer on shore, to burn and destroy the town entirely, the two churches, which stood a little way from the rest, only excepted, the Spaniards, as has been already said, never having made any advance towards treating for its ransom.

But now, before I entirely quit the relation of our transaction at this place, it may, perhaps, be expected, that I should give a more particular account of the booty we made, and of the loss the Spaniards sustained, I have already observed, that there were great quantities of valuable effects in the town, but as most of them were, what we could neither dispose of, nor carry away, the total of this merchandise can only be guessed at. The Spaniards, in their representations sent to the court of Madrid (as we were afterwards assured) estimated their whole loss at a million and a half of dollars; and when it is considered, that no small part of the goods we left behind us, were of the richest and most expensive species, as broadcloths, silks, cambrics, velvets, &c. I cannot but think their valuation sufficiently moderate.

As to ourselves, the acquisition we made, though inconsiderable in comparison of what we destroyed, was yet far from despicable; for the wrought plate, dollars, and other coin, which fell into our hands, amounted to upwards of 30,000l. besides several rings, bracelets, jewels, whose intrinsic value we could not then estimate: and over and above all this, the plunder, which became the property of the immediate captors, was very great; so that, upon the whole, it was by much the most important booty we met with upon that coast.

There remains still another matter to be related, which on account of the signal honour, that our national character in those parts has thence received, and the reputation which our commodore in particular, has

has thereby acquired, merits a distinct and circumstantial discussion. I have already observed, that all the prisoners taken by us, were before our departure, put on shore and discharged, amongst whom there were some persons of considerable distinction, especially a youth about 17 years of age, son of the vice president of the council of Chili. As the barbarity of the buccaneers, and the artful uses the ecclesiastics had made of the account, had filled the natives of those countries with the most terrible ideas of English cruelty, we always found our prisoners, at their first coming on board us, to be extremely dejected, and under great horror and anxiety; particularly this youth, who, having never having been from home before, lamented his captivity in the most moving manner, regretting, in very plaintive terms his parents, his brothers, his sisters, and his native country, of all which, he was fully persuaded, he had taken his last farewel, believing that he was now devoted for the remaining part of his life to an abject and cruel servitude. Indeed, his companions on board, and all the Spaniards that came into our power, had the same desponding opinion of their situation. Mr. Anson constantly exerted his utmost endeavours to efface those terrifying impressions they had received of us, always taking care, that as many of the principal people among them as there was room for, should dine at his table by turns, and giving the most peremptory orders that they should be treated with the utmost decency and humanity; but notwithstanding all his precaution, it was generally observed, that for the first day or two they did not quit their fears, suspecting the gentleness of their usage to be only preparatory to some unthought of calamity. However, being at length convinced of our sincerity, they grew perfectly easy in their situation, and remarkably chearful; so that it was often disputable whether they considered their being detained by us as a real misfortune; for the youth I have mentioned, who was near two months on board us, had at last conquered his melancholy surmises, and had taken such an affection to Mr. Anson, that it is doubtful to me, whether, if his own opinion had been asked, he would not have preferred a voyage to England in the Centurion, to the being set on shore at Payta, where he was at liberty to return to his country and friends.

This conduct of the commodore to his prisoners, which was continued without interruption or deviation, gave them all the highest idea of his humanity and benevolence, and occasioned them likewise (as mankind are fond of forming general opinions) to entertain very favourable thoughts of the whole English nation; but whatever they might be disposed to think of Mr. Anson, before the capture of the Teresa, their veneration for him was prodigiously increased by his conduct towards the ladies, whom he took in that vessel; for, being informed that there were among them a mother and two daughters of exquisite beauty, he not only ordered that they should be left in full possession of their own apartments, but also on the severest penalty forbade any of the common people to approach them: and that they might be the more certain of having these orders complied with, or otherwise of having the means of complaining, he permitted the pilot, who in Spanish ships is generally the second person on board, to stay with them as a guardian and protector. These were measures that seemed so different from what might have been expected from an enemy and a heretic, that the Spaniards on board, though they had experienced his beneficence were surprised at this new instance of it; and the more so, as all was done without the solicitation or the interposition of one friend in their favour. The ladies were so sensible of the obligations they owed the commander, that they absolutely refused to go on shore at Payta till they had been permitted to wait on him on board the Centurion, there personally to return thanks for his civilities. Indeed all the prisoners left us with the strongest assurances of their grateful remembrance of his uncommon treatment. A Jesuit, in particular, whom the commodore had taken, and who was an ecclesiastic of some distinction, could not help expressing himself with great thankfulness for the civilities which he and his countrymen had found on board; declaring, that he would consider it as his duty to do Mr. Anson justice at all times; adding, That his usage of the men prisoners was such as never could be forgotten, and such as he should never fail to acknowledge on all occasions, but that his behaviour to the ladies was so extraordinary, and so extremely honourable, that he doubted if all the regard due to his own ecclesiastical character would be sufficient to render it credible. Indeed we were afterwards informed that he and the rest of our prisoners had not been silent on this head, but that at Lima, and at other places, they had given the greatest encomiums to our commodore. The Jesuit, in particular, as we were told, on this account, in a lax and hypothetical sense interpreted the article of his church which asserts the impossibility of heretics being saved. 1741

After we had finished our business, set the town in flames, and got the treasure on board, Mr. Brett, the officer who commanded the attack, having collected his men together, was directing his march towards the beach, where the boats waited to take them on board, when the Spaniards on the hill behind the town, observing his retreat, resolved to try if they could not precipitate his departure; and thereby lay some foundation for future boasting. To this end, a party of horse, all picked men, singled out for this daring enterprize, marched down the hill with much seeming resolution; so that, had we not entertained a just opinion of their prowess, we might have imagined, that, now we were upon the open beach, with no advantages of situation, they would certainly have charged us: but we presumed, and we were not mistaken, that all this was mere ostentation; for, notwithstanding the pomp and parade they at first came on with, Mr. Brett had no sooner ordered his men to halt and face about, than the enemy stopped their career and never dared to advance a step farther. They burn Payta.

When our people arrived at their boats and were ready to go on board, they were for some time retarded by missing one of their number; and being unable, on their mutual enquiries among each other, to inform themselves where he was left, or by what accident he was detained, after a considerable delay, they resolved to get into their boats, and to depart without him: but, when the last man was actually embarked, and the boats were just put off, they heard him calling to them to take him in. The place was by this time so thoroughly on fire, and the smoke covered the beach so effectually, that they could scarcely discern him, though they heard his voice. However, the lieutenant instantly ordered one of the boats to his relief whose crew found him up to his chin in water, for he had waded as far as he durst, being extremely frightened with the apprehensions of falling into the hands of the enemy, enraged, as they must be at the pillage and destruction of their town. On enquiry into the cause of his staying behind, it was found that he had taken that morning too large a dose of brandy, which had thrown him into so sound a sleep, that he did not awake till the fire came near enough to scorch him. He was strangely amazed, at the first opening of his eyes, to see the houses in a blaze on one side, and several Spaniards and Indians not far from him on the other, the greatness and suddenness of his fright, instantly reduced him into a state of sobriety, and gave him sufficient presence of mind to push through the thickest of the smoke, as the likeliest means to escape the enemy; and making the best of his way to the beach, he ran as far into the water as he could (for he could not swim,) before he ventured to look back. By the time our people had helped their comrade out of the water, and were making the best of their way to the squadron, the flames had taken possession of every part of the town, and burned so furiously, both by means of cumbustibles that had been distributed for that purpose, and by the slightness of the materials

1741. trials of which the houſes were compoſed, and their aptitude to take fire, that it was ſufficiently apparent no efforts of the enemy (though they flocked down in great numbers) could poſſibly put a ſtop to it, or prevent the entire deſtruction of the place, and all the merchandiſe contained therein. Our detachment having now ſafely joined the ſquadron, the commodore prepared to leave the place the ſame evening, at ſeven. Cape Blanco in lat. 3 deg. 28 min. S. and long. 88 deg. 16 min. W. from London, bore from us S. S. E. half E. about ſeven or eight miles diſtant. This afternoon and the next day we employed in taking the moſt uſeful and valuable things out of the Santa Tereſa and the Payta bark: we likewiſe deſigning to take every neceſſary thing which we conveniently could out of the Santa Tereſa, in order to deſtroy her, and bring our ſtrength into a leſs compaſs, took her in tow, and ſet the Payta bark on fire, with the ſame view. The next day we deſtroyed the Santa Tereſa in the ſame manner, having got out of them both ſome anchors, cables, hawſers, yards, and top-maſts, blocks, bales of goods, and ſeveral other neceſſaries.

On the 17th, at three in the afternoon, the Glouceſter, with a prize of her's in tow, joined us. This prize was called The Del Oro, and was chiefly laden with wine; however, out of her, and a ſmall boat which they took going along ſhore, they got, in gold, ſilver, and wrought plate, to about the value of 17 or 18,000l. Theſe two were all the prizes the Glouceſter took in thoſe ſeas.

On board this prize of the Glouceſter, (ſays our author) were two horſes, which being, I ſuppoſe, fat, and probably better in taſte than their ſalt beef or pork, they killed for food; and this, I imagine, gave ground to that fiction which one of the ſpurious accounts of our voyage has given, of our eagerly hunting and eating wild horſes, whereas in reality we never ſaw nor heard of a wild horſe during the voyage.

The Glouceſter had chaced two or three ſhips, which had eſcaped her, and one of thoſe touched at Payta; and though they could give no certain account that the ſhip which had chaced them was an enemy, yet the circumſtances they gave were ſo ſtrong, that it put the people of Payta, upon ſecuring their treaſure, and the beſt of their effects, not caring to be too well provided for the profit of ſuch unwelcome viſitants.

The 21ſt, at half paſt five in the morning, we ſaw the iſland of Plata, ſo called from Sir Francis Drake's having, as it is ſaid, divided the treaſure he took in the South Seas, at this place. At two this afternoon, the port of Manta bore S. E. by E. diſtant about eight or nine leagues; we at this time ſent ſix months proviſions on board the Carmen; and all the ſhips had orders, in caſe of ſeparation, for ſeveral places of rendezvous, on the coaſt of Mexico, or, in caſe of not meeting there, to make the beſt of their way to Macao in China, where they were to wait for the arrival of the commodore.

On the 22d a diviſion was made of the plunder of Payta, and here we cannot but obſerve a great difference between the relations given by Paſcoe Thomas, and that given by Mr. Walters; the former having aſſerted, that the commodore did not interfere in the diſtribution; the latter, that it was by his prudent management, that a jealouſy, which had ariſen between thoſe who were the real captors, and thoſe who remained on board the ſhip, was accommodated. Mr. Walters's account of the matter is as follows:—And now, ſays he, (while the ſhips lay to, in hopes of joining the Glouceſter) a jealouſy, which had taken its riſe at Payta, between thoſe who had been commanded on ſhore for the attack, and thoſe who had continued on board, grew to ſuch a height, that the commodore, being made acquainted with it thought it neceſſary to interpoſe his authority to oppoſe it. The ground of this animoſity was the plunder gotten at Payta, which thoſe who had acted on ſhore had appropriated to themſelves, conſidering it as a reward for the riſques they had run, and the reſolution they had ſhewn in that ſervice. But thoſe who had remained on board, looked on this as a very partial and unjuſt proceedure, urging that, had it been left to their choice, they ſhould have preferred the acting on ſhore to the continuing on board, that their duty while their commanders were on ſhore was extremely fatiguing for, beſides the labour of the day, they were conſtantly under arms all night, to ſecure the priſoners, whoſe numbers exceeded their own, and of whom it was then neceſſary to be extremely watchful, to prevent any attempts there might have been formed in that critical conjuncture, that, upon the whole, it could not be denied, but that the preſence of a ſufficient force on board was as neceſſary to the ſucceſs of the enterprize, as the action of the others on ſhore: and, therefore, thoſe who had continued on board, maintained, that they could not be deprived of their ſhare of plunder without manifeſt injuſtice. Theſe were the conteſts amongſt our men, which were carried on with great heat on both ſides; and, though the plunder in queſtion was a very trifle in compariſon of the treaſure taken in the place (in which there was no doubt but thoſe on board had an equal right) yet as the obſtinacy of ſailors is not always regulated by the importance of the matter in diſpute, the commodore thought it neceſſary to put a ſtop to this ferment betimes. Accordingly, on the morning after our leaving Payta, he ordered all hands upon the quarter deck, where, addreſſing himſelf to thoſe who had been detached on ſhore, he commended their behaviour, and thanked them for their ſervices on that occaſion; but then, repreſenting to them the reaſons urged by thoſe who had continued on board, for an equal diſtribution of the plunder, he told them that he thought thoſe reaſons very concluſive, and that the expectations of their comrades were juſtly founded; and therefore, he inſiſted that not only the men, but all the officers likewiſe who had been employed in taking the place, ſhould produce the whole of their plunder immediately upon the quarter-deck, and that it ſhould be impartially divided amongſt the whole crew, in proportion to each man's rank and commiſſion; and, to prevent thoſe who had been in poſſeſſion of the plunder from murmuring at this diminution of their ſhare, the commodore added, that, as an encouragement to others who might be hereafter employed on like ſervices, he would give his entire ſhare to be diſtributed amongſt thoſe who had been detached for the attack of the place. Thus, this troubleſome affair, which, if permitted to have gone on, might, perhaps, have been attended with miſchievous conſequences, was, by the commodore's prudence, ſoon appeaſed, to the general ſatisfaction of the ſhip's company; not but there were ſome few whoſe ſelfiſh diſpoſitions were uninfluenced by the juſtice of this procedure, and who were incapable of diſcerning the force of equity, however glaring, while it tended to deprive them of any part of what they had once got into their hands.

Being now joined by the Glouceſter and her prize, it was reſolved that we ſhould ſtand to the northward and make the beſt of our way either to Cape St. Lucas, in California, or to Cape Corientes, on the coaſt of Mexico; indeed, the commodore, when at Juan Fernandez, had determined to touch in the neighbourhood of Panama, and to endeavour to get ſome correſpondence over land with the fleet under the command of Admiral Vernon, for when he departed from England, he left a large force at Portſmouth, which was intended to be ſent to the Weſt-Indies, there to be employed in an expedition againſt ſome of the Spaniſh ſettlements, and Mr. Anſon, taking it for granted that this enterprize had ſucceeded, and that Porto Bello might perhaps be then garriſoned with Britiſh troops, he hoped that, on his arrival at the iſthmus, he ſhould eaſily procure an intercourſe with our countrymen on the other ſide, either by means of the Indians, who were greatly diſpoſed in our favour, or through the Spaniards themſelves, ſome of whom, for proper rewards might be induced to

carry on his intelligence, which, after it was once begun might be continued with very little difficulty, ſo that Mr. Anſon flattered him by theſe means he might have received a reinforcement from the other ſide, and by ſettling a prudent plan of operations with our commanders in the Weſt-Indies, he might even have taken Panama itſelf, which would have given to the Britiſh nation, the poſſeſſion of that iſthmus, whereby we ſhould have been in effect, maſters of all the treaſures of Peru.

Such were the projects which the commodore revolved in his thoughts, at the iſland of Juan Fernandez, notwithſtanding the feeble condition to which he was then reduced; but on examining the papers which were found on board the Carmelo, the firſt prize that we took, we learned that the attempt againſt Carthagena had failed, and that there was no probability that our fleet in that part of the world would engage in any new enterprize which would at all facilitate this plan. Mr. Anſon therefore gave over all hopes of being reinforced acroſs the iſthmus, and conſequently had no inducement at preſent to proceed to Panama, as he was incapable of attacking the place, and there was great reaſon to believe that, by this time, there was a general embargo on all the coaſt. The only feaſible meaſure then which was left us, was to ſteer as ſoon as poſſible to the ſouthern parts of California, or to the adjacent coaſt of Mexico, there to cruiſe for the Manilla galleon, which, we knew was now at ſea, bound to the port of Acapulco; and we doubted not but we ſhould get on that ſtation time enough to intercept her: but there was a buſineſs which we foreſaw would occaſion ſome delay, and that was recruiting our water, it being impoſſible to think of venturing upon this paſſage to the coaſt of Mexico till we had procured a freſh ſupply. It was for ſome time a matter of deliberation, where we ſhould take in this neceſſary article; but by conſulting the accounts of former navigators, and, examining our priſoners, we at laſt reſolved for the iſland of Quibo, ſituated at the mouth of the bay of Panama; nor was it but on good grounds that the commodore conceived this to be the propereſt place for watering the ſquadron. Indeed, there was the ſmall iſland called Cocos, which was leſs out of our way than Quibo, where ſome of the buccaneers had pretended to find water, but none of our priſoners knew any thing of it, and it was thought too dangerous to riſque the ſafety of the ſquadron, by expoſing ourſelves to the hazard of not meeting with water when we came there on the mere authority of thoſe legendary writers, of whoſe miſrepreſentations and falſities we had almoſt daily experience. Determined, therefore to take in water at Quibo, we directed our courſe northward, being eight ſail in company, and conſequently having the appearance of a very formidable fleet; and on the 19th, at day-break, we diſcovered Cape Blanco, bearing S. S. E. half E. ſeven miles diſtant. By this time we found that our laſt prize, the Solidad, was far from anſwering the character given of her as a good ſailor; and ſhe and the Santa Tereſa delaying us conſiderably, the commodore commanded them to be cleared of every thing that might prove uſeful to the reſt of the ſhips, and then to be burnt. And having given proper inſtructions, and appointed a rendezvous to the Glouceſter, and to the prizes in caſe of ſeparation, we proceeded in our courſe to Quibo.

On the 25th, Point Manta bore S. E. by S. at ſeven miles diſtance, and there being a town of the ſame name in the neighbourhood, Captain Mitchell, in the Glouceſter, took the opportunity of ſetting on ſhore ſeveral of his priſoners. The boats were now daily employed in diſtributing proviſions on board the prizes to complete their ſix months ſtock, and that the Centurion might be the better prepared to give the Manilla ſhip a warm reception, if happily ſhe ſhould fall in our way, the carpenters were ordered to fix eight ſtocks on the main and fore-tops, which were properly fitted for the mounting of ſwivel guns.

[After coming in ſight of the iſland of Gallo, they croſſed the Bay of Panama, and in their paſſage had ſultry weather, frequent calms and heavy rains, which attended them as far as the 7th degree of north latitude. They burned Captain Mitchell's largeſt prize on the 27th, and on the 30 of December they ſaw Quibo; the eaſt end of it bearing, W. N. W. but kept off all night on account of the ſhoals at the entrance of the channel. At ſix the next morning they ſaw Point Manta, at the diſtance of about three leagues, and all the veſſels, except the Centurion, were very near point in weathering it; and the Glouceſter, being moſt to the leeward, was obliged to tack and ſtand to the ſouthward. At length the reſt of the veſſels came to an anchor at ſeven in the evening.] 1741.

The next morning, ſays my author, an officer was diſpatched on ſhore to diſcover the watering place, who having found it, returned before noon; and then we ſent our long-boat for water, and, at the ſame time, weighed and ſtood farther in with our ſhips, for the convenience of being ſooner ſupplied; ſo that we were little more than two days in laying in all the wood and water we wanted.

While the ſhip continued at anchor here, the commodore, attended by ſome of his officers, went to examine a bay which lay to the northward, and they afterwards ranged all along the eaſtern ſide of the iſland. In the places where they put on ſhore in the courſe of this expedition, they generally found the ſoil to be rich, and met with great plenty of excellent water. In particular, near the north-weſt part of the iſland, they diſcovered a natural caſcade, which ſurpaſſed, as they conceived every thing of this kind, which human art had ever yet produced. It was a river of tranſparent water, about forty yards wide, which rolled down a declivity of near a hundred and fifty feet in length. The channel itſelf was very irregular, entirely compoſed of rocks, both its ſides and bottom being made up of large detached blocks, and by theſe the courſe of the water was frequently interrupted; for in ſome parts it ran ſloping with a rapid but uniform motion, whilſt in others it tumbled over rocks with a perpendicular deſcent. In the neighbourhood of this ſtream was a fine wood, and even the huge maſſes of rock which over-hung the water, and which, by their various projections, formed the inequalities of the channel, were covered with lofty foreſt trees. While the commodore, with thoſe that accompanied him, were attentively viewing this place and were remarking the different blendings of the water, the rocks, and the wood, there came in ſight, as it were to heighten and animate the proſpect, a prodigious flight of Macaws, which hovering over this ſpot, and often wheeling and playing on the wing above it, afforded a moſt brilliant appearance by the glittering of their variegated plumage.

Within three days we completed our buſineſs in this place, and were impatient to depart, that we might arrive time enough on the Mexican coaſt to intercept the galleon; but the wind being contrary, detained us a night; and when we had gained an offing, while we were hovering about, in hopes of getting ſight of the Glouceſter, on the 20th we diſcerned a ſmall ſail to the northward, to which we gave chace, and took her. She proved to be a bark from Panama, called the Jeſu Nazareno, laden with oakum, rock ſalt, and a ſmall quantity of money to purchaſe a cargo of proviſions at Cheripe, which has a good market, though it is but an inconſiderable village on the continent. On the 12th of September we joined the Glouceſter, and found that, in tacking to the ſouthward on her firſt approach to the iſland, ſhe had ſprung her fore-top-maſt which had diſabled her from working to windward, and prevented her from joining us ſooner. We now ſcuttled and ſunk the Jeſu Nazareno, and on the 12th of December ſtood to the weſtward, having previouſly delivered freſh inſtructions for the conduct of the fleet.

We had now little doubt of arriving ſoon enough upon our intended ſtation, as we expected to fall in with the regular trade wind; but, to our extreme

1742 vegation, we were baffled for near a month, ſo that it was the 25th of December before we ſaw the iſland of Cocous, which, according to our reckoning, was only an hundred leagues from the continent; and even then we had the mortification to make ſo little way that we did not loſe ſight of that iſland again in five days. We had flattered ourſelves that the uncertain and weſtern gales we met with, were owing to the neighbourhood of the continent, from which, as we got more diſtant, we hoped to be relieved, by falling in with the regular eaſterly wind; but being likewiſe diſappointed in this, we began at length to deſpair of the great purpoſe which we had in view. This produced a general dejection amongſt us, having conſidered the project as almoſt infallible, and indulged ourſelves in the boundleſs hopes of the advantages we ſhould receive from it. However, our deſpondency was in ſome meaſure alleviated by a favourable change of the wind; and as we now advanced apace to our ſtation, our hopes began to revive. On the 17th of January we were advanced to the lat. of 12° 50′ north; and, on the 26th of January, finding ourſelves to the northward of Acapulco, we tacked and ſtood to the eaſtward, with a view of making the land; and we expected by our reckonings to have fallen in with it on the 28th, yet though the weather was perfectly clear, we had no ſign of it at ſun-ſet. About ten at night, we diſcovered a light on the larboard bow bearing N. N. E. from us, and ſoon after the Trial's prize made the ſignal for ſeeing a ſail. As none of us had any doubt but that what we ſaw was a ſhip's light, we were all extremely animated with a firm perſuaſion that it was the Manilla galleon, which had ſo long been the object of our wiſhes. We immediately caſt off the Carmelo, and preſſed forwards with all our canvas, making a ſignal to the Glouceſter to do the ſame. Thus we chaced the light, keeping all our hands at their reſpective quarters, under an expectation of engaging within half an hour, as at ſome times we conceived the chace to be about a mile diſtant, and at others to be within the reach of our guns. In this conſtant and eager expectation we continued all night, always preſuming that another quarter of an hour would bring us up to this Manilla ſhip; but when day-light came we were vexatiouſly diſappointed, finding that the light which had occaſioned all the expectancy, was only a fire on the ſhore. At ſun-riſe, after this mortifying deluſion, we found ourſelves about nine leagues off land. Being now in the track of the Manilla galleon, it was a doubt with us, being near the end of January, whether ſhe was arrived or not; but, examining our priſoners about it, they aſſured us that ſhe was ſometimes known to come in after the middle of February; and they endeavoured to perſuade us that the fire we had ſeen on ſhore was a proof that ſhe was yet at ſea, it being cuſtomary, they ſaid, to make uſe of theſe fires as ſignals for her direction when ſhe continued out longer than ordinary. On account of this reaſoning of our priſoners, we reſolved to cruiſe for her ſome days; and we accordingly ſpread our ſhips at the diſtance of 12 leagues from the coaſt, in ſuch a manner that it was impoſſible ſhe ſhould paſs us unobſerved; however, not ſeeing her ſoon, we were ſolicitous to gain ſome poſitive intelligence. With this view, the commodore reſolved to ſend a boat, under cover of the night, into the harbour of Acapulco, to ſee whether the Manilla ſhips were there or not. To execute this enterpriſe, the barge was diſpatched on the 6th of February, carrying a ſufficient crew, and two officers, alſo a Spaniſh pilot and an Indian. She did not return till the 11th, when the officers acquainted Mr. Anſon, that they had miſtaken the harbour, and that Acapulco lay conſiderably more to the eaſtward; ſo that not having a ſufficient quantity of proviſions, they were obliged to return, to make known their diſappointment. On this intelligence, we made ſail to the eaſtward; and, the next day, we diſpatched the barge with particular inſtructions to the crew to keep at a ſufficient diſtance not to be ſeen from the ſhore. We watched ſix days without receiving any intelligence, ſo that we began to be uneaſy for her ſafety; but on the 7th ſhe returned with advice that being at the very place they ſought for, though they were then ignorant of their ſituation, they ſurpriſed a fiſhing canoe with three negroes on board, who told them that the Manilla ſhip had arrived at Acapulco on the 9th of January, but that having delivered her cargo, ſhe was taking in water and proviſions in order to return, and that the Viceroy of Mexico had fixed her departure for the 14th of March. This laſt intelligence was moſt joyfully received by us, ſince we had no doubt but that ſhe muſt fall into our hands; and it was much more eligible to ſeize her on her return than before her arrival, as the money for which ſhe had ſold her cargo, and which ſhe would have now on board would be much more eſteemed by us than the cargo itſelf. Thus were we a ſecond time engaged in an eager expectation of meeting with this Manilla ſhip, which, by the fame of its wealth, we had been taught to conſider as the moſt deſirable capture that could be made on any part of the ocean. As it was the 17th of February when the barge returned and brought us our intelligence, the commodore reſolved to continue the greater part of the intermediate time in his ſtation to the weſtward of Acapulco, in order to avoid a diſcovery from the ſhore. During this interval we were ſo ſtrongly prepoſſeſſed with the certainty of our intelligence, and with an aſſurance of her coming out of port, that one or other was conſtantly imagining that he diſcovered one of our cutters returning with the ſignal. Thus diſappointed, however, we did not deſpair, nor did we abate of our vigilance; but after remaining till the 25th of March, we at length concluded (and we afterwards found it true) that we had been diſcovered, and that, in conſequence, an embargo had been laid upon the galleon, and her departure poſtponed till the next year. The cutters having finiſhed their cruiſe before the harbour, returned to the ſquadron, and the ſignal being given for the fleet to join, it was determined to retire to Chequetan, in order to take in a freſh ſupply of water, our ſtock being then nearly exhauſted. In the mean time, a cutter commanded by Mr. Hughes, lieutenant of the Trial's prize, was ordered to continue off the harbour of Acapulco for 24 days, that if the galleon ſhould ſet ſail in that time we might be ſpeedily informed of it.

We entered the harbour of Chequetan on the 5th of April. It lies in 17° 36′ of north latitude, and is about 30 leagues to the weſtward of Acapulco. The watering place has the appearance of a large ſtanding lake, without any viſible outlet to the ſea, from which it is ſeparated by a part of the ſtrand. The origin of this lake is a ſpring that bubbles out of the ground, near half a mile up the country. We found its water a little brackiſh, but conſiderably more ſo towards the ſea ſide, but the nearer we advanced towards the ſpring head, the ſofter and freſher it proved. This laid us under a neceſſity of filling all our caſks from the fartheſt part of the lake, which, however, was facilitated by means of canoes that traverſed the lake, and brought a number of ſmall caſks to the ſide next the beach; there the water was ſtarted into larger veſſels in the boats, and by that contrivance brought on board with very little trouble.

Chequetan deſcribed.

The country hereabouts, particularly the tract of the coaſt contiguous to Acapulco, appearing to be well cultivated and peopled, we hoped eaſily to procure from thence ſome freſh proviſions and other refreſhments of which we ſtood in need. To facilitate theſe views, the morning after we came to an anchor, the commodore ordered a party of 40 men well armed, to march into the country, and endeavour to diſcover ſome town where they were to ſet on foot a correſpondence with the inhabitants; as, when we once began this intercourſe, we doubted not but by proper preſents we ſhould allure them to bring us down whatever fruits or freſh proviſions were in their power. As our prizes abounded with various ſorts of coarſe merchan-

dise which were of little consequence to us, though to them they would be extremely valuable, our people were directed to proceed with the greatest circumspection on this occasion, and to make as little shew of hostility as possible; for we were sensible that we could find no wealth in those parts worth our notice; and thought that what necessaries we really wanted, would be better, and more abundantly supplied, by an open, amicable traffic, than by violence and force of arms. But this endeavour of opening a commerce with the inhabitants proved ineffectual, and therefore we desisted from any more attempts of the same nature, contenting ourselves with what we could procure in the neighbourhood of the port where we lay. We caught fish in abundance; among the rest were bream, mullets, soals, fiddle-fish, and lobsters; and we here, and in no other place met with that extraordinary fish called the torpedo, which is in shape very much resembling the fiddle-fish, and is only distinguished from it in appearance by a brown circular spot of about the bigness of a crown piece near the center of its back. This fish is, indeed, of a most singular nature, benumbing whoever touches it all over his body, but more particularly that limb which happens to come immediately in contact with it; the same effect, too, will be in some degree produced by touching the fish with any thing held in the hand; and it has lately been discovered, that it may be communicated like the electrical stroke to a large circle, by means of a certain apparatus much more simple than that which is used in experiments in electricity.

The animals which we met with on shore, were chiefly guanoes, with which the country abounds, and which by some are reckoned delicious food. We saw no beasts of prey, except we should esteem that amphibious creature the alligator as such; several of which our people discovered, but none of them very large. It is, however, certain, that there were great numbers of tygers in the woods, though none of them happened to make their appearance while we remained upon the coast. Parrots and pheasants were found in plenty, but by no means proper food, being dry and tasteless, though they were often killed and eaten, being by some thought preferable to salt provisions.

The papah, lime, and a little sour plumb, were all the fruits the woods furnished, and of these there were but a scanty portion; nor was there any other useful vegetable, except brook-lime, which, being esteemed an antiscorbutic, was frequently eaten, though from its bitterness it was exceedingly unpalatable.

While we lay at Chequetan, it was resolved, after mature deliberation, to destroy all our prizes, as the whole number of men on board our squadron did not amount to the complement of a fourth-rate man of war. It was therefore judged most prudent to set fire to the ships, and to divide the men between the Centurion and Gloucester, now, preparing to set sail for China. Besides the necessary repairs for a voyage of such a length, the removal of their stores and cargoes into the men of war took up so much time, that it was the end of April before we were in a condition to leave the place.

It should have been remarked, that from this harbour of Chequetan we discovered but one path-way through the woods into the country; and as this was much beaten, we were from that circumstance convinced, that it was not unfrequented by the natives. As it passed by the spring-head, and was the only avenue by which the Spaniards could approach to surprise us, we, at some distance from the spring-head, felled several large trees, and laid them one upon another, across the path, and at this barricadoe we constantly kept a guard. We, besides, ordered our men, employed in watering, to have their arms always in readiness, in case of an alarm, and to march instantly to his post. And, though our principal intention herein was to prevent our being disturbed by the enemy's horse, yet it answered another purpose, which was, to hinder our people from straggling singly into the country, where we had reason to believe they would be surprised by the Spaniards, who would doubtless be very solicitous to pick up some of them, in hopes of getting intelligence of our future designs. To avoid this inconvenience, the strictest orders were given to the centinels; to let no person whatever pass beyond this post, but notwithstanding this precaution, we missed one Lewis Legere, who was the commodore's cook; as he was a Frenchman and a Roman catholic, it was first imagined that he had deserted with a view of betraying all that he knew to the enemy, though this appeared by the event, to be an ill-grounded surmise: for it was afterwards known, that he had been taken by some Indians, who carried him prisoner to Acapulco, from whence he was transported to Mexico, and from thence to Vera Cruz, where he was shipped on board a vessel bound to Old Spain. But, the vessel being obliged by some accident to put into Lisbon, Legere escaped on shore, and was by the British consul sent from thence to England, where he gave the first authentic account of the safety of the commodore, and of his principal transactions in the South Seas. The relation he gave of his own seizure, was that he rambled into the woods at some distance from the barricadoe where he had first attempted to pass, but had been stopt and threatened to be punished; that his principal view was to gather a quantity of limes for his master's stores, and that in this occupation he was surprised unawares by four Indians, who stript him naked, and carried him in that condition to Acapulco, exposed to the scorching heat of the sun, which at that time of the year shone with its greatest violence; that afterwards, at Mexico, his treatment was sufficiently severe; so that the whole course of his captivity was a continued instance of the hatred which the Spaniards bear to all those who endeavour to disturb them in the peaceable possession of the coasts of the South Seas. Indeed, Legere's fortune was, upon the whole, extremely singular; as, after the hazards he had run in the commodore's squadron, and the severities he had suffered in his long confinement among the enemy, a more fatal disaster attended him on his return to England; for though, when he arrived in London, some of Mr. Anson's friends interested themselves in relieving him from the poverty to which his captivity had reduced him, yet he did not long enjoy the benefit of their humanity, since he was killed in an insignificant night-brawl, the cause of which could scarcely ever be discovered.

1742

Adventure of Lewis Legere.

When we were necessitated to proceed to Chequetan to recruit our water, the commodore considered that our arrival in that harbour would soon be known at Acapulco: and therefore he hoped, that on the intelligence of our being employed in that part, the galleon might put to sea, especially as Chequetan is so very remote from the course generally steered by the galleons: he therefore ordered the cutter, as has been already noticed, to cruize 24 days off the port of Acapulco, and her commander was directed, on perceiving the galleon under sail, to make the best of his way to the commodore at Chequetan. As the Centurion was certainly a much better sailor than the galleon, Mr. Anson, in this case, resolved to have got to sea as soon as possible, and to have pursued the galleon across the Pacific ocean; however the viceroy of Mexico ruined this project, by detaining the galleon in port all the year.

Towards the latter end of April, all things being in readiness for sailing, the Centurion and Gloucester weighed anchor; and, having gained an offing, the prizes were set on fire, and a canoe fixed to a grapple in the middle of the harbour, with a bottle in it, well corked, inclosing a letter to Mr. Hughes, directing him to go back immediately to his former station, before Acapulco, where he would find Mr. Anson, who resolved to cruise for him in that station some days. Indeed, it was no small mortification to us, now we were at sea, and the stormy season approaching, that we were detained by the absence of the cutter, and under the necessity of standing towards Acapulco in search of her. As the time of her cruise had

1742 had been expired near a fortnight, we ſuſpected that ſhe had been diſcovered from the ſhore, and that the governor of Acapulco had thereupon ſent out a force to ſeize her; which as ſhe carried but ſix hands, was no very difficult enterpriſe. However, this being only conjecture, the commodore, as he was got clear of the harbour of Chequetan, ſtood along the coaſt to the eaſtward in ſearch of her; and, to prevent her from paſſing by us in the dark, we brought-to every night, and carried lights, which the cutter could not but perceive.

By the 2d of May we were advanced within three leagues of Acapulco; and, having ſeen nothing of our boat, we gave her over for loſt; which, beſides the compaſſionate concern for our ſhipmates, and for what it was apprehended they might have ſuffered was in itſelf a misfortune, that in our preſent ſcarcity of hands we were greatly intereſted in; ſince the crew of the cutter were the flower of our people, purpoſely picked out for this ſervice, as known to be every one of them of tried and approved reſolution, and as ſkilful ſeamen as ever trod a deck. However, as it was the general belief amongſt us, that they were taken and carried into Acapulco, the commodore's prudence ſuggeſted a project which we hoped would recover them. This was founded on our having many Spaniſh and Indian priſoners on board, ſome of them of quality. The commodore, therefore, wrote a letter to the governor of Acapulco, telling him that he would releaſe them all, provided the governor returned the cutter's crew. This letter was diſpatched by a Spaniſh officer, of whoſe honour we had a high opinion and who was furniſhed with a launch belonging to one of our prizes, and a crew of Spaniards, who gave their parole for their return. The Spaniſh officer, too, beſides the commodore's letter, carried with him a joint petition ſigned by all the reſt of the priſoners, beſeeching the governor to acquieſce in the terms propoſed for their liberty. But while we were thus contriving their releaſe, the centinel called out from the maſt-head that he ſaw a boat under ſail at a conſiderable diſtance to the ſouth-eaſtward, which to our unſpeakable joy upon her nearer approach, we found was our own cutter, the wan and meagre countenances of whoſe crew, the length of their beards, and the feeble and hollow tone of their voices, convinced us that they had ſuffered much greater hardſhips than could be expected from even the ſeverities of the Spaniſh priſon. They were obliged to be helped into the ſhip, and were immediately put to bed, when by reſt and nouriſhing diet, with which they were plentifully ſupplied from the commodore's table, they recovered their health and vigour.

And now we learned that they had kept the ſea the whole time of their abſence, which was above ſix weeks, and that when they had finiſhed their cruiſe, and had juſt began to ply to the weſtward, in order to join the ſquadron, a ſtrong adverſe current had forced them upwards of 80 leagues to the leeward, where they found ſo great a ſurf, that there was no ſuch thing as landing. They paſſed ſome days in the moſt diſagreeable ſituation, without water, having no other means left them to allay their thirſt than ſucking the blood of the turtles which they caught. At laſt, giving up all hopes of ſuccour, the heat of the climate likewiſe augmenting their neceſſities, and rendering their ſufferings inſupportable, they abandoned themſelves to deſpair, fully perſuaded that they ſhould periſh by the moſt terrible of all deaths; but ſoon after, a moſt unexpected incident happily relieved them; for there fell ſo heavy a rain that, on ſpreading their ſails horizontally, and putting bullets in the centre of them, they caught as much water as filled their caſks. Immediately upon this fortunate ſupply, they ſtood to the weſtward in ſearch of the commodore; and being now luckily favoured by a ſtrong current, they joined him in leſs than 50 hours from that time, after having been abſent in the whole full 43 days.

And now having got on board our people, to our intire ſatisfaction, and the ſeaſon of the year for ſailing to Aſia being far advanced, the commodore reſolved not to wait for any return from Acapulco, but gave orders to equip two large prize launches, to carry on ſhore the Spaniſh and Indian priſoners both from our ſhip and the Glouceſter; and, having given them proviſions and all neceſſaries for Panama, whither they intended to ſail, they left us about four in the afternoon, to the amount of about ſixty perſons; having firſt (though enemies) obſerved the cuſtom of ſeafaring people at parting, and wiſhed us a proſperous voyage.

From the ſixth of May, the day we took our departure, we met with little that was remarkable for a month, except that the true trade-wind, which is ſaid never to fail at about 60 or 70 leagues from the ſhore of Mexico at the fartheſt, was ſo far from anſwering our expectations, that we had nothing but croſs winds, rain, thunder, and lightening, till by account we were 600 leagues to the weſtward of Acapulco, having been above 40 days in getting ſo far. On the 9th we found the foremaſt ſprung in a dangerous manner, and thereupon faſtened and ſecured it very ſtrongly. A leak that was ſprung on the 22d was ſtopped by the carpenter with very little trouble.——On the 11th of June we found a current ſet to the ſouthward about 24 miles a day, but could not diſcover whether to the eaſt or weſt, for want of opportunity to try it. This was, by account, 450 leagues from Acapulco. About this time, abundance of ſcorbutic ſymptoms, ſuch as blackneſs in the ſkin, hard nodes in the fleſh, ſhortneſs of breath, and a general laſſitude of all the parts, began to prevail almoſt univerſally among our people. This, with the great mortality we experienced from this diſtemper in our Cape Horn paſſage, added to the time we might ſtill expect to be at ſea, formed a melancholy proſpect, as we had ſtill 1800 leagues to run to the Ladrones, which the Spaniards call the Marian Iſlands. Theſe conſiderations gave us dreadful apprehenſions of what this paſſage might terminate in, and the event ſhewed that we had but too much reaſon for them.

The ſhip's company attacked with the ſcurvy.

[For ſome days we find nothing remarkable related except the ſpringing and damaging of maſts and yards, which were repaired or replaced as expeditiouſly as poſſible; but the Glouceſter was obliged to have recourſe to a jury maſt, on which ſhe made ſail on the 29th of June.]

We had not only now (continues our author) but for almoſt our whole paſſage, abundance of birds of prey, alſo flying fiſh, which are their proper food, and vaſt quantities of ſkipjacks, albicores, &c. whereof we took a great number, which contributed much to our refreſhment after the loſs of the tortoiſes that generally leave all the ſhips about twenty or thirty leagues off the land. I think this more worthy of notice, becauſe Dampier, Rogers, Cook, and other voyagers, ſome of whom have been not only once, but ſeveral times on this voyage have reported, that they never ſaw a fiſh or fowl in this whole run. [Here a very probable cauſe is aſſigned for the different accounts of voyagers in this particular, namely, the different ſeaſons of the year, in which they might have arrived in theſe latitudes. On the 10th day of the month they ſaw three gannets, birds which are deſcribed to reſemble what are called Soland geeſe, in Scotland.]

On the 12th at noon, the longitude by account was 180° 41 to the weſtward of London, which is juſt 11′ more than half the circumference of the globe, being then 1429 leagues diſtant from the port of Acapulco. From this time till the 16th we had freſh gales with ſqualls and rain, the 17th and 18th we had moderate and cloudy, the 19th and 20th freſh gales, with abundance of rain. We made this obſervation, that with rainy weather, or even ſlight tranſient ſhowers, the fiſh bit more freely, and were caught in greater numbers than with fair weather, which made our fiſhermen the more attentive at ſuch times. It was likewiſe remarked that when the Glouceſter's people could find an opportunity to fiſh they had always more ſucceſs than we; whether their fiſher-

men

men had more art, or whatever elſe occaſioned it, the fact is true. They had alſo a better way of diſpoſing of them, when taken; for Captain Mitchell conſtantly ordered ſeveral boys, who were very dextrous at it, to catch fiſh for the ſhip's company, eſpecially for the ſick, and what was taken was very juſtly and regularly divided among them; whereas our fiſhermen were left at liberty to make their advantage of what they took, and to prey upon their ſuffering ſhipmates. Theſe took care not to let ſlip the opportunity; for the leaſt fiſh you could purchaſe of them would coſt a bottle of brandy (which at this time was worth four, or perhaps ſix, and ſometimes eight ſhillings, or half a guinea) and you muſt be very thankful, and acknowledge yourſelf to be highly obliged into the bargain, or elſe expect none the next time, and very often fail of it notwithſtanding. About this time, our people began to die very faſt, and, I believe, five parts out of ſix of the ſhip's company that were ill, expected to follow in a ſhort time. Thoſe whoſe breath was any way affected, dropped off immediately; but thoſe who were attacked firſt in the more remote parts of the body, languiſhed generally a month or ſix weeks; the diſtemper advancing, in the mean time, towards the lungs, by a very ſenſible and regular approach. As I myſelf was one of thoſe who were ſeverely afflicted in this latter manner, I ſhall give ſuch an account of its progreſs as I found in myſelf, and which was corroborated by the ſimilar report of my fellow-ſufferers.

I was firſt taken about the beginning of this month with a ſlight pain on the joint of my left great toe, but having hurt that a little while before, I imagined it to be the effect of that hurt, and minded it the leſs; but here I muſt obſerve once for all, that if ever any part of the body had received a bruiſe, ſtrain, or contuſion, if it was not perfectly cured, the ſcurvy was ſure to attack that part firſt. In a little time, a large black ſpot appearing on the part affected, with very intenſe pains at the bone, gave me to underſtand my caſe. I now took phyſic often, by way of prevention, but to little purpoſe. Several hard nodes began to riſe in my legs, thighs, and arms, and not only many more black ſpots appeared in the ſkin, but thoſe ſpread till my legs and thighs were for the moſt part, as black as a negro; and this was accompanied with ſuch exceſſive pains in the joints of the knees, and ancles, as I thought before I experienced them, that human nature could never have ſupported. It next advanced to the mouth: all my teeth were preſently looſe, and my gums overcharged with extravaſated blood, fell down over my teeth, which occaſioned my breath to ſmell much, yet I believe, without affecting my lungs. But I believe, one week more at ſea would have ended me, and leſs than a month more all the reſt. One thing was very remarkable, and likewiſe univerſal; which was, that when the diſtemper had far prevailed, if the afflicted perſon lay quiet in his hammock he ſeemed to be perfectly well and hearty; but if he was removed out of it on any neceſſity, he immediately fainted away; and this was always a ſure ſign of the party's diſſolution.

[This account is the more extraordinary ſince the laſſitude incurred by lying ſtill, generally encourages the ſcurvy, if it does not bring it on in the firſt inſtance. Of this we have been convinced by ocular demonſtration, and have experienced the great efficacy of moderate exerciſe, in preventing the dreadful effects of this diſtemper. Perhaps it may be affirmed, upon the whole, that the diſorder is not thoroughly underſtood; becauſe the ſea ſcurvy has this in common with that which we contract on ſhore; namely, that it puts on various appearances according to the ſituation, climate, time of life and conſtitution of the patient. In concluſion, our author ſeems willing to adopt a contrary hypotheſis to that generally received; for he is of opinion that reſt rather than exerciſe is good in caſe of the ſea ſcurvy; but this appears to be only in the laſt ſtage of it, when the patient may be incapable of motion.]

Since our paſſing Cape Horne (ſays he) our ſurgeon, Mr. Henry Ettrick, who was a very good practical ſurgeon, had been very buſy in digeſting a theory of ſcurvies, wherein he enumerated many caſes very particularly, having been allowed to open and examine as many bodies as were abundantly ſufficient for that purpoſe. His ſyſtem was principally grounded on the obſervations made on a long paſſage in a very cold climate. He took abundance of pains to prove by many inſtances, that the tone of the blood was broken by the cold nipping air, and rendered ſo thin as to be unfit for circulation, or any other of the uſes of life, and being thus deprived of force and vigour, ſtagnation and death muſt neceſſarily enſue. From this ſuppoſition, he had laid it down as an infallible rule, that food of a glutinous nature, ſuch as fiſh, bread, and ſeveral ſorts of grain were alone proper on ſuch voyages. As for liquids, I know not which he pitched on, as the moſt ſalubrious on this occaſion. But this paſſage, in a very hot climate, where the ſymptoms were not only more dreadful, but the mortality much more quick and fatal in proportion to the number of people, put our ſcheming doctor to a non-plus. All this obliged him at laſt (though he was ſtill endeavouring to reconcile contradictions) to own that though ſome of the concurrent circumſtances of this diſeaſe were plain enough, yet the grand cauſe was the long continuance at ſea, or an entire ſecret; and that no cure but the ſhore would ever be effectual. 1741

The commodore, on this great mortality, having by him a quantity of Ward's pills and drops, in order to experience whether they would be of any uſe, firſt tried them on himſelf, and then gave what he had left to the ſurgeon, to adminiſter to ſuch of the ſick people as choſe to take them. The ſurgeon would not recommend them to any perſon; but ſeveral took them, though I know of none that believed they were of any ſervice. They worked moſt people who took them very violently; after which, as ſeveral told me, they would ſeem to be a little eaſier though weaker for a day or two, but then they always relapſed, and became worſe than before; and this, together with the inefficacy of all that our ſurgeon could do in the caſe, ſufficiently ſhewed the vanity of attempting the cure of their diſtemper at ſea. [After a digreſſion tending to inculcate the uſefulneſs of reſt to people afflicted with the ſcurvy, and an obſervation on contrary winds and bad proviſions, the relation proceeds as follows.]

On the 29th in the morning, the Glouceſter's fore-cap ſplitting, her fore-top-maſt came by the board, and meeting with the fore-yard, broke it in the ſlings. As ſhe was hereby rendered incapable of making any ſail for ſome time, we were under a neceſſity, as ſoon as the gale ſprang up, to take her in tow, and near 20 of the healthieſt of our ſeamen were removed from the duty of our own ſhip, and were continued for eight or ten days together to aſſiſt in repairing her damages, but theſe things, mortifying as we thought them, were only the commencement of our misfortunes; for ſcarcely had our people finiſhed their buſineſs in the Glouceſter before we met with a violent ſtorm from the weſt, which obliged us to lie to. This ſtorm, which laſted from the 10th to the 13th of Auguſt was attended with rain, thunder and lightning, and ſuch a lofty ſea as I have ſeldom ſeen, and could not have believed in latitudes between the tropics, for ſuch a long duration. Moſt of the time that we lay to, we drove to the northward. Abundance of our people died daily, and the ſhip proving very leaky, every perſon that could ſtir, (the principal officers not excepted) was obliged to take his turn at the pumps, and all little enough to keep us above water.

On the 13th of Auguſt at ten in the morning, the Glouceſter made a ſignal of diſtreſs, and being to windward, bore down to us; but we obſerved ſhe was long in veering, rolled very much, and made bad ſteerage. About half an hour after noon, her people ſpoke with us, and told us they were ſo leaky that

1741 they muſt quit their ſhip; that they had ſeven feet water in the hold; and that all the men they had capable of ſtirring, were quite exhauſted with pumping, and could work no longer. This was an additional misfortune, and ſeemed to be without reſource; for while the Glouceſter's crew were thus enfeebled, our own ſick were ſo much increaſed, and thoſe who ſtill remained in health, ſo over-fatigued with labour, that it was impoſſible for us to lend them any aid. Therefore all that could be done was to ſend our boat on board for a more particular account of the ſhip's condition; as it was ſoon ſuſpected, that the taking her people on board us; and then deſtroying the Glouceſter was the only meaſure that could be proſecuted in the preſent emergency, both for the preſervation of their lives and for our own. Our boat ſoon returned with a repreſentation of the melancholy ſtate of the Glouceſter, and of her ſeveral defects, ſigned by Captain Mitchell and all his officers; by which it appeared that the ſhip was decayed in every part; that her crew was greatly reduced; they added that there remained alive no more than 77 men (officers included) 18 boys, and two priſoners; that of the whole number only 16 men, and 11 boys were capable of keeping the deck, and ſeveral of theſe very infirm, and that the water was ſo deep in the hold, that thoſe who were yet alive were ſtarving, and could neither come at freſh water nor proviſions. On account of this repreſentation, which was in no inſtance exaggerated, the commodore ſent immediately an order to Captain Mitchell, to bring his people on board the Centurion, and take out ſuch ſtores as could moſt eaſily be come at, among which he was very deſirous of ſaving two cables, and a ſheet anchor. But the ſhip rolled ſo much, and the men were ſo exceſſively fatigued, that it was with the greateſt difficulty the prize-money was ſecured, the prize goods amounting to many thouſand pounds being abandoned) nor could any other proviſions be got at, than five caſks of flour, (three of which were ſpoiled by the ſalt-water), a ſmall quantity of brandy, and ſome living ſtock. Even this little buſineſs was ſo languiſhingly performed, that two days were waſted in the execution, during which time three or four of the ſick periſhed on being removed. As the weather was now calm, and we were uncertain how far diſtant we might be from Guam, a ſettlement in poſſeſſion of the enemy, to whom the wreck of ſuch a ſhip with guns and ammunition on board would have been a very valuable acquiſition, the commodore judged the moſt effectual way to prevent her falling into their hands was to ſet her on fire: and, accordingly, as ſoon as the captain and his officers had quitted her, the combuſtibles placed for that purpoſe were lighted, and ſhe continued burning the whole night, and at ſix the next morning ſhe blew up. Thus periſhed his majeſty's ſhip the Glouceſter; and now it might have been expected, that being freed from the embarraſſment in which her frequent diſaſters had involved us, we ſhould have proceeded on our way much briſker than we had hitherto done. However, we were ſoon taught that our anxieties were not ſo to be relieved.

The Glouceſter ſet on fire.

We were at this time in the utmoſt diſtreſs; the ſhip conſiderably lumbered with prize goods, and the ſmall room we had left thronged with the ſick, whoſe numbers were now very much increaſed with thoſe from the Glouceſter, the dirt, nauſeouſneſs, and ſtench almoſt intolerable, more people daily diſabled with the diſeaſe; no ſign of land, and but very little wind, and that not fair but variable; very bad proviſions and water, and the ſhip very leaky; and though we diſcovered the leak to be in her bows on each ſide the ſtern, it lay in ſuch a manner that we could not ſtop it, nay, the attempting it rather made it worſe. In this diſtreſs we made the beſt of every ſpurt of wind.

Nothing farther remarkable happened till Sunday the 22d, when about eight in the evening, we diſcovered two iſlands; one bearing weſt half ſouth, and the other S. W. by W. at the diſtance of about 10 leagues. We were overjoyed at this ſight, and ſtood toward them with all our ſail: but there being little wind, we did not get near them till the next day about noon, when being about three miles off the largeſt and moſt promiſing of them, which opened very hilly and full of trees, we ſent on ſhore one of our lieutenants in the cutter to make diſcoveries, who returned at nine in the evening, and gave us but a very indifferent account of the ſhore.

The trees were moſtly cocoa-nut trees, of which there were prodigious quantities: they brought about 60 cocoa-nuts on board with them, but they could find no water, nor any good place to anchor in. On this account it was thought fit to ſtand farther to the ſouthward, for ſome more proper place. This was a ſevere diſappointment to moſt of the ſick, who, on the ſight of land, (or hearing that it was ſo near) had begun ſenſibly to revive: but as perſons in ſuch circumſtances are ſoon driven to deſpond, when an aid they depended upon deſerts them, ſo this diſappointment deſtroyed our hopes, and increaſed our dejection. We feared, that, if we met with more iſlands in the ſame run, they might be either as bad, worſe, or inhabited by our enemies the Spaniards, who in our weak condition, might eaſily be able to hinder us from proper refreſhments: add to this, how many of us were near to death, and how little we could expect to ſurvive any time in ſearching for other iſlands, I know not whether theſe were the general thoughts of the ſick, but I muſt own they were mine, and made our ſituation at that time appear ten times worſe to me than at any other in the whole courſe of our voyage; I was indeed very ill, and my illneſs might poſſibly occaſion every thing to appear in its worſt light, yet I was never one of thoſe who were frightened at the apprehenſion, or even the viſible approach of death; it had no unreaſonable terrors in any of its proſpects to me; and I always could, meet it with reſignation: but I believe the healthieſt and ſtouteſt at that time, had probably the greateſt apprehenſions; and I have ſince heard from many of thoſe, that they expected all to have periſhed, had we been ſo little as three weeks longer at ſea; and I much queſtion whether they were not right in that expectation.

On the 26th at five in the morning, we ſaw three other iſlands, being from S. E. by S. to N. E. the middleſmoſt of the three, which was the largeſt, due eaſt. The 27th, at three in the afternoon, being got pretty near the ſhore of the middle iſland, we ſent our cutter and pinnace in-ſhore for diſcovery. At four, the pinnace came off, and brought with her an Indian praw, with a Spaniard and four Indians whom they took in her. They likewiſe told us, that they had in ſhore a ſmall bark of about 16 tons, and between 20 and 30 more people on the iſland, all of whom had been ſent thither from Guam, to kill cattle and hogs, and make jerked beef and cocoa-nut oil, &c. for the Spaniſh garriſon there; and that there are people conſtantly ſent on that account, who, after ſome months ſtay at that place, are relieved by freſh parties for the ſame purpoſe. We ſecured both the bark and praw, together with all the Indians who fell into our hands, to hinder their carrying intelligence of us to the Spaniards at Guam. One of thoſe Indians was a carpenter by trade, and his father was one of the principal builders at Manilla. This young man having been ill uſed by the governor at Guam, voluntarily entered with us, became one of our carpenter's crew, and proved a very uſeful handy fellow.

The Spaniard being examined as to the ſtate of the iſland we were now approaching, the account he gave ſurpaſſed even our moſt ſanguine hopes; and, though uninhabited, he ſaid, it wanted none of thoſe accommodations with which the beſt cultivated countries are furniſhed. On muſtering up our whole force, as we drew near, all the hands we could collect, capable of any kind of duty, even on the moſt preſſing occaſions, amounted to not more than 71 men, (officers included). This number, inconſiderable as it may ſeem, were all of the united crews of the Centurion,

Glouceſter, and Trial, that could move without being aſſiſted, notwithſtanding when they left England they conſiſted of near 1000 men.

When we had entered the road, our firſt buſineſs, after furling the ſails and ſecuring the ſhip, was to provide an hoſpital on ſhore for the ſick: but the officer and ſeamen who were ſent upon this ſervice, returned joyfully, and acquainted us that the Indians on ſhore had ſaved them that trouble, and had provided for us better than we could have done for ourſelves; for, having erected a number of little cabins for their accommodations during their reſidence on the iſland, and one in particular which they made uſe of by way of ſtorehouſe to ſtow their proviſions in, there could be nothing more ſuitably adapted for the reception of both the ſick and the healthy, than theſe erections. Accordingly we began ſending aſhore as many of the ſick as could poſſibly be conveyed, among which number I myſelf was one: I ſay, as many as poſſibly could be conveyed, for we were ſo extremely feeble and helpleſs, that we were no otherwiſe to be landed than by being carried in our hammocks, both in and out of the boats, on mens ſhoulders, in which ſervice both the commodore himſelf and his officers very humanely aſſiſted; and indeed they were almoſt the only perſons on board capable of performing it, the healthieſt ſeamen being ſo much enfeebled, that they had but juſt ſtrength enough left to help themſelves. The next day, being the 29th, the remainder of the ſick were brought on ſhore, when 21 men died; but the greateſt part of the reſt recovered ſurpriſingly. The ſoil, upon examination, we found to be every where dry and healthy; and being withal ſomewhat ſandy, it was thereby the leſs diſpoſed to a rank and over-luxuriant vegetation: and hence the meadows and woods were neater and ſmoother than is uſual in hot climates. The valleys and hills were moſt beautifully diverſified by the mutual incroachments of woods and lawns, which ſkirted each other, and traverſed the iſlands in large tracts. The woods conſiſted of tall and well-ſpread trees, ſome celebrated for their beauty, and ſome for their fruit: whilſt the lawns were generally crowded with herds of cattle, of which it was not uncommon to ſee thouſands feeding in a herd, and being all milk-white, it was no wonder that ſuch an appearance excited our longings, and encreaſed our impatience, to kill and eat. Add to this, the innumerable ſwarms of poultry that filled the woods, and, by their frequent crowings, gave us in idea the pleaſing apprehenſion of being in the neighbourhood of farms and villages; and we even fancied, that in the covert of the woods we ſhould find ſuch concealed. The cattle we had ſight of were computed at 10,000; and, beſides theſe and the poultry, we likewiſe found abundance of wild hogs, which were excellent food, but fierce, and not eaſily maſtered. At firſt we killed them by ſhooting; but our ammunition failing, owing to an accident, we at laſt hunted them down with dogs, ſeveral of which joined us on the iſland, and being trained to the ſport by the Indians, readily enough followed us, and afforded good diverſion. In their conflicts with the boars, ſome indeed were killed; but thoſe that came off victorious, were ſtill more eager to engage in every new purſuit. *

Tinian deſcribed.

This iſland was no leſs fortunate to us in its vegetable than in its animal productions, more particularly in abounding in ſuch fruits and plants as were beſt adapted to the cure of that diſeaſe by which we had been ſo dreadfully debilitated. In the woods cocoa-nuts were to be gathered without number; and, what is remarkable, cabbages grew on the ſame trees. There were, beſides, guavas, limes, ſweet and ſour oranges, and, what is common to all the tropical iſlands, bread fruit; in the plains we found water-melions, dandelion, creeping-purſlain, mint, ſcurvy-graſs, and ſorrel: all which, together with the freſh meats of the place, were ſuch ſalutary refreſhments, that the ſick, who were at death's door when they landed, before they had been a week on ſhore, put on very different countenances, and with their new complexion received a freſh recruit of ſpirits. 1741

Amidſt ſuch a variety of proviſions as the land furniſhed, it was thought unneceſſary to indulge ourſelves in thoſe offered us by the ſea. From fiſh, therefore, we wholly refrained; and the rather, as ſome we caught at our firſt arrival, ſurfeited thoſe who ate of them. This, however, was not regretted, as beef, pork, poultry, and wild-fowl, were in ſuch plenty, that except the trouble of bringing them from a conſiderable diſtance ſometimes, there was no difficulty attending their procurement. It were indeed, an endleſs taſk to recount all the excellencies and delicacies we met with in this delightful iſland; nor is it eaſy to ſay which to prefer where every thing is worthy of admiration, the neatneſs of its lawns, the ſtatelineſs, freſhneſs, and fragrance of its woods, the happy inequality of its ſurface, and the variety and elegance of the views it afforded. All theſe conſpired to charm the ſight, while, at the ſame time, the excellency of its productions could not fail to gratify the appetite. And theſe advantages were greatly enhanced by the healthineſs of the climate, by the almoſt conſtant breezes that prevailed, and by the frequent, gentle ſhowers that ſeemed to fall juſt to refreſh the earth, and add to its fertility; for theſe, inſtead of the long continued rains that in other countries fill the air with noxious vapours, and overflow the earth, with waſteful inundations, ſeemed juſt enough to purify the air, and to refreſh the ſoil; which was obſervable enough by the effects it had in increaſing our appetites, and promoting our digeſtion. This effect was indeed remarkable, ſince thoſe among our officers who were at all other times ſpare and temperate eaters, were here in appearance transformed into gluttons; as inſtead of one reaſonable fleſh-meal a day, they were ſcarcely ſatisfied with three: and yet our digeſtion ſo well correſponded to the keenneſs of our appetites, that we were neither diſordered nor even loaded by this uncommon repletion; for after having made a large beef breakfaſt, it was not long before we began to conſider the approach of dinner as a very deſireable and ſomewhat tardy event: The principal inconveniences that attended our reſidence upon this iſland aroſe from the vaſt number of muſkittos and other troubleſome inſects, by which we were perpetually teaſed: there was likewiſe a venomous little inſect that, like the ſheep-ticks in England, would bury its head in the ſkin, and if not ſoon removed, cauſe an inflammation. Running water there was none in the iſland, but that defect was ſupplied by a large lagune or lake, almoſt in the centre of it, to which the cattle, in times of drought, generally reſorted; but the freſhneſs of their paſture, and the copious dews and gentle ſhowers that often moiſtened it, rendered that reſource almoſt unneceſſary. There were beſides ſprings of excellent water, and, near the ſurface, wells might every where be dug, whoſe waters in any other place, would not have been complained of.

But the great danger we had to dread, remains to be told. During four months in the year; that is, from the middle of June to the middle of October, when the weſtern monſoons prevail, the winds about the full and change of the moon are variable, and blow with ſuch fury, that the ſtouteſt cables afford no ſecurity to ſhips riding at anchor in the road: and what adds to the danger in the rapidity of the tide, which ſets to the S. E. and occaſions ſuch a hollow and overgrown ſea as is ſcarcely to be conceived; inſomuch that though we were in a ſixty-gun ſhip, we were under the dreadful apprehenſion of being pooped by it. During the reſt of the year, the weather is conſtantly ſettled, and when ſhips have nothing to fear, if their cables are well armed, which otherwiſe will ſoften from the foulneſs of the ground. From the 19th of Auguſt, when our ſick were all put on ſhore, to the 12th of September, when the commodore himſelf

* The iſland of Tinian is differently deſcribed by Commodore Byron.

1741 ſelf landed, thoſe that remained on board were chiefly employed in mooring their ſhip, in ſhifting their guns, to come at their leaks, and in ſecuring the cables from being galled againſt the rocky bottom; at the ſame time an anchor and cable were put on board the Spaniſh bark, her own being only a heavy log of wood, and a rope made of baſs, and ſome barrels of powder, which by long keeping were become moiſt, to be dried and recovered. From the 12th to the 15th, their hands were continually ſhifting; thoſe who were ſo well recovered as to be capable of duty, were ſent on board, and thoſe who had borne the burden of the labour were relieved and ſent on ſhore.

A violent tempeſt drives the Centurion from her anchor.

The weather began to alter on the 19th, and to threaten a ſtorm. On that day, the next, and the 21ſt, it blew hard; however, we rode it out, and flattered ourſelves that the prudence of our meaſures had ſecured us from accidents. On the 22d the hurricane came on, and our only hope of ſafety ſeemed to depend on our putting out to ſea; but the commodore was on ſhore, and all communication with the land abſolutely cut off. At five in the afternoon, the ſmall bower parted, and the ſhip ſprang off to the beſt bower. As night approached, the violence of the ſtorm increaſed; yet, notwithſtanding its inexpreſſible fury, the rapidity of the tide was ſuch as to prevail over it, and to force the veſſel before it, as it were, in deſpight of its utmoſt rage. It was now that the ſea broke round us in a tremendous manner, and a large tumbling ſwell threatened to ingulph us in its boſom. The long-boat which was moored a-ſtern, was, on a ſudden, thrown ſo high that it broke the tranſum of the commodore's galley, and would, doubtleſs, have riſen as high as the tafferil, had it not been for the ſtroke, which ſtove her to pieces; yet the poor boat-keeper, though much bruiſed, was ſaved almoſt by miracle.

About eight o'clock the tide ſlackened, but the wind did not abate; and the beſt bower cable by which alone we held, parted at eleven. In this extremity, Mr. Saumarez, our firſt lieutenant, who commanded in the abſence of the commodore, ordered guns to be fired, and lights to be ſhewn, as ſignals of diſtreſs. In a ſhort time after, the night being exceſſively dark, the ſtorm raging, the thunder roaring, and nothing to be ſeen but the blue lightning flaſhing through the rain, we were driven to ſea; and by this cataſtrophe the whole crew, both by ſea and land, were reduced to a ſtate of deſpair; thoſe on ſhore, concluding that they had now no means left them ever to get home, while thoſe on board, being utterly unable to ſtruggle with ſuch winds and ſeas, expected each moment to be their laſt. In this deſpondent ſtate, while the crew on board were every moment expecting to be daſhed againſt the rocks of Aiguignan, an iſland about three leagues from Tinian, thoſe on ſhore were perſuaded the ſhip could not ſurvive the ſtorm, the whole channel between the two iſlands, appearing from the land like one continued breach; the ſea ſwelling, breaking, and roaring, like mountains over mountains, and forming the moſt aweful and terrifying ſight that the mind of man can poſſibly conceive. Indeed the condition of thoſe driven to ſea was truly pitiable: they were in a leaky veſſel, with three cables in their hawſes, to one of which ſtill hung their yet remaining anchor: they had not a gun on board laſhed, nor a port barred in. Their ſhrouds were looſe, their fore-top-maſt was unrigged, and they had ſtruck their fore and main yards down before the hurricane came on, ſo that there was no ſail they could ſet except the mizzen. To add to their misfortunes, they were no ſooner at ſea than by the labouring of the ſhip, whole floods of water ruſhed in at the hawſe-holes, ports, and ſcuppers, which, with the uſual leakage, kept the pumps conſtantly at work. Perſuaded that their deſtruction was inevitable, yet ſinking was but their ſecondary concern, for they judged by the driving of the ſhip, that they were making towards the land, and in the darkneſs of the night that they ſhould no otherwiſe perceive it than by ſtriking upon it. Day-light, however, relieved them from that uneaſy apprehenſion, by ſhewing them that the iſland which they had ſo much dreaded was at a conſiderable diſtance, and that the northern current had proved the means of their preſervation. It was not, however, till the expiration of three days, that the turbulent weather which had driven them from Tinian, began to abate; when every man in the ſhip was ſo worn out with fatigue, that they found it impoſſible to man the pumps, and hand the ſails at the ſame time. They had twice attempted to get up the main and fore yards, in which they had as often miſcarried, by the breaking of the jeers; and in the laſt effort, one of their beſt men periſhed.

All this time the ſhip was driving to leeward, and dragging her ſheet-anchor, the only one ſhe had, with two cables on end at her bows. This was a circumſtance of the greateſt conſequence, and required a ſpeedy remedy; for though, upon a third exertion of their whole force, they had replaced their yards, they durſt not, while the anchor remained in that ſituation, venture to ſpread their canvas. Some reſt and refreſhment became neceſſary before a work of ſuch labour could be propoſed to a feeble and diminiſhed crew, that hardly conſiſted of 100 men. It was therefore five days after their departure, before they could ſecure their anchor. Then they ſet their courſes, and, for the firſt time, ſtood to the eaſtward, in hopes of ſoon regaining the iſland, and rejoining their commander, and the reſt of the company. But in this they were unhappily diſappointed; for having run, as they thought, the diſtance neceſſary, and being in full expectation of ſeeing the iſland, they found themſelves bewildered by the irregularity of the currents, and knew not what courſe to ſteer, till, after many days uncertainty, they came at laſt in ſight of Guam, from whence, with infinite labour, they directed their courſe to Tinian, the wind being conſtantly againſt them, and the tide variable. This ſevere employment held till the 11th of October, when, after 19 days abſence, they appeared again in the offing, and were reinforced from the ſhore, to the inexpreſſible joy of the whole crew.

A few days after the ſhip was driven off, ſome of the people on ſhore cried out, *A ſail!* This ſpread a general joy, they ſuppoſing it to be the Centurion returning; but preſently another ſail was deſcried, which wholly deſtroyed the firſt conjecture, and made it difficult to gueſs what they were. The commodore, by the help of his glaſs, ſaw they were two boats; on which he inſtantly concluded, that the Centurion was gone to the bottom, and that thoſe were her boats, returning with the remains of her people. This ſudden ſuggeſtion wrought ſo powerfully upon him, that, in order to conceal his emotion, he was obliged to retire to his tent, where he ſpent ſome bitter moments in the firm perſuaſion that all his hopes were now at an end, and that, inſtead of diſtreſſing the enemy, he muſt himſelf, with his people, fall a prey to their cruelty. He was, however, ſoon relieved from this mortifying thought, they appearing, on their near approach, to be Indian proas [or praws] directing their courſe towards the bay with a view, as was ſuppoſed, to relieve their countrymen, or take on board their proviſions.

On this intelligence, the commodore ordered his people to conceal themſelves; but the praws, after advancing within a quarter of a mile of the ſhore, lay by for the ſpace of a few hours; and, probably obſerving ſome change in the appearance of the place, which might raiſe their ſuſpicion that an enemy lay in ambuſh, they got again under ſail, and ſteered to the ſouthward.

After this incident, an opinion began generally to prevail that the Centurion would never more appear at this iſland; and that ſhe was either loſt, or forced upon the coaſt of China, from whence, in her crazy condition, it would be impoſſible for her ever to return. Though the commodore did not apparently give into this opinion, yet he was not without his fears; and to provide againſt the worſt, he propoſed

cutting asunder the Indian bark which they took, on their first arrival, and lengthening her in such a manner as to render her capable of taking on board all who were then upon the island, and follow the ship, if peradventure she should be driven to Mocao. After some hesitation, owing to the difficulty attending the execution, they were prevailed upon to engage in the work, and the commodore by his example encouraged their diligence; for, being always at work by day-break himself, it was thought a disgrace to be idle when their chief was employed. It fortunately happened, that the carpenters both of the Glouceſter and the Trial were on shore, and that they had brought for safety their chest of tools with them. The smith too, was on shore with his forge, but his bellows was still in the ship. This defect occasioned some delay; but was soon supplied by the ingenuity of his ship-mates, one or other of them never being at a loss for expedients on such occasions. They limed a fresh hide for leather; the carpenters shaped out a wooden frame, and a gun barrel served for a nozel; the smith being now in readiness to prepare the iron work, some were employed in cutting down trees, and sawing them into planks, whilst the main body were busied in digging out a draw-dock to receive the bark, and laying of ways to heave her up and down. All, in short, were variously employed; and the work went on successfully for 16 days; in which time the bark was sawn asunder, and her two parts were separated, and placed at the proper distance from each other; and, the materials being all in readiness before hand, they proceeded with no small dispatch in the enlargement, insomuch that they fixed on the 5th of November as the day when they should be ready to depart. The alacrity with which the business was carried on, left no room for reflexion among the common sailors, though their superiors were not without their fears. They had no sea provisions, except the jerked beef, which the Indians had prepared, and abandoned when they fled, and they had a run of 600 leagues before they could presume upon a supply. They had no bread, and the bread fruit on this island could not be preserved at sea; they wanted salt; and, what was still a more necessary article in their present situation, they wanted ammunition for their defence, in case of an attack from an enemy; for, upon the strictest search, no more than 90 charges of powder could be collected, which was short of one round a-piece for each of the company. They were in an unknown sea, and wanted instruments to direct their course; in short, though the common men had no other thought than how they should get on board, the officers foresaw a thousand difficulties, which were almost insurmountable to human apprehension, but which they carefully concealed, that the main business might not be retarded. But, in the midst of these gloomy apprehensions, which, the nearer the time of their departure approached, still became the more serious, and when all hopes of seeing the Centurion at Tinian had subsided, one of the Glouceſter's men, being upon a hill at a distance, looking out for cattle, perceived, something like a ship in the clouds, which, on steady observing it, seemed to move slowly towards the land, it was not long before he was sensible of its approach, and persuaded himself it was the Centurion. The man with extasy ran towards the landing-place, crying to his comrades, *The ship! The ship!* This being heard by the nearest, was echoed from mouth to mouth, till it reached the spot where the commodore was at work, who, on hearing the joyful news, threw down his axe, and joined in the general transport. In a few hours, the Centurion appeared in the offing, and a boat with 18 men was sent off to reinforce her, and to carry fresh meat, fruits and refreshments, for the crew. In the afternoon of the 11th of October, she happily cast anchor; the commodore went instantly on board, and the joy and congratulation on that occasion were equally sincere and mutual.

The labour of the artificers was now at an end, and another kind of employment succeeded, which was that of laying in water for the voyage. Now also hunting, shooting, and every device that could be contrived to catch live cattle, hogs, and poultry, for stores, took place; while, at the same time, the commodore and officers amused themselves with traversing the island, and examining more minutely its several parts. In one of these excursions, being on a rising ground, they observed, in a valley beneath them, the appearance of a small thicket, which, by attending to it, seemed to have a progressive motion, as indeed it had, but was no other than a parcel of cocoa-bushes trailed upon the ground by persons concealed beneath them. From this uncommon circumstance, it was immediately concluded, that the Indians, whose boat they had surprised upon their first arrival, must be the persons who were dragging the bushes, and that it could not be far to the place of their concealment. They therefore kept their eye upon them, and traced them to their cell; but, to their surprise, when they entered it, they found it abandoned, though all things were ready prepared for dinner, and stood smoaking hot on a table of turf. The officers, having in vain endeavoured to track them returned, and, with an appetite increased by the keeness of the pursuit, sat down to eat that meal which the poor hungry savages had abandoned. It consisted of salted spear-ribs, and bread fruit; all which they found ready dressed, and in quantity as much as they all could eat. 1742

On the third day, after the second arrival of the ship, the commodore being on board, a sudden gust of wind arose, and again brought home our anchor, and drove us out to sea. Our chief officers were now all on board; and only about 70 of our men, with a midshipman or two to command them, were employed on shore in filling water and catching cattle. Of these about 30 came off to us in a cutter, and the eighteen-oared barge was sent for the rest: but they not being in readiness, and the ship quickly driving out of sight, it was no longer in their power to join us. However, as the weather soon proved favourable, and we were now stronger and healthier than when we met with our first disaster, in about five days we regained the road, and anchored safe in our former station. On our return we found the bark restored to her old dimensions, and the parts brought together, and in good forwardness to be completed; for the few remaining people, despairing of the return of the ship, had determined to follow her to her destined port. We now laboured indefatigably to get in our water, in order to sail, in which service two of our men, employed in the well, unfortunately perished; for the sides of the well being loose earth, by the carelessness of those above, in not properly attending the filling, the bank gave way by the weight of a heavy cask, and both that and the bank fell in upon them together. Some other misfortunes happened through haste in rafting the casks to the ship, which yet, notwithstanding, were such as are generally accounted trifling on board a man of war. Our watering went on so successfully, that by the 20th of October it was completed; and on that day leave was given for a man from each mess to go on shore and gather as many oranges, lemons, cocoa-nuts, and other fruits of the island as should be sufficient for us all, while at sea. This being accomplished, and the Spanish bark set on fire, the men returned on board, and the boats were hoisted in. On the 21st we set sail, and the wind being fair, and the weather moderate, nothing remarkable happened till we arrived on the coast of China, except that while we were passing by the rocks of Vale Rete, near the south end of the Island Formosa, we were alarmed by a cry of fire on the fore-castle, which brought the whole crew together in the utmost confusion, so that it was difficult for some time to reduce them to order; but, as soon as discipline took place, and a proper examination could be made, it was found to proceed from the furnace, where the bricks, being over-heated, had begun to communicate the fire to the wood-work, which, had it not been timely discovered, might have been of the most dreadful conse-

1742 quence; but, as it fell out, it was extinguiſhed with the greateſt facility, and the brick-work ſo ſecured, that no accident of the like kind could happen again.

From the iſland of Formoſa we directed our courſe ſo as to fall in with the coaſt of China, to the eaſtward of Pedro Blanco; as that rock is generally eſteemed the beſt directions for ſhips bound to Mocao; and, on the 6th of November we fell in with it, and were preſently ſurrounded by an incredible number of fiſhing boats, which covered the ſurface of the ſea as far as the eye could reach. Nor was this ſwarm of fiſhing veſſels peculiar to that place, for, as we ran on to the weſtward, we found them as abundant on every other part of the coaſt. From among theſe we had no ſort of doubt of procuring a pilot to Mocao; but, when we thought ourſelves near it, though we tempted them with ſhewing them bags of Spaniſh dollars, for which, it is ſaid, a Chineſe would ſell his father, yet not one of them would venture to come on board us, nor give us the leaſt intelligence; neither did our ſhip, the like of which ſo armed and filled, probably, had never before appeared upon their coaſts, ſeem to excite in them any curioſity. They continued their fiſhing with the ſame apparent indifference as if any trading ſhip had been paſſing by; and, when we made them ſignals, they diſregarded them as much, though they certainly underſtood them, as if we had been in ſport. The next day, however, about two in the afternoon, as we were ſtanding to the weſtward, within two leagues of the ſhore, ſtill ſurrounded as before, we obſerved that a boat a-head of us waved a red flag and blew a horn. This we apprehended was a ſignal for us, and accordingly hoiſted out our cutter, and ſent to know the meaning of it; when we preſently diſcovered the miſtake, and that it was only the uſual notice to leave off fiſhing, which the whole fleet inſtantly obeyed. Being thus diſappointed, we kept on our cruiſe till we came to a groupe of iſlands, round the weſternmoſt of which we were directed to paſs, and then to haul up. While we were thus employed, a Chineſe pilot came on board, and, in broken Portugueſe, undertook to pilot us into harbour for 30 dollars; and on the 12th of November, anchored us ſafe in Mocao road, where the firſt thing we did was to ſalute the fort, and to ſend to the Portugueſe governor, to adviſe with his exceſſency in what manner to behave, to avoid giving offence to the Chineſe. The difficulty the commodore principally apprehended, related to the port charges uſually paid by the ſhips in the river Canton, from which charges men of war are exempted in every port of Europe, and which the commodore was determined not to be forced to pay in this.

In the evening the boat returned with two officers, who delivered it as the governor's opinion, that, if the Centurion ventured into the river of Canton, the duty would moſt certainly be expected; and, therefore, if the commodore approved of it, he would ſend a pilot to conduct the ſhip into another harbour, called the Typa, where it was probable the port charges would never be demanded. To this propoſal our commander agreed; the pilot was ſent and the ſhip ſafely moored.

Next day the commodore paid a viſit, in perſon, to the governor, to ſolicit a ſupply of proviſions, and of naval ſtores to refit the ſhip. The governor very frankly acquainted Mr. Anſon, that he durſt not openly furniſh either the one or the other: for that he himſelf never received proviſions for his garriſon but from day to day, by permiſſion from the Chineſe government, nor any thing elſe but what his preſent neceſſaries required. However, he aſſured the commodore in a friendly manner, that he would give him all the aſſiſtance in his power. On this declaration, the commander reſolved to go to Canton himſelf, to procure a licence from the viceroy to purchaſe a ſupply, and his attendants to carry them into port. But juſt as they were ready to embark, the Hoppo refuſed to grant them a permit; nor would he, for all the intereſt the commodore could make, withdraw the prohibition, till he was threatened to be compelled to it by force. This operated when fair means had failed; the next day a permit was ſent on board; and the commodore proceeded to the Engliſh factory, to conſult with the principal officers there, about the precautions that were to be uſed, leſt the factory there ſhould ſuffer by violent meaſures, which he was ſolicitous to avoid. They adviſed him to tranſact the matter with the Chineſe merchants, who, at firſt, undertook to accompliſh it; but after trifling with him for more than a month, they declared they durſt not interfere in it. They then undertook to procure him proviſions clandeſtinely, but that would not ſuffice. On his return, he found the ſhip ſo much out of repair that ſhe could not proceed without being hove down. The next day, therefore, he wrote a letter to the viceroy, acquainting him, that he was commodore of a ſquadron of his Britannic Majeſty's ſhips of war, that had been cruiſing in the South Seas againſt the Spaniards, who were at war with his nation; that his ſhip was leaky; that his people were in want of proviſions; that he had put into Mocao, a friendly port for a ſupply; but that, being a ſtranger to the cuſtoms of the country, he had been unable to ſucceed; and therefore he requeſted he might be permitted to employ workmen to repair his ſhips, and that he might be ſupplied with proviſions at the accuſtomed rates at which the articles which he ſtood in need of were generally ſold.

Another difficulty was now ſtarted as to the delivery of this letter, the Hoppo at firſt refuſing to intermeddle with it; but on the commodore's expreſſing ſome reſentment, and threatening to convey it to Canton, by his own meſſengers, he at length undertook not only to deliver it, but to procure an anſwer; accordingly, though the letter was only dated on the 17th of December, on the 19th a mandarine of the firſt rank, together with two others of an inferior claſs, and their attendants, having in their retinue 18 half galleys, decorated with ſtreamers, and furniſhed with bands of muſic, came to a grapple a-head of the Centurion, whence the mandarine ſent in to acquaint the commodore, that he came by order of the viceroy to examine the condition of the ſhip, and to report the ſame as it ſhould appear to him upon a juſt ſurvey. On this meſſage, preparations were inſtantly made to receive him; in particular, a hundred of the moſt ſightly men on board, uniformly dreſt in the regimentals of the marines, were drawn up under arms on the main deck, againſt his arrival. When he entered the ſhip, he was ſaluted by the drums and military muſic, and conducted by ſome of the principal officers to the quarter-deck, where he was received in ſtate by the commodore, and then introduced to the great cabin; then he explained his commiſſion, and deputed the perſons he had brought with him to take the ſurvey. The mandarine appeared to be a perſon of ſuperior abilities, and endowed with a frankneſs and honeſty not uſually to be met with among the ordinary ranks of Chineſe officers, and being an eye-witneſs, of the dangerous ſtate of the leaks, and of the neceſſity there was for a thorough repair, he expreſſed his entire acquieſcence in the report that had been given, and promiſed to lay the ſame immediately before the council upon his return. He was exceedingly curious in inſpecting the ſhip, in examining her guns, and poiſing her great ſhot. He expreſt his aſtoniſhment at her ſtrength and magnitude; and the commodore, to increaſe his wonder, and ſhew his own power, let him know how eaſy it would be for him to deſtroy the whole navigable force of China, and lay the city of Canton in ruins; but, nevertheleſs, he aſſured him, that not the leaſt violence ſhould be offered, provided his wants were ſupplied upon reaſonable terms.

At the ſame time the commodore complained of the behaviour of the officer at Mocao, who had prohibited the country people from ſelling proviſions to his company, though they had paid for what they purchaſed

in ſterling ſilver. The mandarine heard the complaint without emotion, but ſaid it ſhould be remedied for the future. After the buſineſs was over, dinner was ordered, and the commodore apologiſed for the meanneſs of the fare, from the difficulty he had to procure better; but the two inferior mandarines, who were the only perſons of the retinue permitted to ſit at table with them, ſhewed no diſlike to any thing ſet before them, except the beef, to which they have the ſame averſion as the Jews have to pork, from a prejudice derived from their anceſtors; of which the commodore was not apprized, nor were they offended at its being ſet before them. They were indeed, very aukward in the uſe of knives and forks, and it was found neceſſary to introduce their own ſervants to carve for them before they could make an end of their dinner. But if they were deficient in their manner of eating, they were no novices in putting about the glaſs; for, there was not an officer at table that durſt engage with them. Seeing they were fond of Frontiniac, and that they preſently emptied four or five bottles without any effect, the commodore ordered a bottle of citron water to be brought up, which on taſting, they liked, and, hethen excuſing himſelf, on account of an illneſs from which he had not yet recovered, they clapped a ruddy faced officer on the ſhoulder, and deſired him to pledge them, ſaying, by their interpreter, they were ſure he could not plead illneſs for declining his glaſs. When the bottle was out, they all roſe from the table, without appearing to be in the leaſt diſordered; and after the uſual ceremonies, departed very well pleaſed with their entertainment.

The commodore now eagerly expected the licence which he had requeſted; but it was ſeveral days before it paſſed the neceſſary forms, chiefly owing to the intrigues of a Frenchman, who having the advantage of ſpeaking the language fluently, was at no loſs in traverſing the meaſures of the friendly mandarine; yet a repetition of the threats already referred to, produced the deſired effect.

The licence was received on the 6th of January, and the carpenters ſet to work, and the prohibition being previouſly taken off, proviſions were every day brought to the ſhip in plenty. However, it was the beginning of April before the repairs could be completed; and the Chineſe began to be very uneaſy at the commodore's long ſtay. They had frequently ſent meſſengers to him to haſten his departure; not knowing or believing that he was no leſs in earneſt to be gone than they were deſirous to be freed from his long ſtay. At laſt, on the third of April, two mandarines came on board from Mocao, with a peremptory command, addreſſed to the commodore, requiring him to depart; to which he made anſwer in a determined tone, That he ſhould go when he thought proper, and not when they preſumed to command him. After this rebuke, however, all communication was forbidden, and no more proviſions were ſuffered to go on board; and ſo ſtrictly were thoſe injunctions carried into execution, that, from thenceforward, nothing could be purchaſed at any rate whatſoever.

On the 6th the Centurion weighed, and warped to the ſouthward, and by the 15th ſhe was ſafe in Mocao road. Long before this, ſome time in the month of November, Captain Saunders, commander of the Trial prize, had taken paſſage on board a Swediſh ſhip, with diſpatches from the commodore for government. And about the middle of December, Captain Mitchell, Col. Crockerode, Mr. Taſwel, with his nephew, Mr. Charles Herriot, and the Rev. Mr. Walter, embarked on board the company's ſhips, on their return home. About this time we received the firſt news of the arrival at Rio Janeiro of the Severn and Pearl, the two ſhips of our ſquadron, that parted from us at Cape Horne. The former had been remarkable for the extraordinary ſickneſs which had been more fatal on board her than any other veſſel in the whole ſquadron; inſomuch that though her hands were twice recruited from the Centurion, during her voyage to the ſtreights of Le Maire, yet when ſhe parted company ſhe wanted hands to navigate her in a ſtorm, which was the reaſon of her return. It was from the knowledge of this uncommon mortality that prevailed among the crew, that the commodore concluded the Severn to be loſt. The news, therefore, of hers and the Pearl's ſafety was received with the greater pleaſure, as we had long entertained an opinion that both of them had periſhed. But, to proceed.—From the 1ſt to the 15th of April, we had ſtormy weather, with heavy rains, and ſuch amazing and terrifying claps of thunder and flaſhes of lightening, as nothing of the kind I had ever ſeen, bore any proportion to. This was upon the breaking up of the eaſterly monſoon, when ſuch ſtorms are uſual in the country, and ſometimes are accompanied with dreadful guſts of wind, which they call tuffoons, of the effects of which the Chineſe relate wonderful ſtories. 1742

While we were warping out of the harbour, the commodore went on ſhore to Mocao, to take leave of the Portugueſe governor, who, had behaved in a very friendly manner to us; at his coming from the fort he was ſaluted with 15 guns.

During our ſtay, we had entered about 20 freſh hands, being chiefly Laſcars, Perſians, and Dutchmen, ſo that our whole complement, when we ſailed, amounted to 224 men and boys, among whom were ſome of almoſt all nations, languages, and religions.

Being now at ſea, we were for ſome time in a ſtate of uncertainty what courſe the commodore intended to ſteer. He gave out at Mocao, that he was bound for Batavia, and from thence to England; but his real deſign was very different. The project which the commodore had reſolved upon in his mind was to cruiſe for the annual ſhip from Acapulco to Manilla; and, not diſcouraged by his former diſaſters, he reſolved again to riſque the dangers of the Pacific Ocean, and to take his ſtation off Cape Spirito Santo, on the iſland of Jamal, being the firſt land the Acapulco ſhips make in approaching the Philippines. When we were thus got out to ſea, it was no longer neceſſary to conceal his project, he therefore ſummoned all his people on the quarter-deck, and in a ſhort, but ſpirited ſpeech, informed them of his deſign, which was received by them with ſigns of higheſt approbation. Such a confidence of ſucceſs had diffuſed itſelf through all the ſhip's company, that the commodore, who had taken ſome Chineſe ſheep to ſea with him for his own proviſion, enquiring one day of his butcher, Why he had lately ſeen no mutton at his table? the man replied, That there were but two ſheep left, and theſe, with his honour's leave, he would reſerve for the entertainment of the general of the galleons.

When the Centurion left the port of Mocao, ſhe ſtood ſome days to the weſtward, and on the firſt of May, paſſed the Iſland of Formoſa. Steering to the ſouthward, on the 4th in the evening they came in ſight of the Baſhee Iſlands, which they ſuſpected to be wrong laid down by Dampier, and, from obſervation found them 25 leagues too far to the weſtward. On the 20th of May they came in ſight of Spirito Santo.

As it was known that there were centinels placed upon the cape to make ſignals to the Acapulco ſhips,* the commodore tacked, and ordered the top-gallant-ſails to be taken in, to prevent a diſcovery; and this being the ſtation in which he propoſed to cruiſe, he fixed the limits between the latitude of 12° 50′ north, and 13° 5′ the Cape itſelf lying in 12° 4° north, and four degrees eaſt longitude from Pſotel Tobago Xima. It was now the ſhip from Manilla was every hour expected; for ſhe ſeldom fails of making land in the month of June, and ſometimes ſooner, and it was the laſt day of May New Style, when the commodore took his ſtation.

* There were two expected, becauſe none had been permitted to ſail the preceding year.

[After

1742 [After a month of tedious expectation in which hopes and fears alternately reigned in the breasts of our adventurers, on the 20th of June, Mr. Charles Proby a midshipman, discovered a sail from the mast-head; on which it was immediately concluded that this must be one of the galleons, and accordingly they stood towards her. They could see her from the deck at half an hour past seven in the morning, when she fired a gun to leeward, which the English thought had been a signal to her consort, but which they afterwards found was intended as a signal for her own people to prepare for engaging.]

They meet with the Acapulco ship.

The commodore was surprised to see the vessel steadily pursue her course, and was now in no fear of losing her, as, at noon, he could fetch her wake. Her consort not appearing, it was concluded that they had parted company, and it now became visible that the Spaniard did not intend to fly, but to fight. Every preparation had been previously made on board the Centurion, and all hands properly instructed; so that every man on board repaired to his post with as much regularity and unconcern as if preparing for a review. Thirty of the best marksmen lined the tops; two men placed themselves at each gun, to load it, and gangs of ten men each, were appointed to go from gun to gun, to run them out, and fire them as soon as they were loaded. Thus a constant running fire was kept up, and no interval allowed for the enemy to stand to their guns in safety, as is common when whole broad-sides are discharged at once.

At one in the afternoon, the galleon hauled up her fore-sail, and brought to, under top-sails, with her head to the northward, hoisting Spanish colours, and having the standard of Spain flying at her top-gallant mast-head. About the same time the Centurion hoisted her broad pendant and colours; and seeing the enemy clearing the decks of their cattle and lumber, gave orders to fire the chace guns, to disturb them in their employment. The galleon returned the fire with her stern chace guns, one of which carried away one of our fore-shrouds, which could not have been done by an ordinary ball. The English setting their sprit-sail fore and aft for boarding, the Spaniards, out of a bravado did the same. Soon after the Centurion shot abreast of the enemy, within pistol shot; and now the engagement became hot and fierce. For the first half hour, the Centurion over-reached the galleon, and lay on her bow, while by the wideness of her ports, she could traverse almost all her guns upon the enemy, but, in return, the galleon could only bring a part of her's to bear.

[In the midst of the action, the mats with which the galleon had stuffed her netting, took fire, blazing up nearly as high as the mizzen-top. This accident threw the Spaniards into the utmost terror, and also alarmed the commodore, he fearing lest the galleon should be burnt, and that he himself might suffer by being closely grappled by her. Happily, however, both these dangers were averted, and the fire was extinguished by cutting away the netting, and letting the whole tumble into the sea.]

All this time the commodore kept his first advantageous position, firing with great regularity and briskness; while, at the same time the galleon's decks lay open to our top-men, who having, with their first volley, driven the Spaniards from their tops, made prodigious havock with their small arms, &c. killing or wounding every officer but one that appeared upon the quarter-deck, and wounding in particular the general of the galleon himself. Thus the action continued for more than half an hour: after which the Centurion lost the superiority of her situation, and came close along-side of the galleon, when the enemy continued their fire with great activity for near an hour longer: yet, even in this situation, the commodore's grape-shot swept their decks so effectually, and the number of the dead and wounded became so considerable, that they began to fall into great confusion, especially as the general, who was the life of the action, was no longer able to exert himself. The disorder was so great, that their officers were seen running about to prevent the desertion of the men from their posts; but all their endeavours were in vain; for, after having, as a last effort, fired five or six guns with more judgment than usual, they yielded up the contest; and, the galleon's colours being singed off the ensign-staff at the beginning of the engagement, she struck the standard at the main-top-gallant-mast-head; but even this office would have been at the peril of the man's life, had not the commodore, observing what he was about, given express orders to leave off firing.

The commodore, when the action was ended, resolved to make the best of his way with his prize to the river Canton, being, in the mean time, fully employed in securing his prisoners, and in removing the treasure from on board the galleon into the Centurion. His first business was to commission the ship, and put her under the command of proper officers: Lieutenant Saumarez was appointed Captain, and was immediately ordered on board to take possession of his charge.

But, just as the galleon had struck, the officer who commanded between decks came up, seemingly to congratulate the commodore on his conquest; but at the same time privately whispered to him, that the Centurion was dangerously on fire near the powder-room. It seems one of the lads, called powder monkeys, being heedless, a cartridge that he was carrying blew up in his hands; this fired another, and that three of the lower-deck guns on the off side of the ship, which being happily loaded and laid down for service, and the ports hauled up to vent the smoke, they did not occasion the least mischief; however, the cartridges and guns together raised such a smother, that it was at first doubtful whether it proceeded from the explosion, or from a part of the ship being on fire; in fact, upon examination, it was found to proceed from both: for part of a cartridge having fallen between the planks of the cieling, close aft by the scuttle of the chaplain's cabin, not only a considerable smoke issued out, but a very sensible heat, and, had it not been immediately extinguished, the consequence would have been dreadful: to be brief, a few pails of water seasonably applied, did more than all the water of the ocean could have effected after an hour's delay.

This alarm being thus happily subsided, we drafted out 50 of our people (of whom myself was one) to board and man the prize. I heard we killed them 60 men, and wounded as many more, and expected to have seen the horrid spectacles of mangled limbs, dead carcases, and decks covered with blood: but no such spectacles appeared, a party having been properly stationed, during the time of action, to wash away the blood, and to throw the dead over-board. We found, however, many desperately wounded, and among them the general, who had received a musket ball in his breast, and was, or pretended to be so ill, that it was judged unsafe to remove him from his cabin: but all the other officers, together with the passengers of note, were sent on board the Centurion. Among the latter was an old gentleman, governor of Guam, who was going to Manilla to renew his commission, and who had scarcely mounted the Centurion's side before he was received with open arms by Mr. Crooden, captain of marines, who, 36 years before, at the battle of Almanza, had been his prisoner, and honourably used by him. These two renewed their old acquaintance, and Captain Crooden had a long-wished for opportunity of returning the favour he had formerly received, and which he gratefully remembered.

The ship, which upon examination, was found to contain to the value of more than a million and a half of dollars, was called the Nuestra Signora de Cabadonga, Don Jeronimo de Montero, commander, by nation a Portuguese, and accounted the most intrepid officer employed in the Spanish mercantile service: and, indeed, in my opinion, he was more brave than prudent; for, surely, no wise man, intrusted with such a cargo,

six leagues to the windward of a man of war, purposely stationed to intercept him, would have borne down upon his enemy, and braved him to his teeth, when, with the advantage of the wind, he might have got safe to port, from whence he was not more than 10 or 12 leagues distant, and where he might then have set his pursuer at defiance.

His galleon was indeed larger than the man of war, was pierced for 64 guns, but had only 36 mounted, most of them 12 pounders and 17 of them brass: she had, besides, 28 patararoes in her gunwale, quarters, and tops, carying each a 4lb. ball; and, before the engagement, she mustered 640 men capable of bearing arms, officers and passengers included: she was, besides, well furnished with small arms, and was particularly provided against boarding, both by her close quarters, and by a strong net-work of two-inch rope laced over her waste, and fortified with half-pikes placed in the manner of chevaux de frize; but, notwithstanding all her defences, she had 64 men killed, and 84 wounded, whilst the Centurion had only two men killed, and a lieutenant and 16 men wounded, all of whom recovered, one man only excepted.

And now the commodore learned from some of the prisoners, that the other ship, which had been kept in the port of Acapulco the year before, instead of returning in company with this, as was expected, had sailed earlier in the season than usual, and was probably got into Manilla before the Centurion set sail from Mocao; so that, notwithstanding our present success, we had reason to regret the loss of time occasioned by the delays of the Chinese, which prevented our taking two rich prizes instead of one, though to say the truth, it would not have been an easy task to dispose of the prisoners, which, even as it fell out, was a matter that gave the commodore no small disquietude; for they were above double the number of our people; and some of them observed, when they were brought abroad, how slenderly we were manned; and the general himself could not help expressing his indignation to be thus beaten by a handful of boys. It was therefore necessary for our own preservation to prevent their rising; and that could not be securely effected without exercising a degree of severity which in any other circumstances could not have been justified on the principles of humanity; for there was no method practicable but that of stowing the men in the holds of the two ships; and as for the officers, 17 in number, they were confined in the first lieutenant's cabin, under a guard of six men, first depriving them of their arms, and then keeping a strict watch on all their motions. Indeed, the sufferings of the common men, such of them, in particular, who were not employed in navigating the ship, were much to be pitied; for, the weather being extremely hot, the stench of the hold was loathsome beyond conception, and their allowance of water but just sufficient to keep them alive, being only a pint a day, for each man. It was next to a miracle that not a man of them died, during their confinement, except five of the wounded, who expired the very night they were brought aboard the Centurion. Thus circumstanced, the motives of humanity, as well as interest, strongly urged the commodore to hasten his return to China; and the prize being much damaged, both in her hull and rigging, it was found necessary to take her in tow for a quicker dispatch.

On the 21st of June it blew a storm, which continued till the 25th when the sea ran mountains high; in this storm the Centurion lost her long-boat, and the prize a launch.

On the 2d of July we passed between the Bashee Islands, though the rippling of the sea seemed to indicate breakers or rocky ground; but, the wind bearing so far to the northward as to render it difficult to weather them, we risqued the danger to shorten the voyage. On the 8th of July we made the coast of China, and on the 11th came to an anchor off the city Mocao; from thence we proceeded to the river of Canton, where we met with the usual obstructions from the custom-house officers, and where the commodore was again obliged, as it were, resolutely to force his way to his intended station. The officers who came to take the dimensions of his ships, in the usual manner, seemed astonished when he talked of being exempted from the accustomed rates, and gave him to understand, that the emperor's duty must be paid by every ship that came into his ports; and the pilot had private instructions not to carry the ships through the Bocca Tygris, or narrow pass that forms the entrance into the river Canton, till security was given for the accustomed charges. 1742

And here it may be necessary just to mention that this pass, not more than a quarter of a mile in breadth is defended by two forts on the opposite sides; but these the commodore disregarding, and being determined to enter the river without delay, as the stormy season was approaching, caused the pilot to be brought before him, and, in a determined tone, threatened to hang him to the yard arm, if he did not instantly take charge of the ship, and carry her safe, without striking ground, through the Bocca Tygris into the open river. The poor pilot performed his office, but did not escape punishment for what he could not help. He was instantly seized, on being released from the Centurion, committed to prison, and rigorously disciplined with the bamboo. However, he found means to get access to the commodore afterwards, to supplicate a recompence, who, ever ready to reward the sufferers in his service, gave him such a sum as more than contented him for his whipping. Nor was the poor pilot the only sufferer, for the governors of the forts, were both displaced for not preventing what it was in vain for them to attempt to oppose, and for not doing what all the council must know was impossible to be done.

On the 16th the commodore sent his second lieutenant to Canton, with a letter to the viceroy, assigning his reason for putting into that port, demanding a licence for purchasing provisions and stores, and intimating an intention of waiting upon his excellency in person to make his acknowledgements. The lieutenant was civilly received, and promised an answer the next day. In the mean time, the principal officers of the prize desired permission to go to Canton on their parole, which was readily granted; these no sooner arrived, than they were called before a magistracy and examined; when they generously and frankly acknowledged, that they fell into the hands of the commodore by the chance of war, and though they were prisoners, they were notwithstanding at liberty to treat for their release; they said farther, that tho' it was not the custom among European nations to put prisoners to death; yet that the laws of war authorised much severer treatment than they had hitherto met with from their conquerors. This confession from an enemy had great weight with the Chinese, who, till then, though they had reviewed the commodore's naval force, had yet suspected his morals, and had considered him rather as a lawless free-booter, than as one commissioned by the state for the revenge of public injuries.

On the 20th of July, three mandarines with their retinue came on board, and brought the viceroy's permit for a daily supply of provisions, and for pilots to carry the ship up the river as high as the second bar; and, at the same time, they delivered a message from the viceroy, in answer to that part of the commodore's letter which related to visiting his excellency, the substance of which message was, That the viceroy wished the commodore to defer his visit till the hot season was over; but that in September, when the weather would be more temperate, he should be glad to receive him. This the commodore looked upon as a finesse, knowing an express was sent up to the emperor's court at Pekin; whence the real motive for putting off the visit seemed to be to gain time to receive the emperor's instructions concerning the ceremony to be observed at his reception. The mandarines, having dispatched this part of their commission, next entered upon the

1742

business of the port charges; whereupon the commodore at once cut them short, by telling them that as he did not come to trade, he was not to be treated upon the same footing with trading ships; that his Britannic Majesty's ships never paid customs in the ports of Europe, nor ever would be subject to pecuniary imposts in any other port whatever. Finding nothing to be gained on this head, they told the commodore, that they had still another matter in charge, and that was the release of the prisoners taken on board the galleon, for that the emperor would never permit the subjects of princes with whom he was in alliance, to be held in bondage in his dominions, nor could the viceroy answer it to his sovereign, if he suffered it; and that therefore his excellency hoped that the commodore would give immediate orders for their release. Though nothing could be more agreeable to the commodore, who wanted much to be rid of the incumbrance, than this requisition, yet to inhance the favour, he at first raised difficulties, but at length suffered himself to be prevailed upon by their intreaties, and concluded, by assuring them, that, to shew his readiness to oblige, he would deliver up the prisoners whenever the viceroy would order boats to fetch them. Matters being thus adjusted, the mandarines departed; and, in a few days, two Chinese junks were sent from Canton to carry them to Mocao, under the direction of one Captain Fial, commander of a Spanish merchant-man, to whose ship we gave chace in our passage from the Bashee Islands to Mocao, but lost sight of her in the night.

The commodore refuses to pay customs.

To this gentleman the general of the galleon, and all his officers, except one who accompanied us to England, were delivered up. And now I have occasion to mention the general, I cannot help relating an affair which gave us on board the prize a great deal of concern, and sufficiently shewed the meanness of his spirit, and his beggarly craft. I have already taken notice of his being wounded in the engagement, and of his being indulged with the use of his own cabin till he was fit to be removed. The commodore, over and above this indulgence, sent him a surgeon from his own ship, upon a complaint that the Spanish surgeon on board the galleon was quite ignorant in his profession; but at the same time he sent an officer to demand his commission. Pretending to this officer that he was unable to move, he referred him to a small box in the locker of his private cabin, in which, he said, it was, and likewise a sword-belt set with diamonds of great value, his own property: but, upon search, neither the commission nor belt could be found, and, as some of our people had been rummaging both that and the other parts of the ship, he protested, that, if they could not be there found, they must have been taken away and concealed. Under colour of this concealment, though he never produced his commission, he all along received the most humane and gentlemanlike treatment, that the most worthy officer could desire or expect, and such was continued till his departure, when neither his chests, of which he had two very large ones, nor any of his trunks or cases were suffered to be searched, but every thing that he claimed as his personal effects were delivered to him with the greatest care and punctuality; though, as I was afterwards informed, he had many valuable ventures concealed, which ought to have been delivered up as prize to the captors; but, that was never examined into, he carried them off with the rest, and, it was supposed, was not the least among the gainers by the capture of his ship. He persisted, however, to the last, in the loss of his commission and belt, and, though there were none on board on whom he could charge the theft, yet the commodore sufficiently expressed his displeasure against the whole crew, by the prohibition he laid upon us, as soon as the prize came to an anchor in the river, by which all communication was cut off between us and the country people, and no boat suffered to come near us but our own, by which severe order we were entirely debarred from purchasing our own provisions and necessaries from the Chinese, which the people in the Centurion were at full liberty to do, neither could we employ the Chinese tradesmen to supply us with apparel, of which we stood greatly in need, though in that too the Centurion's people were indulged; and all this for no other reason, ever assigned than that the commodore was determined the secreter should have no opportunity of disposing of them without being discovered. Had this precaution been taken as it ought, for the satisfaction of those suffering under the severity of the censure; and had the effects of the Spanish general been properly inspected, the secreter would have been publicly exposed; for when we afterwards fell down to Mocao with the ships, where we sold the prize, I was myself told by an Irish priest that the general had both his commission and his belt, that he made no secret of the matter at Mocao, and that he had offered the jewels (made up only by way of blind) among the merchants for sale.

During our stay in the river Canton, our people were employed in repairing the Centurion, overhauling her sails and rigging; also in ventilating her decks and quarters below, and in paying and decorating her hull; insomuch that when she came to sail, she had more the appearance of a ship newly fitted out, than of one that had been a three years voyage round the globe. While these things were doing in the Centurion, we on board the prize were busied in rummaging for treasure, till about the latter end of August, when we made a full end of our search, and found, upon account of the captors, 1,278,546 dollars in specie, and 1,324 of wrought plate and virgin silver. The jewels found were not then valued. While the inferior officers and seamen were thus employed, the commodore had a still more important business in hand. He knew it was impossible for us to proceed to Europe, without an ample supply of provisions and other sea stores; and though we were furnished with a daily allowance, yet no order had been obtained for victualling us for our intended voyage. Application had indeed been made, and terms agreed upon with the contractors to furnish whatever was necessary; and they had the viceroy's permission for the delivery; but when, about the middle of September the proper officer was sent to inquire in what forwardness these things were, he found that the baker had not begun to bake the bread, nor the butcher to kill the oxen; nor was the least step taken to comply with any one article of the agreement. We could no otherwise account for this faithless procedure of the Chinese, than by supposing they meant to starve us into a compliance with their accustomed demands for port charges, with which the commodore was determined never to acquiesce. Indeed it was suspected that the contractors themselves had some interest in promoting the delay, though it was not easy to penetrate the views by which they were influenced, as it may with truth be asserted, that in artifice, falsehood, and attachment to all kinds of lucre, the Chinese, as a nation, are not to be parallelled by any other people under the sun. It were endless to recount all the artifices, extortions, and frauds, which were practised on the commodore and his people by this interested race. The method of buying provisions in China being by weight, the tricks made use of to make them heavy, were almost incredible. At one time a number of fowls and ducks being brought for the ship's store, the greatest part of them presently died, which spread a general alarm on board, for fear they should have died of poison; but, on examination, it was discovered that they had crammed them with small stones and gravel, to increase their weight. The hogs too bought of the Chinese ready killed were found to have water injected into the carcases for the same purpose, and when, to avoid this cheat, the hogs were bought alive, it was found that salt had been given them to increase their thirst, and methods used to suppress their urine, and that the tortured animals had been sold in that inflated state.—Mr. Walter adds, That as the Chinese never

never ſcruple to eat theſe animals that die of themſelves, they contrived by their ſecret practices when the commodore put to ſea, that part of his live ſtock ſhould die in a ſhort time after it was put on board. In order, therefore to make a ſecond profit of the dead carcaſes, which they expected would be thrown overboard, they followed in boats, to pick up the carrion; and accordingly two thirds of the hogs dying, before the ſhip was out of ſight, their labour could not be in vain.

The treachery of the contractors being now diſcovered, the commodore determined to renew his former requiſition for an audience with the viceroy. With this view, he notified his intentions to the proper mandarine, and deſired he would fix the time with the viceroy when he would be pleaſed to receive him; at the ſame time giving him to underſtand that, on the firſt of October he intended to proceed in his boat to Canton. The mandarine returned for anſwer, That he would make the viceroy acquainted with his intentions.

As it was apprehended that the payment of the cuſtomary duties would be demanded at this interview, the commodore took the neceſſary precautions to prevent the Chineſe from facilitating the ſucceſs of their pretenſions by having him in their power at Canton, and therefore gave the command of the Centurion to his firſt lieuteuant, Mr. Brett, (now Sir Piercy) with orders if he ſhould be detained, to lie at the mouth of the river, and to ſuffer no boat or ſhip to paſs or repaſs till he was releaſed. This being known to the Chineſe, they were now more embarraſſed than ever in their deliberations. On the morning of the firſt of October the boat's crew, to the number of 18, whom the commodore intended to take with him, appeared in their uniform, conſiſting of ſcarlet jackets and blue ſilk waiſtcoats, the whole trimmed with ſilver, having alſo ſilver badges on their jackets and caps. Juſt at this time Mr. Anſon's linguiſt came to him from the mandarine, to tell him that a letter had been received from the viceroy, deſiring the commodore to defer his intended purpoſe for two or three days, the men were ordered to be undreſſed, and the preparations were all laid aſide. But, in the afternoon of the ſame day, another linguiſt came on board, ſeemingly in a great panic, to inform him that the viceroy had expected him up that day; that the council had been aſſembled, and the troops put under arms to receive him; and alſo that the viceroy, highly incenſed at the diſappointment, had ſent the commodore's linguiſt to priſon, ſuppoſing him to be the ſole cauſe of this contempt. This plauſible tale gave the commodore great uneaſineſs, at that time, not ſuſpecting any oppoſition: and though it afterwards appeared to be all a farce, yet the falſehood was ſo well ſupported by the artifices of the Chineſe merchants, that the commodore read a letter three days afterwards ſigned by all the ſupercargoes of the Engliſh ſhips then at the place, expreſſing their anxiety about what had happened, and intimating their fears that ſome inſult would be offered to his boat, if he attempted to come to Canton before the viceroy was fully ſatisfied of the miſtake. To this letter the commodore replied, That he did not believe there had been a miſtake, but was perſuaded it was a forgery of the Chineſe, to prevent his viſiting the viceroy, and that therefore he would certainly come up to Canton on the 13th of October, confident that the Chineſe would not dare to offer him any inſult, as well knowing he ſhould neither want the power nor inclination to make them a proper return. Accordingly, on the day appointed, the commodore continuing firm to his reſolutions, all the ſupercargoes of the Engliſh, Daniſh, and Swediſh ſhips came on board the Centurion, to accompany him to Canton, for which place he ſet out in his barge the ſame day, attended by his own boats, and by thoſe of the trading veſſels, which, on this occaſion, were ſent to augment his retinue. As he paſſed by Wampo, where the European veſſels lay, he was ſaluted by all of them except the French; and in the evening he arrived ſafe at Canton. The Chineſe merchants, who affected to appear very much pleaſed that he met with no oppoſition in his way, pretended that the viceroy was then fully employed in preparing his diſpatches for Pekin, that there was no getting admittance to him, but that they had engaged one of the officers of his court, as ſoon as he was at leiſure, to notify the commodore's arrival, and endeavour to fix the time of audience. Though Mr. Anſon knew this to be a falſehood, yet he ſuffered himſelf to be perſuaded by the European ſupercargoes not to appear to doubt it, provided the Chineſe merchants would undertake that his bread ſhould be baked, and all his ſtores in readineſs within forty days; after which time if the leaſt article was forgotten, he would force his way to the viceroy, and prefer his complaint. 1742

During the interval; while the contractors were endeavouring in earneſt to fulfil the terms of the agreement on their part, (which however they inſiſted ſhould be paid for in advance on his) a fire broke out in the ſuburbs of Canton, which, on the firſt alarm being ſpread, might eaſily have been extinguiſhed by pulling down ſome of the adjoining ſheds; which the commodore with his officers and crew obſerving, were about inſtantly to carry into execution; but they were told that whatever they pulled down they muſt build up again at their own expence, and that none but a mandarine muſt preſume to direct upon ſuch occaſions. On receiving this admonition, the commodore diſpatched his people to the Engliſh factory, to aſſiſt his countrymen there in ſecuring their effects, as it was eaſy to conclude no diſtance was ſafe from fire where the common people contented themſelves with gazing at it, and now and then holding up an idol by way of extinguiſhing it. At length a mandarine came out of the city with four or five hundred firemen, who made ſome feeble efforts to pull down the neighbouring houſes, but by this time the fire extended itſelf, and had ſpread among the merchants warehouſes, where the Chineſe firemen had neither ſpirit nor ſkill to encounter it; ſo that it was feared the whole city would have been laid in aſhes. In this emergency the viceroy vouchſafed to make his appearance; and a meſſage was ſent to the commodore requeſting his aſſiſtance. Accordingly he haſtened a ſecond time with about forty of his men to the place where the fire raged with the greateſt violence; and they, in the ſight of the whole city, performed ſuch daring, and to the people who beheld them ſuch aſtoniſhing feats, that they looked upon their gueſts as ſalamanders, and cried out that they could live in the fire. In reality, it was no uncommon thing to ſee ſome of the boldeſt and moſt active among the Engliſh, tumble on the roofs, amidſt the ruins of the houſes which their own efforts had brought down under them. And thus, by their agility, the fire was very ſoon ſubdued, to the aſtoniſhment of the Chineſe, who were ſpectators of the wonders which they performed. The Swediſh was the only factory that ſuffered on this occaſion, though an account widely different was afterwards given in the Paris Gazette. A fire at Canton extinguiſhed by the Engliſh.

This ſignal aſſiſtance gained the Engliſh commander much reſpect. He was the next day waited on by the principal inhabitants with preſents, and thanks; and, ſoon after, a meſſage came from the viceroy, appointing the 30th of November for the day of audience. Being highly pleaſed with this laſt intimation, Mr. Anſon, inſtantly gave orders for the neceſſary preparations, and engaged Mr. Flint, a gentleman belonging to the Engliſh factory, for his interpreter, who having been trained up from his infancy among the Chineſe, ſpoke their language fluently, and who was not afraid to deliver with boldneſs what the commodore gave him in charge, a part which the Chineſe interpreters would not have dared to perform with equal fidelity.

On the day appointed, the commodore and his retinue ſet out; and, as he entered the outer gates of the city he was met by a guard of 200 ſoldiers, that conducted him to the great parade before the emperor's palace,

1743

palace, in which the viceroy then reſided, where a body of troops to the number of 10,000 were drawn up under arms, who made a fine appearance, being all new cloathed for this ceremony. Through the middle of theſe the commodore marched with his retinue to the hall of audience, where he found the viceroy ſeated under a canopy, in the emperor's chair of ſtate, with all his council of mandarines attending. He was ſeated the third in order from the viceroy, the chiefs of the law and treaſury being the only perſons placed above. Mr. Anſon then addreſſing the viceroy, by his interpreter, complained of the delays which he had met with, enumerating the inſincerity of thoſe whom he had employed, the various impoſitions of the officers of the cuſtoms; the grievances of the Britiſh ſubjects; and, finally, mentioned the loſs ſuſtained by the Hallingfield Indiaman, which had arrived there diſmaſted but a few days before the fire happened, by which the crew had been great ſufferers, and the captain in particular, who had loſt a cheſt of treaſure, of the value of 4500 tahel. To the latter article, the commodore received for anſwer, That in ſettling the emperor's cuſtoms with that ſhip, the Captain ſhould be conſidered. To the other complaints the commodore received no anſwer. Having now gone through the ſeveral articles which he had in charge from the company, he next entered upon his own affairs, and particularly concerning the licence to ſhip off his proviſions and ſtores, which he ſaid were all ready, and the ſeaſon for ſailing now ſet in. The viceroy replied to this, That the licence ſhould be immediately iſſued, and that every thing ſhould be ordered on board the following day. The buſineſs being now at an end the viceroy continued the converſation for ſome time on difference and curioſity; and, after obſerving that the Centurion had been long on the coaſt, he concluded with acknowledgments for the ſervices which the commodore had rendered the Chineſe, by the activity of his people at the late fire, and with wiſhing him a good voyage to Great Britain.

The commodore has an audience of the viceroy.

Thus happily concluded this long expected audience; and, in purſuance of the viceroy's promiſes, the proviſions were begun to be ſhipped the very next day. And now all the preparations for putting to ſea were purſued with ſo much expedition, that by the 5th, the Centurion and the prize were ready to unmoor; on the 10th, they paſſed through the Bocca Tygris into the open road, and, on the 12th anchored before the town of Mocao. While they lay there, the Portugueſe merchants entered into treaty with the commodore for the purchaſe of the prize, for which they would give no more than 6000 dollars, though worth double that ſum: but the impatience of Mr. Anſon to be gone, that he might himſelf be the meſſenger of his own good fortune, and thereby prevent the enterpriſes of the enemy to intercept him, prevailed upon him to conclude the bargain; and ſhe being delivered on the 15th of December, and the money received in the afternoon of the ſame day, he hoiſted ſail, and took his departure for his native country.

On the 3d of January he came to an anchor at Prince's Iſland, in the ſtreights of Sunda, and, on the 8th weighed, and continued his courſe. From this time till the 23d, we had foul and ſtormy weather; and the wind blowing againſt us, we were driven pretty near the coaſt of New Holland; and had it continued blowing in the ſame direction for 48 hours longer, we ſhould have found it difficult to have cleared the coaſt; but on the 21ſt the wind abated, and the weather became moderate. On the 24th the trade-wind ſet in, and then we proceeded on our paſſage with the greateſt alacrity. On the 24th of February, at half after four in the morning, I diſcovered a comet to the eaſtward, near the horizon, being, as I judged, lately emerged from the ſun's rays. Its tail was at this time about ten degrees in length; but in leſs than a fortnight, it increaſed, and extended itſelf to near 40 degrees. Its head appeared very large and bright; and, on a nice inſpection, I have perceived it when the ſun has been about half its diameter above the horizon. The next time I obſerved its diſtance from the planet Venus, to be 26° 50′ following the order of the planets; but not having inſtruments fit for taking altitudes without a very obvious ſenſible horizon, I was prevented from making more ſatisfactory obſervations. From this time till the 6th of March, we had pleaſant weather, with few exceptions, but on that and the three following days, being near the Cape of Good Hope, we had ſome boiſterous ſtorms; yet, when we arrived at Table-Bay, on the 11th, the Dutch knew not that any ſuch had happened. We found riding here two Engliſh Eaſt-Indiamen, the Saliſbury and Warwick, each of which ſaluted us with thirteen guns, and we returned eleven. We alſo found five Dutch ſhips, one of which as admiral, having a flag at his main top-maſt head, ſaluted us with nine guns, and we returned ſeven. At eleven at night we parted our beſt bower cable and hawſer, both of which were very rotten, and the next day moored again with others purchaſed from the Dutch. Here the commodore continued till the beginning of April, highly delighted with the place, and during his ſtay entered 40 new men. Having completed the taking in of our water and proviſions on the third of May, we weighed anchor. On the 19th we paſſed within ſight of St. Helena, which however, we did not viſit; and, on the 26th we caught on board a ſnake that meaſured ſix feet two inches in length, which our ſurgeon on examination, pronounced to be perfectly harmleſs; this ſerpent was ſuppoſed to have been brought on board with our wood, at Prince's Iſland, in the ſtreights of Sunda. Being before the wind on the 30th, with a fine breeze and a gentle rain, a violent and ſudden ſquall took us a-head, which threw all the ſails a-back, carried away our fore top-ſail yard, ſplit the fore-ſail, fore top-ſail, and fore top-gallant ſail, as alſo the mizzen and mizzen top-ſail. During this ſquall, the ſhip lay down very much, and we were in the utmoſt danger of our maſts coming by the board; but, providentially, we eſcaped without farther damage.

On the 9th of June, it being a thick fog, on a ſudden, we ſaw a ſhip cloſe by us, fired a ſhot and brought her to. She proved to be an Engliſh ſhip from Amſterdam, bound for North America, with Palatine emigrants; after having given us the firſt notice of a war, ſhe proceeded on her voyage.

We came into ſoundings on the 10th, and on the 11th, at half paſt eleven in the morning, diſcovered three ſail, one of which we ſpoke with, at one in the afternoon, which proved to be a Dutch veſſel from Dublin: at the ſame time, the ſecond being pretty near us, ſhewed Dutch colours. The third, which had been in chace of theſe two the whole day, perceiving that we deſigned to ſpeak with her, ſtood from us with all the ſail ſhe could crowd. We gave her chace for about three hours, when, finding we did not gain upon her, we reſumed our former courſe. On the 12th, in the morning, the fog clearing up, we perceived the Lizard Point; but that the ſignal perils which had ſo often threatened us, and from whence we had more than once been providentially delivered, might be diſcoverable to the laſt, as we were afterwards told, there was a French fleet of conſiderable force cruiſing in the chops of the channel, through the middle of which we had ſailed this night unperceived. On the 13th, between Portland and the Iſle of Wight we ſaw a ſhip towing another which was diſabled in her maſts. The former proved to be the Salamander privateer, the latter, a French prize, which ſhe had taken. We anchored on the 14th, at eleven in the morning, at the back of the Iſle of Wight, and in the evening weighed, and again anchored at Spithead, after having been three years and nine months abſent from England.

Thus ended Mr. Anſon's voyage, the chief ſucceſs of which was the taking of the Manilla ſhip, and which, however well conducted by the commodore, by no means anſwered the ends for which it was at firſt propoſed.

With

With regard to the Wager ſloop, which we have already mentioned as having been ſeparated from the ſquadron, we have the following account: Captain Cheap, who commanded the veſſel, knowing the importance of the charge which he had in truſt, without which no enterprize of importance on ſhore could be undertaken, was extremely ſolicitous to reach Baldivia, the laſt place of rendezvous and the firſt to be attacked, before the ſquadron ſhould have finiſhed the cruiſe, that no blame might reſt upon him if the attack of the city ſhould be rendered improper to be carried into execution. But while he was exerting himſelf to keep clear of the land, in making the Iſland del Soccoro, he had the misfortune to diſlocate his ſhoulder, and thereby to diſable himſelf from proſecuting with vigour the deſign that he had in view. The ſhip being little better than a wreck; the officers quite exhauſted, the weather cold, and ſtormy, the crew in a miſerable deſponding condition, and the currents bearing ſtrongly in ſhore; all theſe circumſtances concurring, ſo intangled the ſhip with the land, that all the efforts of her feeble crew could not prevent her from running upon a ſunken rock, where ſhe grounded, between two ſmall iſlands not a muſquet ſhot from the ſhore. She continued entire in this ſituation ſo long that all who were on board might have reached the land in ſafety, and ſtored themſelves with proviſions, and every neceſſary for their preſent ſubſiſtence, and future eſcape; but the moment the ſhip ſtruck, all ſubordination ceaſed; one part of the crew got poſſeſſion of the liquors, intoxicated themſelves, and grew frantic in their cups; another part began to furniſh themſelves with arms, and to make themſelves maſters of the money and things of moſt value, on board; while the captain and ſome of the principal officers endeavoured, in vain, to maintain their authority, and to preſerve a proper diſcipline, in order to effect the deliverance of as many as poſſible from the common danger, in which all were involved. But the mutinous diſpoſition that prevailed rendered ineffectual every effort for their preſervation. Thoſe who remained in poſſeſſion of the ſhip and her ſtores pointed the cannon, and fired at thoſe who had gained the land. The latter party, on the other hand, grew riotous for want of proviſions; but what completed the ſcene of confuſion was, that a midſhipman, named Cozens, who had buſied himſelf in oppoſition to all good government, was, by the captain ſhot dead upon the ſpot. [The occaſion of this action is variouſly related; but according to the beſt accounts, the captain conſidering the ſituation of affairs could not be juſtly blamed for his ſeverity.] However that might be, the conſequence of Cozens's death was the abolition of every ſhadow of remaining order. The idea of ſubſerviency ceaſed, and all thought of nothing but ſhifting for themſelves, as opportunity offered, or circumſtances would admit.*] Of about 130 perſons that reached the ſhore, 30 died upon the place. About 80 others, having converted the long boat into a ſchooner, ſailed to the ſouthward attended by the cutter. Theſe being diſtreſſed for proviſions, in doubling Cape Horne, on their return, and having loſt the cutter in a ſtorm, ſuffered innumerable hardſhips in their courſe to the coaſt of Braſil, where only 30 of the crew arrived to give an account of the miſerable fate of their companions, ſeveral of whom had died of hunger, others deſired to be ſet on ſhore, and ſome beginning to be mutinous, they landed and deſerted. Of 19 that were left behind on Wager Iſland, with the Captain, 16 embarked on board the barge and yawl, and attempted to eſcape to the northward; of theſe, one was drowned in the yawl, and four were left on a deſart part of the coaſt, where moſt probably they periſhed. The eleven remaining after a fruitleſs attempt to weather Cape Treſmontes were forced to return to Wager Iſland, from whence they had firſt ſet out; where meeting with a Chiloan Indian, who could ſpeak a little Spaniſh, they agreed with him to pilot them to Chiloe; but after coaſting along for four days, the captain and his officers being on ſhore, five in number, the other ſix perſuaded the Indian to put to ſea without them; by which perfidy the remaining ſix were reduced to the ſad neceſſity of travelling near 600 miles, ſometimes by land, and ſometimes by water; till at length, after a variety of misfortunes and hardſhips, four of them, viz. Captain Cheap, the Hon. Mr. Byron, [who lately went round the world, and whoſe voyage the reader will find related in the following ſheets.] Mr. Hamilton, and Mr. Campbell arrived at Chiloe, and were there treated very humanely by the Spaniards. From thence they were ſent firſt to Valparaiſo, and afterwards to St. Iago, the capital of Chiloe, where they remained above a twelvemonth. On advice of a cartel being eſtabliſhed, Captain Cheap, Mr. Byron, and Mr. Hamilton were allowed to return to Europe; and Mr. Campbell, who, in the mean time, had changed his religion, embarked for Spain. However, as he did not there meet with ſuch encouragement as he expected, he returned ſoon after to his native country, where he publiſhed an account of his adventures. 1766

In order to fulfil our other promiſe we ſhall now preſent the reader with an account of what befel the ſquadron of the Spaniſh admiral Piſarro, which ſtood a very good chance of defeating the intention with which Mr. Anſon's was fitted out, but from a number of concurring circumſtances, failed in the attempt, experiencing nothing but a variety of misfortunes and diſappointments. Fate of Admiral Piſarro's ſquadron.

This ſquadron conſiſted of the following ſhips: The Aſia, of 66 guns and 700 men, commanded by Don Joſeph Piſarro, as admiral; the Guipuſcoa, of 64 guns and 700 men; the Hermione, of 54 guns and 500 men; the Eſperanza, of 40 guns and 450 men; the Eſtevan, of 40 guns and 350 men; and a patache of 20 guns and 120 men. And, beſides this complement they had on board an old Spaniſh regiment of foot, intended to reinforce their garriſons in the South Seas, and to counterbalance the land forces which they well knew were intended to be ſent out with commodore Anſon.

The Spaniſh admiral having gained the latitude of Madeira, cruiſed for ſome time to the eaſtward of that iſland, till, ſeeing nothing of the Engliſh fleet, he determined to purſue his inſtructions, and hold on his courſe to the South Seas. Had he cruiſed to the weſtward, the two fleets muſt have met, and had they engaged, it is moſt probable, that which ever way fortune had inclined, the commodore would not have been in a proper condition to proſecute his intended voyage.

But matters fell out otherwiſe and Piſarro, diſappointed in his expectations, ſtood for the Braſilian coaſt, quitting his ſtation off the Madeiras in the beginning of November, and arrived at the river Plata on the 5th of January following, when, coming to an anchor in the bay of Maldando, he immediately ſent for a ſupply to Buenos Ayres. It was here that by means of the Portugueſe governor of St. Catherine's, he received intelligence of the arrival of the commodore at that port, and of the condition he was then in. Piſarro, however, made no other uſe of this information than endeavouring to be beforehand with Mr. Anſon, in doubling the Cape, intending, if he could firſt enter the South Seas, effectually to alarm the coaſt, and ſo far ſtrengthen the forts as to render vain all the projected attacks of the Engliſh in thoſe parts, and entirely to deprive them of the means of procuring what was neceſſary for their ſubſiſtence. His

 preca[u]tions

* It is not a little remarkable that the place where the Wager ſtruck, was ſo near that where the Anne pink found ſhelter, as has been already related, that the Wager's people were even within hearing of the Anne's morning and evening guns, and yet never thought of following the ſound, or examining from what veſſel it proceeded.

1744 precautions, however, proved ineffectual; the commodore, had put to ſea four days before him, and in ſome part of the paſſage round the cape, the fleets were ſo near each other, that the Pearl being ſeparated from the reſt of the Engliſh fleet, by a ſtorm, was near being decoyed by Admiral Piſarro, as has already been related. At that tempeſtuous ſeaſon it was with the utmoſt difficulty, and not without the promiſe of great rewards that the Spaniſh ſailors were prevailed on to attempt their paſſage round Cape Horne. By the latter end of February, however, they had run the length of the cape, and when turning to the weſtward, a ſtorm aroſe wherein the Guipuſcoa, Hermione, and Eſperanza loſt ſight of the admiral; and, on the 6th of March, the Guipuſcoa was ſeparated from the other two. The ſtorm increaſing on the 7th of March, drove the ſquadron, in ſpite of all their efforts, to the eaſtward, and at laſt forced them to Braſil. The Aſia ſheltered herſelf in the river Plata, and was joined by the Eſperanza, and Eſtevan, about the middle of May. As to the Hermione it was ſuppoſed that ſhe had foundered at ſea; and the Guipuſcoa was run on ſhore and ſunk on the Braſilian coaſt. The patache had been condemned before they quitted Braſil the firſt time, and her crew diſtributed among the other ſhips; ſo that only three veſſels now remained of the ſix which had ſet out on this expedition, and theſe three were in a moſt wretched ſituation. For though the Spaniards had not experienced ſuch dreadful effects from the ſcurvy, yet they were reduced to the greateſt diſtreſs by famine, inſomuch that they caught rats for food, which ſold at four dollars apiece.*

About this time a conſpiracy broke out among the ſoldiers on board the Aſia, to murder the admiral and the ſhip's crew for the ſake of getting all the proviſions into their own poſſeſſion. But a dying man confeſſing this matter to his prieſt, the father purſued proper methods to defeat the bloody purpoſes of the conſpirators. However, though they were delivered from this danger their diſtreſſes multiplied. They were perpetually attacked by enemies which it was moſt difficult to vanquiſh: hunger, thirſt, diſeaſe and fatigue, increaſed upon them daily; the ſhips grew more and more leaky, and the men could not ſtand at the pumps. The marks of diſpondency were viſible in every countenance, and nothing was to be heard but complaints from every quarter. In effect the Aſia was near ſinking, when at laſt ſhe arrived at Monte Vedio in a moſt wretched condition, having loſt near half her crew in the courſe of her voyage. When the Eſtevan anchored in the bay of Barragon, ſhe had alſo loſt the like number of her people; and the Eſperanza, which brought 450 ſeamen from Spain, as has been already noticed, had only 58 alive that reached the ſhore, and of the whole regiment of ſoldiers there were only 60 ſurviving.

All kinds of neceſſaries, naval ſtores, maſts, rigging, and money, the grand means of purchaſing every thing, being equally wanted by the Spaniſh admiral, he diſpatched an expreſs over land by an Indian to St. Iago in Chili, from whence it was to be forwarded to the viceroy of Peru. The meſſenger charged with this diſpatch, though it was then the depth of winter when the Cordilleras are generally ſuppoſed to be impaſſable, on account of the ſnow, was only 13 days in travelling from Buenos Ayres to S. Jago, which are 300 Spaniſh leagues diſtant from each other. Admiral Piſarro's requiſition of the viceroy was to ſend him 200,000 dollars; at the ſame time an advice boat was ſent to Rio Janeiro, with a letter of credit to purchaſe what was neceſſary of the Portugueſe. Neither of theſe diſpatches ſucceeded as the admiral wiſhed. Inſtead of 200,000 dollars, he received but half that ſum from the viceroy, and the Portugueſe, inſtead of furniſhing him with maſts and yards, ſent him only ſome pitch, tar, and cordage. And to complete the ſeries of his diſappointments in thoſe parts, a carpenter whom he had intruſted with a conſiderable ſum of money, ſending him to Paraguay to cut maſts, inſtead of obeying his orders, intirely deſerted the ſervice, and married and ſettled in the country. This circumſtance obliged him to ſhift the maſts of the Eſperanza into the Aſia, and to fit up the Eſtevan with what ſpare maſts and yards they could collect, and with theſe two ſhips, as it was now ſummer, once more attempt doubling Cape Horne. But nothing but ill ſucceſs attended all their deſigns. This being accompliſhed, the Eſtevan ran on a ſhoal and beat off her rudder in coming down the river Plata, and the Aſia proceeded alone with moderate weather; but when ſhe came to the height of Cape Horne, and was tacking to change her courſe to the weſtward, by ſome miſmanagement in wearing ſhip, ſhe rolled away her maſts and was forced back a ſecond time to the river Plata, when Piſarro undertook to croſs the continent, which deſign he accompliſhed. In the mean time Don Mindinuetta, commander of the Guipuſcoa, which had been wrecked on the Braſilian coaſt, with thoſe of his crew that had eſcaped, arrived at the place of general rendezvous; and finding the Eſtevan without maſts, made a ſecond application to the Portugueſe, and ſucceeded ſo well as to repair her, and carry her round the Cape. Arriving in the South Seas, he met Piſarro, who claimed the command of the Eſperanza, which Mindinuetta diſputed, and an enmity aroſe between thoſe commanders which the viceroy in vain attempted to reconcile, each being equally obſtinate in aſſerting his claim. They both returned over land in the year 1755 to the coaſt of Braſil, where they found the Aſia in a ſhattered condition. They reſolved, however, to bring this ſhip to Europe, and having fitted her up as well as circumſtances would permit, they manned her partly with Spaniards, partly with Portugueſe; together with ſome Engliſh priſoners and ſome Indians whom they had forced into the ſervice.

Thus equipped, in the beginning of November they put to ſea. But they had not long purſued their courſe, before the Indians, who were eleven in number, formed a conſpiracy againſt the Spaniards, in which they doubted not but the Portugueſe and Indians, who were treated with a degree of inſolence would join them. They had not, however, concerted meaſures properly for their purpoſes, and therefore the weight of the undertaking reſted upon them alone.

About nine o'clock one evening, their chief, whoſe name was Orellana, with all his companions, came upon the quarter-deck, and drew near the great cabin; which the boatſwain obſerving reprimanded them, and ordered them to be gone. On this the Indian who had laid his plan with wiſdom, as far as the inſufficiency of his numbers would allow, ſpoke to his countrymen in his own language, on which four of them drawing off, as if in obedience to the boatſwain, two took poſſeſſion of each gang-way; while their chief and the reſt ſeemed to be quitting the quarter-deck with a ſlow pace; but as ſoon as Orellana ſaw his orders were executed, he placed his hands hollow to his mouth, and ſet up the war cry of his country. Immediately the Indians fell upon the Spaniards, and laid near forty of them at their feet, twenty of whom were killed on the ſpot, and the reſt diſabled.

When this tumult began, many of the officers eſcaped into the great cabin, where they put out the lights, and barricadoed the door; whilſt ſome of the reſt, endeavoured to eſcape along the gang-ways to the fore-caſtle, where the Indians placed for that purpoſe ſtabbed the greater part as they attempted to paſs by: others threw themſelves into the waſte in order to lie concealed among the cattle; but the greater number of the fugitives eſcaped up the main ſhrouds, to ſave themſelves in the tops or the rigging; and though the fore-caſtle watch had not been attacked, yet finding their communication with the quarter-deck cut off they

* It is ſaid that a Spaniſh ſailor concealed his brother's death for ſeveral days and nights lying in the ſame hammock with the corpſe for the ſake of receiving the dead man's allowance.

they had recourſe to the ſame expedient of ſheltering themſelves in the rigging.

Had the Indians been joined by the Engliſh and Portugueſe, as they expected, the command of the Spaniards here would have ended; but as no ſuch event took place, they could not improve the advantage which they had gained by purſuing the enemy any farther. The latter, in conſequence gained time to recover from their confuſion; and Piſarro and his officers half-opened the cabin door. Orellana inſtantly attempted to force it, but being ſhot dead by Mindinuetta, the Indians ſeeing him fall, leaped into the ſea, teſtifying their reſolution by their death, and leaving their enemies to proceed on their voyage, who held on their courſe for Spain, where they arrived in the beginning of the year 1746. 1746

Thus ended an expedition in which Spain loſt about 3000 of her beſt ſailors, and a whole regiment of veteran ſoldiers, four ſhips of war and a patache, the Aſia alone returning to Europe, as the Eſtevan was found unable to redouble Cape Horne.——The Spaniards were entirely unfortunate, and if we except the treaſure taken in the Acapulco ſhip, it will appear that the Engliſh rather diſtreſſed the enemy than really benefited themſelves by Commodore Anſon's enterprize.

THE VOYAGE OF COMMODORE BYRON ROUND THE WORLD.

IN the year 1764, government having formed a deſign of proſecuting the diſcoveries in the South Seas, the Honourable Mr. Byron was pitched upon to conduct an expedition planned for that purpoſe. Two veſſels being fitted out for that purpoſe, this gentleman was nominated to command the Dolphin ſhip of war in quality of commodore, attended by the Tamar frigate, Captain Mouat commander.

Commodore Byron ſails from the Downs.

Theſe veſſels ſailed from the Downs on the firſt of June, 1764. Before they had cleared the channel, the Dolphin ran a-ground, on which account ſhe was brought into Plymouth dock; but on examination, it appearing that ſhe had received no injury, ſhe was in readineſs to purſue her voyage by the 3d of July, when the commodore gave the ſignal for ſailing.

Shaping their courſe for Madeira, they arrived at the iſland, and anchored in the bay of Fonchiale on the 30th, the governor of which ſaluted the Engliſh with 11 guns, and the ſalute was returned by the commodore. From hence they ſet ſail on the 19th; on the 21ſt they came in ſight of Palma, one of the Canary Iſlands* and on the 30th they anchored in the bay of Port Praya. As ſoon as they had taken in water, and ſuch other things as they ſtood in need of, they quitted the port with all poſſible expedition, being apprehenſive that otherwiſe they might encounter the tornadoes and hurricanes which generally rage here from the month of Auguſt till about the middle of the winter ſeaſon. They came to an anchor in the road of Rio de Janeiro on the coaſt of Braſil, when the commodore viſited the governor, who received him in ſtate; putting the guard under arms before the palace; 15 guns were fired in honour of the Britiſh flag, and his excellency afterwards returned the viſit, and was received by the commodore in a ſuitable manner on board the Dolphin. Lodgings were here provided on ſhore for a great many of the Tamar's people who were ſick; as to thoſe on board the Dolphin, the freſh meat and greens which they uſed plentifully, kept them in a more healthy ſituation. However, while the ſhips lay in this harbour, the Portugueſe found means to decoy away nine of the Dolphin's, and five of the Tamar's people, the latter were recovered, but the commodore loſt his men, whom probably they intoxicated with liquor, and afterwards ſent up the country, there to remain till the Engliſh veſſels departed.

On the 16th of October, the commodore weighed anchor, and on the 22d he informed the ſhip's company that they were not bound to the Eaſt-Indies, as at firſt they had ſuppoſed, but on a voyage of diſcovery, their good behaviour in the courſe of which, would be rewarded by order of the lords of the Admiralty, with double pay, and other emoluments. This ſpeech was received with marks of the higheſt ſatisfaction, and the crew promiſed obedience to the commodore, and expreſſed their willingneſs to do all in their power for the ſervice and honour of their country. 1764

A violent ſtorm aroſe on the 29th, in the courſe of which they were obliged to throw four of their guns overboard; it continued all night, but ſubſided on the morning of the 30th, they made ſail, and being arrived at 35° 30′ ſouth lat. found the weather extremely cold, though it was then the latter end of October, which anſwers to our April, in the northern climates, inſomuch that the ſailors were now ſorry that they had parted with their old cloaths †; but as ſufficient precautions had been taken, they were ſoon relieved by being furniſhed with cloathing which had been taken on board by the commodore, in order to accommodate his men in caſe of neceſſity on ſo long a voyage.

On the the 2d of November Mr. Byron delivered the officers their commiſſions after the cuſtomary oath had been taken. The ſhip was now ſurrounded with vaſt flocks of birds, and perceiving the water diſcoloured, they ſtood in for the land on the 11th of this month, and at the depth of 45 fathoms they found ground. The next day they imagined they ſaw land a-head of them, but it proved to be what they call a fog bank and ſuddenly vaniſhed ‡. Theſe deceptions are frequently occaſioned by ridges of clouds, and ſometimes in the higher latitudes by an extraordinary quality of the air, to be accounted for only by the doctrine of refraction, of which we ſhall have occaſion to ſay more in the courſe of this work.

It is remarkable that this falſe appearance was ſucceeded on the 13th by a violent hurricane. In the afternoon the ſky grew black to windward, and a noiſe was heard, which reſembled the beating of the ſea upon a ſhallow beach. The birds were obſerved flying from the point whence the ſtorm proceeded, and ſhrieking through the apprehenſion of its approach. It was not poſſible to make the neceſſary preparations before it reached the Dolphin and laid her on her ſide. The firſt lieutenant was ſtruck down by the main ſheet, had ſome of his teeth knocked out, and was otherwiſe bruiſed. The Tamar, though not ſo ſuddenly taken by the ſtorm, as being to leeward had yet her main-ſail ſplit, and conſidering the violence of

* At this time their water having become foul, they purified it by forcing a ſtream of air through it, by means of a ventilating tube, which had the proper effect.

† Several of the ſhip's crew had purchaſed fowls, &c. in exchange for their old ſhirts and jackets. As to fiſh, they found they had little chance of catching any whilſt at ſea, for none of the finny tribe would come near the ſhip becauſe ſhe was ſheathed with copper.

‡ Among other remarkable deceptions, a maſter of a veſſel not many years ago made oath that he had ſeen an iſland with trees growing on it, between Newfoundland and the weſtern coaſt of Ireland: ſome ſhips were ſent in ſearch of it, but it proved to be a deluſion.

1766 of the hurricane, it was wonderful that no more damage was done. The wind continued all night, but abated in the morning when the ſea was found to be covered with a ſmall red fiſh, numbers of which were caught by the ſhip's company.

Steering for Cape Blanco, they got ſight of it on the 17th and were two days endeavouring to gain Port Deſire. They ſtood into a bay to the ſouthward of the cape, but could find no port. On the 20th they ſaw Penguin Iſland, and as they underſtood Port Deſire, to be a few leagues to the north-weſt of it, they ſent their boat in ſearch of it, which ſucceeded to their wiſh, and they entered the harbour on the 21ſt, the commodore in his boat, attended by two other boats proceeded to ſound the bay. In theſe ſeas there were thouſands of ſeals and penguins obſerved near the ſhip.

The country appeared to Mr. Byron on his landing, like one continued down, without either ſhrub or tree to adorn it. They ſaw here four beaſts near 13 hands high, in ſhape like a deer, anſwering the deſcription of the animals called Guanicoes. Proceeding higher up the harbour, they went to an iſland abounding with ſeals, above 50 of which they killed, and found ſome of them nearly as large as our Engliſh oxen. Among a variety of birds that they killed, there was one that had a head reſembling that of an eagle with a large comb on it, and a white ruff like a tippet round its neck. The feathers on its back were of a ſhining black, its legs were large and ſtrong, with talons like thoſe of an eagle; the wings being extended meaſured twelve feet from one extremity to the other. The Tamar ſailed into the harbour on the 21ſt with the riſing of the tide; but the Dolphin, waiting for a wind ran a-ground. She remained in that ſituation all night and the next day in ſtormy weather. They ſaw the track of a tyger, and ſeveral other beaſts on the 23d. On the 24th both ſhips were at length moored in the harbour where at ſpring tides the water riſes no leſs than 27 feet. The ſame day the commodore went on ſhore, and ſhot a hare, weighing 26 pounds, and ſaw ſeveral others which appeared to be as large as fawns. Landing again on the 25th, he found the barrel of an old muſquet with the king's broad arrow on it, and an oar of a ſingular form. The former of theſe crumbled to duſt on being touched. They had probably been left there by Sir John Narborough, when he was in thoſe parts. Here they ſaw ſome remains of fires, but diſcovered no inhabitants. They ſhot ſeveral wild ducks, and a hare which ran two miles before it dropped, with the ball in its body, the fleſh of which creature was of an excellent flavour, and as white as ſnow. Another party killed a fawn and two guanicoes, and found ſome of the latter animals in theſe parts to weigh full 300 weight. Here were found the ſkull and bones of a man which were brought on board the veſſel. They alſo caught a young guanicoe, which was very beautiful, and grew tame on board, but died in a ſhort time afterwards.

They diſcovered two ſprings of tolerable water on 27th, and a ton of it was brought on board the next day. When the commodore next went on ſhore he ſaw ſuch a number of birds take flight, as darkened the ſky, nor could the men walk without treading on eggs, a great many of which they choſe to eat, though there were frequently young birds in them. Some of the crew being ſent on ſhore for water, on the 30th, two of them diſcovered a tyger lying on the ground; the animal taking no notice of them, they threw ſtones at him, but could by no means provoke him. He remained on the ſpot till their companions, who were a little behind them came up, and then he walked away at his leiſure. They found the country near this bay to abound with geeſe, ducks, widgeon, and ſea pies, beſides ſeveral other birds, the names of which were unknown to them.

The ſhips got under ſail on the 5th of November, with fair and pleaſant weather, and a favourable gale. Thus they held on their courſe for Pepy's Iſland, which is laid down in 47° of ſouth lat. The weather being clear, the ſhips ſpread themſelves in ſuch a manner that they could command a proſpect of 20 leagues between them; but after ſearching for this iſland in vain, till the 11th, the commodore concluded that there was no ſuch place, and ſtood in for the main, in order to take in wood and water. Having thus changed his courſe, large whales were obſerved to ſwim frequently about the ſhip, and birds in great numbers flew round them. A great hurricane ſucceeded on the 15th before which the veſſels might have ran more ſafely than beat up againſt it, but their want of water and wood made them chuſe the latter, and endeavour to weather it, which they did till eight o'clock the next morning, when it abated.

They ſaw land on the 18th, which, like that near Port Deſire, was of the downy kind without trees. Here they obſerved white porpoiſes, with black ſpots, purſuing the fiſh in the ſea, which appeared in great numbers in theſe latitudes.

On the 20th they ran cloſe in ſhore to Cape Virgin, and having obſerved a ſmoke on the ſhore, and a great many guanicoes feeding in the valley, they came to an anchor. The next day they ſailed again, and, at length, anchored about two miles from the ſhore, near the place where they had ſeen the ſmoke the preceding day. Here the commodore obſerved a number of men on horſeback, riding to and fro, oppoſite the ſhip, and waving ſomething white, which he conceived to be intended as an invitation for him to land; and as he was anxious to know what people theſe were, he went in one boat with a party of men well armed; the firſt lieutenant following with a ſeparate party in another. When they came near the ſhore, they ſaw a great number of people, horſe and foot, to the number as was ſuppoſed of 500, who were drawn up on a ſtony point of land which ran far into the ſea. Though the commodore did not obſerve that they had any weapons, yet he made ſigns that they ſhould retreat a little, which they very readily did, and kept ſhouting very loudly while the crew were landing; which was no ſooner effected than they were muſtered on the beach, with their officers at their head. Mr. Byron then advanced alone; but the Indians retreated; on which he made ſigns that one of them ſhould come forward. This was complied with, and the perſon who advanced, appeared to be a chief, and was very near ſeven feet in height. Round one of his eyes was a circle of black paint, and one of white round the other: the reſt of his face was painted with various colours, and he had the ſkin of a beaſt with the hair turned inwards, thrown over his ſhoulders. The commodore and the Indian having paid their compliments to each other in language mutually unintelligible to the perſon to whom it was addreſſed, they walked together towards the main body of the natives, few of whom were ſhorter than the abovementioned ſtandard, and the women large in proportion. Mr. Byron made ſigns for them to ſit on the ground, which they did, chaunting in a moſt ſerious and melancholy tone. The eyes of any one face were never painted with the ſame colours, ſome being white and red, ſome black and red, and ſome black and white; their teeth were white and even. They were all dreſſed much alike, except that ſome wore a kind of boots, with a ſpur of peaked wood faſtened to each heel. The commodore having prevailed on ſome of them that were ſtill gallopping about to alight, and ſit down with the reſt, diſtributed ſome white and yellow beads among them, which they very gladly accepted. He then took a piece of ribband, and putting the end of it into the hands of the firſt Indian, he continued it to the next, and ſo on, as they ſat, to the end of the ribband. He then cut with a pair of ſciſſars between every two of them, tying each man's ſhare round his head, which they did not attempt to remove. It was remarked, that though the preſents were inſufficient to ſupply them all, not one paſſed forward from the ſtation aſſigned him, nor ſeemed to envy the ſuperior good fortune of his neighbour.

Among these gigantic people, one woman who was of the largest size, and most disagreeably painted, had her hair adorned with beads of blue glass, hanging, in two divisions, down before her shoulders, and she had bracelets of pale gold, or brass on her arms; but there was no learning how she obtained this finery. One of the men shewed Mr. Byron the bowl of a tobacco pipe, made of red earth, and made signs that he wanted some tobacco, none of which they had among them.

On this the commodore beckoned to the seamen, who still remained drawn up on the beach, three or four of them instantly running forward, the Indians were alarmed, and rising up in an instant, were preparing to retire, as it was supposed, to fetch their arms. Mr. Byron, therefore, ran and stopped the sailors, directing one of them only to come forward, when he had got all the tobacco he could muster among them. This restored peace, and all the Indians resumed their places except an old man, who sang a long song to Mr. Byron, at nearly the conclusion of which Mr. Cumming, the first lieutenant, brought the tobacco. This gentleman, though six feet two inches high, was himself astonished at the diminutive figure he cut among the strangers, who were broad and muscular, in proportion to their height. The commodore having distributed the tobacco, they made signs to him to ride to their huts; but he intimated that he must return to the ship; on which they sat down again, apparently much concerned. Their horses, though not large, were active and much under command, their saddles were like an English pad, and the bridle was formed of a thong of leather, with the bit made of wood; they had no stirrups, and both men and women rode astride. When the commodore left them, they kept their seats, not one offering to follow him.

On the 21st of December, they began sailing up the streight of Maghellan, with a view to take in a proper stock of wood and water, as the finding Falkland's Island was yet a matter of uncertainty. They remarked a single Indian on this shore, who waved his hand to them till he lost sight of the ship; they likewise saw several guanicoes on the hills. On the evening of the 22d, six Indians came on the beach hallooing, and making signs that they wished an acquaintance with the crew; but, as the seamen were fatigued, the commodore would not send off a boat to them. On the 25th they saw a point of land near St. George's Island, to which they gave the name of *Porpoise Point*.

Having anchored at ten at night, the commodore went the next morning in quest of wood and water, plenty of which they found on the point above-mentioned. A fine level country lies over the point, the soil of which appeared to be very luxuriant, producing innumerable flowers of several kinds, the smell of which was extremely fragrant; there was also a plenty of good grass, among which grew pease that were then in blossom. They saw hundreds of painted geese, (so called from their beauty) which were feeding among this variety of sweets; they likewise found an abundance of plants, and wild celery in great quantities. Many Indian wigwams were seen situated in the woods near streams of water; these had been lately occupied, as the fires appeared but just burnt out. In a walk of twelve miles they saw no place proper for a boat to land, the sea breaking high on the shore. Mr. Byron returned in the evening, and found that some of the men had been shooting geese, teal, and snipes, while others had employed themselves, with equal success in fishing; these employments, indeed, became necessary, as the men could have eaten thrice their allowance, owing to the keen air of the country. On the 26th they steered for Port Famine, and came to an anchor, close to the shore, the next day at noon. In this place they found drift-wood enough to have supplied a thousand vessels. The commodore went four miles up the river, but could proceed no farther, the trees which had fallen across the stream impeding the boat's way; one of the stumps of them having made a hole in her bottom, she was immediately filled with water: but they made shift to get her on shore, and stopped the leak, so as to return in her to the mouth of the river. The banks of this stream were furnished with the noblest trees, sufficient in number to supply masts for the whole navy of Great Britain. Some of these were so large, that four men joined hand in hand could not enclose them; and among the rest, the pepper tree was found. These woods abounded in parrots, and other beautiful birds. The quantity of fish that was daily taken was equal to the supply of both the crews, and the commodore shot as many geese and ducks as furnished several tables besides his own. 1765

While the ships lay at anchor here, Mr. Byron and a party went on shore; but, being caught in a violent rain, they stopped where some Indians had left a fire, the wood of which was yet warm and kindling a fire to dry their cloaths another fire was instantly made on Terra del Fuego, the opposite shore, which they imagined to be a signal, on a supposition that they were Indians. The hills were craggy, of an amazing height, and wholly covered with snow; but the plains were adorned with flowers equal in fragrance and beauty to those in the gardens in England.

The commodore having ordered a tent to be erected on the borders of a wood and joining to a rivulet, three of the sailors were there stationed to wash linen, and they lay in the tent. One evening, soon after they had retired to rest, they were awakened by the deep and hollow roarings of some wild beasts, which came nearer them every moment. Terrified with apprehension, they made and kept up a blazing fire, round which the beasts walked at a small distance till the dawn of the morning, when they retired.

Near where the ships rode at anchor was a hill cleared of wood, which they imagined to have been a Spanish settlement. Both ships having taken in sufficient wood and water by the 4th of January, 1765, they sailed at four o'clock in the morning, in quest of Falkland's Islands; but the wind dying away, they were obliged to come to an anchor the day following.

On Sunday the 6th, they again made sail, and the commodore, who had been 24 hours on deck, retired to rest; but he was soon awakened by the vessel's beating on a bank. Happily at this instant, it was a perfect calm, so that the rising of the tide soon carried the ship safe off again. On the 8th the officer of the watch discovered that the head of the mast was sprung, which they supposed to have happened in a violent gale some time before; but effectual methods were immediately taken to repair the damage.

They saw land on the 12th, which was taken for De Wert's Islands, and at the same time other land to the south, which was judged to be what is called New Islands in the charts. This land consists chiefly of mountainous and barren rocks, on which was a great number of birds. Seals abound here, and large whales were seen sporting round the ship. On the 14th they saw a flat island, covered with tufts of grass as large as bushes; and on the following day the commodore sent a boat from each ship, to examine an opening that had the appearance of an harbour; which being discovered, they stood in for it in the afternoon, and found it excellent beyond their most sanguine hopes. Soon after this they entered another harbour to which Mr. Byron gave the name of Port Egmont, from the title of the nobleman at that time, the first lord of the Admiralty. This harbour is represented to be one of the finest in the world, and large enough to contain the whole navy of England, in full security: there is plenty of fresh water in every part of it, and geese, ducks, snipes, and other edible birds abound in such numbers, that the sailors were tired with eating them. The geese were generally knocked down with stones, so that it was no unusual thing to bring off 60 or 70 of these birds, without the necessity of shooting a single one; seals and penguins abound here; sea lions of a prodigious size were found Port Egmont.

1765 on the coaſt: and there are plenty of muſcles, clams, and limpets. The woods produce ſorrel and wild celery in great abundance.

The commodore was once unexpectedly attacked by a ſea-lion, and extricated himſelf from the impending danger with great difficulty. They had many battles with this animal, the killing of one of which was frequently an hour's work for ſix men; one of them almoſt tore to pieces Mr. Byron's maſtiff dog, by a ſingle bite. The maſter having been ſent to ſound the coaſt, four very fierce animals ran after the boat's crew, till they were up to their bellies in water, ſo that they were obliged to put off from the ſhore, as they had no fire-arms in the boat. The next day, on the oppoſite ſhore, Mr. Byron and his company ſaw a ſea-lion of an enormous ſize, and the crew, being well armed, inſtantly engaged him. While they were thus employed, one of the other animals poſted towards them, but a ball being lodged in his body, he was inſtantly diſpatched. Five of theſe beaſts were killed this day, in their attempts to ſeize the men, whom they always purſued the moment they got ſight of them. They were of a mixed ſhape, between a wolf and a fox, moſt like the latter, but of the ſize of the former: they burrowed in the ground like a fox, feeding on ſeals and penguins, and are very numerous on the coaſt. The ſailors, in order to be rid of ſuch diſagreeable companions, ſet fire to the graſs, which burnt ſo rapidly, that the country was all in a blaze for ſome days, and theſe animals were ſeen running to ſeek ſhelter from its fury.

While they lay in this harbour the crew breakfaſted on portable ſoup and wild celery, thickened with oatmeal, which made a very nutritive meſs. The ſoil of the land was a light clay, under a black mould. The commodore thought this was the ſame place which, in Cowley's voyage, is called Pepy's Iſland; but he took poſſeſſion of the harbour, and all the adjacent iſlands, by the name of *Falkland's Iſlands*, for George the IIId. King of Great Britain. To the honour of the ſurgeon of the Tamar frigate, during his ſtay there, he made a fence of turf near the watering place, round a tract of land, which he planted with vegetables, for the uſe of thoſe who might hereafter touch at this port.

On Sunday, July the 27th, they left Port Egmont, and the ſame day they ſaw a remarkable head-land, which was named *Cape Tamar*; ſoon after which they paſſed a rock, which Mr. Byron called the *Eddiſtone*, and then ſailed between that and a head-land, to which he gave the name of *Cape Dolphin*. The diſtance from Cape Tamar to Cape Dolphin, is about eight leagues, and, from its appearance, was called *Carliſle Sound*, though it is ſince known to be the northern entrance of the ſtreight between the two principal iſlands. The land ſeen during this day was all downs, having neither trees nor buſhes, but large tufts of graſs in various places.

Having anchored during the night, they ſailed again the next day, when the commodore gave the name of *Berkeley's Sound* to a deep ſound between the iſlands. About four miles to the ſouthward of the ſouth point of this ſound the ſea breaks very high, on ſome rocks that appear above water. The coaſt now wore a dangerous aſpect, rocks and breakers being at a conſiderable diſtance from the ſhore, and in all directions; and the country appeared barren and deſolate. The ſea riſing high, the commodore ſailed to the northward, to prevent being driven on the lee ſhore. He imagined the whole circumference of Falkland's Iſlands to be little leſs than 700 miles.

At eight in the evening they ſtood to the weſtward, and held their courſe till the 6th of February, when they ſaw, and ſtood in for, Port Deſire, at the mouth of which they came to an anchor, and had the pleaſure of ſeeing the Florida, a ſtore-ſhip which they expected from England. On Thurſday the maſter of the ſtore-ſhip went on board the Dolphin, and informed the commodore of the extreme bad condition of his ſhip, on which it was reſolved to attempt unloading her in the harbour, though a place very ill calculated for the purpoſe. They therefore entered the harbour, but the night proving very tempeſtuous, the Tamar and the Florida both made ſignals of diſtreſs, having been driven from their moorings up the harbour. On this and the following night they were both near driving on ſhore; and as the ſtore-ſhip was in conſtant danger of being loſt, Mr. Byron ſent hands on board to aſſiſt in repairing her, and reſolved to take her into the Streights of Maghellan before he unloaded her. In this harbour the rudder of the Dolphin was likewiſe repaired, there being no timber proper for making her a new one.

On the 13th, the Florida put to ſea, with orders to ſteer directly for Port Famine; and the next day ſhe was followed by the Dolphin and Tamar. The three following days they ſaw a ſtrange veſſel following them, which ſhaped her courſe, and ſailed faſt or ſlow, exactly as they did, a circumſtance that cauſed much ſpeculation. The commodore being obliged to wait for the Florida, which was far a-ſtern, imagined the ſtranger would ſpeak with him, and therefore made the neceſſary diſpoſition to give her a proper reception. When he came to an anchor the ſtranger did the ſame, four miles to windward of him; but in the morning ſhe was ſeen three leagues to the leeward. She now got under way, and approached the Dolphin: on which the commodore got out eight guns, which were all that could be come at to one ſide of the ſhip, as ſhe lay at anchor. Neither party hoiſted any colours; but about this time the ſtore-ſhip running a-ground, the ſtrange veſſel hoiſted French colours, and ſent two boats with an anchor, to aſſiſt her. The commodore now ſent a boat from each of his ſhips to the aſſiſtance of the Florida, with poſitive orders not to let the French boats board her, but to acknowledge, in a proper manner, the offer of aſſiſtance. Theſe orders were obeyed, and the ſtore-ſhip was got off.

They weighed anchor at ſix in the evening, and anchored again at eleven: at which time the French veſſel did the ſame, but in a ſituation that ſhewed her ignorance of the channel they were in.

On the 19th they again ſailed; and as the French veſſel ſteered after them, Mr. Byron thought they came from Falkland's Iſlands, where there was then a French ſettlement, to take in wood, or that they were on a ſurvey of the Streights of Maghellan, in which they were now ſailing. On the 20th they reached Port Famine, when the Dolphin and Tamar having taken as much proviſion out of the ſtore-ſhip as they could find room for, the maſter received orders to ſail for England as ſoon as poſſible; it being determined to navigate the other ſhips through the ſtreight.

On the 28th they paſſed the French ſhip, which was in a ſmall cove, and near her a large quantity of wood; which the commodore had no doubt was intended for their new ſettlement. On Mr. Byron's return to England this appeared to be the fact; and that the ſhip was commanded by Monſ. Bougainville, and called the Eagle.

That part of the account of their paſſage through the Steights of Maghellan, which conſiſts chiefly of the names of places, and deſcriptions of ſoundings, bearings and diſtances, we have purpoſely omitted, but have preſerved all that can contribute to the entertainment or improvement of the reader.

The mountains on both ſides of the ſtreight are covered with ſnow from top to bottom, are ſteep and craggy, and of a moſt deſolate appearance. On the firſt of March two or three canoes of Indians followed the ſhip, one of which went on board. This canoe was of bark, and wretchedly made: it contained ſome men, women, and a boy, who had a bow and arrows, which they exchanged for beads and other trinkets, the bow-ſtring was made of the gut of ſome beaſt dried, and the arrows were formed of a reed, pointed with a green ſtone. Theſe people had no other garment than a ſeal-ſkin thrown over their ſhoulders, and they made on the whole, a moſt wretched appearance. When the ſhip came to an anchor, ſeveral

ral of the Indians went on board, and gladly accepted ſome ribbands, beads, and other trifling matters, with which the commodore preſented them. Theſe people ſubſiſt chiefly on muſcles and berries, ſome of the latter of which they gave Mr. Byron, when he returned their viſit on ſhore.

Having eſcaped the dreadful effects of a ſtorm on the 3d of March, boats were repeatedly ſent out till the 6th, in ſearch of a proper place to anchor in; and at length the Dolphin was moored in a little bay oppoſite Cape Quod; and the Tamar, which could not work up ſo far, about ſix miles to the eaſtward of it. This part of the ſtreight being only four miles over, its appearance is dreary and deſolate beyond imagination, owing to the prodigious mountains on each ſide of it, which riſe above the clouds, and are covered with perpetual ſnow. On the 8th they met with a large number of ſhell fiſh; and on this day the commodore went up a deep lagune under a rock, at the head of which was a fine fall of water, and on the eaſt ſide of it were ſeveral ſmall coves, calculated for the ſecure reception of ſhips of the greateſt burden.

On the 12th an officer was ſent in a boat, in ſearch of an harbour; and in two days he returned with an account that there were five bays between the ſhip and Cape Upright, in any one of which they might anchor ſecurely. While this officer was abſent, he met with ſome Indians, who made him a preſent of a dog, and one of the women having a ſucking child, offered to give it him. At this time winter commenced with all its ſeverity, and the hills were ſoon covered with ſnow. The cold became ſo intenſe, that the ſeamen, whoſe clothes were continually wet, ſuffered ſeverely: to fortify them againſt this inclemency of weather, the commodore gave a warm jacket of the woollen ſtuff, called fear-nought, to the crews of both ſhips, officers included.

On the 16th, perceiving they loſt ground on every tack, they came to an anchor; but finding the ground to be rocky, they weighed again, and every man on board was on deck the reſt of the day, and the whole night, during which time the rain poured down on them in unremitting torrents. Notwithſtanding this inceſſant labour, they found, in the morning, that they had been only loſing way, owing to the rapidity of the current. They were now glad to anchor in the very bay they had left two days before. As it continued to rain and blow violently for ten days longer, the commodore ſent a boat to ſound the bay on the north ſhore; but no anchorage could be found. On the 20th, the veſſel was driven from her moorings; but by heaving up the bower anchor, and carrying out another they ſoon reſtored her to her ſituation: After labouring all day on the 21ſt, they had gained only two miles on the current, when they came to an anchor, but the ſea running high, they ſailed the day following; and the current now running to the weſtward, they made great way, and in the evening, anchored in a commodious bay, where the Tamar had arrived before them. It was remarkable that notwithſtanding the late ſeverity of the weather, added to their inceſſant labour, the crew retained both health and ſpirits.

On the 23d they again ſet ſail, and in a few hours had ſight of the South ſea, which rolled a prodigious ſwell on them. On the 25th two boats which had been ſent in ſearch of anchoring places, returned with an account that they had found two, but neither of them very eligible; they, however, made ſail the next morning, and at four in the afternoon found themſelves within a mile of the ſouth ſhore, which the thickneſs of the weather prevented their ſeeing ſooner; but as there was no place to anchor in, they ſtood for the oppoſite ſhore. Between ſix and ſeven the Tamar was ordered under the ſtern of the Dolphin, and then directed to keep a-head of her during the night to ſhew lights, and as often as ſhe varied her tack to fire a gun. At ſeven in the evening the weather cleared for a minute, ſo that they had ſight of the north-ſhore, bearing weſt by north, on which they inſtantly tacked about. The wind now blew a perfect hurricane; the rain deſcended in torrents, and ſome of the ſails were torn in pieces. During this tempeſtuous night, in which the ſea was continually breaking over them; the ſhips parted company, and were encompaſſed with rocks and breakers over them, however, they happily weathered the ſtorm, and at ſeven in the morning both ſhips came to an anchor. They had now been twice within four leagues of Tueſday's Bay, at the weſtern mouth of the ſtreight, and twice driven ten or twelve leagues back again by ſtorms; ſo dangerous is the navigation of this ſtreight at an improper ſeaſon of the year. On the 28th the Tamar narrowly eſcaped being daſhed to pieces againſt the rocks, by the parting of the cable of her beſt bower anchor. The Dolphin weighed anchor the next morning, and got under ſail, which ſhe had no ſooner done than ſignals of diſtreſs were made on board the Tamar, the anchor of which could not be purchaſed. The Dolphin, therefore ſtood again into the bay, and ſent her aſſiſtance, after which they both anchored for the night; a night the moſt dreadful they had ever yet known. The winds were ſo violent as to raiſe up the ſea, and carry it higher than the heads of the maſts! a dreadful ſea rolled over them and broke againſt the ſhore; with a noiſe as loud as thunder. Happily they did not part their cables, or they muſt have been daſhed in pieces againſt the rocks. On the following day, April the firſt, it was almoſt a perfect calm; but in the evening it rained much, and the wind blew violently; they therefore remained in their ſtation till the 4th, when the cutter, which had been ſent in ſearch of a proper anchoring-place, returned with an account of having found one to the weſtward of the north ſhore. The officer who commanded the cutter had met with a party of Indians, whoſe canoe was of a conſtruction not before obſerved, being compoſed of planks ſewed together. Theſe Indians had no covering but a piece of ſeal-ſkin thrown over their ſhoulders. Their food, which was of the moſt indelicate kind, was eaten raw: One of them tore a piece of ſtinking whale's blubber with his teeth, and then gave it his companions, who followed his example. One of theſe Indians obſerving a ſailor aſleep, cut of a part of his jacket with a ſharp flint.

1765

The ſhips coming to an anchor in the bay which had been diſcovered, propoſing to take in wood and water; while they remained here, ſeveral of the natives made a fire oppoſite the ſhip in which ſignals were made for them to come on board; but they would not. The commodore went on ſhore and gave them ſome trifles that pleaſed them highly: he likewiſe divided ſome biſcuit amongſt them, and was ſurpriſed to remark, that if a bit of it fell to the ground not one of them would ſtoop to pick it up without his permiſſion. Some of the ſailors being at this time cutting graſs for a few ſheep which the commodore had on board, the Indians inſtantly ran to their aſſiſtance, and tearing up the graſs in large quantities, ſoon filled the boat. On Mr. Byron's return, they followed in their canoe till they came near the ſhip, at which they gazed with the moſt profound aſtoniſhment. Four of them were at length prevailed on to go on board; and the commodore, with a view to their diverſion, directed one of the midſhipmen to play on the violin, while ſome of the ſeamen danced. The poor Indians were extravagantly delighted; and one of them, to teſtify his gratitude, took his canoe, and fetching ſome red paint, rubbed it all over the face of the muſician, nor could the commodore, but with the utmoſt difficulty, eſcape the like compliment. When they had been diverted for ſome hours, it was hinted to them, that they ſhould go on ſhore, which they at length did, though with evident reluctance.

On the 7th the commodore ſailed from the bay, and on the 8th again encountered very bad weather, as it rained and ſnowed, while the wind blew a hurricane. On the 9th they paſſed ſome dangerous rocks, which Narborough called the Judges, and on which the ſurf beats with prodigious violence. This day, contrary

1765 trary to expectation, a ſteady gale at ſouth-weſt, carried them at the rate of nine miles an hour, ſo that by eight in the evening they were 20 leagues from the coaſt on which they encountered ſo many perils.

[Mr. Byron recommends it to future navigators, to be at the eaſtern entrance of the ſtreight of Maghellan in December, in which caſe he thinks even a fleet of ſhips might navigate it ſafely in three weeks. He obſerves that the facility with which wood and water are to be obtained, the vaſt plenty of vegetables on the coaſt, and the abundance of fiſh which may be almoſt every where procured are advantages highly in favour of this paſſage. It is remarkable, that in ſeven weeks and two days, the time they were in paſſing it, not a ſingle man was ſick of the ſcurvy, or of any other diſorders.]

On the 26th they ſailed weſtward bearing away for the iſland of Maſafuero, which they were within ſeven leagues of the ſame evening. The next day they bore away for the north of the iſland, and then lay by for the boats, which had been ſent to ſound the eaſtern ſide, but could not land on account of the violence of the ſurf. The boat returning, brought a number of fine fiſh, caught with the hook and line; and the officer reporting, that he had found a bank where they might anchor, oppoſite to which was a plenty of freſh water, they made ſail for it, on which they landed at ſeven on Sunday morning. The boats were now ſent out for wood and water, their crews having put on cork jackets, to aſſiſt them in ſwimming and prevent their being bruiſed againſt the rocks. In theſe ſeas, were a great number of very large ſharks, which were frequently very near the ſwimmers, but they providentially eſcaped them. One of theſe voracious fiſh ſeized a large ſeal cloſe to one of the watering boats, and devoured it in an inſtant, and the commodore ſaw another do the ſame, cloſe to the ſtern of the ſhip. The iſland abounds in goats, many of which were killed and ſent on board, and they were deemed equal in flavour to the fineſt veniſon. One of theſe goats had his right ear ſlit, ſo as to make it evident that ſome perſon had caught him, given him that mark of diſtinction, and let him go again. Various ſorts of excellent fiſh were now ſo plentiful that they could catch ſufficient to ſupply the whole crew two days, in a few hours, with a hook and line only.

The gunner and one of the ſeamen, who were with others, on ſhore for water, were left behind all night, being afraid to venture in the boat, as the ſea ran high. The commodore being informed of this circumſtance, ſent them word, that as blowing weather might be expected, the ſhip might be driven from her moorings, in the night, in which caſe they would infallibly be left behind. This meſſage being delivered, the gunner ſwam to the boat; but the ſailor ſaying, he had rather die a natural death than be drowned, refuſed to make the attempt, and taking a melancholy farewel of his companions, reſolved to abide his fate; when, juſt as the boat was going to put off, a midſhipman took the end of a rope in his hand, and ſwam on ſhore, where he remonſtrated with the poor tar on the fooliſh reſolution he had taken, till having an opportunity of throwing the rope in which was a running knot round his body, he called to the boat's crew, who inſtantly dragged their companion on board; but he had ſwallowed ſo much water that he appeared to be dead. They recovered him, however, by holding up his heels, and on the day following he was perfectly well. The commodore now made a promotion among the officers, he appointed Captain Mouat, commander of the Dolphin, under him, making Mr. Cumming, the firſt lieutenant of the Tamar, and advancing ſome other inferior officers.

They ſailed on the 30th of April, ſteering in various directions till the 10th of May, on which, and the day following, they ſaw ſeveral dolphins and bonettas round the ſhip, and obſerved a few birds which had a ſhort beak; all their bodies being white, except the back and upper part of the wings. They ſaw likewiſe ſeveral grampuſes the next day, and more of the birds juſt mentioned; from whence they concluded, that they were approaching the land.

Two remarkable birds, as large as geeſe, with white bodies and black legs, and which flew very high, were obſerved on the 16th, which confirmed them in their conjecture, that they had paſſed ſome main land, or iſlands. On the 22d they ſaw ſeveral tropical birds, and caught two bonettas; and on the 26th two large birds, the beak and neck of which were white, and all the reſt was black: there flew about the ſhip on the 28th two other birds, one black and white and the other brown and white, and would have ſettled on the yards, but they were intimidated by the working of the ſhip. For ſeveral days after they ſaw a great number of birds, and on the 7th of June diſcovered land.

After this they ſteered for a ſmall iſland, the appearance of which was remarkably pleaſant. It was ſurrounded by a beach of white ſand, and crowned with lofty trees, whoſe ſhade was far extended, and formed moſt beautiful groves, unincumbered with underwood, adorned with a moſt delightful verdure.

It was not long before ſome of the natives made their appearance, armed with long ſpears. Theſe kindled large fires, which were anſwered by other fires that were made on a neighbouring iſland. At this time a boat being ſent to look out for an anchoring place, returned without ſucceſs. It was mortifying in the mean time for the ſailors (ſuch of them as were not confined to their hammocks by the ſcurvy) to view from the decks thoſe delicacies which it was out of their power to reach. Among the reſt, they ſaw cocoa-nuts, tempting them in vain, whoſe milk is reckoned of ſovereign uſe in ſcorbutic caſes; and, beheld the ſhells of turtles ſtrewed along the ſhore. All this while the natives keeping a-breaſt of the ſhip, danced, ſhouted, and ſhook their ſpears, after which they fell backwards as if they were dead, which was interpreted into a threat of deſtruction to ſuch as ſhould venture to land upon their coaſts. Theſe ſavages alſo fixed two ſpears in the ſand, at the top of which ſome things were ſeen waving in the air, before which they kneeled, and appeared to be in prayer to their idols, poſſibly with the idea of thereby averting the dreaded invaſion. In the mean time, the commodore thought proper to ſail round the iſland, and again ſent out boats to ſound. On this, the natives raiſed a terrible outcry, pointing to their ſpears and poiſing large ſtones in their hands. In return for all this the ſailors made all poſſible ſigns of friendſhip, throwing bread and other things on ſhore, none of which the natives choſe to take, but retreated to the woods, dragging their canoes with them. They afterwards ran into the water, with an apparent intention of hauling the boats on ſhore, on which the ſailors, irritated by their behaviour, would have fired on them, but that they were hindered by their officer. The crews of the boats having once more reported, that they could find no landing place, the commodore proceeded to the other iſland and brought to at the diſtance of a quarter of a league from the ſhore, the next morning.

They now ſaw ſeveral other iſlands covered with cocoa-trees, and there again the natives ran to the beach, armed with clubs and ſpears, uſing threatening geſtures. The commodore fired a cannon ſhot over their heads, on which they returned to the woods. The boats having been again ſent out, returned with an account, that no landing place could be found, on which Mr. Byron named this paradiſe in appearance, the Iſland of Diſappointment. The natives were ſhort, and well made, very quick runners, and their complexion that of the deep copper. Having ſailed on the 8th of June, they diſcovered an iſland on the following day which laid low, and were covered with various kinds of trees, among which was the cocoa nut. the iſland was ſurrounded with a rock of red coral. The inhabitants on the coaſt, having made large fires (as was ſuppoſed to alarm the more inland natives) they ran

Iſland of Diſappointment.

ran along the ſhore in multitudes, armed like thoſe of the Iſland of Diſappointment. The veſſels now brought to, at a ſmall inlet, opening into a lake of ſalt water, which appeared more than two leagues wide. There was a little town, under the ſhade of a grove of cocoa-nut trees. The ſhips advancing to the mouth of the inlet, ſome hundreds of the natives, headed by a kind of an officer, who carried a pole, on which was faſtened a piece of mat, ranged themſelves, up to their waiſts in water, making a hideous noiſe, till they were joined by a number of large canoes, which came down the lake. Two boats were now out in ſearch of ſoundings, and the crews of them making every poſſible ſign of friendſhip, ſome of the canoes drew towards them, not with a peaceable intention, but with a view to haul the boats on ſhore; ſeveral of the natives, leaping from the rocks, ſwam towards the Engliſh and one of them ſprang into the Tamar's boat, ſnatched up a ſeaman's jacket, and inſtantly dived from the boat to the ſhore, another of them laid violent hands on a hat, but loſt his prize through his ignorance, as he pulled it downwards, inſtead of lifting it from the head of the wearer. They now ſailed weſtward, and ſoon diſcovered another iſland, diſtant four leagues. The natives purſued them in two large double canoes, in each of which were about 30 armed men. The boats were a conſiderable way to leeward of the ſhips, and were chaced by the canoes; on which the commodore making a ſignal, the boats turned towards the Indians, who inſtantly pulled down their ſails, and rowed, away with great rapidity; driving through the violent ſurf on the ſhore, and were followed by the boats, when, being apprehenſive of an invaſion of the country, they armed themſelves with ſtones and clubs; on which, the boat's crew fired, and killed two or three of them, one of whom died as he was throwing a ſtone at the Engliſh after three balls had gone through his body. This fellow dropping cloſe to the boat, his body was brought to the ſhip; but the Indians carried off the reſt of their companions. The boats carried the two canoes with them, as the trophies of their victory. Theſe veſſels conſiſted of planks ſewed together, with a ſtrip of tortoiſe-ſhell fixed over each ſeam; they had ſharp bottoms, and were very narrow, and two of them were faſtened along ſide each other by two timbers, which left a ſpace of full ſix feet between the canoes, and had a ſail, made of matting, paſſed from one veſſel to the other, being fixed to a maſt which was hoiſted in each of them. When they ſailed, ſeveral men ſate on the timbers which lay from boat to boat, their cordage appeared to be formed of the outward covering of the cocoa-nut, and was exquiſitely well made.

As no refreſhments could be obtained, owing to the violence of the ſurf, the commodore returned to his former ſtation at the inlet, and again ſent the boats in ſearch of an anchoring place. A number of the Indians were on the ſpot where he had left them, and were preparing ſome large canoes, probably to attack the boats; on which a ſhot was fired over their heads, when they inſtantly ran away and ſecreted themſelves. The boats returned in the evening; with a few cocoa-nuts; and in the morning were ſent out again, with all the invalids, who were able to go on board them. The commodore went on ſhore this day, and ſaw many Indian huts, which were covered with the branches of the cocoa-nut tree; they were mean buildings, but finely ſituated among groves of lofty trees. The men went naked; but ſome women were ſeen, who wore a kind of cloth from the waiſt to their knees. The ſhore abounded with coral and ſhells of large pearl oyſters; and it ſeemed probable a valuable pearl fiſhery might be eſtabliſhed here. There were many dogs in the huts, which kept barking continually till the Engliſh went on board.

The next day the ſeamen found, in one of the huts, the carved head of a rudder; which had evidently belonged to a Dutch long-boat; they likewiſe found a piece of braſs, one of iron, and ſome iron tools; but by whom theſe things were left, was wholly unknown to them. The burial-places of the natives were under high trees, near their houſes: and their tombs conſiſted of flat ſtones laid on perpendicular ſide-ſtones, like thoſe in ſome of our church yards. On the branches which ſhaded theſe repoſitories hung baſkets of reeds, containing the heads and bones of turtle and other fiſh, and ſeveral boxes filled with human bones, were found near the graves. The flies on this iſland were extremely troubleſome, but no venomous creatures were ſeen. Parrots and other birds were very plentiful, and our voyagers ſaw ſome beautiful doves, ſo tame as to follow them into the huts of the Indians. The water here was good, and the ſurface of the ground was almoſt covered with ſcurvy graſs. This part of the iſland is ſituated in 14° 29′ ſouth lat. and 148° 50′ weſt long. On Wedneſday, June the 12th they ſailed to another iſland, and as they coaſted along it, the natives, armed like thoſe of the other iſlands, kept even with the ſhip for ſome leagues. They frequently plunged into the ſea, or fell into the ſand, that the ſurf might break over them, to cool and refreſh themſelves. The boats being near the beach, the crew made ſigns that they were in want of water, on which the natives pointed farther along the ſhore, where, when the boats arrived, they ſaw a number of houſes, whither they were followed by the Indians, many more of whom joined them at this place. The boats having got cloſe in ſhore, and the ſhips lying at a ſmall diſtance, a venerable old man, with a white beard, advanced from the houſes to the beach, attended by a young fellow. Having made a ſignal for the other Indians to retire, he came forward to the edge of the water, preſſing his beard to his breaſt with one hand, and holding a branch of a tree in the other. He made a kind of muſical oration, during which the people in the boat threw ſome trifling preſents, which he would neither take up, nor permit his attendant to touch, till he had finiſhed his harangue, when he walked into the water and throwing the branch to the boat's crew, he retired, and picked up their preſents. Moſt of the natives having complied with a ſign made them to lay down their arms, one of the midſhipmen ſwam on ſhore; on which they flocked round him, admiring his clothes: as his waiſtcoat pleaſed them moſt, he gave it to them, which he had no ſooner done, than one of them untied his cravat and ran away with it. He now thought it time to retreat to his boat, whither ſeveral of the natives ſwam after him: ſome bringing each a cocoa-nut, and others freſh water in the ſhell. The boat's crew had taken with them ſome ſhells of pearl oyſters in order to learn of the natives how to procure to ſome pearls; but they could not poſſibly make them comprehend their meaning. This iſland is ſituated in 14° 41′ ſouth latitude. and 149° 15′ weſt long. and both theſe the commodore called *King George's Iſlands*, in reſpect to his ſovereign. In a lake belonging to the laſt iſland, two or three very large veſſels were ſeen, one of which had two maſts, with proper cordage. The boats having returned on board, they ſailed weſtward the ſame day; and the next afternoon deſcried another iſland, towards which they immediately ſteered, and found that it was well inhabited, and had a fine appearance of verdure; but a violent ſurf broke all along the coaſt. It lay in 15° ſouth lat. and 151° 53′ weſt long. and received the name of the *Prince of Wales's Iſland*.

1765

King George's Iſlands.

Prince of Wales's Iſland.

They now ſailed northward, and from the vaſt flocks of birds they had repeatedly ſeen, which always winged their way to the ſouth, on the approach of evening; and from the iſlands being ſo well peopled, the commodore concluded that there was a chain of them leading to a continent, the diſcovery of which he would certainly have attempted, but the crews of both ſhips were ſo unhealthy, as to render it impoſſible to ſucceed.

On Monday, June the 17th, the voyagers concluded that land was near, from the multitude of birds which flocked about the ſhip: but they ſaw no land till the 21ſt, when it was diſcovered at eight leagues diſtance, having

1765 ing the appearance of three islands, with rocks between them. They abounded with inhabitants, whose dwellings lined the coast; and the beauty and fertility of the soil, seemed to excell that of any place they had seen: but the rocks and breakers with which it was surrounded, was an insuperable bar to any attempt at landing.

On the night of the 21st all hands were on deck; it rained hard, and the wind blew violently. Soon after nine o'clock the Tamar fired again, and the crew of the Dolphin imagined they saw breakers to leeward, which however proved to be only the reflection of the setting moon on the rising surges.

Duke of York's Island. On the 24th they discovered another island, which was named the *Duke of York's Island*. A terrible sea broke round the coast, but the place itself had a pleasing appearance. The boats landed with some difficulty, and brought off a great quantity of cocoa-nuts, which furnished great relief to the sick. Thousands of sea fowls were found sitting on their nests in high trees, and were so tame as to be easily knocked down, and there were large numbers of land crabs on the ground. This island has a large lake in the middle of it, but they found no inhabitants.

On the 29th the commodore sailed northward, with a view to cross the equinoctial line, and then steered for the Ladrones. On the 2d of July they discovered a low flat island, abounding with the cocoa-nut, and other trees, and affording a most agreeable prospect. A great number of the natives were seen on the beach, many of whom, in above sixty canoes, [or praws] sailed, and formed a circle round the ship, which having surveyed for a considerable time, one of the Indians jumped out of his boat, swam to the vessel, ran up its sides in a moment, sat down on the deck, and began laughing most violently: he then ran about the ship, pilfering whatever he could lay his hands on, all which things were taken from him as fast as stolen. This man having as many antic tricks as a monkey, was dressed in a jacket and trowsers, and afforded exquisite diversion. He devoured some biscuits with great eagerness, and after having played many antics in his new dress, resolved at last to carry it off, which he effected by jumping over the ship's side, and swimming to his companions. After this, several others swam to the ship, and getting up to the gun-room ports, shewed their disposition to theft by seizing on some petty prize, and then making their way through the sea, easily escaped with their booty.

These Indians are described as being of a light copper coloured complexion, well made and tall; their hair which is long and black, being either tied in three knots or hanging in a large bunch behind, as fancy leads the wearer. They had their ears bored, which bore the strongest marks of their having worne heavy ornaments in them, some of them being drawn down almost as low as their shoulders. As to their ornaments in general, they appeared to be shells strung together and worn round the neck, the wrist, and waist: in other respects they were naked. A string of human teeth was the decoration which one of the chiefs chose for his waist; and some of them carried spears that for the length of three feet were stuck with sharks teeth which were as sharp as any pointed instrument of steel. When some cocoa-nuts were shewn them by the English, and signs made that more were wanted, they endeavoured to steal what they saw without giving the necessary directions. To this place the officers gave the name of Byron's Island, in honour of their commander. It is laid down in 1° 18′ of south latitude, and 173° 56′ of east longitude. From hence they sailed on the 3d of July; and on the 21st the crew were again ill of the scurvy, having consumed all the cocoa-nuts which might have remedied this disorder. The extreme heat of the weather also occasioned several of the crew to be visited with the flux, which added to their distresses.

On the 22d the commodore sailed for the island of Tinian, and, within six days, they saw the three islands of Saypan, Tinian, and Aiguignan, between two and three degrees distant from each other. About noon, on the 31st, they anchored at the south-west end of Tinian, where Commodore Anson had before anchored with the Centurion. Though the water was 144 feet deep here, yet they found it so clear that they could see the ground at the bottom.

Mr. Byron going on shore, saw many huts which had been left there by the Spaniards the year before; and, having pitched upon a proper spot whereon to erect tents for the sick, he and his company went in search of those beautiful lawns and meads of which the reader has had so luxuriant a description in the voyage of Commodore Anson. In this attempt they worked their way through thick woods, and underwent much difficulty for which they were ill rewarded when they came to the place where they expected to view these inchanting scenes. They found the lawns covered with reeds, in which their legs, being often intangled, were cut as with whip-cord. In some places these reeds grew higher than a man's head, and in none less than half the height. They were covered with flies which, when they opened their mouths, frequently got down their throats. Having killed a bull, which was all their atchievement in this fruitless expedition, they then retired much dissatisfied to the tents, which had been set up while they were absent, and a party was sent afterwards to fetch away their prize. The preceding day the invalids had been brought on shore, and on the first of August they began to clear the well, which Mr. Byron supposes to be the same where Mr. Anson's people had watered, but he says the water is brackish and full of worms. At one time while they lay here, so violent a west wind arose that the vessels were forced to put to sea, for fear of being driven on the rocks and dashed to pieces.

They had brought on shore the armourer's forge to repair the iron-work of the ships; and the commodore remained in his tent having been violently attacked by the scurvy. Though the crew in general recovered from this disorder, yet many fell sick of fevers, two of whom died, being the first they had lost since they had left England. The rains were continual and violent, and the heat excessive. They were constantly tormented with insects;* flies by day, and muskittos by night, were their constant, troublesome companions. Scorpions, the reptile called Centipieds and black ants were also found here in abundance. Some of the crew were sent out to kill cattle. When they had been absent two days and nights killing a bullock, they had near eight miles to drag it to the beach, and when it arrived it was generally fly-blown and stunk. In the mean time this toil contributed to add to the number of those afflicted with fevers, and so continued to heighten the inconveniences they suffered in this part of the world. The wild hogs furnished their chief supply of fresh provisions; they killed some of these that weighed near 200 pounds. Their greatest convenience arose from a method found out by a negro for ensnaring these creatures, by which means they had fresh meat in the vessels as well as on shore, a number of them being sent on board alive. As to poultry, the ship's company could kill a sufficiency of them, but, in less than an hour after they had killed them, their flesh turned green, and swarmed with maggots: However, at length finding a spot where there was plenty of cattle, and contriving to bake bread every day for the sick, they got a tolerable supply of provisions to relieve them.

Island of Saypan. The island of Saypan is described as larger and more pleasant than that of Tinian. It is generally covered with trees, and abounds with the animals called Guanicoes. There was reason to believe that the Spaniards carried on a pearl fishery there at certain periods; large heaps of the pearl oyster shells were seen, as well as other marks of some Europeans having lately been in those parts.

* It is related that the thermometer generally stood at 36 being only 9 degrees less than the heat of the blood at the human heart.

The

The ſick being tolerably well recovered, the commodore weighed anchor and ſailed from Tinian on the 30th of September, ſteering to the northward. On the 18th of the next month ſeveral land birds that ſeemed much fatigued flew near the veſſel, and one of them reſted on the bows, about as large as a gooſe, its beak, which was of an extraordinary length and thickneſs, was black, as alſo were its legs; the other parts of the body were white.

Timoan. They came to an anchor off the iſland of Timoan, on the 5th of November, where Mr. Byron landed the next day. The inhabitants proved to be Malays, many of whom when they ſaw the boat approaching the ſhore, came down to the beach, having each a ſpear in one hand and a long knife in the other, and a dagger by his ſide. However, the boat's crew landed and exchanged a few handkerchiefs for a dozen of fowls a kid and a goat. Theſe Malays were well made but ſmall of ſtature, and of a copper complexion. On their heads they wore turbans, and had pieces of cloth faſtened with ſilver claſps round their waiſts; only one old man among them was habited nearly in the manner of the Perſians. As to their houſes they are built according to the cuſtom which we have already noticed on poſts about eight feet from the ground, are compoſed of ſlit bamboo and very neatly contrived. The cocoa-nut and cabbage trees are to be found here in abundance, and there are alſo ſome free grounds upon the iſland. An animal was brought on board alive, while the ſhips lay here at anchor, that had legs like thoſe of a deer, with a body like a hare, which proved to be very fine eating. The crews catched large quantities of fiſh in the harbour, from whence they ſailed on the 7th of the month. Mr. Byron having anchored in the harbour of Pulo Toupoa, nothing happened worth notice till the 14th, when he ſaw a ſloop at anchor in the ſame harbour. The veſſel hoiſted Dutch colours, and he ſent an officer on board her, who was received with great politeneſs, tea being immediately ordered for him and his attendants, but he could not make them underſtand him, the crew conſiſting entirely of Malays. This veſſel, was made of ſlit bamboo, which had on each quarter a piece of timber that ſerved to ſteer her inſtead of a rudder.

The commodore ſailed the following day, and held his courſe till the 19th when he ſpoke with an Engliſh ſnow, bound from Bencoolen to Malacca and Bengal, in the Eaſt-India Company's ſervice. At this time their biſcuit was filled with worms and rotten, and their beef and pork were ſtinking. The maſter of the ſnow being appriſed of this circumſtance, ſent Mr. Byron two gallons of arrack, a turtle, twelve fowls, and a ſheep, which is ſuppoſed to have been half his ſtock, and for which he refuſed to accept the ſlighteſt return. They dropped their anchor this day in the road of Sumatra; and on the 27th came to an anchor in that of Batavia. Having anchored nearer the town on the following day, they fired eleven guns, which were returned; and an Engliſh ſhip from Bombay fired thirteen guns in honour of the commodore. The Dutch commodore ſent his boat on board the Dolphin, under the command of his cockſwain, who made but a ſhabby appearance; he put ſeveral queſtions to Mr. Byron reſpecting his voyage and deſtination, and took a book from his pocket to write down his anſwers, which Mr. Byron conſidering as an indignity, deſired him inſtantly to leave the ſhip, and thus ended his viſit. 1766

Mr. Byron viſiting the Dutch commodore at his country houſe was received with great politeneſs, and told that he might take a houſe in any part of the city, or be lodged at the hotel. Any inhabitant of Batavia permitting a ſtranger to ſleep, though but for a ſingle night in his houſe, incurs a penalty of 500 dollars, the hotel being the only licenſed lodging houſe, the governor appoints the keeper of it, who at this time was a Frenchman. This hotel is the moſt ſuperb building in the city, having more of the air of a palace than an inn. All the ſtreets of Batavia which are well diſpoſed, have canals running through them, and reſemble the cities of Holland.

The inhabitants are a motley herd of Dutch, Portugueſe, Chineſe, Perſians, Moors, Malays, Javaneſe, &c. and their numbers are amazingly great, the Chineſe live in a kind of ſeparate towns, without the city walls, and deal very largely, having annually ten or twelve veſſels laden from China. The roads, for ſeveral miles round the city, are very wide, and have a canal, ſhaded with trees, running by them; which is broad enough for the navigators of large veſſels. Adjoining to this canal are the country houſes and gardens of the citizens. The ſhips remained in this harbour till the 10th of December, when they ſailed, being ſaluted with eleven guns from the fort, and thirteen by the Dutch commodore, during their run from hence to Prince's Iſland, in the ſtreight of Sunda, they were ſo abundantly ſupplied with turtle, by boats from Java ſhore, that the common ſailors ſubſiſted wholly on that fiſh.

At Prince's Iſland they ſtaid till the 19th, when they ſailed for the cape of Good Hope. On the 10th of February, they ſaw a great ſmoke ariſing from a ſandy beach, which they ſuppoſed to have been made by the Hottentots. On the 13th they came to anchor, and the next morning the governor ſent his coach and ſix for the commodore, and received him with great politeneſs, offering him the accommodations of the company's houſe in the garden, and the uſe of his coach. The cape is a fine country, ſituated in a healthy climate, and abounding with various kinds of refreſhments. In a paddock, adjoining the Company's garden, which is extremely elegant, oſtriches, and other curious birds and animals are conſtantly kept. The commodore frequently gave his men permiſſion to go on ſhore, and they as conſtantly returned intoxicated with the Cape wine. They ſailed on the 7th of March, and on the 25th croſſed the equinoctial line.

At this time an accident happening to the rudder of the Tamar, and it being impoſſible to make a perfect repair of it at ſea, the captain was ordered to bear for Antigua, in conſequence of which, they parted company on the firſt of April; and the Dolphin, without meeting with any other material occurrence, came to an anchor in the Downs, on the 9th of May, 1766, after having circumnavigated the globe in about 22 months.

THE VOYAGE OF CAPTAIN WALLIS, ROUND THE WORLD.

THE command of his Majeſty's ſhip the Dolphin, being given to Samuel Wallis, Eſq; which veſſel was deſtined for a voyage round the world, he fell down the river on the 26th of July, and on the 16th of Auguſt came to an anchor off Plymouth ſound. Three days afterwards he received ſailing orders, with directions to take alſo the Prince Frederic and the Swallow under his command. On the 22d, the veſſels ſailed, and on the 7th of September came to an anchor in the road of Madeira.

They ſailed from thence on the 12th, after having taken in beef, wine, and onions, as ſea ſtores. On the 16th as they were ſailing off the Iſland of Palma, at the rate of eight miles an hour, the wind ſuddenly died

1766 died away, ſo that the veſſel lay quite ſtill. On the 20th they catched ſeveral bonettas, out of a great number which ſurrounded the ſhip; and this day they ſaw ſome herons flying to the eaſtward. The ſwallow, which was a bad ſailor, parted from the other veſſels, in the night between the 21ſt and 22d; but ſhe joined company again on the 24th at the diſtance of about ſix leagues from the iſle of May. On the ſame day three veſſels came to an anchor at Port Praya, in that iſland. The next morning they got leave from the commanding officer at the fort to get water and other neceſſaries. As this was the ſickly ſeaſon, and the ſmall-pox was very fatal in thoſe parts, every man who had not had that diſtemper was detained on board by the captain. Great quantities of fiſh were caught here, and ſome wild purſlain was found, which proved very refreſhing.

Having procured cattle and water, they ſailed from hence on the 28th, and in the night ſaw the burning mountain of Terra del Fuego. Captain Wallis now ordered every man to be furniſhed with a hook and line, in order that he might ſupply himſelf with fiſh, and likewiſe to prevent infection, he ordered that no fiſh ſhould be kept above 24 hours. The butter and cheeſe being all expended, they began to ſerve the crew on the 20th with oil, and orders were given for the remainder of the voyage, that once a fortnight they ſhould be ſerved with muſtard and vinegar. On the 22d they judged that they were not at a great diſtance from land, from the ſight of a great number of birds. Two days after this, orders were given for ſerving the men with brandy and the wine was reſerved for ſuch as were ſick among them.

The Prince Frederic ſprang a leak on the 27th, and at the ſame time her crew were ſo ſickly, through the fatigue of pumping and the badneſs of their proviſions, that Lieutenant Brine, her commander, was apprehenſive he could not keep company much longer unleſs he could have ſome aſſiſtance given him. The carpenter and ſix ſailors were ſent on board, but the captain was unable to ſupply her with better proviſions; and as the carpenter found he could do little towards ſtopping the leak in the ſtore-ſhip, the Dolphin and Swallow completed their proviſions from her, and put empty oil jars, ſtaves, and iron hoops on board her.

Arriving at the 30th degree of ſouth latitude on the 12th of November, though it is then the ſummer ſeaſon in theſe climates, the men found the weather ſo cold that they were obliged to put on their thick jackets. A meteor was obſerved on the 18th of this month about nine at night, which flew from the north-eaſt to the ſouth-weſt, leaving ſuch a train of light as equalled the brightneſs of mid-day. Three or four days afterwards they ſaw, beſides whales, ſeals, ſnipes, plovers, and other birds, the tokens of land, which they diſcovered on the 8th of December, and on the 9th a ſort of red ſhrimps ſurrounded the ſhip, which diſcoloured the ſea about them.

Being near Cape Virgin on the 16th, they ſaw ſeveral men riding on the ſhore, by whoſe ſigns it was underſtood that they wiſhed them to land. When the veſſels came to an anchor, it was obſerved that the natives ſhouted aloud, and keeping up large fires, remained oppoſite the ſhip all night. The captain, with a boat's crew from each ſhip, went on ſhore in the morning, and having made ſigns to the Indians to ſit down, diſtributed among them, combs, buttons, knives, and various toys, and pleaſed the women much by giving them ſome ribbands. Afterwards he took ſome pains to make them underſtand that he would give them ſome bill-hooks and hatchets, which he ſhewed them, in exchange for guanicoes and oſtriches, but they were either ignorant of his meaning, or did not chuſe to underſtand him.

With regard to the ſize of theſe people, according to the moſt exact account, the talleſt among them were about ſix feet ſeven inches in height, ſeveral others were an inch or two ſhorter; but from five feet ten inches, to ſix feet and upwards ſeemed to be the ſtandard, which by the moſt moderate calculation is three inches at leaſt above that of our country; and as to a man of ſix feet ſeven, the reader need not be told that he is looked on as a giant amongſt us. Theſe people were muſcular and well made, but their hands and feet were remarked to be ſmall in proportion to their bodies. Their dreſs was the ſkin of the guanicoe, with the hairy ſide turned inwards; and ſome of them wore a ſort of ſquare piece of cloth wove from the hair of that animal, a hole being cut to admit the head; and the garment thus made, reached to the knees. They had beſides a ſort of buſkin that reached from the middle of the leg to the inſtep, and was alſo conveyed under the heel; but the reſt of the foot was bare. Their hair, which was very long and coarſe, was tied back with a piece of cotton, and their complexion was of the dark copper colour. Their horſes, on which both men and women rode aſtride, were about 14 hands high, and their dogs appeared to be of the Spaniſh kind. Some of the men had wooden ſpurs, and ſeveral of them had their arms painted; the faces of others were variouſly marked, and ſome were ſeen that had their eyes incloſed with a painted circle. Two round ſtones incloſed with leather, formed their arms, one being held in the hand, the other was ſwung round the head for ſome time, and then diſcharged from a ſtring of eight feet in length, with great violence as from a ſling. By this cord they alſo caught guanicoes and oſtriches, throwing it in ſuch a manner as to hamper the legs of their prey*. The people were found here to be great talkers, and frequently uſing the word *Ca-pi-ta-ne*, they were ſpoken to in Portugueſe, Spaniſh, French and Dutch, of neither of which languages they appeared to have any idea: But it was remarked that they learned to pronounce Engliſh words readily enough, and particularly uſed the ſentence, "Engliſhmen come on ſhore," with great facility.

As they ſeemed deſirous of going on board, the captain took eight of them into the boats, on which they inſtantly began ſinging for joy; but when they came into the ſhip, they expreſſed no kind of ſurpriſe at the novelties they beheld, till a looking glaſs being ſhewn them, they acted many antic geſtures before it, occaſionally walking to and from it, talking earneſtly and laughing immoderately. They would drink nothing but water, but they eagerly ate every article of the ſhip's proviſions. They were highly pleaſed with the turkies, guinea-hens, hogs, and ſheep on board; and one of them making ſigns that he ſhould be glad of ſome clothes, the captain gave him a pair of ſhoes and buckles, and preſented each of the reſt with a little bag, in which were new ſixpences and half-pence, with a ribband paſſed through a hole in them, to hang round their necks; there were alſo in it a looking-glaſs, a comb, ſome beads, a knife, a pair of ſciſſars, ſome twine, and a few ſlips of cloth: ſome tobacco being offered them, they ſmoked a few minutes, but did not ſeem to like it. On the marines being exerciſed before them, they were terrified at the firing of the muſkets, and one of them falling down ſhut his eyes, and lay without motion, which was ſuppoſed to intimate that he knew the deſtructive nature of thoſe weapons. It was with difficulty that they were at length prevailed on to go on ſhore; one of them in particular would not leave the ſhip till he had ſung a long kind of prayer, and petitioned to ſtay till evening, by pointing to the ſun, and then moving his hand round to the weſtward. They began to ſing as ſoon as they were in the boat, and did not ceaſe till they had reached the ſhore; where many of their companions preſſed eagerly to be taken on board, and were highly affronted at being refuſed that favour.

They turned into the Streights of Maghellan this day with the tide of flood, and the ſame day ſaw many people on horſeback hunting the guanicoes, which

* Captain Wallis's people obſerved ſome of the natives devouring the paunch of an oſtrich raw, after having turned the inſide outwards, and ſhaken off ſome of the filth.

ran up the country with prodigious ſwiftneſs. The natives lighted fires oppoſite the ſhips, and in the morning about 400 of them were obſerved in a valley with their horſes feeding near them. This being the ſpot where Mr. Byron ſaw the Patagonians, ſome officers were ſent towards the ſhore, but with orders not to land, as the ſhips were too far off to give them aſſiſtance. As they drew near the ſhore, many of the natives flocked towards them, among whom were women and children, and ſome of the ſame men they had ſeen the preceding day: thoſe waded towards the boat, frequently calling out, "Engliſhmen come on ſhore;" and were with difficulty kept from coming on board, when they found the crews would not land. Some bread, tobacco, and toys, were diſtributed, but no proviſions could be obtained in exchange for theſe articles. The tide was ſo violent on the 23d, that the ſhips were driven three ſeveral ways; but in the evening they were ſafely anchored. On Chriſtmas-day they procured a quantity of celery from Elizabeth's Iſland, which being boiled with portable-ſoup and wheat, the crews breakfaſted on it for ſeveral days. Upon this iſland were found many huts, and two dogs were ſeen; but the Indians had quitted their abodes for the preſent. They obſerved many mountains, which, though it was then the midſt of ſummer, were in a great degree covered with ſnow.

They anchored in the bay of Port Famine on the 26th, and the ſick were ſent on ſhore, where a tent was erected for their reception, as was another for the accommodation of the ſail-makers, and thoſe who landed to get wood; the empty water-caſks were landed on the 28th, and on the ſame day great quantities of fiſh were caught, among which were ſmelts. On their arrival here, many of the people were very ill of the ſcurvy; but by the plentiful uſe of vegetables, and bathing in the ſea, in a ſhort time they recovered. And now all hands were employed in repairing and ſtoring the ſhips, and thouſands of young trees were carefully taken up with the mould about them, to be carried to Falkland's Iſlands, which produce no timber. The maſter of the Dolphin, who had been in ſearch of anchoring places, returned on the 17th of January with an account, that he found ſuch as were proper for the purpoſe, and the Prince Frederick ſailed for Falkland's Iſlands the ſame day.

They came to an anchor on the 17th, half a mile from the ſhore, oppoſite a current of freſh water, that falls rapidly from the mountains. But having diſcovered a more convenient anchoring place, and at the ſame time better adapted for procuring wood and water, they ſailed again the next day, and came to an anchor in the bay of Cape Gallant on the 23d. Here they caught wild ducks in ſuch numbers as to afford them very ſeaſonable relief. The maſter of the Swallow climbed one of the high mountains, with the hope of getting a view of the South Sea; but being diſappointed in his expectations, he erected a pyramid, and having written the ſhip's name, and the date of the year, he left the ſame, with a ſhilling within the ſtructure.

They ſaw an animal on the 24th, that was as ſwift as a deer, and had a cloven foot; but in other reſpects was like an aſs. The country here has a moſt forbidding aſpect. The lower part of the vaſt mountains on both ſides the ſtreight are covered with trees, a ſpace of which is occupied by withered ſhrubs; higher up are fragments of broken rocks and heaps of ſnow, and the tops are intirely naked and deſolate. On the 28th they ſaw a great ſmoke on the ſouthern ſhore, and another on Prince Rupert's Iſland; ſome people being ſent on ſhore the next morning for water, they had no ſooner landed, than ſeveral of the natives came off in three canoes, and having advanced towards the ſailors, made ſigns of friendſhip, which being anſwered to their wiſh, they ſhouted aloud, and the Engliſh ſhouted in return. When the Indians came up, they were eating the fleſh of ſeals raw, and were covered with the ſkins, which ſtunk intolerably. They had bows, arrows, and javelins, the two laſt of which were pointed with flint. The talleſt of theſe people did not meaſure more than five feet ſix inches, and they were of a deep copper complexion. 1767

Three of the natives who were taken on board the Dolphin, ate whatever food was given them, but, like the Patagonians, would drink only water, they were likewiſe highly diverted with a looking-glaſs, in which they at firſt looked with great ſurpriſe, till, having become more familiar with it, they ſmiled at the novelty, and when they obſerved the figure in the glaſs ſmiled alſo, they burſt into moſt immoderate fits of laughter at its effects. The captain going on ſhore with them, preſented ſome trinkets to their wives and children, and received ſome of their arms, and pieces of mundic, of the kind found in the Corniſh tin mines, in return. Theſe Indians went off in canoes that had ſeal-ſkin ſails.

On the 3d of February the ſhips ſailed, and came to an anchor in York Road on the ſame day. Capt. Wallis went on ſhore the next morning with a party, near Bachelor's river, where he ſaw ſome Indian huts, and ſeveral dogs which ran away the moment they were obſerved; they likewiſe ſaw oſtriches, and collected various kinds of fiſh and ſome vegetables of the country. There is a cataract near this river, the noiſe of which is tremendous, the water falling more than 400 yards, partly over a very ſteep deſcent, and partly in a perpendicular line. Having ſailed on the 14th, they came to an anchor again the ſame day in York Road, after having loſt ground by the contrary winds, and were driven with ſuch violence the next morning by the current, as to be in continual expectation of being daſhed againſt the rocks, from which they were frequently not half the length of the ſhip; but they were providentially preſerved, and came to an anchor in Butler's Bay, which was ſo called from the name of one of the mates, by whom it was firſt diſcovered. Butler's Bay.

Keeping their ſtation here till the 20th, they were then encountered by a moſt violent ſtorm, attended with hail and rain, which increaſed till the evening, the ſea breaking over the fore-caſtle upon the quarter-deck: yet, as the cables did not part, they were again wonderfully preſerved. Here they remained eight days, taking in wood and water, and repairing the little damage the ſhip had ſuſtained in the ſtorm. In the mean time they caught fiſh, among which were muſcles near ſix inches long, and procured plenty of vegetables. The mountains in this neighbourhood had the moſt rugged and deſolate appearance. Their heads ſeemed to be loſt in the clouds; and ſome of them on the ſouthern ſhore, produced not a ſingle blade of graſs, while the valleys, equally barren, and almoſt covered with ſnow, had a very melancholy appearance. They ſet ſail again on the firſt of March, and anchored on the ſame day in a bay which was called *Lion's Cove*, from whence they ſailed on Monday. The five following days they had ſuch tempeſtuous weather, that they had no proſpect before them, but that of immediate deſtruction: and the crew on board the Dolphin were ſo prepoſſeſſed that the Swallow could not ride out the ſtorm, that they fancied they ſaw ſome of her hands coming towards them over the rocks. During a fortnight that they remained at this place, they were at two-thirds allowance, brandy excepted, which was found highly uſeful to keep up their ſpirits. Both the veſſels were ſafely anchored in a place called Swallow Harbour, on the 15th, from whence they ſailed the next morning; and on the following day the Swallow, being driven among breakers, made a ſignal of diſtreſs; but a breeze from the ſhore happily releaſed her.

The waves ran high that day, and there was ſo thick a fog, that they narrowly eſcaped ſhip-wreck among a number of ſmall iſlands: the weather however clearing up a little in the afternoon, they came to an anchor in a bay under Cape Upright. Two canoes having on board ſeveral Indians, on the 19th came along-ſide the Dolphin, who had with them a great quanty of ſeal's fleſh, blubber, and penguins, which they ate without any kind of dreſſing. A

1767 ſailor having caught a fiſh bigger than a herring, gave it to one of them, who killed it by a bite near the gills, and inſtantly devoured it. They would not drink any liquor but water, they eagerly ate proviſions of any kind, boiled, roaſted, raw, ſalt or freſh. Though the weather was very cold, theſe ſavages had no covering but a ſeal-ſkin, and even that they did not wear when they were rowing. They had all ſore eyes, probably occaſioned by the ſmoke of their fires, and they live in ſuch a naſty way that they ſmell quite rank. They had a kind of javelin pointed with bone, which they uſe in ſtriking fiſh. The captain gave them a few baubles, with which they departed extremely well pleaſed. One night 22 of the ſailors ſtaying on an iſland, 30 of the natives hurried to their boats, and began to make free with its contents. The ſailors had juſt time to hinder their intended depredations, at which the ſavages appeared to be much inraged, and betook themſelves to their poles and javelins; but ſome ſmall preſents made them by the men, pacified them on this occaſion. It proving a fine day on the 30th, the crew employed themſelves in drying the ſails. The next day ſome Indians coming on board, proved to be the ſame people whom they had ſeen on ſhore before.

Some of the natives, on the firſt of April, ſold them ſeveral of the birds called race-horſes, and the day following eight of the Indians brought ſix of their children on board, to whom the Captain gave necklaces and bracelets. The Indians here appeared to be remarkably tender of their children, and delicate in regard to their women. A boat having been ordered on ſhore in order to procure wood and water, ſome of the natives had come on board, and others were in canoes along-ſide of the ſhip. The latter kept their eyes fixed upon the boat, and when ſhe put off, called loudly to their companions, who directly handed down the children, and jumped into the canoes which had followed the boat with the greateſt expedition, all the time crying out as if they were in the utmoſt diſtreſs. When the boat came near the land, ſome women appeared among the rocks to whom the Indians called in like manner, on which they all ran away. The crew, however, remarking their jealous fear, lay on their oars in order to convince them, that they intended no injury. The Indians, however, drew their canoes on ſhore, and haſtily followed the women.

The men now began to be troubled with fluxes, on which account, at the requeſt of the ſurgeon, it was ordered, that no more muſcles (which had hitherto been found in plenty) ſhould be brought on board. The two veſſels ſailed in company on the 10th of this month, and, on the 11th they loſt ſight of each other, nor did they meet again during the whole courſe of the voyage. The Dolphin cleared the ſtreights this day, after having encountered innumerable difficulties and dangers on her paſſage through them, for the ſpace of three calendar months and 25 days. *

Among the obſervations of our author, he takes particular notice of the Spaniſh town built with a view to command the Maghellanic Streights. As the reader has had an account already of the wretched fate of the colony left there in 1581, we ſhall only take notice that moſt of them were ſtarved to death, and this uncomfortable place received the appellation of Port Famine, which it retains to this day. Cape Holland Bay, and the adjacent country where fiſh were caught in great plenty, produced alſo cranberries and wild celery; but no birds were to be found thereon. At Cape Gallant Bay they found wood, water, vegetables, and fiſh as well as at Elizabeth's Bay, and York Road. At Butler's Bay were procured rock-fiſh, muſcles, wild fowl, &c. Lion Cove, and Goodluck Bay, were found to produce nothing but wood and water. At Swallow harbour, where the mountains were the moſt deſolate that ever could be imagined they procured muſcles and rock fiſh, and wild fowl and fiſh were taken, while they were at anchor in Upright Bay.

Holding a weſtward courſe on Sunday the 12th of April, a number of gannets, pintadoes, and other birds were ſeen flying about the ſhip; the upper works of which being open, and the clothes and bedding always wet, in a few days the ſailors were attacked with colds and fevers. The ſick were brought on deck, on the 27th of this month, which proved a fine day; and they were nouriſhed with ſalop and portable ſoup in which wheat was boiled; but the violent winds ſoon viſiting them again, the bedding was wet through as before; and the ſhip being in danger of loſing her maſts, it was thought neceſſary to alter their courſe. From this time till the 14th of May, nothing material happened. On that day ſomething like high land appeared, and a number of brown birds were ſeen, but ſteering for the quarter where they expected to fall in with it, they found themſelves diſappointed; though the ſigns were ſometimes renewed. In ſhort, it was not till the 6th of June that land was really diſcovered to the W. N. W. This proved to be a low iſland, at five or ſix leagues diſtance, which was at length diſcovered from the deck, to the great joy of the ſhip's company.

When they came within five miles of this iſland another was diſcovered. To the firſt of theſe iſlands a boat was ſent, under the command of the ſecond lieutenant, the crew being properly provided with arms. On their approaching the ſhore, two canoes were ſeen to put off to the other iſland. The crews however landed, gathered ſome cocoa-nuts and a quantity of ſcurvy-graſs, and then returned to the ſhips, bringing with them ſome fiſh-hooks made of oyſter ſhells, that had belonged to the natives. In this excurſion they ſaw three huts, ſupported on poſts, and open all round, but thatched with cocoa and palm leaves, ingeniouſly wrought together. As no anchorage was to be found, and the whole iſland was encompaſſed with rocks and breakers, the captain reſolved to ſteer for the other iſland, giving the name of Whitſun Iſland to this, becauſe it was diſcovered on the eve of Whitſunday. Having approached the other iſland, about 50 of the natives, armed with pikes, and ſome having fire-brands in their hands, were obſerved running on the coaſt. Two boats were ſent out manned and armed, and the lieutenant was inſtructed to ſteer to that part of the ſhore where the people had been ſeen; to avoid offending them, and to endeavour to procure water and fruit in exchange for ſuch commodities as he took with him. When the boat came near the ſhore, the natives put themſelves in a poſition as if they would defend it with their pikes; but the crew making ſigns of friendſhip, and expoſing their trinkets, ſome of the Indians walked into the water; to whom it was hinted, that ſome cocoa-nuts and water would be acceptable; which was no ſooner done, than they fetched a ſmall quantity of each, which they ventured to bring to the boats, and received ſome nails and other trifles in exchange. While they were dealing, one of the Indians ſtole a ſilk handkerchief with its contents, but the thief could by no means be diſcovered. The boats were again diſpatched the next morning, with orders to land, if they could do it without offence to the natives. As they approached the ſhore, they obſerved ſeven large canoes, each with two maſts, lying ready for the Indians to embark in them; theſe having made ſigns to the crew to proceed farther, and this being done, the Indians embarked and ſailed weſtward, being joined by two canoes, at another part of the iſland. Theſe latter, two of which were laſhed together, appeared to be 30 feet in length, four in breadth, and three in depth. The people had long black hair hanging over their ſhoulders, were of a dark complexion, and of a middle ſize, and dreſſed in a kind of matting

Whitſun Iſland.

* It is to be obſerved here, as in the former voyage, that we have not ſo exactly copied the writer's account of all the bearings, diſtances, &c. in the courſe of the veſſels through theſe ſtreights, but have only ſelected what we thought might be moſt entertaining or inſtructive to the reader.

matting made faſt round the middle; and it was remarked that the women were beautiful, and the men juſtly proportioned.

The lieutenant being again ſent on ſhore, the captain commanded him to take poſſeſſion of the iſland in the king's name, and to call it *Queen Charlotte's Iſland*. The boats returned loaded with cocoa-nuts and ſcurvy-graſs after having found two wells of excellent water. Proviſions for a week were now alloted for a mate and twenty men, who were left on ſhore to fill water; the ſick were landed for the benefit of the air; and a number of hands were appointed to climb the cocoa-trees and gather the nuts, which, in their ſituation, were very deſireable. The water was brought on board on the 10th, but the cocoa-nuts, and vegetables, which the cutter was bringing off, were loſt by the rolling of the waves, that almoſt filled her with water. Afterwards they made an iſland where were found ſeveral tools, reſembling adzes, awls, and chiſſels, which were formed of ſhells and ſtones. The dead bodies were not buried, but left under a kind of canopy, to decay above ground.

Queen Charlotte's Iſland.

The ſhip ſailed again this day, after taking poſſeſſion of the iſlands for the king; in teſtimony of which they left a flag flying, and carved his majeſty's name on a piece of wood, and on the bark of ſeveral trees. They left ſhillings, ſixpences, halfpence, bottles, nails, hatchets, and other things for the uſe of the natives. It was remarkable, that on this iſland they found the very people who had fled from Queen Charlotte's Iſland, with ſeveral others, in the whole near 100. It lies in 19° 20′ ſouth lat. and 138° 30′ weſt long. and received the name of *Egmont Iſland*.

Egmont Iſland.

On the 11th they obſerved about ſixteen perſons on an iſland which was called *Glouceſter Iſland*; but as it was ſurrounded with rocks and breakers, they did not attempt to land. This day they likewiſe diſcovered another, which was called *Cumberland Iſland*; and, on the day following, a third, which received the name of Prince *William Henry's Iſland*.

Glouceſter Iſland.

Cumberland Iſland.

Prince William Henry's Iſland

On the 17th they again diſcovered land, and at ten at night ſaw a light, which convinced them that it was inhabited, and remarked, that there was a plenty of cocoa-trees, a certain proof that there was no want of water. An officer was ſent on ſhore the day following, with inſtructions to exchange ſome toys for ſuch things as the iſland produced. He ſaw a great number of the people, but could find no place where the ſhip might anchor. Some of the natives, who had white ſticks in their hands, appeared to have an authority over the reſt. While the lieutenant was trafficking with them, an Indian diving into the water, ſeized the grappling of the boat, while his companions on ſhore laid hold of the rope by which ſhe was faſtened, and attempted to draw her into the ſurf, but their endeavours were fruſtrated by the firing of a muſquet, on which they all let go their hold. Theſe Indians were dreſſed in a kind of cloth, a piece of which was brought to the ſhip. It was concluded from the number of the people ſeen, and their having ſome large double canoes on the ſhore, that there were larger iſlands at no great diſtance: the captain, therefore, having named this place Oſnabrugh Iſland, made ſail and ſoon diſcovering high-land, came to an anchor, becauſe the weather was very foggy.

Oſnabrugh Iſland.

The next morning early they ſaw land, diſtant four or five leagues; but, after having ſailed towards it ſome time, thought it prudent again to anchor, on account of the thickneſs of the fog; but it no ſooner cleared away, than they found the ſhip encompaſſed by a number of canoes, in which were many hundreds of people. Having approached the ſhip, they beheld it with wonder, and talked with great earneſtneſs. Some baubles were now ſhewn them, and ſigns were made for them to come on board, on which they rowed the canoes towards each other, and a general conſultation took place; at the concluſion of which they all ſurrounded the ſhip with an appearance of friendſhip, and one of them delivered an oration, at the concluſion of which he threw into the ſea the branch of a plantain-tree, which he had held in his hand. This being done, a young Indian, of more apparent courage than the reſt, ventured on board the ſhip. The captain would have given him ſome baubles, but he refuſed the acceptance of them till thoſe in the canoes came along-ſide, and, having held a conſultation, threw on board ſeveral branches of the plantain-tree. Others now ventured on board; but it was remarked, that they all got into the ſhip at ſome improper part, not one of them, even by accident, finding the right place of aſcent. 1767

A goat belonging to the ſhip, having run his horns againſt the back of one of the Indians, he looked round with ſurprize, and ſeeing the animal ready to renew the attack he ſprang over the ſhip's ſide, and was inſtantly followed by all his countrymen. Their terror, however, ſoon ſubſided, and they returned to the ſhip; and the ſheep, hogs, and poultry being ſhewn them, they intimated that they poſſeſſed the two latter ſpecies.

The captain then gave them nails and other trifles and made ſigns that he wanted hogs, fowls, and fruit; but they could not comprehend him. They were detected in ſeveral attempts to take away any thing they could lay hold of; but one of them, at length jumped overboard with a laced hat which he had ſnatched from one of the officers.

The inner parts of the iſland abounds in hills, cloathed with timber trees, above them are high peaks, from which large rivers deſcend to the ſea; the houſes, when ſeen at a diſtance, reſemble barns, having no ſhelter but a roof; the land towards the ſea is level, and produces the cocoa-nut, with a variety of other fruits, and the face of the whole country is pictureſque beyond deſcription. They now ſailed along the ſhore, while the canoes, which could not keep pace with them, made towards the land. In the afternoon the ſhip brought to, and the boats being ſent to ſound a bay that promiſed good anchorage, the Indian canoes flocked round them. The captain, apprehenſive that their deſigns were hoſtile, made a ſignal for the boats to return to the ſhip, and fired a gun over the heads of the Indians. Though they were frightened at the report, they attempted to prevent the return of the cutter; but ſhe eaſily out-ſailed them. This being obſerved by ſome canoes in a different ſtation, they intercepted her, and wounded ſome of her people with ſtones, which occaſioned the firing a muſquet, and ſome ſhot were lodged in the ſhoulder of the man who began the attack; which the Indians obſerving, they all made off with the utmoſt precipitation. The boats having reached the ſhip preparations were made for ſailing, but a large canoe making towards her at a great rate, it was reſolved to wait the event of her arrival; on which an Indian, making a ſpeech, threw a plantain branch on board, and the captain returned the compliment of peace, by giving them a branch, which had been left on board by the other Indians; ſome toys being likewiſe given them, they departed very well ſatisfied. They now ſailed, and the next morning were off a peak of land which was almoſt covered with the natives and their houſes. On the 21ſt the ſhip anchored, and ſeveral canoes came along-ſide of her, bringing a large quantity of fruit, with fowls and hogs, for which they received nails and toys in exchange.

The boats having been ſent to ſound along the coaſt, were followed by large double canoes, three of which ran at the cutter, ſtaved in her quarter, and otherwiſe damaged her, the Indians at the ſame time, armed with clubs, endeavouring to board her; the crew now fired, and wounded one man dangerouſly, and killing another, they both fell into the ſea, whither their companions dived after them, and got them into the canoe. They now tried if they could ſtand or ſit, but as one was quite dead, they laid him at the bottom of the canoe, and the wounded man was ſupported in a ſitting poſture. The ſhips boats now kept on their way, while ſome of the canoes went on ſhore, and others returned to the ſhip to renew

1767 their merchandiſe. While the boats continued out in ſeveral ſoundings, the natives ſwam off to them with water and fruit. The women were particularly urgent for the ſailors to land, and, putting off all their cloaths, gave hints, of the moſt indelicate nature, how acceptable their company would be. The boats being ſent on ſhore with ſome ſmall caſks to get water, the Indians filled two of them, and kept all the reſt for their trouble. When the boats came off the ſhore was crowded with thouſands of men, women, and children.

During this time, ſeveral canoes remained alongſide the ſhip, but the captain would not permit a ſingle Indian to go on board, as there was no guarding againſt their artful diſpoſitions.

On the 22d, the natives brought hogs, poultry and fruit to the ſhip, which they bartered for knives and other things, ſo that the whole crew was ſupplied with meat for two days, by means of this traffic. The boats having been this day ſent for water, every inducement was uſed by the inhabitants to perſuade them to land, and the behaviour of the women was ſtill more laſcivious than before. Having procured a ſmall quantity of water, the boats put off: on which the women ſhouted aloud, pelted them with apples and bananas, and ſhewed every mark of contempt and deteſtation.

They made ſail the following day, with intention to anchor off the watering-place, but, the man at the maſt-head diſcovering a bay a few miles to the leeward, they immediately ſtood for it. The boats, which were a-head, making a ſignal for an anchorage, they prepared to bring to; but when the ſhip had almoſt reached the place, ſhe ſuddenly ſtruck, and her head remained immoveable, fixed on a coral rock; in which ſituation ſhe remained near an hour, when ſhe was happily relieved by a breeze from the ſhore. During the whole time that ſhe was in danger of being wrecked, ſhe was encompaſſed by hundreds of Indians in their canoes; but not one of them attempted to board her.

The veſſel was now piloted round a reef, into an harbour, where ſhe moored. The maſter was then ſent to ſound the bay, and found ſafe anchorage in every part of it. In the mean time ſome ſmall canoes brought proviſions on board; but as the ſhore was crowded with large canoes, filled with men, the captain loaded and primed his guns, ſupplied his boats with muſqueteers, and kept a number of men under arms.

The ſhip ſailed up the harbour on the 24th and many canoes followed them, bringing proviſions, which were exchanged for nails, knives, &c. A number of very large canoes advanced in the evening, laden with ſtores, on which the captain ordered the ſtricteſt watch to be kept. At length ſome canoes came off; which had on board a number of women, who being brought almoſt under the ſhip, began to practiſe thoſe arts of indelicacy already mentioned. During this ſingular exhibition the large canoes came round the ſhip, ſome of the Indians playing on a kind of a flute, others ſinging, and the reſt blowing a ſort of ſhells. Soon after a large canoe advanced, in which was an awning; and on the top of it ſat one of the natives, holding ſome yellow and red feathers in his hands. The captain having conſented to his coming alongſide, he delivered the feathers, and while a preſent was preparing for him, he put back from the ſhip, and threw the branch of a cocoa-tree in the air. This was, doubtleſs, the ſignal for an onſet, for there was an inſtant ſhout from all the canoes, which, approaching the ſhip, poured volleys of ſtones into every part of her. On this two guns, loaded with ſmall ſhot, were fired, and the people on guard diſcharged their muſquets. The number of Indians round the ſhip were full 2000, and though they were at firſt diſconcerted, they ſoon recovered their ſpirits, and renewed the attack. Thouſands of the Indians were now obſerved on ſhore, embarking as faſt as the canoes could bring them off; orders were therefore given for firing the cannon, ſome of which were brought to bear upon the ſhore. This firing put a ſtop to all hoſtilities, on the part of the Indians, for a ſmall time; but the ſcattered canoes ſoon got together again; and, having hoiſted white ſtreamers, advanced, and threw ſtones of two pounds weight from ſlings, by which a number of the ſeamen were wounded. At this time ſeveral canoes approached the bow of the ſhip, from whence no ſhot had been yet diſcharged. In one of theſe was an Indian, who appeared to have an authority over the reſt, a gun was therefore levelled at his canoe, the ſhot of which ſplit it in two pieces. This put an end to the conteſt, the canoes rowed off with the utmoſt ſpeed, and the people on ſhore ran and concealed themſelves behind the hills.

After this, the captain ſailed for his intended anchoring place, and moored his ſhip within a little diſtance of a fine river. Some of his people who had been ſent to ſurvey the ſhore, returned the next morning with an account that they had found good freſh water (produced from the river abovementioned) but that there was not a canoe to be ſeen. A lieutenant was ſent the ſame day with all the boats, well manned and armed, and a number of marines, having orders to land his men under cover of the ſhip and boats. This being accordingly effected, he turned a piece of turf, and having hoiſted a broad pendant upon a ſtaff, took poſſeſſion of the iſle for his Britannic majeſty, naming it *King George the Third's Iſland*. Some rum being then mixed with the river-water, the king's health was drank by every perſon preſent. During the performance of this ceremony, two old men were ſeen on the oppoſite ſide of the river, who put themſelves in a ſupplicating poſture, and appeared to be much terrified. On this, the Engliſh made ſigns to them to croſs the river. One of them obeying the ſignal came over, and crawled on his hands and knees towards the lieutenant, who ſhewed him ſome ſtones that had been thrown at the veſſel, but took pains at the ſame time, to intimate, that no injury ſhould be done to the Indians, if they were not the aggreſſors. He then cauſed ſome hatchets to be produced, giving the Indian to underſtand that his people would be glad to exchange them for various kinds of proviſions. Some trifles were alſo given to this old man, who expreſſed his gratitude by his geſtures, and by dancing round the flag-ſtaff, but when they ſaw the pendant ſhaken by the wind, they ran back, with ſigns of fear and ſurpriſe. When they had recovered themſelves from their fright, they brought two hogs which they laid down, and began dancing round the pendant as before. The hogs were afterwards put into a canoe, which the old Indian rowed towards the ſhip; and when he came along-ſide of her, pronounced a ſerious oration, in the courſe of which he delivered a number of plantain leaves, (one at a time, ſomewhat in the manner of the North Americans cloſing their periods with belts of wampum.) After this he rowed back again, refuſing at that time to accept of any preſents.

King George the Third's Iſland.

The noiſe of drums and other inſtruments was heard this night, and the next morning it was obſerved that the pendant was taken away, and the natives had quitted the coaſt. While the caſks were filling with water, the old Indian already mentioned, croſſed the river, and brought the Engliſh ſome fowls and fruits. At this time the captain was ill, but though he was confined to the veſſel, he had remarked from thence by the help of glaſſes what was doing on ſhore. In the courſe of his obſervations, he perceived many of the natives creeping behind the buſhes towards the watering-place, at the ſame time that vaſt numbers advanced through the woods, and a large party came down the hill in view; all tending to the ſame quarter. Two diviſions of canoes were beſides ſeen making round the oppoſite ſides of the bay. As the lieutenant had likewiſe obſerved the threatened danger, he got his people on board the boats; previous to which he had ſent the old Indian to intimate to his countrymen that the crew wanted nothing but water, and to prevail on them to keep at a proper diſtance,

tance whilſt it was filling; but ſo far was this from having the proper effect, that the iſlanders made a prize of the caſks, and thoſe at ſome diſtance from the watering-place, went forward with all expedition, in order to keep pace with the canoes, which rowed along very ſwiftly. At the ſame time a number of women and children took their ſtation on a hill, which commanded a proſpect of the ſhipping. The canoes drawing near that part of the bay where the veſſel was at anchor, took in many from the ſhore who were laden with bags filled with ſtones. Then they rowed towards the ſhip, on which orders were given to fire on the firſt party that approached in the canoes, which being done, the Indians made off frightened and aſtoniſhed. Captain Wallis being now reſolved that this action ſhould put an end to all diſputes, incenſed at the behaviour of the natives, commanded his people to fire firſt into the wood, and afterwards towards the hill, whither the iſlanders had retreated; when finding at what a diſtance the guns could reach them, they diſperſed and diſappeared.

A ſkirmiſh with the natives of Otaheite.

After this, the boats were ſent out, a ſtrong guard being appointed to attend the carpenters, who, according to orders, deſtroyed all the Indian canoes which could be met with. At length a ſmall party of the natives came to the beach, ſtuck up ſome ſmall branches of trees, as if for tokens, and then retreated to the woods; however they came again, and brought ſome hogs and dogs with their legs tied, which they left on the ſhore, together with a quantity of ſuch cloth as they wore, all which they made ſigns to the ſailors to take away. On this, a boat was diſpatched which conveyed the hogs on board, but left behind the other articles; hatchets and nails were alſo depoſited on the beach in return for theſe preſents, but the Indians would by no means accept them till the cloth was taken away.

A party being employed in filling water on the 27th of this month, the old Indian was ſeen on the oppoſite ſide of the river. After having delivered an oration in his manner, he came over, when the officer referred him to the bags and ſtones which had been brought down, and uſed his endeavours to convince him that the Engliſh in the late action had acted only from motives of ſelf-defence. The old man, however ſeemed to think his countrymen much aggrieved, and with great openneſs intimated his opinion. However at laſt he ſuffered himſelf to be reconciled, ſhook hands with the lieutenant, and accepted ſome preſents from him. It was then hinted to him that it would be beſt for the people of the iſland to appear only in ſmall parties for the future, with which terms, the Indian appeared ſatisfied, and an advantageous traffic was afterwards eſtabliſhed with the natives.

Matters being thus ſettled, the ſick were ſent on ſhore, and were lodged, under the care of the ſurgeon, in tents near the watering place. This gentleman ſhooting a wild duck, it dropped on the oppoſite ſide of the river, in the preſence of ſome Indians, who fled directly; but ſtopping within a ſhort ſpace, one of them was at laſt perſuaded to bring the duck over, which he laid at the ſurgeon's feet, but, at the ſame time, the agitation of his mind was viſible in his countenance. Three ducks were killed by a ſecond ſhot, and the natives were by this time poſſeſſed with ſuch a notion of the effects of fire-arms, as whilſt it raiſed their admiration, was ſuppoſed to contribute in a great meaſure to their good behaviour towards the Engliſh during their ſtay in theſe parts, though there might be another reaſon aſſigned for this before their departure, as will be apparent in the ſequel.

The gunner was now appointed to manage all affairs of trade between the Indians and the ſailors, in order to prevent quarrelling and pilfering. This was a judicious choice; the natives ſometimes ſtole certain trifles, but immediate reſtitution was made on the ſight of a gun. Beſides, the old Indian made himſelf very ſerviceable in recovering any thing that might have been taken away. In particular, an Indian ſwam one day over the river, and pilfered a hatchet, on which the gunner making preparations, as if he meant to go in ſearch of him, the goods were reſtored by the old man's means, and the offender was alſo delivered up to the gunner. Though he had committed other robberies, yet the captain diſcharged him; and all his puniſhment conſiſted in his terrible apprehenſions. Being reſtored to his countrymen, he was conducted to the woods in the midſt of their ſhouts of applauſe. This man had the gratitude to bring a roaſted hog and ſome bread fruit to the gunner next day, as an acknowledgement for the lenity ſhewn him.

1767

The captain, firſt lieutenant, and purſer, were at this time very ill; ſo that the charge of the veſſel, and the care of the ſick, were committed to the ſecond lieutenant, who diſcharged his duty with zeal and fidelity; and fruit, fowls, and freſh pork, were procured in ſuch plenty that at the end of fourteen days almoſt every man had perfectly recovered his health.

A piece of ſalt-petre, of the ſize of a ſmall egg, was found on the 25th on the ſhore; but whether it was brought from the ſhip, or not, could not be learned, after the moſt diligent enquiry; but however, no other piece was found. On the 2d of July they began to want fruit and freſh meat, owing to the abſence of the old Indian, but they had ſtill a ſufficient ſupply for the ſick. On the 3d, the ſhip's bottom was examined, when its condition was found to be nearly the ſame as when ſhe left England. This day a ſhark was caught, which proved an acceptable preſent to the natives. The old Indian, who had viſited the interior parts of the iſland in queſt of proviſions, returned on the 5th, and brought with him a roaſted hog as a preſent for the captain, who in return, gave him a looking-glaſs, an iron pot, &c. His return was ſoon followed by ſome of the natives, who had never yet viſited the market, and who brought ſome hogs that were larger than any yet purchaſed.

Another ſort of traffic was now eſtabliſhed between the Indian girls and the ſailors. The price of a female's favours was a nail or two; but as the ſeamen could not always get at the nails, they drew them out of ſeveral parts of the ſhip; nor could the offenders be diſcovered by the ſtricteſt enquiry. The damage done to the veſſel might have been eaſily repaired; but a worſe conſequence aroſe from this traffic; for on the gunner's offering ſmall nails for hogs, the Indians produced large ſpikes, demanding ſuch as thoſe. Some of the men made uſe of a particular device to gratify their paſſions; for when they could procure no more nails, they cut lead into the ſhape of them, and paſſed thoſe pieces on their unſuſpecting paramours. When the Indians diſcovered the fraud, they demanded nails for the lead; but this juſt demand could not be granted, becauſe it would have promoted the ſtealing of lead, and likewiſe injured the traffic with iron. In conſequence of their connection with the women, the ſailors became ſo impatient of controul, that the articles of war were read, to awe them into obedience; and a corporal of marines was ſeverely puniſhed, for ſtriking the maſter at arms. The captain's health being nearly reſtored, he went in his boat to ſurvey the iſland, which he found extremely delightful, and every where well peopled.

On the 8th, the wood-cutters were entertained in a friendly manner by certain Indians, who ſeemed to be of a rank above thoſe they had yet ſeen, and ſome of theſe viſiting the captain, he laid before them a thirty-ſix-ſhilling piece, a guinea, a crown-piece, a dollar, ſome ſhillings, ſome new half-pence, and two large nails, intimating that they might take their choice, when they eagerly ſeized the nails, and then took a few half-pence, but left all the other pieces untouched.

The Indians now refuſed to ſupply the market, unleſs they could get large nails in exchange; the captain therefore ordered the ſhip to be ſearched, when it was found that almoſt all the hammock-nails were ſtolen, and great numbers drawn from different places; on which every man was ordered before the captain;

1767 who told them, that not a man should go on shore till the thieves were discovered; but no good consequence arose from his threats, at that time.

Three days after this, the gunner conducted to the ship a lady of an agreeable face, and portly mein, whose age seemed to be upwards of forty. This lady had but lately arrived in that part of the island, and the gunner observing that she seemed to have great authority, presented her with some toys, on which she invited him to her house, and gave him some fine hogs. She was afterwards taken on board, at her own desire. Her whole behaviour shewed her to be a woman of fine sense and superior rank; the captain presented her with a looking-glass and some toys, and gave her a handsome blue mantle, which he tied round her, with ribbands. As she then intimated that she should be glad to see him on shore, he signified his intention of visiting her the next day. Accordingly, on Saturday the 12th, Captain Wallis went on shore, where she met him, attended by a numerous retinue, some of whom she directed to carry the captain, and others who had been ill, over the river, and from thence to her habitation, and the procession was closed by a guard of marines and seamen. As they advanced, a great number of Indians crowded to see them; but, on a slight motion of her hand, they made room for the procession to pass. When they drew near her dwelling, many persons of both sexes advanced to meet her, whom she caused to kiss the captain's hand, while she signified that they were related to her. Her house was 320 feet in length, and about 40 in breadth. The roof, which was covered with the leaves of palm-tree, was supported by a row of pillars on each side, and another in the middle. The highest part of the thatch on the inside, was 30 feet from the ground, and the space between the sides of the building and the edge of the roof, which was about 12 feet, was left open.

Captain Wallis's meeting with the queen.

The captain, lieutenant, and purser, being seated, the lady helped four of her female attendants to pull off the gentlemens coats, shoes, and stockings, which was awkwardly performed; the girls however smoothed down the skin, and rubbed it lightly with their hands for more than half an hour. The surgeon, being heated with walking, having pulled off his wig, one of the Indians screamed out, and the eyes of the whole company were instantly fixed on the wonderful sight, and they remained for some time fixed in surprize. After this, the queen ordered several bales of cloth to be brought out, which were the produce of the country, which were now destined for the dress of the captain and his attendants. It was intended that the Captain should be carried as he had been before, but as he refused the offer, the queen walked arm in arm with him, and lifted him like an infant over such wet and dirty places as they came to in their way. She gave him a sow big with young, and took her leave when she had attended him to the beach. The gunner being dispatched to wait on her the next day with a present of bill-hooks, hatchets, &c. found her busied in entertaining some hundreds of the Indians who were regularly seated round her. She ordered a mess to be provided for the gunner, which he found to be very agreeable, and supposed to be fowls and apples cut small, and mixed with salt water. The provisions which were distributed by the queen, were served in cocoa shells, which her servants brought in a sort of trays. This lady took her seat somewhat above the rest of the company, and when they were supplied, was fed by two women servants, standing on each side of her.

It was observed that she received the captain's presents with an air of great satisfaction, and the supply of provisions brought to market was now greater than ever, but the prices were raised, in a great measure owing to the commerce between the English seamen and the women of the island, of which we have taken notice; for which reason, besides the orders given for restraining the people belonging to the crew from going on shore, it was also thought proper to prohibit any women from passing the river.

On the 14th of this month, the gunner being on shore, discovered a woman on the opposite side of the river, who seemed to be weeping in a most piteous manner. Perceiving that he seemed to take notice of her apparent distress, she sent a youth to him, who having made a long oration, laid a branch of plantain at his feet, after which he went to fetch the woman, and also brought two hogs with him. The youth now made a long speech, and, in the end, the gunner was given to understand that her husband and three of her sons, had been killed when the English fired on the Indians as above related. She fell speechless on the ground after she had told her tale of woe, and two lads that attended her, seemed also to be much affected. The gunner seeing her distressed situation endeavoured to console her, and at last she became a little calmer, offered him her hand, and directed the hogs to be given him, not would she accept any thing in return for her present. A large party rowed round the island in their boats on the 15th, in order to take a view of it, and to purchase provisions. Returning, they brought with them a number of hogs and fowls, and some cocoa-nuts. They found the island to be pleasant, and abounding with the necessaries of life, and saw a great number of canoes, several of which were not quite finished. The natives tools were formed of bones, stones, and shells. No other four-footed beasts but dogs and hogs, were seen. The inhabitants ate all their meat either baked or roasted, as they neither had any vessel wherein water could be boiled, nor seemed to entertain an idea that it could be heated by fire so as to answer any useful purpose. One morning, when the lady we have mentioned was at breakfast, an Indian that attended her having observed the cock of an urn turned, to fill a tea-pot, he also turned the cock, when the scalding water falling upon his hand, he cried out, and jumped about the cabin, while the Indians were equally surprised and terrified at the circumstance. The Captain received another visit from the queen on the 17th, and the same day a great quantity of provisions was purchased of some of the natives, whom the English had never before dealt with. The next day the queen repeated her visit, and made the captain a present of two hogs, and the master attending her home, she cloathed him in the dress of the country, as she had done the captain and his retinue. Their provisions received an increase on the 19th, by the gunner's sending on board a number of hogs and pigs, and abundance of fowls and fruits which he had purchased in the country. At this time an order was made that none of the sailors should be allowed to go on shore, except those that were appointed to procure wood, water, or other necessaries.

On the 21st the queen came again to visit Captain Wallis and presented him with some hogs. She likewise invited the captain to her house who attended her home with some of his officers. She tied wreaths of plaited hair round their hats, and on the captain's she put a tuft of feathers of various colours, by way of distinction. She came back with them as far as the water-side on their return and ordered some presents to be put into the boat at their departure. Captain Wallis having intimated before they put off, that he should leave the island in seven days time, he made signs that she wished him to stay twenty days; but he repeating his resolution, she hurried into a flood of tears.

The vessel was so well stored with hogs and poultry,

* On the 20th one of the sailors was sentenced to run the gauntlet three times round the deck, while the crew whipped him with nettles. This punishment (which however was not very severely inflicted by the men) was ordered on account of his having drawn pails from the ship, and it was thought proper to prevent this practice for the future, by hindering the seamen from going on shore, and thereby removing the temptation.

try, that the decks were covered with them, and as the men were more inclined to eat fruit than meat, they were killed faster than had been intended.* The captain presented his friend the old Indian with some cloth and other articles, and sent a number of things to the queen, among which were a cat with kitten, turkies, geese, hens, and several sorts of garden seeds. This compliment was returned by a present of fruit and hogs. Pease and other European seeds were sowed here, and the captain staid long enough to see them come up, and to observe that they were likely to thrive in the country.

A party was sent on shore on the 25th in order to examine the country, and a tent was erected for the purpose of observing an eclipse of the sun. When it was ended, the captain took his telescope to the queen, who shewed a surprise scarcely to be expressed, on discovering several objects with which she was well acquainted, but which were too distant to be seen without the help of a glass. He afterwards invited her and her retinue to come on board the ship, where an elegant dinner was prepared, of which all but the queen ate heartily; but she would neither eat nor drink. On the return of the party from their excursion, the queen was landed with her train. The captain still keeping in the same mind as to the time of his departure, she wept again on being informed of his resolution.

The party sent out this day, reported, That on their first landing they called on the old Indian, and took him into their company, walking some on one side of the river, and some on the other, till the ground rising almost perpendicular, they were all obliged to walk on one side. On the borders of the valley through which the river flowed, the soil was black and there were several houses with walled gardens, and plenty of fowls and hogs. In many places channels were cut to conduct the water from the hills to the plantations. No underwood was found beneath the trees, but there was good grass; the bread-fruit and apple-trees were set in rows upon the hills, and the cocoa-nut grew upon the level ground. The streams now meandered through various windings, and the crags of mountains hung over the travellers heads. When they had walked about four miles they rested, and began their breakfast under an apple tree. At this time they were alarmed by a loud shout from a number of natives. On this they were going to betake themselves to their arms, but the old Indian made signs that they should sit still. He then went to his countrymen, and it was presently observed that they became silent and withdrew. They afterwards returned, bringing with them some refreshments, in exchange for which they received buttons and other trifles from the lieutenant. The party then proceeded, looking every where for metals and ores, but found nothing of that sort worth attending to. And now the old Indian being tired, gave his English companions to understand that he was desirous of returning; but he did not leave them till he had given directions to the Indians to clear the way over a mountain. After his departure his countrymen cut branches from the trees, and laid them in a ceremonious manner at the feet of the seamen; they then painted themselves red with the berries of a tree, and stained their garments yellow with the bark of another. By the assistance of these people, the most difficult parts of the mountains were climbed, and they again refreshed themselves at its summit, when they saw other mountains so much above them, that they seemed as in a valley.

Towards the sea the prospect was inexpressibly beautiful, the sides of the hills being covered with trees, and the vallies with grass, while the whole country was interspersed with villages. They saw but few houses on the mountains above them, but as smoke was observed in many places, it was conjectured, that the highest were inhabited. Many springs gushed from the sides of the mountains, all of which were covered with wood on the sides and with fern on the summit. The soil even on the high land was rich, and the sugar cane grew without cultivation; as did likewise turmeric and ginger. 1767

Having a third time refreshed themselves, they descended towards the ship, occasionally deviating from the direct way, tempted by the pleasant situation of several houses, the inhabitants of which entertained them in the most hospitable manner. They saw parrots, parroquets, green doves, and ducks. The lieutenant planted the stones of cherries, peaches and plumbs, several kinds of garden seeds, and oranges, lemons and limes. In the afternoon they rested on a delightful spot, where the inhabitants dressed them two hogs and several fowls. Here they staid till evening, when they rewarded the diligence of their guides, and repaired to the ship. Captain Wallis prepares to leave Otahite.

On the 26th, the captain was visited by the queen with her usual presents, and this day they discontinued taking in wood and water, and prepared for sailing. A greater number of Indians now came to the sea-shore, than they had ever yet seen; and of these several appeared to be persons of consequence. In the afternoon the queen visited Captain Wallis, and solicited him to remain ten days longer; but being informed that he should certainly sail on the following day, she burst into tears. She now demanded when he would come again, and was told in 50 days; she remained on board till evening, when being informed that the boat waited for her, she wept with more violence than she had yet done. At length this affectionate woman went over the ship's side, as did the old Indian who had been so serviceable to the crew. This man had signified that his son should sail with the captain; but when the time came the youth was not to be found, from whence it was concluded that parental affection had caused the old man to forfeit his word. The next morning early two boats were sent to fill a few casks of water; but the officer, alarmed at finding the shore crowded with the natives, prepared to return. This occasioned the queen to come forward, who ordered the Indians to retire to the other side of the river, after which she made signs for the boats to come on shore. While they were filling the water she ordered some presents to be put into the boat, and earnestly desired to go once more to the ship, but the officer being ordered not to bring off a single native, she ordered her double canoe out, and was followed by many others. When she had been on board for an hour, weeping and lamenting, the English took advantage of a fresh breeze, and got under sail. She now embraced the captain and officers, and left the ship; but as the wind fell, the canoes put back, and reached the ship again, to which the queen's was made fast, and advancing to the bow of it she there renewed her lamentations. Captain Wallis presented her with several articles of use and ornament, all which she received in mournful silence. The breeze springing up again, the queen and her attendants took their final leave, and tears were shed on both sides.

The place where the ship had lain at anchor, was called Port Royal Harbour, and is situate in 17° 30′ of south lat. and 150° of west long.

Customs and manners of the natives.

The following are the particulars of Captain Wallis's farther account of customs, manners, &c. of the people of Otaheite. With regard to their stature he says, the men are from five feet seven to five feet ten inches high, the standard of the women, in general, near three inches shorter, the tallest among them being about five feet seven inches, they were mostly handsome, and some of them are described as being really beautiful. The complexion of such of the men as are much employed on the water is reddish, but their natural colour is what is called tawny. The colour of their hair is not like that of the East Indians and Americans, black, but is diversified like that of the Europeans, having among them black, brown,

* A boat and sow of this kind were sent over and presented to Mr. Stephens, secretary to the Admiralty, the latter of which died in farrowing.

1767 fed and flaxen, moſt of the children being remarked for the latter. When it is left looſe, it has a ſtrong natural curl; but they are accuſtomed to tie it in two bunches, one on each ſide of the head, or in a ſingle one in the middle. They anoint their heads with cocoa-nut oil, mixed with a fragrant ſmelling root.

The females, as has been mentioned, have not the idea of chaſtity's being a virtue, but the beauty of their perſons generally fixes the price of their charms. If a man offered a girl to a ſeaman, he ſhewed a ſtick of the ſize of the nail which was to be given for the gratification of the Engliſhman's deſires.

Two pieces of cloth, which bear ſome reſemblance to China paper, form their apparel; in one of theſe a hole is made for the head to paſs through, and this hangs to the middle of the leg: the whole is wrapped round the body, and forms a drapery which is not inelegant. The cloth is made of the bark of a tree; and their ornaments conſiſt of pearls, ſhells, flowers, and feathers.

The hinder parts of the thighs and loins of both ſexes are marked with black lines in different forms, which is effected by forcing the teeth of an inſtrument through the ſkin, and then rubbing ſoot and and oil into the holes ſo made. There were ſome of the men who ſeemed to be of rank among them, that had their legs marked, but neither boys nor girls under the age of twelve years had this ceremony performed upon them.

One of the queen's attendants who took great pleaſure in imitating the Engliſh, was preſented with a ſuit of the lieutenant's cloaths, in which he looked very well. The officers being carried on ſhore by the Indians, becauſe it was ſhoal-water at the landing place; this man was carried in the ſame manner, reſolving not to be out of the faſhion. It was laughable enough to obſerve his firſt attempts to make uſe of a knife and fork, his hand going to his mouth regularly enough, while the fork retained the meat which he intended to ſwallow.

The people of Otaheite eat dog's fleſh, beſides fiſh and the articles already mentioned. Of the common method of dreſſing their food, we have the following account: Having made a fire by rubbing two dry ſticks together, they dig a pit which they pave with ſtones, and put their fire in it. Theſe ſtones being well heated, they clear away the aſhes, and having laid green leaves of the cocoa-nut at the bottom of the pit, they put in their meat, wrapped up in plantain leaves, and cover it over with the hot aſhes, on which they alſo place a layer of the bread-fruit wrapped up in the ſame manner: theſe again they cover with the embers intermixed with hot ſtones, and cloſe the whole with a covering of earth. In this manner a ſmall hog may be dreſſed whole, but a large one is cut in two. This method of dreſſing, Captain Wallis found perfectly agreeable to his palate, and thought it excelled any that he had ever known before. It appears to be nearly the ſame with that which was ſaid to be uſed by the Iriſh (eſpecially their militia) at an early period of their hiſtory. The ſauces which the Indians uſed were fruit and ſalt water, and they had no other knives but ſuch as were made of ſhells. When they ſaw meat boiled they were amazed, having, as before obſerved, no idea of heating water; the captain, however, gave the queen and her chiefs ſome iron pots, which brought them into uſe, and the old Indian generally boiled his meat. Their only liquor is water.

The Engliſh concluded from the ſcars which they perceived on the bodies of theſe Indians, that they were not without their wars, and it appeared that they were not ignorant of ſurgery.*

Several ſheds were obſerved upon the iſland, on the outſide of which were poſts fixed in the ground, whereon were the reſemblances of human creatures as well as of dogs and hogs. The area incloſed was paved with broad ſtones, the graſs growing between them; the natives entering theſe incloſures with an appearance of ſorrow, they were judged to be the burial-places of their anceſtors. Captain Wallis diſcovered no traces of religious worſhip among theſe iſlanders. The arms of the inhabitants were bows and arrows, clubs, and ſlings for ſtones, as we have already mentioned. With regard to their navigation, they had three kinds of canoes; one made of a ſingle tree, in which they go out to fiſh, another made of planks ſewed together, and large enough to hold 20 or 30 men; in which they ſail round the iſland and come home laden with fruits; and a third ſort not unlike the gondolas of Venice, and which they uſed when they ſailed on parties of pleaſure. They make a proceſſion in theſe two or three times a week, with ſtreamers flying, attended by the ſmaller canoes, their countrymen crowding the ſhores to view them. They are arrayed in their beſt garments on theſe occaſions, and while ſome are under a large awning others ſit upon it. On the prow of each veſſel two men ſit habited in red, but white is the dreſs of the ſteerſman.

The iſland is repreſented by our voyagers as one of the moſt pleaſant in the world. The air is pure, the country abounds in wood and herbage. It harbours no venomous animals. The ſouth-eaſt parts which produced abundance of fruit, were the beſt peopled of any place on the iſland.

From this harbour the Dolphin ſailed on the 27th of July, and paſſed by the *Duke of York's Iſland*, and on the 28th diſcovered land, which they called *Sir Charles Saunders's Iſland*. There were but few inhabitants there, who lived in huts, and the cocoa-nut and other trees grow along the ſhore.

They made land again on the 30th day of the month, which they called *Lord Howe's Iſland*; coming afterwards to ſome very dangerous ſhoals, they gave them the appellation of Scilly Iſlands, from the reſemblance they bore to that rocky part of Britain. Lord Howe's Iſland. Scilly Iſland.

They now ſteered weſtward, and came within ſight of two iſles, one of which they denominated *Keppel's*, and the other *Boſcawen's Iſland*. They diſcovered ſeveral inhabitants on the former, but ſteered towards the latter, as they thought its appearance more promiſing; but ſome breakers at a conſiderable diſtance from the land prevented their attempting to anchor there. The boats being ſent to the iſland brought two fowls beſides cocoa-nuts and other fruit. The officer who was ſent, obſerved that the inhabitants ſomewhat reſembled thoſe of *Otaheite*. Some of them had ventured into the boat, but ſoon jumped out and ſwam back again. Theſe people were dreſſed in a ſort of matting, and were remarkable for having the joints of their little fingers cut off. Finding no convenient watering-place here, and the veſſel having received ſuch damages as rendered it unſafe for her to encounter a rough ſea, Captain Wallis reſolved to ſteer for Tinian, to ſail from thence to Batavia, and ſo return by way of the Cape of Good hope to England. On this account, he paſſed by this iſland, of which we have no farther account than it appeared to be well inhabited, and was of a circular figure. Keppel's and Boſcawen's Iſlands.

Land was again diſcovered on the 16th of Auguſt, to which the officers gave the name of *Wallis's Iſland*. The coaſt of it is very rocky, and the trees grow almoſt to the water edge. The natives wore no covering but a ſort of mat, which each of them had about the waiſt, and they all carried large clubs, two of which the boat's crew purchaſed. Theſe ſavages endeavoured to ſteal the cutter, by hauling her upon the rocks; but a gun being fired cloſe to the face of one of them, they Wallis's Iſland.

* One of the ſailors having run a ſplinter into his foot, his meſſmate tried in vain to extract it with his pen-knife, which one of the natives obſerving, formed an inſtrument out of a ſhell with his teeth with which he preſently extracted it, and the old Indian applied ſome of the gum of the apple-tree to the wound, which in two days was healed.

they retreated with precipitation. Obſerving the boats on their return to the ſhip, to be much hindered by points of rocks, the Indians followed them, but rowed back again, as ſoon as they ſaw them in deep water. Though no ſort of metal was ſeen on any of theſe new-diſcovered iſlands, yet as ſoon as the natives procured a piece of iron, they began endeavouring to ſharpen it, and were not obſerved to do the ſame either to braſs or copper.

From hence they ſailed to the north-weſt, and obſerved a great number of birds flying about the ſhips on the 28th. Having caught one of them, it was obſerved to be web-footed, but in every other particular it reſembled a dove. They ſaw land on the 3d of September, which they ſuppoſed to be two of the Piſcadores. The ſame day an Indian praw approached the veſſel, on which they hoiſted Spaniſh colours, but ſhe ſtopped at two miles diſtance. They ſaw ſeveral birds on the 9th; on the 18th they made the iſland of Saypan, and ſoon after that of Tinian, at which latter they came to an anchor the next day.

The boats were now ſent on ſhore, and returned in due time, laden with cocoa-nuts, oranges, and limes, when the ſick were ſent on ſhore, where tents were provided for their reception. The carpenter's cheſt, and the ſmith's forge were alſo landed, and the captain and firſt lieutenant, who ſtill continued ill, went on ſhore, as did alſo a party of men to hunt for cattle, who preſently caught a young bull of great weight, and found bread-fruit in great plenty, as well as oranges and limes. Theſe hunting expeditions, however, were rendered ſo fatiguing, by going through thickets for many miles, that one party was ordered to relieve another. In the mean time, the ſecond lieutenant being ſent to reſide in the northern quarter of the iſland, where they judged cattle to be moſt plentiful, a boat was ſent every day to bring off what he caught. Thus, at length, they ſupplied themſelves with beef, pork, and poultry, and all ſuch fruits and refreſhments as Commodore Anſon met with when he touched at this place.

They left Tinian on the 15th of October, their ſick being recovered, and directed their courſe to the weſtward. On the 21ſt and 22d they ſaw ſeveral gannets, and on the 23d a violent ſtorm aroſe, while the ſhip made more water than ſhe had ever done before. This bad weather was accompanied by thunder, lightning, rain, and a ſea ſo violent, as to waſh overboard many heavy things, and even to break the iron-work of the gunwale. It did not abate till the 27th, when they once more ſaw the ſun, and the next day the weather grew more moderate. They loſt one man at this time, who, as it was generally ſuppoſed, had taken too much liquor and fallen overboard.

They diſcovered three iſlands on the 3d of November, to which they gave the names of *Sandy Iſland*, *Small Key*, and *Long Iſland*; and the next day they ſaw another, which Captain Wallis called *New Iſland*. All theſe lay, by account, in the 10th deg. of ſouth lat. and 247° of weſt long. They kept on their courſe till the 8th, when it was altered, and the inferior officers and men delivered up the log and journal books of the voyage. On the 13th they ſaw the iſlands of Timoan, Aras, and Peſang. They croſſed the equinoctial line on the 16th, and came again into ſouth latitude.

Sandy Iſland, Small Key and Long Iſland. New Iſland.

The next day they ſaw Pulo Toté, and Pulo Weſte, [Pulo as we have before obſerved, ſignifies an iſland] and had ſight of the ſeven iſlands ſoon after. The following night was extremely tempeſtuous, and ſo dark that, except by the flaſhes of lightning, they could not ſee acroſs the ſhip. One of theſe flaſhes, however, afforded them ſo much light as to perceive a veſſel of conſiderable ſize, which was almoſt aboard them, before ſhe was diſcovered; but as the ſtorm was too loud for them to hear each other, they could not diſcover whence ſhe came, nor to what nation ſhe belonged. This was the firſt ſhip they had ſeen ſince their ſeparation from the Swallow ſloop. Pulo Taya was diſcovered the next morning, near which they came to an anchor in the evening. The ſucceeding morning they ſailed, but the current occaſioning them to loſe way that evening alſo, they anchored again. They loſt an anchor the next day, the cable being cut away by the rocks. 1767

They made the coaſt of Sumatra, on the 22d, and came to anchor in the road of Batavia on the 3d of November. The captain ſaluted the Dutch governor, the next day with 13 guns which compliment was returned with an additional gun; and beef, vegetables, and other neceſſaries were ſoon ſupplied, permiſſion having been obtained for that purpoſe. At this time, however, it was thought proper to threaten with puniſhment any of the crew that ſhould bring liquor on board. None were ſuffered to leave the ſhip but ſuch as were called on ſhore by their duty, and even theſe were not allowed to enter the town, to prevent the ill conſequences which might ariſe from the immoderate uſe of the Batavia arrack.

The Falmouth ſhip of war was now lying in the road in a moſt ſhattered condition. The warrant officers of this ſhip ſent a petition to Captain Wallis, on the 5th of December, wherein they ſet forth, "That the Dutch had cauſed their powder to be thrown into the ſea; that the gunner was dead; that their misfortunes had deprived the boatſwain of his ſenſes, who was then a lunatic in the Dutch hoſpital; that his ſtores were all ſpoiled; that the cook had been wounded, and remained a cripple; and that the carpenter was near death." On theſe accounts, they intreated that the captain would give them a paſſage to England, or at leaſt diſmiſs them from the ſhip. But they received for anſwer that neither of theſe requeſts could be granted, for as they had taken charge of ſtores, they muſt wait for orders from England. In their reply to this they obſerved, "That they had not received a ſingle order ſince their being left in the Batavia road; that they had ten years pay due, and would rather go home ſweepers than remain in that wretched ſituation; that they were never permitted to ſleep on ſhore, and when they were ſick, no perſon had the humanity to attend them; that the Malays frequently robbed them, and that they expected nothing but deſtruction from thoſe people, as they had burned the Siam prize not long before the arrival of the Dolphin." All they could obtain from the captain, in alleviation of theſe diſtreſſes, was that he would make their caſe known in England. Diſtreſs of the Falmouth.

Several neceſſary ſtores being now wanted, Captain Wallis went on ſhore, with a deſign of providing them, but when he attempted to treat with the Dutch, their demands were ſo high that he did not think it prudent to comply with them, but determined to depart, and accordingly ſailed on the 8th of December, without loſing a ſingle man, and having only two ſick on board. But on the 11th the ſhip's company were viſited by the flux, which proved a great affliction. On the 12th they ſaw the coaſt of Java, where there were a number of lights placed, as it was ſuppoſed, in order to decoy the fiſh and bring them near the ſhore. They came to an anchor off Prince's Iſland on the 14th, where they took in wood and water, and purchaſed turtle, poultry, and other refreſhments, and remained till the 20th *. They buried three men here, and beſides the flux, many were ſeized with a putrid fever, the nature of which latter diſorder rendered it dangerous to attend the ſick. The ſhip at this time made four feet water in three hours, and thus they proceeded on their voyage till the 10th of January, when the ſickneſs began to abate. They were attacked by a violent tempeſt on the 24th, which tore their

* While they lay at anchor there, one of the ſailors fell from the main-yard into the barge, which was alongſide the ſhip, and threw down two others, one of whom was ſo much bruiſed, that he expired in four days, the other had only his toe broken. The man that fell was terribly bruiſed, and broke ſeveral of his bones.

1768 their ſails, carried five of their booms overboard, and broke a rudder chain. It was remarkable that ſeveral birds and butterflies were ſeen during the continuance of this ſtorm. They ſaw land on the 30th, and on the 4th of February anchored in Table-Bay, at the Cape of Good Hope.

The captain having ſaluted the governor and the veſſels in the harbour, and the ſalute being returned, freſh meat and vegetables were ſent for, and obtained, to the great refreſhment of the crew. Orders were likewiſe given the ſurgeon to endeavour to procure lodgings on ſhore for the ſick; but the rate demanded was ſo exorbitant at the ſame time that the ſmall pox made great havock, that the captain, with permiſſion of the governor, erected tents on a plain about two miles diſtant from the town, and the ſick were ſoon after ſent on ſhore.

Strict orders were given that no ſtrong liquors ſhould be brought into thoſe tents, but extra proviſions were procured for thoſe that were moſt weakened by ſickneſs, and none were permitted to enter the town. In the mean time all thoſe that were able to labour, were ſet about refitting the ſhip, a neceſſary work, which was almoſt finiſhed by the 10th of February. The orders were now in ſome meaſure relaxed, as, after this time, many of the ſhip's company that had had the ſmall-pox were allowed to viſit the town, and the others made country excurſions, which were likely to contribute to the preſervation of their health. As to the captain, he was ſtill ill, and all the time the ſhip remained here, he reſided at a country houſe ſome miles diſtant from the ſhore. Here thoſe neceſſaries which were ſo dear at Batavia, were purchaſed at moderate prices, and freſh water was procured by diſtillation, to convince the captains of the Indiamen lying in the bay, how eaſily wholeſome water might be procured at ſea.*

All hands being ordered on board, on the 25th, there were only three found not able to do duty, and the ſhip ſailed on the 3d of March, after having taken ſome ſheep on board for their ſea-ſtore.

They anchored at St. Helena on the 17th where they ſent people to gather purſlain, and procure water. The captain going on ſhore, was ſaluted from the fort, where he was invited to take up his reſidence as long as he choſe to remain on the iſland; but the wind proving favourable the next day, he weighed anchor and departed.

They croſſed the equinoctial line on the 28th and proceeding on their voyage towards England, on the 11th of May, they diſcovered the Savage ſloop of war, in full chace of a ſloop, at which ſhe fired ſeveral guns: Captain Wallis, obſerving this, likewiſe fired at the chace, and bringing her to, ſhe was found to be a veſſel laden with tea, brandy, &c. and the captain ſuſpecting ſhe was a ſmuggler, detained her, to bring her to England. He now held on his courſe, without meeting with any thing worth notice, till he came to an anchor in the Downs, on the 20th of May, 1768, having thus accompliſhed the circumnavigation of the globe. The adventures which befel his conſort the Swallow, the reader will find related in the ſubſequent pages.

THE VOYAGE OF CAPTAIN CARTERET,

Round the World, in the Swallow Sloop.

THIS gentleman who had ſailed with Commodore Byron on his expedition, ſoon after his return, was appointed commander of the Swallow ſloop, which was deſtined to accompany the Dolphin and Prince Frederic ſtore-ſhip. Nothing material happened before the ſeparation of the two veſſels, except that while the Swallow lay in the road of Madeira, nine of her beſt ſailors took it into their heads to ſwim on ſhore, taking nothing with them except their money which they tied in their handkerchiefs round their bodies. When the captain was about to write to the conſul, to requeſt his aſſiſtance for the recovering theſe men, he received information that they had been found naked on the ſhore, aſhamed of their ridiculous ſituation, and heartily tired of their frolic. A boat was ſent to fetch them on board, and when they where brought back, all the reaſon they could give for this temporary deſertion was only that they were reſolved to have a ſkinful of liquor, as they were on a long voyage and it was uncertain whether they might live or die. The captain thinking they had contributed ſufficiently to their own puniſhment, paſſed the matter by, to the ſatisfaction of the whole ſhip's company.

The reader will remember that on the 11th of April the Swallow parted from the Dolphin and Prince Frederic. At nine o'clock that day Captain Carteret had intirely loſt ſight of the Dolphin, which he judged to be then clear of the ſtreights mouth, and his own veſſel being under land where ſhe had not any conſiderable breeze, he entertained but little hope of meeting with his conſort again.

They had not been long ſeparated before the Swallow experienced a violent tempeſt, during which tho' they were within half a mile of a mountainous land, it could not be diſcerned. The boat was then gone off, in ſearch of an anchoring place, and when night ſucceeded, the darkneſs was ſuch that they could not ſee half the length of the ſhip. In theſe circumſtances it was judged proper to hoiſt lights, and to fire a gun every half hour, by means of which precautions the boat was enabled to return to them in ſafety. The next morning ſhe was ſent off again upon the ſame errand, and the captain had given over the hopes of her return, when, in the afternoon, he diſcovered her ſounding a bay, on which he immediately ſtood towards her, and came to an anchor in the ſame place.

The veſſel being thus ſecured, Captain Carteret had juſt retired to repoſe himſelf when he was diſturbed by a noiſe on the deck, and he heard numbers running up to join their companions; being alarmed, he quitted the cabin to know the cauſe of this hurry. He had ſcarcely come forward before he heard all the men crying out, The Dolphin! the Dolphin! But this appearance of a ſail ſoon vaniſhed, originating only from water forced up and whirled in the air by a guſt of wind from ſome of the neighbouring hills.—Muſcles are found in this bay, and the borders of it afford wood and water, and abound with wild geeſe.—They ſailed from hence on the 15th of April.

While Captain Carteret was thus proceeding on ſo long a voyage, it was but an uncomfortable reflection that the cloth, linen, cutlery wares, and toys, were on board the Dolphin, ſo that he had no articles fit for Indian commerce. However, he encouraged his men, from the firſt, to proceed, being reſolved to accompliſh what he had undertaken.

Soon after they had left this bay, the wind ſuddenly ſhifting

* This was performed in the following manner: Fifty-ſix gallons of water were put into the ſtill at five in the morning, and thirty-ſix gallons of freſh water were got by about a quarter after ten; thirteen gallons and a half remaining in the ſtill. But the proceſs conſumed ſixty-nine pounds of coals, and ſix pounds of wood.

shifting, they met with another storm, so violent that they were in danger of sinking. They durst not however, take in any sails, for fear of running foul of some rocky islands, which in Narborough's voyage are called the Islands of Directions; nor could they go back into the streight, without the danger of running foul of the lee-shore; yet, notwithstanding their best endeavours, the ship made hastily towards it. They were therefore compelled to stave the water-casks on and between the decks, in order to carry better sail; and by this expedient, escaped ship-wreck, and got into the open sea, after a very seasonable deliverance; for, had the wind shifted again, the ship must have been unavoidably lost.

They now steered a northward course along the coast of Chili; but as the water on board was deemed insufficient for the length of the voyage, the captain proposed touching at the island of Juan Fernandez, or at Massafuero, to take in a proper quantity. On the 15th, the wind which had been hitherto favourable for their sailing northward, and consequently getting into a more temperate climate, suddenly shifted, and continued contrary till the 18th of April, blowing violently all the time, with thunder, lightening, rain and hail, at intervals, adding to the horror of the tempest.

They saw abundance of sea-birds at this time, among which were two sorts; one like a pigeon, which the seamen called the Cape of Good Hope Hen; and the Peterels, which they term, Mother Carey's Chickens, and are reckoned to forebode a storm. They had continual bad weather from the 27th of this month, till the first of May, and on this day a prodigious sea laid the whole ship under water for some time, while it blew a hurricane, and the rain poured down in torrents. The wind now shifted so that the head of the vessel came right against a mountainous sea, which repeatedly broke over the forecastle, as far as the main-mast, so that it was in danger of sinking.

The weather became afterwards something more moderate, and they repaired in some degree the damage the ship had sustained during the storm; but they had not much fine weather afterwards till the 9th of May, when they were in sight of the island of Massafuero: and on the 10th they saw Juan Fernandez, and sailed round to Cumberland Bay on the east side of it. The Spaniards had fortified this island, a circumstance till then unknown to Captain Carteret. A number of men were seen on the shore, and two large boats lying on the beach. A house and four pieces of cannon were observed near the sea-side; and on the brow of a hill, at a small distance, was a fort with Spanish colours flying on it. Many cattle were seen on the hills, and about 20 houses on different parts of the island. The wind blew so strong out of the bay, that it was impossible to get very near it: they therefore sailed westward, and were followed by one of the Spanish boats; but she soon returned, on observing that the wind kept them out of the harbour. On the eastern side of the west bay, they saw a kind of guard-house with two pieces of cannon, on carriages near it. They now returned towards Cumberland Bay, when the boat again put after them; but night coming on they lost sight of her. Captain Carteret did not hoist any colours during all this time, because he had none but English ones on board.

Heartily chagrined at this disappointment, they steered for Massafuero, where they came to an anchor on the 12th, but found it then impossible to land, as the beach was rocky, and the surf ran so violently that the ablest swimmers could not force their way through the breaches. However, the boats landed and filled some water-casks the next morning. They anchored on the east side of the island on the 15th, but were driven from their moorings, and kept out at sea all night. The cutter was sent for water in the morning, and the ship got near the shore, where she took several casks on board, and sent back for more, employing the long-boat likewise on this service, and also to carry provisions to those of the crew that were on the island. The boats being seen running along the shore in the afternoon, the ship followed and took them in; but in such a condition that the whole night was spent by the carpenters in refitting them, and repairing the damage. The cutter was sent again for water on the 17th, and returning, the lieutenant brought information that such torrents of rain and overflowing water had deluged the land, that many of the casks were lost; and the men had enough to do, to save themselves from being drowned. The lieutenant having seen several rivulets produced by the rain that had fallen, proposed to go and fill the remaining casks, but he had not been long gone before there were all the signs of an approaching storm. It thundered and lightened surprisingly, and as it was grown quite dark, those in the ship (which kept near the shore) began to fear their boat was lost; but she came along-side just in time to save her from a squall which, in all human probability, must have sent her to the bottom. It appeared that three of the sailors having swam on shore with the casks, before the storm began, the lieutenant was under a necessity of leaving them behind him, naked and exposed to all the fury of the tempest. 1767

They returned however, the next day, and related what had passed while they were left upon the island.—As long as the day-light continued, they had still some hopes of regaining the boat; but when the darkness came on, finding their situation cold and damp, they began to think it was in vain at that time to expect a deliverance; and therefore began to consider by what means they should best be able to abide the inconveniences of the weather. The only expedient they could hit on, was to lie alternately each between the other two, till day-light. Then they rose and proceeded by the sea-shore towards the tent; but being often interrupted by high points of land, they ventured to swim round them, and that at such a distance, as to avoid the danger of the rocks; but they certainly ran as great a risque from the sharks which abound in those latitudes. They were fortunate enough, however, to surmount all difficulties, and arrived in safety at the watering-place, where their brother sailors chearfully shared with them their cloaths and provisions. When they came on board, they were allowed a whole night's rest, and appeared to be in perfect health the next morning. These were three of the nine men who had swam on shore at Madeira, as has been already related.

Such a quantity of fish was taken this day by the boat's crew with hooks and lines only as proved sufficient for the whole ship's company. On the 20th, the ship which had been standing off and on for some time, came to an anchor again. That night, and all the next day they had bad weather, but as soon as it grew a little calmer, the seamen were sent on shore to kill seals, and make oil of their fat to burn for their lamps. The boats being sent on shore on the 22d, returned with a number of Pintado birds, which they got from the natives, who said that when the wind blew high on the night, these birds flew into the fire in such numbers, that they caught several hundreds of them.

As much water as the weather would admit of being brought off, was shipped on the 23d, but by the violence of the surf several of the casks were lost. This succession of bad weather made the captain impatient to be gone. Accordingly, orders were issued for all those on shore to repair on board with the greatest expedition. The vessel was at the same time driven from her moorings into deep water, dragging the anchor after her. They were obliged to lie to, now under bare poles, waiting for the boats; in the mean time the wind was so violent as to raise the sea above the mast-head. The long-boat was taken on board with ten of the men in the evening; but the cutter with the lieutenant and eighteen more still remained.—About midnight, the weather became somewhat more moderate; on which the ship stood in for the land, and was near the shore the next morning. The cutter was not then in sight, but being discovered about

1767 noon close under the land, her crew were got on board within three hours. The people had made an attempt to come off the preceding evening, but had scarcely quitted the shore when their boat filled with water, and was in danger of going to the bottom. With difficulty they regained the shore, where she remained all night. The crew not having seen the ship in the morning, had given her over for lost, and, having taken the proper means to secure their little vessel, thought of nothing but waiting till the summer, when they might embark in her for Juan Fernandez.

Massafuero. The island of Massafuero, on the coast of which the Swallow was in such danger, is about 22 miles in circumference: it is of a triangular form, and appears like a single rock at a distance. It has many good anchoring places, and there are abundance of goats upon the island: cod, hallibut, and cray-fish are got there in great numbers, and the seals are almost innumerable. There are plenty of birds, among which are some very large hawks; and the mountain cabbage is found in this country.

Having quitted this coast, the captain sailed northward, with a view of catching the south-east trade wind. When he had gone farther north than he at first intended, he searched for the islands of St. Felix, and St. Ambrose, but could not hit upon either of them; he also sought for the supposed continent called Davis's Land, but with no better success. Indeed, as to the latter, he concluded that there was no such land in reality existing. They continued thus wandering over the ocean till the 17th of June, when the weather was cold and dark, with frequent sleet and rain, and thunder and lightning. In the midst of this gloom, which was scarcely ever cheared by sun-shine, being the very sport of the winds, they were obliged to carry as much sail as possible, lest they should perish by famine before the ship could be brought into any port where the crew might be supplied with provisions.

At length, on the 2d of July, they saw an island that was cloathed with verdure, and down the side of which ran a stream of fresh water. This they called after the name of the person that first discovered it, *Pitcairn's Island.*

Pitcairn's Island. The vessel admitted a great quantity of water on the 4th, and was in a shattered condition. The men also began to be visited by the scurvy; but they were well supplied with water by that which fell from the clouds, which they caught on an awning of painted canvas. Captain Carteret discovered an island this day, which he called *Osnabrugh Island*, and on the 12th saw two other isles, where were found birds so tame, that the boat's crew caught them in their hands. The other island was about five leagues distant, but no water nor vegetables could be found on either of them. They were called the *Duke of Gloucester's Islands*. From this time to the 22d of the month, alternate storms and calms perplexed them. They had seen no signs of the southern continent, and they were now by account 5400 miles from the continent of America.

The scurvy now daily increased among the ship's company, and the ship being likewise in so bad a condition, Captain Carteret steered northward, in hopes of having the advantage of the trade wind, whereby he thought he might reach some island, and get the necessary refreshments for his crew.

From the great number of birds, which they saw on the 25th, they supposed that they were near land, but they discovered none. On the 3d of August they saw a number of sea-birds, and the current, which before had set to the northward, now ran strong to the southward*, being in 10° 18′ of south latitude, and 177° 13′ of east longitude.——On the 10th the ship sprang a leak in a place which they could not come at to stop it, which was the source of no small anxiety to the voyagers. However, two days afterwards, they saw land. Captain Carteret discovering seven islands, sailed towards two which lay very near together; and they came to an anchor off the largest of them in the evening, where they saw two of the natives, who were woolly-headed Negroes, and went intirely naked.

Having sent their boat on shore, the officer reported that there was fine fresh water near the coast, but that it could not be procured without difficulty, as the country was covered with thick wood, quite to the beach: The consideration of this difficulty, and the danger that the natives, if they were disposed to commence hostilities, might attack them under cover of these woods, occasioned the captain to dispatch the cutter the next day to seek for some more convenient anchoring place. The master was at the head of the party, and was ordered to steer to the westward. He was particularly injoined to be on his guard against the natives, and had several trinkets on board proper to present them with, in order to secure their favour. They also sent off the long-boat, which brought a lading of water. After this success she was ordered out a second time; but, as the natives were observed to come down in numbers towards the landing-place, a signal was made for her to return immediately. A little while afterwards, three Indians were remarked sitting down on the shore, who for some hours continued stedfastly looking at the ship. On the lieutenant's approaching them in the boat, they moved along the shore, and were presently joined by three others. When their conference was over, the former went on, and the latter came towards the boat with great expedition. The lieutenant having observed by a signal made from the ship, that the captain and his people had watched the motions of those on shore, in consequence of which it was requisite for him to act with caution, he landed, and offered his presents, to engage their attention. But these people, instead of accepting what he offered, discharged a flight of arrows at him and his men, and then betook themselves to flight. None of the English were hurt; they fired however, in return, but it did not appear that their fire did any execution.

The master and his party acting with less caution, and either ignorantly or wantonly provoking the natives, fell to skirmishing with them, after they had penetrated into the country. This officer, who came on board with three arrows sticking in his body, gave the following account of the transaction.

He said, that being arrived at a place which was about five leagues distant from the ship seeing some houses, but only a few of the inhabitants, he resolved to land with four of his crew, well armed. The Indians recovering from the fears they had first conceived on his approach, received what he presented them with marks of satisfaction, and gave him some fish, yams, and cocoa-nuts, in return. He then proceeded to the houses; but, soon after, perceiving a number of people among the trees, and several canoes being descried coming round a point, he made haste to return to the boat; but before he could accomplish his purpose, a general attack was made both on his people and those in the boat. The English, in return, fired among the Indians, and killed and wounded many of them; notwithstanding which the natives continued the fight. Some of them ran into the water as high as their breasts, and when the boat got farther off from the shore, the canoes pursued her, till one of them was sunk, and several people killed and wounded in the others by the fire of the English.

But some of those who were witnesses of the whole transaction, gave a different account of the matter. They asserted, that the Indians had demeaned themselves in an amicable manner, towards their guests, till the master provoked them by felling a cocoa-tree, which they had given him to understand, they wished that he would not meddle with on any account. They added, that as the natives, one man excepted, left the spot, as soon as the tree was cut down, a midship-

man

* From this circumstance the captain concluded that the passage between New Holland to New Zealand opened in this latitude.

man begged that the master would immediately repair on board; but he would by no means attend to this counsel, nor did he retire till the attack was begun. However that might be, the consequence was fatal to him, as he and three of the seamen afterwards died of the wounds received in this skirmish.

Though they were far from being agreeably situated, yet the captain resolved to endeavour repairing the ship. The wind setting into the bay on the 14th she was driven near the shore, at which time the Indians expecting her to run aground, were observed watching her from the covert of the woods. A party was sent on shore the next day, after a gun had been fired into the woods, in order to disperse any who might be lying in ambush there. The cutter was likewise sent, under the command of the lieutenant, in order, by repeated firing, to keep the coast clear for such as were taking in water. But notwithstanding all this caution, a discharge of arrows was made by the Indians, whereby one of the sailors received a dangerous wound. The captain perceiving what passed, made a signal for the return of the boats, and as soon as that was effected, fired his cannon into the woods. Another large party being afterwards observed on a point of the bay, a great gun was fired towards that quarter, and the ball falling among them, they dispersed immediately. A constant firing towards the woods was afterwards kept up, and by the dying groans that were heard, it appeared that the poor wretches were punished (perhaps too severely) for their temerity.

Egmont Island. Swallow Bay. The captain gave this place the name of *Egmont Island*, and the bay *Swallow Bay*. The master now dying of his wounds, and the captain and lieutenant were so ill that it was doubtful; and as there was little likelihood of procuring proper refreshments where the vessel then lay, there was no longer any encouragement for proceeding to the southward. They sailed from this bay on the 27th of August; and on that day discovered an island, to which they gave the name of *Portland Island*, and discovering an harbour at about the distance of four miles, gave it the appellation of *Byron's Harbour*. Three leagues from hence, they came in sight of the bay where the Indians had attacked the cutter's crew, and gave it the denomination of *Bloody Bay*. Here they saw a number of houses not ill built on the shore; and observed one that much exceeded the rest in length, where it seems the master and his party had been entertained before the skirmish, and which seemed to be constructed for a kind of public hall. The sides of the room were covered with matting, and great numbers of arrows were seen hanging in this apartment. Many gardens planted with vegetables, and inclosed with stone walls, were observed in this neighbourhood. They also saw a large town defended by an angular fortification of stone at about three miles distance from this village. A bay was discovered about a league farther on the coast, into which a river emptied itself, which they denominated Granville's River, and called the Point of the Bay, Ferrers's Point. From hence the land forms the bay, near which was a large Indian town that was extremely well built. As the vessel passed by, the natives came out and danced before their houses, moved round in circles, and holding what appeared to be bundles of grass in their hands with which they stroked each other.

Portland Island. Byron's Harbour. Bloody Bay. Indian houses and inclosures. Granville's River. Ferrers's Point.

Proceeding a few miles farther, they saw another point, which they called *Carteret's Point*, where they perceived a large canoe with an awning over it, and saw a town fortified like that which we have just described; and here also the Indians danced as before. Some Indians put off in their canoes, to take a view of the ship, but would not come on board.

Carteret's Point.

Afterwards they came to another small island, to which they gave the appellation of *Trevanian Island*, and the north part of it was called *Cape Trevanian*. Both this isle and the main land abounded with inhabitants. Several canoes advanced to attack the boat that was sent to sound, as soon as the Indians thought she was at a convenient distance from the ship. Having discharged a flight of arrows, the boat's crew firing, in return, killed one man and wounded another. A gun loaded with grape-shot being also fired from the ship, all the canoes made for the shore, except that wherein was the wounded man, which was taken to the ship, and the surgeon employed to examine his wounds. It appeared that one of this man's arms was broke, and a shot had gone thro' his head; and the surgeon being of opinion that the latter wound was mortal, he was placed in his canoe again, and with one hand rowed towards the shore. The canoe was formed only of the hollow trunk of a tree; he was a young fellow, almost as black as the negroes of Guinea; his features were good, his hair was woolly, and he wore no cloathing.

Trevanian Island. Cape Trevanian. 1767

As they sailed along the shore they saw plantains, bananas, and cocoa-nut trees, and great numbers of hogs and poultry; but the captain being yet very ill, and not having officers sufficient to direct on board the ship, he had no opportunity of establishing a friendly traffic with the Indians; and was unable to obtain by force those refreshments which the crew became every hour more and more in want of. It being thus impossible to proceed farther to the south, and in danger of being too late for the monsoon, he gave immediate orders to proceed northwards, in hopes of discovering the country which Dampier has distinguished by the name of Nova Britannia.

Captain Carteret gave these islands the general name of *Queen Charlotte's Islands*, and besides those already mentioned, he saw several which he named as follow, viz. *Lord Howe's Island*, *Keppel's Island*, *Lord Edgecumbe's Island*, *Ourry's Island*, *and Volcano Island*; this last being so denominated from a smoke that issued from its top, which is of an amazing height, and shaped like a sugar loaf.

Lord Howe's, Keppel's, Lord Edgecumbe's, Gurry's, and Volcano Islands.

The canoes of the inhabitants are made of the trunk of a tree hollowed, are large enough to contain ten or twelve people, and are furnished with out-riggers, but have no sails.

The natives of the country which Captain Carteret called Egmont Island, were expert at swimming and diving; and very active and vigorous. Their arrows were so sharp, and discharged with such strength, that one of them wounded a man in the thigh, after passing through the wash-board of the boat. The points of these arrows are flint, and no metal was seen among the natives. There are good harbours on the coasts of these islands, which likewise abound in rivers, and have some valleys; but for the most part they are mountainous, and covered with wood.

On the 19th of August the captain sailed, and keeping a W. N. W. course, on the 20th he discovered a small island, which was called *Gower's Island*, the people of which did not differ in any thing material from the Indians he had seen on the other islands.

Gower's Island

They here procured some cocoa-nuts in exchange for nails, and the inhabitants had intimated, that they would furnish a farther supply the next morning; but it was then found, that the current had carried the ship considerably to the south during the night, and brought them within sight of two other islands, one of which was called *Simpson's Island*, and the other *Carteret's Island*. These islands bore to windward of the ship. Thus situated they sailed again to Gower's Island, which abounds with fine trees, many of which are the cocoa-nut. A boat being sent on shore, the Indians attempted to seize her, and in return the crew made prize of a canoe, in which they found a number of cocoa-nuts. The natives were armed with bows and arrows and spears.

Simpson's Island, Carteret's Island.

The current setting strong to the southward, they now steered a north-westerly course, because the bad condition of the ship, and sickness of the crew, would have rendered it impossible for them ever to have got to sea again, if they had been driven into any gulph or deep bay. On the 22d one of the marines fell overboard and was drowned.

1767

The ſhip fell in with nine iſlands in the night of the 24th, which Captain Carteret ſuppoſes to be the ſame that were diſcovered by Taſman, and are named Ohang Java: eight of theſe are very ſmall, but the other is more extenſive, and they are all inhabited by blacks, whoſe heads are woolly, like thoſe on the coaſt of Africa. On the 25th they ſaw an iſland covered with verdure, which was called *Sir Charles Hardy's Iſland*; and, from the number of fires that were ſeen on it, they ſuppoſed it to be inhabited. This day they had ſight of a large iſland, formed of three high hills, which took the name of *Winchelſea's Iſland*. On the 26th they ſaw another large iſland to the north, which Captain Carteret imagines to be the iſland of St. John, that was diſcovered by Schouten. They were now within ſight of Nova Britannia, and the next morning the current drove the ſhip into a deep bay, which in Dampier's voyages was called St. George's Bay. On the 28th, they gave the name of *Wallis's Iſland* to a ſmall iſland in a bay, off which they came to an anchor, and were now 7500 miles due weſt from the main land of America. The cutter was ſent out to catch fiſh; but not ſucceeding, ſhe returned with a lading of cocoa-nuts. The next day, after great fatigue, they weighed anchor, and ſailed to a place they called *Engliſh Cove*, and began immediately to take in wood and water. They now attempted to catch fiſh with hooks and lines, and alſo with their nets, but did not ſucceed in either attempt: turtle likewiſe were very plentiful, yet they could not take any of them; but, at low water, they procured ſome large cockles and rock oyſters. They procured cocoa-nuts and the cabbage of the cocoa-tree, which is criſp and juicy; this, when eaten raw, taſtes like a cheſnut; but when boiled, has a more agreeable flavour than a parſnip; it was found particularly good when boiled with portable ſoup and oat-meal. They likewiſe gathered ſome plumbs, which taſted like thoſe of the Weſt-Indies which they called Jamaica plumbs; and by this ſupply of vegetables, they ſoon grew more healthy.

Sir Charles Hardy's Iſland.

Winchelſea's Iſland.

Wallis's Iſland.

Engliſh Cove.

This iſland appeared to have been lately inhabited, as ſeveral wretched huts were ſeen, in which there were remains of fires, and the ſhells of fiſh, which did not ſeem to have been long taken: they likewiſe ſaw two animals reſembling dogs. The ſoil here produces palm-trees of various kinds; aloes, canes, bamboos, rattans, betel-nut, and the nutmeg-trees; with a variety of other trees, and many ſhrubs and plants, of which the names were not known. In the woods was a large black-bird, whoſe note was ſomewhat like the barking of a dog; there were likewiſe parrots, rooks, pigeons, and doves; and centipieds, ſerpents, and ſcorpions, were ſeen on the iſland.

They took in wood and water here, repaired the ſhip in the beſt manner that circumſtances would admit, and took poſſeſſion of the country, with all the neighbouring iſlands, for the king of Great Britain. This was done by nailing on a lofty tree a piece of board faced with lead, on which was engraved the name of the veſſel and of the captain, the time of their entering and leaving the harbour, and the repreſentation of the union flag. They left the cove on the 7th of September and anchored on the ſame day almoſt cloſe to a grove of cocoa-nut trees, where they plentifully ſupplied themſelves with fruit, and the cabbage. They called the place, *Carteret's Harbour*, which being formed by the main and two iſlands, one of them was named *Leigh's Iſland*, and the other *Cocoa-nut Iſland*.

Carteret's Harbour.

Leigh's Iſland.

Cocoa-nut Iſland.

The captain now reſolved to ſail for Batavia, while the monſoon continued favourable: on the 9th of September, therefore they weighed anchor, and when they were about four leagues from land, the wind and current being both againſt them, they ſteered round the coaſt into a channel between two iſlands, which channel was divided by another iſland, to which Captain Carteret gave the name of the *Duke of York's Iſland*, and near which are ſeveral ſmaller iſlands. To the ſouth of the largeſt of them are three hills of ſingular form, which were called the *Mother and Daughters*, one of which was ſuppoſed to be a volcano from the large clouds of ſmoke that were ſeen iſſuing from it. A point they called *Cape Palliſer*, lies to the eaſt of theſe hills, and *Cape Stephens* to the weſt; north of which laſt, lies an iſland, which took the name of the Iſle of Man. The country in general is mountainous and woody, and was ſuppoſed to be inhabited, from the numbers of fires ſeen on it in the night. On the Duke of York's Iſland, the houſes were ſituated among groves of cocoa-nut trees, and thus formed a moſt beautiful proſpect. They brought to, for the night, and ſailed again in the morning, when ſome of the Indians put off in canoes towards the ſhip; but the wind being fair and blowing freſh, it was not thought prudent to wait for them. They now ſteered north-weſt by weſt, and loſt ſight of New Britain on the 11th, when it was found that what had been taken for a bay, was a ſtreight, and it was called *St. George's Channel*, whilſt the iſland on the north of it received the name of *New Iſland*. In the evening they diſcovered a large iſland, well clothed with verdure, which was denominated *Sandwich Iſland*: off this iſland the ſhip lay great part of the night, during which time a perpetual noiſe reſembling the ſound of a drum was heard from the ſhore. When they had almoſt cleared the ſtreights, the weather falling calm, a number of canoes approached the ſhip, and tho' their crews could not be prevailed on to go on board, they exchanged ſome trifles with the Engliſh for nails and bits of iron, which they preferred to every thing elſe that was offered them. Though the canoes of theſe people were formed out of ſingle trees, they were between 80 and 100 feet in length. The natives were negroes, and their hair was of the woolly kind; but they had neither thick lips nor flat noſes. They wore ſhell-work on their legs and arms, but were otherwiſe naked. Their hair and beards were powdered with white powder, and a feather was ſtruck into the head of each, above the ear. Their weapons conſiſted of a long ſtick and a ſpear; and it was obſerved, that they had fiſhing-nets and cordage.

Sailing from hence weſtward, they came in ſight of the ſouth-weſt point of the iſland, it was called *Cape Byron*; near which is an iſland of conſiderable extent, which received the name of *New Hanover*. The ſtreight they had now paſſed was called *Byron's Streight*; one of the largeſt iſlands they had ſeen, *Byron's Iſland* and the ſouth-weſt point of New Hanover, *Queen Charlotte's Foreland*. On the following day they ſaw ſeveral ſmall iſlands, which received the name of the *D. of Portland's Iſlands*. Having completely navigated St. George's channel, the whole length of which is about 100 leagues, they held on a weſtward courſe, and on the 14th of September diſcovered ſeveral iſlands. The next morning ſome hundreds of the natives came off in canoes towards the ſhip, and were invited on board by every token of friendſhip and good will; notwithſtanding which, when they came within reach, they threw ſeveral lances at the ſeamen on the deck. A great gun and ſeveral muſquets were then fired at them, by which ſome were killed or wounded; on which they rowed towards ſhore; and after they had got to a diſtance, a ſhot was fired, ſo as to fall beyond them, to convince them that they were not out of the reach of the guns. Soon after, ſome other canoes advanced from a diſtant part of the iſland, and one of them coming nearer than the reſt, the people in it were invited on board the ſhip: inſtead of complying, they threw in a number of darts and lances. This aſſault was returned by the firing of ſeveral muſquets, by which one of the Indians was killed; on which his companions jumped over-board, and ſwam to the other canoes, all of whom rowed to the ſhore. The canoe being taken on board, was found to contain turtle, and ſome other fiſh, alſo a fruit of a ſpecies between an apple and a plumb, hitherto unknown to Europeans. Theſe people were moſtly negroes, with woolly hair, which they powdered,

dered, and went naked, except the ornaments of shells round their arms and legs.

Captain Carteret now coasted along the islands, to which he gave the general name of the *Admiralty Islands*. He describes them as having a beautiful appearance, being covered with woods, groves of cocoa-nut trees and the houses of the natives. The largest is computed to be about 50 miles in length; and he supposes that they produce many valuable articles, particularly spices. They discovered two small verdant islands on the 19th, which were called *Durour's Island*, and *Matty's Island*, the inhabitants of which last ran along the coast with lights during the night. They had sight of other two small islands on the 24th, which were called *Stephen's Islands*, and which abounded with beautiful trees. They saw also three islands on the 25th in the evening, when the natives came off in canoes, and went on board the ship. They bartered cocoa-nuts for some bits of iron, with which metal they did not seem unacquainted, and appeared extravagantly fond of it. They called it *parram*, and hinted that a ship sometimes touched at their islands. These people were of the copper colour, and had fine black hair; but their beards were very small, as they were continually plucking the hair from their faces. Their teeth were even and white, and their countenances very agreeable. They were so extremely active that they ran up to the mast-head quicker than the sailors. Every thing that was given them they ate and drank with freedom, and seemed to have no sort of reserve in their behaviour. A piece of fine matting wrapped round their waists, constituted the whole of their dress, and good-nature appeared to be the only rule of their actions.

Admiralty Islands.

Durour's and Matty's Island.

Stephen's Islands.

The current carrying the ship swiftly along, the captain had not the opportunity of landing; and was therefore obliged to refuse gratifying these friendly people in that particular, though they readily offered that some of their people should remain as hostages for the safe return of any of the officers or ship's company who should chuse to go on shore. Finding that their offer was not accepted, one of the Indians absolutely refused to quit the ship: he was carried in consequence, as far as the island of Celebes, where he died. This man was named Joseph Freewill, and they called the largest of the isles, *Freewill Island*, (by the natives called *Pegan*.) The names of the two other islands were *Onata* and *Onello*.

Pegan, or Freewill Island. Onata and Onello.

An island was discovered from the mast-head as they held on their course, on the 28th in the evening, but they neither landed there nor gave it a name. On the 12th of October they saw a small isle which they named *Current Island*, from the great strength of the southerly current in those parts; and the next day two islands were discovered, to which they gave the name of *St. Andrew's Island*.

Current Island.

The next land appeared to be Mindanao, along the south-east part of which they coasted, seeking for a bay which Dampier had described; but this they could not find. The boat, however, found a little creek at the southern extremity of the isle, near which a town and a fort were seen. The people having descried the boat from the shore, a gun was fired, and several canoes came off after it. The lieutenant therefore retreated towards the ship, which, when the canoes discovered, they retired and made towards the shore.

Captain Carteret arrives at Mindanao.

The captain now stood to the eastward, and on the 2d of November anchored in a bay near the shore, whither the boats were dispatched to take in water. No signs appeared of that part of the island being inhabited; a canoe however came round a point, seemingly with a view of observing them, which rowed back again, after having taken a survey of the vessel.

But, in the night, a great noise was heard on the shore, somewhat like the war-song of the Americans. The captain therefore made proper preparations to defend himself in case hostilities should be commenced on the part of the islanders.

One of the boats was sent on shore for water the next morning, and the other was ordered to hold herself in readiness, in case her assistance should be necessary. The crew had no sooner landed than several armed men came forward from the woods, and one of them held up something white, which being construed as a sign of amity, the Captain having no white flag on board, determined to send the lieutenant with a table cloth in order to answer the token of peace. For the present this had the desired effect. Two Indians, who spoke bad Dutch and Spanish, having at last made themselves understood by the officer in the latter language, made several inquiries which chiefly turned upon desiring to be informed whether the ship belonged to the states of Holland, and whether she was bound to Batavia or elsewhere. He also wanted to know whether she was a ship of war, and what number of guns she carried. Having been resolved as to these particulars, he said they might proceed to the town; some armed Indians were ordered to retreat, and the lieutenant presented a silk handkerchief to the person he conversed with, receiving a neck-cloth in return. 1767

When the captain heard this, he was highly pleased, thinking that all matters were now in a proper train, especially as he had received a supply of water; but while he was enjoying this prospect, he perceived some hundreds of armed Indians on the shore, who held up their targets, and brandished their swords, by way of defiance, and at the same time discharged their lances and arrows towards the vessel. Notwithstanding this hostile appearance, the captain was still willing, if possible, to avoid coming to extremities with the islanders, and for that purpose, sent the lieutenant on shore to display again the former sign of peace. As the boat approached the shore, but without landing her men, one of the natives beckoned them to come where he stood, but the lieutenant did not chuse to obey this summons, lest he should come within reach of the arrows of the islanders. He now concluded that there were Dutchmen or people in the Dutch interest on shore, to whose interference this apparent alteration in the disposition of the natives was owing, and who had irritated the natives against the Swallow's crew, on being informed that she was an English vessel. Captain Carteret however sailed from this place, which he called *Deceitful Bay* with a full intention to visit the town; but soon after the wind blowing violently in shore, he altered his resolution, and steered directly for Batavia, which was probably the best course he could have taken in such a critical situation.

Deceitful dealing of the inhabitants.

Deceitful Bay.

He reached the streight of Macassar, on the 14th of November, which streight lies between the islands of Celebes and Borneo. To a point of the former they at this time gave the name of *Hummock Point*; and to the westward of this point they discovered a great many boats fishing upon the shoals. On the 21st, they were in sight of two very small islands, which were covered with verdure, and Capt. Carteret supposed them to be the Taba Isles, mentioned in the French charts. They crossed the equinoctial line, and came into southern latitude, on the 29th of this month, the tornadoes becoming violent, and the current setting against them. Death had now diminished the crew, and sickness was daily weakening the remainder. They had sight of the Little Pater-Nosters (islands so called) which are situate something more than two degrees to the southward of the equinoctial line, but the winds and currents would not suffer them at that time to land for any refreshment. At this time the whole crew were alike afflicted with the scurvy; and what was very distressing they were attacked soon after in the night by a piratical vessel, which had been seen the evening before. She engaged them with swivel guns and small arms; but though they could not see their enemy, they returned her fire so warmly that they sent her to the bottom, and all her crew perished. As to the Swallow she received some small damage, and had two persons wounded on board. The vessel that she sunk belonged to a pirate who had no less than thirty

Hummock Point.

1767 thirty of them engaged in the business of plunder, which constantly infested these seas.

The diseases of Captain Carteret's men now daily increased. By the 12th of this month he had lost thirteen of his crew, and thirty others were almost on the point of death. The westerly monsoon being set in they could have no hopes of reaching Batavia, and their situation was such that they must perish if they could not speedily make land. On this account, it was resolved to steer for Macassar, a Dutch settlement on the island of Celebes; and happily they accomplished their design, coming to anchor off that island, at the distance of more than a league from Macassar, on the 15th of December.

The arrive at Macassor.

The governor sent a Dutchman on board the Swallow late that night, who seemed much alarmed on finding that she was an English ship of war, and would not trust himself in the cabin. Early the next morning the captain dispatched a letter to the governor requesting leave to buy provisions, and to shelter his ship till the season for sailing westward came on. The boat arriving at the shore, none of the crew were suffered to land; and, the lieutenant having refused to deliver the letter to any but the governor himself, two officers, called the Shebander and the Fiscal, came to him with a message, importing that the governor was sick and had commanded them to come for the letter. The lieutenant, though he thought this was only a mere pretence, at length delivered the letter, which they took away with them. After the boat's crew had waited without any refreshment for several hours in the heat of the sun, they were told that the governor had ordered two gentlemen to wait on their captain with an answer. As the boat lay off the wharf, the people on board observed a great hurry on shore, and concluded that all hands were busy in fitting out armed vessels, a circumstance which could not much contribute to their satisfaction.

Ill behaviour of the Dutch governor.

According to the promise given, soon after the boat's return, two gentlemen of the names of De Cerf and Douglas, came with dispatches, desiring, "That the ship might instantly depart from the port, without coming any nearer to the town; insisting that she should not anchor on any part of the coast, and that the captain should not permit any of the people to land on any place under the governor's jurisdiction."

The captain could not but sensibly feel the cruelty of this proceeding. As the strongest argument that could be used in answer to the letter, he shewed his dying men to the gentlemen, and urged the necessity of the case; nor could they but feel the propriety of granting refreshments to the subjects of a power at peace with their country, and who were in such a deplorable situation; but they observed that their orders were absolute and must be obeyed. Incensed at this treatment, Captain Carteret, at last, declared, that he would come to an anchor close to the town, and there, if they persisted in refusing him necessary refreshments, that he would run the ship aground, when his crew would sell their lives as dear as possible. Being alarmed at this declaration, they intreated the captain to remain in his present situation till further orders should arrive. This he promised, on condition that an answer should be sent before the setting in of the sea-breeze the next day.

In the morning early, it was observed that a sloop of war, and another vessel with soldiers on board, anchored under the ship's bows. They refused to speak with Captain Carteret, and as he weighed and set sail with the sea-breeze, they did the same, and closely followed him. As he proceeded, a vessel from the town approached him, wherein were several gentlemen, and Mr. Douglas among them; but, till the Swallow dropped anchor they could not come on board. They expressed some surprize at the English vessels having advanced so far; but the captain alledged that he had only acted according to his former declaration, which his present situation would sufficiently justify to every candid person.

These gentlemen brought with them two sheep, some fowls, fruit, and other provisions, which were extremely welcome to the English; but, after they had made several proposals, with which he could not comply, he shewed them the dead body of a man who had expired but a few hours before, and whose life might probably have been saved, had the Dutch sent them a timely supply of refreshments, and again declared his resolution of executing what he had threatened, if they would not comply with his requisition. His guests now enquired whether the ship had touched at the spice islands, and were answered in the negative. At last it was agreed, that the Swallow should sail for a bay at a little distance, where an hospital for the sick might be provided, and where provisions were generally plentiful, and, if there was a want of any articles, they might be supplied occasionally from the town.

It will be imagined that a proposal of this kind was readily agreed to by Captain Carteret; all he insisted upon was, that it should be ratified by the governor and council, which was afterwards done in the proper manner. He could not forbear asking, however, for what reason the two vessels had anchored under his ship's bows. He received for answer, that this was only done in a friendly manner, to protect her from any insult that might be offered by the natives of the country. While this treaty was going forward, the English captain had nothing to give his guests but rotten biscuit and bad salt meat; however, they had ordered an elegant dinner to be dressed on board their own vessel, which was afterwards served up at his table, and they parted in friendship.

The next day an officer from the town came on board, to whom the captain applied to get money for his bills on the English government. He promised to endeavour to do this, and for that purpose went on shore, but when he returned in the evening, he said that there was no person in the town that had any cash to remit to Europe; that the company's chest was quite empty. This was a great difficulty; however it was surmounted at last by an order being sent to the Resident at Bonthain, who had money to remit, and who, in consequence received the bills in question. Matters being thus accommodated, they sailed on the 20th of December, and anchored in the road of Bonthain on the 21st, at which time the guard-boats were moored between them and the shore, to prevent any communication between the ship's boats and the natives of the country. The captain having waited on the resident, to settle the mode of procuring provisions, he had a house appointed for him near a small Dutch fort. The sick being now landed at this place, which was fitted up in the manner of an hospital, they were put under a guard which was commanded by M. Le Cerf, who would not suffer them to go above thirty yards from the spot, nor would he let the seamen carry on any sort of treaty with the natives, so that all the profits were engrossed by the Dutch soldiers, whose gains were immoderate; so great indeed, that some of them sold at more than a thousand per cent. after having extorted the provisions from the natives, at what price they pleased. Captain Carteret having remonstrated with the Resident, on the injustice of this procedure, he spoke to the soldiers on the subject, but this produced no good effect; and it was known that after this Le Cerf's wife sold provisions at more than double the prime cost while it was suspected that her husband sold arrack to the seamen.

On the 26th and 27th, three vessels arrived, one of which had troops on board, destined for the Banda Islands; but their boats not being allowed to go on board the ship, the captain prevailed on the Resident to purchase, for his use, four casks of salt provisions. Above one hundred sail of praws arrived in Bonthain Bay on the 28th. These vessels, which fish round the island, carry Dutch colours, and send the produce of their labours to China for sale.

On the 18th of January a letter from Macassar informed Captain Carteret, that the Dolphin, his old consort, had arrived at Batavia. Ten days afterwards

SOLDIERS of the Kingdom of MACASSER
blowing poisoned Darts through Trunks at their enemies.

PORTRAITS of SOLDIERS inhabiting the ISLE of TIMOR,
whose Swords are made of Sandel Wood.

7 AP 53

the ſecretary, who had been ſent with Le Cerf had orders to return to Macaſſar. On the 19th of Feb. Le Cerf himſelf was recalled, and on the 17th of March the largeſt of the guard-boats was ordered back. On the 9th the reſident received a letter from the governor of Macaſſar, enquiring when Captain Carteret would ſail for Batavia, though he muſt know it could not be before the eaſtern monſoon ſet in, which would not be till May. All theſe were ſuſpicious circumſtances; and toward the end of the month a canoe was frequently obſerved paddling round the ſhip ſeveral times in the night, but returned as ſoon as ſhe was diſcovered.

Various conjectures were formed, relative to this circumſtance and ſome others which appeared not to wear a very favourable aſpect. In the mean time, a letter was ſent to the captain, wherein he was given to underſtand, that a deſign was formed for his deſtruction: the ſcheme was ſaid to be laid by the Dutch, but the ſon of the king of Bony was to be the chief perſon to put it into execution, as he was on terms of friendſhip with them, who had often aſſiſted him in his attempts to reduce the reſt of the iſland of Celebes. The pretended grounds for theſe proceedings were to prevent the Engliſh from forming connexions with any of thoſe unſubdued natives. On receiving this intelligence, though the captain could not be certain whether it was true or not, yet he thought it highly proper to put himſelf in a poſture of defence. In reality, he ſuſpected that the reſident was concerned in this piece of treachery, of which he had now received information; though as to this particular he had afterwards ſufficient reaſon to believe otherwiſe; but it appeared that one of the princes, ſubject to the king of Bony, and a miniſter of that monarch had been privately at Bonthain, but of 800 men who were ſaid to be there, no traces could be found.

On the 7th of May the captain received, through the hands of the reſident, a letter from the governor of Macaſſar, denying his having any knowledge of the above-mentioned project, and requiring that the writer of the letter might be given up; but this requiſition was not complied with, as the captain knew he would be equally puniſhed, whether his information was true or falſe.

At this place they purchaſed plenty of freſh proviſions, at moderate prices; and, among the reſt, beef of an excellent quality. The bullocks of this country are thoſe that have the bunch on the back; and it abounds in buffaloes, horſes, ſheep, deer, and goats. The natives neither eat pork nor turtle; but they ſold the latter, as well as other fiſh, to Captain Carteret.

Having taken in wood and water, they ſailed hence on the 22d of May, and, ſteering along the ſhore, came to an anchor the ſame evening between the iſlands of Celebes and Tonikaky. They ſailed again in the morning, and at night ſaw the ſouthernmoſt of the iſlands of Salombo. On the 26th they ſaw the iſland of Luback; and on the 29th a number of ſmall iſlands, called Carimon Java.

On the 2d of June they had ſight of the land of Java, and on the following day came to an anchor in the road of Batavia, after having with difficulty prevented the ſhip from ſinking, by the conſtant working of the pumps, during her whole paſſage from Celebes. Having fired guns of ſalutation, the captain attended the governor, requeſting permiſſion to repair the defects of the ſhip; but he was directed to petition the council. The council met on the Monday following, when the captain ſent a letter, ſtating the defects of the ſhip, and requeſting permiſſion to repair her. The time from this day till the 11th of the month, was loſt in altercations, reſpecting the affair at Bonthain Bay; the governor and council inſiſting, that Captain Carteret ſhould ſign a formal declaration, that he believed the report of an intention formed at Celebes, for cutting off the ſhip, was falſe and malicious; and he on his part reſolutely perſiſting in his refuſal to ſign any ſuch paper.

The captain learned, on the 18th that orders had been iſſued for repairing the ſhip at Onruſt whither a pilot had attended her, and where ſhe came to an anchor, on the 22d of June. The wharfs, however, being pre-engaged by other veſſels, it was the 24th of July, before the repairs commenced. The ſhip when examined, was found to be in ſo decayed and rotten a condition, that the Dutch carpenter would not undertake to repair her without ſhifting her whole bottom, till the captain had certified under his hand, that whatever ſhould be done was in conſequence of his own expreſs direction. This precaution the Dutchman inſiſted on, leſt, if the ſhip ſhould never reach England, the blame might remain with him. 1768

While Captain Carteret ſtaid at this port, he often viſited Mr. Houting, an admiral in the Dutch ſervice. This gentleman was remarkable for his politeneſs and affability, from whom the captain received great civilities.—The governor of Batavia keeps the ſtate of a ſovereign prince. When he goes publicly abroad is attended by horſe-guards, and two black footmen run before his carriage. If any other coach meets the governor's, it is obliged to be drawn on one ſide, and thoſe who are in are then to get out, in order to pay their reſpects to him. Nor muſt any one that is behind, paſs by that of his excellency, though never ſo much in haſte. The ſame rules are obſerved with regard to the honour ſhewn thoſe of the council, only that the ſalute is given by the perſon who meets him ſtanding upright in his carriage, inſtead of getting out of it, and a member of the council has only one black footman running before his coach. The blacks carry ſticks, and threaten to chaſtiſe ſuch as do not comply with theſe arbitrary cuſtoms.

The maſter of the hotel where the Engliſh captain lodged, failed not to give his gueſt notice of what was expected from him in theſe particulars, but the captain diſdained to pay ſuch homage to the governor or council belonging to the province of a republic as was not expected by the king of Great Britain, he therefore, in plain terms refuſed to comply, and when the black fellows were mentioned to him as perſons that were appointed to inforce compliance, he intimated that he ſhould have recourſe to his piſtols, if any inſult was offered him. To prevent a conteſt of this nature, however, the governor thought proper to ſend him word that he might act as he pleaſed.

The Swallow ſailed from Onruſt on the 5th of September, the captain having recruited his crew by engaging ſome Engliſh ſeamen, and the next day came to an anchor off the ſtreights of Sunda. Here he took in wood and water, and ſailed again on the 25th with a favourable gale, which continued to carry him on their courſe for the ſpace of 700 leagues, and on the 23d of Nov. he anchored in Table Bay, at the Cape of Good Hope. From hence they ſailed again on the 26th of January, the captain during his ſtay having received a number of civilities from the governor and the gentlemen of this ſettlement. On the 20th of January they came to an anchor off St. Helena, and quitting that iſland, took their departure from thence for England, on the 24th of the ſame month. They touched at Aſcenſion Iſland in their courſe, anchoring on the laſt day of January, in a bay where they found plenty of turtle. The veſſel ſailed again the ſucceeding day. The iſland is uninhabited and it has been cuſtomary to leave a letter in a bottle, containing an account of the name and deſtination of any veſſel that might touch there, with which Captain Carteret complied before he proceeded on his voyage.

They obſerved a ſhip on the 20th of February ſtanding towards them. This veſſel had been ſeen far to the leeward the day before, but had outſailed the Swallow in the night. She proved to be a Frenchman, and ſent her boat on board, with a young officer, who had it in charge to endeavour to learn from Captain Carteret all the intereſting particulars of his voyage, at the ſame time that he took great pains to diſguiſe what related to his own. It was however afterwards diſcovered that the ſhip from whence he had been ſent, was M. Bougainville's, which, like the

1769 the Swallow, was returning from a voyage round the world, and which, as we have already noticed, had followed Captain Wallis ſo cloſely through the Streights of Magellan. The French captain had learned the name of the Engliſh ſhip from the letter left in the bottle at Aſcenſion Iſland, and took this unfair method of attempting to inform himſelf of all that he wanted to know concerning the expedition.

But Captain Carteret was ſo cautious and guarded in his converſation, that the French officer got no information of any conſequence to his nation from this proceeding, while his own ſecret was diſcovered by his countrymen; for the boat's crew that had brought him on board, told the whole matter to one of the Engliſhmen who was able to converſe with him in his own language.

Nothing material happened to the Swallow from this time, during the reſt of the voyage. Captain Carteret came in ſight of the Weſtern Iſlands on the 27th of March, 1769, and holding on his courſe, came to an anchor at Spithead on the ſame month, after having accompliſhed her voyage round the world, for which it was ſcarcely poſſible to conceive any veſſel more unfit, and having ſingly combatted ſuch difficulties as even whole ſquadrons have found it impoſſible to ſurmount.

THE VOYAGE OF CAPTAIN COOK ROUND THE WORLD,

In his Majeſty's Ship the ENDEAVOUR: Undertaken in the Year 1768.

CAPTAIN COOK ſailed on this voyage the latter end of Auguſt, 1768, having on board Mr. Banks and Dr. Solander, two gentlemen of diſtinguiſhed abilities, of whom we ſhall ſay a few words, before we proceed with our relation.

The firſt of theſe gentlemen, who was poſſeſſed of a conſiderable fortune in Lincolnſhire, had already been on a voyage to Newfoundland, and was now deſirous of obſerving the tranſit of Venus, in the ſouthern hemiſphere. On this expedition he engaged his friend Dr. Solander to accompany him. The Doctor had been appointed to a place in the Britiſh Muſeum, which he filled with credit to himſelf, and in which he gave univerſal ſatisfaction. He was a native of Sweden, and a man of great learning and capacity, an adept in natural philoſophy, and had ſtudied under the famous Linnæus. Mr. Banks took two draughtſmen with him, the one being intended to paint ſubjects of natural hiſtory, the other to delineate figures and landſcapes. He had likewiſe a ſecretary and four ſervants in his retinue.

Captain Cook ſails from Plymouth with Mr. Solander and Doctor Banks.

The Endeavour quitted Plymouth on the 26th of Auguſt, and ſaw land between Cape Finiſterre, and Cape Ortegal, on the coaſt of Gallicia in Spain, on the 2d of September. During their courſe, theſe two gentlemen ſaw ſeveral marine animals hitherto unnoticed by naturaliſts. One of theſe is deſcribed as a new ſpecies. It is of an angular figure, near three inches in length, and about one in thickneſs; it has a hollow quite through it, and a brown ſpot at one end. It ſeemed that four of theſe animals were joined together; but when they were put into water they ſeparated and ſwam about, ſhining with a gem-like brightneſs. There was alſo another animal of a beautiful colour, ſomewhat reſembling an opal. They obſerved likewiſe ſeveral birds not deſcribed by Linnæus at the diſtance of about ten leagues from Cape Finiſterre.

They diſcovered the iſlands of Puerto Santo and Madeira, on the 12th, and on the 13th they came to an anchor in the road of Fonchial. In heaving the anchor Mr. Weir, the maſter's mate, was unfortunately carried over-board and drowned. Mr. Banks found here the tree called *Laura Indicus*, the wood of which he ſuppoſes to be what is called the Madeira mahogany, as there is no real mahogany upon the iſland.

Madeira deſcribed.

The people of Madeira appear to have no other article proper for trade than wine, which is made by preſſing the juice out in a ſquare veſſel. The ſize of this veſſel is proportioned to the quantity of wine, and the perſons employed, taking off their cloaths, get into it, and with their elbows and feet, preſs out as much of the juice as they can; in the ſame manner, the ſtalks being tied together, are alſo preſſed under another ſquare piece of wood by a lever, and a ſtone to extract the remainder of the juice. Wheeled carriages are not in uſe in Madeira, nor have they any thing that reſembles them, except a hollow board which is more properly a ſledge, upon which their wine veſſels are drawn. The ſoil is ſo very rich, and there is ſuch a variety in the climate, that there is ſcarcely any article either of the neceſſaries or luxuries of life, which might not probably be cultivated here. On the hills, walnuts, cheſnuts, and apples flouriſh, almoſt without culture. Pine-apples, mangoes, guanas, and bananas, grow almoſt ſpontaneouſly in the town. They have corn which is large-grained and fine; and it might be produced in plenty; but for want of being attended to, this is not the caſe, but all that they conſume here is imported from other countries. Beef, mutton, and pork, are remarkably good here, and the captain took ſome of the former on board for his uſe. Fonchial (which took its name from *Fonchi*, ſignifying fennel, in the Portugueſe language) is ſituate at the bottom of a bay, and though it is extenſive in proportion to the reſt of the iſland, it is but poorly built, and the ſtreets are narrow and badly paved. The churches are full of ornaments, with pictures and images of ſaints; the firſt are, for the moſt part, wretchedly executed, and the latter are dreſſed in laced cloaths. The taſte of the convents, eſpecially of the Franciſcans is better; neatneſs and ſimplicity being united in moſt of the deſigns of the latter. The Infirmary alſo is a piece of good architecture, and one of the moſt conſiderable in the place. There are many high hills here, and Pico Ruivo in particular, is near 5100 feet in height. To a certain height theſe hills are covered with vines, above which are numbers of cheſnuts and pine-trees; and above theſe again whole foreſts of various ſorts of trees. The Mirmulano and Paobranco which are found among them, are unknown in Europe. The latter of theſe is very beautiful, and would be a great ornament to our gardens.

The inhabitants of Madeira are computed to amount to between ſeventy and eighty thouſand, and the revenue that ariſes from the cuſtoms is between twenty and thirty thouſand pounds a year. Beſides wine, water is to be had here in plenty; alſo onions, and a great number of fruits may eaſily be procured, but for the obtaining of poultry and freſh meat it is neceſſary to get the governor's permiſſion.

The veſſel ſailed from Madeira on the 19th of September, and on the 22d they ſaw the iſlands of Salvages to the northward of the Canaries. The principal of theſe iſlands was about five leagues to the ſouth half-weſt. They ſaw the Peak of Teneriff on the 23d, bearing weſt by ſouth. The height of this mountain is eſtimated at about 15,400 feet. On the 29th they ſaw Bona Viſta, one of the Cape Verd Iſlands, in 16° north latitude, and 21° 48′ of weſt longitude.

In their course from Bona Vista to Teneriff they observed great numbers of flying fish, which appeared very beautiful, their sides resembling burnished silver; and Mr. Banks went out in a boat on the 7th of October, and caught what is called a Portuguese Man of War, together with several marine animals, which were objects of his curiosity.

They had now variable winds, with some showers of rain, and the air was so damp as considerably to damage their utensils. On the 25th of this month, Mr. Banks shot a black-toed gull, a sort of bird which Linnæus has not described, and whose dung is of a lively red.

On the 25th of October they crossed the line with the usual ceremonies; and on the 28th of the same month, when the ship was in the latitude of Ferdinand Noronha, and in 32° 5′ west long. they began to look out for the island, and the shoals which are laid down as situate between it and the main; but neither the island nor the shoals could be discovered by our voyagers. On the evening of the 29th they perceived that luminous appearance of the sea mentioned by navigators, which sent forth rays like those of lightning. As Mr. Banks and his friend were not thoroughly satisfied with any of the causes which have hitherto been assigned for this phœnomenon,* but rather thought it was occasioned by some luminous animals, they threw out a casting net, in order to try by experiment whether they were right in their conjectures. A species of the Medusa was taken, which bore some resemblance to a metalline substance greatly heated, and emitted a whitish light; they caught also some small crabs which glittered very much; animals which had not before been taken notice of by the curious researchers into the secrets of nature.—As provisions by this time began to grow short, they resolved to put into the harbour of Rio de Janeiro. On the 8th of November they saw the coast of Brasil, and speaking with the crew of a Portuguese fishing boat, were informed by them, that the land which they saw was to the south of Santo Espirito. Mr. Banks buying some fish of these people was surprised that they required English shillings, and refused Spanish silver. †

Luminous animals in the sea.

They made sail for Rio de Janeiro on the 13th in the morning, and the first lieutenant was sent before to the city to acquaint the governor that we put into that port in order to procure a pilot and proper refreshments. The pinnace returned, but the lieutenant had been detained by the viceroy, till the captain should come on shore. When the ship had come to an anchor, a ten-oared boat filled with soldiers, approached, and rowed round her, but no conversation took place. Presently afterwards another boat appeared which had several of the viceroy's officers on board. They enquired from whence the Endeavour came, and what was her cargo? They also desired to know the number of men and guns she carried, and to what port she was bound? All these questions being punctually and truly answered by the English, the officers apologized for having detained the lieutenant, and behaved in the manner already related, pleading the custom of the place in excuse for their conduct.

On the 14th the captain went on shore, and got leave to furnish himself with provisions, which permission was clogged with the condition of employing an inhabitant as a factor. He also found that it was judged proper to send a soldier in the boat every time she came from shore to the vessel. To both these circumstances Captain Cook made objections, but the viceroy was determined to insist on them, neither would he by any means permit the gentlemen to remain on shore, nor allow Mr. Banks to go up the country to collect plants. The captain conceiving from these and other marks of jealousy, that the viceroy thought they were come to trade, used all his endeavours to convince him of the contrary; and acquainted him that they were bound to the southward, to observe the transit of Venus over the disk of the sun, which was an object of great consequence to the improvement of navigation; but the person to whom he addressed himself, seemed to be entirely ignorant of this phœnomenon. An officer now was appointed to attend the captain: this he was told must be understood as a compliment. However, when he would have declined such a ceremony, the viceroy very politely forced it upon him. 1768

The two gentlemen were not a little disappointed and chagrined on hearing that they must not be permitted to reside on shore, and still more so when they understood that they were not even to be allowed so much as to quit the vessel. For the viceroy had ordered that none but the captain and such sailors as were required by their duty, should come on shore. Whether this arose from his jealousy in regard to trade, or from the apprehensions he entertained of the extraordinary abilities of gentlemen sent on voyages of discovery, it is certain that they were highly disagreeable to the persons prohibited, who were resolved, if possible, to evade the order. They attempted to come on shore, but were stopped by the guard-boat; yet several of the crew, without the knowledge of the centinel, let themselves down by a rope from the cabin window into the boat, about midnight, and drove away with the tide, till they were out of hearing. They afterwards rowed to an unfrequented part of the country, where they landed, and from thence went up the country. Disputes with the viceroy.

The captain failed not to remonstrate to the viceroy on the unreasonableness of these restrictions; but the latter gave him for answer, that these were his master's orders, and must be obeyed. Thus repulsed, Captain Cook, much displeased at this conduct, resolved to go no more on shore, rather than when-ever he did so, to be treated as a prisoner in his own boat, the officer who was so polite as to accompany him, constantly attending him both to and from the shore. A resolution was now taken to draw up two memorials, to be presented to the viceroy, one written by the captain, and the other by Mr. Banks; but the answers sent to these were by no means such as gave satisfaction. In effect, several papers passed between them and the viceroy, to no good purpose, the prohibitions still remaining as before. This caused the captain to judge it necessary in order to vindicate his own compliance, to urge the viceroy to some act of force in the execution of his orders. For this purpose he sent Lieutenant Hicks with a packet, giving him orders not to admit of a guard in his boat. As this gentleman was resolved to obey his captain's command, the officer of the guard-boat did not oppose him by force, but accompanying him to the viceroy, acquainted him with what had happened, on which the lieutenant was sent away with the packet unopened. When he returned, he found a guard of soldiers had been placed in his boat, which he insisted on their quitting. The officer then seized the boat's crew, and conducted them under an escort to prison. The lieutenant being sent back to the ship, guarded. As soon as the captain was informed of the transaction, he wrote to the viceroy to demand his boat and her crew, inclosing the memorial which Mr. Hicks had brought back with him. He sent these papers by a petty officer, to avoid continuing the dispute concerning a guard, which must have been kept up by a commissioned officer.

An answer was now promised by the viceroy, but before this could well arrive, the long-boat, which had

* Some have supposed it to be caused by fishes darting at their prey; some have concluded it to arise from the putrefaction of marine animals; and others have attributed it to electricity.

† Their Venetian and Portuguese interpreters told them the crew of the fishing vessel asserted, that they had not seen a ship for eight years; but as these men spoke the English language very imperfectly, it was natural to conclude that there must have been some mistake in the interpretation.

1768 had four pipes of rum on board (the rope breaking that was thrown from the ſhip) was driven to windward of her, together with a ſmall ſkiff which was faſtened to her; while the pinnace was ſtill detained on ſhore. Immediate orders were given for manning the yawl, which being diſpatched accordingly with proper directions, returned, and brought the people on board the next morning. Captain Cook learned from them that the long-boat having filled with water, they had brought her to a grappling, and quitted her, and falling in with a reef of rocks on their return, they were forced to cut the faſtening of Mr. Banks's little boat, and ſend her adrift. The captain now thought it would be proper to ſend again to the viceroy; and accordingly he diſpatched another letter to his excellency, wherein he informed him of the accident, deſired he would aſſiſt him with a boat to recover his own, and at the ſame time, renewed his demand of the delivery of the pinnace, and her crew. The viceroy at length complied with the demand, and granted the requeſt; but in his anſwer to the captain's remonſtrance, ſuggeſted ſome doubts that he entertained, whether the Endeavour was really a king's ſhip, accuſing the crew of ſmuggling. *

Captain Cook in his reply ſaid, that though the viceroy had already ſeen his commiſſion, he was willing to ſhew it; adding, if any attempt ſhould be made to carry on a contraband trade, he requeſted his excellency would order the offender to be taken into cuſtody.

The diſpute was thus terminated; but Mr. Banks's thirſt of natural knowledge led him to attempt eluding the vigilance of the guard, which he found means to do, and got ſafe on ſhore on the 26th in the morning. He took care to avoid the town, and paſſed the day in the fields, where he could beſt gratify his curioſity. He found the country people inclined to treat him with civility, and was invited to their habitations. But as it was afterwards heard that ſearch had been making for him while he was abſent, he and Dr. Solander reſolved to run no more riſques in going on ſhore, while they remained at this place.

Having taken in water and proviſions, they got a pilot on board on the firſt of December, when a contrary wind prevented them from putting to ſea. A Spaniſh packet from Buenos Ayres, bound for Spain, arriving the next day, the captain of her was ſo polite as to offer his ſervice to convey Mr. Cook's diſpatches to Europe, who accordingly ſent by him all the papers which had paſſed between him and the viceroy, leaving the duplicates of them with his excellency.

It was not till the 7th that the Endeavour got under way, when having paſſed the fort, the guard-boat left them, and the pilot was diſcharged. It was obſerved that during the three laſt months of their ſtay in this place, the air was filled with a certain ſpecies of butterflies. Of the town and neighbouring country we have the following deſcription.

Deſcription of Rio de Janeiro.

Rio de Janeiro is ſuppoſed to have been called ſo becauſe it was diſcovered on the feſtival of St. Januarius. The town, which is the capital of the dominions of the Portugueſe, in America, borrows its name from this circumſtance.

It is ſituated on the weſt ſide of the river, from which it extends itſelf about three quarters of a mile. The ground whereon it ſtands is a level plain; it is defended on the north ſide by a hill that extends from the river, having a ſmall plain, which contains the ſuburbs and king's dock. On the ſouth ſide is another hill running towards the mountains which are behind the town. Some of its ſtreets run parallel from north to ſouth, and are interſected by others at right angles. The principal ſtreet is near 100 feet in width, and extends from St. Benedict to the foot of Caſtle-hill. The other ſtreets are commonly twenty or thirty feet wide. The houſes adjoining to the principal ſtreet are three ſtories high, but in other places they are very irregular, though built after the ſame manner as at Liſbon. In the town are four convents; the firſt is that of the Benedictines, ſituated near its northern extremity: the ſtructure affords an agreeable proſpect, and contains an elegant chapel, which is ornamented with ſeveral valuable paintings. The ſecond is that of the Carmelites, which forms the centre angle of the royal ſquare, and fronts the harbour; its church had fallen ſome time before, but it was rebuilding in a very elegant manner, with fine free-ſtone brought thither from Liſbon. The third is that of St. Anthony, ſituated on the point of a hill, on the ſouth ſide of the town; before this convent ſtands a large baſon of brown granite, in the form of a parallelogram, which is employed in waſhing. The fourth is ſituated at the eaſtern extremity of the town, and was formerly the Jeſuit's convent, but is now converted into a military hoſpital.

The viceroy's palace forms the right angle of the royal ſquare: the palace, mint, ſtables, goal, &c. compoſe but one large building, which has two ſtories, and is 90 feet from the water. In paſſing through the palace, the firſt entrance is to a large hall or guard-room, to which there is an aſcent of three or four ſteps. In the guard-room are ſtationed the body of guards, who attend the viceroy, and are relieved every morning between eight and nine: Adjoining to the hall are the ſtables, the priſon being in the back part of the building. Within the guard-room is a flight of ſtairs for aſcending to the upper ſtory; this divides at a landing-place about half way, and forms two branches, one leading to the right, and the other to the left. The former leads to a ſaloon, where there are two officers in conſtant attendance; the viceroy's aid-du-camp at the ſame time waiting in an anti-chamber to receive meſſages and deliver orders.

The left wing of the royal ſquare is an irregular building, which conſiſts chiefly of ſhops occupied by trading people. In the centre of the ſquare is a fountain ſupplied with water from a ſpring at the diſtance of three miles, from which it is brought by an aqueduct. From this fountain both the ſhipping and inhabitants are ſupplied with water, the place being continually crowded with negros of both ſexes waiting to fill their jars. At the corner of every ſtreet is an altar. The market-place extends from the north-eaſt end of the ſquare along the ſhore; and this ſituation is very convenient for the fiſhing-boats, and thoſe who bring vegetables from the other ſide of the river to market. Negros are almoſt the only people employed in ſelling the different commodities expoſed in the market, and they employ their leiſure time in ſpinning cotton.

Without the Jeſuit's college on the ſhore, is a village called Nueſtra Seignora del Gloria, which is joined to the town by a very few intervening houſes. Three or four hundred yards, within the Jeſuit's convent, ſtands a very high caſtle, but it is falling to decay. The biſhop's palace is about 300 yards behind the Benedictine convent, and contiguous to it is a magazine of arms, ſurrounded by a rampart.

The gentry keep their chaiſes, which are drawn by mules; the ladies however uſe a ſedan chair, boarded before and behind, with curtains on each ſide, which is carried by two negros, on a pole connected to the top of the chair by two rods coming from under its bottom, one on each ſide, and reſting to the top. The inhabitants likewiſe uſe hammocks or rajas, ſupported in like manner, and ſurrounded with curtains. The apothecaries ſhops in this town commonly ſerve the purpoſes of coffee-houſes, as the people meet in them to drink capillaire, and play at back-gammon. When the gentry are ſeen abroad they are

* It ſeems that Mr. Banks's ſervants had got on ſhore by ſtratagem, on the 22d, early in the morning, and remained till night; but they had brought on board nothing but plants and inſects to gratify their maſter's curioſity.

are well-dreſſed, though at home they are but looſely covered. The ſhop-keepers have generally ſhort hair, and wear linen jackets with ſleeves.

"The women here, as in moſt of the Portugueſe and Spaniſh ſettlements in South America, are more prompt to grant amorous favours than thoſe of any other civiliſed parts of the world. As ſoon as the evening began, females appeared at the windows on every ſide, who diſtinguiſhed ſuch of the men as beſt pleaſed their fancies by giving them noſegays, and the doctor and two other gentlemen, received ſo many of them, that they threw away theſe love-tokens by handfuls.

"As to the climate of Rio de Janeiro, it is healthy and agreeable, and free from moſt of thoſe inconveniences incident to tropical countries. The air is ſeldom found immoderately hot, as the ſea-breeze conſtantly begins to blow about ten o'clock in the morning, and continues till night, when it is generally ſucceeded by a land wind; though that does not always happen. The ſeaſons are divided into dry and rainy, though their commencement of late has been irregular and uncertain. It appeared that the rainy ſeaſons had almoſt failed for four years preceding Captain Cook's arrival in thoſe parts; but at this time the rain had juſt began, and it fell in large quantities during their ſtay: formerly the ſtreets have been overflowed by the rain, and rendered impaſſable with canoes.

"The adjacent country is mountainous, and chiefly covered with wood, but a ſmall part of it appearing to be cultivated. The ſoil near the town is looſe and ſandy; but farther from the river it is a fine black mould. It produces all the tropical fruits, ſuch as oranges, lemons, limes, melons, mangoes, cocoa-nuts, &c. in great abundance, and without much cultivation, a circumſtance which is agreeable to the inhabitants, who are very indolent.

"The mines, which lie far up in the country, are very rich; but their ſituation is concealed, and nobody can view them, except thoſe who work in them. The experiment is very dangerous, for every one found upon the road which leads to them, is hung upon the next tree, unleſs he can give a ſatisfactory account of the cauſe of his being in that ſituation. About twelve months before their arrival, the government had detected ſeveral jewellers in carrying on an illicit trade for diamonds, with the ſlaves in the mines; and immediately afterwards a law paſſed, making it felony to work at the trade, or have any tools fit for it in poſſeſſion, the civil officers having indiſcriminately ſeized on all that could be found. Near 40,000 negros are annually imported to dig in the mines: theſe works are ſo pernicious to the human frame, and occaſion ſo great a mortality amongſt the poor wretches employed in them, that, in the year 1766, 20,000 more were draughted from the town of Rio de Janeiro to ſupply the deficiency of the former number. There are ſeveral courts of Juſtice in the town, at all of which the viceroy preſides. In criminal cauſes the ſentence is regulated by the majority of voices in the ſupreme court. The viceroy has a council appointed from Europe by the king, to aſſiſt him in his private department, where he has two voices.

"The inhabitants of Rio de Janeiro maintain a whale-fiſhery, which ſupplies them with lamp-oil. They import brandy from the Azores, and their ſlaves and Eaſt India goods from their ſettlements in Africa, their wine from Madeira, and their European goods from Liſbon. The current coin is Portugueſe, which is ſtruck here; the ſilver pieces are called Petacks of different value; and the copper are five and ten ree pieces.

"Rio de Janeiro is very uſeful for ſhips that are in want of refreſhment; the harbour is ſafe and commodious, and may be diſtinguiſhed by a remarkable hill, in the ſhape of a cone, at the weſt point of the bay. The entrance is not wide, but it is eaſy, from the ſea-breeze which prevails from noon to ſun-ſet, for any ſhip to enter before the wind. The entrance of the narrow part is defendeſt by two forts, La Cruz, and Loziã,; they are about three quarters of a mile from each other. The bottom being rocky, renders it dangerous to anchor there, but there is a way to avoid that danger, which is to keep in the mid-channel. The coaſt abounds with a variety of fiſh, among which are dolphins and mackarel." 1769

An amazing number of atoms were taken out of the ſea on the 9th of December. Theſe were of a yellowiſh colour, and few of them were more than the 5th part of an inch long; nor could the beſt microſcope on board the Endeavour diſcover whether they belonged to the animal or vegetable creation. The ſea was tinged in ſuch a manner with theſe equivocal ſubſtances, as to exhibit broad ſtreaks of a ſimilar colour, for near the ſpace of a mile in length, and for ſeveral hundred yards in breadth.—Perhaps theſe might be the ſpawn of ſome marine animal, unknown either to ancient or modern philoſophers. Extraordinary ſubſtances found in the ſea.

Having procured all neceſſary ſupplies, Captain Cook left Rio de Janeiro on Thurſday, the 8th of December, and met with nothing worth relating till the 22d of the ſame month, when numbers of birds of the *proſillaria genus* were diſcoved in 39° 37′ of ſouth latitude, and in longitude 49° 16′ weſt, a number of porpoiſes of a ſingular ſpecies alſo ſurrounded them; theſe were of an aſh-colour, and about 15 feet long.

On the 23d, an eclipſe of the moon was obſerved; and a ſmall white cloud appeared about ſeven o'clock in the weſt, from which iſſued a train of fire, extending itſelf weſterly; in two minutes time, they heard two diſtinct loud exploſions like thoſe of a canon, immediately ſucceeding each other; and the cloud diſappeared ſoon afterwards.

They caught a large tortoiſe called a logger-head, on the 24th, and likewiſe ſhot ſeveral birds, among which was one of thoſe called the *Albetroſs*, meaſuring between the tips of its wings nine feet and an inch, and two feet one inch and a half from the beak to the tail. They ran upwards of fifty leagues on the 30th through great numbers of land inſects, ſome in the air, and ſome upon the water, which appeared exactly to reſemble our flies in England. This was the more remarkable as our voyagers accounted themſelves to be 30 leagues from land.

Captain Cook now ſuppoſed himſelf to be nearly oppoſite the bay called Sans Fond [or bottomleſs] where ſome have conjectured there is a paſſage that divides America; but the gentlemen on board rather thought it might be a large river which had cauſed an inundation. They had much thunder and lightning and rain on the 31ſt, and the three following days. They now ſaw ſome birds, about the ſize of our pigeon, with white bellies and grey breaſts. They had alſo ſight of ſeveral whales.

On the 4th of January they perceived the appearance of land, which they miſtook for Pepys Iſland; but ſtanding towards it, it proved one of thoſe deceptions which we have already noticed. At this time the ſailors were furniſhed with fear-nought jackets, as is cuſtomary in theſe cold climates. Having paſſed Falkland's Iſlands at about the diſtance of four leagues, they ſaw Terra del Fuego. Perceiving a ſmoke they took it for a ſignal, as it did not continue after they had paſſed along the ſhore to the ſouth-eaſt.

They entered the ſtreights of Le Maire on the 14th, but were afterwards driven out again with ſuch violence, (the tide being againſt them) that the ſhip's bow-ſprit was frequently under water.

At length however they got anchorage in a little cove, which was called St. Vincent's Bay, where the weeds, that were obſerved upon rocky ground were very remarkable. They appeared above the ſurface of the water, where it is eight or nine fathoms in depth. Their leaves were four feet long, and many of the ſtalks of the length of an hundred feet, tho' their circumference was not above an inch and an half. Mr. Banks and the Doctor went on ſhore, and returned with upwards of an hundred different plants and St. Vincent's Bay.

1769

and flowers, of which none of the European botaniſts had taken any notice near this bay. The country in general was flat, and the bottom, in particular, was a graſſy plain. Here was plenty of wood, water, and fowl, and winter bark was found in great plenty. The trees appeared to be a ſpecies of the birch, but neither large nor lofty. The wood was white and they bore a ſmall leaf. White and red cranberries were found in theſe parts.

They came to an anchor on Sunday, the 18th in twelve fathom water, upon coral rocks, before a ſmall cove, at the diſtance of about a mile from the ſhore. At this time two of the natives came down upon the beach, as if they expected that the ſtrangers would land; but as there was no ſhelter here, the ſhip was got under ſail again, and the Indians retired diſappointed.

The ſame afternoon about two o'clock, they came into the bay of Good Succeſs, and the veſſel coming to an anchor, the captain went on ſhore, accompanied by Mr. Banks and Dr. Solander, in order to ſearch for a watering place, and diſcourſe with the Indians. Theſe gentlemen had not proceeded above 100 yards before the captain, when two of the Indians that had ſeated themſelves, roſe up, and threw away the ſmall ſticks which they held in their hands, as a token of amity. They afterwards returned to their companions, who had remained at ſome diſtance behind them and made ſigns to their gueſts to advance, whom they received in a friendly tho' uncouth manner. In return for their civility, ſome ribbands and beads were diſtributed among them. Thus a ſort of mutual confidence was eſtabliſhed, and the reſt of the Engliſh joined the party, the Indians converſing with them in their way, in an amicable manner. Captain Cook and his friends took three of them to the ſhip, dreſſed them in jackets, and gave them bread and other proviſions, part of which they carried on ſhore with them; but they refuſed to drink rum or brandy, making ſigns that it burned their throats, as their proper drink was water.

Strange Indians.

"One of theſe people (ſays our author) made ſeveral long and loud ſpeeches, but no part of them was intelligible to any of us. Another ſtole the covering of a globe, which he concealed under his garment that was made of ſkin. After having remained on board about two hours, they returned on ſhore, Mr. Banks accompanying them. He conducted them to their companions, who ſeemed no way curious to know what their friends had ſeen, and the latter were as little diſpoſed to relate as the former were to enquire. None of theſe people exceeded five feet ten inches in height, but their bodies appeared large and robuſt, though their limbs were ſmall. They had broad, flat faces, high cheeks, noſes inclining to flatneſs, wide noſtrils, ſmall black eyes, large mouths, ſmall, but indifferent teeth, and ſtraight black hair, falling down over their ears and foreheads, the latter being generally ſmeared with brown and red paints, and like all the original natives of America, they were beardleſs. Their garments were the ſkins of ſeals and guanicoes, which they wrapped round their ſhoulders. The men likewiſe wore on their heads a bunch of yarn, which fell over their foreheads, and was tied behind with the ſinews or tendons of ſome animals. Many of both ſexes were painted on different parts of their bodies with red, white, and brown colours, and had alſo three or four perpendicular lines pricked acroſs their cheeks, and noſes. The women had a ſmall ſtring tied round each ancle, and each wore a flap of ſkin faſtened round the middle. They carried their children upon their backs, and were generally employed in domeſtic labour and drudgery.

Mr. Banks and Dr. Solander go up the country.

"Mr. Banks and Dr. Solander, attended by their ſervants, ſet out from the ſhip on the 16th, with a deſign of going into the country as far as they could that day, and returning in the evening. Having entered a wood, they aſcended a hill through a pathleſs wilderneſs till the afternoon. After they had reached what they took for a plain, they were greatly diſappointed to find it a ſwamp, covered with birch, the buſhes interwoven and ſo inflexible that they could not be divided: however, as they were not above three feet high, they ſtepped over them, but were up to the ancles in boggy ground. The morning had been very fine, but now the weather became cold and diſagreeable; the blaſts of wind were very piercing, and the ſnow fell thick; nevertheleſs they purſued their route in hope of finding a better road. Before they had got over this ſwamp, an accident happened that greatly diſconcerted them: Mr. Buchan, one of the draughtſmen, whom Mr. Banks had taken with him, fell into a fit. It was abſolutely neceſſary to ſtop and kindle a fire, and ſuch as were moſt fatigued remained to aſſiſt him; but Mr. Banks, Dr. Solander, and Mr. Monkhouſe proceeded, and attained the ſpot they had in view, where they found a great variety of plants that gratified their curioſity, and repaid their toil. On returning to the company amidſt the ſnow which now fell in greater abundance, they found Mr. Buchan much recovered. They had previouſly ſent Mr. Monkhouſe and Mr. Green back to him and thoſe that remained with him, in order to bring them to a hill which was conjectured to lie in a better track for returning to the wood, and which was accordingly fixed on as a place of rendezvous. They reſolved from this hill to paſs through the ſwamp, which this way did not appear to be more than half a mile in extent, into the covert of the wood, in which they propoſed building a hut, and kindling a fire, to defend themſelves from the ſeverity of the weather. Accordingly, the whole party met at the place appointed, about eight in the evening, whilſt it was ſtill day-light, and proceeded towards the next valley.

Their diſtreſſes.

"Dr. Solander, having often paſſed over mountains in cold countries, was ſenſible, that extreme cold when joined with fatigue, occaſions a drowſineſs that is not eaſily reſiſted; he therefore intreated his friends to keep in motion, however diſagreeable it might be to them. His words were—Whoever ſits down will ſleep, and whoever ſleeps will wake no more.—Every one ſeemed accordingly armed with reſolution; but, on a ſudden, the cold became ſo very intenſe as to threaten the moſt dreadful effects. It was now very remarkable, that the Doctor himſelf, who had ſo forcibly admoniſhed and alarmed his party, was the firſt that inſiſted to be ſuffered to repoſe. In ſpite of the moſt earneſt intreaties of his friends, he lay down amidſt the ſnow, and it was with difficulty that they kept him awake. One of the black ſervants alſo became weak and faint, and was on the point of following this bad example. Mr. Buchan was therefore detached with a party to make a fire at the firſt commodious ſpot they could find. Mr. Banks and four more remained with the doctor and Richmond the black, who with the utmoſt difficulty were perſuaded to come on; and when they had traverſed the greateſt part of the ſwamp, they expreſſed their inability of going any farther. When the black was told that if he remained there he would ſoon be frozen to death, his reply was, That he was ſo much exhauſted with fatigue, that death would be a relief to him. Doctor Solander ſaid he was not unwilling to go, but that he muſt firſt take ſome ſleep, ſtill perſiſting in acting contrary to the opinion which he himſelf had delivered to the company. Thus reſolved, they both ſat down, ſupported by ſome buſhes, and in a ſhort time fell aſleep. Intelligence now came from the advanced party, that a fire was kindled about a quarter of a mile farther on the way. Mr. Banks then awakened the doctor who had already almoſt loſt the uſe of his limbs, though it was but a few minutes ſince he ſat down; nevertheleſs, he conſented to go on, but every meaſure taken to relieve the black proved ineffectual. He remained motionleſs, and they were obliged to leave him to the care of a ſailor, and the other black ſervant, who appeared to be the leaſt hurt by the cold, and they were to be relieved as ſoon as two others were ſufficiently warmed, to fill their places. The doctor, with much difficulty, was got to the fire; and as to thoſe who were ſent to relieve the com-

companions of Richmond they returned without having been able to find them. What rendered the mortification ſtill greater was, that a bottle of rum (the whole ſtock of the party) could not be found, and was judged to have been left with one of the three that were miſſing.

"There was now a fall of ſnow which continued for near two hours, and there remained no hopes of ſeeing the three abſent perſons again. At twelve o'clock, however, a great ſhouting was heard at a diſtance, which gave inexpreſſible ſatisfaction to every one preſent. Mr. Banks and four others now went forward and met the ſailor, who had juſt ſtrength enough left to walk. He was immediately ſent to the fire, and they proceeded to ſeek for the other two. They found Richmond upon his legs, but incapable of moving them; the other black was lying ſenſeleſs upon the ground. All endeavours to bring them to the fire was fruitleſs; nor was it poſſible to kindle one upon the ſpot, on account of the ſnow that had fallen, and was falling; ſo that there remained no alternative, and they were compelled to leave the two unfortunate negros to their fate, after they had made them a bed of the boughs of ſome trees, and covered them over thick with the ſame. As all hands had been employed in endeavouring to move theſe poor blacks to the fire, and had been expoſed to the cold for near an hour and an half in the attempt, ſome of them began to be afflicted in the ſame manner as thoſe whom they were to relieve. Briſcoe, another ſervant of Mr. Banks, in particular, began to loſe his ſenſibility. At laſt they reached the fire, and paſſed the night in a very diſagreeable manner.

"The party that ſet out from the ſhip had conſiſted of twelve; two of theſe were already judged to be dead, it was doubtful whether the third would be able to return on board, and Mr. Buchan, a fourth, ſeemed to be threatened with a return of his fits. The ſhip they reckoned to be at the diſtance of a long day's journey, through an unfrequented wood, in which they might probably be bewildered till night, and having been equipped only for a journey of few hours, they had not a ſufficiency of proviſions left to afford the company a ſingle meal.

"On the 17th at day-break nothing preſented itſelf to the view all around but ſnow, which covered alike the trees and the ground; and the blaſts of wind were ſo frequent and violent, that their journey ſeemed to be rendered impracticable, and they had reaſon to dread periſhing with cold and famine. However, about ſix in the morning, they were flattered with a dawn of hope of being delivered, by diſcovering the ſun through the clouds, which gradually diminiſhed. Before their ſetting out, meſſengers were diſpatched to the unhappy negros; but theſe returned with the melancholy news of their death. Though the ſky had flattered the hopes of the ſurvivors, the ſnow continued falling very faſt, a circumſtance which impeded their journey, but a breeze ſpringing up about eight o'clock, added to the influence of the ſun, began to clear the air, and the ſnow falling in large flakes from the trees, gave tokens of a thaw. Hunger prevailing over every other conſideration, induced our travellers to divide the ſmall remainder of their proviſions, and to ſet forward on their journey about ten in the morning. To their great aſtoniſhment and ſatisfaction, in about three hours they found themſelves on the ſhore, and much nearer to the ſhip than their moſt ſanguine expectations could have ſuggeſted. When they looked back upon their former route from the ſea, they found that inſtead of aſcending the hill in a direct line, they had made a circle almoſt round the country. On their return, theſe wanderers received ſuch congratulations from thoſe on board as can more eaſily be imagined than expreſſed."

Mr. Banks and Dr. Solander went on ſhore again on the 20th of this month, landing in the bottom of the bay, where they collected a number of ſhells and plants, hitherto unknown. After having returned to dinner, they went to viſit an Indian town, about two miles up the country, the acceſs to which, on account of the mud, was difficult. When they approached the town, two of the natives came out to meet them, who began to ſhout in their uſual manner. They afterwards conducted Mr. Banks and the Doctor to their town. It was ſituate on a ſmall hill, over-ſhaded with wood, and conſiſted of about a dozen huts, conſtructed without art or regularity. They were compoſed of a few poles inclining to each other in the ſhape of a ſugar-loaf, which were covered on the weather ſide with graſs and boughs, and on the other ſide a ſpace was left open, which ſerved at once for a fire-place and a door. They were of the ſame nature of the huts that had been ſeen at St. Vincent's Bay. A little graſs ſerved for beds and chairs, and their utenſils were a baſket for the hand, a ſatchel to hang upon the back, and a bladder for water, out of which they drank through a hole near the top. This town was inhabited by a tribe of about 50 men, women, and children. Their bows and arrows were conſtructed with neatneſs and ingenuity, being made of wood highly poliſhed, and the point which was either glaſs or flint, very ſkilfully fitted. Theſe latter ſubſtances were obſerved among them unwrought, as alſo cloth, rings, buttons, &c. from whence it was concluded that they ſometimes travelled to the northward, as no ſhip, for years paſt, had touched at this part of Terra del Fuego. The natives here did not ſhew any ſurpriſe at the ſight of fire arms, but appeared to be well acquainted with their uſe. It is likely that the ſpot on which the Doctor and Mr. Banks met them, was not a fixed habitation, as their houſes did not ſeem as if they were erected to ſtand for any long time, and they had no boats or canoes among them. They did not appear to have any form of government or any ideas of ſubordination. They ſeemed to be the very out-caſts of men; and a people that paſſed their lives in wandering in a forlorn manner over dreary waſtes; their dwelling being a thatched hovel, and their cloathing ſcarcely ſufficient to keep them from periſhing with cold, even in theſe uncomfortable climates. Their only food was ſhell-fiſh, which on any one ſpot muſt ſoon be exhauſted; nor had they the rudeſt implement of art, not even ſo much as was neceſſary to dreſs their food, yet amidſt all this, we are told, that they appeared to enjoy that content which is ſeldom found in great and populous cities; a ſpecies of content, which if they really enjoyed it, muſt have ariſen from ſtupidity, a ſatisfaction the offspring of the greateſt ignorance. 1769

Such is the ſtate of uncultivated nature; ſuch the rude form which unciviliſed man puts on. The wants of theſe people ſeemed to be few; but ſome wants all mankind muſt have, and even the moſt ſimple of them, theſe poor ſavages appeared ſcarcely in a condition to gratify. The calls of hunger and thirſt muſt be obeyed, or man muſt periſh, yet the people in queſtion ſeemed to depend on chance for the means of anſwering them. Thoſe who can be happy in ſuch a ſituation, can only be ſo, becauſe they have not a due feeling of their miſery.

We know that there have been admirers of ſimple nature amongſt the philoſophers of all ages and nations; and certainly ſimple nature has her beauties. In regard to the vegetative and brute creation, ſhe operates with reſiſtleſs energy; her power is prevalent as her pencil is inimitable; but when we aſcend in the ſcale of beings, and come to examine the human race, what ſhall we find *them*, without cultivation? It is here that inſtinct ends and reaſon begins, and without entering into the queſtion, Whether a ſtate of nature is a ſtate of war? when we obſerve the innumerable inconveniences to which thoſe are ſubject on whom the light of ſcience never dawned, we may eaſily determine in the favour of thoſe arts which have civiliſed mankind, formed them into ſocieties, refined their manners, and taught the nations where they have prevailed, to protect thoſe rights which the untutored

ſavages

1769 ſavages have ever been obliged to yield to the ſuperior abilities of their better inſtructed invaders, and have thus fallen a prey to European tyranny. *

No other quadrupeds than ſeals, ſea-lions, and dogs were obſerved here. From a hill, Mr. Banks, indeed, remarked the impreſſion of the foot-ſteps of a large animal, on the ſurface of a bog, but of what kind it was he could not determine. There were no land-birds ſeen here larger than an Engliſh black-bird, hawks and vultures excepted; there were ducks and other water-fowls in abundance. Shell-fiſh, clams, and limpets, were very plentiful here. The country, though not cleared, produced no ſpecies of hurtful or troubleſome animals. A great variety of plants were found by the Doctor and Mr. Banks. The beach and the birch which grow here may be uſed for timber. The wild celery (as well as the ſcurvy-graſs) is ſuppoſed to poſſeſs antiſcorbutic qualities, which cannot but be of ſervice to the crews of ſuch ſhips as touch here after having been on a long voyage. The latter is found in abundance near ſprings and in damp places, particularly at the watering-place in the bay of good Succeſs, and reſembles the Engliſh cuckow-flower or lady's-ſmock. The wild celery is like that of our gardens, but the leaves are of a deeper green. It grows in plenty near the beach and upon the land above the ſpring-tides, and taſtes ſomewhat like parſley mixed with celery.

On Sunday, January 22, Captain Cook having got in his wood and water, ſailed out of the bay, and ſteered his courſe through the Streights of Maghellan.

Notwithſtanding the terrible deſcription which ſome voyagers have given of Terra del Fuego, the people on board the Endeavour did not find that it had ſuch a very forbidding aſpect. On the contrary, they found the ſea coaſts and the ſides of the hills cloathed with verdure. The ſummits of theſe hills were indeed barren, but the valleys appeared rich, and a brook was generally found at the foot of almoſt every hill. Though the water had a reddiſh tinge, it was far from being ill-taſted.

The ſtreight of Le Maire is bounded on the weſt by Terra del Fuego, and on the eaſt by the weſt end of Staten Land, and is near five leagues in length, and as many in breadth. The bay of Good Succeſs is ſituate about the middle of it, on the ſide of Terra del Fuego, which preſents itſelf on entering the ſtreight from the northward. The ſouth head of it may be diſtinguiſhed by a land mark, reſembling a road from the ſea into the country. It affords good anchorage, and plenty of wood and water. Staten Land did not appear to captain Cook in the ſame manner as it did to Commodore Anſon. The horror and wildneſs with which it appeared to the commodore was not diſcernible to our voyager. On the contrary, the land ſeemed not to be deſtitute of wood and verdure, nor covered with ſnow; and on the north ſide there was the appearance of bays and harbours. It is moſt probable that the ſeaſon of the year and other circumſtances have concurred to furniſh us with theſe different deſcriptions of a land which at beſt muſt be owned to be diſagreeably ſituated.

The ſhip ſailed from Cape Horne on the 26th of January, the weather being then very calm; and Mr. Banks went on board a ſmall boat in order to ſhoot birds, when he killed ſome ſheer-waters, and albetroſſes, the latter were larger than thoſe caught to the northward of the ſtreight, and proved to be very good food.

Captain Cook had the good luck to find no difficulty in doubling Cape Horn, and had a very diſtinct view of the coaſt, the weather being fair and temperate. On the firſt of March they were in 38° 44′ of ſouth latitude, and 110° 33′ of weſt longitude, both by the log and by the obſervation, a concurrence very ſingular in a run of 660 leagues, and which tended to prove that no current had affected the ſhip in her courſe, and it was likewiſe concluded that ſhe had not come near a continent of very large extent from a parity of reaſoning. Mr. Banks killed more than 60 birds in one day, and caught two foreſt flies, ſuch as had never yet been deſcribed; he alſo found a cuttle-fiſh different from thoſe of this name generally deſcribed in Europe. This fiſh which had a double row of talons, reſembling thoſe of a cat, which it could put forth or withdraw at pleaſure, when dreſſed made good ſoup.

A young fellow about twenty threw himſelf overboard on the 25th, on account of a quarrel about a piece of ſeal-ſkin which he took by way of frolic, but being charged with it as a theft, he took it ſo much to heart, that he could not endure to live after ſuch an accuſation.

On Tueſday the 14th of April, Peter Briſcoe, ſervant to Mr. Banks, diſcovered land to the ſouth, at the diſtance of about three or four leagues. The captain immediately gave orders to haul up for it, and found it was an iſland of an oval form, with a lagune [or lake] in the middle which extended over the greateſt part of it. The ſurrounding border of land was low and narrow in many places, eſpecially towards the ſouth, where the beach conſiſted of a reef of rocks; three places on the north ſide had the ſame appearance; ſo that on the whole, this land ſeemed to reſemble ſeveral woody iſlands. There was a large clump of trees to the weſtward, and in the centre were two cocoa-trees. The veſſel came within a mile on the north ſide, but no bottom could be found at 130 fathom, nor any good anchorage. The iſland was covered with trees; but no other ſpecies than the palm and the cocoa-nut tree could be diſcerned from on board. Several of the natives were diſcovered on ſhore. They appeared to be tall, with heads remarkably large, which probably ſome bandage might have increaſed. Their complexion was of the copper colour, and their hair was black. Some of theſe people were ſeen a-breaſt of the ſhip, holding poles or pikes of twice their own height. They then appeared naked, but when they retired, on the ſhip's paſſing by the iſlands, they put on a light-coloured covering. Some clumps of palm-trees ſerved for their habitations, and the appearance of the groves was very agreeable. They called this place Lagune Iſland; it lay in latitude 18° ſouth, and longitude 139° weſt. Lagune Iſland.
In the afternoon the captain ſaw land again to the north-weſt, by ſun-ſet he reached it, and found it a low circular iſland, in circumference about a mile. The land appeared here covered with verdure, but of various ſorts, but no inhabitants were ſeen, nor any cocoa-trees. It was called *Thrumb-Cap* by the gentlemen on board. Thrumb-Cap Land.

They continued their courſe on the 5th, with a favourable trade wind, and ſaw land about three o'clock to the weſtward. It was a low land, in form reſembling a bow, and appeared to be about ten or twelve leagues round. Its length was between three and four leagues, its width that of above two hundred yards. The beach was flat, and ſeemed to have no other herbage than ſea-weeds upon it. The reſemblance of a bow was preſerved in the arch and cord forming the land, while the intermediate ſpace was taken up by water; the arch in general was covered with trees of various verdure, and of different heights. Bow Iſland.

Having ſailed along the beach within a league till ſun-ſet, concluding that they were half way between the two tufts of trees that they had ſeen, they ſounded.

From

* For a comprehenſive ſyſtem of all the uſeful arts, ſee the New and Complete Dictionary of Arts and Sciences, written by the Rev. Mr. Middleton, and other gentlemen of abilities, where the principles of every art are treated in ſuch a manner as to be ſuited to all capacities, and the whole circle of ſciences is fully illuſtrated and explained. This Dictionary is compriſed in only eighty numbers, and includes all the new diſcoveries in the ſeveral arts and ſciences.

From the ſmoke that had been ſeen here, our voyagers concluded the place to be inhabited, and gave it the name of *Bow Iſland*.

On Thurſday the 6th, about noon, land was again ſeen to the weſt; at three o'clock they came up with it. It ſeemed to be divided into two parts, which had the appearance of two collections of iſlands, to the extent of about nine leagues. The two largeſt were divided from the others by a ſtreight, the breadth of which was about half a mile.

There were ſome of theſe iſlands about ten miles in length; but they appeared like long narrow ſtrings of land, not above a quarter of a mile in breadth. They produced trees, however, of different kinds, among which the cocoa-tree was ſeen. Some of the inhabitants came out in their canoes, and two of them made as if they intended to come on board; but theſe, like the reſt, ſtopped at the reef. After the captain had got about a league from the ſhore, he ſaw ſome of the natives following in a canoe with a ſail, but ſhe likewiſe ſtopped after ſhe paſſed the reef. From the obſervations made on theſe people, they appeared to be about the common ſize, and well made, their complexion was brown, and they were naked. — In general, they bore two weapons, one of them was a long pole, ſpear-pointed, and the other reſembled a paddle. Several of their canoes were conſtructed in ſuch a manner as not to carry more than three perſons; others were fitted up for ſix or ſeven; one of theſe boats hoiſted a ſail, which was converted into an awning when a ſhower of rain fell. The captain did not chuſe to ſtay for any of them; neither could he nor his officers determine whether the ſignals made by the natives were meant for defiance or for invitation. However, the captain did not think proper to try the experiment, being ſatisfied that ſhould theſe people endeavour to oppoſe his landing, it muſt coſt them dear, whereas the iſland appeared to be of no importance, as producing nothing of which the ſhip's company were at that time deſtitute. He therefore reſolved to paſs by this place, and proceed to the iſland where directions were given to make the aſtronomical obſervations already mentioned, the natives of which he conceived would make no reſiſtance, as they had already experienced the danger of oppoſing the force of an European nation.

On the 7th, about ſix in the morning, another iſland was diſcovered, which was about five miles in circumference, being very low and had a piece of water in the middle of it. It was woody, and covered with verdure, but no inhabitants were ſeen upon it by thoſe on board. The Engliſh called this Bird Iſland. *Bird Iſland*, from the birds that were ſeen flying round it.

In the afternoon of Saturday, they ſaw land to the northward, and came abreaſt of it in the evening, at about five miles diſtance. It ſeemed to be a chain of iſlands. It was of an oval figure, and conſiſted of coral and ſand, with ſome clumps of ſmall trees, and a lagune [or lake] was in the middle of it. It received Chain Iſland. the name of *Chain Iſland*, on account of its appearance.

Oſnaburgh Iſland, already mentioned, was ſeen on the 10th, and the ſame day they made Otaheite, or King George the Third's Iſland, as Captain Wallis had denominated it. The ſhip was prevented from approaching it by the calms, till the 12th, when a breeze ſprang up, and ſeveral canoes were ſeen making towards the ſhip, but thoſe who were in the neareſt of theſe canoes ſeemed to be very ſhy of coming on board. They had brought with them young plantains and branches of trees, which were handed up the ſhip's ſide, and, by their deſire, were ſtuck in conſpicuous parts of the rigging, as tokens of peace and friendſhip. Then the Engliſh bartered with the Indians for their cargoes, which conſiſted of bread fruit, bananas, apples, and figs. 1769

They opened the north-weſt point of the iſle, to which the Dolphin's people had given the appellation of York Iſland, on the evening of this day. They lay off and on all night, and entered Port Royal Harbour on the 13th, in the morning, and came to an anchor within half a mile of the ſhore. Several of the natives came off immediately in their canoes, and brought with them bread-fruit, * cocoa-nuts, and apples, beſides ſome hogs which they bartered for beads and other trinkets with the ſhip's company. The old Indian that was ſo well known to Mr. Gore and others, who had been on the iſland with Mr. Wallis, came on board. His name was *Owhaw*; and being looked upon as a very uſeful man, they were glad of his company. Captain Cook arrives at Otaheite.

The veſſel being ſecured in a proper manner, the captain, Mr. Banks, and Dr. Solander went on ſhore with a party under arms. Some hundreds of the natives received them with awe and reverence; and the tokens of peace being exchanged the Indians offered to conduct them to a ſpot of ground which it would be more convenient for them to occupy, than that where they had landed. The offer was accepted, and, on their way, the Engliſh made the Indians ſome preſents which the latter very thankfully received. They now took a circuit of about four miles through groves of the bread-fruit and cocoa-trees. Intermingled with theſe were the dwellings of the natives, which conſiſted of huts without walls. They found but few fowls or hogs in the courſe of their journey, and underſtood that none of their conductors, nor any of the people they had hitherto ſeen were perſons of rank in the iſland. Such as had before been at Otaheite in the Dolphin, were likewiſe of opinion, that the queen's reſidence was removed, as there were no traces of it now to be diſcovered.

Before they left the ſhip the next morning, ſeveral canoes were ſeen full of people whoſe dreſs indicated them to be of a ſuperior claſs. Two of them came on board, when each fixed upon a friend, one choſe Captain Cook, and the other Mr. Banks, at the ſame time performing the ceremony of taking off great part of their cloaths to put on the Engliſh gentlemen, who preſented them with ſome trinkets in return for their compliment. They afterwards made ſigns for their new friends to go with them to their habitation. As the captain was deſirous of being acquainted with the people, and of finding out a more convenient harbour, he accepted the invitation, and went with them, accompanied by Mr. Banks, Dr. Solander, and others. They landed at the diſtance of about three miles, among a great number of the natives who brought them to a large houſe, where they were introduced to a middle-aged man, named Tootahah. As ſoon as they were ſeated, this Indian preſented Mr. Banks with a cock and a hen and a piece of perfumed cloth, which compliment was returned by a preſent from the Engliſh gentleman. After this they were conducted to ſeveral large houſes built in the manner we have already deſcribed, where they were kindly received by many of the natives of both ſexes, and afterwards met with another chief, whoſe name was Tubora Tumaida, with whom they ſettled a treaty according to the faſhion of the country. This chief gave them to underſtand that if they choſe to eat he had proviſions at their ſervice, which he accordingly produced.

"In the courſe of this viſit (ſays my author) Tomio, the chief's wife placed herſelf upon the ſame mat with Mr. Banks, cloſe by him; but as ſhe was not young, nor appeared ever to have poſſeſſed many charms, this gentleman paid little attention to her, and ſhe received the additional mortification of Mr. Banks's beckoning to a pretty girl, who, with ſome

* The tree which bears this fruit is about the ſize of the horſe-cheſnut; its leaves are near a foot and a half in length, in ſhape oblong, and very much reſemble thoſe of the fig-tree. The fruit is ſomething like that of the cantaloupe melon, it is incloſed in a thin ſkin, and its core is as large as a man's thumb, its ſubſtance is ſomewhat like that of new bread, and of the whiteneſs of a blanched almond. It is roaſted before it is eaten, and has very little taſte.

1769 reluctance, came and placed herſelf by him. The princeſs was ſomewhat chagrined at this preference given to her rival; nevertheleſs ſhe continued her aſſiduities to her gueſt. This whimſical ſcene was interrupted by an event of a more ſerious nature; Dr. Solander having miſſed his opera glaſs, a complaint was made to the chief, which interrupted the convivial party. The complaint was inforced by Mr. Banks's ſtarting up and ſtriking the butt-end of his muſquet againſt the ground, which ſtruck the Indians with ſuch a panic that all of them ran precipitately out of the houſe, except the chief and a few others of the ſuperior claſs. That no diſadvantageous notions might be entertained of them on account of this circumſtance, the chief obſerved, with an air of great probity, That the place which the Doctor had mentioned on this occaſion, was not within his diſtrict, but that he would ſend to the chief of it, and endeavour to recover it, adding, that if this could not be done, he would make the Doctor compenſation, by giving him as much new cloth, (of which he produced large quantities) as ſhould be thought equal to the value. The caſe however was brought in a little time, and the glaſs itſelf ſoon after, which deprived us of the merit we ſhould otherwiſe have had in refuſing the cloth which had been offered us. But it afforded an opportunity of convincing the natives of our generoſity, by laviſhing rewards upon them for an action, to which ſelf-intereſt had been the motive, rather than any ſentiment of probity; to which, from numerous tranſactions, they appeared to be abſolutely ſtrangers. After this adventure was amicably terminated, we returned to the ſhip about ſix o'clock in the evening. On Saturday the 15th, in the morning, ſeveral of the chiefs, one of whom was very corpulent, came on board from the other point, bringing with them hogs, bread-fruit, and other refreſhments, in exchange for which they received linen, beads, and other trinkets; but ſome of them took the liberty of ſtealing the lightning chain. This day the captain, attended by Mr. Banks, and ſome of the other gentlemen, went on ſhore to fix on a proper ſpot to erect a fort for their defence, during their ſtay on the iſland, and the ground was accordingly marked out for that purpoſe; a great number of the natives looking on all the while, and behaving in the moſt peaceable and friendly manner."

As Mr. Banks and his friends had ſeen ſo few hogs and poultry in their walks, they ſuſpected that they had been driven up the country; for which reaſon they determined to penetrate into the woods, the tent being guarded by a petty officer and a party of marines. On this excurſion ſeveral of the natives accompanied the Engliſh. While the party were on their march they were alarmed by the diſcharge of two pieces fired by the guard of the tent. Owhaw having now called together the captain's party, diſperſed all the Indians, except three, who in token of their fidelity broke branches of trees, according to their cuſtom, and whom it was thought proper to retain. When they returned to the tent, they found that an Indian having ſnatched away one of the centinel's muſquets, a young midſhipman, who commanded the party, was ſo imprudent as to give the marines orders to fire, which were obeyed, and many of the natives were wounded; but this did not ſatisfy them, as the offender had not fallen, they therefore purſued him and revenged the theft by his death.

This action which was equally inconſiſtent with policy and humanity, could not but be very diſpleaſing to Mr. Banks; but as what had paſſed could not be recalled, nothing remained but to endeavour to accommodate matters with the Indians. Accordingly he croſſed the river where he met an old man, through whoſe mediation ſeveral of the natives were prevailed to come over to them, and to give the uſual tokens of friendſhip. The next morning, however, they ſaw but few of the natives on the banks, and none came on board, from whence it was concluded that the treatment they had received the former day was not yet forgotten, and the Engliſh were confirmed in this opinion by Owhaw's having left them. In conſequence of theſe circumſtances, the captain brought the ſhip nearer to the ſhore, and moored her in ſuch a manner as to make her broad-ſide bear on the ſpot which they had marked out for erecting their little fortification. But in the evening the captain and ſome of the gentlemen going on ſhore, the Indians came round them, and trafficked with them as uſual.

On the 17th, Mr. Banks had the misfortune to loſe Mr Buchan. The ſame day they received a viſit from Tubora Tumaida, and Tootahah. They brought with them ſome plantain branches, and till theſe were received, they would not venture on board. They bartered ſome bread-fruit and a hog which was ready dreſſed, for nails, with the Engliſh.

On the 18th the fort began to be erected. And now ſome of the company were employed in throwing up intrenchments, whilſt others were buſied in cutting faſcines and pickets, in which work the Indians aſſiſted them. They fortified three ſides of the place, with intrenchments and palliſadoes, and upon the other which was flanked by a river, where a breaſtwork was formed by the water-caſks. The natives brought down ſuch quantities of bread-fruit and cocoa-nuts this day, that it was neceſſary to refuſe them, and to let them know that none would be wanting for two days. Mr. Banks ſlept for the firſt time on ſhore this night. None of the Indians attempted to approach his tent, he had however taken the precaution of placing centinels about it, for its defence, in caſe any attack ſhould be meditated.

Tubora Tumaida viſited Mr. Banks at his tent on Wedneſday the 19th, and brought with him his wife and family with the materials for erecting a houſe, intending to build it near the fort. He afterwards aſked that gentleman to accompany him to the woods. On their arrival at a place where he ſometimes reſided, he preſented his gueſts with two garments, one of which was of red cloth, and the other was made of fine matting; having thus clothed Mr. Banks, he conducted him to the ſhip, and ſtaid to dinner with his wife and ſon. They had a diſh ſerved up that day, which was prepared by the attendants of Tubora Tumaida, which ſeemed like wheat flour, and being mixed with cocoa-nut liquor, it was ſtirred about till it became a jelly. Its flavour was ſomething like blanc mange. A ſort of market was now eſtabliſhed without the lines of the fort, which was tolerably well ſupplied, and Tubora Tumaida was a frequent gueſt to Mr. Banks, and the other Engliſh gentlemen. He was the only native that attempted to uſe a knife and fork, being fond of adopting European manners. The ſurgeon being abroad on his evening walk, reported that he had ſeen the body of the man who had been ſhot from the tent, of which he gave the following account.——"The corpſe was depoſited in a ſhed, cloſe to the houſe where the deceaſed had reſided when he was alive, and others were within ten yards of it. It was about fifteen feet in length, and eleven in breadth, and the height was proportionable. The ſides and one end were incloſed with a ſort of wicker work; the other end was intirely open. The body lay on a bier, the frame of which was of wood, ſupported by poſts about five feet high, and was covered with a mat, over which lay a white cloth: By the ſide of it lay a wooden mace, and towards the head two cocoa ſhells; towards the feet was a bunch of green leaves, and ſmall dried boughs tied together, and ſtuck in the ground, near which was a ſtone about the ſize of a cocoa-nut; here were alſo placed a young plantain tree, and a ſtone axe. A great many palm-nuts were hung in ſtrings at the open end of the ſhed; and the ſtem of a palm-tree was ſtuck up on the outſide of it, upon which was placed a cocoa-ſhell filled with water. At the ſide of one of the poſts there hung a little bag with ſome roaſted pieces of bread-fruit."—The natives were not pleaſed at his approaching the body, their jealouſy appearing plainly in their countenances and geſtures.

On the 22d they were entertained by ſome of the muſicans of the country, who performed on an inſtrument ſomewhat reſembling a German flute, but the performer blew with his noſtril inſtead of his mouth; ſeveral of the natives accompanied this inſtrument with a particular tune.

Some axes were brought by the natives to the Engliſh to grind and repair, and moſt of them appeared to have been left there by Captain Wallis and his people. There was however a French one among the reſt, which it was found at laſt they had received from M. Bougainville when he viſited theſe parts, in the courſe of his voyage round the world, as the reader will ſee in its proper place.

Mr. Banks and the Doctor made an excurſion into the country on the 24th, and found it level and fertile for about two miles along the ſhore to the eaſtward; farther on, they found the hills ſtretch to the water's edge, till at laſt they ran quite out into the ſea. Having paſſed theſe hills, which continued about three miles, they deſcried an extenſive plain where the houſes were good; the people ſeemed to enjoy a conſiderable ſhare of property; and the place was rendered ſtill more agreeable by a wide river iſſuing from a valley that watered it.——When they had croſſed this river, perceiving that they were come into a barren country, they reſolved to return; but juſt as they were about to put their reſolve into execution, they were offered ſome refreſhment by a man whoſe ſkin was of a dead white, and his hair and eyebrows were as white as his ſkin. Tubora Tumaida and his women expreſſed great joy when they met the Engliſh on their return.

Several of the gentlemens knives being miſſing on the 25th, Mr. Banks who had loſt his amongſt the reſt, accuſed Tubora Tumaida of having taken it, which, as he was innocent, occaſioned him a great deal of unmerited anxiety. It was ſome time before he could forget the injury, and at laſt it was found that Mr. Banks's ſervant had miſlaid it. The Indian, with the tears ſtarting from his eyes, made ſigns that if he ever had been guilty of ſuch an action as was imputed to him, he would ſuffer his throat to be cut. But though he was innocent of this accuſation, it appeared that the natives of this iſland were very much addicted to thieving.

Six ſwivel guns were mounted upon the fort on the 24th, on which the Indians ſeemed to be in great trouble, and ſeveral of the fiſhermen removed themſelves, fearing, notwithſtanding all the marks of friendſhip which had paſſed between them, that within a few days they ſhould be fired at from the fort.

Notwithſtanding this jealouſy, Tubora Tumaida came with three of his women, and an acquaintance of his who was a remarkable glutton, to dine at the fort; after which he went back to his own houſe in the wood. It was not long after that he returned, to complain to Mr. Banks that the ſhip's butcher had threatened to cut his wife's throat, becauſe ſhe would not barter a ſtone hatchet for a nail. As it appeared that he was to blame, he was flogged in the veſſel in ſight of ſeveral of the natives, who were humane enough to interfere, and beg for his releaſe;—they ſhewed great concern, and even burſt into tears when that favour was denied them.

In the forenoon of the 28th the Indian canoes were continually coming in, and people of both ſexes filled the tents at the fort. The maſter of the Endeavour now went on ſhore, where having ſeen a female whoſe name was Oberea, he declared ſhe was the ſame perſon whom he judged to be the queen of the iſland when he was there with Captain Wallis.

It will naturally be imagined that the attention of all was fixed on a perſon of whom ſo much had been ſaid by the captain and crew of the Dolphin. With regard to her perſon, ſhe was tall, and rather large made; her ſkin was white, and ſhe had once been handſome, but as ſhe was near forty, it was no wonder that her beauty was on the decline; her eyes, however, ſtill retained great expreſſion. It was not long before this lady was conducted on board with ſome of her family. Among ſeveral preſents that ſhe received, was a child's doll that ſhe ſeemed to be very attentive in viewing. She was eſcorted on ſhore by the captain, to whom ſhe gave a hog and ſome plantains, in return for his preſents;—theſe marks of her favour were carried in a ſort of proceſſion, the rear of which was cloſed by the queen and the captain.—Envy is found among thoſe who are ſuppoſed to be the children of ſimple nature; this peſt is but too apt to ſow her baleful ſeeds in every breaſt. Her influence was plain enough here, though in a matter which to an European was rather a ſubject of laughter than of ſerious conſideration. As they proceeded they met Tootahah who, though he did not appear to be king of the iſland, yet acted as if he thought he had a right to ſomething like ſovereign command. He immediately ſhewed ſigns of jealouſy at Oberea's having the doll; nor could there be any means found of conciliating his friendſhip (however abſurd the preſent might ſeem) without complimenting this chief with "the baby of a child" and ſo prevalent is faſhion in every country, when the great ones lead the way, that now a doll was preferred to a hatchet; but a very ſhort time taught the Indians to find their miſtake, and the uſefulneſs of iron in the end prevailed over every other conſideration. As to the natives who now came on board, the men ate heartily of the ſhip's proviſions, but the women did not chuſe to partake of any of them; and though they were courted to dine with the gentlemen, yet, for reaſons which remained a ſecret to thoſe who ſolicited them, they choſe to eat of plantains with the ſervants. 1769 The queen comes on board.

Mr. Banks paid a viſit to Oberea on the 29th day of the month, but found that ſhe was aſleep under the awning of her canoe, and going to call her up, was not a little ſurpriſed at finding her in bed with a young fellow of about twenty-five years of age, a circumſtance which cauſed him to retire rather diſconcerted, and with ſome precipitation. But as we have already obſerved, a commerce of this kind was by no means uncommon in the iſland of Otaheite; the ladies being all of eaſy virtue, frequently courting the men to their arms, and making no ſecret of their amorous dalliance. On this occaſion, Mr. Banks was given to underſtand that ſuch an intrigue as this was not conſidered as ſcandalous, and that the perſon found in bed with the queen, whoſe name was Obadie, was well known to her ſubjects to be the companion of her looſer hours.

Oberea, however, ſoon got up and dreſſed herſelf to wait on her Engliſh friend. After dreſſing him in a ſuit of fine cloth, they proceeded together to the tent; and Mr. Banks paid a viſit to Tubora Tumaida in the evening. He was aſtoniſhed to find this chief and his family in tears, nor could he diſcover the reaſon while he remained with them: But, on his return, the officers acquainted him that Owhaw had been ſo weak as to pretend to foretell that the guns would be fired within four days, and this was the eve of the third, which had occaſioned their alarm. As the gentlemen were apprehenſive that ſome ill conſequence might ariſe from this prepoſſeſſion, the centinels were doubled at the fort, and they themſelves thought it neceſſary to keep under arms; but Mr. Banks walking his bounds about two in the afternoon, finding nothing that might tend to encourage his ſuſpicions, he dropped them and reſted ſecure in the fort.

On the 30th Tomio came in great haſte to the tents, and taking Mr. Banks by the arm, told him that Tubora Tumaida was dying, owing to ſomething that had been given by ſome of the Engliſh, and entreated he would inſtantly go to him.

Mr. Banks went according to their deſire, and found the Indian very ſick. He was told that he had been vomiting, and had thrown up a leaf which they ſaid contained ſome of the poiſon. Mr. Banks having examined the leaf, found it was nothing but tobacco which the Indian had begged of ſome of the ſhip's company.

The

1769 The matter, however, appeared in a very ſerious light to Tubora Tumaida, who really concluded from the violent ſickneſs he ſuffered, that he had ſwallowed ſome deadly drug, the terror of which no doubt contributed to make him yet more ſick. While Mr. Banks was examining the leaf, he looked up to him, as if he had been juſt on the point of death. But when the nature of this dreadful poiſon was found out, he only ordered him to drink of cocoa-nut milk, which ſoon reſtored him to health, and he was as chearful as before the accident happened.

Theſe people ſeemed in particular inſtances to be ſometimes ſtrangely afflicted from ſlight cauſes. At one time a certain female attendant of Tubora Tumaida came to the tent in the greateſt ſeeming affliction, the cauſe of which could not be diſcovered: the tears guſhed from her eyes, and ſhe ſeemed to be in all the bitterneſs of grief. When ſhe was aſked the occaſion of all this, ſhe refuſed to make any anſwer, but ſtruck herſelf with a ſhark's tooth ſeveral times upon the head, till ſhe cauſed the blood to flow plentifully; yet ſeveral other Indians who were preſent, continued talking and laughing without being in the leaſt concerned at her ſorrow. She afterwards picked up ſome pieces of cloth that ſhe had thrown down to catch the blood, and caſt them into the ſea, as if ſhe meant to ſignify that ſhe wiſhed her unaccountable behaviour might be forgotten. Afterwards ſhe bathed herſelf in the river, and returned with great chearfulneſs to the tent; and ſoended the whole matter.

Captain Cook having produced an iron adze, which was made in imitation of the ſtone ones uſed by the natives, ſhewed it to Tootahah, as a curioſity. The latter ſnatched it up and inſiſted on having it; and though he was offered the choice of any of the articles in the cheſts which were opened before him, yet he would not accept of any thing in its ſtead. A chief dined with them that day, who had been on board ſome time before, accompanied by ſome of his women that uſed to feed him. He now came alone; and when all things were ſet ready for dinner, the captain helped him to ſome victuals, ſuppoſing that he would have diſpenſed with the ceremony of being fed; but he was deceived; for the chief never attempted to eat, and would have gone without his dinner, if one of the ſervants had not fed him.

They took the aſtronomical quadrant and ſome of the inſtruments on ſhore that afternoon; and to their great ſurpriſe when they wanted to make uſe of the quadrant, the next day, it was not to be found; a matter which was looked upon as the more extraordinary, as a centinel had been placed for the whole night within a few yards of the place where it was depoſited.

At firſt their own people were ſuſpected of being concerned in this theft, and, as the inſtrument had never been taken out of the caſe, it was ſuſpected that ſome perſon might have carried it off, under the ſuppoſition that its contents were articles uſed in traffic. A ſtrict ſearch was made in and about the fort, and a conſiderable reward offered in order to obtain it again. But all this proving fruitleſs, Mr. Banks, accompanied by Mr. Green and ſome other gentlemen, ſet out for the woods, where they thought they might probably get ſome tidings of what was ſtolen. In their way, they met with Tubora Tumaida, and ſome of the natives. This chief was made to underſtand by ſigns, that they had loſt the quadrant, and that as ſome of his countrymen muſt have taken it, they inſiſted upon being ſhewn the place where it was concealed. Having proceeded a few miles together, after ſome enquiry, Tubora Tumaida was informed who the thief was, and it was found that he was then at a place about four miles diſtant. As they had no arms but a brace of piſtols, not caring to truſt themſelves ſo far from the fort, a meſſage was diſpatched to Captain Cook, requeſting him to ſend out a party to ſupport them. The captain accordingly ſet out, with a party properly armed, after having laid an embargo upon all the canoes in the bay.

In the mean time, Mr. Banks and Mr. Green proceeded on their way, and at the place which had been mentioned, were met by one of Tubora Tumaida's own people, bringing with him part of the quadrant; the caſe and the other parts of the inſtrument were recovered ſoon afterwards, when it was found that it had received no real injury, though it had been taken to pieces.

When they returned in the evening, they were much ſurpriſed to find Tootahah under confinement in the fort, while a crowd of the natives, (who thought he would be put to death) ſurrounding the gate, diſcovered marks of the greateſt anxiety for the fate of their chief.

The cauſe of his detention originated from the conduct of the Indians: alarmed at Captain Cook's having gone up the country with an armed party, moſt of the natives left the fort that evening, and one of the canoes attempted to quit the bay. The lieutenant who commanded on board the ſhip, having it in charge not to ſuffer any canoe to depart, ſent a boat to detain her, but ſhe no ſooner approached, than the Indians jumped into the ſea. Tootahah being of the number, was taken up, and ſent by the lieutenant to the officer that commanded at the fort, who concluded he ſhould do right to detain him priſoner, while the poor chief thought of nothing but being put to death, till Captain Cook cauſed him to be returned to the great joy of his countrymen.

But the natives were ſtill inclined to bear this affair in their minds, and as a proof of it, they neglected to ſupply the market with proviſions. Mr. Banks walking into the woods, heard great murmurings concerning the treatment of Tootahah, who, as they ſaid, had been ill uſed and beaten, though Mr. Banks declared he was quite ignorant of his having received ſuch treatment.

The chief now ſent for ſuch hogs to be reſtored as he had left behind him at firſt, intending them as a preſent, which by this time, perhaps, he did not think the Engliſh had merited; but they refuſed to ſend them unleſs he would come himſelf, thinking by an interview to promote a reconciliation; and this they were the more deſirous of, as they were told it would be a fortnight before he would pay them a viſit.

Proviſions were now extremely ſcarce, as the markets continued to be ill ſupplied on the account already mentioned; and it was not without ſome difficulty that Mr. Banks got a few baſkets of bread-fruit from Tubora Tumaida. Tootahah now ſent for an axe and a ſhirt in return for the hogs, which were accordingly promiſed to be brought him the next day. He ſent again early in the morning of the 5th, and Mr. Banks and the Doctor ſet out in the pinnace, taking with them one of Tootahah's people, and ſoon reached Eparre, where he reſided, which was a few miles to the weſtward. When they arrived there, they found a great number of the natives waiting for them on the ſhore, and were conducted directly to the chief, the people notwithſtanding the offence they had ſo lately taken, ſhouting out in their language, "Tootahah is your friend." He was ſitting under a tree, and ſome old men were ſtanding about him. Having made ſigns for them to be ſeated, he aſked for the axe, which was then given him by Captain Cook, as alſo the ſhirt that he had demanded, and a broad-cloath garment, which latter he put on, and was well pleaſed with the preſent. They ate a mouthful together in the boat, and were afterwards conducted to a large court-yard on one ſide of the chief's houſe where they were to be entertained with wreſtling after the manner of the country. He himſelf ſat at the upper end of the area, having ſeveral of his principal men on each ſide of him, who appeared as judges of the ſport, which is deſcribed in the following manner.

"Ten or twelve combatants entered the area; and after many ſimple ceremonies of challenging, they engaged, and each endeavoured to throw his antagoniſt by mere ſtrength: thus they ſeized each other

other by the hand, the thigh, the hair, or the cloaths, grappling, without the leaſt art, till one was thrown on his back. The conqueſt was applauded by ſome words from the old men, and three ſhouts. After one engagement ſucceeded another, but if they could not determine the victory in about a minute, they parted, either by conſent or the intervention of their friends. Several women of rank in the country were preſent, but it was thought they only attended this amuſement in compliment to the Engliſh gentlemen. A man with a ſtick, who made way for them when they landed, officiated here as maſter of the ceremonies, keeping order among the people.

As ſoon as this entertainment was ended, the gentlemen were acquainted that ſome hogs and a quantity of bread-fruit were ordered to be prepared for their dinner, which intelligence was pleaſing enough to them, as their journey had ſharpened their appetite. However, they neither dined on ſhore nor in the boat, but went as far as the ſhip, at the deſire of the chief; and as ſoon as he was known to be on board, the Indians brought to the fort plenty of bread-fruit, cocoa-nuts, and other proviſions.

Early in the morning of the 8th, Mr. Molineux, the maſter, and Mr. Green, ſet out in the pinnace to the eaſtward, with a view of procuring ſome poultry or hogs; they ſaw ſome of the latter, and a turtle, but could not purchaſe either, becauſe they belonged to Tootahah, and without his permiſſion the people would not preſume to ſell them. However, ſome time afterwards, bringing out their nails to purchaſe proviſions, they obtained near 20 cocoa-nuts and ſome bread-fruit, for one of the ſmalleſt ſize, ſo that they ſoon had plenty of theſe articles. On the 9th in the forenoon, Oberea and her favourite Obadie paid the Engliſh a viſit, and made them a preſent of a hog and ſome bread fruit.

By this time the forge was ſet up and frequently employed, which greatly excited the curioſity of the Indians, and they were beſides ſometimes more materially obliged by the ſmith's having permiſſion to make them various ſorts of tools out of ſome old iron which was ſuppoſed to have been left on the iſland by Captain Wallis's people.

A very extraordinary ceremony was performed by ſome of the natives, on the 12th of this month. As Mr. Banks was ſitting in his boat, ſome ladies who were ſtrangers, came, in a ſort of proceſſion, the Indians each ſide giving way to them. They then preſented him with ſome plantains and other plants, as alſo with ſome parrots feathers. After this they brought ſome large bundles of cloth, conſiſting of nine pieces, which being divided into three parcels, one of the women, who appeared to be the principal, ſtepping on one of them, pulled up all her cloaths as high as her waiſt, and then turned round three times with an air of the greateſt ſimplicity. She did the ſame on the other two parcels, and then the ladies ſaluting Mr. Banks, the whole was preſented to him, and he, in return, gave them ſuch preſents as he ſuppoſed would prove moſt acceptable to them: ſo ended this ceremony.

Tubora Tumaida the next evening much ſurpriſed and offended Mr. Banks, by ſnatching his gun out of his hand, and firing it in the air, whereas the Engliſh gentlemen had no idea that the Indian knew any thing of the method of uſing it. And as the ignorance of the people of theſe countries in regard to this particular muſt always cauſe them to reverence and fear their gueſts, Mr. Banks made a ſerious matter of what probably the other meant as a joke, and, not without threats, gave him to underſtand, that for him to touch the piece was a high inſult. The offender made no reply, but ſet out immediately with his family for Eparre. However, as he was really an uſeful man, and his abſence might in ſome meaſure impede the dealings of the Engliſh with the Indians, Mr. Banks and Mr. Molineux went after him, and found him among his people, apparently much dejected on account of what had happened. On this, they made up the affair with him, and brought him back to ſupper, and both he and his wife paſſed the night in Mr. Banks's tent. That very evening, while they were there, one of the natives tried to ſcale the walls of the fort, but the centinel prevented him. The temptation which cauſed him to attempt what might have coſt him his life, was doubtleſs the iron which he expected to find within in the fortification. 1769

On Sunday the 14th, in the morning, divine ſervice was performed on ſhore, which was done with a view of having the preſence of ſome of the Indians; but before the time fixed on for beginning, moſt of them were gone home; Tubora Tumaida and his wife indeed were preſent, but though they behaved with great decency, they took no notice of what paſſed, and their brethren, at their return, made as few enquiries of them as they had been diſpoſed to make of the Engliſh. The day thus begun, on the one hand, with an act of piety, was concluded with ſeveral acts of lewdneſs, on the other, which were exhibited by the natives, by way of entertainment. Among the reſt, a young fellow publicly lay with a girl about eleven or twelve years of age, while queen Oberea and ſome women of the firſt rank in the country were ſpectators of the exhibition.

Mr. Banks having a good opinion, in general, of Tubora Tumaida, was reſolved to put his honeſty to the teſt, in order to prove whether he was as much infected as his countrymen, with the common vice of the iſland. For this purpoſe, he threw ſeveral temptations in his way; a baſket of nails at laſt proved an object ſo deſireable as to conquer his honeſty. He confeſſed the fact; but when reſtitution was talked of, he ſaid the nails were at Eparre. High words paſſed on the occaſion, and, in the end, the Indian produced one of the nails, and was to be forgiven on reſtoring the reſt; but his virtue was not equal to the taſk, and he withdrew himſelf, as uſual, when he had committed any offence.

One of theſe nimble-fingered Indians came before day-light, on the 17th, in order to ſteal ſome caſks, and as this was not the firſt attempt of the ſame nature, he was near paying dear for his temerity, for the centinel levelled his piece at him, and he eſcaped only by its miſſing fire.

Tootahah having ſent ſeveral times to intreat that the captain would viſit him, and promiſed to acknowledge the favour by preſenting him ſome hogs, Mr. Hicks was ſent to him on the 24th, in order, if poſſible, to obtain the hogs without the required viſit. Coming to a place called Tettehah, where the chief had taken up his reſidence, he was received in a friendly manner, but procured only one hog, though when this was produced, which was on his firſt arrival, he was promiſed more the next morning; but when the time arrived, he was obliged to go away without them.

Mr. Banks ſeeing Tubora Tumaida at the tent, for the firſt time after the affair of the nails, once more endeavoured to prevail on him to make reſtitution, but he did not ſucceed in his attempt, for which reaſon the Indian was treated very coolly while he ſtayed; and as he could not but perceive it, he departed in a very abrupt manner.

Tootahah having removed to a place called Atahoroa, the captain with Mr. Banks and Dr. Solander, and ſome others ſet out in the pinnace, to pay him a viſit. After making preſents of a few articles, they were invited to paſs the whole night there. Mr. Banks accepted of a place in Oberea's canoe, to whom he gave charge of his cloaths; but notwithſtanding her care, they were ſtolen, as were alſo his piſtols, his powder-horn, and ſeveral other things that were in his waiſtcoat pockets. Tootahah, who ſlept in the next canoe, being alarmed, roſe and went in purſuit of the thief, Oberea accompanying him. As to Mr. Banks he waited for them, having nothing on but his breeches; and when they returned, found that he muſt be obliged to put up with his loſs, as their ſearch had been unſucceſsful. Juſt as he had compoſed himſelf

1769 to ſleep again, he was rouſed by ſome muſic, and obſerved lights at a little diſtance from the ſhore. He then roſe to go and find his companions. As ſoon as he approached the lights, he found the hut where Captain Cook and three others of the gentlemen lay, when he began to relate his miſadventure to them, they told him, in return, that they had loſt their ſtockings and jackets. In effect, Dr. Solander, who joined them the next morning, was the only one that eſcaped being robbed, and he had ſlept at a houſe that was a mile diſtant. This accident, however, did not prevent Captain Cook, Mr. Banks, and the reſt that were at the hut, from attending to the muſic which was a ſort of concert called Heiva, and conſiſted of drums, flutes, and ſeveral voices. They retired again to their repoſe, after this entertainment was over.

Their cloaths, and the other things which had been ſtolen, were never heard of afterwards, but Mr. Banks got ſome cloaths from Oberea, in which he made an odd appearance. The next morning they ſet out for the boat, having obtained only one hog, which had been intended for their ſupper the preceding night; ſo that all things conſidered they had little reaſon to be ſatisfied with their excurſion. On their return, to the boat, they had a ſpecimen of the agility of the Indian ſwimmers, ſome of whom, merely for diverſion, ſwam in a ſurf where no European boat could have lived, and where our beſt ſwimmers muſt have periſhed, had they accidentally fallen in with it.

At this time the preparations were made for viewing the tranſit of Venus, and two parties were ſent out to make obſervations from different ſpots, that in caſe of failing in one place, they might ſucceed in another. They employed themſelves for ſome time in preparing their inſtruments, and inſtructing thoſe gentlemen who were to go out, in the uſe of them; and on Thurſday the firſt of June they ſent the long-boat with Mr. Gore, Mr. Monkhouſe, and Mr. Sporing, the latter of whom was a friend of Mr. Banks, with proper inſtruments to Emayo. Others were ſent to find out a ſpot that might anſwer the purpoſe, at a convenient diſtance from their principal ſtation.

The party that went towards Emayo, after rowing the greater part of the night, having hailed a canoe, were informed of a proper place by the Indians on board, which was judged proper for their obſervatory, where they accordingly fixed their tents. It was a rock that roſe out of the water about 140 yards from the ſhore.

As ſoon as it was light on Saturday the 3d (the day of the tranſit) Mr. Banks left them in order to go and get freſh proviſions on the iſland. The king, whoſe name was Tarrao, came to pay him a viſit, as he was trading with the natives, and brought with him Nuna his ſiſter. As it was cuſtomary for the people in theſe parts to be ſeated at their conferences, Mr. Banks ſpread his turban of Indian cloth, which he wore as a hat, upon the ground, on which they all ſat down. Then a hog and a dog, ſome cocoa-nuts, and bread-fruit were brought, being the king's preſent, and Mr. Banks ſent for an adze, a ſhirt, and ſome beads, which were preſented to his majeſty, who received them with apparent ſatisfaction. Tubora Tumaida, and Tomio, who had gone with Mr. Banks, came from the obſervatory, when Tomio, who was ſaid to be related to Tarrao, gave him a long nail, and left a ſhirt as a preſent for Nuna. Afterwards the king, his ſiſter, and three beautiful young women their attendants, returned with Mr. Banks to the obſervatory, where he ſhewed them the tranſit of Venus, and acquainted them, that to view it in that ſituation was the cauſe of his undertaking a voyage to thoſe remoter parts. According to this gentleman's account, the produce of this iſland is nearly the ſame with that of Otaheite; the people alſo reſembled thoſe of that iſland: he had ſeen many of them upon it who who acquainted with the nature of trading articles. The parties that were ſent out to make their obſervations on the tranſit, had good ſucceſs in the undertaking; though they differed rather more than might have been expected in their account of the contact. * They view the tranſit of Venus.

Some of the ſhip's company having broke into the ſtore-room while the gentlemen and officers were buſied in viewing the tranſit, took the liberty of ſtealing a quantity of ſpike-nails. After a ſtrict ſearch the thief was found out; he had, however but few of the nails in his poſſeſſion; but he was ordered to receive two dozen of laſhes, by way of example.

An old female of ſome diſtinction dying, gave the Engliſh an opportunity of obſerving the ceremonies uſed by theſe iſlanders in diſpoſing of the dead bodies of their people; which, as we have obſerved, they do not directly bury. The reader has already ſeen the deſcription of the bier, the placing the bread-fruit, &c. which, according to Tubora Tumaida's account, was a ſort of offering to their Gods. In the front of the ſquare ſpace, a ſort of ſtile was placed where the relations of the deceaſed ſtood to give token of their grief. There were under the awning ſome pieces of cloth, whereon were the tears and blood of the mourners, who uſed to wound themſelves with a ſhark's tooth upon theſe occaſions. Four ſmall temporary houſes were erected at a ſmall diſtance, in one of which remained ſome of the relations of the deceaſed; the chief mourner reſided in the other; and was dreſſed in a particular manner, in order to perform a certain ceremony. When the corpſe is rotten, the bones are buried near the ſpot, and theſe places were found to anſwer the purpoſes of religious worſhip, though Captain Wallis could not perceive the traces of any ſuch worſhip among them.

As to the ceremony we are about to ſpeak of, the following is the account we have of it, which may not be unentertaining to the curious reader: "It was performed on the 10th, and Mr. Banks was ſo deſirous of being preſent, that he agreed to take a part in it when he was informed, that he could not be a ſpectator on any other condition. He went accordingly in the evening, to the place where the body was depoſited, where he was met by the relations of the deceaſed, and was afterwards joined by ſeveral other perſons. Tubora Tumaida was the principal mourner, whoſe dreſs was whimſical, though not altogether ungraceful. Mr. Banks was obliged to quit his European dreſs, and had no other covering than a ſmall piece of cloth that was tied round his middle; his body was blacked over with charcoal and water, as were the bodies of ſeveral others, and among them ſome females, who were no more covered than himſelf. The proceſſion then began, and the chief mourner uttered ſome words which were judged to be a prayer, when he approached the body, and he repeated theſe words as he came up to his own houſe. They afterwards went on, by permiſſion, towards the fort. It is uſual for the reſt of the Indians to ſhun theſe proceſſions as much as poſſible; they accordingly ran into the woods in great haſte, as ſoon as this came in view. From the fort the mourners proceeded along the ſhore, croſſed the river, then entered the woods, paſſing ſeveral houſes, which became immediately uninhabited, and during the reſt of the proceſſion, which continued for half an hour, not an Indian was viſible. Mr. Banks filled an office that they called *Niniveh*, and there were two others in the ſame character. When none of the other natives were to be ſeen, they approached the chief mourner, ſaying *Imatata*; then thoſe who had aſſiſted Funeral ceremonies.

* Mr. Green's account was as follows:

	Hours.	Min.	Sec.	
The firſt external contact	9	25	4	Morning.
The firſt internal contact or total emerſion,	9	44	4	Morning.
The ſecond internal contact, or beginning of the emerſion,	3	14	8	Aftern.
The ſecond external contact, or total emerſion	3	32	10	Aftern.

Latitude of the obſervatory 17 deg. 29 min. 15 ſec. ſouth; longitude, 149 deg. 32 min. 30 ſec. weſt from Greenwich.

assisted at the ceremony bathed in the river, and resumed their former dress." Mr. Banks who had performed a capital part in this ceremony, received applause from Tubora Tumaida. 1769

The Indians having lost some of their bows and arrows, and some strings of plaited hair, on the 12th of this month, a complaint was made on the subject to the captain, whereupon the affair was inquired into, and the offenders who had taken them away received each two dozen of lashes. The same day Tubora Tumaida brought his bow and arrows, in order to decide a challenge of shooting between him and Mr. Gore, but it appeared that they had mistaken each other, Mr. Gore intending to discharge his arrow at a mark, while the Indian meant only to try who could shoot farthest. As soon as this was apprehended, the challenge was dropped; but Tubora Tumaida, in order to shew his skill, kneeling down, shot an arrow (unfeathered, as they all are) near the sixth part of a mile, dropping the bow the instant the shot is discharged.

Mr. Banks having this morning met several of the natives, and learning that these people had a kind of musical entertainment in the evening, he and the English gentlemen resolved to be present at it. They went accordingly, and heard a performance on drums and flutes by a sort of itinerant musicians. The drummers sung to the music, and the English perceived these must be mere extempore compositions, as themselves were the subject of the song.

The captain seizes the canoes of the Indians on account of their thefts.

The continued dishonesty of the natives, (whose manners were in other respects agreeable enough) occasioned Captain Cook to try if he could not at once put an end to this evil by making reprisals; an iron coal rake for the oven being stolen in the night of the 14th, this consideration, added to many other facts of the like nature occasioned him to give orders for seizing twenty-seven of their double canoes, which were just come in, laden with fish. They were told that unless the rake and all the other things were returned these canoes with their cargoes should certainly be burnt; but Captain Cook who had very humanely already given orders to the centinels not to fire on the Indians, even if they should detect them in the act of thieving, never meant to make this sacrifice to justice. However, the natives were alarmed by a threat of such a nature, as he was furnished with the power to put it into immediate execution. Yet so much averse were they to restitution, that the cole-rake only was brought home, the rest being still retained in their possession. The captain, however, gave up the cargoes of the Indian vessels, as the poor natives were greatly distressed by the seizure, and afterwards promised to release the canoes, in order to prevent the confusion arising from the disputes concerning the property of the different lots of goods which they had on board.

But a boat being sent on shore, in order to procure ballast, the imprudence of the officer was near involving his countrymen in another quarrel with the Indians. As he could not readily procure what he wanted, he very improperly began to violate the mansions of the dead, and was immediately opposed by the inraged islanders. Intelligence of this dispute being received by Mr. Banks, he went to the place where it had commenced, when, as it appeared that there was a sufficient quantity of stones to be got elsewhere, the affair was amicably settled. And this was the only opposition which they met with, and the only personal insult received, properly so called (except at the affair of the fort, which has been already related) was by Mr. Monkhouse, the surgeon, whom one of the Indians struck for plucking a flower within one of these burial inclosures. This gentleman laid hold of him, but two of his countrymen pulled his hair, till he was obliged to let him go; and then they all ran off as fast as they could. In the evening of the 19th soon after the canoes were detained, Queen Oberea and several of her attendants came from Tootahah's house in a double canoe, and brought a hog, a dog, some bread-fruit, and other presents; but as she had brought none of those things which the captain had required to be restored, he would not accept them, at which she appeared to be much concerned; especially as a childish story that she told about Obadie's taking them, and her having beaten him for so doing did not gain credit. Notwithstanding all this, and though at first she did not seem to be without her fears, yet at length she surmounted them so far as to offer to sleep in Mr. Banks's tent; but being refused she went to rest in her canoe.

She returned to the fort next morning, when the captain thought fit to accept her presents, when two of her attendants were very assiduous to match themselves with mates, in which design they found the greatest likelihood of succeeding by means of the surgeon and one of the lieutenants. All were very agreeable till bed-time, when some words arising between the surgeon and one of them, Mr. Banks thrust her out, and the rest followed. As Mr. Monkhouse thought his mistress not well used, it was feared this affair would have occasioned a duel; but happily the matter was amicably adjusted.

The natives of Otaheite hold dogs flesh in higher esteem than they do pork; but it is to be observed that those dogs which they breed for food, live only upon vegetables. In order to try an experiment, Tupia undertook to kill and bake one of these animals; and they all allowed that the dish was agreeable.

On the 21st of this month they were visited by many of the natives, who brought them various presents. Among the rest was a chief of several districts on the island, named Oamo, whom the English gentlemen had never yet seen. He had a boy and a young woman with him; and the former was carried upon a man's back though he was able to walk. Oberea and some of the Indians bareheaded, and uncovered as low as the waist, went forth to meet them; a circumstance which was considered as a mark of respect. When Oamo entered the tent, the young girl, though seemingly very curious, did not follow him. The youth was brought in by Dr. Solander, but was soon got out again by the Indians, who were averse to the boy's entrance.

Mr. Banks and the rest of the gentlemen, being curious to know who their new guests were, received the following account: "That Oamo was the husband of Oberea; but that this couple had been separated by consent a long time, and the boy and girl were their children. The former was called Terridiri; he was heir apparent to the sovereignty of the islands, and when he came to a proper age, was to marry his sister. The present sovereign, Outou, was a minor, and was the son of a prince, called Whappai.—Whappai, Oama, and Tootahah, were all brothers, of whom Oama was the eldest, the last-named was the youngest; and Whappai having no other child besides Outou, Terridiri, his brother's son, according to the custom of the country, was heir to the sovereignty." It is here to be noticed, that in the island of Otaheite, a boy, as soon as he is born, succeeds to his father's authority; but a regent being necessary, that office, though elective, generally falls upon the father, who holds the reins of government till the child is of age. The reason that the election in this case had fallen upon Tootahah was, his being celebrated for his warlike exploits among his countrymen. Oamo asked a number of questions concerning the English, and, by his conversation appeared to be a person of good understanding.

Captain Cook received an elegant garment from a woman that came from the western part of the island. The ground was a bright yellow; it was bordered with red; and there were several crosses in the middle of it. As the French had been on the coast, it was supposed that they had taught the natives the notion of making these figures.

One of the English being missing on the 23d, proper inquiries were made for him among the natives; and at last it was found that he was at Eparre, from

whence

1769 whence one of the Indians fetched him the ſame evening. When he returned, he acquainted them that he had been taken by three men from the fort, and carried up to the top of the bay; that they ſtripped him, forced him into a canoe, and conducted him to Eparre, where Tootahah had given him ſome cloaths, and wanted to perſuade him to remain among his people. As ſoon as the natives knew of his return, they quitted the fort which was conſtrued as a confirmation of what this man had aſſerted.

Captain Cook ſails round the iſland.

Captain Cook ſetting out in the pinnace with Mr. Banks, ſailed to the eaſtward with a deſign of circumnavigating the iſland. They went on ſhore in the forenoon, in a diſtrict in the government of Ahio, a young chief, who at the tents had frequently been their viſitant. And here alſo they ſaw ſeveral other natives whom they knew. Afterwards they proceeded to the harbour where M. Bougainville's veſſel lay, when he came to Otaheite, and were ſhewn the watering-place, and the ſpot where he pitched his tent.

Coming to a large bay, when the Engliſh gentlemen mentioned their deſign of going to the other ſide, their Indian guide, whoſe name was Titubaola, ſaid he would not accompany them, and alſo endeavoured to diſſuade the captain and his people from going; obſerving, "That country was inhabited by people who were not ſubject to Tootahah, and who would deſtroy them all." Notwithſtanding they reſolved to put their deſign in execution, loading their pieces with ball; and at laſt Titubaola ventured to go with them. Having rowed till it was dark, they reached a narrow iſthmus which ſevered the iſland in two parts, and theſe formed diſtinct governments. However, as they had not yet got into the hoſtile part of the country, it was thought proper to go on ſhore to ſpend the night where Ooratova, the lady who had paid her compliments in ſo extraordinary a manner at the fort, provided them with a ſupper, and they proceeded for the other government in the morning.

They afterwards landed in the diſtrict of a chief called Maraitata, and his father was called Pahairede.* Theſe people gave the captain a very good reception, ſold them a hog for a hatchet, and furniſhed them with proviſions. A crowd of the natives came round the Engliſh gentlemen, amongſt whom however they met only two with whom they were acquainted; but though they ſaw ſeveral European commodities, yet they perceived none that came out of the Endeavour. Here they ſaw two twelve pound ſhot, one of which had the king's broad arrow upon it, yet the natives ſaid they had them from M. Bougainville. They afterwards advanced till they reached that diſtrict which was under the government of Waheatua, who had a ſon: it was not known in whoſe hands the ſovereign power was depoſited. There they found a ſpacious plain with a river which they were obliged to paſs over in a canoe, though the Indians that followed them, ſwam over without any difficulty. They proceeded on their journey for a conſiderable way along the ſhore, till at laſt they were met by the chief, who had with him an agreeable woman, of about twenty-two years of age, who was called Toudidde. Her name was not unknown to the Engliſh who had often heard of it; and ſhe was ſuppoſed to bear the ſame rank here as Oberea bore in the other part of the iſland. The parts through which they now paſſed, appeared to be better cultivated than any of the reſt, and the burial-places were more in number. They were neat, and ornamented with carvings; and in one a cock was ſeen, which was painted with the various colours of the bird. Though the country was apparently fertile, very little bread-fruit was to be found here, a nut called Ahee, furniſhing the principal ſubſiſtance of the inhabitants.

Being fatigued with their journey, they went on board their boat, and landed in the evening on an iſland which was called Otooareite, to ſeek for refreſhment. Mr. Banks going into the woods for this purpoſe, when it was dark could diſcover only one houſe, wherein he found ſome of the nuts before-mentioned, and a little bread-fruit. There was a good harbour in the ſouthern part of this iſland, and the ſurrounding country appeared to be extremely fruitful. Landing at about three miles diſtance they found ſome of the natives whom they well knew, yet it was not without difficulty that they obtained a few cocoa-nuts before they departed. When they came a little farther to the eaſtward, they landed again, and here they were met by Mathiabo, the chief, with whom they were not at all acquainted. He ſupplied them with bread-fruit and cocoa-nuts, and they purchaſed a hog of him for a glaſs bottle which he choſe in preference to all the other articles preſented before him. A turkey-cock and a gooſe were ſeen here, which were much admired by the natives, and were ſuppoſed to have been left there by Captain Wallis's people. They obſerved in a houſe near the ſame place ſeveral human jaw-bones, which ſeemed freſh, and had not loſt any of the teeth, and were faſtened to a board, of a ſemi-circular figure; but they could not get any information of the cauſe of this extraordinary appearance.

When they left the place, the chief piloted them over the ſhoals. In the evening they opened the bay on the north-weſt ſide of the iſland, which anſwered to that on the ſouth-eaſt in ſuch a manner as to interſect it at the iſthmus. Several canoes came off here, and ſome beautiful women giving tokens that they ſhould be glad to ſee them on ſhore, they readily accepted the invitation.—Of their adventures during the reſt of their journey we have the following account.

"They met with a very friendly reception from the chief whoſe name was Wiverou, who gave directions to ſome of his people to aſſiſt them in dreſſing their proviſions which were now very plentiful, and they ſupped at Wiverou's houſe in company with Mathiabo. Part of the houſe was allotted for them to ſleep in, and ſoon after ſupper they retired to reſt. Mathiabo having borrowed a cloak of Mr. Banks, under the notion of uſing it as a coverlet when he lay down, made off with it without being perceived either by that gentlemen or his companions. However, news of the robbery being preſently brought them by one of the natives, they ſet out in purſuit of Mathiabo, but had proceeded only a very little way before they were met by a perſon bringing back the cloak which this chief had given up rather through fear than from any principle of honeſty. On their return they found the houſe entirely deſerted; and, about four in the morning, the centinel gave the alarm that the boat was miſſing. Captain Cook and Mr. Banks were greatly aſtoniſhed at this account, and ran to the water-ſide; but though it was a clear, ſtar-light morning no boat was to be ſeen. Their ſituation was now extremely diſagreeable. The party conſiſted of no more than four, having with them only one muſquet and two pocket piſtols, without a ſpare ball or a charge of powder. After having remained ſome time in a ſtate of anxiety ariſing from theſe circumſtances, of which they feared the Indians might take advantage, the boat which had been driven away by the tide, returned; and Mr. Banks and his companions had no ſooner breakfaſted than they departed. This place is ſituated on the north ſide of Tirrabou, the ſouth-eaſt peninſula of the iſland, about five miles eaſt from the iſthmus, with a harbour equal to any in thoſe parts. It was fertile and populous, and the inhabitants every where behaved with great civility.

The laſt diſtrict in Tiarrabou, in which they landed was governed by a chief named Omoe. He was then building a houſe, and was very earneſt to purchaſe a hatchet; but the gentlemen had not one left. He would not trade for nails, and they embarked, the chief, however, following them in his canoe with his wife. They were afterwards taken on board, but when they had ſailed about a league, deſired to be put on ſhore. Their requeſt was complied with, when

* The former of theſe names ſignifies *the burying-place of men*, and the other *the ſcaler of boats*.

the captain met with some of Omoe's people, who brought with them a very large hog. The chief agreed to exchange the hog for an axe and a nail, and to bring the beast to the fort. As the hog was a very fine one, Mr. Banks accepted the offer. They saw at this place one of the Indian Eatuas, a sort of image, made of wicker-work, which resembled a man in figure; it was near seven feet in height, and was covered with black and white feathers; on the head were four protuberances, called by the natives *Tata ete*, that is, *little men*. Having taken their leave of Omoe, the gentlemen set out on their return. They went on shore again, after they had rowed a few miles, but saw nothing, except a sepulchral building, which was ornamented in an extraordinary manner. The pavement, on which was erected a pyramid, was very neat; at a small distance there was a stone image, very uncouthly carved, but which the natives seemed to hold in high estimation. They passed through the harbour which was the only one fit for shipping on the south of Opoureonou, situate about five miles to the westward of the isthmus, between two small islands, not far from the shore, and within a mile of each other. They were now near the district called Paparra, which was that where Oama and Oberea governed, and where the travellers intended to spend the night. But when Mr. Banks and his company landed, about an hour before it was dark, it appeared they were both set out to pay them a visit at the fort. However, they slept at Oberea's house, which was neat, though not large, and of which there was no inhabitant but her father, who shewed them much civility.

"They took this opportunity of walking out upon a point upon which they had observed at a distance some trees called Etoa, which usually grow upon the burial places of these islanders. They call those burying grounds Morai. And here Mr. Banks saw a vast building, which he found to be the Morai of Oama and Oberea, which was the most considerable piece of architecture in the island. It consisted of an enormous pile of stone-work, raised in the form of a pyramid, with a flight of steps on each side. It was near 270 feet long, about one third as wide, and between 40 and 50 feet high. The foundation consisted of rock stones; the steps were of coral, and the upper part was of round pebbles, all of the same shape and size. The rock and coral-stones were squared with the utmost neatness and regularity, and the whole building appeared as compact and firm as if it had been erected by the best workmen in Europe. What rendered this last circumstance the more extraordinary was the consideration that when this pile was raised, the Indians must have been totally destitute of iron tools either to shape their stones, or for any other necessary purpose, nor had they mortar to cement them when made fit for use; so that a structure of such height and magnitude must have been a work of infinite labour and fatigue. In the centre of the summit was the representation of a bird carved in wood; close to this was the figure of a fish in stone. The pyramid constituted part of one side of a court or square, the sides of which were nearly equal; and the whole was walled in, and paved with flat stones, notwithstanding which pavement, several plantains and trees which the natives call Etoa, grew within the inclosure. At a small distance to the westward of this edifice was another paved square that contained several small stages, called Ewattas by the natives; which appeared to be altars, whereon they placed the offerings to their Gods. Mr. Banks afterwards observed whole hogs placed upon these stages or altars.

"They arrived at Otahorou on Friday the 30th, where they found their old acquaintance Tootahah, who received them with great civility, and provided them a good supper and convenient lodging; and though they had been so shamefully plundered the last time they slept with this chief, they spent the night in the greatest security, none of their cloaths nor any other article being missing the next morning. They returned to the fort at Port Royal Harbour, on the first of July, having discovered the island, including both peninsulas, to be about 100 miles in circumference." 1769

After their return from this tour, they were very much in want of bread-fruit, none of which they had been able to provide themselves with, as they had seen but little in the course of their journey; but their Indian friends coming round them, soon supplied their want of provisions.

Mr. Banks made an excursion on the 3d, in order to trace the river up the valley to its source, and to remark how far the country was inhabited along the banks of it. He took some Indian guides with him, and after having seen houses for about six miles, they came to one which was said to be the last that could be met with. The master presented them with cocoa-nuts and other fruits, and they proceeded on their walk, after a short stay. They often passed through vaults formed by rocky fragments in the course of their journey, in which, as they were told, benighted travellers sometimes took shelter. Pursuing the course of the river about six miles farther, they found it banked on both sides by rocks almost 100 feet in height, and nearly perpendicular; a way, however, might be traced up these precipices, along which their Indian guides would have conducted them, but they declined the offer as there did not appear to be any thing at the summit which could repay them for the toil and dangers of ascending it. Mr. Banks sought in vain for minerals among the rocks, which were naked almost on all sides, but no mineral substances were found. The stones every where exhibited signs of having been burnt, which was the case of all the stones that were found while they staid at Otaheite, and both there and in the neighbouring islands the traces of fire were evident in the clay upon the hills.

A great quantity of the seeds of water-melons, oranges, limes and other plants, brought from Rio de Janeiro, were planted on each side of the fort, by Mr. Banks, who also plentifully supplied the Indians with them, and planted many of them in the woods. Some melons, the seeds of which had been sown on the first arrival of the English at the island, grew up and flourished before they left it.

By this time they began to think of making preparations to depart; but Oama, Oberea, and their son and daughter visited them before they were ready to sail. As to the young woman (whose name was Tojmata) she was curious to see the fort, but Oama would not permit her to enter. The son of Waheatua, chief of the south-east peninsula, was also here at the same time; and they were favoured with the company of the Indian who had been so dextrous as to steal the quadrant, as above related. The carpenters being ordered to take down the gates and palisadoes of the fort, to be converted into fire-wood for the Endeavour, one of the natives stole the staple and hook of the gate; he was pursued in vain, but the property was afterwards recovered, and returned to the owners by Tubora Tumaida.

Before their departure, two circumstances happened which gave Captain Cook some uneasiness. The first was, that two foreign sailors having been abroad, one of them was robbed of his knife, which as he was endeavouring to recover, he was dangerously hurt with a stone by the natives, and his companion also received a slight wound in the head. The offenders escaped, and the captain was not anxious to have them taken, as he did not want to have any disputes with the Indians. Of the other matter we have the following account.—

Two young marines one night withdrew themselves from the fort, and in the morning were not to be met with. Notice having been given the next day that the ship would sail that or the ensuing day; as they did not return, Captain Cook began to be apprehensive that they designed to remain on shore; but as he was apprised in such a case no effectual means could be taken to recover them without running a risque of destroying the harmony subsisting between the English and the natives, he resolved to wait a day, in hopes of their

1769 their returning of their own accord. But as they were ſtill miſſing on the 10th in the morning, an enquiry was made after them, when the Indians declared they did not propoſe to return, having taken refuge among the mountains, where it was impoſſible for them to be diſcovered; and added, that each of them had taken a wife. In conſequence of this, it was intimated to ſeveral of the chiefs that were in the fort with their women, that they would not be ſuffered to quit it till the deſerters were produced. They did not ſhew any ſigns of fear or diſcontent upon the occaſion; but aſſured the captain that the perſons in queſtion ſhould be ſent back. However, in the mean time, he ſent Mr. Hicks with the pinnace to bring Tootahah on board the ſhip, and he executed his commiſſion without giving any alarm. When night came on, Oberea, Tubora Tumaida, and ſome others, were removed on board the ſhip, which greatly alarmed them all, and eſpecially the females, theſe latter teſtifying their apprehenſions with great agitation of mind, and floods of tears, when they were conducted on board. Captain Cook eſcorted them; but Mr. Banks remained on ſhore with ſome Indians whom he thought it of leſs conſequence to detain. One of the marines was brought back in the evening by ſome of the natives, who reported that the other, and the two people that were ſent to fetch them back, would be detained while Tootahah was confined. On this, Mr. Hicks was immediately diſpatched in the long-boat, with ſeveral men, to reſcue the Engliſh priſoners; at the ſame time Captain Cook told Tootahah that it was incumbent on him to aſſiſt them with ſome of his people, and to give orders in his name that the men ſhould be ſet at liberty; for that he would be expected to anſwer for the event. Tootahah immediately complying, this party releaſed the men without oppoſition. They returned on the 11th about ſeven in the morning, but they did not bring their arms back with them; theſe however being ſent ſoon after, the chiefs on board were allowed to return, and thoſe that had been detained on ſhore were alſo ſet at liberty. On examining the deſerters it appeared that the Indians had told the truth, they having choſen two girls, and would have remained with them at Otaheite if they had not been brought back as above related.—

The power of Oberea was not ſo great when Captain Cook came to theſe parts as it was when the Dolphin firſt diſcovered the iſland. The Engliſh gentlemen had obſerved all the way from her houſe to the Morai, a great number of human bones. When they aſked what had occaſioned this circumſtance, they were told "That about four or five months before the arrival of the Endeavour, the inhabitants of Tiarrabou, the ſouth-eaſt peninſula had made a deſcent, and ſlain many of the people, whoſe bones were thoſe which were ſtrewn along the ſea-coaſt; that thereupon Oberea and Oama fled to the mountains, and that the victors deſtroyed all the houſes, and pillaged the country." It ſeems the turky and gooſe which Mr. Banks had ſeen in Mathiabo's diſtrict, were not left there by captain Wallis's people, but were taken among the plunder from Oberea's government. As to the jaw-bones, it ſeems they were preſerved as trophies, being looked upon in much the ſame light wherein ſcalps are conſidered by the North-American Indians.

Tupia, who had been prime miniſter of the queen when in the zenith of her power, had often expreſſed a deſire of going with the Engliſh. This Indian was alſo intimately acquainted with the religion of the iſlanders, being himſelf the principal prieſt in the country. Beſides this, he had a knowledge of navigation, and was acquainted with the ſituation and inhabitants of the neighbouring iſlands. On Wedneſday the 12th he came on board with a boy about twelve years of age, who was his ſervant, whoſe name was Taiyota, and requeſted that the gentlemen on board would let him go with them. This being agreed to, Tupia went on ſhore for the laſt time to bid farewell to his friends, to whom he gave ſeveral baubles, by way of remembrance, at parting.

Captain Cook and Mr. Banks wanting to obtain a drawing of the Morai, which was in the poſſeſſion of Tootahah, went to viſit him at Eparre, accompanied by Dr. Solander, where thy were met by Oberea and ſeveral others. Tupia came back with them, and ſlept on board the ſhip for the firſt time, the Indian chiefs having promiſed once more to viſit the gentlemen before the veſſel ſet ſail.

Accordingly, theſe friendly people came on board on the 30th, and a vaſt number of canoes filled with Indians of the lower ſort, ſurrounded the ſhip. About twelve, the captain weighed anchor, and notwithſtanding all the little miſunderſtandings that had happened between the Engliſh and the natives, who were treated ſometimes perhaps too ſeverely, yet the latter, who poſſeſſed a great fund of good-nature and much ſenſibility, took their leave weeping in an affecting manner. As to Tupia, he felt the ſcene, but with more fortitude than his countrymen; though it might ſeem that he had the moſt cauſe for weeping, he ſuppreſſed the ſtarting tear, and going to the maſt-head with Mr. Banks, took a laſt farewell of his country.——For the entertainment of the curious reader, we ſhall here give a ſummary account of what has been remarked by the voyagers who viſited this iſland, which is to the following purport:—

Further deſcription of Otaheite.

"The people are in general of a larger make than the Europeans. The males are moſtly tall, robuſt, and finely ſhaped; the women of the higher claſs, in general are rather above the ſize of thoſe in England; but it is remarkable that thoſe of the lower rank are below our ſtandard, and ſome of them are very ſhort. Their natural complexion is a fine clear olive, or what we call a *brunette*; their ſkin is delicately ſmooth and agreeably ſoft. Their faces in general are handſome, and their eyes are full of ſenſibility. Their teeth are remarkably white and regular, and their breath is intirely free from any diſagreeable ſmell; their hair is for the moſt part black. The men, unlike the *aborigines* of America, have long beards, which they wear in various forms; and circumciſion is generally practiſed among them from a motive of cleanlineſs, which is carried ſo far, that they have a term of reproach with which they upbraid thoſe among them who do not adopt this cuſtom. Both ſexes always eradicate the hair from their arm-pits, and they often took upon them to charge the Engliſh gentlemen with want of cleanlineſs, for not making uſe of the ſame method. Their motions are eaſy and graceful, and their behaviour when unprovoked (as the reader has ſeen) affable and courteous. Contrary to the cuſtom of moſt other nations, the women of this country cut their hair quite ſhort, whereas the men wear it long, ſometimes hanging looſe upon the ſhoulders, and at other times tied in a knot on the crown of the head, in which they ſtick the feathers of birds of various colours.

"A piece of cloth of the manufacture of the country is frequently tied round the heads of both ſexes, in the manner of a turban; and the women take pains to plait human hair into long ſtrings, which being folded into branches, are tied on the forehead by way of ornament. They have alſo a cuſtom (not peculiar to them, but practiſed in many of the hot countries) of anointing their hair with cocoa-nut oil; the ſmell of which is not very agreeable; and having no ſort of combs among their various inventions, they were infeſted with vermin, which however they quickly got rid of as ſoon as they were furniſhed by the Europeans with theſe convenient inſtruments.

"The people of this iſland ſtain their bodies by indenting or pricking the fleſh with a ſmall inſtrument made of bone, cut into ſhort teeth; which indentures they fill with a dark blue or blackiſh mixture, prepared from the ſmoke of an oily nut (burnt by them inſtead of candles) and water; this operation, which is called by the natives Tataowing, is exceedingly painful, and leaves an indelible mark on the ſkin.

It is uſually performed when they are about ten or twelve years of age, and on different parts of the body; but thoſe which ſuffer moſt ſeverely are the breech and the loins, which are marked with arches, carried one above another a conſiderable way up the back. At the operation of tataowing performed upon the poſteriors of a girl about twelve years of age, Mr. Banks was preſent; it was executed with an inſtrument that had twenty teeth, and at each ſtroke, which was repeated every moment, ſerum mixed with blood iſſued. She bore it with great reſolution for ſeveral minutes; but at length the pain became ſo intolerable, that ſhe murmured and complained, and then burſt into the moſt violent lamentations; but her operator was inexorable, whilſt ſome females preſent chid, and even beat her. Mr. Banks was a ſpectator for near an hour, during which time it was performed only on one ſide, the other having undergone the ceremony ſome time before; and the arches upon the loins, which are the moſt painful, but which they moſt value, were yet to be made.—They cloath themſelves in cloth and matting of various kinds: the firſt they wear in fair, the latter in wet weather. They are in different forms, no ſhape being preſerved in them, nor are the pieces ſewed together. The women of a ſuperior claſs wear three or four pieces. One which is of conſiderable length, they wrap ſeveral times round their waiſt, and it falls down to the middle of the leg. Two or three other ſhort pieces, with a hole cut in the middle of each, are placed on one another, and their heads coming through the holes, the long ends hang before and behind, both ſides being open, by which means they have the free uſe of their arms. The mens dreſs is very ſimilar, differing only in one inſtance which is that part of the garment, inſtead of falling below the knees is brought between the legs. This dreſs is worn by all ranks of people, the only diſtinction being quantity in the ſuperior claſs. At noon both ſexes appear almoſt naked, wearing only the piece of cloth that is tied round the waiſt. Their faces are ſhaded from the ſun with ſmall bonnets, made of cocoa-nut leaves or matting, which are conſtructed in a few minutes. The men ſometimes wear a ſort of wig made of human or dog's hair, or of cocoa-nut ſtrings, woven on a ſingle thread, which is faſtened under their hair, and hangs down behind. Both men and women wear ear-rings on one ſide, conſiſting of ſhells, ſtones, berries, or ſmall pearls; but they ſoon gave the preference to the beads, brought by the Endeavour's company. The boys and girls go quite naked; the firſt till they are ſeven or eight years old; the latter till they are about five. Their houſes, which have been deſcribed already, they ſeldom uſe but to ſleep in, or to avoid the rain, as they eat in the open air, under the ſhade of a tree. Their cloaths ſerve them at night for covering, and there are no diviſions or apartments. The maſter and his wife repoſe in the middle, then the married people; next to theſe the unmarried females, and at a ſmall diſtance the men who are unmarried; and the ſervants ſleep in the open air in fair weather. The houſes of the chiefs, however, differ in ſome degree; there are ſome very ſmall, and ſo built as to be carried in canoes; all ſides of them are incloſed with the leaves of the cocoa-nut; the air nevertheleſs penetrates: in theſe the chief and his wife alone ſleep. There are alſo houſes which are general receptacles for the inhabitants of a diſtrict. Theſe are much larger, many being more than 200 feet in length, 40 in breadth, and 70 or 80 feet high. They are conſtructed at the common expence, and have an area on one ſide, ſurrounded with low paliſadoes: but like the others have no walls.

"When a chief kills a hog, which is but ſeldom, he divides it equally among his vaſſals; dogs and fowls are more common. When the bread-fruit is not in ſeaſon, they are ſupplied by cocoa-nuts, bananas, plantains, &c. Their cookery conſiſts chiefly of baking, the manner of doing which has been already deſcribed. They bake their bread-fruit in the ſame way, which renders it ſomething like a mealy potatoe; of this fruit three diſhes are made, by beating it to a paſte, and mixing it with bananas, plantains, or ſour paſte, which the natives nominate *mahie*. 1769

This paſte is made by taking bread-fruit which is not thoroughly ripe, and laying it in heaps, covered with leaves, by which means it ferments; the core is then taken out, and the fruit put into a hole lined with graſs; it is then again covered with leaves, upon which large ſtones are placed; this produces a ſecond fermentation, after which it grows ſour, and undergoes no change for a long time: they take it from this hole as they have occaſion for it and make it into balls, it is rolled up in plantain leaves, and baked; as it will keep for ſome weeks after it is dreſſed, they eat it both hot and cold. Such is the food of theſe people, their ſauce to which never conſiſts of any thing but ſalt water. As to their drink, it is generally confined to water, or the milk of the cocoa-nut, though there were inſtances in which ſome of them drank ſo freely of the Engliſh liquors as to become quite intoxicated. This, however, ſeemed to proceed more from ignorance than deſign, as they were never known to practice a debauch of this kind a ſecond time. They were told indeed that the chiefs ſometimes became inebriated by drinking the juice of a plant called Ava; but of this they ſaw no inſtance during the time they remained on the iſland. The chief generally eats alone, unleſs when viſited by a ſtranger, who is ſometimes permitted to become a ſecond in the meſs. Having nothing to ſupply the want of a table, they ſit on the ground in the ſhade; leaves of trees being ſpread before them, ſerve as a table-cloth: their attendants, who are numerous, having placed a baſket by the chiefs, containing their proviſions and a cocoa-nut ſhell of freſh and ſalt water, ſet themſelves around; they then begin by waſhing their mouths and hands, after which they eat a handful of bread-fruit and fiſh, dipt in ſalt water alternately, till the whole is conſumed, taking a ſup of ſalt water likewiſe between almoſt every morſel. The bread-fruit and fiſh being all eaten, they next have either plantains or apples, which they never eat without being pared. During this time a ſoft paſte is prepared from the bread-fruit, which they ſup out of cocoa-nut ſhells; this finiſhes the meal, and the hands and mouth are again waſhed as at the beginning. They eat an aſtoniſhing quantity of food at a meal; Mr. Banks and ſome other gentlemen ſaw one of them devour three fiſh of the ſize of a middling carp, four bread-fruits, as large as a common melon; thirteen or fourteen plantains, ſeven or eight inches long, and above half as big round, and about a quart of the paſte made of bread-fruit. The inhabitants of this iſland, though apparently ſo fond of the pleaſures of ſociety, have yet an averſion to holding any intercourſe with each other at their meals; and they are ſo rigid in the obſervation of this cuſtom that brothers and ſiſters have their ſeparate baſkets to contain their proviſions, and generally ſit at the diſtance of ſome yards when they eat, with their backs on each other, and not exchanging a word during the whole time of their repaſt; the middle-aged of ſuperior rank, uſually go to ſleep after dinner, but what is remarkable, the older people are not ſo indolent, but muſic, dancing, wreſtling, and ſhooting with the bow, or throwing the lance, conſtitute a chief part of their diverſions. Flutes and drums are formed of a circular piece of wood, hollow only at one end, this is covered with the ſkin of a ſhark, inſtead of a ſtick. The ſongs of the iſlanders are *extempore*, and frequently in rhime, but they conſiſt only of two lines. Theſe are often couplets rehearſed by way of evening amuſements, between ſun-ſet and bed time, during which interval they burn candles made from an oily nut, fixing them one above another upon a ſmall ſtick that is run through the middle; ſome of theſe candles afford a pretty good light, and are known to burn for a long time. They have a dance called Timorodee, which is generally performed by ten or a dozen young females,

1769 males, who put themſelves into the moſt wanton attitudes, keeping time during the performance with the greateſt nicety and exactneſs. Pregnant women are excluded from theſe dances. *

"Perſonal cleanlineſs is much eſteemed among theſe Indians. Both ſexes are particular in waſhing three times a day, viz. when they riſe in the morning, at noon, and before they go to reſt. They are alſo very cleanly in their cloaths, ſo that no diſagreeable effluvia are found to ariſe in the largeſt communities.

"Cloth is the chief manufacture of Otaheite, and of this there are three ſorts, all which are made out of the bark of different trees, namely, the mulberry, the bread-fruit, and a tree which bears ſome reſemblance to the Weſt-Indian wild fig-tree. The firſt of theſe produces the fineſt cloth, which is ſeldom worn but by thoſe of the firſt rank. The next ſort is made of the bread-fruit tree and the laſt of that which reſembles the wild fig-tree. But this laſt ſort, though the coarſeſt is ſcarcer than the other two, which are manufactured only in ſmall quantities, as the ſame manner is uſed in manufacturing all theſe cloths. [The following deſcription will ſuffice for the reader's information.]

"The bark of the tree being ſtripped off, is ſoaked in water for two or three days; they then take it out, and ſeparate the inner bark from the external coat, by ſcraping it with a ſhell, after which it is ſpread out on plantain leaves, placing two or three layers over one another, care being taken to make it of an equal thickneſs in every part. In this ſtate it continues till it is almoſt dry, when it adheres ſo firmly that it may be taken from the ground without breaking. After this proceſs, it is laid on a ſmooth board, and beaten with an inſtrument made for the purpoſe, of the compact, heavy wood called Etoa. The inſtrument is about fourteen inches long, and about ſeven in circumference; is of a quadrangular ſhape, and each of the four ſides is marked with longitudinal grooves or furrows, differing in this inſtance, that there is a regular gradation in the width and depth of the grooves on each of the ſides; the coarſer ſide not containing more than ten of theſe furrows, while the fineſt is furniſhed with above fifty. It is with that ſide of the mallet where the grooves are deepeſt and wideſt that they begin to beat their cloth, and proceeding regularly, finiſh with that which has the greateſt number. By this beating, the cloth is extended in a manner ſimilar to the gold that is formed into leaves by the hammer; and it is alſo marked with ſmall channels reſembling thoſe which are viſible on paper, but rather deeper; it is in general beat very thin; when they want it thicker than common, they take two or three pieces and paſte them together with a kind of glue prepared from a root called *pea*.

This cloth becomes exceedingly white by bleaching, and is died of a red, yellow, brown or black colour; the firſt is exceeding beautiful, and equal, if not ſuperior to any in Europe. They make the red colour from a mixture of the juices of two vegetables, neither of which uſed ſeparately has this effect: matting of various kinds is another conſiderable manufacture in which they excel, in many reſpects, the Europeans. They make uſe of the coarſer ſort to ſleep on, and in wet weather they wear the finer. They excel in the baſket and wicker work; both men and women employ themſelves at it, and can make a great number of different patterns. They make ropes and lines of all ſizes of the bark of the Poerou, and their nets for fiſhing are made of theſe lines; the fibres of the cocoa-nut they make thread of, ſuch as they uſe to faſten together the ſeveral parts of their canoes; the forms of which are various, according to the uſe to which they are applied. Their fiſhing lines are eſteemed the beſt in the world, made of the bark of the Erowa, a kind of nettle which grows on the mountains; they are ſtrong enough to hold the heavieſt and moſt vigorous fiſh, ſuch as bonettas and albicores; in ſhort, they are extremely ingenious in every expedient for taking all kinds of fiſh.

"The tools which theſe people make uſe of for building houſes, conſtructing canoes, hewing ſtones, and for felling, cleaving, carving and poliſhing timber, conſiſts of nothing more than an adze of ſtone, and a chiſſel of bone, moſt commonly that of a man's arm; and for a file or poliſher, they make uſe of a raſp of coral and coral ſand.

"The blades of their adzes are extremely tough, but not very hard; they make them of various ſizes, thoſe for felling wood, weigh ſix or ſeven pounds, and others which are uſed for carving, only a few ounces; they are obliged every minute to ſharpen them on a ſtone, which is always kept near them for that purpoſe. The moſt difficult taſk they meet with in the uſe of theſe tools, is the felling of a tree, which employs a great number of hands for ſeveral days together. The tree which is in general uſe is called *Aair*, the ſtem of which is ſtrait and tall. Some of their ſmaller boats are made of the bread-fruit tree, which is wrought without much difficulty, being of a light ſpungy nature. Inſtead of planes they uſe their adzes with great dexterity. Their canoes are all ſhaped with the hand, the Indians not being acquainted with the method of warping a plank.

"They have two kinds of canoes; one they call *Ivahah*, the other *pahies*; the former is uſed for ſhort voyages at ſea, and the latter for long ones. Theſe boats do not differ either in ſhape or ſize, but they are in no degree proportionate, being from ſixty to ſeventy feet in length, and not more than the thirtieth part in breadth. Some are employed in going from one iſland to another, and others uſed for fiſhing. There is alſo the Ivahah, which ſerves for war; theſe are by far the longeſt, and the head and ſtern are conſiderably above the body. Theſe Ivahahs are faſtened together, ſide by ſide when they go to ſea, at the diſtance of a few feet, by ſtrong wooden poles, which are laid acroſs them and joined to each ſide. A ſtage or platform is raiſed on the fore-part, about ten or twelve feet long, upon which ſtand the fighting-men, whoſe miſſile weapons are ſlings and ſpears. Beneath theſe ſtages the rowers ſit, who ſupply the place of thoſe who are wounded. The fiſhing Ivahahs are from thirty or forty to ten feet in length, and thoſe for travelling have a ſmall houſe fixed on board, which is faſtened upon the fore-part, for the better accommodation of perſons of rank, who occupy them both day and night. The pahies differ alſo in ſize, being from ſixty to ſeventy feet long, they are alſo very narrow, and are ſometimes uſed for fighting, but chiefly for long voyages. In going from one iſland to another, they are out ſometimes a month, and often at ſea a fortnight or twenty days, and if they had convenience to ſtow more proviſions, they could ſtay out much longer.

Theſe veſſels are very uſeful in landing, and putting off from the ſhore in a ſurf, for by their great length and high ſtern they landed dry, when the Endeavour's boats could ſcarcely land at all.

They are very curious in the conſtruction of theſe boats, the chief parts or pieces whereof are formed ſeparately without either ſaw, plane, chiſſel, or any other iron tool, which renders their fabrication more ſurpriſing

* One of the worſt cuſtoms of the people of Otaheite, is that which ſeveral of the principal people of the iſland have adopted of uniting in an aſſociation, wherein no woman confines herſelf to any particular man, by which means they obtain a perpetual ſociety. Theſe ſocieties are called Arreoy. The members have meetings where the men amuſe themſelves with wreſtling, and the women dance the Timorodee in ſuch a manner as is moſt likely to excite the deſires of the other ſex, and which were frequently gratified in the aſſembly. A much worſe practice is the conſequence of this. If any of the women prove with child, the infant is deſtroyed, unleſs the mother's natural affection ſhould prevail with her to preſerve its life, which, however, is forfeited unleſs ſhe can procure a man to adopt it. And where ſhe ſucceeds in this, ſhe is expelled from the ſociety being called Whannownow, which ſignifies a bearer of children, by way of reproach.

1769

surprising and worthy observation. These parts being prepared, the keel is fixed upon blocks, and the planks are supported with props, till they are sewed or joined together with strong plaited thongs, which are passed several times through holes bored with a chissel of bone, such as they commonly make use of, and when finished, they are sufficiently tight without caulking. They keep these boats with great care in a kind of shed, built on purpose to contain them. Mr. Banks and Dr. Solander were at a loss to find out their method of dividing time, they always made use of the term Malama, which signifies the moon, whenever they spoke of time, either past or to come; they reckon thirteen of these moons, beginning again when they are expired. This proves that they have some idea of the solar year; but these gentlemen could not discover how they computed their months, to make thirteen equal to the year, as they said these months consisted of twenty-nine days, one day in which the moon was invisible being included. They, however, knew the prevailing weather that was to be expected, as well as the fruits which would be in season. As to the day, they divide it into twelve equal parts, six of which belong to the day, and the other six to the night. When they numerate, they reckon from one to ten, making use of their fingers, and changing hands, till they came to the number which they intended to express; and joining expressive signs to their words, in the course of their conversation. But they are not so expert in measuring distances, for when they attempt describing the space between one place and another, they are obliged to express it by the time that would be taken in passing it.

"With regard to their language, it is soft, as it abounds with vowels, and easy to be pronounced, but very few of their nouns or verbs being declineable, it must consequently be rather imperfect. However, they found means to be mutually understood without much difficulty.

"The natives of this country are seldom afflicted with any diseases except sometimes an accidental fit of the cholic; but they are subject to the erisypelas, attended with cutaneous eruptions somewhat resembling the leprosy; and if they have it to any considerable degree, they are excluded from society and live alone, in a small house in some unfrequented part of the island. The management of the sick belongs to the priests, whose method of cure consists generally of prayers and ceremonies, which are repeated till they recover or die. If the former happens, it is attributed to their mode of proceeding; if the patient dies, then they urge that the disease was incurable.

"The religion of these islanders appears to be very mysterious; and as the language adapted to it, was different from that which was spoken on other occasions, the English were not able to gain much knowledge of it. Tupia, who gave them all the information that they got in regard to this particular, informed them, That his countrymen imagined every thing in the creation to proceed from the conjunction of two persons. One of these two first being (the supreme deity) they called Taroataihetoomo, and the other Tapapa; and the year which they call Tettowmatatayo, they suppose to be the daughter of these two. They also imagine an inferior sort of deities, known by the name of Eatuas, two of whom, they say, formerly inhabited the earth, and they suppose that the first man and woman descended from them. The Supreme Being they style "The causer of earthquakes;" but more frequently address their prayers to Tane, whom they conceive to be a son of the first progenitors of nature. They believe in the existence of the soul in a separate state, and suppose that there are two situations differing in the degrees of happiness, which they consider as receptacles for different ranks, but not as places of rewards and punishments. Their notion is, that the chiefs and principal people will have the preference to those of lower ranks. For as to their actions they cannot conceive them to influence their future state, as they believe the deity takes no cognizance of them. The office of priest is hereditary; there are several of them of all ranks: the chief is respected next to their kings; and they are in general superior to the natives, not only in point of divine knowledge, but also in that of astronomy and navigation. They are not at all concerned with the ceremony of marriage, which is only a simple agreement between the man and the woman, and when they chuse to separate, the matter is accomplished with as little ceremony as was thought necessary to bring them together. These people do not appear to worship images of any kind; but they enter their Morals with great awe and humility, their bodies being uncovered to the waist when they bring their offering to the altar.

"As to their form of government, there is a sort of subordination among them which resembles the early state of all the nations of Europe when under the feudal system; which reserved authority to a small number, putting the rest intirely in their power. The ranks of the people of this island were these, Earee Rahie, signifying a king or supreme governor; Earee, answering to the title of baron; Mannahoonies, to that of vassal; and Toutou, under which name was included the lowest orders of the people, such as are called villains according to the old law term. The Earee Rahie, of which there are two here, one belonging to each peninsula, had great respect shewn them by all ranks. The Earees are lords of one or more of the districts, into which these governments are divided; and they separate their territories into lots, which are given among the Manahoonies, who respectively cultivate the share that they hold under the baron. But they are only nominal cultivators; this, as well as all other laborious work, being done by the Toutou, or lower class of the people. The sovereign, or Earee Rahie, and the baron, or Earee are succeeded in titles and honours by their children, as soon as they are born; but their estates remain in their possession, and subject to the management of their parents. Every district under the command of an Earee furnishes a proportionate number of fighting men, for the defence of the common cause, in case of a general attack; and they are all subject to the command of the Earee Rahie. The number of fighting men furnished by the principal districts, amounted (according to Tupia's account) to upwards of 6000. Their weapons, as we have already observed, consist of slings, with which they are very dextrous, and of long clubs, remarkably hard,

* The following specimen will possibly enable the reader to form some notion of the language of those islanders.

Aheine, *a woman*	Ereowroo, *the head*
Aihoo, *a garment*	Huaheine, *a wife*
Ainao, *take care*	Itopa, *to fall*
Aree, *a chief*	Kipoo a meemhee, *a chamber-pot*
Aouna, *to-day*	Mahana, *a day*
Aoy, *water*	Marroowhai, *dry*
Eahoo, *the nose*	Matau, *the eyes*
Eawow, *to scald*	Matte roah, *to die*
Eei, *to eat*	Mayneence, *to tickle*
Eeyo, *look you*	Meyoooo, *the nails*
Emoto, *to box*	Midee, *a child*
Epanoo, *a drum*	Mutee, *a kiss*
Epeenei, *an echo*	Myby, *good*
Epehe, *a song*	Necheeo, *good night*
Oboboa, *to-morrow*	Tatta te homannee maital, *a good-natured person*
Oowhau, *the thighs*	Tea, *white*
Ore' dehaiya, *a large nail*	Teine, *a brother*
Ore' eeteea, *a small nail*	Tooaheine, *a sister*
Orawra, *yesterday*	Tooanahoe, *you and I*
Pahie, *a ship*	Toonoah, *a mole in the skin*
Parawei, *a shirt*	Tumatau, *a bonnet*
Poa, *a night*	Wahoa, *fire*
Poe, *ear-rings*	Waow, *I*
Tane, *a husband*	

It is remarkable that the people of Otaheite, finding great difficulty in pronouncing English names, instituted others more agreeable with their own language, by which they distinguished their guests: Thus Captain Cook they called *Toote*; Hicks, *Hate*; Green, *Treen*; and, Mr. Banks they called *Opane*.

1769

hard, with which they fight obſtinately and cruelly, giving no quarter to their enemies in time of battle."

While the Endeavour ſtaid at Otaheite, there was a good underſtanding between the Earees of the two peninſulas, though it ſeems that the Earee of Tiarrebau called himſelf king of the whole iſland: this however was a mere nominal claim, and was conſidered as ſuch by the inhabitants. There is nothing among them ſubſtituted for money or a general medium by which every deſirable object may be purchaſed or procured; neither can any permanent good be obtained by force or fraud. The general commerce with women ſets aſide almoſt every excitement to commit adultery. In a word, in a government ſo little poliſhed, though diſtributive juſtice cannot be regularly adminiſtered, as at the ſame time there can be but few crimes whereon to exerciſe it, the want of this juſtice is not ſo ſeverely felt, as it muſt be in more civiliſed ſocieties.

Before the crew of the endeavour quitted Otaheite, it is to be remarked that they were appriſed of the natives having the venereal diſeaſe among them, which it was eaſy to conclude was diſſeminated there by M. Bougainville's people. The iſlanders called it by a name expreſſive of *rottenneſs*, and gave the moſt diſmal accounts of its effects, obſerving that the hair and nails of thoſe who were firſt infected with it, fell off, and the fleſh rotted from their bones; while their countrymen uninfected, and neareſt relations were ſo much terrified at the appearance, that the unhappy ſufferer was often forſaken by them, and left to periſh in that horrible condition.—

On Thurſday, the 13th of July, after leaving the iſland of Otaheite, they ſailed with clear weather and a gentle breeze; and Tupia informed them that the iſlands which he called *Huaheine*, *Ulietea*, *Otaha*, and *Bolabola*, were at the diſtance of about one or two days ſail, and that hogs, fowls, and other refreſhments which were very ſcarce on board, were to be got there in great abundance. Accordingly they proceeded in ſearch of theſe iſlands, and diſcovered Huaheine, on the 14th, and ſounded on the 16th near the north-weſt part of the iſland, but found no bottom at 70 fathoms. Several canoes put off; but the Indians ſeemed fearful of coming near the veſſel till the ſight of Tupia removed their apprehenſions. They then came along ſide, and the king of Huaheine and the queen came on board. They ſeemed ſurpriſed at whatever was ſhewn them, but made no inquiries after any thing but what was immediately preſented before them. The king, whoſe name was Oroe, propoſed exchanging names with Captain Cook, a cuſtom which is looked upon as a mark of friendſhip in this iſland, and which the captain readily complied.

Huaheine.

The people here appeared in almoſt every reſpect ſimilar to thoſe of Otaheite; only Tupia aſſerted that they were not like them addicted to thieving.

The captain having come to an anchor in a ſmall but convenient harbour on the weſt ſide of the iſland, went on ſhore with Mr. Banks, and ſome other gentlemen, accompanied by the king and Tupia. The laſt-mentioned uncovered himſelf to the waiſt, deſiring Mr. Monkhouſe to follow his example. Being ſeated, he now began a ſpeech, which laſted about twenty minutes; the king, who ſtood oppoſite to him, anſwering in what ſeemed ſet replies. During this diſcourſe he delivered, at different times, a handkerchief, a black ſilk neck-cloth, ſome beads, and plantains, as preſents to their Eatua or Deity. He received in return for the Eatua, of the Engliſh, a hog, ſome young plantains, and two bunches of feathers, which were carried on board. Theſe ceremonies were conſidered as a kind of ratification of a treaty between the Engliſh and the king of Huaheine.

On the 17th they went again on ſhore, and walked up into the country, the productions of which greatly reſembled thoſe of the Otaheite; the rocks and clay ſeemed, however, more burnt; the boat-houſes were large, and the other houſes neat. The level part of the country affords the moſt beautiful landſcapes that the imagination can poſſibly form an idea of; the ſoil is exceedingly fertile, and the ſhore is lined with fruit-trees of different kinds, particularly the cocoa-nut, which was ſeen in great abundance. They alſo went on ſhore on the 18th, without Tupia, but his boy, whoſe name was Taiyota, accompanied them, and Mr. Banks propoſed taking a more perfect view of a kind of cheſt, or ark, which he had before obſerved: the lid of this ark was covered in a peculiar manner, and thatched with palm-nut leaves. It was placed upon two poles, and ſuſtained on ſmall carved arches of wood; the poles ſerved to remove it from one place to the other, in the manner of a ſedan chair: it is very ſurpriſing, that this cheſt was of a form greatly reſembling the ark of the Lord, among the Jews; but what was ſtill more extraordinary, the boy informed them that it was called *Ewharee no Eatua*, *the houſe of the God*, but could give no account of its nothing or utility.—With ſome difficulty they negotiated for eleven pigs, and were not without hopes of obtaining more the next morning.—

On the 19th they carried ſome hatchets with them, with which they procured three hogs. As they propoſed to ſail in the afternoon, the king accompanied by ſome others of the natives, came on board to take his leave, when his majeſty received from Captain Cook a ſmall pewter plate, with the following inſcription, "His Britannic Majeſty's ſhip Endeavour, Captain Cook commander, 16 July 1769." He alſo was preſented with ſome medals, or counters, reſembling the coin of England, and other trifles which were very acceptable to him. The iſland lies in 16° 43′ ſouth latitude, and 150° 52′ weſt longitude; it is about 30 leagues diſtant from Otaheite, and is about twenty miles in circumference. Their productions ſeem to be about a month forwarder than thoſe of Otaheite. Mr. Banks ſaw only a few new plants, but he found here a new ſpecies of ſcorpion.

The inhabitants are of a very lazy diſpoſition, but are ſtouter and larger made than thoſe of Otaheite. The women are much fairer than thoſe of that iſland, and in general are very handſome; neither ſo ſuſceptible of fear, nor not ſo deſirous of information.

They ſailed from Huaheine for the iſland of Ulietea, and came within a league or two of the ſhore in the afternoon. The next morning, by the direction of Tupia, they anchored in a bay which is formed by a reef on the north ſide of the iſland, two canoes full of the natives ſoon came off from the ſhore, and brought with them two ſmall hogs, which they exchanged for ſome nails and beads. The captain, Mr. Banks, and ſome other gentlemen now went on ſhore, accompanied by Tupia, who introduced them with the ſame kind of ceremonies that had taken place on their landing at Huaheine; after which Captain Cook took poſſeſſion of this adjacent iſland in the name of the king of Great Britain. They then walked to a large Morai, which the natives called Tapodoboatea. They found that it differed from the ſepulchral ornaments of Otaheite, being compoſed of four walls, about eight or nine feet in height, and built of large coral ſtones, ſurrounding a court of about 30 feet ſquare. They ſaw an ewhatta or altar, on which a hog was placed as an offering, weighing about an hundred pounds. There was an amphitheatre in the front of this morai, facing the ſea. They alſo ſaw three or four *Ewharee*, *no Eatua* (houſes of God) like that which was obſerved at Huaheine.

Ulietea.

The maſter was ſent on the 21ſt to inſpect the ſouthern part of the iſland, and a lieutenant was diſpatched in the yawl to ſound the harbour where the Endeavour lay; while the captain went in the pinnace to take a view to the northward. On their return they ſaw a tree of the ſame kind as that which had been obſerved by Mr. Green at Otaheite; the circumference of the trunk, or rather congeries of the roots of which, meaſured about 40 yards.

The hazy weather and briſk gales prevented Captain Cook

Cook from getting under ſail, till the 24th, when he put to ſea, and ſteered northward within the reef, towards an opening, at the diſtance of about five or ſix leagues, in effecting which he was in great danger of ſtriking on a rock, the man who ſounded, crying out on a ſudden "Two fathoms," which could not but alarm them greatly, but luckily they received no damage.

The name of the bay where the Endeavour lay at anchor is Oopoa. It is capacious enough to hold a great number of ſhipping, and is ſecured from the ſea by a reef of rocks. Its ſituation is off the eaſternmoſt part of the iſland. The proviſions here conſiſt of cocoa-nuts, yams, plantains, and a few hogs and fowls. The country round about the place where they landed was not ſo plentiful as at Otaheite or Huaheine.

Otoha. They were within a league or two of the iſland of Otoha; but could not get near enough to land (the wind having proved contrary) till the 25th in the morning, when Mr. Banks and Dr. Solander went in the long-boat with the maſter, in order to ſound a harbour on the eaſt ſide of the iſland, which they found ſafe and convenient. They then went on ſhore and purchaſed a large quantity of plantains, and ſome hogs and fowls. The produce of this iſland was much the ſame with that of Ulietea, but it ſeemed to be more barren. They received the ſame compliment from the Indians here, as was uſual for them to pay their own kings, which was by uncovering their ſhoulders, and wrapping their cloaths round their bodies. They made ſail to the northward, and at eight o'clock the next morning they were under the high peaks of Bolabola. They found the iſland inacceſſible in this part, and found likewiſe that it was impoſſible to weather the ſouth end of it till late at night. On the 13th they diſcovered an iſland which Tupia called *Maurua*, but ſaid it was ſmall, ſurrounded by a reef, and without any commodious harbour, but inhabited, and yielded nearly the ſame produce as the adjacent iſlands. In the middle is a high round hill which may be ſeen at eleven or twelve leagues diſtance. In the afternoon, finding themſelves to windward of ſome harbour that lay on the weſt ſide of Ulietea, they intended to put into one of them, in order to ſtop a leak which they had ſprung in the powder-room, and to take in ſome additional ballaſt. The wind being right againſt them, they plied on and off till the afternoon of the firſt of Auguſt, when they came to an anchor in the entrance of the channel, which led into one of the harbours.

Maurua.

On Wedneſday the 3d, in the morning, when the tide turned, they came into a proper place for mooring in 28 fathom. In the interim many of the natives came off, and brought hogs, fowls, and plantains, which were purchaſed upon very moderate terms. Mr. Banks and Dr. Solander went on ſhore, and ſpent the day very agreeably; the natives ſhewing them great reſpect: being conducted to the houſes of the chief people, they found thoſe who had ran haſtily before them, ſtanding on each ſide of a long mat ſpread upon the ground, and the family ſitting at the farther end of it. In one houſe they obſerved ſome very young girls dreſſed in the neateſt manner, who kept their places waiting for the ſtrangers to accoſt them; theſe girls were the moſt beautiful the gentlemen had ever ſeen.

One of them, who was about ſeven or eight years old, was dreſſed in a red gown, and her head was decorated with a great quantity of plaited hair; this ornament is called Tamou, and is held in great eſtimation among them. She was ſitting at the upper end of one of their long mats, on which none of the people preſent preſumed to ſet a foot; and her head was reclined on the arm of a decent looking woman, who appeared to be her nurſe; when Mr. Banks and Dr. Solander approached her, ſhe ſtretched out her hand to receive ſome beads, which they preſented to her, with an air of ſuch dignity and gracefulneſs, as would have done honour to the firſt princeſs in Europe.

Before their departure, they were entertained with a dance, different from any they had ſeen before. The performer put upon his head a large piece of wicker-work, about four feet long, of a cylindrical form, covered with feathers, and edged round with ſhark's teeth. Having this head-dreſs on, which is called a Whou, he began to dance with a ſlow motion; frequently moving his head, ſo as to deſcribe a circle with the top of his wicker cap, and ſometimes throwing it ſo near the faces of the by-ſtanders as to make them jump back: this they conſidered as an excellent piece of humour, and it always produced a hearty laugh, when practiſed upon any of the Engliſh gentlemen. 1769

On Thurſday the 3d, as Mr. Banks and the Doctor were going along the ſhore to the northward, with a deſign to purchaſe ſtock, they met with a company of dancers, who retarded the progreſs of their excurſion. The company was compoſed of ſix men and two women dancers, with three drums. They were informed that theſe dancers were ſome of the principal people of the iſland, and though they were an itinerant troop, they did not, like the ſtrolling parties of Otaheite, receive any gratuity from the by-ſtanders. The women wore a conſiderable quantity of tamou, or plaited hair, ornamented with flowers of the cape jeſſamine, which were ſtuck in with taſte, and made an elegant head-dreſs. The womens necks, breaſts, and arms, were naked; the other parts of their bodies were covered with black cloth, which was faſtened cloſe round them, and by the ſide of each breaſt, next the arms, was a ſmall plume of black feathers, worn like a noſegay.

Thus apparelled, they advanced ſideways, keeping time with great exactneſs to the drums, which beat quick and loud; ſoon after they began to ſhake themſelves in a very whimſical manner, and put their bodies into a variety of ſtrange poſtures, ſometimes ſitting down, and at others falling with their faces to the ground, and reſting on their knees and elbows, moving their fingers at the ſame time with a quickneſs ſcarcely to be credited. The chief dexterity, however, of the dances, as well as the amuſement of the ſpectators, conſiſted in the lacivioufneſs of their attitudes and geſtures.

Between the dances of the women a kind of dramatic interlude was performed by the men, conſiſting of dialogue as well as dancing; but for want of a ſufficient knowledge of their language, they could not learn the ſubject of this interlude.

Mr. Banks, Dr. Solander, and ſome other gentlemen, were preſent at a more regular dramatic entertainment the next day. The performers, who were all men, were divided into two parties, one dreſſed in brown, and the other in white, by way of diſtinction. Tupia being preſent, informed them that the party in brown acted the parts of a maſter and his ſervants, and the party in white, a gang of thieves; the maſter having produced a baſket of meat, which he gave in charge to his ſervants: which party, exhibited a variety of expedients, in endeavouring to ſteal this baſket, and the brown ſet as many in preventing the accompliſhment of their deſign. After ſome time had been ſpent in this manner, thoſe to whom the baſket was intruſted, laying themſelves down on the ground round it, pretended to fall aſleep; the other party availing themſelves of this opportunity, ſtole gently upon them, and carried off their booty; the ſervants awaking ſoon after, diſcovered their loſs, but they made no ſearch after the baſket, and began to dance with as much alacrity as before.

On Saturday the 5th, ſome hogs and fowls, and ſeveral large pieces of cloth, many of them being fifty or ſixty yards in length, together with a quantity of plantains and cocoa-nuts, were ſent to Captain Cook, as a preſent from the Earee Rahie of the iſland of Bola- Bolabola.
bola, accompanied with a meſſage, importing that he was then on the iſland, and intended waiting on the captain.

On Sunday the 6th, the king of Bolabola did not viſit

1769 visit them agreeable to his promise, his absence, however, was not in the least regretted, as he sent three young women to demand something in return for his present. After dinner, they set out to pay the king a visit on shore, since he did not think proper to come on board. As this man was the Earee-Rahie of the Bolabola men, who had conquered this, and were the dread of all the neighbouring islands, they were greatly disappointed, instead of finding a vigorous enterprising young chief, to see a poor feeble old dotard, half blind, and sinking under the weight of age and infirmities. He received them without either that state or ceremony which they had hitherto met with among the other chiefs.

On Wednesday the 19th, having stopped their leak, and taken on board their fresh stock of provisions they sailed out of the harbour. Though they were several leagues distant from the island of Bolabola, Tupia earnestly intreated Captain Cook, that a shot might be fired towards it; which, to gratify him, the captain complied with. This was supposed to have been intended by Tupia as a mark of his resentment against the inhabitans of that place, as they had formely taken from him large possessions which he held in the island of Ulietea, of which island Tupia was a native, and a subordinate chief, but was driven out by these warriors.

They had great plenty of provisions, as well of hogs, as of vegetables, during the time they continued in the neighbourhood of these islands, so that they were not obliged to use any considerable quantity of the ship's provisions, and they had flattered themselves, that the fowls and hogs would have supplied them with fresh provisions during the course of their voyage to the southward, but in this they were unhappily disappointed, for as the hogs could not be brought to eat any European grain, or any provender whatever, that the ship afforded, they were reduced to the disagreeable necessity of killing them immediately on their leaving those islands; and the fowls all died of a disease in their heads, with which they were seized soon after they had been carried on board.

As they were detained longer at Ulietea in repairing the ship than they expected, they did not go on shore at Bolabola; but after giving the general name of *The Society Islands*, to the islands of Huaheine, Ulietea, Bolabola, Otaha, and Maurua, which lie between the latitude of 16° 10′ and 18° 55′ south, they pursued their course, standing southwardly for an island, to which they were directed by Tupia, at above 100 leagues distant, which they discovered on Sunday the 13th, and were informed by him, that it was called Obiterea.

The next morning they stood in for land, and saw several of the inhabitants coming along the shore. One of the lieutenants was dispatched in the pinnace to sound for anchorage, and to obtain what intelligence could be got from the natives concerning any land, that might be farther to the south. Mr. Banks, Dr. Solander, and Tupia, went with the lieutenant in the boat. Obiterea. When they approached the shore, they observed, that the Indians were armed with long lances. A number of them were soon drawn together on the beach, and two jumped into the water endeavouring to gain the boat; but she soon left them and some others that had made the same attempt, far enough behind her. Having doubled the point where they intended to land, they opened a large bay, and saw another party of the natives standing at the end of it, armed like those whom they had seen before. Preparations were then made for landing, on which a canoe full of Indians came off towards them. Observing this, Tupia received orders to acquaint them that the English did not intend to offer them violence, but meant to traffic with them for nails, which were produced. Thus informed they came along-side the boat, and took some nails that were given them, being seemingly well pleased with the present. Yet a few minutes after, several of these people boarded the boat, designing to drag her on shore; but some musquets being discharged over their heads they leaped into the sea, and having reached the canoe, put back with all possible expedition, joining their countrymen who stood ready to receive them. The boat immediately pursued the fugitives, but the crew finding the surf extremely violent, did not venture to land there, but coasted along shore to try if they could not find a more convenient place. Soon after the canoe got on shore, a man opposite the boat flourished his weapon, calling out at the same time with a shrill voice, which was a mark of defiance, as Tupia explained it to the English.—Not being able to find a proper landing-place they returned, with an intention to attempt it where the canoe went on shore; whereupon another warrior repeated the defiance: his appearance was more formidable than that of the other; he had a high cap on made of the tail feathers of a bird, and his body was painted with various colours. When he thought fit to retire, a grave man came forward, who asked Tupia several questions, relating to the place from whence the vessel came, Who were the persons on board? Whither they were bound? &c. After this, it was proposed that the people in the boat should go on shore and trade with them if they would lay aside their weapons; but the latter would not agree to this, unless the English would do the like. As this proposal was by no means an equal one, when it was considered that the hazard must for many reasons be greater to the boat's crew than the Indians, and as perfidy was dreaded, it was not complied with. Besides, since neither the bay which the Endeavour entered, nor any other part of the island furnished good harbour or anchorage, it was resolved not to attempt landing any more, but to sail from hence to the southward. Of the people of the island we have the following account.

"The natives are very tall, well proportioned, and have long hair, which, like the inhabitants of the other islands, they tie in a bunch on the top of their heads, they are likewise tatowed in different parts of their bodies, but not on their posteriors. The isle does not shoot up into high peaks like the others that they visited, but is more level and uniform, and divided into small hillocks, some of which are covered with groves of trees. However, none of those bearing the bread fruit were seen, and not many cocoa-trees, but a great number of those called Etoa, were seen on the sea coast of this island. Both the nature of their cloth, and their manner of wearing it differed in many respects from what had been observed in the progress of our voyagers. All the garments that these people wore, were died yellow, and painted with a variety of colours on the outside. One piece formed their whole habit, having a hole in it through which they put their heads. This reached as far as their knees, and was tied close round their bodies with a kind of yellowish sash. Some of them also wore caps of the same kind, as we have already mentioned, and others bound round their heads a piece of cloth which resembled a turban."

The Endeavour sailed from this island on the 15th of August, with a fine breeze; but on the 16th it was hazy, and they bore away for what resembled several high peaks of land, but the weather clearing up, they were convinced of their mistake, and resumed their course accordingly. They saw a comet on the 30th, about four o'clock, which was then about 60° above the horizon. Land was discovered at west by north, on Thursday the 7th of October, and in the morning of the 8th they came to an anchor opposite the mouth of a small river, not above half a league from the coast.

Captain Cook, Mr. Banks, Dr. Solander, and some other gentlemen, having left the pinnace at the mouth of the river, proceeded a little farther up, when they landed, leaving the yawl to the care of some of their boys, and went up to a few small houses in the neighbourhood. Some of the natives that had concealed themselves in the neighbourhood took advantage of their absence from the boat, and rushed

out, advancing towards it, and brandiſhing their long wooden lances. On this, the boys dropped down the ſtream, but the ſavages purſued them cloſely. The cockſwain of the pinnace then fired a muſquetoon over their heads, but it did not prevent them from following till they were near enough to diſcharge their lances, in conſequence of which he levelled his piece and ſhot one of them dead upon the ſpot. They remained for a ſhort time motionleſs with aſtoniſhment, but retreated precipitately as ſoon as they had recovered from their fright. In the mean while thoſe in the pinnace and yawl being alarmed at the report of the piece, made haſte to return to the veſſel.

The Captain, Mr. Banks, and ſeveral gentlemen went on ſhore, with Tupia, on the Monday following, and a proper party, on that ſide of the river which was oppoſite to a ſpot where ſome Indians were ſeated on the ground. Theſe latter immediately ſtarted up, and began to handle their weapons; but Tupia ſpeaking to them, the gentlemen were agreeably ſurpriſed to find that he was underſtood by them, as they ſpoke his language, though in a different dialect. It appeared at firſt, that they had hoſtile intentions, whereupon it was thought proper to fire a muſquet at ſome diſtance from them. The ball ſtruck the water; and the effect which it had was viſible, in deterring them from farther menacing the Engliſh. Afterwards the captain, with ſome of the gentlemen and Tupia in their company, the mariners being previouſly drawn up, advanced nearer to the river's ſide. This friendly Indian ſpoke again to them, and told them that the Engliſh wanted only to trade; to which they readily conſented; but the gentlemen would not croſs the river unleſs the natives would lay aſide their weapons, which they could not by any means be prevailed upon to do, and without which conceſſion it was thought improper to croſs the river. The gentlemen, however, in their turn, intreated the iſlanders to come over; which one of them conſented to. However, they did not ſeem to value the beads and iron with which the Engliſh preſented them, nor would they give any thing in return, but propoſed to exchange their weapons for thoſe belonging to the Engliſh, which being conſequently objected to, they endeavoured ſeveral times to ſnatch them out of their hands, but as the Engliſh were on their guard, from the information given them by Tupia, that they were ſtill enemies, their attempts to ſeize their arms were repeatedly fruſtrated, and Tupia, by the directions of the gentlemen, gave them notice, that any further violence would be puniſhed with inſtant death. One of them had, nevertheleſs, the audacity to ſnatch Mr. Green's hanger, and, retiring a few paces, flouriſhed it over his head; he, however, paid for this temerity with his life, Mr. Monkhouſe firing at him with a muſquet loaded with ball; and that gentleman afterwards, with ſome difficulty, recovered the hanger, one of the Indians endeavouring to ſeize it.

The behaviour of the natives, added to the want of freſh water, induced Captain Cook to continue his courſe round the head of the bay. He was ſtill in hopes of getting ſome of the Indians on board, and by preſents added to civil uſage, to convey through them a favourable idea of the Engliſh to their fellow countrymen and thereby ſettle a good correſpondence with them. Soon after an event occurred, though attended with diſagreeable circumſtances, that promiſed to facilitate this deſign. Two canoes appeared, making towards land, and Captain Cook propoſed intercepting them with boats. One of them got clear off, but the Indians in the other finding it impoſſible to eſcape the boats, began to attack them with their paddles; this compelled the Endeavour's people to fire upon them, when four of the Indians were killed, and the other three, who were youths, jumped into the water, and endeavoured to ſwim to ſhore; they were, however, taken up and brought on board. They were at firſt greatly terrified, thinking they ſhould be killed; but Tupia, by repeated aſſurances of friendſhip, removed their fears, and they afterwards eat very heartily of the ſhip's proviſions. When they retired to reſt, in the evening, they appeared perfectly eaſy in their minds, and ſlept very quietly for ſome hours, but in the middle of the night their fears returned, and they appeared in great agitation, frequently uttering loud and diſmal groans. After ſome time, however, the friendly promiſes and kind careſſes of Tupia again prevailed over their fears, and they became ſo calm and reſigned as to ſing a ſong, the tune of which was ſolemn and ſlow, and at the dead of the night, when an univerſal ſilence prevailed throughout the ſhip, had an aweful and pleaſing effect. The next morning, after they were dreſſed and ornamented, according to the mode of their country, with necklaces and bracelets, Captain Cook propoſed ſetting them on ſhore, that they might give a favourable report to their countrymen of the reception they had met with. They teſtified much ſatisfaction on being told they were going to be releaſed, but ſeemed under great apprehenſions of danger, at finding the boat approach Captain Cook's firſt landing-place, intimating, that the inhabitants were their foes, and that they always killed and eat their enemies. The captain nevertheleſs, judged it expedient to land near the ſame ſpot, which he accordingly did, with Mr. Banks, Dr. Solander, and Tupia, reſolving at the ſame time to protect the youths from any injury that might be offered them, but on ſeeing two large parties of the Indians advancing haſtily towards them, they returned, and again put themſelves under their protection. As the Indians drew nearer, one of the boys diſcovered his uncle amongſt them, and a converſation took place between them acroſs the river, in which the lad gave a very juſt account of the hoſpitality he had met with, and took great pains to diſplay their cloaths and finery. Soon after, the uncle ſwam acroſs the river, bringing with him a green bough, as a token of friendſhip, which was received as ſuch, and ſeveral preſents were made him. The body of the Indian, who was ſhot the day before, lay in the ſame place where he fell; one of the boys had covered it with part of his cloaths, and after the gentlemen had retired, the Indian performed a kind of ceremony over it, by throwing a green bough towards it, and the body was afterwards carried in a raft acroſs the river. Notwithſtanding the preſence of the uncle of one of the boys, all three of them, by their own deſire, returned to the ſhip, but as the captain intended ſailing the next morning, he ſent them on ſhore in the evening, though much againſt their inclination. The names of theſe boys were Toahowrange, Koikerange, and Maragovete. They informed Captain Cook that there was a particular kind of deer upon the iſland, likewiſe tars, capers, romara, yams, a kind of long pepper, bald coote, and black-birds.

1769

On the 11th, Captain Cook ſet ſail, in hopes of finding a better anchoring place, after giving this bay (called by the natives Toaneora) the name of *Poverty Bay*, and the ſouth-weſt point he called *Young Nick's head*, on account of its being firſt perceived by a lad on board, named Nicholas Young. They were becalmed in the afternoon, and ſeveral canoes came off from the ſhore with Indians, who received many preſents, and afterwards bartered even their cloaths, and ſome of their paddles, ſo eager were they of being poſſeſſed of as many European commodities as poſſible. A ſingle tree formed the bottom of their canoes, and the upper part conſiſted of two planks ſewed together; they ſat on thwarts, their paddles were painted red, repreſenting many uncommon figures, and very curiouſly wrought. They were armed with bludgeons made of wood, and of the bone of a large animal: they called them *Patoo-Patoo*; and they were well contrived for cloſe fighting.

Poverty-Bay.

After they had finiſhed their traffic, they ſet off in ſuch a hurry, that they forgot three of their companions, who remained on board all night. They teſtified their fears and apprehenſions, notwithſtanding Tupia took great pains to convince them they

1769 were in no danger; and about ſeven o'clock the next morning a canoe came off, with four Indians on board. It was at firſt with difficulty the Indians in the ſhip could prevail on thoſe in the canoe to come near them, and it was not till after the former had aſſured them that the Engliſh did not eat men, that they came along ſide the Endeavour. The chief came on board, whoſe face was tataowed, with a remarkable patoo in his hand, and in this canoe the three Indians left the ſhip. Captain Cook gave the name of *Cape Table* to a point of land about ſeven leagues to the ſouth of Poverty Bay: its figure greatly reſembling a table, and the iſland, called by the natives *Teahowry*, he named *Portland Iſland*, it being very ſimilar to that of the ſame name in the Britiſh Channel. It is joined to the main by a chain of rocks near a mile in length, partly above water. There are ſeveral ſhoals, called ſhambles, about three miles to the north-eaſt of Portland, one of which the Endeavour narrowly eſcaped; there is, however, a paſſage between them with twenty fathom water. Some parts of Portland Iſland, as well as the main, were cultivated; and pumice-ſtone in great quantities lying along the ſhore, within the bay, indicated that there was a volcano in the iſland. High palings upon the ridges of hills were alſo viſible in two places, which were judged to be deſigned for religious purpoſes.

On the 12th ſeveral Indians came off in a canoe; they were diſfigured in a ſtrange manner, danced and ſang, and at times appeared to be peaceably inclined, but at others to menace hoſtilities. Notwithſtanding Tupia ſtrongly invited them to come on board, none of them would quit the canoe. Whilſt the Endeavour was getting clear of the Shambles, five canoes full of Indians came off, and ſeemed to threaten the people on board, by brandiſhing their lances, and other hoſtile geſtures. A four-pounder, loaded with grape-ſhot, was therefore ordered to be fired, but not pointed at them. This had the deſired effect, and made them drop a-ſtern. Two more canoes came off whilſt the Endeavour lay at anchor, but the Indians on board behaved very peaceably and quiet, and received ſeveral preſents, but would not come on board.

On Friday the 13th in the morning, they made for an inlet, but finding it not ſheltered, they ſtood out again; and were chaced by a canoe filled with Indians, but the Endeavour out-ſailed them. She purſued her courſe round the bay, but did not find an opening.

The next morning they had a view of the inland country: It was mountainous, and covered with ſnow in the interior parts, but the land towards the ſea was flat and uncultivated, and in many places there were groves of high trees. Nine canoes full of Indians came from the ſhore, and five of them, after having conſulted together, purſued the Endeavour, apparently with a hoſtile deſign. Tupia was deſired to acquaint them that immediate deſtruction would enſue if they perſevered in their attempts; but words had no influence, and a four-pounder, with grape-ſhot was fired, to give them ſome notion of the arms of their opponents. They were terrified at this kind of reaſoning, and paddled away faſter than they came. Tupia then hailed the fugitives, and acquainted them that if they came in a peaceable manner, and left their arms behind, no annoyance would be offered them; one of the canoes ſubmitting to the terms, came along-ſide the ſhip, and received many preſents; but the other canoes returning, and perſiſting in the ſame menacing behaviour, interrupted this friendly intercourſe.

The following day, Sunday the 15th, they were viſited by ſome fiſhing-boats, the people in which, conducted themſelves in an amicable manner. Though the fiſh which they had on board had been caught ſo long that they were not eatable, Captain Cook purchaſed them merely for the ſake of promoting a traffic with the natives. In the afternoon a canoe with a number of armed Indians came up, and one of them, who was remarkably cloathed, with a black ſkin, found means to defraud the captain of a piece of red baize under pretence of bartering the ſkin he had on for it. As ſoon as he had got the baize into his poſſeſſion, inſtead of giving the ſkin in return, agreeable to his bargain, he rolled them up together, and ordered the canoe to put off from the ſhip, turning a deaf ear to the repeated remonſtrance of the captain againſt his unjuſt behaviour. After a ſhort time, this canoe, together with the fiſhing boats which had put off at the ſame time, came back to the ſhip, and trade was again begun. During this ſecond traffic with the Indians, one of them unexpectedly ſeized Tupia's little boy Taiyota, and pulling him into his canoe, inſtantly put off, and paddled away with the utmoſt ſpeed; ſeveral muſquets were immediately diſcharged at the people in the canoe, and one of them receiving a wound, they all let go the boy, who before was held down in the bottom of the canoe. Taiyota taking the advantage of their conſternation, immediately jumped into the ſea, and ſwam back towards the Endeavour; he was taken on board without receiving any harm; but his ſtrength was ſo much exhauſted with the weight of his cloaths, that it was with great difficulty he reached the ſhip. In conſequence of this attempt to carry off Taiyota, Capt. Cook called the cape off which it happened, *Cape Kidnappers*, lying in latitude 39 deg. 43 min. ſouth, and longitude 182 deg. 24 min. weſt, and is very diſtinguiſhable by the high cliffs and white rocks that ſurrounded it. The diſtance of this cape from Portland Iſland is about 13 leagues, and it forms the ſouth point of a bay which was denominated *Hawke's Bay*, in honour of Admiral Hawke.

Cape Kidnappers.

Hawke's Bay.

Taiyota, on recovering from his fright, produced a fiſh, and informed Tupia that he intended to offer it to his Eatua or God, in gratitude for his happy eſcape; this being approved of by the other Indian, the fiſh was caſt into the ſea. Captain Cook now paſſed by a ſmall iſland which was ſuppoſed to be inhabited only by fiſhermen, as it ſeemed to be barren, and *Bare Iſland* was the name given to it, and to a head-land in latitude 40° 34′ ſouth, and longitude 182° 55′ weſt, becauſe the Endeavour turned, he gave the name of *Cape Turnagain*. It was never certainly known whether New Zealand was an iſland before this veſſel touched there: On this account, the lords of the admiralty had inſtructed Captain Cook to ſail along the coaſts as far as 40 degrees ſouth, and if the land extended farther, to return to the northward again. It was for this reaſon that the captain altered his courſe, when he arrived at the cape above-mentioned: The wind having likewiſe veered about to the ſouth, he returned, ſailing along the coaſt nearly in his former track. Between this and Cape Kidnappers Bay, the land is unequal, and ſomewhat reſembles our downs and ſmall villages, and many inhabitants were obſerved. The ſhip came abreaſt of a peninſula, in Portland Iſland, named *Terakako*, on Wedneſday the 19th. At this time a canoe with five Indians came up to the veſſel. There were two chiefs among them who came on board, and ſtaid all night. One of theſe was a very comely perſon, and had an open and agreeable countenance. They were extremely grateful for the preſents which they received, and diſplayed no ſmall degree of curioſity. They would not eat or drink, but the ſervants devoured the victuals ſet before them with a moſt voracious appetite.

Bare Iſland.

Cape Turnagain.

They gave the name of *Gable End Foreland* to a remarkable head-land, which they paſſed on the 19th. Three canoes appeared here, and one Indian came on board to whom they gave ſmall preſents before he withdrew.

Gable End Foreland.

Several of theſe Indians wore pieces of green-ſtone round their necks which were tranſparent, and reſembled an emerald. Theſe being examined, appeared to be a ſpecies of the Nephritic ſtone. Several pieces of it were procured by Mr. Banks, and it appeared that this furniſhed the iſlanders with their principal

The VARI, *or Maucauco, a native of* MADAGASCAR.

principal ornaments. The form of ſome of their faces was agreeable, and their noſes were rather prominent than flat. Their dialect was not ſo guttural as that of the others, and they ſpoke like the people of the iſland of Otaheite. Having anchored in a bay about two leagues to the northward of the foreland, two chiefs came on board here, and the natives invited them aſhore. The chiefs received preſents of linen, but they did not ſeem to value ſpike-nails ſo much as the inhabitants of the other iſlands. They were dreſſed in jackets, the one ornamented with tufts of red feathers, the other with dog's-ſkin. The natives received Mr. Banks and Dr. Solander courteouſly on ſhore; where they did not appear in numerous bodies. In the courſe of their journey round the bay, freſh water was found. All night they remained on ſhore, and the next day the Doctor and Mr. Banks diſcovered ſeveral plants and many beautiful birds, among which were large pigeons and quails. Many ſtages for the purpoſe of drying fiſh were obſerved near the place where the gentlemen landed, and ſome houſes with fences were ſeen. Some dogs were remarked on the iſland, which had pointed ears, and were very ugly. Sweet potatoes, like thoſe of North America were found here; and the cloth-plant grew ſpontaneous. The lands in the neighbouring valleys were laid out in regular plantations. In the bay there is plenty of crabs, cray-fiſh, and horſe-mackarel, larger than thoſe upon our coaſts. The woods were almoſt impaſſable on account of the number of ſupple jacks (as they are called) which grow there. As to the flat lands, they were planted with cocoas, as the hollow parts were with gourds. The Doctor and Mr. Banks viſited ſeveral of the natives houſes, and they met with a very civil reception. Fiſh conſtituted their principal food at this time; and a root of a ſort of fern ſerved them for bread, which, when roaſted upon a fire, and diveſted of its bark, was ſweet and clammy; in taſte not diſagreeable, but unpleaſant from its number of fibres. Vegetables were, doubtleſs, at other ſeaſons very plentiful. The women painted their faces red, which ſo far from increaſing, diminiſhed the very little beauty they had. The mens faces were not in general painted, but rubbed over with red ocre from head to foot, their apparel not excepted. Though they could not be compared to the inhabitants of Otaheite for cleanlineſs in general, they ſurpaſſed them in this reſpect in ſome particulars. Every dwelling was ſupplied with a privy, and they had dunghills for depoſiting dirt and filth. The women wore a girdle made of the blade of graſs under a petticoat, and to this girdle was tied in front a bunch of fragrant leaves. They ſeemed to hold chaſtity but in little eſtimation, many of the young females reſorting to the watering-place where they bountifully beſtowed every favour that was requeſted. One of the officers on ſhore, meeting with an elderly woman, he accompanied her to her houſe, and having preſented her with ſome cloth and beads, a young girl was ſingled out, and he was given to underſtand he might retire with her. Soon after, an elderly man with two women, came in as viſitors, and with much formality ſaluted all the company, according to the cuſtom of the place, which is by gently joining the tips of their noſes together. The officer, on his return, was furniſhed with a guide, who led him a much better road than that he had came, and whenever they came to a brook or rivulet, the Indian took him upon his back to preſerve him from being wet; ſeveral of the inhabitants were curiouſly tatowed, and one old man in particular, was marked on the breaſt with various figures. There was an axe made of the green-ſtone, already mentioned, which could not be purchaſed, though many things were offered in exchange. At night they danced in a very uncouth manner, making antic geſtures, lolling out their tongues, with other ſtrange grimaces; and in theſe dances old men with grey beards, as well as the young ones, were capital performers. They carried their civility ſo far, as to aſſiſt Mr. Banks and his company with one of their canoes to carry them on board, but the Endeavour's people being unacquainted with the method of ſteering ſuch a veſſel, ſhe was overſet, but no one was drowned; and they reached the ſhip without any farther accident, ſome of the Indians having voluntarily engaged to conduct her. During the ſtay of the gentlemen on ſhore, many of the natives went out in their canoes, and trafficked with the ſhip's company, preferring at firſt the cloth of Otaheite to that of Europe; but it ſoon diminiſhed in its value. Several of the Indians went on board, and teſtified their curioſity and ſurpriſe with regard to the different parts of the ſhip. 1769

On Sunday the 22d, in the evening, they ſailed from this bay, which by the natives is called Tegadoo, and lies in latitude 38° 10' ſouth. The wind being contrary, they put into another bay a little to the ſouth, called by the natives Toltaga in order to complete their wood and water, and extend their correſpondence with the natives: in this bay they came to an anchor in about ſeven fathom water, with a good ſandy bottom. Several canoes appeared with Indians on board, and they trafficked very fairly for glaſs bottles and cloth. The captain, Mr. Banks, and the Doctor went in the afternoon to examine the water, and found it extremely good; here was alſo plenty of wood, and the natives behaved with as much civility as thoſe they had juſt departed from.

On the 24th, Mr. Gore and the marines were ſent on ſhore, to guard the people employed in cutting wood and filling water, Captain Cook, Mr. Banks and the Doctor alſo went on ſhore; the two latter employed themſelves in collecting plants. In their route they found in the vales many houſes uninhabited, the natives reſiding chiefly in ſlight ſheds on the ridges of the hills, which are very ſteep. In a valley between two very high hills they ſaw a curious rock, that formed a large arch, oppoſite to the ſea: this cavity was in length above ſeventy feet, in breadth 30, and near 50 in heighth; it commanded a view of the hill and the bay, which had a very happy effect. Indeed, the whole country about the bay being agreeable beyond deſcription, if properly cultivated would be a moſt fertile ſpot. The hills are covered with beautiful flowering ſhrubs, intermixed with a number of tall and ſtately palms, which perfume the air, and make it moſt agreeably odoriferous. Mr. Banks and the Doctor found the tree that produces the cabbage, which, when boiled, was very good; and ſome other trees that yielded a fine tranſparent gum. Between the hills were fruitful valleys that might have been ſucceſsfully cultivated or turned into paſturage. Various kinds of edible herbage, were met with in great abundance; and there was reaſon to believe there were many trees that produced fruit fit to eat, ſome of which the gentlemen examined. The plant from which the cloth is made, is a kind of Hemerocallis, the leaves of which afford a ſtrong gloſſy flax, equally adapted to cloathing, and making of ropes. There are ſweet potatoes and young plantains near their houſes, which are carefully cultivated. Theſe gentlemen, on their return, met an old man who entertained them with the military exerciſes of the natives, which were performed with the *Patoo-Patoo*, and the lance. The former has already been mentioned, and is uſed as a battle-axe, the latter is 18 or 20 feet in length, made of extreme hard wood, and ſharpened at each end. A ſtake was ſubſtituted for their old warrior's ſuppoſed enemy; he firſt attacked him with his lance, when, having pierced him, the patoo-patoo was uſed to demoliſh his head, and the force with which he ſtruck, would at one blow have ſplit any man's ſcull. This mode of fighting induced the gentlemen to believe no quarter was ever given here in war. The natives in this part are not very numerous, they are tolerably well-ſhaped, but lean and tall, their faces reſemble thoſe of the Europeans, their noſes are aquiline, their eyes dark coloured, their hair is black, which is tied up on the top of their heads, and their beards are of a moderate length, their tatoowing is done very curiouſly in various figures, which makes

1769 their skin resemble carving; it is confined to the principal men, the females and servants using only red paint, with which they daub their faces, that otherwise would not be disagreeable. Their cloth is white, glossy, and very even; it is worn principally by the men, though it is wrought by the women, who, indeed, are condemned to all drudgery and labour.

On the 25th, the armourer's forge was set up on shore for necessary uses. Mr. Banks and Dr. Solander went again in search of plants, Tupia, who was with them, engaged in a conversation with one of the priests, and they seemed to agree in their opinions upon the subject of religion. Tupia, in the course of this conference, enquired whether the report of their eating men was founded in truth, to which the priest answered it was, but that they ate none but declared foes, after they were killed in war. This idea so savage and barbarous, proved, however, that they carried their resentment even beyond death. Captain Cook and Dr. Solander went on the 27th to inspect the bay, when the doctor was not a little surprised to find the natives in the possession of a boy's top, which they knew how to spin by whipping it, and he purchased it out of curiosity. Mr. Banks was during this time employed in attaining the summit of a steep hill, that had previously engaged their attention, and near it he found many inhabited houses. There were two rows of poles about fourteen or fifteen feet high, covered over with sticks, which made an avenue of about five feet in width, extending near a hundred yards down the hill, in an irregular line: the intent of this erection was not discovered. When the gentlemen met at the watering place, the Indians, sang their war song, which was a strange medley of shouting, sighing, and grimace, at which the women assisted. The next day Captain Cook and the other gentlemen went upon the island at the entrance of the bay, and met with a canoe that was 67 feet in length, six in breadth, and four in height; her bottom, which was sharp, consisted of three trunks of trees, and the sides and head were curiously carved.

There was a large unfinished house upon this island, the posts which supported it were ornamented with carvings, that did not appear to be done upon the spot, and as the inhabitants seem to set great value upon works of this kind, future navigators might find their advantage in carrying such articles to trade with. Though the posts of this house were judged to be brought here, the people seemed to have a taste for carving, as their boats, paddles, and tops of walking sticks evince. Their favourite figure is a volute or spiral, which is sometimes single, double, and triple, and is done with great exactness, though the only instruments the gentlemen saw were an axe made of stone, and a chissel. Their taste, however, was extremely whimsical and extravagant, scarcely ever imitating nature. Their huts are built under trees, their form is an oblong square: the door low on the side, and the windows are at the ends; reeds covered with thatch compose the walls, the beams of the eaves, which come to the ground are covered with thatch; most of the houses the gentlemen saw had been deserted, through fear of the English, upon their landing. There are many beautiful parrots, and great numbers of birds of different kinds, particularly one whose note resembles the European black-bird; but here is no ground fowl or poultry, nor were there any quadrupedes, except rats and dogs, and these were not numerous. The dogs are considered as delicate food, and their skins serve for ornaments to their apparel. There is a great variety of fish in the bay, shell and cray fish are very plentiful, some of the latter weigh near a dozen pounds.

Sunday, October 19, they set sail from this bay, which was called by the natives *Tolaga*. It is situate in latitude 38° 22′ south, four leagues to the north of Gable-End Foreland; there are two high rocks at the entrance of the bay, which form a cove very good for procuring wood and water. There is a high rocky island off the north point of the bay, which affords good anchorage, having a fine sandy bottom, and from seven to thirteen fathom water, and is likewise sheltered from all but the north-east wind.

Captain Cook obtained nothing here in trade but some sweet potatoes, and a little fish. This is a very hilly country, though it presents the eye with an agreeable verdure, various woods and many small plantations. Mr. Banks found a great number of trees in the woods, quite unknown to Europeans, the fire wood resembled the maple-tree, and produced a gum of whitish colour; other trees yielded a gum of a deep yellow green. The only roots they met with were yams and sweet potatoes, though the soil appears very proper for producing every species of vegetables.

Sailing to the northward, they fell in with a small island about a mile distant from the north-east point of the main, and this being the most eastern part of it, the captain named it *East Cape*, and the island *East Island*, it was but small, and appeared barren. The cape is in latitude, 37° 42′ 30″ south. There are many small bays from Tolaga Bay to East Cape. When the Endeavour had doubled the cape, many villages presented themselves to view, and the adjacent land appeared cultivated. In the evening of the 30th, Lieutenant Hicks discovered a bay to which his name was given. Next morning, about nine, several canoes came off from shore with a number of armed men, who appeared to have hostile intentions. Before these had reached the ship, another canoe, larger than any that had yet been seen, full of armed Indians, came off, and made towards the Endeavour with great expedition. The captain now judging it expedient to prevent, if possible, their attacking him, ordered a gun to be fired over their heads. This not producing the desired effect, another gun was fired with ball, which threw them into such consternation that they immediately returned much faster than they came. This precipitate retreat, induced the captain to give the cape, off which it happened, the name of *Cape Runaway*; it lies in latitude 37° 32′ south, and longitude 181° 48′ west. East-Island.

At day-break the next morning between 40 and 50 canoes were seen, several of which came off as before, threatening to attack the English. There was one of their chiefs who flourished his pike, and made several harangues, seeming to bid defiance to those on board the vessel. At last, after repeated invitations, they came close along-side; but instead of shewing a disposition to trade, the haranguing chief uttered a sentence, and took up a stone which he threw against the ship, and immediately after they seized their arms. They were informed by Tupia, of the dreadful consequences of commencing hostilities; but this admonition they seemed little to regard. A piece of cloth, however, happening to attract their eyes, they began to be more mild and reasonable. A quantity of cray fish, muscles, and conger eels was now purchased by the gentlemen. No fraud was attempted by this company of Indians, but some others that came after them, took goods from the vessel without making proper returns. As one of them that had rendered himself remarkable for these practices, and seemed proud of his skill in them, was putting off with his canoe, a musquet was fired over his head, which circumstance produced good order for the present. Yet when these savages began to traffic with the sailors, they renewed their frauds; and one of them was bold enough to seize some linen that was hung to dry, and run away with it. In order to induce him to return, a musquet was first fired over his head, but this not answering the end, he was shot in the back with small shot, yet he still persevered in his design. This being perceived by his countrymen, they dropped a-stern, and set up the song of defiance. In consequence of their behaviour, though they made no preparations to attack the vessel, the captain gave orders to fire a four pounder, which passed over them; but its effect on the water terrified them so much, that they retreated with precipitation to the shore.

A high

A high island was seen to the westward in the afternoon, and other rocks and islands appearing in the same quarter, the ship not being able to weather them before night-fall, bore up between them and the main land. In the evening a double canoe, built after the same fashion as those of Otaheite, came up, when Tupia entered into a friendly conversation with them, and was told that the island, close to which the Endeavour lay, was called *Mowtohera*; it was but a few miles from the main land, pretty high, but of no great extent. When it was dark, these Indians began their usual salute, poured a volley of stones into the ship, and then retreated. A high round mountain was seen S. W. by W. of Mowtohera, which was called Mount Edgecumbe by Captain Cook. Many of the Indian canoes appeared the next morning, and one which appeared to be the same that had given the salute the preceeding night, came up. They once more entered into a peaceable conversation with Tupia, which lasted about an hour, but afterwards discharged another volley of stones at the Endeavour; in consequence of which insult, a musquet was fired, and they took to their paddles with precipitation.

Mowtohera.

The ship sailed in the afternoon of the same day, between a low flat island and the main. The villages on the latter were more extensive than any that they had yet discovered. They were upon the high land next the sea, and were surrounded by a ditch and a bank with rails on the top of it. Some of the inclosures here resembled a rude sort of fortification, and the whole had the appearance of a number of places calculated for defence. The name of *The Court of Aldermen* was given, on the 3d, to several small islands that lay in the neighbourhood, being distant about twelve miles from the main, between which were many other high islands which were mostly barren, as indeed the main land here appeared to be; and the whole seemed but thinly inhabited. Teratu was the name of the chief that governed the district from Cape Turn-again to this coast.

The Court of Aldermen.

Three canoes built differently from those abovementioned came along-side the English vessel on Friday. They were formed of the trunks of whole trees, rendered hollow by burning, which were not ornamented or carved at all. The people on board were of a darker complexion than the others; they were hostile, and their manner of defiance was much the same as that of the other Indians already described.

Captain Cook sailed afterwards towards an inlet, that had been discovered, and anchoring in seven fathoms water, the ship was surrounded soon after by a number of canoes, the crews of which did not seem disposed to commit any act of hostility. A bird being shot by one of the English, the Indians, without shewing any surprise brought it on board, and were rewarded with a piece of cloth for their pains. It might be imagined that this circumstance would have tended to conciliate the affections of those people; but it happened otherwise: as soon as it was dark, they sang one of their songs of defiance, and endeavoured to carry off the buoy of the anchor. Though some musquets were fired at them upon this occasion, they seemed rather to be irritated than frightened, and threatened to return in greater numbers, the next morning. Instead of this, they came back about eleven on the Sunday night, but retired when they found that the ship's crew were upon their guard.

A great number of canoes came off, on the 4th in the morning, on board of which were near 200 men, armed with lances, spears, and stones, who seemed determined to attack the ship and would have boarded her, had they known on what quarter they could best make their attack.

While the crew were watching their motions in the rain, Tupia took all possible pains to dissuade the Indians from attempting any thing against the English; but his arguments had not so good an effect as those that came from the mouths of the musquets, which frightened them effectually, and induced them to begin trading again; yet they could not leave off their fraudulent practices. They sold two of their weapons; but a third, for which they had received cloth, they would not deliver, and only laughed at those who demanded an equivalent. The offender was wounded; but his countrymen did not seem disposed to take notice of him; and another canoe was hit with shot, the natives behaving in the same manner. The people paddled away whilst a round shot was fired over them. 1769

Searching for an anchoring place, the captain saw a fortified village on a high point near the head of the bay, and came to an anchor when he had found a village fortified like those already noticed. Some Indians came off who behaved better than those that had been on board before. An old man in particular, whose name was Tojava, came with another Indian to whom the captain presented some nails. Being informed that the English had no ill designs, this man said they were often visited by freebooters, from the north, who stripped them of all they could lay their hands on, and often made captives of their children and wives; and that being ignorant who the English were upon their first arrival, the natives had taken the alarm upon the ship's appearing off the coast, but were now satisfied of their good intent. He added, That to secure themselves from these plunderers, their houses were built contiguous to the tops of rocks, where they were more able to defend themselves. Probably their poverty and misery may be ascribed to the ravages of this banditti, who often stript them of every necessary of life. Whilst they were fishing for mullets in the bay, the Indians who came upon the banks testified their friendship by every possible means, and gave them an invitation to come on shore. The assurances of friendship, which they had received from the gentlemen on board, seemed to have a proper influence upon the natives, who were now very tractable and submissive, and behaved with much civility to the people in the long-boat, which was again dispatched into the bay to fish, but with little success: the Indians, however, brought great quantities of fish dressed and dried; and though they were indifferent, they were purchased, that trade might not be discouraged. In a word, the natives treated the English with great hospitality, supplied them with wood and good water, and the ship being very foul-keeled, scrubbed her bottom in the bay.

On the 8th of November they were visited by several canoes, in one of which was Tojava, who perceiving two strange canoes paddling from the opposite shore, suddenly turned about and acquainted the captain that he was under apprehensions the people in them were freebooters, but soon found his mistake, and returned to the ship. The Indians supplied the ship's crew with as much excellent fish, resembling mackarel, as was sufficient for all their dinners, for which they gave them some pieces of cloth. A great variety of plants was this day collected by Mr. Banks and Dr. Solander, who had never observed any of the kind before. These gentlemen remained on shore till near dark, when they observed the manners of the natives disposing of themselves during the night. They lay under some bushes; the men nearest the sea in a semicircular form, and the women and children most distant from it: their arms were placed against trees, very near them to defend themselves in case of a surprise from the freebooters. They had no king whose sovereignty they acknowledged, which was a circumstance unparallelled on any other parts of the coast.

Early in the morning of the 19th several canoes brought a prodigious quantity of mackarel, one sort of which was no way different from the mackarel caught on our coast. These canoes were succeeded by many others, equally loaded with the same sort of fish; and the cargoes purchased were so great, that when salted, they might be considered as a month's provision for the whole ship's company. This being a very clear day, the astronomer (Mr. Green) and the other gentlemen landed to observe the transit of Mercury, and whilst the observation was making, a large canoe, with various

1769 various commodities on board, came along-side the ship; and Mr. Gore, the officer who had then the command, being desirous of encouraging them to traffic, produced a piece of Otaheitean cloth, of more value than any they had yet seen, which was immediately seized by one of the Indians, who obstinately refused either to return it, or give any thing in exchange: he paid dearly however for his temerity, being shot dead on the spot. The death of this young Indian alarmed all the rest; they fled with great precipitancy, and, for the present, could not be induced to renew their traffick with the English. But when the Indians on shore had heard the particulars related by Tojava, who greatly condemned the conduct of the deceased, they seemed to think that he had merited his fate. His name proved to be Otirreeonooe. This transaction happened, as has been mentioned, whilst the observation was making of the transit of Mercury, when the weather was so favourable, that the whole transit was viewed, without a cloud intervening. Mr. Green made the observation of ingress, whilst Captain Cook was engaged in ascertaining the time by taking the sun's altitude. The transit commenced seven hours, 20 min. 58 sec. By Mr. Green's observation the internal contact was at 12 hours, eight min. 57 sec. the external at 12 hours nine min. 54 sec. the latitude 39 deg. 48 min. five sec. In consequence of this observation having been made here, this bay was called *Mercury Bay*.

Mercury Bay.

On the 10th, Mr. Banks, Dr. Solander, and the captain went in boats to inspect a large river that runs into the bay. They found it broader some miles within than at the mouth, and intersected into a number of streams, by several small islands, which were covered with trees. On the east side of the river the gentlemen shot some shags, which proved very good eating. The shore abounded with fish of various kinds, such as cockles, clams, and oysters; and here were also ducks, shags, and curlieus, with other wild fowl in great plenty.—At the mouth of the river there was good anchorage in five fathom water. The gentlemen were received with great hospitality by the inhabitants of a little village on the east side of the river. There are there the remains of a fort called Eppah, on a peninsula that projects into the river, and it was calculated for defending a small number against a greater force. From the remains, it nevertheless seemed to have been taken and partly destroyed.

The Indians sup before sun-set, when they eat fish and birds baked or roasted; they roast them upon a stick, stuck in the ground near the fire, and bake them in the manner the dog was baked, which the gentlemen eat at St. George's Island. A female mourner was present at one of their suppers; she was seated upon the ground, and wept incessantly, at the same time repeating some sentences in a doleful manner, but which Tupia could not explain; at the termination of each period she cut herself with a shell upon her breast, her hands, or her face; notwithstanding this bloody spectacle greatly affected the gentlemen present, yet all the Indians who sat by her, except one, were quite unmoved. The gentlemen saw some, who from the depth of their scars must, upon these occasions, have wounded themselves more violently.

On November the 11th great plenty of oysters were procured from a bed which had been discovered, and they proved exceedingly good. Next day the ship was visited by two canoes, with unknown Indians; after some invitation they came on board, and they all trafficked without any fraud.

Two fortified villages being deserted, the Captain, with Mr. Banks, and Dr. Solander, went to examine them. The smallest was romantically situated upon a rock, which was arched; this village did not consist of above five or six houses, fenced round. There was but one path, which was very narrow, that conducted to it. The gentlemen were invited by the inhabitants to pay them a visit, but not having time to spare, took another route, after having made presents to the females. A body of men women and children now approached the gentlemen; these proved to be the inhabitants of another town, which they proposed visiting. They gave many testimonies of their friendly dispositions, among others they uttered the word Heromai, which according to Tupia's interpretation, implied peace, and appeared much satisfied, when informed the gentlemen intended visiting their habitations. Their town was named Wharnetouwa. It is seated on a point of land over the sea, on the north side of the bay; it was paled round, and defended by a double ditch. Within the ditch a stage is erected for defending the place in case of an attack; near this stage, quantities of darts and stones are deposited that they may always be in readiness to repel the assailants. There is another stage to command the path that leads to the town; and there were some outworks. The place seemed calculated to hold out a considerable time against an enemy armed with no other weapons than those of the Indians. It appeared however deficient in water for holding out a siege. Instead of bread, they ate fern root, which was here in great plenty, with dried fish. Very little of the land was cultivated, and sweet potatoes and yams were the only vegetables to be found. There are two rocks near the fort of this fortification, both separated from the main land; they are very small, nevertheless they are not without dwelling-houses and little fortifications. In their engagements they throw stones with their hands, being destitute of a sling, and those and lances are their only missible weapons; they have, besides the patoo-patoo, already described, a staff about five feet in length, and another shorter. The English sailed from this bay, after having taken possession of it in the name of the king of Great Britain, on the 15th of November. Tojava, who visited them in his canoe just before their departure, said he should prepare to retire to his fort as soon as the English were gone, as the relations of Otirreonooe had threatened to take his life, as a forfeit for that of the deceased. Tojava being judged partial in this affair to the English.

A number of islands of different sizes appeared towards the north-west, which were named *Mercury Islands*, Mercury Bay lies in latitude 36° 47′ south; longitude 184° 24′ west, and has a small entrance at its mouth. On account of the number of oysters found in the river, the Captain gave it the name of *Oyster River*: *Mangrove River* (which the captain so called from the great number of those trees that grew near it) is the most secure place for shipping, being at the head of the bay. The north-west side of this bay and river appeared much more fertile than the east side. The inhabitants, though numerous, have no plantations. Their canoes are very indifferently constructed, and are not ornamented at all. They lie under continual apprehensions of Terratu, being considered by him as rebels. Shore iron sand is to be found in plenty on this coast, which proves that there are mines of metal up the country, it being brought down from thence by a rivulet.

Mercury Islands.

Oyster River.

Mangrove River.

In the morning of the 18th, the Endeavour steered between the main, and an island which seemed very fertile, and as extensive as Ulietea. Several canoes filled with Indians, came along-side here, and the Indians sang their war song, but the Endeavour's people paying them no attention, they threw a volley of stones, and then paddled away; however they presently returned their insults. Tupia spoke to them, making use of his old argument, that inevitable destruction would ensue if they persisted; they answered by brandishing their weapons, intimating, that if the English durst come on shore, they would destroy them all. Tupia still continued in expostulating with them, but to no purpose; and they soon gave another volley of stones; but upon a musquet being fired at one of their boats, they made a precipitate retreat. Captain Cook cast anchor in 23 fathom water in the evening, and early the next morning he sailed up an inlet. Soon after two canoes came off, and

and some of the Indians came on board. They claimed an acquaintance with Tojava, and knew Tupia's name; and after they had received some presents, they retired peaceably. The Endeavour was now in the bay called by the natives Oraiaouragee, and Captain Cook, with Mr. Banks and Dr. Solander, and others, went in boats to the bottom of the bay to examine it, and they did not return till next morning. They had been up a fresh-water river in three fathoms water, which would make a good harbour, and had met with an Indian town, and a hippah, or place of refuge, the inhabitants of which invited them to land, and gave them a friendly reception. At the entrance of a wood they met with a tree 98 feet high from the ground to the first branch, quite strait, and 19 feet in circumference; and they found still larger trees of the same kind as they advanced into the wood. The captain called this river *Thames*, as it resembled our river of that name. They also found several young cabbage-trees, and a new species of the palm-nut. They weighed anchor the same afternoon, sailing down the river with the tide, the wind blowing fresh from north-north-west. The next morning the flood obliged them to cast anchor again; and the captain, with Dr. Solander, went on shore to the westward, but made no observation worth relating. The ship at their departure from it, was surrounded with canoes, which induced Mr. Banks to remain on board, that he might trade with the Indians. The chief object of these people was paper, for which they exchanged their arms and cloaths, and took no unfair advantages. Though these traders were in general honest in their dealings, there was one amongst them who took a fancy to a half-minute glass, but was detected in secreting it, and he was punished with a cat of nine tails. The other Indians endeavoured to save him, but being opposed, they got their arms from the canoes, and some of the people in them attempted to get on board. Mr. Banks and Tupia now coming upon deck, the Indians applied to the latter, but he having no influence upon Mr. Hicks, the commanding officer, informed them of the nature of the offender's intended punishment, which pacified them, as they supposed that death would have been the consequence of his crime. However he received twelve lashes, and also a beating from an old man who was conceived to be his father, or some near relation. After this, the canoes went off, and the Indians said they should be afraid to return. Tupia, notwithstanding, prevailed on them to come back; but they seemed to have lost much of that confidence which they had before reposed in Captain Cook and his people. The wind continuing still unfavourable, the vessel was forced to go down the river with the tide on the 23d, and passed a point called *Point Rodney*, to the north-west. During a course of near 30 miles, as they could not approach the land, they had but a distant view of the main. Under the name of the River Thames, the captain comprehended the whole bay; and he gave the name of *Cape Colville* to the promontery at the north-easternmost extremity, in honour of Lord Colville. This cape is to be distinguished by a high rock, and lies in 36° 26′ of south latitude, longitude 194° 27′ west. The river runs south by east from the southern point of the cape. In some parts, it is three leagues over, for about fourteen leagues, after which it becomes narrower. Abundance of fish were supposed to lie in this river, as there appeared many instruments proper for carrying on a fishery.

Thames River.

Point Rodney.

Cape Colville.

In some places the water was 26 fathoms deep, and the depth diminished gradually, and the anchorage is good in all parts of the bay. Captain Cook gave the name of *Barrier Islands* to some isles which shelter it from the sea. The country seemed to be thinly inhabited. As to the natives they were a short and active people. Their bodies were painted all over with a red colour. Their canoes were well constructed, and ornamented with carved work.

Barrier Islands.

Captain Cook still continued steering along shore between the islands and the main, and anchored on the 12th in 14 fathom water, in an open bay, where a number of fish of the bream kind being taken, *Bream Bay* was the name given to it by our voyagers. It lies in 35° 46′ of south latitude, being about 17 leagues north-west of Cape Colville. A number of rocks were seen off this bay which they called the Hen and Chickens. The land extending for about 30 miles between Point Rodney and this place is low and woody. The English saw none of the natives, but concluded from the fires which they perceived at night, that this place was not uninhabited. Early in the morning the ship sailed out of the bay, keeping near the shore to the northward. Soon after they discovered some islands about three leagues to the north-north-east, where there were cultivated lands and a few towns that appeared to be fortified. To these they gave the appellation of *The Poor Knights*. A number of Indians approached the vessel towards night, and two of their chiefs coming on board, gave the English to understand that they were not ignorant of their arrival in that part of the world. Other Indians came, in order to trade after they were gone; but these beginning to pilfer, were fired upon, and retreated with precipitation.—

Bream Bay.

The Poor Knights.

The English continued sailing slowly along to the northward; and on the 26th, some more of the Indians in two canoes, came on board, and carried on a fair traffic. They were followed by two larger canoes, the people on board of which, after having held a conference with them came along-side of the vessel. These last were adorned with carving. The people who seemed to be of the higher order were armed with various weapons. Their patoo-patoos, which were made of stone and whale-bone, were held in high estimation, and they were ornamented with dog's hair. The complexion of these people was darker than that of those to the south, and their faces were stained with amoco. They were given to pilfering, of which one of them gave an instance, pretending to barter a weapon for a piece of cloth, which latter he ran away with, without fulfilling his agreement, nor was he at all disposed to do, till a musquet being fired brought him back again.

The vessel passing a remarkable high point of land, it was called *Cape Brett*, in honour of the baronet of that name. There is a curious rocky island to the north-east by north, which is arched, and at a distance, has a pleasing effect. This is called Motuyogo by the natives, and lies in 35° 10′ 30″ south, and longitude 185° 23′ west. It forms a bay to the west, which contains many small islands, and Captain Cook named the point at the north-west entrance *Point Pococke*. There are many villages on the main as well as on the islands, which appeared well inhabited, and several canoes filled with Indians, made to the ship; and after coming along-side to trade, shewed the same desire of cheating as the others. One of the midshipmen was so nettled at being imposed upon, that he had recourse to a whimsical expedient by way of recovery: he took a fishing-line, and threw the lead with so much dexterity, that the hook caught the Indian who had imposed upon him by the buttocks, when the line breaking, the hook remained in his posteriors. These Indians were strong and well-proportioned; their hair was black, and tied up in a bunch stuck with feathers; the chiefs among them had garments made of fine cloth, ornamented with dog-skin; and they were tataowed like those who had last appeared. On the 27th the Endeavour was among a number of small islands, from which several canoes came off, but the Indians, from their frantic gestures, seemed disordered in their minds; they threw their fish into the ship by handfuls, without demanding any thing by way of barter. Some other canoes also came up, who saluted the ship with stones. One of the Indians, who was particularly active, threw a stick at one of the Endeavour's men. It was then judged time to bring them to reason, and a musquet with small shot was fired at him, when he fell in the canoe. A general terror was now spread among them, and they all

Cape Brett.

Point Pococke.

1769 all made a very precipitate retreat. Among the fish obtained from these canoes were *cavalles* in great plenty, and for this reason the captain called these islands by the same name. For several days the wind was so very unfavourable, that the vessel rather lost than gained ground. On the 29th, having weathered Cape Brett, they bore away to leeward, and got into a large bay, where they anchored on the south-west side of several islands, and suddenly came into four fathoms and a half water. Upon sounding, they found they had got upon a bank, and accordingly weighed and dropped over it, and anchored again in ten fathoms and a half, after which they were surrounded by thirty-three large canoes, containing near three hundred Indians all armed. Some of them were admitted on board, and Captain Cook gave a piece of broad cloth to one of the chiefs, and some small presents to the other. They traded peaceably for some time, being terrified at the fire-arms, with the effects of which they were not unacquainted; but whilst the captain was at dinner, on a signal given by one of the chiefs, all the Indians quitted the ship, and attempted to tow away the buoy; a musquet was now fired over them, but it produced no effect; small shot was then fired at them, but it did not reach them. A musquet loaded with ball, was therefore ordered to be fired, and Otegoowgoow (son of one of the chiefs) was wounded in the thigh by it, which induced them immediately to throw the buoy overboard. To complete their confusion, a round shot was fired, which reached the shore, and as soon as they landed, they ran in search of it. If these Indians had been under any kind of military discipline, they might have proved a much more formidable enemy; but acting thus, without any plan or regulation, they only exposed themselves to the annoyance of the fire-arms, whilst they could not possibly succeed in any of their designs. The Captain, Mr. Banks, and Dr. Solander, landed upon the island, and the Indians in the canoes soon after came on shore. The gentlemen were in a small cove, and they were presently surrounded by near 400 armed Indians; but the captain not suspecting any hostile design on the part of the natives, remained peaceably disposed. The gentlemen, marching towards them, drew a line, intimating that they were not to pass it: they did not infringe upon this boundary for some time; but at length, they sang the song of defiance, and began to dance, whilst a party attempted to draw the Endeavour's boat on shore, these signals for an attack being immediately followed by the Indians breaking in upon the line; the gentlemen judged it time to defend themselves, and accordingly the captain fired his musquet, loaded with small shot, which was seconded by Mr. Banks's discharging his piece, and two of the men followed his example. This threw the Indians into confusion, and they retreated, but were rallied again by one of the chiefs, who shouted and waved his patoo-patoo, The Doctor now pointed his musquet at this hero, and hit him: this stopped his career, and he took to flight with the other Indians. They retired to an eminence in a collected body, and seemed dubious whether they should return to the charge. They were now at too great a distance for a ball to reach them, but these operations being observed from the ship, she brought her broadside to bear, and by firing over them, soon dispersed them. The Indians had in their skirmish two of their people wounded, but none killed: peace being thus restored, the gentlemen began to gather celery and other herbs, but suspecting that some of the natives were lurking about with evil designs, they repaired to a cave, which was at a small distance. Here they found the chief, who had that day received a present from the Captain; he came forth with his wife and brother, and solicited their clemency. It appeared, that one of the wounded Indians was a brother of this chief, who was under great anxiety lest the wound should prove mortal, but his grief was in a great degree alleviated, when he was made acquainted with the different effects of small shot and ball; he was at the same time assured, that upon any farther hostilities being committed, ball would be used. This interview terminated very cordially, after some trifling presents were made to the chief and his companions. "The prudence of the gentlemen (says our author) cannot be much commended: for had these 400 Indians boldly rushed in upon them at once with their weapons, the musquetry could have done very little execution; but supposing twenty or thirty of the Indians had been wounded, as it does not appear their pieces were loaded with ball, but only small shot, there would have remained a sufficient number to have massacred them, as it appears they do not give any quarter, and none could have been expected upon this occasion. It is true, when the ship brought her broadside to bear, she might have made great havock amongst the Indians; but this would have been too late to save the party on shore.—Being in their boats, the English rowed to another part of the same island, when landing and gaining an eminence, they had a very agreeable and romantic view of a great number of small islands, well inhabited and cultivated."

The inhabitants of an adjacent town approached unarmed, and testified great humility and submission. Some of the party on shore who had been very violent for having the Indians punished for their fraudulent conduct, were now guilty of trespasses equally reprehensible, having forced into some of the plantations, and dug up potatoes. The captain, upon this occasion shewed strict justice in punishing each of the offenders with twelve lashes: one of them being very refractory upon this occasion, and complaining of the hardship, thinking an Englishman had a right to plunder an Indian with impunity, received six additional lashes for his reward.

As it was quite a dead calm on the 30th day of this month, two boats were sent to sound the harbour; when many canoes came up and traded with great probity; the gentlemen went again on shore and met with a very civil reception from the natives; and this friendly intercourse continued all the time they remained in the bay, which was several days. Being upon a visit to the old chief, he shewed them the instruments used in tataowing, which were very like those employed at Otaheite upon the like occasion. They saw the man who had been wounded by the ball, when the attempt was made to carry off the ship's buoy; and though it had gone through the fleshy part of his arm, it did not seem to give him the least pain or uneasiness. On Tuesday the 5th, in the morning, they weighed anchor, but were soon becalmed, and a strong current setting towards the shore, they were driven in with such rapidity, that they expected every moment to be run upon the breakers, which appeared above water not more than a cable's length distance, and they were so near the land, that Tupia, who was totally ignorant of the danger, held a conversation with the Indians, who were standing on the beach. They were happily relieved however, from this alarming situation by a fresh breeze suddenly springing up from the shore. The bay which they had left was called *The Bay of Islands*, on account of the numerous islands it contains; they caught but few fish while they lay there, but procured great plenty from the natives, who were extremely expert in fishing, and displayed great ingenuity in the form of their nets, which were made of a kind of grass; they were two or three hundred fathoms in length, and remarkably strong, and they have them in such plenty, that it is scarcely possible to go a hundred yards without meeting with numbers lying in heaps. These people did not appear to be under the government of any particular chief or sovereign, and they seemed to live in a perfect state of friendship, notwithstanding their villages were fortified. According to their observations upon the tides, the flood comes from the south, and there is a current from the west. December 7, several ca-

Bay of Islands.

noes

noes put off and followed the Endeavour, but a breeze arising, Captain Cook did not wait for them. On the 8th they tacked, and ſtood in for the ſhore, and on the 9th they were about ſeven leagues to the weſtward of the Cavalles, and ſoon after came to a deep
Doubtleſs Bay bay, which the captain named *Doubtleſs Bay*. The wind prevented their putting in here, and being ſoon after becalmed, they were viſited by ſeveral canoes from ſhore, with whom they trafficked. From theſe Indians they learned, that they were about two days ſail from *Moore Whennua*, where the land changed its ſhape, and inſtead of extending to the weſtward, turned to the ſouth; and that to the north-north-weſt there was an extenſive country, named *Ulimaroah*, where the inhabitants lived upon hogs, which they called *Booah*, which was the ſame name given them by the inhabitants of the iſlands in the South Seas. They ſaw upon the coaſt ſeveral plantations of the Eaowte, or cloth trees, and ſome of the Koomarra. They beat to windward four days, and made but little way.

On the 10th, the land appeared low and barren, but was not deſtitute of inhabitants; the next morning they ſtood in with the land, which forms a peninſula, and which the Captain named *Knuckle Point*.
Knuckle Point
Another bay, that lies contiguous, Captain Cook called *Sandy Bay*, in the middle of it is a high mountain, which was named *Mount Camel*, on account of its reſembling that animal; ſeveral canoes put off, but could not reach the ſhip, which now tacked and ſtood to the northward, till the afternoon of the 12th, when ſhe ſtood to the north-eaſt. Towards night it began to rain and blow, and in the morning it was ſo tempeſtuous as to ſplit the main-top ſail, and the fore-mizen-top ſails. Early in the morning of the 14th they ſaw land to the ſouthward, and on the 15th they tacked and ſtood to the weſtward; next day they diſcovered land from the maſt-head to the ſouth-ſouth-weſt, and on the 16th came off the northern extremity of New Zealand, which the captain called *North Cape*. It lies in lat. 34° 22′ ſouth, and long. 186° 55′ weſt, and forms the north point of Sandy Bay. Their ſituation varied but little till the 24th, when they diſcovered land, which they judged to be the iſlands of *The Three Kings*, though they did not reſemble the deſcription of them in Dalrymple's account. The chief iſland is in lat. 34° 12′ ſouth, and long. 187° 48′ weſt, between 14 and 15 leagues from North Cape. Mr. Banks went out in the ſmall boat, and caught ſome birds that greatly reſembled geeſe, and they were very good eating. On the 27th it blew very hard from the eaſt all day, accompanied with heavy ſhowers of rain, and they brought the ſhip under a reefed main-ſail. On the 30th they ſaw land, bearing north-eaſt, which was thought to be Cape Maria Van Diemen, but the ſea being very boiſterous, they did not venture to approach it, but tacked about and ſtood to the north-weſt.
Sandy Bay.
Mount Camel.
North Cape.

January 1ſt, 1770, they tacked and ſtood to the eaſtward, and on the 3d they ſaw land again; it was high and flat, and tended away to the ſouth-eaſt, beyond the reach of the naked eye. It is remarkable, that the Endeavour was three weeks in making ten leagues to the weſtward, and that ſhe met with a violent gale of wind in lat. 35° ſouth, at Midſummer. On the morning of the 4th they ſtood along the ſhore, the coaſt appeared ſandy and barren, dreary and inhoſpitable. Steering northward on the 6th they ſaw land again, which they imagined to be Cape Maria: on the 7th they had light breezes, and were ſometimes becalmed, when they ſaw a ſun-fiſh, ſhort and thick in figure, with two large fins, but ſcarcely any tail, reſembling a ſhark in colour and ſize. They continued ſteering eaſt till the 9th, when they perceived land, and were ſoon after abreaſt off a point,
Woody Head. which Captain Cook named *Woody Head*. From the ſouth-weſt there is a ſmall iſland, which the captain
Gannet Iſland. called *Gannet Iſland*. Another point remarkably high to the eaſt-north-eaſt, the captain named *Albetroſs*
Albetroſs Point. *Point*, on the north-ſide of which a bay is formed that promiſes good anchorage. At about two leagues diſtance from Albetroſs Point, to the north-eaſt they diſcovered a remarkable high mountain, equal in height to that of Teneriffe, the ſummit of which was covered with ſnow, and it was named Mount Egmont. It is in lat. 39° 16′ ſouth, and long. 185° 15′ weſt, and the country round it is pleaſant, preſenting an agreeable verdure, interſected with woods. The coaſt forms an extenſive cape, which the captain likewiſe called *Cape Egmont*, in honour of the noble- Cape Egmont.
man of that name. It is about 27 leagues to the ſouth-ſouth-weſt point of Albetroſs Point, having two ſmall iſlands to the north, near a very high point of a conic figure. This day ſome very heavy ſhowers of rain fell, accompanied with thunder and lightening. 1770

"The captain (ſays my author) propoſed careening the ſhip here, and taking in wood and water, and accordingly, on the 15th ſteered for an inlet, when it being almoſt a calm, the ſhip was carried very near the ſhore, but got clear with the aſſiſtance of the boats. Whilſt this was doing, a ſea-lion made its appearance; a very curious creature, and anſwering the deſcription given of it in Lord Anſon's voyage. The captain ſent the pinnace to examine a ſmall cove that appeared, but ſoon after recalled her, on ſeeing the natives launch and arm their canoes. The Endeavour anchored in a commodious part of the bay. In ſailing towards this ſpot an Indian town was deſcried; when the inhabitants waved their hands, ſeemingly to invite the Endeavour's people to land. In paſſing the point of the bay, they obſerved an armed centinel on duty, who was twice relieved. Four canoes came from the ſhore to viſit the ſhip, but none of the Indians would venture on board, except an old man, who ſeemed of elevated rank; his countrymen took great pains to prevent his coming on board, but they could not divert him from his purpoſe, and he was received with the utmoſt civility and hoſpitality. Tupia and the old man joined noſes, according to the cuſtom of the country, and after receiving ſeveral preſents, he returned to his aſſociates, when they began to dance and laugh, and ſoon after retired. The captain and the other gentlemen now went on ſhore, where they met with plenty of wood and water, and were very ſucceſsful in fiſhing, catching ſome hundred weight in a ſhort time.

"On the 16th the Endeavour's people were engaged in careening her, when three canoes came off with a great number of Indians, and brought ſeveral of their women with them. This circumſtance was judged a favourable preſage of their peaceable diſpoſition, but they ſoon gave proofs of the contrary, by attempting to ſtop the long-boat that was ſent on ſhore for water, when Captain Cook had recourſe to the old expedient of firing ſome ſhot, which intimidated them for the preſent; but they ſoon gave freſh proofs of their inſidious deſigns. One of them ſnatched ſome paper from the Endeavour's people, who were trading with them, and brandiſhing his patoo-patoo, put himſelf in a threatening poſture, upon which it was judged expedient to fire ſome ſhot at him, which wounded him in the knee. This ſtep put an end to the correſpondence with regard to trade; but Tupia ſtill continued converſing with them, and making enquiries concerning the curioſities of New Zealand; he alſo aſked them, if they had ever before ſeen a ſhip as large as the Endeavour, to which they replied, they had not, nor ever heard ſuch a veſſel had been upon the coaſt: though Taſman certainly touched here, which was only fifteen miles ſouth of Murderer's Bay. There is great plenty of fiſh in all the coves of this bay, among others here are cuttle-fiſh, large breams, ſmall grey breams, ſmall and large baracootas, flying gurnard, horſe mackrel, dog-fiſh, ſoles, dabs, mullets, drums, ſcorpenas, or rock-fiſh, cole-fiſh, ſhags, chimeras, &c. The inhabitants catch their fiſh as follows: their net is cylindrical; extended by ſeveral hoops at the bottom, and contracted at the top; the fiſh going in to feed upon what is put into the net, are caught in great abundance; there are alſo birds of various kinds, and in great numbers, particularly parrots, wood-

1770 pigeons, water hens, hawks, and many different ſinging birds. An herb, a ſpecies of *Philadelphus*, was uſed here inſtead of tea, and a plant called Teegoomme, reſembling rug-cloaks, ſerved the natives for garments. The environs of the cove where the Endeavour lay is covered entirely with wood, and the ſupple jacks are ſo numerous, that it is with difficulty that paſſengers can purſue their way; here is a numerous ſand fly, that is very diſagreeable. The tops of many hills were covered with fern. The air of the country is very moiſt, and has ſome qualities that promote putrefaction, as birds that had been ſhot but a few hours were found with maggots in them. The women who accompanied the men in the canoes, wore a head-dreſs, which the gentlemen had no where met with before, it was compoſed of black feathers, tied in a bunch on the top of the head, which greatly increaſed its height. The manner of their diſpoſing of their dead is very different to what is practiſed in their ſouthern iſlands, they tie a large ſtone to the body, and throw it into the ſea. The gentlemen ſaw the body of a woman which had been diſpoſed of this way, but which, by ſome accident had diſengaged itſelf from the ſtone, and was floating upon the water. The Captain, Mr. Banks, and the Doctor viſited another cove, about two miles from the ſhip. There was a family of Indians who were greatly alarmed at the approach of theſe gentlemen, all running away except one; but upon Tupia's converſing with him, the others returned. They found, by the proviſions of this family, that they were canibals, here being ſeveral human bones that had been lately dreſſed and picked, and it appeared that a ſhort time before, ſix of their enemies having fallen into their hands, they had killed four and eaten them, and that the other two were drowned in endeavouring to make their eſcape. They made no ſecret of this abominable cuſtom, but anſwered Tupia, who was deſired to aſcertain the fact, with great compoſure, that his conjectures were juſt, that they were the bones of a man, and teſtified by ſigns, that they thought human fleſh delicious food. Upon being aſked, Why they had not eaten the body of the woman that had been floating upon the water? they anſwered, She died of a diſorder, and that moreover ſhe was related to them, and they never ate any but their enemies. Upon Mr. Banks ſtill teſtifying ſome doubts concerning the fact, one of the Indians drew the bone of a man's arm through his mouth, and this gentleman had the curioſity to bring it away with him. There was a woman in this family whoſe arms and legs were cut in a ſhocking manner, and it appeared ſhe had thus wounded herſelf becauſe her huſband had lately been killed and eaten by the enemy. Some of the Indians brought four ſkulls one day to ſell, which they rated at a very high price. The brains had been taken out, and probably eaten, but the ſkull and hair remained. They ſeemed to have been dried by fire, in order to preſerve them from putrefaction. The gentlemen likewiſe ſaw the bail of a canoe, which was made of a human ſkull. On the whole their ideas were ſo horrid and brutiſh, that they ſeemed to pride themſelves upon their cruelty and barbarity, and took a particular pleaſure in ſhewing the manner in which they killed their enemies, it being conſidered as very meritorious to be expert at this deſtruction. The method uſed was to knock them down with their patoo-patoos, and then rip up their bellies.

"Great numbers of birds uſually began their melody about two o'clock in the morning, and ſerenaded the gentlemen till the time of their riſing. This harmony was very agreeable, as the ſhip lay at a convenient diſtance from the ſhore to hear it. Theſe feathered choriſters, like the Engliſh nightingales, never ſing in the day-time.

"On the 17th, the ſhip was viſited by a canoe from the hippah, or village; it contained, among others, the aged Indian, of ſuperior diſtinction, who had firſt viſited the Engliſh upon their arrival. In a conference which Tupia had with him, he teſtified his apprehenſions, that their enemies would very ſoon viſit them, and repay the compliment, for killing and eating the four men. On the 18th they received no viſit from the Indians; but going out in the pinnace to inſpect the bay, they ſaw a ſingle man in a canoe fiſhing, in the manner already deſcribed. It was remarkable, that this man did not pay the leaſt attention to the people in the pinnace, but continued to purſue his employment even when they came along-ſide of him, without once looking at them. Some of the Endeavour's people being on ſhore, found three human hip bones, cloſe to an oven; theſe were brought on board, as well as the hair of a man's head, which was found in a tree. The next day a forge was ſet up to repair the iron-work; and ſome Indians viſited the ſhip with plenty of fiſh, which they bartered very fairly for nails.

"On the 20th, Mr. Banks purchaſed of the old Indian a man's head, which he ſeemed very unwilling to part with; the ſkull had been fractured by a blow, and the brains were extracted, and like the others, it was preſerved from putrefaction. From the care with which they kept theſe ſkulls, and the reluctance with which they bartered any, it was imagined they were conſidered as trophies of war, and teſtimonials of their valour. In this day's excurſion they did not meet with a ſingle native; the ground on every ſide was quite uncultivated; but they diſcovered a very good harbour. The ſucceeding day the ſhip's company were allowed to go on ſhore for their amuſement, and the gentlemen employed themſelves in fiſhing, in which they were very ſucceſsful. Some of the company in their excurſion met with fortifications that had not the advantage of an elevated ſituation, but were ſurrounded by two or three wide ditches, with a draw-bridge, ſuch as, though ſimple in its ſtructure, was capable of anſwering every purpoſe againſt the arms of the natives. Within theſe ditches is a fence, made with ſtakes, fixed in the earth. A deciſive conqueſt or victory over the beſieged, occaſions an entire depopulation of that diſtrict, as the vanquiſhed, not only thoſe who are killed, but the priſoners likewiſe are devoured by the victors.

The 22d was employed by Mr. Banks and Dr. Solander, in collecting of plants, whilſt Captain Cook made ſome obſervations on the main land on the ſouth-eaſt ſide of the inlet, which conſiſted of a chain of high hills, and formed part of the ſouth-weſt ſide of the ſtreight; the oppoſite ſide extended far to the eaſt. He alſo diſcovered a village, and many houſes that had been deſerted, and another village that appeared to be inhabited. There were many ſmall iſlands round the coaſt, that ſeemed entirely barren, and what few inhabitants were upon them lived principally upon fiſh. On the 24th they viſited a hippah, which was ſituated on a very high rock, hollow underneath, forming a fine natural arch, one ſide of which joined to the land, and the other roſe out of the ſea. The inhabitants received the gentlemen with great civility, and very readily ſhewed them every thing that was curious. This hippah was partly ſurrounded with paliſadoes, and it had a fighting ſtage, like that already deſcribed. Here they met with a croſs reſembling a crucifix, which was erected as a monument for a deceaſed perſon; but they could not learn how his body was diſpoſed of. From a converſation that Tupia had with theſe people, a diſcovery was made that an officer being in a boat near this village, and ſome canoes coming off, made him imagine they had hoſtile deſigns, and he fired upon them with ball, which made them retire with much precipitation, but they could not effect their retreat, before one of them was wounded. What made this raſh action the more to be lamented was, that the Indians gave afterwards every poſſible aſſurance that their intentions upon this occaſion were entirely friendly. On the 25th the captain, Mr. Banks, and Dr. Solander, went on ſhore to ſhoot, when they met with a numerous family, who were among the creeks catching fiſh: they behaved very civilly, and received ſome trifling preſents

ſents from the gentlemen. The next day they went to take a view of the ſtreight, that paſſed between the eaſtern and weſtern ſeas, they accordingly attained the ſummit of a hill, but it being cloudy weather, they could not ſee at a conſiderable diſtance. Here, however, they erected a pile, leaving in it muſquet balls, ſmall ſhot, beads, &c. as a teſtimonial of this place having been viſited by Europeans. Upon their return they met with another Indian family, who behaved to them very reſpectfully, and aſſiſted in procuring them water. They alſo viſited another hippah upon a rock that was almoſt inacceſſible: it conſiſted of about 90 houſes, and a fighting ſtage. The gentlemen made the inhabitants ſome ſmall preſents, and they in return furniſhed them with dried fiſh.

"The ſhip's company were, on the 27th and 28th engaged in making neceſſary repairs, and getting her ready for ſea. The next day they were viſited by Topoa, their old friend, and ſome other Indians. They ſaid, That the man who had received a wound from the officer near the hippah, was dead; but this aſſertion proved afterwards groundleſs. The Doctor and Mr. Banks often went on ſhore whilſt the ſhip was preparing for ſea, and made ſeveral obſervations on the coaſt to the north-weſt; they perceived an iſland at about 10 leagues diſtance, between which and the main there were ſeveral ſmaller iſlands. The captain alſo went on ſhore, and erected another pyramid of ſtones, in which he put ſome bullets, beads, &c. as before, with the addition of a piece of ſilver coin, and placed part of an old pendant on the top, to diſtinguiſh it. Some of the people who had been ſent out to gather celery, met with ſeveral of the natives, among whom were ſome women, whoſe huſbands had lately fallen into the hands of the enemy, and they were cutting many parts of their bodies in a moſt ſhocking manner with ſharp ſtones, in teſtimony of their exceſſive grief. What made this ceremony appear ridiculous as well as ſhocking, was, that the male Indians, who were with them, paid not the leaſt attention to it, but with the greateſt unconcern imaginable employed themſelves in repairing ſome empty huts upon the ſpot.

"On Thurſday the 30th, two poſts were erected, inſcribed with the ſhip's name, &c. as uſual, one was placed at the watering place, with the union flag upon it; and the other in the ſame manner as on the iſland of Motuara; and the inhabitants being informed, that theſe poſts were meant as memorials of the Endeavour's having touched at this place, promiſed never to deſtroy them. The captain then named this inlet *Queen Charlotte's Iſland*; and took poſſeſſion of it in the name, and for the uſe of his majeſty, and a bottle of wine was drank to the queen's health.

Queen Charlotte's Iſland.

"The captain made the old man ſome preſents: among others there were a ſilver three-pence, and ſome ſpike-nails, with the broad arrow upon them. Topoa being queſtioned concerning a paſſage into the eaſtern ſea, anſwered, that there was certainly ſuch a paſſage; and he alſo informed the captain, that the land to the ſouth-weſt of the ſtreight, where he then was, conſiſted of two iſlands named Tovy Poennammoo, and that it would take about two days to ſail round them; he added, that there was a third iſland to the eaſt, Eaheinomauwee, which was of a conſiderable extent, and that the land contiguous to this inlet was called Tiera Witte. Towards night, on the 31ſt, a briſk gale aroſe, attended with heavy ſhowers, and the next morning the weather was ſo very tempeſtuous, that the Endeavour had her hawſer broke, and ſeveral caſks of water that had been left on ſhore were waſhed away with the rain. The 2d, 3d, and 4th of February, were chiefly ſpent in preparing for their departure, and purchaſing fiſh of the natives, who confirmed the accounts that Topoa had given, reſpecting an eaſtern paſſage, and the adjacent iſlands. Mr. Banks and Dr. Solander were in the mean while chiefly engaged in collecting ſeeds and ſhells of different kinds. They got under ſail the 5th, but the wind not continuing, they came again to anchor. Topoa viſited the gentlemen again, to bid them farewell, and being queſtioned, whether he had ever heard that ſuch a veſſel as the Endeavour had touched there, he anſwered in the negative; and added, there was a tradition of a ſmall veſſel coming from a place called Ulimaroa, (a diſtant country to the north) that there were only four men in her, and that they were all put to death. 1770

"Mr. Banks and the Doctor went again on ſhore in ſearch of natural curioſities, when they met with a very amiable family of Indians, among whom was a widow and a pretty youth about ten years of age. She had juſt loſt her huſband, and was performing the ceremony of the country upon the occaſion. They behaved with the utmoſt hoſpitality and courteſy, and endeavoured to prevail with the gentlemen to ſtay all night, but they expecting the ſhip to ſail, could not accept the invitation. This family ſeemed the moſt inlightened and intelligent ſet of Indians the gentlemen had as yet met with, which made them regret they had not fallen into their company before, as they would probably have derived much information from them. On the 6th of February in the morning, the Endeavour ſailed out of the bay, which the ſhip's company, from an abhorrence of the brutiſh cuſtom that prevails here of eating men, called *Canibal Bay*. They bent their courſe to an opening to the eaſt, in the evening; being in the mouth of the ſtreights, they were becalmed in latitude 41° ſouth, longitude 184° 45′ weſt. The two points which form this entrance, were named Cape Koomaroo, and Point Jackſon. The natives called the land about it, Totarranue, and the harbour, which the captain named *Ship Cove*, is very ſafe and commodious; a ſhip may enter it either between Motuara and the iſland of Hamote, or between the weſtern ſhore and Motuara. Care, however, muſt be taken to attend to the tides, when there is a little wind they flow about nine or ten o'clock at the full change of the moon, and riſe and fall about ſeven feet and a half, paſſing through the ſtreight from the ſouth-eaſt."

Canibal Bay.

Cape Koomaroo and Point Jackſon.

Ship Cove.

About this ſound the number of the natives did not ſeem to be above four hundred, who lived on fern-root and fiſh, and are ſcattered along the coaſt. Fiſh, which was the only commodity that they traded in, they bartered for nails, often giving them the preference to any other things that were preſented them. When they found that paper was not water-proof, they ſoon rejected that article, nor did they ſet much value upon the cloth of Otaheite, but were well pleaſed with that of Engliſh manufacture. Very good timber was found here, fit for almoſt every purpoſe but that of making maſts. They found abundance of wild fowl in theſe parts.

Leaving the ſound, the Endeavour ſteered eaſtward, and her people were carried by the current very cloſe to one of the two iſlands that lie off Cape Hoamaroe, at the entrance of the ſound. At this time the veſſel was in the greateſt danger; ſo that they expected nothing but deſtruction. However, after veering out 160 fathoms of cable, ſhe was brought up when the rocks were not above two cables length from them. Thus ſituated, they were obliged to wait for the tide's ebbing, which did not take place till after midnight. They weighed anchor at eight o'clock in the morning, and a freſh breeze afterwards carried them through the ſtreight with great ſwiftneſs. There is a ſmall iſland at the mouth of it, which the Engliſh called *Engliſh Iſland*; and to the narroweſt part of this ſtreight between Cape Tierrawitte and Cape Koomaroo, they gave the name of *Cook's Iſland*, which was about thirteen miles broad, and fourteen long. The former of theſe lies in 41° 44′ of ſouth latitude, and 183° 45′ of weſt longitude, and the latter in 41° 34′ ſouth, and 183° 30′ weſt longitude. They were now facing a deep bay, which was called *Cloudy Bay*, at the diſtance of about three leagues from land.

Engliſh Iſland.

Cook's Iſland.

Cloudy Bay.

As ſome of the gentlemen doubted whether Eaheinomauwee were an iſland, the veſſel ſteered ſouth-eaſt, in order to clear up this doubt. The wind ſhifting,

1770 she ſtood eaſtward, and ſteered north-eaſt by eaſt all night. The next morning they were off Cape Pallifer, and found that the land ſtretched away to the north-eaſtward of Cape Turnagain. In the afternoon, three canoes came off, having ſeveral Indians on board. Theſe made a good appearance, and were ornamented like thoſe on the northern coaſt. There was no difficulty in perſuading them to come on board, where they demeaned themſelves very civilly, and a mutual exchange of preſents took place. As they aſked for nails it was concluded that they heard of the Engliſh by means of the inhabitants of ſome of the other places at which they had touched.

Their dreſs reſembled that of the natives of Hudſon's Bay. One old man was tatooed in a very particular manner, he had likewiſe a red ſtreak acroſs his noſe; and his hair and beard were remarkable for their whiteneſs. The upper garment that he wore was made of flax, and had a wrought border: under this was a ſort of petticoat of a cloth called Aooree Waow. Teeth and green ſtones decorated his ears: he ſpoke in a ſoft and low key, and it was concluded, from his deportment, that he was a perſon of diſtinguiſhed rank among his countrymen, and theſe people withdrew greatly ſatisfied with the preſents that they had received.

Captain Cook having parted from them, ſteered coaſtwiſe, till on the 9th in the morning they diſcovered that Eahienomauwee was really an iſland. About ſixty Indians in four double canoes came within a ſtone's throw of the ſhip, on the 14th of February. As they ſurveyed her with ſurpriſe, Tupia endeavoured to perſuade them to come nearer, but this they could not be prevailed on to do. On this account the iſland was denominated *The Iſland of Lookers on.* Five leagues diſtant from the coaſt of Tovy Poenamoo, they ſaw an iſland which was called after Mr. Banks's name; a few Indians appeared on it, and in one place they diſcovered a ſmoke, ſo that it was plain the place was inhabited. Mr. Banks going out in his boat for the purpoſe of ſhooting, killed ſome of the Port Egmont hens, which were like thoſe found on the iſle of Faro, and the firſt that they had ſeen upon this coaſt. A point of land was obſerved on Sunday the 25th in lat. 45° 35 ſouth, to which Captain Cook gave the name of *Cape Saunders*, in honour of Admiral Saunders. They kept off from the ſhore, which appeared to be interſperſed with trees, and covered with green hills, but no inhabitants were diſcovered.

The Iſland of Lookers on.

Cape Saunders.

On the 4th of March, ſeveral whales and ſeals were ſeen; and, on the 9th they ſaw a ledge of rocks, and ſoon after another ledge at three leagues diſtance from the ſhore, which they paſſed in the night to the northward, and at day-break obſerved the others under their bows which was a fortunate eſcape; and in conſideration of their having been ſo nearly caught among theſe, they were denominated the *Traps*. They called the ſouthernmoſt point of land, the *South Cape*, and found it to be the ſouthern extremity of the whole coaſt. Proceeding northward, the next day they fell in with a barren rock about fifteen miles from the main land, which was very high, and appeared to be about a mile in circumference; and this they denominated Solander's Iſland.

Traps.

South Cape.

They diſcovered a bay containing ſeveral iſlands, on the 13th where they concluded if there was depth of water, ſhipping might find ſhelter from all winds. *Duſky Bay* was the appellation given to it by the captain, and five high peaked rocks, for which it was remarkable, cauſed the point to be called *Five Fingers*. The weſternmoſt point of land upon the whole coaſt, to the Southward of Duſky Bay, they called *Weſt Cape*. The next day they paſſed a ſmall narrow opening, where there ſeemed to be a good harbour formed by an iſland, the land behind which exhibited a proſpect of mountains covered with ſnow. They paſſed a point on the 16th which conſiſted of high, red cliffs, and received the name of *Caſcade Point*, on account of ſeveral ſmall ſtreams which fell down it. In the morning of the 18th the valleys were obſerved covered with

Duſky Bay.

Five Fingers.

Weſt Cape.

Caſcade Point.

ſnow as well as the mountains, which ſeemed to have fallen the night before, when they had rain at ſea. Thus they paſſed the whole north-weſt coaſt of Tovy Poenamoo, which had nothing worth the obſervation of our voyagers but a ridge of naked and barren rocks covered with ſnow, ſome of which they conjectured might probably have remained there ever ſince the creation. As far as the eye could reach, the proſpects were in general wild, craggy, and deſolate; ſcarcely any thing but rocks to be ſeen, the moſt of which Dr. Hawkeſworth deſcribes as having nothing but a kind of hollows, and dreadful fiſſures inſtead of valleys between them. From this uncomfortable country they determined to depart, having ſailed round the whole country, by the 27th of this month. Captain Cook therefore went on ſhore in the long-boat, and having found a place proper for mooring the ſhip, and a good watering-place, the crew began to fill their caſks, while the carpenter was employed in cutting wood. The captain, Mr. Banks, and Dr. Solander, went in the pinnace to examine the bay, and the neighbouring country. Landing there, they found ſeveral plants of a ſpecies which was before unknown to them; no inhabitants appeared; but they ſaw ſeveral huts which ſeemed to have been deſerted a long time before: all the wood and water being taken on board, the veſſel was ready to ſail by the time that they returned in the evening, and it was now reſolved at a council of war to ſteer for the coaſt of New Holland, in the courſe of their return by the way of the Eaſt Indies.

They took their departure on the 31ſt of March, from an eaſtern point of land, to which they gave the name of *Cape Farewel*, denominating the bay out of which they ſailed, *Admiralty Bay*, and two capes *Cape Stephens*, and *Cape Jackſon*, (the names of the two ſecretaries of the Admiralty board.) They called a bay between the iſland and Cape Farewel, *Blind Bay*, which was ſuppoſed to have been the ſame that was called Murderers Bay, by Taſman, the firſt diſcoverer of New Zealand, but though he named it Staten Iſland, wiſhing to take poſſeſſion of it for the States General, yet being attacked here by the Indians he never went on ſhore to effect his purpoſe. Of this coaſt, now more accurately examined by our Engliſh voyagers and diſcovered to conſiſt of two iſlands,* we have the following account.

Cape Farewel.

Admiralty Bay.

Cape Stephens

Cape Jackſon.

Blind Bay.

"They are ſituate between the 34th and 48th deg. of ſouth latitude, and between 181° and 194° weſt longitude. The northern iſland is called Eahienomauwee, and the ſouthern is named Tovy Poenamoo, by the natives.

"The former, though mountainous in ſome places, is ſtored with wood, and in every valley there is a rivulet. The ſoil in thoſe valleys is light, but fertile and well adapted for the plentiful production of all the fruits, plants and corn of Europe. The ſummer, though not hotter, is in general of a more equal temparature than in England; and from the vegetables that were found here it was concluded, that the winters were not ſo ſevere. The only quadrupedes that were diſcovered were dogs and rats, and of the latter very few, but the former the inhabitants (like thoſe of Otaheite) breed for food. There are ſeals and whales on the coaſts, and the Engliſh once ſaw a ſea-lion. The birds are hawks, owls, quails, and ſome melodious ſong birds. There are ducks, and ſhags of ſeveral ſorts, like thoſe of Europe, and the gannet, which is of the ſame ſort. Albetroſſes, ſheerwaters, penguins, and pintados, alſo viſit the coaſt. The inſects found here are, butterflies, fleſh-flies, beetles, ſand-flies, and muſquitos.

"Tovey Poenamoo is barren and mountainous, and appeared to be almoſt deſtitute of inhabitants.

"The ſea that waſhes theſe iſlands abounds with delicate and wholeſome fiſh. Whenever the veſſel came

* It was before thought to be a part of the ſouthern continent ſo much ſought after.

came to an anchor, enough were caught with hook and line only, to ſupply the whole ſhip's company; and when they fiſhed with nets, every meſs in the ſhip, where the people were induſtrious, ſalted as much as ſupplied them for ſeveral weeks. There were many ſorts of fiſh here which they had never before ſeen, and which the ſailors named according to their fancies. They were ſold on moderate terms to the crew: among the reſt, fiſh like the ſkate, eels, congers, oyſters, flat-fiſh reſembling ſoles and flounders, cockles, and various ſorts of mackarel were found in abundance upon the coaſt. 1770

"Here are foreſts abounding with trees producing large, ſtrait and clean timber. One tree, about the ſize of our oak, was diſtinguiſhed by a ſcarlet flower, compoſed of ſeveral fibres, and another which grows in ſwampy ground, very ſtrait and tall, bearing ſmall bunches of berries, and a leaf reſembling that of the yew-tree. About 400 ſpecies of plants were found, all of which are unknown in England, except garden night-ſhade, ſow-thiſtle, two or three kinds of fern, and one or two ſorts of graſs. They found wild celery, and a kind of creſſes, in great abundance, on the ſea-ſhore; and of eatable plants raiſed by cultivation, only cocoas, yams, and ſweet potatoes. There are plantations of many acres of theſe yams and potatoes. The inhabitants likewiſe cultivate the gourd; and the Chineſe paper mulberry-tree is to be found, but in no abundance.

"There is only one ſhrub or tree in the country which produces fruit, which is a kind of berry almoſt taſteleſs; but they have a plant which anſwers all the uſes of hemp and flax. There are two kinds of this plant, the leaves of one of which are yellow, and the other a deep red, and both of them reſemble the leaves of flags. Of theſe leaves they make lines and cordage, and much ſtronger than any thing of the kind in Europe. Theſe leaves they likewiſe ſplit into breadths, and tying the ſlips together, form their fiſhing nets. Their common apparel, by a ſimple proceſs, is made from the leaves, and their finer, by another preparation, is made from the fibres. This plant is found both in high and low ground, in dry mould and in deep bogs; but as it grows largeſt in the latter, that ſeems to be its proper ſoil.

"The natives here are as large as the largeſt Europeans. Their complexion is brown, but little more ſo than that of a Spaniard. They are full of fleſh, but not lazy and luxurious; and are ſtout and well ſhaped. The women poſſeſs not that delicacy, which diſtinguiſhes the European ladies; but their voice chiefly diſtinguiſhes them from the men. The men are active in a high degree; their hair is black, and their teeth are white and even. The features of both ſexes are regular; they enjoy perfect health, and live to an advanced age. It is ſaid they appeared to be of a gentle diſpoſition, and treat each other with the utmoſt kindneſs: but they are perpetually at war, every little diſtrict being at enmity with all the reſt. This is owing moſt probably, to the want of food in ſufficient quantities at certain times. As they have neither black cattle, ſheep, hogs, nor goats; ſo their chief food was fiſh, which being not always to be had, they are in danger of dying through hunger. They have a few dogs; and when no fiſh is to be gotten, they have only vegetables, ſuch as yams and potatoes, to feed on; and if by any accident theſe fail them, their ſituation muſt be deplorable. Notwithſtanding the cuſtom of eating their enemies, the circumſtances and temper of theſe people is deſcribed to be in favour of thoſe who might ſettle among them as a colony.

"The inhabitants of New Zealand, are as modeſt and reſerved in their behaviour and converſation as the moſt polite nations of Europe. The women, indeed, were not dead to the ſofter impreſſions; but their mode of conſent was in their idea as harmleſs as the conſent to marriage with us, and equally binding for the ſtipulated time. If any of the Engliſh addreſſed one of their women, he was informed, that the conſent of her friends muſt be obtained, which uſually followed, on his making a preſent. This done he was obliged to treat his temporary wife as delicately as we do in England. A gentleman who ſailed in the Endeavour, having addreſſed a family of ſome rank, received an anſwer, of which the following is an exact tranſlation. "Any of theſe young ladies will "think themſelves honoured by your addreſſes, but "you muſt firſt make me a preſent, and you muſt "then come and ſleep with us on ſhore, for day-"light muſt by no means be a witneſs of what paſſes "between you."

"Theſe Indians anoint their hair with oil melted from the fat of fiſh or birds. The poorer people uſe that which is rancid, ſo that they ſmell very diſagreeable; but thoſe of ſuperior rank make uſe of that which is freſh. They wear combs both of bone and wood, which is conſidered as an ornament when ſtuck upright in the hair. The men tie their hair in a bunch on the crown of the head, and adorn it with feathers of birds, which they likewiſe ſometimes place on each ſide of the temples. They commonly wear ſhort beards. The hair of the women ſometimes flows over the ſhoulders, and ſometimes is cut ſhort. Both ſexes, but the men more than the women, mark their bodies with black ſtains, called Amoco. In general the women ſtain only the lips, but ſometimes mark other parts with black patches: the men on the contrary put on additional marks from year to year, ſo that thoſe who are very ancient are almoſt covered. Excluſive of the amoco, they mark themſelves with furrows. Thoſe furrows make a hideous appearance, the edges being indented, and the whole quite black. The ornaments of the face are drawn in the ſpiral form with equal elegance and correctneſs, both cheeks being marked exactly alike; while paintings on their bodies reſemble fillagree work, and the foliage in old chaſed ornaments; but no two faces or bodies are painted exactly after the ſame model. The people of New Zealand frequently left the breech free from theſe marks; which the inhabitants of Otaheite adorned beyond any other. Theſe Indians likewiſe paint their bodies by rubbing them with red oker, either dry or mixed with oil.

"Their dreſs is formed of the leaves of the flag ſplit into ſlips, which are interwoven and made into a kind of matting, the ends, which are ſeven or eight inches in length, hanging out on the upper ſide. One piece of this matting being tied over the ſhoulders, reaches to the knees: the other piece being wrapped round the waiſt falls almoſt to the ground. Theſe two pieces are faſtened to a ſtring, which by means of a bodkin of bone is paſſed through, and tacks them together. The men wear the lower garment only at particular times.

"They have two kinds of cloth beſides the coarſe matting or ſhag above-mentioned; one of which is as coarſe, but beyond all proportion ſtronger than the Engliſh canvas; the other which is formed of the fibres of a plant, drawn into threads which croſs and bind each other, reſembles the matting on which we place our diſhes at table.

"They make borders of different colours to both theſe ſorts of cloth, reſembling girls ſamplers, and finiſhed with great neatneſs and elegance. What they conſider as the moſt ornamental part of their dreſs is the fur of dogs, which they cut into ſtripes, and ſew on different parts of their apparel. As dogs are not plenty, they diſpoſe theſe ſtripes with œconomy. They have a few dreſſes ornamented with feathers; and one man was ſeen covered wholly with thoſe of the red parrot.

"The women never tie their hair on the top of their head, nor adorn it with feathers; and are leſs anxious about dreſs than the men. Their lower garment is bound tight round them, except when they go out fiſhing, and then they are careful that the men ſhall not ſee them. It once happened that ſome of the ſhip's crew ſurpriſed them in this ſituation, when ſome of them hid themſelves among the rocks, and

1770 the reſt kept their bodies under water till they had formed a girdle and apron of weeds; and their whole behaviour manifeſted the moſt refined ideas of female modeſty.

"The ears of both ſexes were bored, and the holes ſtretched ſo as to admit a man's finger. The ornaments of their ears are feathers, cloth, bones, and ſometimes bits of wood; a great many of them made uſe of the nails which were given them by the Engliſh, for this purpoſe, and the women ſometimes adorned their ears with white down of the albetroſs, which they ſpread before and behind the hole in a large bunch. They likewiſe hung to their ears by ſtrings, chiſſels, bodkins, the teeth of dogs, and the teeth and nails of their deceaſed friends. The arms and ancles of the women are adorned with ſhells and bones, or any thing elſe through which they can paſs a ſtring. The men wear a piece of green talc or whalebone, with the reſemblance of a man carved on it, hanging to a ſtring round the neck. They ſaw one man who had the griſtle of his noſe perforated, and a feather paſſed through it, projecting over each cheek.

"Theſe people ſhew leſs ingenuity in the ſtructure of their houſes, than in any thing elſe belonging to them; they are from ſixteen to twenty-four feet long, ten or twelve wide, and ſix or eight in height. The frame is of ſlight ſticks of wood, and the walls and roof are made of dry graſs pretty firmly compacted. Some of them are lined with bark of trees, and the ridge of the houſe is formed by a pole which runs from one end to the other. The door is only high enough to admit a perſon crawling on hands and knees, and the roof is ſloping. There is a ſquare hole near the door, ſerving both for window and chimney, near which is the fire-place. A plank is placed over the door, adorned with a ſort of carving, and this they conſider as an ornamental piece of furniture. The ſide-walls and roof projecting two or three feet beyond the walls at each end form a ſort of portico where benches are placed to ſit on. The fire is made in the middle of a hollow ſquare in the floor, which is incloſed with wood or ſtone. They ſleep near the walls, where the ground is covered with ſtraw for their beds. Some who can afford it, whoſe families are large, have three or four houſes, incloſed in their court-yard. Their clothes, arms, feathers, ſome ill-made tools, and a cheſt, in which all theſe are depoſited, form all the furniture of the inſide of the houſe. Their hammers to beat fern-root, gourds to hold water, and baſkets to contain proviſions, are placed without the houſe. One houſe was found near 40 feet long, 20 wide, and 14 high. Its ſides were adorned with carved planks of workmanſhip ſuperior to the reſt; but the building appeared to have been left unfiniſhed."

Though the people ſleep warm enough at home, they ſeem to deſpiſe the inclemency of the weather, when they go in ſearch of fiſh or fern-roots. Sometimes, indeed, they place a ſmall defence to windward, but frequently ſleep undreſſed with their arms placed round them, without the leaſt ſhelter whatever.

Beſides the fern-root, which ſerves them for bread, they feed on albetroſſes, penguins, and ſome other birds. Whatever they eat is either roaſted or baked, as they have no veſſel in which water can be boiled. The Engliſh ſaw no plantations of cocoas, potatoes, and yams, to the ſouthward, though there were many in the northern parts. The natives drink no other liquor than water, and enjoy perfect and uninterrupted health. When wounded in battle, the wound heals in a very ſhort time without the application of medicine; and the very old people carry no other mark of decay about them than the loſs of their hair, and teeth, and a failure of their muſcular ſtrength:—but enjoy an equal ſhare of health and chearfulneſs with the youngeſt.

The canoes of this country are not unlike the whale-boats of New-England, being long and narrow. The larger ſort ſeem to be built for war, and will hold from 30 to 100 men. One of theſe at Tolaga meaſured near 70 feet in length, ſix in width, and four in depth. It was ſharp at the bottom, and conſiſted of three lengths, about two or three inches thick, and tied firmly together with ſtrong plaiting; each ſide was found of one entire plank, about twelve inches broad, and about an inch and a half thick, which was fitted to the bottom part with equal ſtrength and ingenuity. Several thwarts were laid from one ſide to the other, to which they were ſecurely faſtened, in order to ſtrengthen the canoes.

Some few of their canoes at Mercury-Bay and Opoorage, are all made entirely of one trunk of wood, which is made hollow by fire; but by far the greater part are built after the plan above deſcribed. The ſmaller boats which are uſed chiefly in fiſhing, are adorned at head and ſtern with the figure of a man, the eyes of which are compoſed of white ſhells:—a tongue of enormous ſize, is thruſt out of the mouth, and the whole face a picture of the moſt abſolute deformity. The grander canoes, which are intended for war, are ornamented with open work, and covered with fringes of black feathers, which gives the whole an air of perfect elegance; the ſide-boards which are carved in a rude manner, are embelliſhed with tufts of white feathers.

Theſe veſſels are rowed with a kind of paddles, between five and ſix feet in length, the blade of which is a long oval, gradually decreaſing till it reaches the handle; and the velocity with which they row with theſe paddles is very ſurpriſing. Their ſails are compoſed of a kind of mat or netting, which is extended between two upright poles, one of which is fixed on each ſide. Two ropes, faſtened to the top of each pole, ſerve inſtead of ſheets. The veſſels are ſteered by two men having ſuch a paddle, and ſitting in the ſtern; but they can only ſail before the wind, in which direction they move with conſiderable ſwiftneſs.

Theſe Indians uſe axes, adzes, and chiſſels, with which laſt they likewiſe bore holes. The chiſſels are made of jaſper, or of the bone of a man's arm; their axes and adzes of a hard black ſtone. They uſe their ſmall jaſper tools till they are blunted, and then throw them away, having no inſtrument to ſharpen them with. The Indians at Tolaga having been preſented with a piece of glaſs, drilled a hole through it, and hung it round the neck. A ſmall bit of jaſper was thought to have been the tool they uſe in drilling it.

Their tillage of the ground is excellent, owing to the neceſſity they are under of cultivating or running the riſque of ſtarving. At Tegadoo their crops were juſt put into the ground, and the ſurface of the field was as ſmooth as a garden, the roots were ranged in regular lines, and to every root there remained a hillock. A long narrow ſtake, ſharpened to an edge at bottom, with a piece fixed acroſs a little above it, for the convenience of driving it into the ground with the foot, ſupplies the place both of plough and ſpade. The ſoil being light, their work is not very laborious, and with this inſtrument alone they will turn up ground of ſix or ſeven acres in extent.

The ſeine, the large net which has been already noticed, is produced by the united labour, and is probably the joint property of a whole town. Their fiſh-hooks are of ſhell or bone; and they have baſkets of wicker-work to hold the fiſh. Their warlike weapons are ſpears, darts, battle-axes, and the patoo-patoo. The ſpear, which is pointed at each end, is about ſixteen feet in length, and they hold it in the middle, ſo that it is difficult to parry a puſh from it. Whether they fight in boats or on ſhore the battle is hand to hand, ſo that they muſt make bloody work of it. They truſt chiefly in the patoo-patoo, which is faſtened to their wriſts, by means of a ſtrong ſtrap, that it may not be wreſted out of their hands. Theſe are worn in the girdles of people of a ſuperior rank, as a military ornament. They have a kind of ſtaff of diſtinction, which is carried by the principal warriors. It is formed of a whale's rib, is quite white, and

and adorned with carving, feathers, and the hair of their dogs; and they sometimes carried a stick six feet long, inlaid with shells, and otherwise adorned like the military staff. This honourable mark of distinction was commonly borne by the old men.

When they came to attack the English, there was usually one or more thus distinguished in each canoe. It was their custom to stop at about 50 or 60 yards distance from the ship, when the commanding officer arising, and putting on a dog-skin garment, used to direct them how to proceed. When they were too far from the ship to reach it with stones or lances, they used to cry out in their language, "Come on shore to us, and we will kill you all with our patoo-patoos."

While they threatened thus, they approached the vessel, yet talking in a peaceable manner at intervals; but afterwards, supposing the English to be afraid of them, they renewed their menaces, and an engagement generally terminated the matter, in which they were repulsed by the superior arms of their European adversaries.

When these savages exhibit their war dance, all their limbs are distorted, and their faces drawn into various contortions. Their tongues hang out of their mouths, and their eye-lids are drawn in such a manner as to form a circle round the eye. At the same time they shake their darts, brandish their spears, and wave their patoo-patoos. A song accompanies this dance, which song is sung in concert, a deep sigh ending every stanza. In this dance they are very active; and it is generally observed that they have just ideas of keeping time to music; as an instance of which, we are told that sixty or eighty paddles will strike at once against the sides of their canoes, and like the firing of regular soldiers, one report only will be heard from the whole number. In times of peace they sometimes sing the war song; but the dance is omitted: the women sing likewise in a melodious but mournful strain. A shell which produces a sound resembling that of the common horn, and a pipe of no more compass than a child's whistle, are their instruments of music. The following description will conduce to give the reader a just idea of these people.—

Their hippahs or villages, of which there are several between the bay of Plenty and Queen Charlotte's Sound, are all fortified. It is in these that the inhabitants of those parts constantly reside, but near Tolaga, Hawk's Bay, and Poverty Bay, there are no towns, only single houses being seen, at a considerable distance from each other. On the sides of the hills were discovered long stages, supplied with darts and stones; and these were concluded to be intended for retreats in time of danger, as it appeared that from such places they could combat their enemies to great advantage. A sort of magazine of provisions, consisting of dried fish, and fern roots, was found in these fortifications.

It appeared that the inhabitants of this part of the country were subject to Teratu, who resided near the Bay of Plenty, and being thus united under a single chief, they enjoyed a security unknown to the inhabitants of the other parts of the country. There were several inferior governors in Teratu's dominions, to whom the most implicit obedience was paid. One of the inhabitants having robbed the English, complaint was made to a chief, who chastised him by kicking and striking him, while the thief bore his punishment with unresisting humility.

The inhabitants of the southern parts appeared to be co-partners in their fishing-nets and fine apparel. The latter, which probably was obtained in war, were kept in a little hut, destined for that use, in the centre of the town, and the several parts of the nets, being made by different families, were afterwards joined together for the common use. The gentlemen imagined that the employment of the men consisted in cultivating the ground, making nets, catching birds, and fishing, while the women were engaged in weaving cloth, procuring fern roots, and shell fish, and dressing food. With regard to religion, they acknowledged one superior being, and several subordinate. Their mode of worship could not be learned; nor was any place proper for that purpose to be seen. There was indeed, a small square area, encompassed with stones, in the middle of which hung a basket of fern roots on one of their spades. This they said was offered to the gods, in hopes of a plentiful crop of provisions. The inhabitants of the southern district said they disposed of their dead by throwing them into the sea; but those of the northward, buried them in the ground. Our adventurers however saw not the least sign of any grave or monument; but the body of almost every inhabitant bore the marks of wounds which they had given themselves, in token of grief for the loss of their friends and relations. Some of the scars were newly made, which is a proof that their friends had died while the ship's crew were there; yet no one saw any thing like a funeral, as those islanders conceal every thing respecting the dead, with the utmost caution. A great similitude was observed between the dress, furniture, boats, and nets, of the New Zealanders, and those of the inhabitants of the South Sea Islands, which furnished a strong proof that the common ancestors of both were natives of the same country. Indeed the inhabitants of these different places have a tradition, that their ancestors originated from another country many years since; and they both agree, that this country was called *Hiawige*. But perhaps a yet stronger proof that their origin was the same, will arise from the similitude of their language, of which the following is a specimen.

The vessel left Cape Farewell on the 31st of March, 1770, and had fine weather and a fair wind, till the 9th of April, when they saw a tropic bird, in the latitude of 38° 29' south, a sight very unusual in so high a latitude. On the 15th, they saw an egg bird, and a gannet; and on the following day a small land-bird perched on the rigging, from which they concluded they were near the land; but they found no ground at 120 fathom. On the 18th, in the morning, they saw a Pintado bird, and some Port-Egmont hens, an infallible sign that land was not very distant; at six o'clock in the morning of the 19th, they discovered land four or five leagues distant, the southernmost part of which was called *Point Hicks*, in compliment to Mr. Hicks, the first lieutenant, who made the discovery of it. At noon they discovered another point of the same land, rising in a round hillock, extremely like the Ram-Head at the entrance of Plymouth Sound, for which reason Captain Cook gave it the same name. What they had yet seen of the land was low and even, and the inland parts were green, and covered with wood. They now saw three water spouts at the same time, one of which continued a quarter of an hour; at six in the evening the northernmost point of the main land, which was distant about two leagues, was named *Cape Howe*. On the following day they had a distant view of the country,

Ram Head.

Cape Howe.

1770

try, which was in general covered with wood, and interſperſed with ſeveral ſmall lawns. It appeared to be inhabited, as ſmoke was ſeen in ſeveral places. At four 'clock the next morning they ſaw a high mountain, which, from its ſhape, they called *Mount Dromedary*, under which there is a point which received the name of *Point Dromedary*. In the evening they were oppoſite a point of land which roſe perpendicular, and was called *Point Upright*. On Sunday the 22d, they were ſo near the ſhore, as to ſee ſeveral of the inhabitants on the coaſt, who were of a very dark complexion, if not perfect negros. At noon they ſaw a remarkably peeked hill, to which the captain gave the name of the *Pigeon-Houſe*, from its reſemblance of ſuch a building. The trees on this iſland were both tall and large, but they ſaw no place fit to give ſhelter even to a boat.

Pigeon-Houſe

"The captain, (ſays our author) gave the name *Cape George* to a point of land diſcovered on St. George's day, two leagues to the north of which the ſea formed a bay, which, from its ſhape, was called *Long-Noſe*; eight leagues from which lies *Red Point*, ſo called from the colour of the ſoil in its neighbourhood. On the 27th they ſaw ſeveral of its inhabitants walking along the ſhore, four of them carrying a canoe on their ſhoulders, but as they did not attempt to come off to the ſhip, the Captain took Meſſrs. Banks and Solander, and Tupia in the yawl, and employed four men to row them to that part of the ſhore where they ſaw the natives, near which four ſmall canoes laid cloſe in land. The Indians ſat on the rocks till the yawl was a quarter of a mile from the ſhore, and then they ran away into the woods. The ſurf beating violently on the beach, prevented the boat from landing; the gentlemen were therefore obliged to make what obſervations they could at a diſtance. The canoes reſembled generally the ſmaller ſort of thoſe of New Zealand. They ſaw a great number of cabbage trees on ſhore; the other trees were of the palm kind, and there was no underwood among them. At five in the evening they returned to the ſhip, and a light breeze ſpringing up, they ſailed to the northward, where they diſcovered ſeveral people on ſhore, who, on their approach, retired to an eminence, ſoon after which two canoes arrived on the ſhore, and four men, who came in them, joined the others. The pinnace having been ſent a-head to ſound, arrived near the ſpot where the Indians had ſtationed themſelves, on which one of them hid himſelf among the rocks near the landing-place, and the others retreated farther up the hill. The pinnace keeping along ſhore, the Indians walked near in a line with her; they were armed with long pikes, and a weapon reſembling a ſcymitar, and, by various ſigns and words, invited the boat's crew to land; thoſe who did not follow the boat, having obſerved the approach of the ſhip, brandiſhed their weapons, and threw themſelves into threatening attitudes. The bodies, thighs, and legs of two of theſe, were painted with white ſtreaks, and their faces were almoſt covered with a white powder. They talked together with great emotion, and each of them held one of the above-mentioned weapons. The ſhip having come to an anchor, they obſerved a few huts, in which were ſome of the natives; and ſaw ſome canoes, in each of which was a man employed in ſtriking fiſh with a kind of ſpear. They had anchored oppoſite a village of about eight houſes, and obſerved an old woman and three children come out of a wood, laden with fuel for a fire; they were met by three ſmaller children, all of whom, as well as the woman, were quite naked. The old woman frequently looked at the ſhip with the utmoſt indifference, and, as ſoon as ſhe had made a fire, the fiſhermen brought their canoes on ſhore, and they ſet about dreſſing their dinner with as much compoſure, as if a ſhip had been no extraordinary ſight. Having formed a deſign of landing, they manned the boats, and took Tupia with them, and they had no ſooner come near the ſhore, than two men advanced, as if to diſpute their ſetting foot on land. They were each of them armed with different kinds of weapons. They called out aloud in a harſh tone, *toarra toarra wai!* the meaning of which Tupia did not underſtand. The captain threw them beads, nails, and other trifles, which they took up, and ſeemed very well pleaſed with. He then made ſignals that he wanted water, and uſed every poſſible means to convince them that no injury was intended. They made ſigns to the boat's crew to land, on which they put the boat in, but they had no ſooner done ſo, than the two Indians came again to oppoſe them. A muſquet was now fired between them, on the report of which, one of them dropped a bundle of lances, which he immediately ſnatched up again in great haſte. One of them then threw a ſtone at the boat, on which the captain ordered a muſquet loaded with ſmall ſhot to be fired, which wounding the eldeſt of them on the legs, he retired haſtily to one of the houſes, that ſtood at ſome litttle diſtance. The people in the boats now landed, imagining that the wound which this man had received would put an end to the conteſt. In this, however, they were miſtaken, for he immediately returned with a kind of ſhield, of an oval figure, painted white in the middle, with two holes in it to ſee through. They now advanced with great intrepidity, and both diſcharged their lances at the boat's crew, but did not wound any of them. Another muſquet was fired at them, on which they threw another lance, and then took to their heels. The Engliſh now went up to the huts, in one of which they found the children, who had ſecreted themſelves behind ſome bark. They looked at them, but left them without its being known they had ſeen them, and having thrown ſeveral pieces of cloth, ribbands, beads, and other things into the hut, they took ſeveral of their lances, and then reimbarked in the boat. The canoes on this coaſt were about 13 feet in length, each made of the bark of a ſingle tree, tied up at the ends, and kept open in the middle by the means of ſticks placed acroſs them; their paddles were very ſmall, and two were uſed at a time.

Cape George.

Long-Noſe.

Red Point.

"They now ſailed to the north point of the bay, where they found plenty of freſh water. On taking a view of the hut where they had ſeen the children, they had the mortification to find that every Indian was fled, and that they had left all the preſents behind them. The captain now went in the pinnace to inſpect the bay, and ſaw ſeveral of the natives, who all fled as he approached them. Some of the men having been ſent to get wood and water, they no ſooner went on board to dinner, than the natives came down to the place, and examined the caſks with great attention, but did not offer to remove them. When the people were on ſhore in the afternoon, about 20 of the natives, all armed, advanced within a trifling diſtance of them, and then ſtopped, while two of their number approached ſtill nearer. Mr. Hicks, the commanding officer on ſhore, went towards them, with preſents in his hands, and endeavoured, by every poſſible means to aſſure them of his friendly intentions, but to no purpoſe, for they retired before he came up to them. In the evening, Meſſrs. Banks and Solander, went with the captain to a cove north of the bay, where they caught between three and four hundred weight of fiſh, at four hauls.

"On Monday the 30th, the natives came down to the huts before it was light, and were repeatedly heard to ſhout very loud, and ſoon after day-break they were ſeen on the beach, but quickly retired about a mile, and kindled ſeveral fires in the woods. This day ſome of the ſhip's crew being employed in cutting graſs at a diſtance from the main body, while the natives purſued them, but ſtopping within fifty of ſixty yards of them, they ſhouted ſeveral times, and retreated to the woods. In the evening they behaved exactly in the ſame manner, when the captain followed them alone and unarmed for ſome time, but they ſtill retired as he approached. On Tueſday, May the firſt, the ſouth point of the bay was named *Sutherland Point*, one of the ſeamen, of the name of Sutherland, having died that day, who was buried on ſhore; and more preſents were

Sutherland Point.

were left in the huts, such as looking-glasses, combs, &c. but the former ones had not been taken away.—— Making an excursion about the country, they found it agreeably variegated with wood and lawn, the trees being strait and tall, and without underwood. The country might be cultivated without cutting down one of them. The grass grows in large tufts, almost close to each other, and there is a great plenty of it. In this excursion they met with many places where the inhabitants had slept without shelter, but they saw one man, who ran away the moment they beheld them. More presents were left in their huts, and at their sleeping-places, in hopes of producing a friendly intercourse. They saw the dung of an animal which fed on grass, and traced the foot-steps of another, which had claws like a dog, and was about the size of a wolf: they also discovered the track of a small animal, whose foot was like that of a pole-cat, and saw one animal alive, about the size of a rabbit. They found some wood that had been felled, and the bark stript off by the natives, and saw several growing trees, in which steps had been cut, for the convenience of ascending them. The woods abound with a vast variety of beautiful birds, among which were cockatooes, and parroquets, which flew in large flocks. The second lieutenant, Mr. Gore, having been with a boat in order to drudge for oysters, saw some Indians, who made signs for him to come on shore, which he declined: having finished his business, he sent the boat away, and went by land with a midshipman, to join the party that was getting water. In their way they met with more than 20 of the natives, who followed them so close as to come within a few yards of them; Mr. Gore stopped and faced them, on which the Indians stopped also, and when he proceeded again, they followed him; but they did not attack him, though they had each man a lance. The Indians coming in sight of the water-casks, stood at the distance of a quarter of a mile, while Mr. Gore and his companions reached their ship-mates in safety. Two or three of the waterers now advanced towards the Indians, but observing they did not retire, they very imprudently turned about, and retreated hastily; this apparent sign of cowardice inspired the savages, who discharged four of their lances at the fugitives, which flying beyond them, they escaped unhurt. They now stopped to pick up the lances; on which the Indians retired in their turn. At this instant the captain came up, with Messrs. Banks and Solander, and Tupia, advancing, made signs of friendship; but the poor natives would not stay their coming up to them. On the following day they went again on shore, where many plants were collected by Dr. Solander and Mr. Banks. They saw several parties of the Indians, who all ran away on their approach. Tupia having learnt to shoot, frequently stayed alone to shoot parrots, and the Indians constantly fled away from him with as much precipitation as from the English. On the 3d of May, fourteen or fifteen Indians, in the same number of canoes, were engaged in striking fish within half a mile of the watering-place. At this time, a party of the ship's crew were shooting near the fishermen, one of whom Mr. Banks observed to haul up his canoe on the beach, and approach the people who were shooting. He watched their motions unobserved by them, for more than a quarter of an hour, then put off his boat and returned to his fishing. At this time the captain, with Dr. Solander and another gentleman, went to the head of the bay to try to form some connection with the Indians. On their first landing they found several of the Indians on shore, who immediately retreated to their canoes, and rowed off. They went up the country, where they found the soil to be a deep black mould, which appeared to be calculated for the production of any kind of grain. They saw some of the finest meadows that were ever beheld, and met with a few rocky places, the stone of which is sandy, and seemed to be admirably adapted for building. In the woods they found a tree bearing cherries, if shape and colour may intitle them to that name, the juice of which was agreeably tart. 1769.
They now returned to their boat, and seeing a fire at a distance, rowed towards it; but the Indians fled at their coming near them. Near the beach they found seven canoes, and as many fires, from which they judged that each fisherman had dressed his own dinner. There were oysters lying on the spot, and some muscles roasting on the fire. They ate of these fish, and left them some beads and other trifles in return. They now returned to the ship, and in the evening Mr. Banks went out with his gun, and saw a great number of quails, some of which he shot, and they proved to be the same kind as those of England.

On the following day a midshipman having strayed from his companions, came suddenly to an old man and woman, and some children, who were sitting naked under a tree together: they seemed afraid of him but did not run away. The man wore a long beard, and both he and the woman were grey-headed; but the woman's hair was cut short. This day likewise, two of another party met with six Indians on the border of a wood, one of whom calling out very loud, a lance was thrown from a wood, which narrowly missed them. The Indians now ran off, and, in looking round they saw a youth descend from a tree, who had doubtless been placed there for the purpose of throwing the lance at them. This day the captain went up the country on the north side of the bay, which he found to resemble the moory grounds of England; but the land was thinly covered with plants about 16 inches high. The hills rise gradually behind each other, for a considerable distance, and between them is marshy ground. Those who had been sent out to fish this day, met with great success, and the second lieutenant struck a fish called the Stingray, which weighed near two hundred and fifty pounds. The next morning a fish of the same kind was taken, which weighed three hundred and fifty pounds. The name of *Botany Bay* was given to this place from the large number of plants collected by Messrs. Banks and Solander. This country produces two kinds of wood which may be deemed timber, one of which is tall and strait like the pine, and the other is hard, heavy, and dark-coloured, like *lignum vitæ*; it yields a red gum, like *dragon's blood*, and bears some resemblance of the English oak. There are mangroves in abundance, several kinds of palm, and a few shrubs. Among other kinds of birds, crows were found here, exactly like those of England. There is great plenty of water-fowls, among the flats of sand and mud; one of which is shaped like a pelican, is larger than a swan, and has black and white feathers. These banks of mud abound with cockles, muscles, oysters, and other shell-fish, which greatly contribute towards the support of the natives, who sometimes dress them on shore, and at other times in their canoes. They likewise caught many other kinds of fish with hooks and line. Botany Bay.

While the captain remained in the harbour, the English colours were displayed on shore, daily, and the name of the ship, with the date of the year, was carved on a tree near the place where they took in their water.

They sailed from Botany Bay on the 6th of May, 1770, at noon, when off a harbour, which they called *Port Jackson*, and in the evening, near a bay, to which they gave the name of *Broken Bay*. The next day at noon, the northernmost land in sight projected so as to justify the calling it *Cape Three Points*. On Wednesday the 9th, they saw two exceeding beautiful rainbows, the colours of which were strong and lively, and those of the inner one so bright, as to reflect its shadow on the water. They formed a complete semicircle, and the space between them was much darker than the rest of the sky. On Thursday they passed a rocky point, which was named *Point Stephens*. Next day they saw smoke in several places on shore, and in the evening they discovered three remarkably high hills near each other, which the captain named the *Three Brothers*. Port Jackson. Broken Bay. Cape Three Points. Point Stephens. Three Brothers.

1770

On Sunday the 13th, they saw the smoke of many fires on a point of land, which was therefore called *Smoky Cape*. And as they proceeded northward, from *Botany Bay*, the land appeared high and well covered with wood. On Tuesday morning, by the assistance of their glasses, they discovered about a score of the Indians, each loaded with a bundle, which they imagined to be palm-leaves, to thatch their houses. They traced them for more than an hour, during which time they took no notice of the ship: at length they left the beach, and were lost behind a hill, which they gained by a gentle ascent. At noon the captain discovered a high point of land, which he called *Cape Byron*. In the evening they perceived breakers at a considerable distance from the shore, so that they were obliged to tack, and get into deeper water, which having done, they lay with the head of the vessel to the land till the next morning, when they were astonished to find themselves farther to the southward than they had been the preceding evening, notwithstanding they had a southerly wind all night. In the morning they passed the breakers, near a peaked mountain, which was named *Mount Warning*, and the point off which they lay was called *Point Danger*. The next day they saw more breakers, near a point which was distinguished by the name of *Point Look out*, to the north of which lies a bay, which Captain Cook called *Moreton's Bay*, and the north point Captain Cook named *Cape Moreton*. Near this place are three hills, which were called *The Glass-Houses*, from the very strong resemblance they bore to such buildings.

Cape Moreton

Glass Houses.

On the 18th they descried a point so unequal, that it looks like two small islands lying under the land, and it was therefore called *Double Island Point*. At noon, by the help of the glasses, they discovered some sands, which lay in spots of several acres, which they observed were moveable, and that some of them had not long been in their present situation, as they saw trees half buried, and the tops of others still green, likewise the naked trunks of some that had been destroyed by the sands. At this time two beautiful water-snakes swam by the ship, which seemed to be distinguished from land-snakes, only by their broad and flat tails, which it was thought were useful to them in swimming. On the 19th they sailed by a point of land, on which a large number of Indians were assembled, from whence it was called *Indian Head*. They soon afterwards saw many more of the natives, and observed smoke in the day-time, and fire by night. The next day they saw a point, which was named *Sandy Cape*, from two large tracts of white sand that were on it. They next passed a shoal which was called *Break-Sea Spit*, because they had now smooth water, after having long encountered a high sea. They had for some days past, seen the sea-birds, called boobies, none of which they had met with before, and which, from half an hour before sun-rising, to half an hour after, were continually passing the ship in large flights, from which it was conjectured, that there was a river or inlet of shallow water to the southward, where they went to feed in the day, returning in the evening to some islands to the northward. In honour of Captain Harvey, this bay was called *Harvey Bay*.

Double Island Point.

Indian Head.

Sandy Cape.

Break Sea Spit

Harvey Bay.

On the 22d, by the help of their glasses, they discovered that the land was covered with palm-nut trees, none of which they had seen since they quitted the islands within the tropics. The next morning early, the Captain took a party of men, and being attended by Tupia and the several gentlemen on board, went on shore to examine the country. They landed a little within the point of a bay, that led into a large lagune, by the sides of which grows the mangrove, as it also does on some bogs, and swamps of salt-water, which they discovered. There were many nests of a singular kind of ant, as green as grass; when the branches of these mangroves were disturbed they came forth in great numbers, and bit the disturber most severely. These trees likewise afforded shelter for a great number of green caterpillars; their bodies were covered with hairs, which, on the touch, gave a pain similar to the sting of a nettle, but much more acute. These insects ranged themselves side by side on the leaves, thirty or forty together, in a very singular manner. They saw among the sand-banks, many birds larger than swans, which they imagined were pelicans, and they shot a kind of bustard, which weighed seventeen pounds. This bird proved very delicate food, and gave name to the place which was called *Bustard-Bay*. They likewise shot a duck of a most beautiful plumage, with a white back. They found vast numbers of oysters of various sorts, and, among the rest, some hammer oysters of a curious kind. While the English were in the woods, several of the natives came down and took a survey of the ship, and then departed. The gentlemen on shore saw fires in many places, and repairing to one of them, they found about a dozen of small fires burning near each other; but the people were gone, and had left some shells and bones of fish they had just eaten. They likewise saw several pieces of soft bark, about the length and breadth of a man, which they judged had been used as beds. This kind of encampment was in a thicket well defended from the wind; and, as the place was much trodden, and there was no appearance of a house, it was imagined that they spent their nights, as well as days, in the open air, even Tupia shook his head, and exclaimed, *Taata Enos!* "Poor wretches!" They sailed the next morning, and on the day following were a-breast of a point, which lying immediately under the tropic, the captain called *Cape Capricorn*, on the west side of which they saw an amazing number of large birds resembling the pelican, some of which were five feet high.

Bustard Bay.

Cape Capricorn.

On the 26th they stood between a range of almost barren islands, and the main land, which is mountainous. They had here very shallow water, and anchored in sixteen feet, which was not two feet more than the ship drew. Mr. Banks tried to fish from the cabin windows, but the water was too shallow. The ground, indeed, was covered with crabs, which greedily seized the bait, and held it till they were above water. These crabs were of two kinds, one of a very fine blue, with a very white belly, and the other marked with blue on the joints, and having three remarkable brown spots on the back. The captain having sent some men in a boat a-head to sound, they returned with an account, that there was not water enough for the ship to pass through; upon which they tacked about and stood back again. In the morning they sailed to the northward, and to the northernmost point of the land the captain gave the name of *Cape Manifold*, from the number of high hills appearing above it. Between this cape and the shore is a bay called *Keppel's Bay*, and some islands bearing the name of the same gentleman. On the 28th, being determined to keep the main-land close aboard, which continued to tend away to the west, they got among another cluster of islands; they were here again greatly alarmed, having on a sudden but three fathom water, in a ripling tide. They immediately put the ship about, and hoisted out the boats in search of deeper water, after which they stood to the west with an easy sail, and, in the evening, came to the entrance of a bay. On the 29th in the morning, the master sent two boats to sound the bay; and the ship was no sooner under sail than the boats made the signal, and the ship accordingly came to an anchor. As they observed the tide to flow and ebb considerably, they imagined this bay to be the entrance of a river that ran up the country. In this place the captain intended to lay the ship ashore, and clean her bottom; and accordingly landed in search of a proper place for that purpose.

Cape Manifold.

Keppel's Bay.

In this excursion, Messrs. Banks and Solander attended Captain Cook. They found walking extremely incommodious, the ground being covered with grass, the seeds of which were sharp, and bearded, so that they

they

they were continually ſticking in their cloaths, whence they worked forward to the fleſh, by means of the beard. They were likewiſe tormented with the perpetual ſtinging of the muſquitos. Several places were found convenient to lay the ſhip aſhore but they could meet with no freſh water; in the interior parts of the country they found gum-trees, on the branches of which were white ants neſts formed of clay, as big as a buſhel. On the other trees they found black ants, which formed their lodging in the body of it, after they had eaten away the pith, yet the trees were in a flouriſhing condition. They found butterflies in ſuch incredible numbers, that which ever way they looked, many thouſands were to be ſeen in the air, while every bough and twig was covered with multitudes. They likewiſe diſcovered on the ground, where it was ſuppoſed to have been left by the tide, a fiſh, about the ſize of a minnow having two ſtrong breaſt fins, with which it leaped away as nimbly as a frog, it did not appear to be weakened by being out of water, nor even to prefer that element to the land; for when ſeen in the water it leaped on ſhore, and purſued its way. It was likewiſe remarked, that where there were ſmall ſtones projecting above the water, it choſe rather to leap from one ſtone to another, than to ſwim through the water.

On the 30th, the captain went on ſhore very early, and having gained the ſummit of a hill took a ſurvey of the coaſt, and adjacent iſlands, which being done, he took Dr. Solander up an inlet which had been diſcovered the preceding day. The weather proving unfavourable, they returned early to the ſhip, having ſeen only two Indians, who followed the boat a conſiderable way along the ſhore, but the tide running ſtrong, they did not think it prudent to wait for them. This day Mr. Banks went with a party on ſhore, and having met with a piece of ſwampy ground, covered with mangroves, they reſolved to paſs it, which they did, up to the knees in mud, and ſometimes crawling on their hands, when they had ſlipt between branches of trees, which were interwoven on the ſurface of the ſwamp. Having performed this diſagreeable taſk, they arrived at a ſpot where the natives appeared to have ſlept on the graſs, and where there were the remains of a fiſh ſupper, which had been roaſted by four ſmall fires. The ſecond lieutenant, at another place, ſaw the track of a large animal, near a gulley of water; he likewiſe heard the voice of the Indians, but did not ſee any. Two turtles were ſeen at this place, ſome water-fowls, and a few ſmall land birds.

Thirſty Sound. As no water was to be found, the captain called the inlet *Thirſty Sound*, which they left on the 31ſt of May, and having ſailed round three ſmall iſlands, anchored in fifteen fathom water. On the firſt of June they got under ſail, having a number of iſlands in ſight, as far the eye could reach. On the 2d at noon they ſaw a high promontory, which was called Cape Hillſborough. *Cape Hillſborough*, and ſeemed to abound in wood and herbage, diſtributed on hills, plains, and valleys. There are numbers of ſmall iſlands in this neighbourhood, on ſome of which they ſaw ſmoke ariſing in different places. On Sunday the 3d, they diſcovered a point, which was named *Cape Conway*, and between that and Cape Hillſborough a bay, which took the name of *Repute Bay*. The land about Cape Conway is diverſified by hills and dales, lawns and woods, and forms a delightful appearance. By the help of their glaſſes they diſcovered three perſons on one of the iſlands, and a canoe, with an out-rigger, like thoſe of Otaheite; they this day named the iſlands *Cumberland Iſlands* in honour of the Duke, and a paſſage which they diſcovered, was called *Whitſunday's Paſſage*, from the day on which it was ſeen. At day-break, they were a-breaſt of a point, which took the name of *Cape Glouceſter*. Names were likewiſe given to three other places, viz. *Holborne Iſle*, *Edgecumbe Bay*, and *Cape Upſtart*, which latter was ſo called, becauſe it riſes abruptly from the low lands that ſurround it.

Cape Conway. Repute Bay. Cumberland Iſland. Whitſunday's Paſſage. Cape Glouceſter. Holborne Iſle, Edgecumbe Bay, Cape Upſtart.

On Tueſday, when near the ſhore, they ſaw very large columns of ſmoke riſing from the low lands. This day they gave name to *Cleveland Bay*, the eaſt point of which was called *Cape Cleveland*, and the weſt *Magnetical Iſle*, becauſe the compaſs did not traverſe well when they were near it. The points, as well as the main land within them, lie high, and form a barren, rugged, and rocky coaſt. On the afternoon of Thurſday they ſaw ſeveral large columns of ſmoke, likewiſe ſome canoes, and ſeveral natives, with ſome trees, that they thought were of cocoa-nut, in ſearch of which fruit Meſſrs. Banks and Solander went a-ſhore with Lieutenant Hicks; but they returned in the evening with a few plants, which they had gathered from the cabbage palm, and which had been miſtaken for the cocoa-tree. On Friday they gave the name of *Point Hillock* to a point of land, between which and Magnetic Iſle the ſhore forms *Halliſax Bay*, which affords ſhelter from all winds: at ſix this evening they were a-breaſt of a point of land which was named *Cape Sandwich*, near which lies *Rockingham Bay*. Hence they ranged northward along the ſhore, toward the cluſter of iſlands, on one of which about 40 men, women and children were ſtanding together, and looking at the ſhip with a curioſity never obſerved among theſe people before. The north point of Rockingham Bay was called *Dunk Iſle*, which is ſcarcely to be diſtinguiſhed from the ſhore, it lies ſo very near it. On Saturday morning they were a-breaſt of ſome ſmall iſlands which were named *Frankland's Iſles*, near which lie two places, which were called *Cape Grafton*, and *Green Iſland*. Here Meſſrs. Banks and Solander went aſhore with the captain, whoſe chief views were to procure water, which not being eaſy to be got, they ſoon returned on board, and the next day arrived near *Trinity Bay*, which was ſo called becauſe it was diſcovered on Trinity Sunday.

1770

Cleveland Bay. Cape Cleveland. Magnetical Iſle. Point Hillock. Halliſax Bay. Cape Sandwich. Rockingham Bay. Dunk Iſle. Frankland's Iſles. Cape Grafton. Green Iſland.

As no accident remarkably unfortunate had befallen our adventurers during a navigation of more than 1300 miles, along coaſts every where abounding with the moſt dangerous rocks and ſhoals, no name expreſſive of diſtreſs had hitherto been given to any cape or point of land which they had ſeen. But they now gave the name of *Cape Tribulation* to a point which they had juſt diſcovered, as they here became acquainted with misfortune. This cape is in 16° 6′ ſouth lat. and 214° 39′ weſt long.

Cape Tribulation.

At ſix in the evening they ſhortened ſail, to avoid the danger of ſome rocks, which were ſeen a-head, and to obſerve whether any iſlands lay in the offing, as they were now near the latitude of thoſe iſlands ſaid to have been diſcovered by Quiros. They kept ſtanding off from ſix o'clock till near nine, with a fine breeze and bright moon. They had got from fourteen into twenty-one fathom water; when ſuddenly they fell into twelve, ten, and eight fathom, in a few minutes. Every man was inſtantly ordered to his ſtation, and they were on the point of anchoring, when, on a ſudden, they had again deep water, ſo that they thought all danger at an end, concluding they had ſailed over the tail of ſome ſhoals which they had ſeen in the evening. They had twenty fathom and upwards before ten o'clock, and this depth continuing ſome time, the gentlemen who had hitherto been upon duty, retired to reſt; but in leſs than an hour the water ſhallowed at once from twenty to ſeventeen fathom, and before ſoundings could be taken, the ſhip ſtruck againſt a rock, and remained fixed, but from the motion given her by the beating of the ſurge. Every one was inſtantly on deck, with countenances fully expreſſive of the agitation of their minds. As they knew they were not near the ſhore, they concluded they had ſtruck againſt a rock of coral, the points of which being ſharp, and the ſurface ſo rough as to grind away whatever is rubbed againſt it, though with a gentle motion, they had reaſon to dread the horror of their ſituation.

The ſails being taken in, and boats hoiſted out to examine the depth of water, they found that the ſhip had been carried over a ledge of the rock, and lay in a hollow within it. Finding the water was deepeſt a-ſtern,

1770 a-ſtern, they carried out the anchor from the ſtarboard quarter, and applied their whole force to the capſtern, in hopes to get the veſſel off, but in vain. She now beat ſo violently againſt the rock, that the crew could ſcarcely keep on their legs. The moon now ſhone bright, by the light of which they could ſee the ſheathing-boards float from the bottom of the veſſel, till at length the falſe keel followed, ſo that they expected inſtant deſtruction. Their beſt chance of eſcaping ſeemed now to be by lightning her, but as they had ſtruck at high water, they would have been out in their preſent ſituation after the veſſel ſhould draw as much leſs water as the water had ſunk; but their anxiety abated a little, on finding that the ſhip ſettled on the rocks as the tide ebbed. They, however, flattered themſelves, that if the ſhip ſhould keep together till next tide, they might have ſome chance of floating her. They therefore inſtantly ſtarted the water in the hold, and pumped it up. The decayed ſtores, oil-jars, caſks, ballaſt, ſix of their guns, and other things, were thrown over-board, in order to get at the heavier articles; and in this buſineſs they were employed till day-break, during all which time not an oath was ſworn, ſo much were the minds of the ſailors impreſſed with a ſenſe of their danger. At day-light they ſaw land at eight leagues diſtance, but not a ſingle iſland between them and the main, on which part of the crew might have been landed, while the boat went on ſhore with the reſt; ſo that the deſtruction of the greater part of them would have been inevitable had the ſhip gone to pieces. It happened that the wind died away to a dead calm before noon. As they expected high water about eleven o'clock, every thing was prepared to make another effort to free the ſhip, but the tide fell ſo much ſhort of that in the night, that ſhe did not float by 18 inches, though they had thrown over-board near fifty tons weight: they now, therefore, renewed their toil, and threw over-board every thing that could poſſibly be ſpared; as the tide fell, the water poured in ſo rapidly, that they could ſcarce keep her free by the conſtant working of two pumps. Their only hope now depended on the midnight tide, and preparations were accordingly made for another effort to get the ſhip off. The tide began to riſe at five o'clock, when the leak likewiſe encreaſed to ſuch a degree, that two pumps more were manned, but only one of them would work; three, therefore were kept going till nine o'clock, at which time the ſhip righted; but ſo much water had been admitted by the leak, that they expected ſhe would ſink as ſoon as the water ſhould bear her off the rock. Their ſituation was now deplorable beyond deſcription, almoſt all hope being at an end. They knew that when the fatal moment ſhould arrive, all authority would be at an end. The boats were incapable of conveying them all on ſhore, and they dreaded a conteſt for the preference, as more ſhocking than the ſhipwreck itſelf: yet it was conſidered, that thoſe who might be left on board, would eventually meet with a milder fate than thoſe who, by gaining the ſhore, would have no chance but to linger out the remains of life among the rudeſt ſavages in the univerſe, and in a country, where fire-arms would barely enable them to ſupport themſelves in a moſt wretched ſituation.

At twenty minutes after ten, the ſhip floated, and was heaved into deep water, when they were happy to find that ſhe did not admit more water than ſhe had done before; yet as the leak had for a conſiderable time gained on the pumps, there was now three feet nine inches water in the hold. By this time the men were ſo worn by fatigue of mind and body, that none of them could pump more than five or ſix minutes at a time, and then threw themſelves, quite ſpent, on the deck, amidſt a ſtream of water which came from the pumps. The ſucceeding man being fatigued in his turn, threw himſelf down in the ſame manner, while the former jumped up and renewed his labour, thus mutually ſtruggling for life, till the following accident had like to have given them up a prey to abſolute deſpair, and thereby inſured their deſtruction.

Between the inſide lining of the ſhip's bottom, which is called the cieling, and the outſide planking, there is a ſpace of about ſeventeen or eighteen inches. The man who had hitherto taken the depth of water at the well, had taken it no farther than the ceiling, but being now relieved by another perſon, who took the depth of the outſide plank, it appeared, by this miſtake, that the leak had ſuddenly gained upon the pumps, the whole difference between the two planks. This circumſtance deprived them of all hopes, and ſcarce any one thought it worth while to labour, for the longer preſervation of a life which muſt ſo ſoon have a period: but the miſtake was ſoon diſcovered: and the joy ariſing from ſuch unexpected good news inſpired the men with ſo much vigour, that before eight o'clock in the morning, they had pumped out conſiderably more water than they had ſhipped. They now talked of nothing but getting the ſhip into ſome harbour, and ſet heartily to work to get in their anchors; one of which, and the cable of another, they loſt; but theſe were now conſidered as trifles. Having a good breeze from ſea, they got under ſail at eleven o'clock, and ſteered for land. As they could not diſcover the exact ſituation of the leak, they had no proſpect of ſtopping it within ſide of the veſſel, but the following expedient, which one of the midſhipmen had formerly ſeen tried with ſucceſs, was adopted. They took an old ſtudding-ſail, and having mixed a large quantity of oakam and wool, chopped ſmall, it was ſtitched down in handfuls on the ſail, as lightly as poſſible, the dung of their ſheep and other filth being ſpread over it. Thus prepared, the ſail was hauled under the ſhip by ropes, which kept it extended till it came under the leak, when the ſuction carried in the oakham and wool from the ſurface of the ſail. This experiment ſucceeded ſo well, that, inſtead of three pumps, the water was eaſily kept under with one.

They had hitherto no farther view than to run the ſhip into ſome harbour, and build a veſſel from her materials, in which they might reach the Eaſt Indies; but they now began to think of finding a proper place to repair her damage, and then to purſue their voyage on its original plan. At ſix in the evening they anchored ſeven leagues from the ſhore; and found that the ſhip made 15 inches water an hour during the night; but as the pumps could clear this quantity, they were not uneaſy. At nine in the morning they paſſed two iſlands, which were called *Hope Iſlands*, becauſe the reaching of them had been the object of their wiſhes at the time of the ſhipwreck. In the afternoon the maſter was ſent out with two boats to ſound and ſearch for a harbour where the ſhip might be repaired. They anchored at ſun-ſet, in four fathoms water, two miles from the ſhore. One of the mates being ſent out in the pinnace, returned at nine o'clock, reporting, that he had found ſuch a harbour as was wanted, at the diſtance of two leagues.— Hope Iſlands.

At ſix o'clock the next morning they ſailed, having previouſly ſent two boats a-head, to point out the ſhoals that they ſaw in their way. They ſoon anchored about a mile from the ſhore, when the captain went out, and found the channel very narrow, but the harbour was better adopted to their preſent purpoſe, than any place they had ſeen in the whole courſe of their voyage. As it blew very freſh this day and the following night, they could not venture to run into the harbour, but remained at anchor during the two ſucceeding days, in the courſe of which they obſerved four Indians on the hills, who ſtopped and made two fires.

The men by this time began to be afflicted with the ſcurvy; and their Indian friend Tupia, was ſo ill with it, that he had livid ſpots on both his legs. Mr. Green the aſtronomer was likewiſe ill of the ſame diſorder; ſo that their being detained from landing was every way diſagreeable. The wind continued freſh till the 17th, but they then reſolved to puſh in for the harbour, and twice ran the ſhip a-ground;— the ſecond time ſhe ſtuck faſt, on which they took

Engraved for Moore's Voyages and Travels.

Capt.n Cook having been Shipwrecked in his Voyage round the World, has the
ENDEAVOUR repaired in an Harbour on one of the HOPE ISLANDS.

7 AP 52

took the booms, fore-yard, and fore-top maſts down, and made a raft on the ſide of the ſhip; and as the tide happened to be riſing, ſhe floated at one o'clock. She was now ſoon got into the harbour where ſhe was moored along the ſide of a beach, and the anchors, cables, &c. immediately taken out of her.

On Sunday morning they erected a tent for the ſick, ſeveral of whom were brought on ſhore as ſoon as it was ready for their reception. They likewiſe built a tent to hold the proviſions and ſtores which were landed the ſame day. Though the boat was diſpatched in queſt of fiſh for proviſion for the ſick, ſhe returned without ſucceſs; but Tupia employed himſelf in angling, and the ſick ſubſiſted on what he caught, and recovered very faſt. The high land up the country was ſtony and barren, and near the river over-run with mangroves, among which at every tide the ſalt-water came up. Mr. Banks in an excurſion ſaw the frames of ſeveral houſes, which appeared to have been ſome time abandoned.

The forge was now ſet up, and preparations were made for repairing the veſſel. And this day Mr. Banks, croſſing the river to view the country, found it to be little elſe but ſandy hills. He perceived vaſt flocks of pigeons and crows, and ſhot ſeveral of the former which proved moſt beautiful. The ſhip having ſprung a leak, it was thought neceſſary to carry her higher up the harbour, to find a ſtation proper for her to be laid in while this was ſtopped.

On examining her on the 22d, it appeared that the rocks had cut through four planks into the timbers, and that three other planks were damaged; but not a ſplinter was to be ſeen in all thoſe breaches, the whole being as ſmooth as if it had been cut with an inſtrument of iron. One of theſe holes was large enough to have ſunk her even with eight pumps going; but the fiſſure was in a great meaſure ſtopped by a fragment of the rock being left ſticking in it. Some pieces of oakum, wool, &c. having gotten between the timber had likewiſe contributed to ſtop ſeveral parts which the ſtone had left open. The veſſel was beſides otherwiſe damaged.

The carpenters continued working on the ſhip, while the ſmiths were buſied in making bolts and nails, and ſome went acroſs the river to ſhoot pigeons for the ſick. They found a ſtream of freſh water, ſaw ſeveral Indian houſes, and obſerved a mouſe-coloured animal that was very ſwift. As to fiſh, though they ſaw plenty, they caught but three of them. Many of the crew ſeeing the animal juſt mentioned, declared they had ſeen the devil, deſcribing this creature in the moſt terrible manner, ſuch as they apprehended muſt be the figure of the grand foe of mankind. It ſeems theſe men had ſeen a bat which had thus ſtruck them with fear and aſtoniſhment.

The repairs of the ſhip were now going forward, the carpenters began to work on her ſtarboard ſide on the 24th. Some palm cabbages and a bunch or two of wild plantains were obtained by Mr. Gore for the refreſhment of the ſick; and the captain and Mr. Banks ſaw the above-mentioned animal, which had a long tail that it carried like a grey-hound; the point of its foot reſembled that of a goat, and it leaped like a deer.—When the veſſel was examined abaft, it was found that ſhe had not received much injury in that quarter. The carpenters, however, continued their work whenever the tide would allow them. The veſſel was now in a poſition that threw all the water abaft, in conſequence of which, Mr. Banks's collection of plants which had been removed into the bread-room were found under. Some of them were totally ſpoiled, but the greater part were reſtored by proper care and attention. They now endeavoured to float the ſhip by throwing water-caſks under her bottom; but this not ſucceeding, they were obliged to wait till the next ſpring-tide. They now found more cabbage-trees, and a fruit of a deep colour, which was about the ſize of a golden pippin, and when kept a few days taſted like a damoſcen. And a plant was diſcovered which reſembled our Engliſh ſpinage. 1770

Some of the crew went up the country with Mr. Banks, on the 28th, who ſhewed them a plant that ſerv-for greens, which was of the ſort that the Weſt-Indians call Indian kale. They ſaw here a tree notched for climbing in the ſame manner as had been obſerved in Botany Bay. They alſo met with neſts of white ants, from the height of ſeven inches to five feet. Prints of mens feet, and the tracts of ſeveral animals were diſcovered up the country. The next day a wolf was ſeen ſimilar to thoſe found in America.

Fiſh were taken in ſuch a quantity the firſt day as to allow a pound and a half to each man.

The captain aſcended a hill on the 30th, in order to take a view of the ſea, which preſented no agreeable proſpect, as there were ſhoals and ſand banks, almoſt on every ſide, but as the wind blew conſtantly from the ſouth he thought he might get clear by a paſſage that appeared to open to the northward. This day Mr. Gore ſaw two animals of a ſtraw colour, ſhaped like a dog, but about the ſize of a hare. And now ſo much fiſh was taken, and ſuch a plenty of greens gathered, that the ſhips company had no reaſon to complain of their proviſions.

All the men were allowed to go on ſhore on the 1ſt of July one excepted from each meſs, who went on the fiſhing party, which ſucceeded very well. On Tueſday the maſter, who had been ſent in the pinnace to look for a channel, returned, and brought word that he had found a paſſage between the ſhoals. He found ſome cockles ſo large that one of them was ſufficient for two men, beſides plenty of ſhell-fiſh, and of theſe he brought a ſupply. In his return to the veſſel he landed in a bay where ſome Indians were at ſupper, who fled: they found ſome ſea eggs and a fire ready to dreſs them.

The attempt to float the ſhip ſucceeded this day, but finding that by the poſition ſhe had lain in ſhe had ſprung a plank, it was judged neceſſary to lay her aſhore, which was accordingly done on the 4th, and the next day ſhe was floated at high water, and moored off the beach, in order to receive the ſtores. Mr. Banks croſſed the harbour the ſame day, and found a great number of fruits, ſuch as they had not ſeen before, among which there was a cocoa-nut, that as Tupia ſaid, had been opened by a crab. All the vegetables picked up here were interſperſed with marine productions. This gentleman having taken a boat for the purpoſe went up the river on the 6th, and returned on the 8th. Having examined the country they found it little different from what they had already ſeen, and following the courſe of the river, found it to be at length contracted within a narrow channel which was bounded by ſteep banks adorned with beautiful trees, and the bark tree among the reſt. The land was low and covered with verdure, and ſeemed capable of cultivation. Several animals were ſeen, one of which they judged to be a wolf.

Strange animals.

"At night, ſays my author, they made a fire and took up their quarters on the bank of the river, but the night was rendered extremely diſagreeable by the ſtings of the muſquitos, which purſued them into the ſmoke and almoſt into the fire. At break of day they ſet out in ſearch of game, and ſaw four animals, two of which were chaſed by Mr. Banks's greyhound; but they greatly outſtripped him in ſpeed, by leaping over the long thick graſs, which incommoded the dog in running. It was obſerved of this animal, that he leaped or bounded forward on two legs, inſtead of running on four. Having returned to the boat, they proceeded up the river, till it contracted to a brook

* This poor fellow obſerved that he was as large as a gallon, and had horns and wings; "yet (added he) crept ſo ſlowly through the graſs that if I had not been afeard I might have touched him. As to the horns that exiſted only in his fancy which was juſt then filled with frightful images.

1770 of freſh water, but in which the tide roſe conſiderably. When they ſtopped for the night, they ſaw a ſmoke at a diſtance, on which three of them approached it, but the Indians were gone. They ſaw the impreſſions of feet on the ſand, below high-water mark, and found a fire ſtill burning in the hollow of an old tree. At a ſmall diſtance they ſaw ſeveral huts, and obſerved ovens dug in the ground: the remains of a recent meal were likewiſe apparent. They now retired to their reſting-place, and ſlept on plantain leaves, with a bunch of graſs for their pillows, on the ſide of a ſand-bank under the ſhelter of a buſh. The tide favouring their return in the morning, they loſt no time in getting back to the ſhip. The maſter, who had been ſeven leagues at ſea, returned ſoon after Mr. Banks, bringing with him three turtles, which he took with a boat-hook, and which together weighed near eight hundred pounds. He was ſent out next morning, and Mr. Banks accompanied him with proper inſtruments for catching turtle: but not being ſucceſsful, he would not go back that night, ſo that Mr. Banks, after collecting ſome ſhells and marine productions, returned in his own ſmall boat.

In the morning the ſecond lieutenant was ſent to bring the maſter back, ſoon after which four Indians, in a ſmall canoe, were within ſight. The captain now determined to take no notice of theſe people, as the moſt likely way to be noticed by them. This project anſwered; two of them came within muſquet ſhot of the veſſel, where they converſed very loud; in return, the people on board ſhouted, and made ſigns of invitation. The Indians gradually approached, with their lances held up; not in a menacing manner, but as if they meant to intimate that they were capable of defending themſelves. They came almoſt along-ſide, when the captain threw them cloth, nails, paper, &c. which did not ſeem to attract their notice, at length one of the ſailors threw a ſmall fiſh, which ſo pleaſed them, that they hinted their deſigns of bringing their companions, and immediately rowed for the ſhore. In the interim, Tupia and ſome of the crew landed on the oppoſite ſhore. The four Indians now came quite along-ſide the ſhip, and having received farther preſents, landed where Tupia and the ſailors had gone. They had each two lances, and a ſtick with which they threw them. Advancing towards the Engliſh, Tupia perſuaded them to lay down their arms, and ſit by him, which they readily did. Others of the crew now going on ſhore, the Indians ſeemed jealous, leſt they ſhould get between them and their arms, but care was taken to convince them that no ſuch thing was intended, and more trifles were preſented to them. The crew ſtaid with them till dinner-time, and then made ſigns of invitation for them to go to the ſhip and eat; but this they declined, and retired in their canoe. Theſe men were of the common ſtature, with very ſmall limbs; their complexion was of a deep chocolate; their hair black, either lank or curled, but not of the woolly kind; the breaſts and upper lip of one of them were painted with ſtreaks of white, which he called *carbanda*, and ſome part of their bodies had been painted red. Their teeth were white and even, their eyes bright, and their features rather pleaſing; their voices muſical, and they repeated ſeveral Engliſh words with great readineſs.

The viſit of three of theſe Indians was renewed the next morning, and they brought with them a fourth, whom they called *Yaparico*, who appeared to be a perſon of ſome conſequence. The bone of a bird, about ſix inches long, was thruſt through the griſtle of his noſe; and indeed all the inhabitants of this place had their noſes bored, for the reception of ſuch an ornament. Theſe people being all naked, the captain gave one of them an old ſhirt, which he bound round his head like a turban, inſtead of uſing it to cover any part of his body. They brought a fiſh to the ſhip, which was ſuppoſed to be in payment for that given them the day before: after ſtaying ſome time, with apparent ſatisfaction, they ſuddenly leaped into their canoe, and rowed off, from a jealouſy of ſome of the gentlemen who were examining it.

Three Indians viſited Tupia's tent on the 12th of July, and after remaining ſome time, went for two others, whom they introduced by name. Some fiſh was offered them, but they ſeemed not much to regard it; and after eating a little, they gave the remainder to Mr. Banks's dog. Some ribbands which had been given them, to which medals were ſuſpended round their necks, were ſo changed by ſmoke, that it was difficult to judge what colour they had been, and the ſmoke had made their ſkins look darker than their natural colour, from whence it was thought that they had ſlept cloſe to their fires, as a preventative againſt the ſting of the muſquitos. Both the ſtrangers had bones through their noſes, and a piece of bark tied over their foreheads; and one of them had an ornament of ſtrings round his arm; and an elegant necklace made of ſhells. Their canoe was about ten feet long, and calculated to hold four perſons, and when it was in ſhallow water they moved it by the help of poles. Their lances had only a ſingle point, and ſome of them were barbed with fiſh bones. On the 14th Mr. Gore ſhot one of the mouſe-coloured animals above-mentioned. It chanced to be a young one, weighing more than 38 pounds; but when they are full grown, they are as large as a ſheep. The ſkin of this beaſt, which is called *Kangaroo*, is covered with ſhort fur, and is of a dark mouſe colour; the head and ears are ſomewhat like thoſe of a hare; this animal was dreſſed for dinner, and proved fine eating. The ſhip's crew fed on turtle almoſt every day, which were finer than thoſe eaten in England, owing to their being killed before their natural fat was waſted, and their juices changed.

Mr. Banks and Dr. Solander went with the captain into the woods on the 17th, and ſaw four Indians in a canoe, who went on ſhore, and walked up without ſign of fear. They accepted ſome beads, and departed, intimating that they did not chuſe to be followed. The natives being now become familiar with the ſhip's crew, one of them was deſired to throw his lance, which he did with ſuch dexterity and force, that though it was not above four feet from the ground at the higheſt, it penetrated deeply into a tree at the diſtance of fifty yards. The natives now came on board the ſhip, and were well pleaſed with their entertainment. On the 19th, they ſaw ſeveral of the women, who, as well as the men, were quite naked. They were this day viſited by ten of the natives, who ſeemed reſolved to have one of the turtles that was on board, which they repeatedly made ſigns for, and being as repeatedly refuſed, they expreſſed the utmoſt rage and reſentment, one of them in particular, having received a denial from Mr. Banks, he ſtamped, and puſhed him away in a moſt violent manner. At length they laid hands on two of the turtles, and drew them to the ſide of the ſhip where the canoe lay, but the ſailors took them away. They made ſeveral ſimilar attempts, but being equally unſucceſsful, they leaped ſuddenly into their canoe, and rowed off. At this inſtant the captain, with Mr. Banks, and five or ſix of the ſeamen, went on ſhore, where they arrived before the Indians, and where many of the crew were already employed. As ſoon as the Indians landed, one of them ſnatched a fire brand from under a pitch-kettle, and running to the windward of what effects were left on ſhore, ſet fire to the dry graſs, which burned rapidly, ſcorched a pig to death, burned part of the ſmith's forge, and would have deſtroyed a tent of Mr. Banks, but that ſome people came from the ſhip juſt in time to get it out of the way of the flames. In the mean while the Indians went to a place where the fiſhing-nets lay, and a quantity of linen was laid out to dry, and there again ſet fire to the graſs, in ſpite of all perſuaſion, and even of threats. A muſquet loaded with ſmall ſhot was fired, and one of them being wounded, they ran away, and this ſecond fire was extinguiſhed; but the other burned far into the woods.

The natives ſtill continuing in ſight, a muſquet charged with ball was fired near them, upon hearing which they ſoon got out of ſight: but their voices being heard in the wood, and ſeeming to come nearer, the captain with a few people, went to meet them. When they were in ſight of each other both parties ſtopped, except an old Indian, who advanced before the reſt a little way, but ſoon halted, and ſpeaking a few words, retreated to his brethren, and they all retired ſlowly together. The Engliſh having ſeized ſome of their darts, followed them about a mile, and then ſat down, the Indians ſitting about a hundred yards from them.

The old man again came forward, having in his hand a lance with a point. He ſtopped and ſpoke ſeveral times, on which the captain made ſigns of friendſhip. The old Indian now turned to his companions, and having ſpoken to them, they placed their lances againſt a tree, and came forward as in friendſhip, whereupon their darts, which had been taken, were returned, and the whole quarrel ſeemed at an end. The Indians having accepted ſome trinkets, walked amicably towards the coaſt, intimating by ſigns that they would not fire the graſs again. They ſat down oppoſite the ſhip, but would not go on board, and they accepted a few muſquet-balls, the uſe and effect of which the captain endeavoured to explain to them. When Captain Cook got on board, he ſaw the woods burning at the diſtance of two miles.

The maſter having been ſent to ſearch for a paſſage to the northward, returned with an accout that he could not find any. By the night of the 20th, the fire had extended many miles round them on the hills, which at night formed an appearance that was very ſtriking. On the 22d they killed a turtle, through both ſhoulders of which ſtuck a wooden harpoon, which the Indians had ſtricken it with, and the wound was quite healed. The next day, one of the ſeamen, who had ſtrayed from his company, met with four Indians at dinner; he was alarmed at this unexpected meeting, but had prudence enough to conceal his apprehenſions, and ſitting down by them gave them his knife, which having all looked at, they returned; he then would have left them, but they choſe to detain him till, by feeling his hands and face, they were convinced he was made of fleſh and blood like themſelves: they then diſmiſſed him, directing him the neareſt way to the ſhip. Mr. Banks having gone on ſhore in ſearch of plants, found the cloth that had been diſtributed among the natives, lying in a heap, as a commodity of no value. On the 24th, Meſſrs. Solander and Banks found ſeveral marking-nuts on the ground; but their ſearch for the tree that bore them was intirely fruitleſs. On the 26th Mr. Banks caught a female animal, called the *Opoſſum*, with two young ones.

By the 29th the ſhip was ready for ſea, but there was not water ſufficient for her to paſs the bar. On the firſt of Auguſt they found that the pumps were all rotten; but as the veſſel admitted only an inch of water in an hour, they hoped ſhe would be ſtout enough to hold out the voyage. On the fourth of this month they put to ſea, the pinnace going a-head to keep ſounding, and at noon came to an anchor, when the captain gave the name of *Cape Bedford* to the northernmoſt point of land in ſight, and that of *Endeavour River* to the harbour which they had quitted.

Cape Bedford.

The proviſions they obtained while in the harbour, conſiſted of turtle, which they went ſome miles to ſea to catch, oyſters of three different ſorts, large cavalhe or ſcomber, large mullets, ſome flat fiſh, a great number of ſmall ſcomber, and ſkait, or ray fiſh; purſlain, wild beans, the tops of cocoas, and cabbage palms. Of quadrupedes there are goats, wolves, and pole-cats; there are many ſerpents, only ſome of which are venomous; dogs are the only tame animals; the land fowls are kites, crows, hawks, loriquets, cockatoos, parrots, pigeons, and ſmall birds of various kinds, the names of which are not known: the water fowls are wild geeſe, curlews, hens, whiſtling ducks, which perch on trees, and ſome few others. The ſoil produces the gum-tree, and various other kinds of wood, and coarſe graſs. The whole of the country is well watered, and ant-hills abound in every part of it. 1770

The captain went to the maſt-head on the 4th to look at ſome ſhoals which threatened great danger; and he ſaw ſeveral of them above the water. This day ſuch a quantity of fiſh was caught, as allowed a dividend of two pounds to each man. During the ſix following days they ſtruggled inceſſantly to ſail ſafely paſt the ſhoals and breakers, by which they were every way ſurrounded; but, for the preſent, their attempts were vain. On the 10th, they were between a head-land, and three iſlands, which had been diſcovered on the preceding day; and began to conceive hopes that they were out of danger; but this not proving to be the caſe, the head-land received the name of *Cape Flattery*. Some land was now ſeen from the maſt-head, which was generally taken for the main, but the captain judged it to be a cluſter of iſlands; and during this diverſity of opinion, the ſhip came to an anchor. The captain now landed, and aſcending a high point, took a ſurvey of the ſea-coaſt, by which he was confirmed in his opinion, that what they had ſeen was not any part of the main, but a number of iſlands. On the point where he ſtood were ſeen the prints of human feet, in white ſand of an exquiſite fineneſs, and the ſpot was denominated *Point Look Out*.

Cape Flattery.

Point Look Out.

Early on the 11th, Mr. Banks and the captain went to viſit the largeſt of the three iſlands, which had been ſeen from the point the preceding day. Having gained the ſummit of the higheſt hill, they beheld a reef of rocks, on which the ſea broke in a frightful manner, but the thickneſs of the weather prevented a perfect view; they lodged under a buſh during the night, in hopes of having a better proſpect in the morning: but the weather proved worſe than on the preceding day: yet, as they ſaw what had the appearance of a channel between the reefs, a perſon was ſent to examine it, who found it very narrow. They now ſet out to return to the ſhip, after giving the name of *Lizard Iſland* to this place, from their having ſeen no animals but lizards on it. Upon their return they landed on a low ſandy iſland, which abounded in birds of various kinds, among which were eagles, a neſt of the young of which they took, and called the place *Eagle Iſland*. On this ſpot they ſaw the neſt of ſome birds, which was built with ſome ſticks on the ground: it was near three feet in height, and twenty-ſix round.

Lizard Iſland.

Eagle Iſland.

During the interval of their abſence from the ſhip, the maſter had landed on ſeveral low iſlands, where he had ſeen great heaps of turtle ſhells, and found the fins of them which the Indians had left hanging on the trees, ſo freſh that they were dreſſed and eaten by the boats crew. After a converſation held among the officers, it was their concurrent opinion, that it would be beſt to leave the coaſt, and ſtand out to ſea, and in conſequence of theſe ſentiments they ſailed on the 13th of Auguſt, 1770, and got through one of the channels in the reef; happy to be once more in an open ſea, after having been ſurrounded by dreadful ſhoals and rocks for near three months. They had now ſailed above 1000 miles, during all which run they were obliged to keep ſounding, without the intermiſſion of a ſingle minute; a circumſtance which it is ſuppoſed, never happened to any ſhip but the Endeavour.

The iſlands, from one of which the paſſage to the open ſea had been obſerved, were called the *Iſlands of Direction*. They abound in turtle and other fiſh, and on the beach were found bamboos, cocoa-nuts, pumice-ſtone, and ſeeds of plants, which were ſuppoſed to be carried thither by the trade winds, as the plants themſelves do not grow in the country. Having anchored on the 14th, they ſteered a weſterly courſe on the following day, to get ſight of the land, that a paſſage

between

1770

between that land and new Guinea, might not be miſſed, if there were any ſuch paſſage; early in the afternoon they had ſight of land, which had the appearance of hilly iſlands, but it was judged to be part of the main; and they ſaw breakers between the veſſel and the land, in which there was an opening, to get clear of which they ſet all their ſails, and ſtood to the northward till midnight, and then went on a ſouthward tack for about two miles, when the breeze died away to a dead calm. When day-light came on they ſaw a dreadful ſurf break at a vaſt height, within a mile of the ſhip, towards which the rolling waves carried her with great rapidity. Thus diſtreſſed, the boats were ſent a-head to tow, and the head of the veſſel was brought about, but not till ſhe was within a hundred yards of the rock, between which and her there was nothing left but the chaſm, and which had riſen and broke to a wonderful height on the rock;—but in the moment they expected inſtant deſtruction, a breeze, hardly diſcernable, aided the boats in getting the veſſel in an oblique direction from the rock. The hopes, however, afforded by this providential circumſtance, were deſtroyed by a perfect calm, which ſucceeded in a few minutes; yet the breeze once more returned, before they had loſt the little ground which had been gained. At this time a ſmall opening was ſeen in the reef, and a young officer being ſent to examine it, found that its breadth did not much exceed the length of the ſhip, but that there was ſmooth water on the other ſide of the rocks. Animated by the hope of preſerving life, they now attempted to paſs the opening; but this was impoſſible; for it having become high water in the interim, the ebb tide ruſhed through it with amazing impetuoſity, carrying the ſhip about a quarter of a mile from the reef, and ſhe ſoon reached the diſtance of near two miles, by the help of the boats. When the ebb tide was ſpent, the tide of flood again drove the veſſel very near the rocks, ſo that their proſpect of deſtruction was renewed, when they diſcovered another opening, and a light breeze ſpringing up, they entered it, and were driven through it with a rapidity that prevented the ſhip from ſtriking againſt either ſide of the channel. The ſhip now came to an anchor, and her crew were grateful for having regained a ſtation, which they had been very lately moſt anxious to quit. The name of *Providence Channel* was given to the opening through which the ſhip had thus eſaped the moſt imminent dangers. A high promontory on the main land in ſight, was denominated *Cape Weymouth*, and a bay near it *Weymouth Bay*. This day the boats went out to fiſh, and met with great ſucceſs, particularly in catching cockles, ſome of which were of ſuch an amazing ſize, as to require the ſtrength of two men to move them. Mr. Banks likewiſe ſucceeded in his ſearch for rare ſhells, and different kinds of coral.

Providence Channel.

Cape Weymouth.

Weymouth Bay.

On the 8th, they diſcovered ſeveral ſmall iſlands, which were called *Forbes's Iſlands*, and had a ſight of a high point of land on the main, which was named the *Bolt Head*. On the 19th they diſcovered ſeveral other ſmall iſlands, the land of which was low, barren, and ſandy. A point was ſeen, and called *Cape Grenville*, and a bay which took the name of *Temple Bay*. In the afternoon many other iſlands were ſeen, which were denominated *Bird Iſles*, from their being frequented by numerous flocks of birds. On the 20th many more ſmall iſlands were ſeen, on one of which were a few trees, and ſeveral Indian huts, ſuppoſed to have been erected by the natives of the main land, as temporary habitations during their viſit to theſe iſlands. On the 21ſt they ſailed through a channel, in which was a number of ſhoals; and gave the name of *York Cape* to a point of the main land which forms the ſide of the channel. A large bay is formed to the ſouth of the cape, which was called *Newcaſtle Bay*, and in which are ſeveral little iſlands; on the north ſide of the cape the land is rather mountainous, but the low parts of the country abound with trees; the iſlands diſcovered in the morning of this day, were called *York Iſles*. In the afternoon they anchored between

York Iſles.

ſome iſlands, and obſerved, that the channel now began to grow wider; they perceived two diſtant points, between which no land could be ſeen, ſo that the hope of having at length explored a paſſage into the Indian Sea, began to animate every breaſt; but, to bring the matter to a certainty, the captain took a party, and being accompanied by Meſſrs. Solander and Banks, they landed on an iſland, on which they had ſeen a number of Indians, ten of whom were on a hill, one of them carrying a bow and a bundle of arrows, the reſt armed with lances; and round the necks of two of them hung ſtrings of mother of pearl. Three of theſe Indians ſtood on ſhore, as if to oppoſe the landing of the boat, but they retired before it reached the beach. The captain and his company now aſcended a hill, from whence they had a view of near forty miles, in which ſpace there was nothing that threatened to oppoſe their paſſage, ſo that the certainty of a channel ſeemed to be almoſt indubitable. Previous to their leaving the iſland, Captain Cook diſplayed the Engliſh colours, and took poſſeſſion of all the eaſtern coaſt of the country, from the 38th deg. of ſouth latitude, to the preſent ſpot, by the name of *New South Wales*, for his ſovereign, the King of Great Britain; and three volleys of ſmall arms being fired, and anſwered by an equal number from the Endeavour, the place received the name of *Poſſeſſion Iſland*. The next morning they ſaw three naked women collecting ſhell-fiſh on the beach; and weighing anchor, gave the name of *Cape Cornwall* to the extreme point of the largeſt iſland on the north-weſt ſide of the paſſage; ſome low iſlands near the middle of the channel receiving the name of *Wallis's Iſle*; ſoon after which the ſhip came to an anchor, and the long boat was ſent out to ſound.

New South Wales.

Poſſeſſion Iſland.

Cape Cornwall.

Wallis's Iſle.

Towards evening they ſailed again, and the captain landed with Mr. Banks, on a ſmall iſland which was frequented by immenſe numbers of birds, the majority of which being boobies, the place received the name of *Booby Iſland*. They were now advanced to the northern extremity of New Holland, and had the ſatisfaction of viewing the open ſea to the weſtward. The north-eaſt entrance of the paſſage is formed by the main land of New Holland, and by a number of iſlands which took the name of the *Prince of Wales's Iſlands*, and which Captain Cook imagines may reach to New Guinea; theſe iſlands abound with trees and graſs, and were known to be inhabited, from the ſmoke that was ſeen aſcending in many places.

Booby Iſland.

Prince of Wales Iſland's

To the paſſage they had ſailed through, Captain Cook gave the name of *Endeavour Streights*. New South Wales is a much larger country than any hitherto known which is not deemed a continent, being larger than all Europe; which is proved by the Endeavour's having coaſted more than 2000 miles, even if her tract were reduced to a ſtrait line. Northward of the latitude of 33 degrees, the country is hilly, but not mountainous; but to the ſouthward of that latitude it is moſtly low and even ground. The hills in general are diverſified by lawns, and woods, and many of the valleys abound with herbage, though, on the whole, it cannot be deemed a fertile country. To the northward the graſs is not ſo rich, nor the trees ſo high as in the ſouthern parts, and almoſt every where, even the largeſt trees grow at a diſtance of not leſs than thirteen yards aſunder. In all theſe places where the land forms a bay, the ſhore is covered with mangroves, which grow about a mile in land, in a ſwampy ground, which the ſpring tides always overflow; in ſome parts there are bogs, covered with thick graſs, and there is plenty of under wood in the valleys; the ſoil in general ſeems unfit for cultivation, though there are many ſpots where the arts of tillage might be attended with ſucceſs.

Endeavour Streights.

There are ſeveral ſalt creeks running in many directions, through the country, where there are alſo brooks of freſh water, but there are no rivers of any conſiderable extent; yet it ſeemed to be well watered, as the time when the ſhip was on the coaſt, was reckoned the drieſt ſeaſon of the year. The gum-tree which

yields a reſin like the dragon's blood. Here are three kinds of palm trees, two of which are found only in the northern diſtrict. Nuts ſomewhat reſembling cheſnuts are produced by one of theſe, which were ſuppoſed to be eatable, yet ſome of the ſeamen having made free with them were taken very ill; two of whom died within a week, and it was not without difficulty that the the third was recovered. The ſecond ſort of palm is much like the Weſt Indian cabbage-tree, which yields a cabbage of an agreeable taſte. The third ſort abounds in the ſouthern part, produces a ſmall cabbage of a very agreeable flavour, and bears many nuts, which furniſh food for hogs. There is likewiſe a tree on which grows a purple apple that taſtes like a damoſcen, as we have before obſerved. Beſides theſe there is a fig-tree, producing figs, but not of the fineſt ſort, and they have another which bears a ſort of plumb that is flat on the ſides like a cheeſe. A plant was found here, the leaves of which were like thoſe of the bulruſh; it yields a bright yellow reſin, that reſembles gumbouge, but does not ſtain—it had a very agreeable ſmell.

There are two ſorts of yams, the one round and covered with ſtringy fibres, and the other in ſhape like a radiſh; both of which are of a pleaſant taſte. A fruit of a diſagreeable flavour was found, in ſhape reſembling a pine-apple; and another that was much like a cherry, but had a ſoft kernel. The country produces purſlain and wild parſly.

The Engliſh ſaw here beſides the beaſt already mentioned one that was called a quall, the belly of this animal was quite white, its back was brown with white ſpots; and it was like a pole-cat. Vaſt numbers of beautiful pigeons were obſerved here, and the ſeamen ſhot many of them. There are alſo eagles, hawks, cranes, herons, buſtards, crows, parrots, parroquets, cockatoos, and ſome other birds of fine plumage; beſides quails and doves.

There are but few inſects in this country, and the ants and muſquitos are the chief among them. There are four kinds of the former which deſerve particular notice. The firſt of theſe are entirely green, and live on trees, where they build their neſts in a very curious manner, bending down the leaves, and gluing them together with an animal juice, ſuppoſed to proceed from their own bodies. While ſeveral of theſe animals were buſied in this employ, thouſands were joined to keep the leaf in its proper ſituation, which, when they were diſturbed in their work, flew back with a force that any one would have imagined to be ſuperior to their united ſtrength: at the ſame time they avenged themſelves by ſeverely ſtinging their diſturbers. The ſecond ſpecies of ants here are black, and live in the inſide of the branches, after they have worked out the pith. The third ſort lodged themſelves in the root of a plant that twines round the trunks of other trees. This they made hollow, and cut into a great number of paſſages that ran acroſs each other, yet there was no appearance of the plants having been injured. They were not above half the ſize of the red ants of this country. As to the fourth ſort, they were like the Eaſt-Indian white ants, and had one ſort of neſts as big as a half-peck loaf which hung from the boughs of trees, and were compoſed of ſeveral minute parts of vegetables, which appeared to be ſtuck together by the glutinous juice before-mentioned. There was a communication between the cells, and there were paſſages to other neſts upon the ſame tree, they had alſo a hollow covered paſſage to another neſt on the ground, at the root of a different tree. The height of the ground neſts was found to be about ſix feet, and the breadth nearly the ſame; and the outſide was plaiſtered with clay almoſt two inches thick. Theſe had a ſubterraneous paſſage leading to the roots of the trees near which they were conſtructed, from whence theſe creatures aſcended the trunk and branches by covered ways, calculated for the purpoſe. It was concluded that the ants reſorted to theſe ground-neſts during the wet ſeaſon, as they were water proof.

Variety of fiſh is ſupplied by the ſeas in theſe parts; among which are mullets, cray-fiſh and crabs. Upon the ſhoals are found the rock, pearl, and other oyſters, as well as the moſt delicate green turtle, beſides thoſe enormous cockles which have been already mentioned. Alligators are found in the rivers and ſalt creeks. The country does not appear to be inhabited by numbers any way proportioned to its great extent; not above thirty being ever ſeen together but once, which was when thoſe of both ſexes and all ages got together on a rock off Botany Bay, to view the ſhip. None of their villages conſiſted of more huts than would afford ſhelter for fourteen or fifteen men, and theſe were the largeſt numbers that were aſſembled with a a view to attack the Engliſh. No part of the country appeared to be cultivated, whence there muſt neceſſarily be fewer inhabitants on the inland parts than on the ſea-coaſt. The men are well made, of the middle ſize, and active, in a high degree; but their voices are ſoft, even to effeminacy. Their colour is chocolate; but they were ſo covered with dirt, as to look almoſt as black as negros. Their hair is naturally long and black, but they commonly cropped it ſhort; in ſome few inſtances it is ſlightly curled, but in common quite ſtrait; it is always matted with dirt, yet wholly free from lice; their beards are thick and buſhy, but kept ſhort by ſinging. The women were ſeen only at a diſtance, as the men conſtantly left them behind when they croſſed the river. The chief ornament of theſe people is the bone that is thruſt through the noſe, which the ſailors whimſically called their ſprit-ſail yard; but beſides this they wore necklaces formed of ſhells, a ſmall cord tied twice or thrice round the arm between the elbow and ſhoulder, and a ſtring of plaited human hair round the waiſt. Some few of them had an ornament of ſhells hanging acroſs the breaſt. Beſides theſe ornaments they painted their bodies and limbs white and red, in ſtripes of different dimenſions; and they had a circle of white round each eye, and ſpots of it on the face. Their ears were bored, but they did not wear ear-rings. 1770

Theſe people accepted whatever was given them, but ſeemed to have no idea of making an adequate return; and they would not part with their ornaments for any thing that was offered in exchange. Their bodies were marked with ſcars, which they ſignified were in remembrance of the deceaſed. Their huts were built with ſmall rods, the two ends of which were fixed into the ground, ſo as to form the figure of an oven; they are covered with pieces of bark and palm-leaves. The door of this building, which is only high enough to ſit upright in, is oppoſite to the fire-places. They ſleep with their heels turned up towards their heads; and even in this poſture the hut will not hold more than four people. In the northern parts, where the weather was warmer, one ſide of the houſes was left open, and the other oppoſed to whatever wind might blow at the time there; huts were only built for temporary uſe, and left behind when they removed to other parts of the country; but if their ſtay was only for a night or two, they had no other protection from the weather than what the graſs and buſhes afforded. While the huts on the main land were turned from the wind, thoſe on the iſlands were towards it: a kind of proof that they viſit the iſlands in fine weather, and enjoy the refreſhing breeze while they ſlept. Theſe huts are furniſhed with a kind of bucket for fetching water, made of an oblong piece of bark tied up at each end with the twig of a tree; and this is the only furniture of the houſe. On their backs they have a kind of bag, of the ſize and form of a cabbage-net, in which they carry their fiſh-hooks and lines, of the ſhells of which they make theſe hooks; the ornaments which they wear conſiſt of ſome points of darts, and two or three bits of paint; and in this narrow compaſs lie all their riches.

They feed on the kangaroo, and ſeveral kinds of birds when they can catch them; they likewiſe eat yams, and various kinds of fruit; but the principal article

1770 of their exiſtence is fiſh. They were frequently obſerved with the leaves of a tree in their mouths, but whether it had the qualities of either tobacco or beetle could not be known; but it was obſerved not to diſcolour the teeth or lips.

From the notches that were ſeen in a great number of trees, for the purpoſe of climbing them, it was imagined that their method of taking the kanguroo, was by ſtriking it with their lances as it paſſed under the tree. In theſe likewiſe, it is probable, that they took birds, while they were rooſting, as they ſeemed too ſhy to be otherwiſe catched. Their method of producing fire, and extending the flames of it is very ſingular: having wrought one end of a ſtick into an obtuſe point, they place this point upon a piece of dry wood, and turning the upright ſtick very faſt backward and forward between their hands, fire is ſoon produced, nor is it encreaſed with leſs celerity. One of the natives was frequently obſerved to run along the ſea coaſt, leaving fire in various places. The method taken to do this was as follows: before he ſet off, he wrapped up a little ſpark of fire in dry graſs, and the quickneſs of his motion ſoon fanning it into a flame, he then placed it on the ground, and putting a ſpark of it in another bit of graſs ran on again, and encreaſed the number of his fires at pleaſure. Theſe fires were ſuppoſed to be intended for the taking of the kanguroo, as that animal was ſo very ſhy of fire, that when purſued by the dogs, it would not croſs places which had been newly burnt, even when the fire was extinguiſhed.

The natives of New South Wales make uſe of ſpears or lances, but theſe are very differently conſtructed: thoſe that were ſeen in the ſouthern parts of the country had four prongs, pointed with bone, and barbed, and the points were rubbed with a kind of wax, the ſmoothneſs of which made an eaſier paſſage into what was ſtruck by them. On the contrary, the lances in the northern parts have only one point; the ſhafts of them are of different lengths, from eight to fourteen feet, are made of the ſtalk of a plant not unlike a bulruſh, and conſiſts of ſeveral joints let into each other, and tied together. The points of theſe lances are ſometimes made of fiſh-bone, and ſometimes of a hard heavy wood; they are barbed with other pieces of wood or ſtone, ſo that when they have entered any depth in the body, they cannot be drawn out without tearing the fleſh in a ſhocking manner, or leaving ſplinters behind them. When the natives intend to wound at a conſiderable diſtance, they diſcharge this inſtrument with a throwing ſtick, but if the object be near them, it is thrown from the hand only. The throwing-ſtick is a piece of ſmooth, hard, red wood, half an inch thick, two inches broad, and about three feet in length, having a croſs piece near four inches long at one end, and a ſmall knob at the other. A ſmall hollow is made in the ſhaft of the lance, near the point, and in this hollow the knob is received, but, on being forced forward, it will eaſily ſlip from it. The lance being placed on this throwing-ſtick, the Indian holds it over his ſhoulder, ſhakes it, and then throws both lance and ſtick with his utmoſt power; but as the croſs-piece ſtrikes the ſhoulder, the ſudden jerk ſtops the ſtick, while the lance is driven forward with amazing rapidity, and is generally ſo well aimed, that a mark at the diſtance of fifty yards is more certainly ſtruck with it than by a bullet from a gun. Theſe people make uſe of ſhields made of the bark of trees, of about eighteen inches broad, and three feet long. Many trees were ſeen from whence the bark had been taken, and others on which the ſhields were cut out but not taken away. In the northern parts of this country, the canoes are formed by hollowing the trunk of a tree, and it was conjectured, that this operation muſt have been performed by fire, as the natives did not appear to have any inſtruments proper for the purpoſe. The canoes are in length about fourteen feet, and ſo narrow, that they would be frequently overſet, but that they are provided with an out-rigger. The natives row them with paddles, uſing both hands in that employment. The canoes in the ſouthern parts are formed only of a piece of bark four yards long, faſtened together at each end, and the middle kept open by pieces of wood, paſſing from ſide to ſide. In deep water theſe are rowed by paddles, of about a foot and an half in length, the rower having one in each hand, but in ſhallow water they are puſhed forward by means of a long ſtick. As theſe veſſels are extremely light, and draw very little water, the Indians run them on the mud banks in ſearch of ſhell-fiſh, ſome of which, it is probable, they broil and eat as ſoon as they are taken, as it was remarked that in the centre of theſe veſſels there was uſually a fire burning on a quantity of ſea-weed. The natives have no tools but a wooden mallet, a kind of wedge, and an adze, made of ſtone, with ſome pieces of coral and ſhells, which may poſſibly be applied to the purpoſes of cutting. They poliſh the points of their lances, and their throwing-ſticks, with the leaves of a tree that appears to be the wild fig, which bites with a ſharpneſs, almoſt equal to that of a raſp. Four people are the greateſt number that a canoe will contain: and when more than this number were to paſs a river, three were landed out of the firſt freight, and one man went back for the reſt. Though it appeared evident that the natives of theſe iſlands waged war with each other by the weapons they poſſeſſed, yet not a wound

a wound received from their enemies appeared on any of their bodies.

In attempting to weigh anchor in the morning of the 24th of Auguſt, 1770, the cable broke near the ring, on which another anchor was dropped in order to prevent the veſſel from driving. In the afternoon the loſt anchor was found, and the ſhip brought up to it; juſt as they were going to ſhip it, the hawſer ſlipped, and thus their labour was for that time rendered uſeleſs. However their attempt being renewed the next morning, ſucceeded to their wiſh, and ſoon after the anchor was weighed, the ſhip got under ſail ſteering north-weſt.

A few hours afterwards, one of the boats a-head made the ſignal for ſhallow water. On this the veſſel brought too immediately, with all her ſails ſtanding, when on ſurveying the ſea around her, it appeared that ſhe had had a moſt fortunate eſcape, being almoſt incompaſſed with ſhoals, between which ſhe was ſo ſituate, that had ſhe been half a cable's length on either ſide the track which they had followed, they would moſt certainly have ſtruck before the ſignal was made which was to warn them of their danger.

Captain Cook now determined to alter his courſe, and ſailing again the next morning, he ſoon got into deep water. After this he ſteered weſterly, and no land being within ſight, held on till the duſk of the evening, when they ſhortened ſail, making oppoſite tacks during the night. They purſued their voyage the next morning, ſhortening ſail at night as before, and tacking till the 28th at day-break, when they ſteered due north, in purſuance of their former plan.

As they proceeded, the ſea was obſerved in many parts, covered like a ſcum, which the ſailors called Spawn. On examination, this was found to conſiſt of a vaſt number of minute particles, each of which being obſerved through a microſcope, was found to conſiſt of a conſiderable number of tubes, which were ſubdivided into little cells. On burning this ſcum, it did not yield the ſmell of an animal ſubſtance, but was concluded to be of the vegetable kind, and it was afterwards called Sea Saw-duſt, inſtead of Spawn by the ſailors.

In the evening a bird called the Noddy, was found among the rigging. As land was ſeen from the maſt-head, they ſtood on and off all night, and at day-break they ſailed towards it with a briſk gale of wind. Between ſix and ſeven o'clock they ſaw a ſmall iſland at about three miles diſtance from the main land, diſtinguiſhed by the names of *Whermoyſon* and *St. Bartholomew*. This iſland is very flat, and it is cloathed with trees, and among them is that which bears the cocoa. By the ſmoke ſeen on various parts of it, it was judged to be inhabited. As the water was ſhallow, boats had been ſent out to ſound; but ſignals were made for them to return, as no increaſe was found in the depth after ſailing two leagues. The captain then ſtood out to ſea till midnight, after which he tacked and ſtood in for land till the morning. They ſaw land from the deck about the diſtance of four leagues, and obſerved its appearance to be ſtill flat and woody. A great quantity of the ſcum already mentioned was now again ſeen upon the ſurface of the ſea.

St. Bartholomew.

They proceeded on a northward courſe juſt in ſight of land, till the 3d of September, but the water being barely deep enough to navigate the veſſel, it proved impoſſible to bring her near enough to gain the ſhore, for which reaſon it was determined to land in one of the boats.

Accordingly the captain, with Mr. Banks and Dr. Solander, the boat's crew, and Mr. Banks's ſervants, ſet out in the pinnace, but, on account of the ſhallow water, were obliged to wade on ſhore, when they came within about two hundred yards of the land. From the prints which they had ſeen of human feet on the land, between high-water mark, they concluded that ſome of the natives had been there very lately. They ſaw a thick wood about a hundred yards from the beach, and walked on the borders of it till they arrived on the banks of a brook, which was ſhaded with cocoa-nut trees; at a little diſtance from which ſtood an Indian hut, thatched with leaves; and many cocoa nut-ſhells were ſcattered round it, the fruit of which appeared to have been lately gathered. Here were alſo found plantains, and the bread fruit-tree. 1770

The gentlemen were at the diſtance of about a quarter of a mile from the pinnace, when three of the Indians ran out of the woods, about an hundred yards behind them, ſhouting loudly. Theſe people ran towards the Engliſh, and the firſt of the three threw ſomething which flew on one ſide of him, and burned like gun-powder, though it made no noiſe: at the ſame time the others caſt their lances. The Engliſh firing they ſtopped, and threw another lance; but the muſquets being loaded with ball and fired at them, the Indians retired with precipitation. The captain not willing to prolong this conteſt, returned with his people towards the boat, whoſe crew made ſignals that more of the natives were coming down: ſeveral of them were preſently diſcovered, who ſtopped, ſeeming to wait for their main body, while the gentlemen having reached their boat, rowed a-breaſt of them. It was obſerved that their ſtature was nearly the ſame with that of the people of South-Wales; but their colour was not quite ſo dark. Like them, however, theſe wore their hair ſhort. While they were thus taking a ſurvey of the natives, the latter let off their fires in a regular manner a few at a time: They ſeemed to be diſcharged by means of a piece of ſtick, almoſt like a hollow cane, which being ſwung ſideways, produced fire and ſmoke exactly like that occaſioned by the firing of ſmall arms. The crew on board the ſhip ſaw this ſtrange phœnomenon, and thought the natives had fire-arms. The gentlemen having ſatisfied their curioſity by attentively looking at theſe people fired ſome muſquets above their heads, the balls from which being heard to rattle among the trees, the natives deliberately retired. The lances which had been thrown ſoon after the gentlemen landed, were made of a reed or bamboo cane, and the points were of hard wood, barbed in ſeveral places.—It was imagined theſe lances were diſcharged by means of a throwing-ſtick, as they flew with great ſwiftneſs above ſixty yards. When this party returned to the ſhip, ſome of the officers entreated the captain to ſend men on ſhore to cut down the cocoa-nut trees, in order to procure the nuts; but this, with equal wiſdom and humanity he refuſed; ſenſible that the poor Indians, who would ill brook even the landing of a ſmall party on their coaſt, would riſque their lives, and of courſe ſacrifice them, in defence of their property. The whole coaſt of this country is low land, but cloathed with a richneſs of trees and herbage, which is beyond deſcription beautiful.

On Monday, the 3d of September, the ſhip got under ſail, and early in the morning of the 8th paſſed two ſmall iſlands, on the latter of which Captain Cook would have landed, but as they had then only ten fathom water, and as the ground was rocky, and the wind blew freſh, he might have endangered the ſafety of the ſhip. They now ſailed at a moderate rate, with various ſoundings, till three o'clock the next morning; after which they had no ground with 120 fathom. Before noon, they had ſight of land, which was conjectured to be either the Arrou Iſlands, or Timor Laoet; but they are not accurately laid down in any of the charts hitherto publiſhed.

On the evening of the 9th they ſaw what had the appearance of land, and the next morning were convinced that the firſt land they had ſeen was Timor, and the laſt Timor Laoet. The ſhip ſtood off and on during the night, when a number of fires were ſeen on this iſland, and the next morning ſmoke was ſeen in ſeveral places, from whence it was conjectured that the place was well peopled. The land near the ſhore was covered with high trees, not unlike pines; farther back were cocoa-trees and mangroves; there were many

1769

many ſalt-water creeks, and ſeveral ſpots of ground which appeared to have been cleared by art; and the whole country roſe, by gradual ſlopes, into hills of a very conſiderable height. The land and ſea breezes being now very ſlight, they continued in ſight of the iſland for two days, when it was obſerved that the hills reached in many places quite to the ſea-coaſt, and where that was not the caſe, there were large and noble groves of the cocoa-nut tree, which ran about a mile up the country, at which diſtance great numbers of houſes and plantations were ſeen; the plantations were ſurrounded with fences, and extended nearly to the ſummits of the moſt lofty hills, yet neither the natives nor cattle were ſeen on any of them, which was thought a very extraordinary circumſtance. Fine groves of the fan-palm ſhaded the houſes from the rays of the ſun. On the 16th they had ſight of the little iſland called *Rotte*; and the ſame day ſaw the *Iſland Semau*, at a diſtance to the ſouthward of Timor. The Iſland of Rotte is chiefly covered with buſhy wood without leaves; but there are a number of fan-palm trees on it, growing near the ſandy beaches; and the whole conſiſts of alternate hills and valleys. The iſland of Semau is not ſo hilly as Timor, but reſembles it greatly in other reſpects.

Rotte.
Semau Iſland.

At ten o'clock this night a dull reddiſh light was ſeen in the air, many parts of which emitted rays of a brighter colour, which ſoon vaniſhed and were ſucceeded by others of the ſame kind. This phœnomenon, which reached about ten degrees above the horizon, bore a conſiderable reſemblance to the Aurora Borealis only that the rays of light which it emitted had no tremulous motion: it was ſurveyed for two hours, during which time its brightneſs continued undiminiſhed. As the ſhip was now clear of all the iſlands which had been laid down in ſuch maps as were on board, they made ſail during the night, and were ſurpriſed the next morning at the ſight of an iſland to the weſt-ſouth-weſt, which they flattered themſelves was a new diſcovery. Before noon they had ſight of houſes, groves of cocoa-nut trees, and large flocks of ſheep. This was a welcome ſight to people whoſe health was declining for want of refreſhment, and it was inſtantly reſolved to attempt the purchaſe of what they ſtood ſo much in need of. The ſecond lieutenant was immediately diſpatched in the pinnace, in ſearch of a landing place; and he took with him ſuch things as it was thought might be acceptable to the natives.—During Mr. Gore's abſence, the people on board ſaw two men on horſeback upon the hills, who frequently ſtopped to take a view of the veſſel. The lieutenant ſoon returned with an account that he had entered a little cove, near which ſtood a few houſes; that ſeveral men advanced and invited him to land; and that they converſed together ſo well as they could by ſigns. He reported that theſe people were very like the Malays, both in perſon and dreſs; and ſaid they had no other arms but a knife which each of them wore in his girdle.

The lieutenant not being able to find any place in which the ſhip might come to anchor, he was diſpatched again with money and goods to buy ſuch neceſſaries as were immediately wanted for the ſick. Dr. Solander attended the lieutanant, and during their abſence, the ſhip ſtood on and off the ſhore. Soon after the boat had put off, two other horſemen were ſeen from the ſhip, one of whom had a laced hat on, and was dreſſed in a coat and waiſtcoat, of the faſhion of Europe. Theſe men rode about on ſhore taking little notice of the boat, but regarding the ſhip with the utmoſt attention. As ſoon as the boat reached the ſhore, ſome other perſons on horſeback, and many on foot haſtened to the ſpot, and it was obſerved that ſome cocoa-nuts were put into the boat, from whence it was concluded, that a traffick had commenced with the natives. A ſignal being made from the boat that the ſhip might anchor in a bay at ſome diſtance, ſhe immediately bore away for it. When the lieutenant came on board, he reported, that he could not purchaſe any cocoa-nuts, as the owner of them was abſent, and that what he had brought were given him, in return for which he had preſſed the natives with ſome linen. The method by which he learned that there was a harbour in the neighbourhood, was by the natives drawing a kind of rude map on the ſand, in which the harbour, and a town near it, was repreſented; it was likewiſe hinted to him, that fruit, fowls, hogs, and ſheep might be there obtained in great abundance. He ſaw ſeveral of the principal inhabitants of the iſland, who had chains of gold about their necks, and wore fine linen. The word *Portugueſe* being frequently repeated by the Indians, it was conjectured that ſome natives of Portugal were in the iſland, and one of the boat's crew being of that kingdom, he ſpoke to the iſlanders in his own language, but ſoon found that they had only learned a few words, of which they did not know the meaning. While the natives were endeavouring to repreſent the ſituation of the town near the harbour, one of them, in order to be more particular in directions, informed the Engliſh that they would ſee ſomething which he endeavoured to deſcribe by placing his fingers acroſs each other; and the Portugueſe ſailor took it for granted, that he could mean nothing but a croſs. When the boat's crew were on the point of returning to the ſhip, the gentleman who had been ſeen on horſeback in the dreſs of Europe, came down to the beach; but the lieutenant did not think it proper to hold a conference with him, becauſe he had left his commiſſion on board the ſhip.

When the ſhip had entered the bay, in the evening, according to the directions received, an Indian town was ſeen at a diſtance; upon which a jack was hoiſted on the fore-top-maſt head, preſently afterwards three guns were fired, and Dutch colours were hoiſted in the town; the ſhip, however, held on her way, and came to an anchor at ſeven in the evening. The colours being ſeen hoiſted on the beach the next morning, the captain concluded, that the Dutch had a ſettlement on the iſland, he therefore diſpatched the ſecond lieutenant to acquaint the governor, or other principal reſident, who they were, and that the ſhip had put in for neceſſary refreſhments. The lieutenant having landed, he was received by a kind of guard of ſomething more than twenty Indians, armed with muſquets, who after they had taken down the colours from the beach, proceeded without the leaſt military order; and thus eſcorted him to the town, where the colours had been hoiſted the preceding evening. The lieutenant was now conducted to the Raja, or king of the iſland, to whom, by means of a Portugueſe interpreter, he made known his buſineſs. The Raja ſaid, he was ready to ſupply the ſhip with the neceſſary refreſhments, but that he could not trade with any other people than the Dutch, with whom he was in alliance, without having firſt obtained their conſent; he added, however, that he would make application to the Dutch agent, who was the only white man among them. To this agent, whoſe name was Lange, and who proved to be the perſon that was ſeen from the ſhip in the European dreſs, a letter was diſpatched, and in a few hours he came to the town, behaved politely to the lieutenant, and told him he might buy what he thought proper of the inhabitants of the iſland. This offer being freely made, and readily accepted, the Raja and Mr. Lange intimated their wiſhes to go on board the ſhip, and that two of the boat's crew might be left as hoſtages for their ſafe return. The lieutenant gratified them in both theſe requeſts, and took them on board juſt before dinner was ſerved. It was thought that they would have ſat down without ceremony; but now the Raja intimated his doubts, whether, being a black, they would permit him to ſit down with them. The politeneſs of the officers ſoon removed his ſcruples, and the greateſt good humour and feſtivity prevailed among them. As Dr. Solander and another gentleman on board, were tolerable proficients in Dutch, they acted as interpreters between Mr. Lange and the

officers, while ſome of the ſailors, who underſtood Portugueſe, converſed with ſuch of the Raja's attendants as ſpoke that language. The chief part of the dinner was mutton, which the Raja having taſted, he begged an Engliſh ſheep and the only one which they had left was given him; he then aſked for a dog, and Mr. Banks gave him his greyhound; and a ſpying glaſs was preſented to him, on Mr. Lange's intimating that it would be acceptable. The viſitors now told Captain Cook, that there was great plenty of fowls, hogs, ſheep, and buffalos, on the iſland, numbers of which ſhould be conveyed to the ſea ſhore on the following day, that he might purchaſe what was neceſſary for the recovery of the ſick and for ſea ſtores. This welcome news gave great ſpirits to the company, and the bottle went ſo briſkly round, that Mr. Lange and his companions became almoſt intoxicated; they had, however, the reſolution to expreſs a deſire to depart, before they were quite drunk. When they came upon deck, the mariners were under arms to receive them; and the Raja intimating that he ſhould be glad to ſee them exerciſe, the captain gave orders that he ſhould be indulged, and three rounds were fired. He was equally pleaſed and ſurprized at their manœuvres, and particularly charmed when they cocked their firelocks, exclaiming violently, "That all the locks made but one click." This being ended, Meſſrs. Solander and Banks went on ſhore with the viſitors, who were ſaluted at their departure with nine guns, which they returned with three cheers.

When they came to the town, the Engliſh taſted their palm wine, which was ſweet, and not unpleaſant; it is made of the freſh juice of the trees, without being fermented. The houſes of the natives conſiſted of nothing more than a floor of boards, over which was a roof of thatch, ſupported by pillars about four feet in height.

On the following day the captain, attended by ſeveral gentlemen, went on ſhore to return the Raja's viſit; but their principal intention was to buy the refreſhments which had been mentioned the preceding day. When they landed they were chagrined to find the cattle had not been driven down to the beach. They went on to the town, where they obſerved that the houſe of aſſembly, and ſome few other houſes which had been built by the Dutch Eaſt India Company, were diſtinguiſhed from the houſes of the natives by having a piece of wood, almoſt in the ſhape of cows horns, fixed at each end of the roof; and theſe they concluded were what the Portugueſe ſailor had imagined to be croſſes, from the Indian's having croſſed his fingers when he was deſcribing the town. The Raja was at the place of aſſembly, ſurrounded by many of his principal ſubjects, and Mr. Lange alſo attended. Captain Cook having informed them, that he had loaded his boat with goods, which he wiſhed to exchange for neceſſary refreſhments, permiſſion was given him to land his effects. The Captain now endeavoured to make an agreement for the hogs, ſheep, and buffalos which were to be paid for in caſh; but this buſineſs was no ſooner hinted at than Mr. Lange took his leave, having firſt told the captain, that he had received a letter from the governor of Concordia, in Timor, the contents of which ſhould be diſcloſed at his return. As they had now no freſh proviſions on board, the gentlemen were unwilling to return to the ſhip before they had dined, they therefore requeſted the Raja's permiſſion to buy a ſmall hog and ſome rice, and hoped he would order his people to dreſs the dinner. To this the Raja very obligingly replied, That if the gentlemen had ſtomach to eat of Indian cookery, he would have the honour of conſidering them as his gueſts. A dinner being thus procured, the captain ſent off the boat to bring liquors from the ſhip. Late in the afternoon the company ſat down on mats, which had been ſpread for them on the floor, having been firſt conducted to a ſervant, who had a veſſel made of the leaves of the fan-palm, containing water to waſh their hands, in which the Indian aſſiſted them. Having waited ſome time for the Raja, they enquired the reaſon of his abſence, and were informed, that the perſon who gave the entertainment never partook of it; but that the Raja was ready to come and taſte of what was provided, if the gentlemen entertained any idea that the meat was unwholeſome. They aſſured the natives that they did not harbour any ſuch ſuſpicion, and began their dinner, which conſiſted of pork and rice, very excellent of their kinds, ſerved up in thirty-ſix diſhes, and three earthen bowls, filled with a kind of broth in which the pork had been boiled; the ſpoons were formed of leaves, but were ſo ſmall, that the hunger of the gueſts would ſcarcely allow them patience to uſe them. When dinner was ended, the captain invited the Raja to drink wine with him, but this he declined, ſaying that the man who entertained company ſhould never get drunk with his gueſts, and that the ſureſt way to avoid drunkenneſs, was to refrain from taſting the liquor. The gentlemen left the remains of the dinner, to their ſervants, and the boat's crew; who being unable to eat it all, the Raja's female ſervants, who came to take away the utenſils, inſiſted that they ſhould take with them all that remained. When the bottle had circulated ſome time, Captain Cook, began to enquire after the cattle that were promiſed to be driven down to the beach; when Mr. Lange informed him, that in the letter which he received from the governor of Concordia, inſtructions were given, that if the ſhip ſhould touch at the iſland, and be in want of proviſions, ſhe ſhould be ſupplied, but that he was not to permit her to remain longer than was abſolutely neceſſary;—that no preſents were to be made to the natives of low rank, nor even left with their ſuperiors to be divided among them after the ſhip had ſailed; but, he added, that any trifling civilities received from the Indians might be acknowledged by a preſent of beads, or other articles of very ſmall value. It is probable that the whole of this ſtory was of Mr. Lange's own manufacture, and merely calculated to draw all the preſents of any value into his own pocket. The captain was ſoon after informed, that ſome ſheep had been driven down to the beach, but had been conveyed away before the men could get money from the ſhip to pay for them, and that not a ſingle hog or buffalo had been down, but that a ſmall number of fowls, and a quantity of the plum-ſyrup had been bought. Much vexed to be thus diſappointed of the chief articles which were wanted, the captain remonſtrated with Mr. Lange, who told him, that if he and his officers had gone to the ſpot, they might have purchaſed any thing that they pleaſed, but that the Indians imagined, the ſeamen would impoſe on them with counterfeit money. This ſtory was no more credited than the former: yet, not to loſe more time in a caſe of ſuch urgency, the captain inſtantly repaired to the beach, but there were no cattle to be bought. During his abſence, Lange informed Mr. Banks, that the Indians were offended, that the ſeamen had not offered gold for what they had to ſell, and that no other metal would purchaſe their commodities: but Mr. Banks, not chuſing to hold farther converſation with a man who had been guilty of ſuch repeated falſities, left him abruptly. Some hours before this, the Raja had aſſigned a much more probable reaſon for the cattle not being brought to the beach, by ſaying, that the buffalos were too far up the country to be driven thither in the time; and the gentlemen returned to the ſhip in the evening, diſpleaſed at their diſappointment. On the 20th, the captain and Dr. Solander went again on ſhore, and while the latter proceeded to the town in ſearch of Lange, the captain ſtaid on the beach with a view to buy cattle. There was an old man at this place who had been diſtinguiſhed by the name of the Prime Miniſter, becauſe he appeared to be inveſted with conſiderable authority; and the captain now preſented him with a ſpying-glaſs, in order to make a friend of him. At preſent there was nothing brought for ſale but a ſmall buffalo, for which five guineas were demanded. Though the captain knew that this was double its value, yet he offered

1770

1770 three guineas, as he was willing to begin dealing at any rate. The perſon who had it to ſell, ſaid That he could not take the money till the Raja had been informed what was offered, on which a man was ſent to him, who ſoon came back with a meſſage, that five guineas would be the loweſt price: This the captain refuſed to give; on which a ſecond meſſage was diſpatched, the bearer of which ſtaying a long time, Capt. Cook was anxious for his return, when he ſaw Dr. Solander coming towards the beach, eſcorted by more than a hundred perſons, ſome of whom had lances in their hands, and the reſt were armed with muſquets. When the Dr. arrived at the marketing-place, he informed the captain, that Lange interpreted to him a meſſage from the Raja, the ſubſtance of which was, That the natives were averſe to all traffic with the Engliſh, becauſe they would not give above half the real worth for the things which were offered for ſale, and that all trading whatever ſhould be prohibited after that day.

A native of Timor, whoſe parents were Portugueſe came down with this party, and delivered to the captain, what was pretended to be the order of the Raja, and which was in ſubſtance the ſame that Lange had told Dr. Solander; but it was afterwards diſcovered, that this man was a confident of Lange's in the ſcheme of extortion. The Engliſh gentleman had, at the ſame time no doubt, but that the ſuppoſed order of the Raja was a contrivance of theſe men, and while they were debating how to act in this critical conjuncture, anxious to bring the affair to a ſpeedy iſſue, the Portugueſe began to drive away ſuch of the natives as had brought palm-ſyrup and fowls to ſell, and others who were now bringing ſheep and buffaloes to the market.——At this juncture Captain Cook happening to look at the old man who had been diſtinguiſhed by the name of prime miniſter, imagined that he ſaw in his features a diſapprobation of the preſent proceedings; and, willing to improve the advantage, he graſped the Indian's hand, and gave him an old broad ſword. This well-timed preſent produced all the good effects that could be wiſhed: the prime miniſter was enraptured at ſo honourable a mark of diſtinction, and brandiſhing his ſword over the head of the impertinent Portugueſe, he made both him, and a man who commanded the party, ſit down behind him on the ground. The whole buſineſs was now accompliſhed; the natives, eager to ſupply whatever was wanted, brought their cattle in for ſale, and the market was ſoon ſtocked. For the firſt two buffaloes, Captain Cook gave ten guineas: but he afterwards purchaſed them by way of exchange, giving a muſquet for each, and at this rate he might have bought any number he thought proper. There remained no doubt but that Lange had a profit out of the two that were ſold; and that his reaſon for having ſaid the natives would take nothing but gold for their cattle, was, that he might the more eaſily ſhare in the produce. Captain Cook purchaſed of the natives of this iſland ſome hundred gallons of palm-ſyrup, a ſmall quantity of garlick, a large number of eggs, ſome limes and cocoa-nuts, thirty dozen of fowls, three hogs, ſix ſheep, and nine buffaloes. Captain Cook having obtained theſe neceſſary articles, now prepared for ſailing from this place.

The iſland of Savu is ſituated in 10° 35′ ſouth lat. and 237° 30′ weſt longitude. Its length is between twenty and thirty miles. But its breadth Captain Cook could not aſcertain, as he only ſaw the north ſide of it. The harbour in which the ſhip lay, was called Seba, from a diſtrict of the country ſo denominated: and there are two other bays on different parts of the iſland. At the time the Endeavour lay there it was near the end of the dry ſeaſon, when it had not rained for almoſt ſeven months, nor was there a running ſtream of freſh water to be ſeen, and the natives were ſupplied only by ſmall ſprings, ſituated at a diſtance up the country, yet even in this dry ſeaſon the appearance of the iſland was beautiful. Near the coaſt the land lies level, and well cloathed with palm, called *Arecas*, and cocoa-nut trees. Farther off, the ground riſes in the moſt gradual aſcent, and is covered with fair palm-trees even to the tops of the hills, ſo as to preſent a regular grove to the view. The rains in this country ceaſe in March or April, and fall again in October or November, and theſe rains produce abundance of indico, millett, and maize, which grow beneath the fineſt trees in the country. Beſides theſe articles, the iſland produces tobacco, cotton, betel, tamarinds, limes, oranges, mangoes, guinea corn, rice, callevances, and water-melons. A ſmall quantity of cinnamon was ſeen, and ſome European herbs, ſuch as garlick, fennel, celery, and marjoram, beſides which, there are fruits of various kinds, and particularly the *blimbi*, which has a ſharp taſte, and is a fine pickle, but it is not eaten raw; its length is from 3 to 4 inches; it is nearly as thick as a man's thumb, of an oval form, covered with a very thin ſkin, of a very light green, and contains a number of ſeeds ranged in the ſhape of a ſtar. Several buffaloes were ſeen on this iſland which were almoſt as large as an ox; and from a pair of enormous horns of this animal, which Mr. Banks ſaw, it was ſuppoſed that ſome of them were much larger; yet they did not weigh more than half as much as an ox of the ſame ſize; having loſt the greater part of their fleſh through the late dry weather: the meat however was juicy, and of a delicate flavour. The horns of theſe animals bend backwards; they had no dew-laps, and ſcarce any hair on their ſkins, and their ears were remarkably large. The other tame animals on the iſland are dogs, cats, pigeons, fowls, hogs, goats, ſheep, aſſes, and horſes. Few of the horſes are above twelve hands high, yet they are full of mettle, and pace naturally in an expeditious manner: the natives ride them with a halter only. The hogs of this country are fed on the huſks of rice and palm ſyrup mixed with water, and are remarkably fine and fat. The ſheep not unlike a goat, and are therefore called Cabaritos; their ears, which are long, hang down under their horns; their noſes are arched, and their bodies are covered with hair. The fowls are of the game kind, and though they are rather large, the hen lays a very ſmall egg. The ſea-coaſt furniſhes the inhabitants with turtle, but not in any great abundance.

The natives of the iſland of Savu are rather below the middle ſtature; their hair is black and ſtrait, and perſons of all ranks, as well thoſe that are expoſed to the weather, as thoſe that are not, have one general complexion, which is the dark brown. The men are well formed and ſprightly, and their features differ much from each other: the women on the contrary have all one ſet of features, are very ſhort, and broad built. The men have ſilver pincers hanging by ſtrings round their necks, with which they pluck out the hair of their beards; and both men and women root out the hair that grows under their arms; the hair of the womens heads is tied in a club behind, while the men wear a kind of turban on their heads, formed of muſlin, cotton, or even with ſilk handkerchiefs, but the heads of the women have no covering. The dreſs of the men conſiſts of two pieces of cotton cloth, one of which is bound round the middle, and the lower edge of it being drawn pretty tight between the legs, the upper edge is left looſe, ſo as to form a kind of pocket, in which they carry knives and other things: the other piece being paſt under the former on the back of the wearer, the ends of it are carried over the ſhoulders, and tucked into the pocket before. The women draw the upper edge of the piece round the waiſt tight, while the lower edge, dropping to the knees makes a kind of petticoat: the other piece of cloth is faſtened a-croſs the breaſt, and under the arms. This cloth, which is manufactured by the natives, is died blue while in the yarn; and, as it is of various ſhades, its look, when it comes to be worn is very beautiful.

The ornaments of the natives of Savu are very numerous, and conſiſt of rings, beads worn round the neck and on the wriſts, and chains of plaited gold wire, are likewiſe worn by both ſexes; but the wo-

men had likewiſe girdles of beads round their waiſts, which helped to keep up the petticoat. Many of the boys wore braſs wire paſſed ſeveral times round the arms, above the elbows: and ſome of the men who were ſaid to be the ſons of the Raja, wore rings of ivory above an inch thick, and two inches broad, on the ſame part of the arm. One man poſſeſſed a ſilver-headed cane, ſuppoſed to have been a preſent from the Dutch Eaſt-India company, as their mark was engraven on the ſilver. The raja, and the principal officer of his houſehold, were commonly habited in night-gowns of ordinary chintz; but one time when Captain Cook waited on the Raja, he was dreſſed in a black ſtuff robe.

Moſt of the men had their names marked on their arms, and the women a black ornament juſt under the bend of the elbow, impreſſed ſo that it could not be rubbed out. On enquiry, it was found that the practice had been common among the Indians long before they were viſited by any Europeans; and it was ſaid that the necks and breaſts of the inhabitants of the adjacent iſlands were marked with circles. It could not be certainly known how theſe black works were impreſſed; but the following extract from M. Boſſa's account of ſome Indians who dwell on the banks of the Akanza, a river in North America, will afford a very probable conjecture how the operation is performed.——["The Akanzas (ſays this writer) have adopted me, and, as a mark of my privilege here, imprinted the figure of a roe-buck upon my thigh, which was done in this manner: An Indian having burnt ſome ſtraw, diluted the aſhes with water, and with this mixture drew the figure upon my ſkin; he then retraced it by pricking the lines with needles, ſo as at every puncture juſt to draw the blood, and the blood mixing with the aſhes of the ſtraw, forms a figure which can never be effaced."]

The houſes on the iſland of Savu are of different lengths, from twenty feet to four hundred, according to the rank of the inhabitants, and are fixed on poſts of about four or five feet from the ground. The houſes are generally divided into three rooms of equal ſize, the centre room being ſet a-part for the uſe of the women, and ſome times ſmaller rooms are incloſed from the ſides of the building, the whole of which is thatched with the leaves of the palm-tree.

The natives eat of all the tame animals which the iſland produces; but they prefer the hog to all the reſt; next to hog's fleſh they admire that of the horſe, to which ſucceeds the buffalo, and then the poultry; and they like the fleſh of cats and dogs much better than that of goats and ſheep. Fiſh is not eaten but by the poorer people, nor even by them, except when buſineſs demands their attendance near the ſea-coaſt; and then each man has a ſmall caſting-net, which he wears tied round his body when he has not occaſion to uſe it.

The fan-palm is the moſt remarkable, and moſt uſeful tree that grows on the iſland, its uſes being equally great and various: ſoon after the buds put forth, the natives cut them, and tying under them little baſkets, formed of the leaves of the tree, a liquor drops into them which has the taſte of a light wine, and is the common drink of all the inhabitants. The men climb the tree twice a day to bring down this liquor; but as a great deal more is obtained than can be conſumed by drinking, a part of the remainder is made into coarſe ſugar, very excellent of its kind; and the reſt is boiled in earthen pots, till it is reduced to a ſyrup, reſembling treacle, but of a much finer flavour; and with this ſyrup the natives fatten their hogs and dogs. The leaves of the trees are applied to the various uſes of making tobacco pipes, umbrellas, cups, baſkets, and the thatching of houſes. The fruit of this tree, is nearly of the ſize of a full-grown turnip; but the natives are not fond of it, nor do they ſuffer much of it to come to perfection, as they wound the bloſſoms for the ſake of the liquor that diſtills from them. The kernels of the fruit muſt be eaten before it is ripe, otherwiſe they are ſo hard, that the teeth will not penetrate them. 1770

As wood for firing is very ſcarce upon the iſland, the natives, by the following method, make a very little of it anſwer the ends of cookery and diſtillation. A hollow is dug under ground in a direct line, about two yards long, with a hole at each end, one of which is large and the other ſmall; the fire is put in at the largeſt hole, while the ſmaller one ſerves as a draught. Circular holes are made through the earth which covers this cavity, and on theſe holes are ſet earthen pots, which, being large in the middle, and ſmaller towards the bottom, the fire acts upon a conſiderable part of the ſurface. They generally contain about eight or nine gallons, and are generally kept boiling with a very ſmall quantity of fuel. It is thus that they make their ſyrup and ſugar, as well as boil all their victuals.

The betel and areca are chewed here both by men and women, and are mixed with a ſort of lime made of ſhells and coral ſtones. To theſe ingredients they frequently add tobacco; and the mixture is of ſuch a nature, as being uſed from their infancy, ſpoils the teeth and breath of all the inhabitants. Tobacco is likewiſe ſmoked here; and the women in particular were obſerved to ſwallow the ſmoke.*

The iſland is divided into five diſtricts, each of which is governed by a Raja. Theſe diviſions are called Timo, Maſſara, Regeeua, Laai, and Seba. The Engliſh went on ſhore on the laſt of theſe, where they found a Raja that governed with the moſt abſolute authority. He was between thirty and forty, and remarkable for his corpulency. It was obſerved that he governed his people in an abſolute manner, but took very little regal pomp upon him. The prime miniſter who has been mentioned, ſeemed to be inveſted with great power, and to have the direction of the Raja in almoſt every reſpect; it was apparent however that he did not abuſe this power, as the people univerſally loved him. The Raja and his counſellors uſed to ſettle the diſputes of the natives in a manner that was equitable, and generally ſatisfactory to the contending parties.——Mr. Lange, to whom Captain Cook was chiefly obliged for the accounts that he received of this iſland, informed him that the Indians were able on a ſhort notice to raiſe 7300 fighting men. Their arms are lances, ſpears, muſquets, targets, and pole-axes, which laſt, are ſomewhat like a wood-bill, but have ſtraiter edges, and are heavier. In the uſe of their lances, theſe warriors are ſaid to be ſo expert, that they can pierce a man through the heart at ſixty or ſeventy yards diſtance. Yet the Raja had always lived at peace with his neighbours.

Before the town-houſe there was a great gun; there were alſo ſome ſwivels and patararoes. But the great gun lay with the touch-hole to the ground, and the ſwivels and patararoes were not in their carriages. A number of ſpears and targets were ſeen in the town-houſe, all of which were of different ſizes, and it was with theſe that the natives had armed themſelves when they came down with Dr. Solander to influence the market. Ruſt had almoſt deſtroyed the inſides of their muſquets, but the out-ſides were kept clean and bright. The men had but very little powder and ball in their cartridge boxes, but a piece of paper was put into each hole, as if they had been furniſhed in a proper manner. They marched in an irregular manner, as has been already noticed, and each man brought with him a fowl, ſome tobacco, or ſome other trifling article, which he thought he could diſpoſe of.

"The inhabitants of Savu (ſays our author) are divided into five ranks, viz. the Rajas, the land owners, the manufacturers, the ſervants, and the ſlaves. The Rajas are chief; the land owners are reſpected in proportion to the extent of their eſtates, and the number

* They have pipes made of the palm-leaf, which are about the ſize of a gooſe-quill, and half a foot long, into one end of which they put the tobacco intended for the purpoſe of ſmoking.

1770 number of their ſlaves, which laſt are bought and ſold with their eſtates; but a fat hog is the price of one if purchaſed ſeparately. Notwithſtanding a man may thus ſell his ſlave, or convey him with his lands, yet his power does not extend farther, as he may not even ſtrike him without the Raja's permiſſion. The eſtates of theſe land-holders are of very different extent; ſome of them not poſſeſſing above five ſlaves, whilſt others have 500. When a man of rank goes abroad, one of his ſlaves follows him with a ſilver-hilted ſword or hanger, ornamented with horſe-hair taſſels, and another carries a little bag containing tobacco, betel, areca, and lime. This is all the ſtate that even the Rajas themſelves take upon them.

"Theſe people have a great veneration for antiquity. Their principal boaſt is of a long line of venerable anceſtors. Thoſe houſes that have been well tenanted for ſucceſſive generations, are held in the higheſt eſteem: even the ſtones which are worn ſmooth by having been ſat upon for ages, derive a certain value from that circumſtance. He whoſe progenitors have bequeathed him any of theſe ſtones, or whoſe wealth has enabled him to purchaſe them, cauſes them to be ranged round his habitation, for his ſervants and ſlaves to ſit upon. The Raja cauſes a large ſtone to be ſet up in the chief town of each diſtrict as a monument of his reign. In the province of Seba, thirteen ſuch ſtones were ſeen as well as the remains of ſeveral others which were much worn. Theſe ſtones were all placed on the top of a hill, and ſome of them were of ſuch an enormous ſize that it was amazing by what means they could have been brought thither; nor could any information on this head be obtained from the natives: theſe monuments, however, indicated that for a ſeries of generations, the iſland had been regularly governed.—When a Raja dies, proclamation is made that all thoſe who have been his ſubjects ſhall hold a ſolemn feſtival. On this they proceed to the hill where theſe ſtones are erected, and feaſt for ſeveral weeks, killing all the animals that ſuit their purpoſe, wherever they can be found in order to furniſh the treat, which is daily ſerved up on the monumental ſtones. When they have thus exhauſted their whole ſtock, they are compelled to keep a faſt; and when the feaſt happens to end in the dry ſeaſon, when they cannot get vegetables to eat, they have no other ſubſiſtence than the palm ſyrup and water, till the few animals which have eſcaped the general maſſacre have bred a ſufficient number for a freſh ſupply, except the adjacent diſtrict happens to be in a condition to relieve them.

"The natives of Savu have an inſtrument with which they clear the cotton of its ſeeds; it is about ſeven inches in height and fourteen in length. They have alſo a machine with which they ſpin by hand, as was the cuſtom before the invention of ſpinning wheels in Europe.

"It was obſerved that the inhabitants of this iſland were in general robuſt and healthy, and had every mark of longevity. The ſmall pox, however, is a diſtemper with which they are acquainted, and which they dread as much as a peſtilence. When any perſon is attacked by it, he is carried to a ſpot at a diſtance from the houſes, where his food is conveyed to him by means of a long ſtick, as no one dares to venture near him. Abandoned by all his friends he is there left to live or die as it may happen, without being admitted to any comforts of the community.—

"It appears that the Portugueſe very early viſited this iſland on which they eſtabliſhed a ſettlement, but ſoon after they were ſucceeded by the Dutch, who without formally taking poſſeſſion of the place ſent a number of trading veſſels in order to eſtabliſh a commerce with the natives. Moſt of the Dutch purchaſes, it is ſuppoſed, are confined to a ſupply of proviſions for the Spice-Iſlands, the inhabitants of which breed but a ſmall number of cattle. The Dutch Eaſt India Company made an agreement with the ſeveral Rajas of the iſlands, that a quantity of rice, maize, and callavances ſhould be annually furniſhed to their people, who, in return, were to ſupply the Rajas with ſilk, linen, cutlery wares, and arrack. Certain ſmall veſſels, each having on board ten Indians, are ſent from Timor to bring away the maize and callavances, and a ſhip that brings the articles furniſhed by the Dutch, receives the rice on board once a year; and as there are three bays on this coaſt, this veſſel anchors in each of them in turn. The Dutch articles of commerce are accepted by the Rajas as a preſent; and they and their chief attendants drink of the arrack without intermiſſion till it is exhauſted.

"It was in the agreement above-mentioned that the Rajas ſtipulated that a Dutch reſident ſhould be conſtantly on the iſland. Accordingly this Lange, whom we have mentioned was ſent thither in that capacity, and a ſort of aſſiſtant with him whoſe father was a Portugueſe and his mother a native of Timor, with one Frederic Craig, whoſe father was a Dutchman and his mother an Indian. Mr. Lange viſits the Raja in ſtate attended by fifty ſlaves on horſeback, and if the crops are ripe, orders veſſels to convey them immediately to Timor, ſo that they are not even houſed upon the iſland. It is likewiſe part of his buſineſs to perſuade the landholders to plant if he perceives that they are backward in that particular. This reſident had been ten years on the iſland, when the Endeavour touched there, during all which time he had not ſeen any white perſons except thoſe who came annually in the Dutch veſſel, to carry off the rice, as above-mentioned. He was married to a native of Timor, and lived in the ſame manner as the natives of Savu, whoſe language he ſpoke better than any other. He ſat on the ground like the Indians and chewed betel, and ſeemed in every thing to reſemble them except in his complexion and the dreſs of his country. As to Mr. Craig, his aſſiſtant, he was employed in teaching the natives to write and read, and inſtructing them in the principles of Chriſtianity. Though there was neither clergyman nor church to be ſeen upon the iſland, yet this Mr. Craig averred, that in the townſhip of Seba only, there were 600 Chriſtians. As to the religion of thoſe who have not embraced Chriſtianity, it is a peculiar ſpecies of Paganiſm, every one having a god of his own, ſomewhat after the manner of the Cemies heretofore mentioned. Their morality, however, is much purer than could be expected from ſuch a people. Robberies are ſcarcely ever committed. Murder is unknown among them; and though no man is allowed more than one wife, they are ſtrangers to adultery, and almoſt ſo to the crime of ſimple fornication. When any diſputes ariſe between the natives, the determination of the Raja is deciſive and ſatisfactory. Some obſervations were made upon the language of the natives, by the gentlemen, while the veſſel lay here; and a kind of vocabulary formed, a ſketch of which the curious reader will find in the note annexed. *

principal is Timor, which is annually visited by the Dutch residents on the other islands, in order to make up some of their accounts. Some of the towns on the north side of Timor are in the hands of the Portuguese, but the Dutch possess a far greater proportion of the island, on which they have built a fort and erected several store-houses. There are three small islands, called the Solars, which produce great abundance of the various necessaries of life, that are carried in small vessels to the Dutch settlements on the island of Timor: these islands are low and flat, and one of them has a commodious harbour. To the westward from the Solars lies the little island of Ende, which is yet in the possession of the Portuguese, who have built a considerable town on the north-east point of it; and close to the town is an harbour where ships may ride in safety. The island of Rotte has a Dutch resident on it, whose business is similar to that of Mr. Lange on the island of Savu: Rotte produces, besides such things as are common to other islands, a considerable quantity of sugar, which is now made to a great degree of perfection. There is likewise a small island lying to the west of Savu, the chief of the produce of which is the areca-nut, of which the Dutch receive in exchange for European commodities, as large a quantity every year as will load two vessels.

A French ship was wrecked on the coast of Timor, about two years before the Endeavour was in these seas, she had been lodged on the rock several days, when the wind tore her to pieces in an instant, and the captain, with the greater number of the seamen were drowned; but the lieutenant and about 80 men having reached the shore, travelled across the country of Concordia, where their immediate necessities were relieved, after which they returned to the wreck, in company with some Dutch and Indians, who assisted them in recovering all their chests of bullion, some of their gums and other effects: which being done, they returned to Concordia, where they remained several weeks; but in this interval death made such havock among them, that not above half their number remained to be sent to their native country, which was done as soon as a vessel could be fitted out for that purpose.

On the 21st of September, 1770, the Endeavour sailed from Savu, steering westward. In the afternoon of this day a little island was discovered in 10° 47′ south lat. and 238° 28′ west long.*

When the ship got clear of the several islands before-mentioned, there was a continual swell of the sea from the south, which Captain Cook imputed to the position of the coast of New South-Wales, imagining it to have determined the sea in that direction. On the 28th they steered north-west the whole day, in order to get sight of the land of Java; and on the 30th the captain received from most of the officers and seamen their respective journals of the voyage, regarding which he advised them to observe the most profound secrecy; and he likewise possessed himself of the log-book. In the night following there was a storm of thunder and lightning, when the land of Java was seen to the eastward by the brightness of the lightning. In the morning they had sight of the island of Cracatoo, which is singular for the height of its peak. Early in the morning of the 2d of October, when the ship was fifteen fathom water, she was close in with the coast of Java, along which they now steered. As their Indian friend Tupia, was at this time extremely ill, the captain now dispatched a boat to the shore, to endeavour to bring him some refreshing fruits, and likewise to procure grass for the buffalos. As soon as the boat landed, the inhabitants assisted the seamen in cutting grass for the cattle, and gathering a bunch of plantains and a few cocoa-nuts, for which they received a shilling, and which were brought off to the ship.—The land of Java had a delightful appearance, being every where well covered with trees. This day they had sight of two Dutch vessels, and an officer being dispatched to one of them, to learn any interesting intelligence, he brought word back, that the Swallow had reached the English channel in safety; that disputes were carried to great lengths at home, in regard to the ministers, and in America, on account of taxes; and that the Russians, Poles, and Turks, were embroiled in a war. The officer said, that the vessels were Dutch East-Indiamen, bound from Batavia, one of them to the coast of Malabar, and the other to the island of Ceylon: he said likewise, that there was a kind of packet-boat, which he had been told, was appointed to carry letters from the Dutch ships that came thither to Batavia, but Captain Cook conjectured that her business was to examine such ships as should pass the streight. The ship had now been some hours at anchor; but a light breeze springing up in the evening, they got under sail, and continued to proceed at a slow rate during the night. On the 3d in the morning, the Dutch packet-boat was observed sailing after the Endeavour; but she bore away again on the shifting of the wind. This changing of the wind obliging the Endeavour to come to an anchor, the master of the packet-boat came along-side her, in one of the boats belonging to the country, bringing with him rice-birds, monkeys, parrots, parroquets, ducks, fowls, turtle, and other things, with an intention to sell them; but as the stock which had been laid in at Savu was not yet consumed, and he had fixed a very high price on his commodities, very few articles were purchased: the captain, however, bought twenty or thirty fowls, and a small turtle. The master of the packet-boat had brought with him two books, in one of which he wrote down the captain's name, and that of the vessel, to be sent to the governor and council of the Indies, and in the other book he requested that some of the gentlemen on board would likewise write down the name of the vessel, with that of the captain, where she came from, to what port she was bound, and as many particulars respecting any person on board, as themselves might think necessary to satisfy the curiosity of any of their friends who might afterwards enquire for them. In this book several Portuguese vessels, and some of other countries had many entries of the same kind, but a lieutenant on board the Endeavour, having written the ship's name, added only the words, "from Europe:" yet of this the master of the packet took no other notice, saying he was content with whatever they were pleased to write; as it was only for the information of his friends.—

1770

Having now weighed anchor, they attempted to sail, but the wind not enabling the vessel to stem the current, she lay to till the 5th in the morning, when a Dutch officer coming along-side, sent a printed paper to the captain, containing the following queries. 1. The ship's name, and to what nation she belonged?—2. Whether she came from Europe, or from any other place?—3. From what place she departed last?—4. Whither she was bound?—5. How many ships belonging to the Dutch Company had been seen on the last coast the vessel had left; and their names?—6. Whether one or more vessels had been in company with the Endeavour, and had sailed for that or any other place?—7. Whether any thing had happened or been seen remarkable during the voyage?—8. Whether any ships had been seen or hailed in the streights of Sunda, and what they were.—9. Whether they had brought any other news worthy of attention from the

1769 place whence the ſhip took her departure, or whether any thing elſe had happened during the voyage that was worth communicating?

The queſtions were ſubſcribed "BATAVIA, in the Caſtle. By order of the Governor-general and the Counſellors of India. *J. Brander Bungl.* Sec."

The officer had many papers of the ſame kind in French, Dutch, and other languages. Obſerving, however, that the captain did not chuſe to anſwer any of the above queſtions, except the firſt and fourth, he obſerved that the reſt were not material, though it was remarked that juſt afterwards he ſaid he muſt diſpatch the paper to Batavia, at which place it would arrive by the next day. This examination was rather extraordinary, and the more ſo, as it does not ſeem to have been of any long ſtanding.

"The anchor was weighed as ſoon as the Dutch officer departed, but in four hours the ſhip was forced to come to an anchor again, till a breeze ſprang up; ſhe then held on her courſe till the next morning, when on account of the rapidity of the current, the anchor was dropped again. At laſt they weighed on the 8th, and ſtood clear of a large ledge of rocks, which they had almoſt ran upon the preceding day. But in the forenoon they were once more obliged to anchor near a little iſland that was not laid down in any chart they had on board. It was found to be one of thoſe called the Milles Iſles. Mr. Banks and Dr. Solander having landed upon it, collected a few plants, and ſhot a bat which was a yard long, being meaſured from the extreme points of the wings; they alſo killed a few plovers on this iſland, the breadth of which does not exceed one hundred yards, and the length five hundred; they found a houſe and a little ſpot of cultivated ground, and on it grew the *Palma Chriſti*, from which the Weſt Indians make their caſtor oil.

"In a little time after the gentlemen came back to the ſhip, ſome Malays came along-ſide in a boat, bringing with them ſome pompions, dried fiſh, and turtle for ſale: one of the turtles, which weighed near one hundred and fifty pounds, they ſold for a dollar, and ſeemed to expect the ſame piece of money for their fruit; but it being hinted to them that a dollar was too much, they deſired that one might be cut, and a piece of it given to them, but this not being complied with, they at length ſold twenty-ſix pompions for a Portugueſe petacka. When they departed, they intimated their wiſhes, that this tranſaction might not be mentioned at Batavia.

"The ſhip now made but ſlow way till night, when the land-breeze ſpringing up, they ſailed to the eaſt ſouth-eaſt, and on the following day, by the aſſiſtance of the ſea-breeze, they came to an anchor in the road of Batavia. At this place they found a number of large Dutch veſſels, the Harcourt Eaſt-Indiaman from England, which had loſt her paſſage to China, and two ſhips belonging to the private trade of our India company. The Endeavour had no ſooner anchored, than a ſhip was obſerved, with a broad pendant flying, from which a boat was diſpatched to demand the name of the veſſel, with that of the commander, &c. To theſe enquiries Captain Cook gave ſuch anſwers as he thought proper, and the officer who commanded the boat departed. This gentleman, and the crew that attended him, were ſo worn out with the unhealthineſs of the climate, that it was apparent many deaths would follow; yet at preſent there was not one invalid on board, except the Indian Tupia. The captain now diſpatched an officer to the governor of the town to apologiſe for the Endeavour's not ſaluting: for he had but three guns proper for the purpoſe, except ſwivels, and he was apprehenſive that they would not be heard. The ſhip was ſo leaky, that ſhe made about nine inches water in an hour, on the average; part of the falſe keel was gone, one of her pumps was totally uſeleſs, and the reſt ſo much decayed, that they could not laſt long. The officers and ſeamen concurring in opinion that the ſhip could not ſafely put to ſea again in this condition, the captain reſolved to ſolicit permiſſion to heave her down; but as he had learned that this muſt be done in writing, he drew up a petition, and had it tranſlated into Dutch.

"On Wedneſday October the 10th, 1770, the captain and the reſt of the gentlemen went on ſhore, and applied to the only Engliſh gentleman then reſident at Batavia; this gentleman, whoſe name was Leith, received his countrymen in the politeſt manner, and entertained them at dinner with great hoſpitality. Mr. Leith informed them, that a public hotel was kept in town, by order of the Dutch governor, at which place merchants and other ſtrangers were obliged to lodge, and that the landlord of the hotel was bound to find them warehouſes for their goods, on the condition of receiving ten ſhillings on every hundred pounds of their value, but as the Endeavour was a king's ſhip, her officers, and the other gentlemen, might reſide where they thought proper, only aſking leave of the governor, whoſe permiſſion would be inſtantly obtained. Mr. Leith added, that they might live cheaper in this way than at the hotel, if they had any perſon who ſpoke the Batavian tongue, whom they could rely on to purchaſe their proviſions, but as there was no ſuch perſon among the whole ſhip's crew, the gentlemen immediately beſpoke beds at the hotel. In the afternoon Captain Cook attended the governor-general, who received him politely, and told him to wait on the council the next morning, when his petition ſhould be laid before them, and every thing that he ſolicited ſhould be granted. Late in the evening of this day, there happened a moſt terrible ſtorm of thunder and lightning, accompanied with very heavy rain. In this ſtorm the main-maſt of a Dutch Eaſt Indiaman was ſplit and carried away by the deck; and the main-top-maſt and main-top-gallant-maſt were torn to pieces; it is ſuppoſed, that the lightning was attracted by an iron ſpindle at the main-top-gallant-maſt-head. The Endeavour, which was at a ſmall diſtance from the Dutch ſhip, eſcaped without damage, owing, moſt probably, to the electrical chain which conducted the lightning over the veſſel.—A centinel on board the Endeavour, who was charging his muſquet at the time of the ſtorm, had it ſhaken out of his hand, and the ram-rod broken to pieces: the electrical chain looked like a ſtream of fire, and the ſhip ſuſtained a very violent ſhock.

"Capt. Cook waited on the gentlemen of the council on Thurſday the 11th, who informed him that all his requeſts ſhould be complied with. In the interim the other gentlemen made a contract with the maſter of the hotel, to furniſh them and their friends with as much tea, coffee, punch and tobacco, as they might have occaſion for, and to keep them a ſeparate table, for nine ſhillings a day Engliſh money: but on the condition that every perſon who ſhould viſit them, ſhould pay at the rate of four ſhillings and ſixpence for his dinner, and the ſame ſum for his ſupper and bed, if he choſe to ſleep at the hotel; they were likewiſe to pay for every ſervant that attended them fifteen pence a day. It was ſoon diſcovered, that they had been much impoſed on: for theſe charges were twice as much as could have been demanded at a private houſe. They appeared to live elegantly, but at the ſame time were but ill ſupplied. Their dinner conſiſted of fifteen diſhes, all ſerved up at once; and their ſupper of thirteen, but of theſe, nine or ten were of the moſt ordinary, becauſe the cheapeſt, (poultry) that could be purchaſed, and even ſome of theſe diſhes were obſerved to be ſerved up four times ſucceſſively: a duck, which was hot at dinner, was brought cold in the evening, the next day ſerved up as a fricaſee, and was converted into forced meat at night. Our countrymen, however, only fared as others had done before them: it was the conſtant cuſtom of the conſcientious maſter of the hotel, to treat all his gueſts in the ſame manner, when they firſt took up their reſidence at his houſe: if they took no notice of it, all was well, for the landlord had the better cuſtomers of them: if they remonſtrated againſt ſuch treatment,

the table was better and better ſupplied from time to time, till, in the end, they had no reaſon to complain. The gentlemen having found fault with their fare, were afterwards ſupplied in a better manner: but Mr. Banks not approving the conduct of the maſter of the hotel, hired lodgings for himſelf and his attendants at the adjoining houſe, for which he agreed to pay forty-five ſhillings a month: but here he was diſappointed in the hope he had formed of living retired; for ſcarcely a Dutchman had occaſion to paſs by the houſe, but he ran in without ceremony, to enquire what was to be ſold; for it is a very uſual thing at Batavia, for ſtrangers who are in a private capacity, not to be furniſhed with ſome articles of traffic. In this houſe nobody was permitted to ſleep, as a gueſt of Mr. Banks, without his bed being ſeparately paid for; it is the univerſal cuſtom here to hire a carriage, and Mr. Banks engaged two, for which he paid eighteen ſhillings a day: theſe carriages are open chaiſes, in which two perſons ſit commodiouſly, and are driven by a man ſitting on a kind of coach-box.

"Their Indian friend, Tupia, had been, till this time on board, very dangerouſly ill, yet perſiſted to refuſe every medicine that was offered him; Mr. Banks now ſent for him to his houſe, in hopes that he might recover his health. While he was in the ſhip, and even after he was put in the boat, he was indiſpoſed, and low ſpirited, in the utmoſt degree, but the moment he came into the town, his whole frame appeared as if re-animated. The houſes, the carriages, the people, and many other objects, were totally new to him, and aſtoniſhment took poſſeſſion of his features at a ſight ſo wonderful: but if Tupia was aſtoniſhed at the ſcene, his boy, Tayota, was perfectly enraptured, dancing along the ſtreets for joy, examining the ſeveral objects as they preſented themſelves with the moſt earneſt curioſity. Nothing ſtruck Tupia ſo much as the vaſt variety of dreſſes worn by the inhabitants of Batavia: he enquired the reaſon of what appeared ſo very extraordinary in his eyes. Being informed that the people were of a variety of nations, and that all were dreſſed according to the mode of their own country, he was deſirous of following the faſhion; this requeſt being complied with, a perſon was diſpatched to the ſhip for ſome South-ſea cloth, with which he ſoon cloathed himſelf in the dreſs of the inhabitants of Otaheite. The people of Batavia, who had ſeen an Indian brought thither in M. Bougainville's ſhip, named Outourou, miſtook Tupia for that man, and frequently enquired if he was not the ſame.

"The neceſſary repairs of the ſhip being ordered to to be made at Ouruſt, Captain Cook obtained an order to the ſuperintendant of that iſland to receive her; and he wrote to the ſecretary of the admiralty, an account of the ſafe arrival of the Endeavour in the road of Batavia, and diſpatched his letter by a Dutch ſhip that was bound to Europe.

"The Captain now applied to ſeveral perſons to advance him money ſufficient to defray the expence of repairing the ſhip; but not one could be found in the whole town who had the requiſite ſum in his poſſeſſeſſion, or if he had was willing to advance it; he therefore made application to the governor, who iſſued his orders that he ſhould be ſupplied out of the treaſury of the Dutch Eaſt India company.

"Early in the morning of the 11th of October, 1771, the ſhip got under ſail, and proceeded to Ouruſt; and, in a day or two, the crew began to take out her ſtores, which were depoſited in a wharf on Cooper's Iſland; but this buſineſs was rendered unavoidably tedious, by ſeveral Dutch ſhips being at the ſame wharf taking in their ladings of pepper.—After little more than a week ſpent at Batavia, the ill effects of the climate began to be ſeverely felt; Dr. Solander and Mr. Banks were indiſpoſed with fevers, Mr. Banks's two ſervants were exceedingly ſick; the Indian boy Tayota, had an inflammation on his lungs; and Tupia was ſo ill, that his life was deſpaired of. Their indiſpoſition was attributed partly to the ſwampy ſituation of the town, and the ſtench of the dirty canals with which it abounds. By the 26th of the month, very few of the crew were well enough to do duty; and on this day a tent was erected for their reception. Tupia now requeſted to be conveyed to the ſhip, in hopes of breathing a purer air than in the town; but his requeſt could not be granted, as ſhe was unrigged, and preparations were making to lay her down, in order that ſhe might undergo a thorough repair: on the 28th, however, Mr. Banks attended Tupia to Cooper's Iſland, where a tent was pitched for him, in ſuch a ſituation, where he was alternately refreſhed by the land and ſea breezes; and the poor creature was ſo ill, that he could not leave his bed; Mr. Banks's fever was greatly increaſed, and Dr. Solander's grew worſe every day. The ſhip was at length laid down on the 5th of November, on which day died Mr. Monkhouſe the ſurgeon, whoſe loſs was the more ſeverely felt, as he was a man of ſkill in his profeſſion, and fell a ſacrifice to the peſtiferous air of the country, at a time when his abilities were moſt wanted: Dr. Solander, though extremely ill, had ſtrength ſufficient to ſee his remains committed to the ground, but Mr. Banks was unable even to pay this ſad laſt duty to a worthy man. 1770

"Deaths were now very frequent among the Engliſh; ſeveral Malay ſervants were engaged to wait on thoſe who were ill; but theſe people were ſo remiſs in their duty, that it was no uncommon thing for the ſick man to leave his bed in ſearch of his attendant. The Indian boy Tayota paid the debt of nature on the 9th of this month, and Tupia was ſo ſhocked at the loſs, that it was evident he could not long ſurvive this misfortune.

"The ſhip's bottom having been carefully ſurveyed, our countrymen had reaſon to be thankful for having been preſerved during a paſſage of ſeveral hundred miles, through the moſt dangerous ſeas on the face of the globe: for the ſheathing in ſeveral places was torn from the veſſel; the falſe keel was in a great meaſure gone; the main keel was damaged in many parts; ſeveral of the planks had received great injury; and a part of three of them was thinner than the ſole of a ſhoe.

"Dr. Solander and Mr. Banks were now ſo worn down by their diſorders, that the phyſician who attended them, recommended the country air, as the only thing that could poſſibly reſtore them to the wiſhes of their friends. In conſequence of this advice they hired a country houſe of the maſter of the hotel, who engaged to ſupply them with ſlaves, and to furniſh their table; but as they had ſufficiently experienced the worthleſſneſs of theſe ſlaves, they bought two Malay women, who ſoon became excellent nurſes, from that tenderneſs of nature which does ſo much honour to the ſex. While theſe gentlemen were taking meaſures for the recovery of their health, poor Tupia fell a victim to the ravages of his diſorder, and to his grief for the deceaſed Tayota. When Tayota was firſt ſeized with the fatal diſorder, he ſeemed ſenſible of his approaching end, and frequently ſaid to thoſe that were about him, *Tyau mate fee*; "My friends, I am dying:" he was very tractable, and took any medicines that were offered to him: they were both buried in the iſland of Edam.

"Capt. Cook beſtows great encomiums on the officers and the workmen of the marine yard at Ouruſt, by whoſe ſkill and diligence, the bottom of the ſhip was perfectly repaired by the 14th of the month; and he warmly recommends the heaving down with two maſts inſtead of one, which he ſays is undoubtedly the more expeditious as well as the ſafer method.—By this time not above ten men were able to do duty out of the whole ſhip's crew, and theſe were employed in getting water and ſtores aboard, and in putting up the rigging. The water was purchaſed at Batavia, at the rate of one hundred and fifty gallons for ſix ſhillings and eight-pence."——

The captain was now taken ill, and Mr. Sporing and

1770 and a ſailor, who attended Meſſrs. Banks and Solander at their country houſe, were attacked with intermitting fevers, but theſe two gentlemen grew ſomething better, though their recovery was very ſlow. Their houſe was ſituated on the borders of a rivulet, which of courſe, aſſiſted the circulation of the air, and it was likewiſe open to the ſea breeze.

In the night of the 25th there fell ſuch a ſhower of rain, for the ſpace of four hours, as even our voyagers had cauſe ever to remember. The water poured through every part of Mr. Banks's houſe, and the lower apartments admitted a ſtream ſufficient to turn a mill. As this gentleman was now greatly reſtored in health, he went to Batavia the following day, and was ſurpriſed to ſee that the inhabitants had hung their bedding to dry. The weſterly monſoon ſet in about the 26th of this month, it blows in the daytime from the north or north-weſt, and from the ſouth-weſt during the night; previous to this, there had been violent ſhowers of rain for ſeveral nights. The muſquitos and gnats, whoſe company had been ſufficiently diſagreeable in dry weather, now begun to ſwarm in immenſe numbers, riſing from the puddles of water like bees from a hive; they were extremely troubleſome during the night, but the pain ariſing from the ſting though very ſevere, ſeldom laſted more than half an hour, and in the day time they ſeldom made their attacks. The frogs kept a perpetual croaking in the ditches, a certain ſign that the wet ſeaſon was commenced, and that daily rain might be expected.—The ſhip being repaired, the ſick people received on board her, and the greater part of her water and ſtores taken in, ſhe ſailed from Ouruſt on the 8th of December, and anchored in the road of Batavia; twelve days were employed in receiving the remainder of her proviſions, water, and other neceſſaries, though their buſineſs would have been done in much leſs time, but that ſome of the crew died, and the majority of the ſurvivors were ſo ill, as to be unable to give their aſſiſtance. On the 24th, Captain Cook took leave of the governor, and ſome other gentlemen, who had diſtinguiſhed themſelves by the civilities they ſhewed him; but at this juncture an incident occurred, that might have produced conſequences by no means deſirable. A ſailor belonging to one of the Dutch ſhips in the road of Batavia, deſerted from the veſſel, and entered himſelf on board the Endeavour. The captain of the Dutch ſhip having made application to the governor, claiming the delinquent as a ſubject of the States General, the governor iſſued his order for the reſtoration of the man; Captain Cook had but juſt taken leave of the governor, when this order was delivered to him, and he ſaid, that the man ſhould be given up, if it appeared he was a Dutchman. As the captain was at this time on ſhore, and did not intend going on board till the following day, he gave the Dutch officer a note to the lieutenant, who commanded on board the Endeavour, to deliver the deſerter on the condition above-mentioned. On the following day the Dutchman waited on Captain Cook, informing him, that the lieutenant had abſolutely refuſed to give up the ſeaman, ſaying he was an Iriſhman, and of courſe a ſubject of his Britannic Majeſty; Captain Cook applauded the conduct of his officer, and added, that it could not be expected that he ſhould deliver up an Engliſh ſubject. The Dutch officer then ſaid, he was authoriſed, by the governor, to demand the fugitive as a Daniſh ſubject, adding, that his name was entered in the ſhip's books as having been born at Elſineur; to this Captain Cook very properly replied, that the governor muſt have been miſtaken, when he gave this order for delivering the deſerter, who had his option whether he would ſerve the Dutch or the Engliſh; but in compliment to the governor, the man ſhould be given up, as a favour, if he appeared to be a Dane, but that in this caſe, he ſhould by no means be demanded as a right, and that he would certainly keep him, if he appeared to be a ſubject of the crown of Great Britain. The Dutchman now took his leave, and he had not been long gone before the captain received a letter from the commanding officer on board, containing full proof, that the man was an Engliſh ſubject. This letter the captain carried to the ſhebander, deſiring him to lay it before the governor, and to inform him, that the man ſhould not be delivered up on any terms whatever. This ſpirited conduct on the part of Captain Cook, had the deſired effect; and thus the matter ended.

Diſpute with the governor of Batavia.

This day the captain, attended by Mr. Banks and the other gentlemen who had hitherto lived in the town, repaired on board the ſhip, which got under ſail the next morning. The Endeavour was ſaluted by the fort, and by the Elgin Eaſt-Indiaman, which then lay in the road; but ſoon after theſe compliments were returned, the ſea-breeze ſetting in, they were obliged to come to anchor. Since the arrival of the ſhip in Batavia road, every perſon belonging to her had been ill, except the ſail-maker, who was more than ſeventy years old, yet this man got drunk every day while they remained there. The Endeavour buried ſeven of her people at Batavia, viz. Tupia and his boy, three of the ſailors, the ſervant of Mr. Green, the aſtronomer, and the ſurgeon; and at the time of the veſſel's ſailing, forty of the crew were ſick, and the reſt ſo enfeebled by their late illneſs, as to be ſcarcely able to do their duty. "The town of Batavia ſituate in 6° 10′ ſouth lat. and 106° 50′ eaſt long. from the meridian of Greenwich, is built on the bank of a large bay, ſomething more than twenty miles from the Streight of Sunda, on the north ſide of the iſland of Java, on a low boggy ground. Several ſmall rivers, which riſe forty miles up the country, in the mountains of Blaeuwen Berg, diſcharge themſelves into the ſea at this place, having firſt interſected the town in different directions. There are wide canals of nearly ſtagnated water in almoſt every ſtreet, and as the banks of the canals are planted with trees, they appear at firſt very agreeable; but theſe trees and canals combine to render the air peſtilential. Some of the rivers are navigable, more than thirty miles up the country; and, indeed, the Dutch appear to have choſen this ſpot to build the town on, for the ſake of water-carriage, in which convenience Batavia exceeds every place in the world, except the towns of Holland. A writer who publiſhed an account of this place near 50 years ago, makes the number of houſes at that time 4760, viz. 1242 Dutch houſes, and 1200 Chineſe houſes, within the walls; and 1066 Dutch houſes, and 1240 Chineſe houſes, without the walls, with 12 houſes for the vending of arrack. The ſtreets of Batavia being wide, and the houſes large, it ſtands on more ground than any place that has only an equal number of houſes. In dry weather a moſt horrid ſtench ariſes from the canals, and taints the air to a great degree; and when the rains have ſo ſwelled the canals that they overflow their banks, the ground-floors of the houſes, in the lower part of the town, are filled with ſtinking water, that leaves behind it dirt and ſlime in amazing quantities. The running ſtreams are ſometimes as offenſive as the ſtagnant canals, for the bodies of dead animals are frequently lodged on the ſhallow parts, where they are left to putrify, and corrupt the air, except a flood happens to carry them away; this was the caſe of a dead buffalo, while the crew of the Endeavour were there, which lay ſtinking on the ſhoal of a river, in one of the chief ſtreets for ſeveral days. They ſometimes clean the canals; but this buſineſs is performed in ſuch a manner, as ſcarcely to make them leſs a nuiſance than before, for the bottom being cleared of its black mud, it is left on the ſide of the canal till it is hard enough to be taken away in boats, and as there are no houſes for neceſſary retirement in the whole town, the filth is thrown into the canals regularly once a day, ſo that this mud is a compound of every thing that can be imagined diſagreeable and offenſive. There is a new church in Batavia, which is a fine piece of building, and the dome of it may be ſeen far off at ſea. This church is illuminated by chandeliers

chandeliers of the moſt ſuperb workmanſhip, and has a fine organ: moſt of the other public buildings are ancient, conſtructed in an ill taſte, and gave a very compleat idea of Dutch clumſineſs. Their method of building their houſes ſeems to have been taught them by the climate. On the ground-floor there is no room but a large hall, a corner of which is parted off for the tranſaction of buſineſs; the hall has two doors, which are commonly left open, and are oppoſite each other, ſo that the air paſſes freely through the room, in the middle of which there is a court, which at once increaſes the draft of air, and affords light to the hall; the ſtairs, which are at one corner, lead to large and lofty apartments above. The female ſlaves are not permitted to ſit in any place but the alcove formed by the court, and this is the uſual dining place of the family.

The town of Batavia is encompaſſed by a river of ſhallow water, the ſtream of which is very rapid; within this river, which is of different widths in various places, is an old ſtone wall, much decayed in many places, and within the wall is a canal that is likewiſe much wider in ſome places than in others, ſo that there is no entering the gates of the town but by croſſing two draw-bridges; there are but few on the ramparts, and no perſons are permitted to walk there. There is a kind of citadel, or caſtle, in the north-eaſt corner of the town, the walls of which are both broader and higher than they are in other parts; it is furniſhed with a number of large guns, which command the landing-place.

Apartments are provided in this caſtle for the governor-general and all the council; and in caſe of a ſiege they have orders to retire thither. In the caſtle are likewiſe a number of ſtore-houſes, in which the effects belonging to the company are depoſited. The company have in their poſſeſſion large quantities of gun-powder, which is kept in different places, that the lightning may not deſtroy the whole ſtock at once, a great number of cannon are likewiſe laid up within the caſtle. There are a great many forts built in different parts of the country, ſeveral miles diſtant from Batavia, moſt probably erected to keep the natives in ſubmiſſion; and beſides theſe there are a number of fortified houſes, each mounting eight guns, which are ſo ſtationed as to command the canals and the roads on the borders. There are houſes of this kind in many parts of the iſland of Java, and the other iſlands in its neigbourhood, of which the Dutch have obtained poſſeſſion. The Chineſe having rebelled againſt them in the year 1740, all their principal houſes were demoliſhed by the cannon of one of theſe fortified houſes, which is in the town of Batavia, where, likewiſe, there are a few more of them.

The roads of this country are only banks between the ditches and canals, and the fortified houſes being erected among the moraſſes near theſe roads, nothing is eaſier than to deſtroy them, and conſequently to prevent an enemy from bringing any heavy artillery near the town: if, indeed, an enemy be only hindered a ſhort time in his approach, he is effectually ruined, for the climate will preclude the neceſſity of the uſe of weapons for his deſtruction. Before the Endeavour had been a week at Batavia, her crew began to feel the ill effects of the climate; half of them were rendered incapable of doing their duty before the expiration of a month. They were informed, that it was a very uncommon thing for 50 ſoldiers out of 100 brought from Europe, to be alive at the expiration of the firſt year, and that of the fifty who might happen to be living, not ten of thoſe would be in ſound health, and, probably, not leſs than half of them in the hoſpital.

All the white inhabitants of Batavia are ſoldiers, and, at the expiration of five years ſervice, they are bound to hold themſelves in readineſs to go to war, if they ſhould be wanted, and the younger inhabitants are frequently muſtered; but as they are neither trained nor exerciſed after the expiration of the five years before-mentioned, the little they have learned is ſoon forgotten. [The Portugueſe, who live in this country, employ themſelves very much in ſhooting the deer, and the wild hog, whence they become excellent markſmen.] The Indians, of whatever nation, who reſide here, and have either been made free, or were born ſo, are called Mardykers; but neither theſe nor the Chineſe are acquainted with fire-arms, yet as theſe people are ſaid to poſſeſs great perſonal bravery, much might be expected from their expert uſe of their daggers, ſwords and lances. It would be a laborious taſk to attack Batavia by land, and it is not poſſible to make any attack at all by ſea, for the ſhallowneſs of the water would hinder any veſſels from advancing within cannon-ſhot of the walls; indeed there is barely depth of water for a ſhip's long-boat, except a narrow channel, called the river, which extends half a mile into the harbour, and is ſtrongly bounded on each ſide with piers, the other end of it being directly under the fire of the caſtle, while its communication with the canals of the town is prevented by a boom of wood, which is every night ſhut preciſely at ſix o'clock, and never opened till the following day. 1770

Any number of ſhips may anchor in the harbour of Batavia, the ground of which is ſo excellent that the anchor will never quit its hold. This harbour is ſometimes dangerous for boats, when the ſea-breezes blow freſh; but, upon the whole, it is deemed the beſt and moſt commodious in all India. There is a conſiderable number of iſlands, which are ſituated round the outſide of the harbour, and all theſe are in the poſſeſſion of the Dutch, who deſtine them to different purpoſes. On one of them, which is called Purmerent, an hoſpital is erected, on account of the air being purer than it is at Batavia. In a ſecond, the name of which is Kuyper, are erected numbers of warehouſes, in which are lodged the rice and ſome other commodities, which belong to the Dutch Eaſt-India Company; at this iſland thoſe ſhips belonging to different nations, which are to be repaired at Ouruſt, unload their cargoes; and it was here that the ſtores of the Falmouth man of war were laid up, when ſhe was condemned on her return from Manilla; her warrant officers, of whom mention has been made in the account of Captain Wallis's voyage, were ſent to Europe in Dutch ſhips about half a year before the Endeavour anchored in the road of Batavia. A third of theſe iſlands, the name of which is Edam, is appropriated to the reception of certain offenders, whoſe crimes are not deemed worthy of death, and thither they are tranſported from Holland, and detained from five to forty years, in proportion to the heinouſneſs of the offence they have committed: making of ropes is the principal part of the employment of theſe criminals.

The environs of Batavia have a very pleaſing appearance, and would in almoſt any other country, be an enviable ſituation. Gardens and houſes occupy the country for ſeveral miles, but the former are ſo covered with trees, that the advantage of the land having been cleared of the wood that originally covered it, is almoſt wholly loſt; while theſe gardens and the fields adjacent to them are ſurrounded by ditches which yield a diſagreeable ſmell; and the bogs and moraſſes in the adjacent fields are ſtill more offenſive. For the ſpace of more than thirty miles beyond the town, the land is totally flat, except in two places, on one of which the governor's country-ſeat is built, and on the other they hold a large market; but neither of theſe places is higher than ten yards from the level of the plain. At near forty miles from the town the land riſes into hills, and the air is purified in a great degree; to this diſtance the invalids are ſent by their phyſicians when every other proſpect of their recovery has failed, and the experiment ſucceeds in almoſt every inſtance, for the ſick are reſtored to health; but they no ſooner return to the town, than their former diſorders reviſit them. On theſe hills the moſt opulent of the inhabitants

1770

bitants have country ſeats, to which they pay an annual viſit. Thoſe who reſide conſtantly on the hills enjoy an almoſt perpetual flow of health; and moſt of the vegetables of Europe grow as freely there as in their native ground: the ſtrawberry in particular flouriſhes greatly, which is a ſufficient proof of the coolneſs of the air.

The rice of this country is very plentiful, and, in order to be brought to perfection, ſhould lie under water more than half the time it is growing: but they have a ſort which grows on the ſides of the hills, which is unknown in the Weſt-India iſlands; this ſort is planted when the wet ſeaſon commences, and the crop is gathered in, ſoon after the rains are over. The maize, which grows near Batavia, is gathered while young, and roaſted in the ear. The land likewiſe produces carrots, celery, parſley, aſparagus, onions, radiſhes, cabbages, lettuces, cucumbers, lentiles, kidney-beans, hyſſop, ſage, rue, Chineſe white radiſhes, which when boiled, are not unlike a parſnip, common potatoes, ſweet potatoes, wet and dry yams, millet, and the egg plant, the fruit of which, when broiled and eaten with ſalt and pepper, is moſt exquiſite food. Amazing quantities of ſugar are produced here, and, while the quantity is beyond compariſon greater, the care of cultivation is inconceivably leſs than in the Weſt India iſlands. White ſugar is retailed at two-pence half-penny the pound; and arrack is made of the molaſſes, with a ſmall addition of rice, and the wine of the cocoa-nut. The inhabitants likewiſe raiſe a little indigo for their own uſe, but do not export it.

The fruits of this country are near forty in number, and of ſome of theſe there are ſeveral kinds. Pine-apples grow in ſuch abundance, that they may be purchaſed at the firſt hand, for the value of an Engliſh farthing; and they bought ſome very large ones for a half-penny a piece at the fruit-ſhops, and their taſte is very excellent. They grow ſo luxuriantly, that ſeven or eight ſuckers have been ſeen adhering to one ſtem. The ſweet oranges of Batavia are good of their kind, but very dear at particular times. The ſhaddocks of the Weſt Indies, called here Pamplemooſes, have an agreeable flavour. Lemons were very ſcarce when the Endeavour lay in the harbour, but limes were altogether as plentiful, and ſold at little more than two-pence the ſcore. There are many kinds of oranges and lemons, but none of them excellent. Of mangoes there are plenty, but their taſte is far inferior to the melting peach of England, to which they have been compared. It is ſaid that the heat, and extreme dampneſs of the climate does not agree with them, yet there are many different kinds of them. Of bananas, there are an amazing variety of ſorts, ſome of which being boiled, are eaten as bread, while others are fried in batter, and are a nouriſhing food: but of the numerous ſorts of this fruit, three only are fit to be eaten; one indeed, is remarkable, becauſe it is filled with ſeeds, which are not common to the reſt. Grapes are ſold from one ſhilling to eighteen pence a pound, though they are far from being good. The tamarinds are cheap and plentiful; but as the method of preſerving them, which is in ſalt, renders them a mere black lump, they are equally nauſeating to the ſight and to the palate. The water melons are excellent of their kind, and are produced in great abundance. The pompions are boiled as turnips, and eaten with ſalt and pepper. This fruit is admirably adapted to the uſe of voyagers, as it will keep many months without care, and makes an excellent pye, when mixed with the juice of lemons and ſugar. The papans of this country are ſuperior to turnips, if the cores are extracted, after paring them when they are green. The guava has a ſtrong ſmell, and a taſte not leſs diſagreeable: it is probable, that the guava of the Weſt-Indies, which many writers have diſtinguiſhed by their praiſes, has a very different flavour. The ſweet ſop is a fruit that has but little flavour: it abounds in large kernels, from which the pulp is ſucked. The taſte of the cuſtard-apple very much reſembles the diſh from which its name is taken. The caſheu apple produces a nut which is not unknown in England, but the fruit has ſuch an aſtringent quality, that the Batavians ſeldom eat of it: the nut grows on the top of the apple. The cocoa-nut is plentiful in this country, and there are ſeveral kinds of this fruit, the beſt of which is very red between the ſhell and the ſkin. The jamboo is a fruit that has but little taſte, but is of a cooling nature: it is conſiderably leſs than a common-ſized apple, and thoſe that have grown to their full ſize, are always the beſt; its ſhape is oval, and its colour a deep red. Of the Jambu-eyer, there are two kinds, the white and the red: they are ſhaped like a bell, and are ſomething bigger than a cherry: they have no kind of taſte but that of a watry acid. The Jambu-eyer mauwar, ſmells like a roſe, and its taſte is not unlike that of conſerve of roſes. The mangoſtan is of a dark red colour, and not larger than a ſmall apple: to the bottom of this fruit adhere ſeveral little leaves of the bloſſoms, while on its tops are a number of triangles combined in a circle, it contains ſeveral kernels ranged in a circular form, within which is the pulp, a fruit of moſt exquiſite taſte; it is equally nutricious and agreeable, and is conſtantly given to perſons who are troubled with inflammatory or putrid fevers. The ſweet orange of this country is likewiſe given in the ſame diſorders. The pomegranate of theſe parts differs in nothing from that generally known in England. The durion takes its name from the word Dure, which, in the language of that country, means prickles, and the name is well adapted to the fruit, the ſhell of which is covered with ſharp points, ſhaped liked a ſugar-loaf: its contents are nuts not much ſmaller than cheſnuts, which are ſurrounded with a kind of juice reſembling cream; and of this the inhabitants eat with great avidity: the ſmell of this fruit is more like that of onions, than any other European vegetable, and its taſte is like that of onions, ſugar, and cream intermixed: the inſide of the durion, when ripe, is parted, lengthways, into ſeveral diviſions. The nanca is a fruit that ſmells like garlick and apples mixed together: its ſize in the gardens of Batavia, is not bigger than that of a middling ſized pompion, and its ſhape is nearly the ſame: it is covered with prickles of an angular form. They were informed that, at a place called Madura, it has been known to grow to ſuch an enormous ſize as to require the ſtrength of two men to carry it. The champada is in all reſpects like the nauca, only that it is not ſo large. The rambutan contains a fruit within which is a ſtone, that is perhaps the fineſt acid in the world: this fruit is not unlike a cheſnut with its huſk on; and it is covered with ſmall prickles of a dark red colour, and ſo ſoft as to yield to the ſlighteſt impreſſion. The gambolan reſembles a damaſcen both in colour and ſize, and is of a very aſtringent nature. The boa bidarra taſtes like an apple, and is likewiſe extremely aſtringent: its ſize is that of a gooſeberry, its form round, and its colour yellow. The nam nam makes an excellent fritter, if fried in batter, but is not eſteemed when raw: the rind of it is rough, its length is about three inches, and its ſhape not unlike that of a kidney. The catappa and the canare are two ſpecies of nuts, the kernels of which are like thoſe of an almond, but ſo hard, that it is almoſt impoſſible to break them. The madja contains a pulp of a ſharp taſte, which is eaten with ſugar: this fruit is covered with a hard ſhell. The ſuntal is a fruit ſcarcely fit to be eaten, being at once aſtringent, acid, and of a moſt unpleaſant taſte, yet it is publicly ſold in the ſtreets of Batavia: it contains a number of kernels, which are incloſed in a thick ſkin. The ſalack is nearly of the ſize of a ſmall golden pippin, and contains a few kernels of a yellow colour, the taſte of which is not unlike that of a ſtrawberry; but the covering of this fruit is very remarkable, as it conſiſts of a number of ſcales, reſembling thoſe of a fiſh. The chefrema and the blimbing, are two four

fruits, exceedingly well adapted to make ſour ſauce, and pickles. The blimbing beſſe is another fruit of the ſame kind, but conſiderably ſweeter.

Of the fruits not in ſeaſon when Captain Cook was at Batavia, are the boa atap, and the kinſhip, which he ſaw preſerved in ſugar: and there are ſeveral other ſorts which the Batavians are fond of, but they are never eaten by ſtrangers: among thoſe are the moringa, the guilindina, the killer, and the ſoccum; this laſt has the appearance of the bread-fruit which is produced in the iſlands of the South Seas, but it is not near ſo good, though the tree on which it grows is almoſt exactly like the bread-fruit tree.

Vaſt quantities of fruit are eaten at Batavia. There are two markets held weekly, at diſtant places for the better accommodation of thoſe who reſide in different parts of the country. Here the fruit-ſellers meet the gardeners, and purchaſe the goods at low rates. We are told it is not uncommon to ſee fifty or ſixty loads of pine-apples careleſsly thrown together at thoſe markets. Flowers are ſtrewn by the inhabitants of Batavia and Java, about their houſes, and they are conſtantly burning aromatic woods and gums, which is ſuppoſed to be done by way of purifying the air from the ſtench that ariſes from the canals and ditches about the town.

In this country ſweet-ſcented flowers are plentiful, many ſpecies of which being intirely unknown, are worth remarking.

The combang tonquin, and combang carenaſſi, are particularly fragrant flowers, which bear ſcarcely any reſemblance to any of thoſe flowers with which we are here acquainted. They are very ſmall, and ſeem to be of the dog's-bane ſpecies. The camunga which is more like a bunch of leaves than a flower, is of a ſingular ſmell, but very grateful. The bon tanjong is of a pale yellow caſt, and has a very agreeable ſmell; it is about an inch and a half in circumference, and conſiſts of pointed leaves, which give it the appearance of a ſtar. The champacka ſmells ſomewhat like a jonquil, but is rather of a deeper yellow. A large tree upon the iſland produces this flower. There is alſo an extraordinary kind of flower called fundal malam, which ſignifies the intriguer of the night. This flower has no ſmell in the day-time, but as night comes on, it has a very fragrant ſcent, and is very much like the Engliſh tuberoſe.

Theſe flowers being made into noſegays of different ſhapes, or ſtrung upon thread, are carried through the ſtreet for ſale on an evening. The gardens of the gentlemen produce ſeveral other ſors of flowers beſides theſe which we have mentioned, but they are not offered to ſale, becauſe there is not a ſufficient plenty of them. A plant, called the pandang, is produced here, the leaves of which being ſhred ſmall, and mixed with other flowers, the natives of both ſexes fill their cloaths and hair with this mixture; which they likewiſe ſprinkle on their beds, and ſleep under this heap of ſweets, a thin piece of chints being their only covering.

Pepper was formerly the only ſpice that grew on the iſland of Java. A conſiderable quantity is brought from thence by the Dutch, but very little of it is made uſe of in the country. The inhabitants prefer cayan pepper, and are fond of cloves and nutmeg, but theſe firſt are too dear to be commonly uſed. Near the iſland of Amboyna are ſome little iſles, on which the cloves grow, and the Dutch poſſeſſed themſelves of all of them, not being eaſy till they all became their property. Scarcely any other nutmegs are found but on the iſland of Banda, which however furniſhes enough for all the nations that have a demand for that commodity. There are but a few nutmeg-trees on the coaſt of New Guinea.

As to Java, of which we have already ſpoken, our voyagers give the following account: "This iſland produces horſes, buffaloes, ſheep, goats, and hogs. The ſort of horſes ſaid to have been met with here when the country was firſt diſcovered, appeared to be nimble animals though ſmall, being generally ſeldom above thirteen hands high. The horned cattle of this country are different from thoſe of Europe. They are quite lean, but of a very fine grain. The Chineſe and the natives of Java eat the Buffaloes fleſh, which the Dutch conſtantly refuſe, being impreſſed with a ſtrange idea that it is feveriſh. The ſheep are hairy like goats, and have long ears: they are moſtly found to be tough and ill-taſted. 1770

"There happening to be a few ſheep from the Cape of Good Hope at Batavia, ſome of them were purchaſed at the rate of one ſhilling a pound. The hogs, eſpecially thoſe of the Chineſe ſtock, are very fine food, but ſo fat as that the lean is ſeparately ſold the butchers, who are Chineſe; they take off the fat, they melt and ſell to their countrymen to be eaten with their rice. Yet though theſe hogs are ſo fine, the Dutch prefer their own breed, and the conſequence is that theſe latter are ſold at extravagant rates.

"As the Portugueſe ſhoot the wild hogs and deer, (as we have already mentioned) they are ſold at a moderate price, and are good eating. As to the goats of this country they are as indifferent as the ſheep. Dogs and cats are found here in abundance, and there are numbers of wild horſes at a conſiderable diſtance from Batavia, on the mountains. There are a few monkeys ſeen near the town; but there are many on the mountains and deſart-places, where there are alſo tygers, and a few rhinoceroſes.

"An aſtoniſhing quantity of fiſh is taken here, and all are fine food, except a few that are ſcarce; yet the inhabitants will not eat thoſe that are found in abundance, but purchaſe thoſe which are worſe and ſcarcer, a circumſtance that contributes to keep up the price of the latter. A prejudice likewiſe prevails among the Dutch which prevents them from eating any of the turtle caught in theſe parts, which are very good food, though not equal to thoſe that are found in the Weſt Indies. Very large lizards are common at Batavia,; ſome of them are ſaid to be as thick as a man's thigh; and Mr. Banks ſhot one five feet long, which being dreſt, proved very agreeable to the taſte.—

"In Batavia they found ſnipes of two different ſorts; and thruſhes might have been purchaſed of the Portugueſe, who were the only dealers in this ſort of birds, and venders of wild fowl in the country.

"In the iſland of Java are palm-wine, and arrack. Of the former they have three ſorts, the firſt of which is drank in a few hours after it is drawn from the tree, and is moderately ſweet; the ſecond and third ſorts are made by fermentation, and by putting ſeveral ſorts of herbs and roots into the liquor.

"The religion of Mahomet is profeſſed in Java, for which reaſon the natives do not make uſe of wine publicly; but in private few of them will refuſe it. They alſo chew opium, whoſe intoxicating qualities prove its recommendation to the natives of India.

"If we exclude the Chineſe, and the Indians of different nations, who inhabit Batavia and its environs, the inhabitants only amount to a ſmall number, not a fifth part of whom are ſaid to be Dutchmen, even by deſcent. The Portugueſe out-number all the European ſettlers on the iſland. The troops in the ſervice of the ſtates of Holland, are compoſed of the natives of almoſt all the nations of Europe; but the greater part of them are Germans. When any perſon goes to reſide at Batavia, he is obliged to enter firſt as a ſoldier, to ſerve their company for five years, Afterwards he applies for a leave of abſence to the council, which being granted as a thing of courſe, he engages in any buſineſs that he thinks proper to chuſe. There is however a ſort of policy in this matter, ſince the Dutch have thus always a force ready to arm and join their troops in this country upon any emergency; all places of power and profit are held by the Dutch, and no foreigner has any ſhare in the management of public affairs.

Not-

1770

" Notwithſtanding all the men of other countries are bound to obſerve the rules above-mentioned, yet women from all parts may remain here unmoleſted. It appeared that the whole place could not furniſh fifty females who were natives of Europe; yet the town abounded with white women, who were deſcended from Europeans, that had ſettled there at different times, all the men having paid the debt of nature; for ſo it is, that the climate of Batavia deſtroys the men much faſter than the women. Theſe women follow the delicate cuſtom of chewing betel, after the example of the native Javaneſe, whoſe dreſs they imitate, and whoſe manners they copy, in all reſpects. Mercantile buſineſs is conducted at Batavia with the ſlighteſt trouble imaginable. When a merchant receives an order for goods of any kind, he communicates the contents of it to the Chineſe, who are the univerſal manufacturers. The Chineſe agent delivers the effects on board the ſhip for which they are beſpoke, and taking a receipt for them from the maſter of the veſſel, he delivers it to the merchant, who pays the Chineſe for the goods, and reſerves a conſiderable profit, without the leaſt trouble, riſque, or anxiety. But when a merchant imports goods of any kind, he receives them himſelf, and lodges them in his own warehouſes. It may be wondered that the Chineſe do not ſhip the goods on their account, but from this they are reſtricted, and compelled to ſell them to the merchants only.

The inhabitants of Java diſtinguiſh the Portugueſe by the name of *Oranſerane*, that is, Nazarene-men; but theſe uſe the general term of *Caper*, or *Caſir*, reſpecting all who do not poſſeſs the religion of Mahomet, and in this they include the Portugueſe. But the Portugueſe of Batavia are ſo only in name; for they have neither any connection with, or knowledge of, the kingdom of Portugal, and they have changed the religion of the church of Rome, for that of Luther; with the manners of the natives, they are wholly familiariſed, and they commonly ſpeak their language, though they are able to converſe in a corrupt kind of Portugueſe. They dreſs in the habit of the country, with a difference only in the manner of wearing their hair; their noſes are more peaked and their ſkin of a deeper caſt than that of the natives. Some of them are mechanics and artificers, others ſubſiſt by waſhing of linen, and the reſt procure a maintenance by hunting.

" The Indian inhabitants of Batavia, and the country in its neighbourhood, are not native Javaneſe, but are either born on the ſeveral iſlands from whence the Dutch bring their ſlaves, or the offspring of ſuch as have been born on thoſe iſlands; and theſe having been made free either in their own perſons or in the perſons of their anceſtors, enjoy all the privileges of freemen. They receive the general appellation of believers of the true faith.

" The various other Indian inhabitants of this country attach themſelves each to the original cuſtoms of that in which themſelves or their anceſtors were born; keeping themſelves apart from thoſe of other nations, and practiſing both the virtues and vices peculiar to their own countries. The cultivation of gardens, and the conſequent ſale of flowers and fruit afford ſubſiſtence to great numbers of them; theſe are the people who raiſe the betel and areca, which being mixed with lime, and a ſubſtance that is called *Gambir*, the produce of the Indian continent, is chewed by perſons of all ranks, women as well as men: indeed ſome of the politer ladies make an addition of cardamom, and other aromatics, to take off the diſagreeable ſmell with which the breath would be otherwiſe tainted. Some of the Indians are very rich, keep a great number of ſlaves, and live, in all reſpects, according to the cuſtom of their reſpective countries, while others are employed to carry goods by water; and others, again ſubſiſt by fiſhing.

The Oranſlams, or believers of the faith feed principally on boiled rice, mixed with a ſmall quantity of dried ſhrimps and other fiſh, which are imported from China, and a little of the fleſh of buffaloes and chickens; they are fond of fruit, of which they eat large quantities, and with the flour of the rice they make ſeveral ſorts of paſtry. They ſometimes make very ſuperb entertainments, after the faſhion of their reſpective countries; but, in general, they are a very temperate people; of wine they drink very little, if any, as the religion of Mahomet, which they profeſs, forbids the uſe of it.

" When a marriage is to be ſolemniſed among the Oranſlams, all the gold and ſilver ornaments that can be procured, are borrowed to deck out the young couple, who, on theſe occaſions, never fail to make the moſt ſplendid appearance; ſumptuous entertainments are given by thoſe who can afford them, which continue twelve or fourteen days, and frequently more, during all which time the women take care that the bridegroom ſhall not viſit his wife privately, though the wedding takes place previous to the feſtival.

All theſe Indians though they come from different countries, ſpeak the Malay language if it deſerves that name. On the iſland of Java there are two or three different dialects, and there is a language peculiar to every ſmall iſland; it is conjectured that the Malay tongue is a corruption of the language of Malacca.

" The hair of the people, which is black without a ſingle exception, grows in great abundance; yet the women make uſe of oils, and other ingredients, to increaſe the quantity of it: they faſten it to the crown of the head with a bodkin, having firſt twiſted it into a circle, round which they place an elegant wreath of flowers, ſo that the whole head-dreſs has a moſt beautiful appearance. It is the univerſal cuſtom both with the men and women, to bathe in a river once every day, and ſometimes oftener, which not only promotes health, but prevents that contraction of filth, that would be otherwiſe unavoidable in ſo hot a climate. The teeth of the Oranſlams have ſome particulars in them well worthy of notice. With a kind of whetſtone they rub the ends of them till they are quite flat and even; they then make a deep groove in the teeth of the upper jaw, in the centre between the bottom of each tooth and the gum, and horizontally with the latter; this groove is equal in depth to a quarter of the thickneſs of the teeth; yet none of theſe people have a rotten tooth, though according to the dentiſts of England and France, ſuch a thing muſt be unavoidable, as the tooth is placed much deeper than what we call the enamel. The teeth of theſe people became very black by the chewing of betel, yet a ſlight waſhing will take off this blackneſs, and they will then become perfectly white; but they are very ſeldom waſhed as the depth of the colour is very far from being thought diſagreeable. Our author obſerves that moſt readers muſt have heard of the Mohawks; and theſe are the people who are ſo denominated, from a corruption of the word amock, which will be explained by the following ſtory and obſervations. To run amock is to get drunk with opium, and then ſeizing ſome offenſive weapon, to ſally forth from the houſe, kill the perſon or perſons ſuppoſed to have injured the Amock, and any other perſon that attempts to impede his paſſage, till he himſelf is taken priſoner or killed on the ſpot. While Captain Cook was at Batavia, a perſon whoſe circumſtances in life were independent, became jealous of his brother, intoxicated himſelf with opium, and then murdered his brother, and two other men who endeavoured to ſeize him. This man, contrary to the uſual cuſtom, did not leave his own houſe, but made his reſiſtance from within it; yet he had taken ſuch a quantity of the opium, that he was delirious, which appeared from his attempting to fire three muſquets, neither of which had been loaded, nor even primed. Jealouſy of the women is the uſual reaſon of theſe poor creatures running amock [or a-muck] and the firſt object of their vengeance is the perſons whom they ſuppoſe to have injured them. The officer, whoſe buſineſs it is to apprehend theſe unhappy

wretches, is furniſhed with a long pair of tongs, in order to take hold of them at ſuch a diſtance from the point of their weapons, as to inſure his perſonal ſafety. When he takes one of them alive, he is amply rewarded; but this is not often the caſe, as they are ſo deſperate as not to be eaſily apprehended: when they are killed in the attempt to take them, the officer has only the cuſtomary gratification. Thoſe who are taken alive are broken on the wheel, as near as poſſible to the place where the firſt murder was perpetrated; and, as they are ſeldom apprehended without being previouſly wounded, the time of their execution is ſooner or later, according to the opinions of the phyſicians, whether the wounds are, or are not mortal.

Oranſlams. "The Oranſlams believe that the devil is the author of ſickneſs and other misfortunes, on which account they make an oblation of meat and money, and other things, to him, when they are either ſick or in trouble. When they dream ſucceſſively for ſeveral nights, they have no doubt but that the devil has injoined the performance of ſome act, to diſcover which, they torture their brains in vain, and then apply to the prieſt, who never fails to interpret the dream in a ſatisfactory manner. In conſequence of this interpretation, by which it appears that the devil is in want of money and food, a quantity of each is placed in the leaves of the cocoa-nut tree, and being hung on the bough of a tree by the ſide of a river, is left till ſome paſſenger ſhall find, and take away the money, which is conſidered not ſo much an offering to the devil, as a fine due for ſome crime committed; with regard to the food, they imagine that the devil comes and ſucks out the nutritive parts of it, without moving it out of its place.—From this part of the ſtory it ſeems reaſonable to conclude, that the prieſt having previous knowledge where the oblation is to be made, takes the money, and leaves the victuals.—

"The Chineſe inhabitants of Batavia are like thoſe of their own country, ſome of the moſt induſtrious people on the face of the earth. They are embroiderers, dyers of cotton, taylors, carpenters, joiners, ſmiths, and makers of ſlippers; ſome of them are ſhop-keepers and deal largely in the manufactures of Europe and China. A few of theſe people live within the walls of the town; but the majority of them take up their reſidence in a diſtrict named Champang China, which is ſituated without the walls. Thoſe of the Chineſe who live in the country, either keep buffalos and other cattle, the milk of which they ſell daily at Batavia, or they procure a ſubſiſtence by the raiſing of rice and ſugar canes, and the cultivation of gardens. There is nothing, however infamous, which a Chineſe will refuſe to do for gain, except his neck is in danger, [and this is the opinion of every preceding writer,] ſo that theſe people muſt have taken no ſmall pains to eſtabliſh their reputation for knavery. They labour with unwearied diligence, but the moment they have compleated their work they ſit down to dice, cards, or ſome other expert art; and they follow their ſports with ſuch eagerneſs, that the buſineſs of eating and ſleeping is frequently ſuſpended. The clothes of the Chineſe, whether rich or poor, are ſingularly clean and decent. Their behaviour is civil even to humility. They are ſuch temperate eaters that gluttony is unknown among them; but as their religion does not command them to refrain from any particular food, they eat a variety of things which are denied to thoſe Indians who profeſs the Mahometan faith. Excluſive of vegetables and fiſh of various kinds, their principal food conſiſts of dogs, cats, lizards, frogs, ſerpents of ſeveral ſorts, and hogs.

"The Chineſe have purchaſed of the Dutch, at a very large expence, ſeveral hundred acres of land in the vicinity of Batavia, for the interment of the dead; for it is a rule from which they never depart, not to open a grave which has once received the body of their countrymen: and hence ariſes an enormous expence in the purchaſe of land, which greatly diſtreſſes the living, to pay an imaginary honour to the dead. In order to preſerve the body as long as poſſible from decay, the coffin conſiſts of a piece of ſolid timber hollowed out: and this being covered with a kind of mortar ſeveral inches thick, petrefies in the ground till it is as hard as a flint. The funeral is attended by the near relations of the deceaſed, and by a train of women who are paid for making lamentations. In theſe expenſive cuſtoms, abſurd as they are, the Chineſe are equalled by the reſt of their Batavian neighbours, for every perſon is buried with a degree of ſplendour proportioned to the rank he has held in life, and there is a poſitive law which enjoins the obſervance of this cuſtom; in conſequence of which it frequently happens, that thoſe who have not money ſufficient to pay the juſt demands on them, are buried in a pompous manner, merely becauſe they have lived elegantly. In this caſe, perſons are employed to take an account of what the man died worth, and when the funeral expences are defrayed the ſurplus is divided among the creditors."— 1770

The various inhabitants of the iſland of Java, whether Dutch, Portugueſe, or Indians, are all waited on by ſlaves, whoſe number is proportioned to the circumſtances of the maſter; but there are laws in force, that no native of the iſland ſhall ſerve as a ſlave. Theſe people, the number of which is very great, are bought at Sumatra, and other eaſtern iſlands, at various prices, from ten to twenty pounds; but there have been inſtances of very beautiful girls being ſold at above five times the common market price. They are fed on boiled rice, and ſuch fiſh as can be purchaſed at the loweſt rates, a little of which ſatisfies them, nor indeed do they deſerve even the little they eat, for they are idle and ſluggiſh in the higheſt degree.

The negros of Africa are purchaſed at a lower price than any other ſlaves, and indeed any price whatever exceeds their merit, for they are of the moſt obſtinate diſpoſition, and thieves, without a ſingle exception. Thoſe ſlaves which are purchaſed from the iſland of Celebes are moſt intolerably lazy, and of ſo ferocious a diſpoſition, that their employers run the hazard of their perſonal ſafety. The iſland of Bali furniſhes the moſt uſeful ſlaves; and the little iſland Nias, near Sumatra, ſupplies female ſlaves of exquiſite beauty; but to theſe women death is the almoſt certain conſequence of even a ſhort reſidence at Batavia.—The maſters of any of theſe ſlaves may puniſh them in whatever way they chuſe, ſo as not to deprive them of life; but when it happens that a ſlave dies of the puniſhments he has received, the maſter is tried, and commonly ſuffers as a murderer. From this circumſtance it is reaſonable to ſuppoſe, that the maſters are cautious how they beat the ſlaves, with undue ſeverity; it is not indeed very common for them to ſtrike them at all, but they pay an officer, who is called the Marineu, for inflicting the puniſhment. The Marineu having heard what is alledged againſt the delinquent, determines how many ſtripes he ſhall receive, and theſe are given by ſlaves, whoſe particular buſineſs it is to obey the commands of the Marineu; theſe ſtrokes are laid on with rods made of rattan ſplit very ſmall. For a ſevere whipping the Marineu receives a ducatoon, and a rix-dollar for a ſlighter puniſhment. The women ſlaves are whipped in the houſe of their maſter; but the men publickly in the ſtreets: in order that theſe ſlaves may not be under too great temptations to ſteal, their maſters are compelled to allow them ſeven-pence half-penny weekly for pocket money.

There is ſomething ſingular in the ſubordination obſerved among the inhabitants of Batavia and the adjacent country. The man who has been longeſt in the Eaſt India Company's ſervice is permitted to gild his coach, while others are allowed to ride in coaches differently painted, according to the length of their ſervices, and others again, ride in thoſe that are quite plain. In like manner the coachmen are dreſſed in liveries

1771 that had a greater or leſs quantity of lace on them, or without any lace at all. The lawyers of Batavia are partial in their adminiſtration of juſtice to a very reprehenſible degree. When an Indian has committed any crime deemed worthy of death, he is impaled, hanged, or broken on the wheel, without ceremony; on the contrary, if a Chriſtian is capitally convicted, execution very ſeldom follows the ſentence; and what is more extraordinary, no pains are taken to apprehend the offender, till time enough has been allowed him to run away if he thinks proper. The civil officers of juſtice among the Chineſe and Malays are called captains and lieutenants, but their deciſions are not final, if the party againſt whom they may decide, thinking himſelf aggrieved, ſhould appeal to the Dutch lawyers, in which caſe, the deciſion of the latter muſt be abided by. The Dutch have laid conſiderable taxes on theſe people, among which is one for the permiſſion to wear their hair. When theſe taxes become due, which is once a month, they hoiſt a flag on the top of a houſe nearly in the center of Batavia, and the man who does not ſpeedily go to pay his money, has reaſon to repent the omiſſion.

The current money of this country is of different value, from a Dutch doit to a ducat. When Captain Cook was at Batavia, Spaniſh dollars ſold at 5s. and 5d. each, and the price is ſeldom much lower. The Chineſe would give only the value of twenty ſhillings for an Engliſh guinea that was almoſt new, and for thoſe that were old, and much worn, only ſeventeen ſhillings. The milled ducatoons of Batavia are valued at eighty ſtivers; thoſe that are unmilled at ſeventy-two; the ducat at one hundred and thirty-two; the imperial rix-dollars at ſixty; the rupees at thirty; the ſchellings at ſix; the double ſheys at two and a half, and the doits at a quarter of a ſtiver.

Early in the morning of the 27th of December, 1770, the Endeavour left the road of Batavia, and after ſeveral hindrances, occaſioned by the wind being contrary, ſhe ſtood over for the ſhore of Java, on the firſt day of January, 1771. As many of the ſhip's crew who had been very ill while at Batavia, were now become much worſe, the veſſel was brought to an anchor in the afternoon of the 5th near Princes Iſland, with a view to get ſome neceſſary refreſhments, and to take in wood and water. Dr. Solander and Mr. Banks now went on ſhore with the captain, and they were no ſooner landed than ſome of the natives conducted them to the king of the iſland, with whom they endeavoured to make a bargain for ſome cattle, but the price could not be agreed on. As the adventurers had no doubt but that they ſhould purchaſe on their own terms the following day, they left the Indians, and proceeded in ſearch of a proper place to fill water, which was found. As they were about to embark for the ſhip, they ſoon purchaſed three turtle from ſome of the natives, but with the ſtricteſt injunction that their ſovereign ſhould not be informed of the tranſaction. On Sunday, the 6th of January, they purchaſed, at very moderate prices, as many turtle as they had occaſion for, and the whole ſhip's company fed on this delicious fiſh. The king was at this time at a houſe ſituated in a rice field, where Mr. Banks waited on him, and found him cooking his own victuals. On Monday the inhabitants brought vegetables, deer, fiſh, fowls, and monkeys, for ſale, and on the following day they brought down a farther number of turtle. As a ſervant that Mr. Banks had hired at Batavia had acquainted him, that there was a town in the iſland, his curioſity determined him to have a view of it, and one of the officers of the ſhip accompanied him on his viſit. As he was apprehenſive that the natives would not be pleaſed at his going to the town, he told ſuch of them as he met, that he was ſeeking for plants, which indeed, was a part of the buſineſs of the day. Having come to a kind of village, conſiſting of a very few houſes, they aſked an Indian the way to the town, and ſome other particulars reſpecting it, who endeavoured to prevent their proceeding by repreſenting it at a very great diſtance. When he ſaw they were reſolved to go forward, he proceeded with them, making frequent attempts to miſlead them. When they were in ſight of the town, the Indian changed his behaviour at once, and led the way to it.

This place, which contains between three and four hundred houſes, is called Samadang, and is divided by a river into the old and the new town. Some of the natives, whom the gentlemen remembered to have ſeen among thoſe who had brought proviſions for ſale, agreed to carry them from the old town to the new for a trifling gratification. This was done by means of two little canoes which were laſhed together; and they had no ſooner reached the oppoſite ſhore, than the Indians ſhewed them the houſes of their chiefs, and behaved otherwiſe in the moſt friendly manner; but as this was the ſeaſon when the natives live in their rice grounds, to ſave their corn from the depredations of the monkeys and birds, moſt of the houſes were ſhut. After the gentlemen had ſeen every thing that they thought worthy of notice, they hired a ſailing-boat, which conveyed them to the ſhip time enough for dinner; for the town of Samadang, though a conſiderable diſtance from the place where the Endeavour lay at anchor, is ſituated only at a ſmall diſtance from the ſea-coaſt. While Captain Cook was on ſhore on the 12th, giving orders to the people who were cutting wood and filling water, he was told that one of the natives had ſtolen an axe; the thief was unknown, but the captain reſolving not to give occaſion for future depredations of this kind by taking no notice of the firſt offence, immediately applied to the king, and in conſequence of this application, the axe was brought down to the watering-place the next day. The Indian who brought it back ſaid, it was left at his houſe in the night; but it was ſuſpected that he himſelf was the thief; Mr. Banks having ſeveral times viſited the king of the iſland, and given him ſome trifles that were very acceptable, waited on him for the laſt time on the 13th of January, and gratified him very much by a preſent of a ſmall quantity of paper. The king aſked the reaſon why the Engliſh ſhip did not touch at the iſland, as was formerly their cuſtom, when Mr. Banks attributed the omiſſion to the ſcarcity of turtle, and adviſed the king to breed buffalos, ſheep, and cattle, for the accommodation of his future viſitors.

After a ſtay of ten days at Prince's Iſland, during which they purchaſed vegetables of various kinds, fowls, deer, turtle, &c. the anchor was weighed, and the veſſel once more put to ſea. Our voyagers ſay the iſland to the weſt of the ſtreight of Sunda, is woody, and has been cleared only in a very few places. Our India ſhips uſed to touch at Princes Iſland to take in water, but they have omitted this practice for ſome years ſince, on account, as it is ſaid of the water being brackiſh; yet the captain obſerves that it is exceeding good, if filled towards the head of the brook.

The fowls which were purchaſed at this place coſt about five-pence each; the turtle three farthings a pound, and other fiſh were proportionably cheap; one hundred of the beſt cocoa-nuts coſt only a dollar; and pompions, pine-apples, and other fruits, were equally cheap and plenty. The natives profeſs the religion of Mahomet, and are ſo ſtrict in the obſervance of the feaſt called Ramadam, that they not only abſtain from food till the ſun is down, but even from the chewing of betel. The manners of theſe people are not unlike thoſe of the Javaneſe, but they are much more jealous of their wives; during the ten days that the Endeavour lay here, only one woman was ſeen, and ſhe ran away the moment ſhe was diſcovered.

The houſes are conſtructed in the form of an oblong ſquare; they are built on pillars four feet above the ground, and well thatched with palm-leaves, as a defence from the ſun and rain: the flooring is of bamboo canes, placed at a diſtance from each other, to admit the air; theſe houſes conſiſt of four rooms, one

of

of which is deſtined for the reception of viſitants; the children ſleep in a ſecond, and the two others are allotted, the one for the purpoſe of cookery, and the other for the bed-chamber of the owner and his wife. The reſidence of the king of the iſland, and that of a another perſon of great authority, has boards on the ſide, while the houſes of all the inferior people have walls made of the bamboo cane, ſlit into ſmall ſticks, and wrought acroſs the beams of the building in the manner of a hurdle. The king of the iſland is ſubject to the ſultan of Bantam. Captain Cook repreſents the natives as very honeſt in their dealings, with the ſingle exception of demanding more than double the ſum they intended to ſell for. The goods of each ſort which different perſons brought to market, were all ſold together, and the purchaſe-money divided among the ſeveral contributors, in proportion to the quantity that each had given in to the general ſtock. When they changed money, they gave 240 Dutch doits for a Spaniſh dollar. The natives ſpeak what they call the language of the mountains, and ſay, that their anceſtors came from the mountains of Java, where this language is ſpoken; that they firſt ſettled at New Bay, where the tygers were ſo numerous that they could not live in ſafety; and therefore that they took up their reſidence on Princes Iſland: they however, are capable of converſing in the Malay language.*

At the time the Endeavour left Princes Iſland, her crew began to feel, in all its force, the ill effects of the putrid air of Batavia; and ſoon afterwards the ſhip was a mere hoſpital, filled with unhappy wretches, ſinking under the rage of fevers and dyſenteries. In the ſpace of ſix weeks, twenty-three perſons died, excluſive of the ſeven that had been buried at Batavia: theſe were nine ſeamen, the corporal of marines, the ſhip's cook, two of the carpenter's crew, the carpenter and his mate, the old ſail-maker, who was in perfect health when all the reſt were ill at Batavia, and his mate; the boatſwain, Mr. Monkhouſe, a midſhipman, Mr. Sporing, who accompanied Mr. Banks, Mr. Parkinſon, draughthſman to that gentleman, and Mr. Green the aſtronomer.

The ſhip was brought to an anchor off the Cape of Good Hope, on the 15th of March, 1771. The captain repaired immediately to the governor, who ſaid, that ſuch refreſhments as the country ſupplied, ſhould be chearfully granted him; on which a houſe was hired for the ſick, who were to have their board and lodging on the payment of two ſhillings a day for each man.

At the time the Endeavour lay here at anchor, an Engliſh Eaſt-Indiaman ſailed for the port of London, that had buried above thirty of her crew, while ſhe was in India; and at that time had many others ſeverely afflicted with the ſcurvy; ſo that the ſufferings of the crew of the Endeavour, conſidering her long abſence from England, are not at all ſurpriſing.

They obſerved that the land over the Cape was mountainous, and totally barren; beyond theſe mountains the country is covered with a light ſand, which will not admit of cultivation: there are indeed a few cultivated ſpots, but they are hardly more than a thouſandth part of the whole country. Proviſions are brought to the Cape from the diſtance of nine hundred miles up the country, which is an evident proof of its extreme fertility, notwithſtanding what has been heretofore written to the contrary. While Captain Cook lay here, a farmer came to the Cape, bringing his young children with him, from a diſtance that took him fifteen days journey; and on his being aſked why he had not left his children with ſome neighbour, he ſaid, there was no inhabitant within five days journey of his farm. There are no trees that are even two yards in height, except in ſome plantations in the vicinity of Cape-town. This town conſiſts of near a thouſand brick houſes, the outſides of which being generally plaiſtered, they have a very pleaſing appearance. There is a canal in the main ſtreet with two rows of oak-trees on its borders, which are in a more flouriſhing ſtate than the other trees of this country: the ſtreets, which croſs each other at right angles, are very ſpacious and handſome. The inhabitants are chiefly Dutch, or of Dutch extraction: the women are beautiful in a high degree, and poſſeſs thoſe blooming countenances which denote the moſt perfect health; they are moſt of them mothers of many children, and Captain Cook ſays, they are the beſt wives in the world. 1771

Although this country is naturally ſo barren, as ſcarcely to produce any thing, yet the unceaſing induſtry of its inhabitants has here ſo effectually corrected the ſoil that there are few places where the neceſſaries of life are more plentiful, and even what are deemed luxuries, are by no means ſcarce. The Conſtantia wine is known to be excellent, but the genuine ſort is made only at one particular vineyard a few miles from the town. The gardens produce many ſorts of European and Indian fruits, and almoſt all the common kinds of vegetables. The cultivated fields yield wheat and barley of an equal quality with that of the growth of England. The ſheep of this country have tails of a very extraordinary ſize, many of which weigh upwards of a dozen pounds; the meat of this animal, as well as of the ox, is very fine food; the wool of the ſheep is rather of the hairy kind, and the horns of the black cattle ſpread much wider than thoſe of England, while the beaſt himſelf is handſomer and lighter made. The cheeſe has a very indifferent flavour; but the butter is extremely good. The pork of this country is nearly the ſame as that of Europe, and there are abundance of goats; but the inhabitants do not eat their fleſh. The country abounds in hares, altogether like thoſe of England. There are ſeveral ſpecies of the antelope; a plenty of buſtards, and two kinds of quails.

The

* Amongſt other ſuperſtitions, the people of Batavia are poſſeſſed of a notion that a woman is never brought to bed of a child without a crocodile's being alſo brought into the world, which they ſay the midwife conveys with great care and tenderneſs to ſome adjacent river. It is therefore looked upon as a duty for the relations of this animal to put food into the river for him to ſubſiſt upon; it is particularly expected that the twin brother ſhould take this charge upon him, believing that death or ſickneſs at leaſt would follow the omiſſion.

In the iſlands of Bouton and Celebes, the natives keep crocodiles in their families; and it is conjectured that this ſtrange notion of the twin crocodile originated in one of theſe iſlands. However that may be, it extends eaſtward as far as Timor, and weſtward as we have ſeen to Java and Sumatra. The following account may ſerve to give the reader a more perfect idea of the opinions the Indians entertain of theſe crocodiles, to which they give the name of *Sudara*.

"A young woman who was born at Bencoolen, and had learned ſo much Engliſh at that place as to render her language intelligible to Mr. Banks, told him, That her father, when on his death-bed, laid the ſtricteſt injunction on her to feed a crocodile which he ſaid was his ſudara. She ſaid that he informed her of the name by which the animal was to be called, which anſwered to White King." Accordingly, ſoon after her father's deceaſe, ſhe haſtened to the river and ſummoned her ſuppoſed relation, who appearing according to the ſummons, ſhe fed him with her own hands. This crocodile ſhe deſcribed to be more beautiful than the general race of reptiles, and ſaid that he had a red noſe and ſeveral ſpots on his body, and obſerved that his feet had ornaments of gold, and that he had rings of the ſame precious metal in his ears. A perſon whoſe mother was a native of Java, and whoſe father was a Dutchman, being engaged in Mr. Banks's ſervice at Batavia, told that gentleman that ſeveral of the iſlanders, and Dutchmen, as well as himſelf, had ſeen ſuch a crocodile, ornamented in the ſame manner. When Mr. Banks remarked the abſurdity of theſe tales, and took notice that crocodiles had *no ears*, the fellow replied, That the ſudaras differed conſiderably from other crocodiles, and aſſerted that they had ears, which however, were very ſmall; he added that their tongues filled their mouths, and that they had five toes."

On the iſland of Batavia there are three tribes, which are called Boetons, Macaſſars, and Bougis. Theſe people firmly believe in the exiſtence of the ſudaras, and aſſemble at ſtated periods to feed them. At theſe times, having laden a large boat with proviſions, it is launched at a place where they ſuppoſe the crocodiles frequent, and they proceed with muſic till one of them is ſeen, when they throw tobacco and proviſions over-board, as a friendly offering to the ſudaras, inviting their relations during the whole time of their ceremonies.

1771 The Dutch company have a garden at the extremity of the high ſtreet, that is more than half a mile in length, in the center walk of which, are a number of fine oak trees. A ſmall part of this garden is covered with botanical plants, but all the reſt is allotted to the production of the common vegetables for the kitchen. The whole is divided into ſquares by the form of its walks, and each ſquare is fenced in by oaks, cut into ſmall hedges. There is a menagerie of beaſts and birds, many of them known in Europe, at the upper end of this garden; and among the reſt is the *Coé Doe*, a beaſt not leſs than a horſe, which has thoſe ſpiral horns that have frequently found a place in the cabinets of the curious.

Our author ſays moſt of the Hottentots ſpeak the Dutch language, without any thing remarkable, yet when they converſe in their native language, they frequently ſtop and make a clucking with their tongues, which has a moſt ſingular and ridiculous effect to the ears of a ſtranger; and, excluſive of this clucking, their language itſelf is ſcarcely ſounded articulately. Theſe people are modeſt to the utmoſt degree of baſhfulneſs, and, though they are fond of ſinging and dancing, can hardly be prevailed on to divert themſelves with their favourite amuſements before ſtrangers: both their ſinging and dancing are alternately quick and ſlow, in the utmoſt extreme. Some of the Hottentots underſtand the art of melting and preparing copper, with which they make plates, and wear them on their foreheads as an article of finery. They are alſo capable of making knives ſuperior to thoſe they can purchaſe of the Dutch, from whom they procure the iron. They have the art of making butter, by ſhaking milk in the ſkin of a beaſt; with this butter they anoint their ſkins; or, when they cannot procure butter, they uſe the fat of the ſheep. The principal people are owners of immenſe herds of cattle, and theſe clothe themſelves with the ſkins of lions and other beaſts, which are adorned with fringes, not ill deſigned.

The Hottentots are ſo dexterous in throwing ſtones, that they will hit a mark not larger than a crown piece, at the diſtance of 100 yards. They are likewiſe expert in the uſe of arrows, and of the lance called an aſſagay, the points of which they poiſon, ſometimes with the juice of particular herbs, and ſometimes with the venom of a ſerpent; ſo that a wound received from either theſe weapons is almoſt always mortal.

On the 14th of April, 1771, the anchor of the Endeavour was weighed, and ſhe once more put to ſea, but came to an anchor again before night, near Robin Iſland. As a few vegetables were wanted, which they had neglected to take in at the Cape, the captain ſent off a boat to the iſland; but, when ſhe reached the ſhore, ſome Dutch ſoldiers forbad her crew landing, at the hazard of their lives, and the officers who commanded, very prudently returned to the ſhip. For ſome time they were at a loſs to account for this behaviour on the part of the Dutch, but it was at length recollected, that the Dutch government at the Cape of Good Hope, had aſſigned the iſland for the reception of offenders whoſe crimes were not deemed worthy of death, where their ſlavery conſiſts in digging lime ſtone, for ſuch a number of years as are thought proportionable to the heinouſneſs of their offence; and that a ſhip belonging to Denmark, which had buried moſt of her hands, had called at this iſland, and taken on board a number of theſe criminals, in order to navigate the veſſel to Europe: hence the conduct of the Dutch ſoldiers was eaſily accounted for.

The ſhip ſailed on the following day, when the maſter of her died, having haſtened his death by hard drinking, though in other reſpects he left behind him an excellent character. On Monday the 1ſt of May they came to an anchor off the iſland of St. Helena, and ſailed from the road on Saturday, in company with the Portland man of war, and ſeveral ſail of Indiamen. They kept company with the man of war and Indiamen till Friday the 10th, but Captain Cook obſerving, that they were out-ſailed by all the other ſhips, and conſequently imagining that ſome of them would reach England before him, made ſignals to ſpeak with the Portland, when the captain of the veſſel came on board, and received from Captain Cook a letter to the Lords of the Admiralty, together with a box in which were depoſited the journals of many of the officers and the ſhip's log-book.

On the 23d they loſt ſight of all the ſhips they ſailed in company with from St. Helena, and in the afternoon of the ſame day, Mr. Hicks, the firſt lieutenant, died of a conſumption, with which he had been afflicted during the whole voyage. From this time nothing remarkable happened till the veſſel came to an anchor in the Downs, on the 12th of June, 1771, having compleated the circumnavigation of the globe.

THE VOYAGE OF M. BOUGAINVILLE, ROUND THE WORLD.

Undertaken by the Order of the French King.

1766 THE laſt voyage of Captain Cook, according to the order of our Engliſh circumnavigators, ſhould have been introduced before the following narration, yet we are under the neceſſity of deferring it for ſome time, as we are promiſed the aſſiſtance of a gentleman of literary merit, who ſailed in the Reſolution, and who has ſome curious remarks to make on theſe very complete new diſcoveries made in the South Seas.—

The French having begun to make a ſettlement on Falkland's Iſlands (called by them *Iſles Malouines*) in 1764, they were demanded by the Spaniards who conceived them to belong to the continent of South America. In order to ſettle this matter, M. Bougainville was ſent out to deliver them to the claimants.

On the 15th of November, 1766, he ſailed from the port of Mindin, having under his command the frigate La Boudeuſe, La Eſmeralda, and La Liebre. Two Spaniſh frigates were to join him in the river Plata, to the commanding officer of which he was to deliver the ſettlement, and the L'Etoile ſtore ſhip was to meet him at Falkland's Iſland.

M. Bougainville embarks.

The Boudeuſe had been at ſea only two days when ſhe encountered ſuch a violent ſtorm of wind, as carried away the clue of the fore-ſail, broke the main-top-maſt, and took off the head of the main-maſt. Thus ſituated, M. Bougainville found it neceſſary to put into Breſt to refit, and to make ſome neceſſary alterations in the ſtowage of his ſhip, which was ill calculated for withſtanding the fury of thoſe ſeas he was to paſs, and particularly ſo for the navigation of the ſea round Cape Horne.

On the 5th of December, M. Bougainville ſailed from the harbour of Breſt, having on board the Prince of Naſſa-Soighen, three gentlemen who went as volunteers, eleven officers in commiſſion, and warrant-officers, ſeamen, ſoldiers, ſervants, and boys, to the number of two hundred. On the 17th they were in ſight of the Salvages, a ſmall flat iſland, which at each end riſes into a hillock: the next day they ſaw the iſland of Palma, and that of Ferro, on the 19th. M. Bougainville was now convinced of a great error in his reckoning, which he attributed to the rapidity

of the currents oppoſite the ſtreights of Gibraltar. This he corrected, took a freſh departure, and arrived at Rio de la Plata, without meeting with any thing worthy of notice.

On the evening of the 29th of January they ſaw Rio de la Plata, but as the night was dark and tempeſtuous, they lay to, with the head of the veſſel towards the offing. The next morning they had a view of the mountains of Maldonado. Here the Spaniards have a ſmall garriſoned town, in the vicinity of which are picked up ſome tranſparent ſtones; and there is likewiſe a gold mine near it, which has been worked for a few years paſt, but to little purpoſe.

The Boudeuſe came to an anchor in the bay of Montevideo on the 31ſt, and there the two Spaniſh ſhips, which were to take poſſeſſion of Falkland's Iſlands, had been at anchor for ſome weeks. Don Philip Ruio Puente, the principal in command of the Spaniſh veſſel having been appointed governor of the iſlands which were to be ſurrendered by the French, accompanied M. Bougainville to Buenos Ayres, to ſettle with the governor general, the mode of making the ceſſion; and the Prince of Naſſau-Seighen attended in this expedition.

The gentlemen made the voyage in a ſchooner; but a contrary wind preventing their paſſage by ſea, they went on ſhore above the colony of San Sacramento, and travelled over a prodigious extent of country, in which there were no roads, and where the eye was their only guide. During this expedition, they ſlept in little hovels conſtructed of leather, while the tygers howled round them on every ſide. M. Bougainville remarks the manner of their paſſing the river St. Lucca, which is wide and deep, yet amazingly rapid: being placed in a long narrow canoe, one ſide of which was beyond all proportion higher than the other, a horſe was faſtened on each ſide of the veſſel, the maſter of which pulling off all his cloaths, got into it, and ſupporting the heads of the horſes above the ſurface of the ſtream, drove them acroſs it in the beſt manner he could, and with ſome difficulty they ſtemmed the rapidity of the torrent. Having tranſacted his buſineſs at Buenos Ayres, he returned to Montevideo, on the 16th of February, and was followed in a few days by the Spaniſh governor, Don Puente. Some neceſſaries of various kinds being taken on board, the veſſels were prepared for ſailing to Falkland's Iſland. The voyagers having cauſed a ſmall veſſel to be laden with cattle for the uſe of the ſhips crew, they ſailed in company, on the 28th of February, 1767, a pilot, acquainted with the coaſt of Falkland's Iſland, having been previouſly put on board each of the Spaniſh ſhips; but this day they were forced to anchor on account of the thickneſs of a fog, which prevented their ſeeing land. The winds now proving contrary, the ſhips remained at anchor the following day; but as the current of the river ran ſtrongly in their favour, M. Bougainville ſent to acquaint the Spaniſh commander, that his veſſel being too near the Engliſh ſand-bank, off the Iſle of Flores, he thought it would be proper to ſail on the following day, even if the wind ſhould not change in their favour. To this the Spaniſh officer replied, that his pilot refuſed to weigh anchor till the wind became fair, and blew ſteady, on which Don Puente was acquainted, that the anchor of the Boudeuſe would certainly be weighed early the next morning, and that ſhe would either anchor more to the north or ply to the windward, waiting for the Spaniſh ſhips, unleſs they ſhould be unavoidably ſeparated by the violence of the weather. The ſmall veſſel laden with cattle had not come to an anchor the preceding night, nor was ſhe ſeen any more during the voyage, but it was afterwards learned that ſhe went back to Montevideo, after an abſence of three weeks from that place. The night had been ſo tempeſtuous that all the ſhips dragged their anchors, and in the morning the Spaniſh veſſels were obſerved with their main-yards lowered, and their top-maſts handed: the Boudeuſe, however, made ſail, and got out of the river before night, leaving the Spaniards ſtill at anchor. M. Bougainville had variable but chiefly bad weather, till the 23d of the month, when he came to an anchor in the bay of Falkland's Iſlands, where the Spaniſh veſſels alſo anchored, on the day following. Theſe laſt had ſuffered extremely through the inclemency of the weather; the cabin windows of Don Puente's ſhip had been broken by the violence of the waves, ſo that the ſea for ſome time poured into her in torrents; and a number of cattle, deſtined for the uſe of the colony at Falkland's Iſlands, died on the paſſage. On the 1ſt of April, M. Bougainville, in the name of the French King, ſurrendered the iſland to Don Puente, who received it for his Moſt Catholic Majeſty, with the ceremony of hoiſting the Spaniſh colours, and the firing of guns from the ſhips, and on ſhore. M. Bougainville then read a letter, in which his ſovereign granted leave to ſuch of the inhabitants as choſe to continue their reſidence, to be under the dominion of Spain; this offer was accepted by ſome, while others embarked with the garriſon and were conveyed to Montevideo in the Spaniſh ſhips. The whole expence of the French ſettlement to the time it was delivered to the Spaniards was 603,000 livres, but as his Moſt Catholic Majeſty took the ſhip's proviſions, and all ſtores of every kind, he reimburſed this ſum.*

1767

The French having come to a reſolution of ſending a colony to ſettle on Falkland's Iſlands, M. Bougainville had, in the beginning of the year 1763, made an offer to eſtabliſh the ſettlement at his expence, and that of two of his near relations, M. d'Arboulin and M. de Nerville. This being accepted, the Frenchmen gave orders for the building and equipment of a ſhip of twenty, and another of twelve guns, the former of which was called the Eagle, and the latter the Sphinx: and as ſoon as theſe veſſels had taken in ſuch ſtores as were neceſſary for the voyage, and for making the ſettlement, M. Bougainville having previouſly engaged ſome Acadian families, embarked his officers, ſeamen and ſettlers, and ſailed from the port of St. Malo, on the 15th of September, 1763. It was ſoon reſolved to form the ſettlement on the coaſt of this bay, and the commander immediately began to take a ſurvey of the inland, to learn what it produced. He obſerves that various kinds of water and land fowl, and fiſh, were all its edible productions; and though there grew no wood, either for firing or other purpoſes; this deficiency in M. Bougainville's opinion might have been well ſupplied by excellent kind of turf, which was almoſt every where to be found in great abundance. On the firſt arrival of theſe adventurers, it was an aſtoniſhing ſight to behold the birds flock round them with evident curioſity, but without the leaſt ſigns of fear: theſe harmleſs animals uſed to perch on thoſe who were ſtanding ſtill, and would at all times ſubmit to be taken with the hand: but they very ſoon learnt to be ſhy of the company of thoſe who ſought only to deſtroy them.

The colony conſiſted of nineteen men, five women, and three children; and M. Bougainville having fixed on

* M. Bougainville obſerves, that Falkland's Iſlands have been but little known till within theſe few years. They are commonly repreſented as being covered with woods, but this miſtake might very well happen in the accounts of thoſe who only ſaw them from on board a ſhip, for what are taken for woods are tall ruſhes, which grow very cloſe together, and the ſtalk being dry to the height of five feet from the ground, a large tuft ſprings from the top of it, ſo that their number, and the manner in which they grow, form ſome reſemblance of a wood. In the year 1594, Sir Richard Hawkins had ſight of theſe iſlands, and called them Hawkins's Maiden Iſlands; he ſays he ſaw fires on them, and that they were then inhabited; about the commencement of the preſent century, a French ſhip, called the St. Louis, came to an anchor on the coaſt, under the ſhelter of the iſles of Arican, which are ſome ſmall iſlands ſo called after the privateer of that name, but the commander of the St. Louis did not think it worth his while to examine the country, yet M. Bougainville ſays it is well calculated for ſheltering veſſels bound to the South Seas.

1767. on the ſpot for their reſidence, they loſt no time in building huts which they covered with ruſhes, to protect them from the inclemency of the weather. They likewiſe built a magazine, and erected a ſmall fort, in the centre of which they raiſed an obeliſk, and under it they had placed ſeveral pieces of money, and a medal, on one ſide of which was the head of the French king with the following motto, *Tibi ſerviat ultima Thule*; and on the other ſide of the medal was this inſcription: "Settlement of the Iſles Malouins, ſituated in 51 deg. 30 min. of ſouth lat. and 65 deg. 30 min. weſt long. from the meridian of Paris; by the Eagle frigate, Captain P. Duclos, Guyat, captain of a fire-ſhip, and the Sphinx ſloop Captain F. Chenard de la Giraudis, lieutenant of a frigate, equipped by Louis Antoine de Bougainville, colonel of infantry, captain of a ſhip, chief of the expedition, G. de Nerville, captain of infantry, and P. d'Arboulin, poſtmaſter general of France; conſtruction of a fort, and an obeliſk decorated with a medallion of his Majeſty Louis XV. after the plans of A. L'Huiller, engineer and of the field and army, ſerving in this expedition; during the adminiſtration of E. de Choiſeuil, duke of Stainville, in February, 1764." Monſ. Bougainville having promiſed the ſettlers, that he would ſoon bring them more companions, and give them farther aſſiſtance, his relation Monſ. de Nerville, agreed to ſtay till his return from France, as well to be an hoſtage for the performance of de Bougainville's promiſe, as to encourage the young coloniſts by participating in every hardſhip and danger to which they might be expoſed, in a ſtation ſo removed from all communication with the reſt of mankind; and in return for Monſ. de Nerville's kind compliance with the wiſh of the ſettlers, he was to be conſidered as their governor. On the 8th of April, 1764, Monſ. Bougainville weighed his anchor, and ſailed for Europe, having firſt taken poſſeſſion of the iſlands in the name, and for the uſe of his moſt Chriſtian Majeſty.

Falkland's Iſlands ſurrendered by the French to the Spaniards.

In the month of January, 1765, he again viſited Falkland's Iſlands, where he found the ſettlers in good health, and pleaſed with their ſituation. After he had landed the ſtores which he had brought for their uſe, he ſailed to the Streights of Maghellan, where he took in timber, and paliſadoes and a number of young trees for planting on Falkland's Iſlands, which place he again left, on the 27th of April, when the whole number of coloniſts were only twenty-four. While Monſ. de Bougainville was on the above-mentioned expedition in the Streights of Maghellan, he ſaw the ſhips under the command of Commodore Byron, as we have already mentioned in the relation of that gentleman's voyage.

The coloniſts on Falkland's Iſlands were increaſed to about one hundred and fifty by a number of ſettlers which ſailed from France in the Eagle, in the year 1765. This ſhip was accompanied by the little ſtore ſhip which carried proviſions to the iſland. By this time the governor, and an officer who took care of the ſtores, had good houſes built of ſtone, and the reſt of the coloniſts were lodged in commodious huts, having walls compoſed of ſods of earth. With the wood which Monſ. Bougainville had brought from the Streights of Maghellan, they had built ſeveral ſmall veſſels adapted to examine the coaſts of the iſland, and three magazines were by this time erected, in which the public and private ſtores were to be depoſited: ſeveral kinds of grain which had been brought from France, grew very well, and promiſed a ſufficient encreaſe; and ſome train oil had been made; and ſeal-ſkins prepared by the ſettlers, with which the Eagle was loaded.*

According to M. Bougainville's account this was the ſtate of Falkland's Iſlands when the French made a ſurrender of them to the Spaniards. As to the great queſtion of the right of poſſeſſion, which M. Bougainville ſays belonged to Spain, it will be neceſſary to conſider whether the Spaniards had really a prior right to the territory.

The iſlands deſcribed.

Theſe iſlands, the reader will recollect, were ſeen by Cavendiſh in the year 1592; Captain Dampier had alſo ſight of them; and Sir Richard Hawkins falling in with them, gave them the name of Hawkins's Maiden Land. Sebald de Wert alſo ſaw them, and gave them the name of Sebald's Iſles, by which name they are laid down in the Dutch charts. They were ſeen by Dampier in 1683, and in 1689 by Strong, who called them Falkland's Iſlands, but the firſt Frenchman who ſaw them was Gouin, which was not till the year 1700. Surely from this ſtate of the evidence it does not appear that the Spaniards viſited them at all, and it ſeems the French were the laſt viſitors, yet M. Bougainville would have us believe, that the Spaniards had the prior claim to their poſſeſſion, and that this claim having been ratified by the French, is, in his opinion, indiſputable.

M. Bougainville gives us the following account of Falkland's Iſlands, which he ſays, is the reſult of the obſervations of his kinſman, M. de Nerville, who reſided on the ſettlement three years. "On the firſt arrival of the French, there was not an object ſtruck their view, except the commodiouſneſs of the port in which the ſhip lay, which could tempt them to take up their reſidence on ſo inhoſpitable a ſhore. The land was in many places broken in upon by the ſea: the mountains being without wood, had a moſt barren appearance, the fields looked dreary for want of houſes and inhabitants; an univerſal ſilence reigned, except when the howling of ſome ſea monſter diſturbed the ſolemn ſtillneſs; while a dull and gloomy ſameneſs of appearance added horror to the whole picture. Though this ſcene appeared very diſcouraging, the adventurers knew all would yield to time and diligence, and that the labour of the induſtrious would not go unrequited: indeed ſome conſolation aroſe in their breaſts, on viewing the place in a more favourable light. The climate had that kind of temperature likely to afford health, ſtrength, and long life, and was therefore preferable to the noxious air of thoſe regions where the ſickening inhabitant faints under the ſcorching heat of the vertical ſun. The iſland produced a number of plants, admirable in the cure of the ſcurvy, and other diſorders incidental to a ſea-faring life; the fiſh and the birds were exquiſitely delicious, and there were amphibious animals in immenſe numbers, while there were none of the fierce or the poiſonous kind; caſcades and rivulets fell from the mountains, which latter ſheltered the fiſherman from the violence of the winds, ſo that he could ſport or labour in the ſpacious bay in perfect ſecurity; meadows of an immenſe extent, promiſed conſtant paſturage for any number of flocks and herds, which might feed at pleaſure, undiſturbed by any tyrant lord of the ſoil. Theſe various advantages in the opinion of the French, were ſufficient to recompence them for the dangers and fatigues of the voyage, and a pledge for the full reward of their future labour.

"The ſituation of Falkland's Iſlands is between 51 and 52 degrees and a half of ſouth latitude, and ſixty-five degrees and a half of weſt longitude from Paris. From the entrance of the Streights of Maghellan, and from the coaſt of Patagonia, their diſtance is about two hundred and fifty miles.

"The harbours are large, and well defended by ſmall iſlands, moſt happily diſpoſed, and even the ſmalleſt veſſels may ride in ſafety in the creeks: while freſh water is eaſily obtained, as the ſmall rivers that deſcend from the mountains diſcharge themſelves into the ſea. The tides do not riſe and fall at any ſtated times,

* When an Engliſh colony had been ſettled at Port Egmont, in the year 1766, Capt. Macbride of the Jaſon frigate, viſited the French ſettlement, when Mr. Bougainville ſays, "he pretended that thoſe parts belonged to his Britannic Majeſty, threatened to land by force if he ſhould be denied that liberty, viſited the governor, and ſailed away the ſame day."

times, but depend on the force with which the wind agitates the waves of the sea; it was, however, observed, that just before high water, the sea rises and subsides, with a quick motion, three times within fifteen minutes; and that at the full of the moon, and during the equinoxes and solstices, this motion is much greater than at any other time. Those winds that blow from between the south and west, and the north and west points, prevail more than others, but in general the winds vary as in other countries. In summer the winds usually blow from some point between the north-west and south-west. It is remarkable, that these winds rise with the rising sun, increase in force as the sun advances to the meridian, blow most violently just at noon, decrease again with the declining sun, and totally cease about the time of its setting. The tide also frequently adds to their violence, and not unfrequently changes their directions.—The quarter from whence the winds blow in winter is a certain indication of the weather. If they come from the south-east they are not so violent as the summer winds from the same quarter; but they are accompanied with slight fogs. When they blow between the south and west points, hoar frost, hail and snow, are the certain consequences; and the weather is wet and foggy, when they come from the points between the north and the west. The snow which comes with the south and west winds, is but small in quantity, and commonly disappears from the ground in a day or two, except what lodges on the summits of the high mountains, where it will remain about two months. The running streams are never frozen, and the lakes and stagnant pools have seldom been covered with ice strong enough to bear the weight of a man for two days together. In the spring and autumn there are light hoar frosts, which being changed to a kind of dew by the warmth of the sun, are rather nourishing than prejudicial to the vegetable productions. There is seldom any thunder or lightning, nor is the climate hot or cold in any extraordinary degree. Throughout the year the nights in general are star-light, serene and fair; and upon the whole the climate is very favourable to the constitution. The fresh water of these islands is extremely good, and in great plenty: the bed of some of the rivers is a kind of tuft, which gives a yellow cast to the water, yet does not affect its taste, but the bottom of most of the rivers is either sand or gravel.

"The depth of the soil in the valleys is more than sufficient for the purposes of plowing; but before the adventurers could proceed to cultivation, they were obliged to extract the roots of the plants, which every where intersected and choaked up the ground for near a foot deep. These roots they dried and burned, and they then made a rich manure for the ground from which they had been cleared. Under the first land is a layer of black earth, ten inches or more in depth; and under that again is likewise found a yellow soil, beneath which are stones and slate, but these stones are not found on the little adjacent islands. The sea coasts are in most places composed of stones which are very fit for the purposes of building: and there are beds of a hard, fine-grained stone in several spots on this island; likewise another kind of stones, in which are particles of talc. The settlers found a kind of stone which split in pieces easily, and with which they made grinding-stones, to give an edge to their instruments. In the quarries they met with a stone of a yellowish hue, which when first taken out was so soft as to be cut with a knife; but it soon grew hard when exposed to the open air. The island likewise yielded earth fit for making bricks and potters ware, and plenty of sand and clay. In many parts of the country there were marshy places, which produced a sort of rushes with sharp points, the remains of the roots of which being continually wasting, formed the turf that was used for firing, which burned exceeding well, and had nothing offensive in its smell.

A plant of the gramen kind grows on a kind of stalk which has a sweetish flavour, and is extremely nourishing for cattle, who like it better than any other kind of pasturage. This plant flourishes on the sea-coasts, on the little isles, where it bends till the stalks unite, forming a kind of harbour, to which the sea-lions and the seals occasionally retreat. The adventurers, in several excursions, found these natural-built houses a very agreeable defence against the inclemency of the weather, and the more so, as the dry leaves which had fallen off, formed a sort of rustic bed. The above-mentioned plant is the largest that grows on the island, which likewise produces many shrubs that were very useful in heating ovens, and other purposes of firing. A sort of heath grows in great plenty there, and bears a red fruit, which is eaten by the fowls and birds. A plant was discovered which resembles a shrub, which having been tasted, was thought fit for the brewing of beer; happily the colonists were supplied with malt and molasses, to which they added the beer plant, and were enabled at all times to brew a very wholesome kind of spruce-beer, which was an admirable specific for the scurvy. This plant was likewise infused in water, in which those who had contracted any illness, while out at sea, bathed themselves, and it was found to be a fine restorative: when pressed, it yielded a mealy substance of a fragrant smell, and of a glutinous nature. The leaves of it were small, of a clear bright green, and dentated.—Other vegetables in abundance were found, which were used as antiscorbutics, particularly water-cresses, sorrel, wild parsley, a kind of maiden-hair, and a species of celery. Here was a kind of resinous gum-plant, which seems to be entirely unknown in all other parts of the globe. Though this is called a plant, it is without leaves, branches, or any other apparent stalk; and except in colour, which is that of a bright green, it more resembles a lump of earth rising from the common surface of the ground. It does not grow to the height of more than eighteen inches, and its breadth in different plants, is from two feet to two yards and upwards: the smaller plants have the form of an hemisphere, and their circumference is regular, but when they come to the full size, they terminate in irregular bunches and hollows, there are drops of tough yellow matter as big as a pea on different parts of its surface, which smell like turpentine. M. Bougainville having cut this plant close to the ground, found that it arose from a stalk, from which grew an immense number of shoots, consisting of leaves resembling stars, varying one within the other. The outsides of these shoots, which are exposed to the air are green, and the insides white: they contain a viscid milky juice, which is likewise found in the roots and the stalks. The roots extending horizontally, frequently produce fresh shoots at a distance, so that there is no instance of one of these plants being found alone. The resin of this plant was found to be a good medicine for the cure of slight wounds; but this resin was often washed away by the rains, or wasted by the influence of the air; yet it would not dissolve except in spirits; some of the seeds were brought to Europe in order to attempt the cultivation of so singular a curiosity in the vegetable world.

1767.

"The island on which the colonists had taken up their residence is divided from east to west, by a chain of hills, to the south of which they found another plant, not unlike the resinous gum-plant, which however did not yield any resin, but produced beautiful yellow flowers, neither was it of so firm a texture, nor was its green of the same shade; yet in other respects the resemblance was very strong. On the hills was found a species of maiden-hair, which grew to a great height, and the leaves of it were shaped like the blade of a sword. The hills likewise abounded with various kinds of plants, which had the appearance of holding a middle station between stones and vegetables. It was apprehended that these might have been successfully used in dying. The place produces flowers in a considerable variety, but only one of them has any smell, which is like that of a tuberose;

1767 this flower is perfectly white; and a violet was ſeen which was of a regular height, and yellow colour. They found a fruit of the ſize of a pea, which received the name of the lucet, from its reſemblance to the North American fruit of that name; its colour is white, but the ſide which is expoſed to the ſun, changes to a red; it has the ſmell of orange bloſſoms, and an agreeable flavour; its branches, which creep along the ground, produce leaves of a dark green, which are round and ſhining, and theſe leaves infuſed into milk give a delicious taſte: the flowers grow in large numbers on the borders of lakes and the plant delights in a moiſt ſoil. Beſides the lucet only one other fruit was found, which grows on long branches, in the ſame manner as the ſtrawberry, but it has the appearance of a mulberry, which name it received, and its leaves are like thoſe of the hornbeam. They ſaw but few ſea-plants, which they could apply to any uſe; but all the coaſt of the harbour was lined with ſea-weeds, which were ſerviceable in breaking the force of the waves in ſtormy weather. Many kinds of coralines of various beautiful colours, and a great number of curious ſhells and ſpunges were waſhed on ſhore by the force of the tides. Among the ſhells were the ſmooth and ſtriated muſcle, ſcallops, whelks, and a bivalve ſhell, of a very ſingular kind, named La Poulette.

"Sea lions and ſeals are the only amphibious animals found in theſe parts; but there are great varieties of fiſh on the coaſt, ſcarce any of which are known in Europe. It ſometimes happens that the whales, getting too near the ſhore are ſtranded in the bays, where their remains have been ſeen. Bones of great magnitude have been found far up the country where the force of the waters could not have conveyed them, which made it probable that the ſoil is encreaſed, or the ſea diminiſhed.—The only quadruped found on Falkland's Iſlands is of a ſpecies between the fox and the wolf, which they called the wolf-fox; the tail of this animal is more buſhy than that of the wolf, and he lives in a kennel which he digs in the ground, on the downs, by the ſea-ſide. At one time of the year the wolf-fox is ſo lean as to appear almoſt ſtarved, from whence it is imagined that he faſts for a conſiderable time; he is about as large as a ſheep-dog, and barks very much like one, only that his barking is not loud. He ſubſiſts principally on wild fowl, in ſearch of which he travels in ſuch a direct line, from one day to another, that when our adventurers firſt beheld his track, they imagined that the iſland was inhabited, and that the natives had made the path. [M. Bougainville makes it a matter of wonder how the wolf-fox can have been conveyed to theſe iſlands without conſidering, that land-animals having got on large pieces of ice, which being broken by the ſea they have frequently been remote from thoſe of their firſt reſidence as is not uncommon on the coaſt of Greenland.] Theſe iſlands and coaſts produce land and water-fowls, in amazing numbers, many of which are the prey of falcons, hawks, eagles, and owls; while the eggs and the young birds are deſtroyed by the wolf-fox, the ſmaller fiſh are deſtroyed by the whales, the amphibious animals, and the voracious birds, ſome of which are conſtantly flying cloſe over the ſurface of the waters, while others perch themſelves on the rocks to watch the event.

The ſwan is perfectly white here, except its feet and its neck, the former of which are of a fleſh colour, and the latter as black as jet. Of wild geeſe there are four kinds, only one of which feeds on dry ground. It has very high legs, and a neck of great length; its flight is much more free than that of the Engliſh gooſe; it walks with equal eaſe, and does not cackle like the common gooſe. The feathers of the gander are white except on the wings, which have a mixture of aſh-colour and black; the wings of the female are of various colours; and its body is yellow. It ſeldom lays more than ſix eggs. The flavour of theſe birds is agreeable, and they were found to be very nouriſhing: excluſive of thoſe which are hatched on the iſland, large flocks fly thither with a weſterly wind which blows in the autumn, ſo that they were generally to be taken in great abundance, and formed a principal part of the ſettlers. Thoſe which came in the autumn were eaſily known from thoſe reſident on the iſland, by their not being ſhy.

The other three kinds were of various colours, yellow, white, black, and aſh-colour; they are not by far ſo beautiful as thoſe above deſcribed; and as they live entirely on fiſh, their fleſh acquires a diſagreeable taſte; one of theſe three ſpecies ſeldom riſes from the water, and is almoſt conſtantly making a very diſagreeable noiſe. A ſoft, thick down, either grey or white, grows under the feathers of all theſe geeſe, as it does likewiſe under thoſe of the ſwan. The rivers and ponds of Falkland's Iſlands abound in teals of two ſpecies, and two of wild ducks; of the latter ſome are perfectly white, and the other totally black, but in other reſpects they reſemble thoſe of England and France. Theſe birds are all very fine food, and to be procured in any numbers. One kind of the teal is very ſmall, but the other is as large as the duck, and its bill is blue. The bellies of ſome of them are alſo covered with feathers of a blue colour.

"The iſland produces a bird which M. Bougainville calls the diver. * Of theſe divers there are two kinds, of which the moſt plentiful has brown feathers, with no other variation than that the feathers on the belly are of a ſomewhat lighter colour than thoſe on the back. The belly of the other kind is white, the back grey; and the feathers on the belly are very thick, ſhining, and ſoft. The eyes of theſe birds are as bright as rubies, and are encircled with a ring of white feathers. The female hatches only two young birds at a time, which ſhe carries on her back, not ſubjecting them to the coldneſs of the water, till feathers have taken place of the down with which they are hatched. Its toes are quite thin, and of a green colour, and being round towards the claw, they are not unlike the leaves of ſome plants; their feet are not webbed, as is common among water-fowl, but their toes are ſeparate, having a ſtrong membrane on each ſide. The coloniſts gave the name of ſaw-bills to two kinds of birds which bore a great ſimilitude to each other, the chief difference conſiſting in their ſize and in the bellies of moſt of them being white, while few were obſerved to have brown feathers on the belly; the feathers on the reſt of the body are of a dark blue, as ſoft as ſilk, and grow very cloſe together. Their feet are webbed and fleſh coloured, and their bills pointed; they lay their eggs on the rocks, where great numbers of them live together; and they ſubſiſt on fiſh, thouſands of which they deſtroy. The ſettlers not only ate the eggs of theſe birds, but frequently killed many ſcores of them at a time, and their fleſh was found to be excellent food. They had ſo little apprehenſion of being caught that it was an eaſy matter to knock them down with a ſtick, and in this manner they were uſually taken. A bird, called by the Spaniards *Quebrantahueſſos*, which meaſures more than two yards from the extremity of its wing, deſtroys the ſaw-bills. [This bird of prey has a long bill with two hollow tubes of the ſame kind of ſubſtance as the bill, and its feet are webbed. Some of the ſeamen called this bird the albetroſs, but it differs conſiderably from the common bird of the name, nor is it an eaſy matter to determine preciſely on its ſpecies, from the imperfect account which M. Bougainville has given of it.] Gulls, and mews of different beautiful plumage, ſerved to direct our coloniſts what was the proper time for taking pilchards. Theſe birds fly in flocks over the ſurface of the water, dart on the pilchard and ſwallow it; when they catch another of theſe fiſh, they diſgorge the one which had been previouſly ſwallowed, and ſo proceed.

When

* From the deſcription he gives of it, this bird is conjectured to be the grebe, which abounds on the lake of Geneva, and of the ſkin of which the moſt elegant muffs and tippets are made.

When the pilchards are not in ſeaſon, they feed on various other ſorts of ſmall fiſh. The eggs of theſe birds were found in great abundance upon the leaves of a plant, on the borders of the marſhes, and they proved to be very good eating. Three kinds of penguins breed on the iſland, one of theſe is a remarkably grand and elegant bird, the belly of which is a clear white, the back a kind of blue, and it has a ruff round its neck near the head, of a bright yellow, which deſcending towards the belly, ſeparates the white feathers from the blue ones; theſe birds do not live together in numbers, but ſeek the moſt quiet and retired places of abode. One of them being caught with an intention of being brought to France, ſoon grew ſo tame that it followed the perſon who fed it; its food was bread, fiſh and fleſh; but there was ſomething more wanting for its ſuſtenance for it gradually loſt its fatneſs till it died. The ſecond kind of penguin anſwers to thoſe which have been mentioned in our former voyages. The third kind of penguins lay their eggs among the high cliffs of the rocks, where they reſide together in great numbers, never ſeeking that ſolitude of which the firſt are ſo fond. They are much ſmaller than the others, and were named hopping penguins, from their method of moving, which is very much like hopping; they have gold coloured feathers which form a kind of eye-brows, and a tuft of the ſame colour which they raiſe when they are diſpleaſed. This bird has a very chearful look, and its general colour is a deep yellow.

At different times, but not frequently, three kinds of petrels were ſeen by the French. Theſe birds build their neſts on the ſea-coaſt, where their young were ſometimes found, covered with down. One ſort of them is quite white, their bill is red, and not unlike a pigeon; a ſecond ſort is larger; and the third ſmaller than the pigeon; and theſe two ſorts have white feathers on the belly, while every other part of the body is black.

Eagles were alſo ſeen of three different ſpecies, two of which are black, with white and yellow feet, and the other is of a dull white. All theſe ſubſiſt on ſnipes and other ſmall birds, which they ſeize every opportunity to deſtroy. Egrets, a ſpecies of the heron, were frequently obſerved on the iſland:—they make a diſagreeable noiſe, not much unlike the barking of a little dog; and they never take any food till towards the evening.

Two kinds of the thruſh came regularly to the iſland in the autumnal months, one of which was of the ſame colour as the European thruſh, and others yellow, except on the belly, which was ſpotted with black. There was a third kind of thruſh, which lived on the iſland throughout the year, the feathers on the belly of which are of a bright red; this was called the red bird. A bird which they called the ſea-pie, was conſtantly ſeen on the coaſts, the feet of which were white, the bill red, and the feathers black and white. This bird whiſtled a kind of note which the coloniſts found it eaſy to imitate, and by that means they came near enough to catch them without much trouble; they live on ſhrimps, which they pick up after the ebbing of the tide. Great numbers of curlews, the ſame as thoſe of Europe, were conſtantly ſeen in the ſummer; and ſnipes of the European kind were found in abundance. It is eaſy to ſhoot theſe birds as they fly in a regular manner. At the time when they are breeding, they aſcend to a great height, and having ſoared ſome time in the air, they drop into their neſts, which are built on the ground, in the open field, where it is moſt free from graſs or other herbage, ſo that thoſe neſts are very eaſily found; the ſnipes are excellent food if dreſſed towards the decline of the year, but in the breeding ſeaſon they are very lean, and not fit to eat.

The amphibious animals of Falkland's Iſlands are ſeals and ſea-lions, which have been already deſcribed. Of the fiſh which were found on the coaſt of Falkland's Iſlands, one that was taken in great plenty was called the mullet, from the likeneſs it bears to the European fiſh of that name, the coloniſts dried many of theſe, which are full a yard in length, the ſeals prey on theſe fiſh whenever they can catch them, but, by a natural inſtinct, they are taught to avoid theſe voracious enemies, by ſheltering themſelves in holes, among ſlimy ground, on the banks of the rivers, and in theſe places they were frequently taken. A fiſh called the *Gardeau*, about twelve inches in length, was ſeen in great abundance, and another named the *Sardine*, was found only at the commencement of the winter ſeaſon; ſome white porpoiſes were taken in the bays, when the weather was fair, and ſome eels in thoſe cavities of the rocks which are filled with water. A freſh-water fiſh was found, about the ſize of a trout, without ſcales, the colour of it was green. Many ſmaller fiſh were caught with the hook and line, among them was one ſpecies the head of which reſembled that of a pike, and it had no ſcales. A few ſoals were found; and among the ſhell-fiſh were muſcles, a very ſmall kind of ſhrimp, a crab, the feet of which were blue, and a kind of cray-fiſh, or prawn, the colour of which was naturally red, without boiling, but theſe were only taken through curioſity, as their taſte was much inferior to thoſe European fiſh which are nearly of the ſame ſpecies. 1767

Every one knows the diſpute between Great Britain and Spain relative to theſe iſlands, and how it was at laſt terminated. It happened in that caſe as it generally does in matters of ſuch a nature, that ſome were for crying up the place for a paradiſe, whilſt others repreſented it as barren and not worth contending for. If we take the medium between theſe, we ſhall find ourſelves nearer to the truth. The accounts which have juſt been given on the one hand, indicate not a barren ſoil; but then it is to be conſidered, on the other, that thoſe who firſt ſettle colonies which they wiſh to thrive are apt to be ſtruck with every thing which appears to recommend them, and to give rather flattering deſcriptions of them. On the whole, theſe iſlands ſeem not to be deſtitute of moſt of the productions common to the latitude wherein they are ſituated, wood excepted; and it ſhould ſeem that by time and labour the ſoil is capable of improvement.

After waiting here till the 2d of June, 1767, in expectation of the Etoile ſtore ſhip, when it was found that ſhe did not arrive, M. Bougainville conſidered, that as his veſſel would hold no more than ſix months proviſions, and that he had only two on board, it would be an act of raſhneſs to attempt the croſſing the great Pacific Ocean alone; he therefore reſolved to ſteer to Rio Janeiro, at which place he had appointed the Etoile to join him, in caſe any unforeſeen accident ſhould prevent her reaching Falkland's Iſlands, before he left the harbour of that place. They had fine weather from the 2d till the 20th of June, on which day they had ſight of the mountains on the main land of Brazil; and they ſaw the entrance of Rio Janeiro on the day following. A number of fiſhing-boats being obſerved near the ſhore, M. Bougainville hoiſted Portugueſe colours, and ordered a cannon to be fired; on which a boat put off to the ſhip, and a pilot was engaged to conduct her into the road.

The coaſt of this country is broken by a number of ſmall hills, which ſerve to give an agreeable variety to the proſpect. The land is rather mountainous, and well cloathed with woods.

The ſhip having arrived off Santa Cruz, a Portugueſe officer was ſent to enquire the reaſon of her ſailing into it; on which M. Bougainville ſent one of his officers to acquaint the viceroy of the Braſils, with his motives for touching there, and to demand whether if he ſhould ſalute the fort, the compliment would be returned. The governor haughtily replied, that when a perſon bowed to another, whom he might caſually meet in the ſtreet, he was not previouſly certain that his compliment would be returned, and that if M. Bougainville ſhould fire his guns by way of ſalute, he (the viceroy) had then to conſider what was proper to be done. In conſequence of this inſolent meſ-

1767 ſage the French commander reſolved very properly not to ſalute at all.

About the ſame time a canoe was diſpatched from the captain of the Etoile, to inform M. Bougainville of the ſafe arrival of that veſſel which now lay in the port. The commander, M. de la Giraudais, ſent word, that inſtead of leaving France in the month of December, various accidents had combined to detain him two months beyond that time: that when he had been three months at ſea, his rigging was ſo greatly damaged, and his veſſel admitted ſo much water, that he was obliged to make the harbour of Montevideo, whence he ſailed for his preſent ſtation, and had come to an anchor but a few days before M. Bougainville. The Etoile had at this time ſalt proviſions ſufficient to ſupply both veſſels for almoſt a year and a half; but as her ſtock of bread, &c. was inſufficient for the conſumption of more than ſeven weeks, M. Bougainville reſolved on ſailing to Rio de la Plata, to take in a ſtock, as neither flour, wheat, nor biſcuit could be purchaſed at Rio Janeiro.

On the 22d of June, 1767, M. Bougainville and his officers, paid a viſit to the viceroy of the Braſils, which was returned three days afterwards on board the Boudeuſe; when the viceroy gave permiſſion for the purchaſe of a ſloop, which the adventurers imagined might be very ſerviceable during the long voyage they propoſed to make. The chaplain of the Etoile having been murdered ſome days before the arrival of the Boudeuſe, under the windows of the viceroy's palace, that gentleman promiſed that he would endeavour to find out, and ſeverely puniſh the perpetrators of the horrid deed: he appeared very remiſs in regard to the fulfilling his promiſe in the execution of this neceſſary piece of juſtice. Yet, contrary to his uſual cuſtom, he behaved with politeneſs to the French officers, for ſeveral days after this viſit; and acquainted them, that he propoſed to entertain them with an elegant collation in bowers of orange-trees and jaſmine, on the banks of the river; and he actually gave orders that a box at the opera ſhould be aſſigned for their reception.*

At this time there lay in the harbour of Rio de Janeiro a French ſhip called the Morning Star, and a Spaniſh man of war, named the Diligent; and while the viceroy behaved with all imaginable politeneſs to the Frenchmen, he had artfully protracted the ſtay of the Spaniard no leſs than eight months, during all which time her commander had not been able to procure the articles neceſſary for the repair of his veſſel, and without which ſhe could not proceed on her voyage. In this dilemma, Don Franciſco de Medina, captain of the Diligent, applied to M. Bougainville for the aſſiſtance of his carpenters and caulkers, who were immediately ſent, both from the Boudeuſe and the Etoile.

The complaiſance with which the viceroy treated the gentlemen on board the French veſſels, ſurpriſed the Spaniards, who told them, that they muſt not long expect ſo great a ſhare of his favours; and they had ſoon reaſon to be convinced that the prediction was founded in truth; for though the viceroy had permitted M. Bougainville to purchaſe a ſloop, and he had actually agreed for one, his excellency thought proper to forbid the delivery of it, and notwithſtanding they had contracted with this tyrannical governor for the purchaſe of ſome timber from the royal dock yards, he afterwards changed his mind, and would not let them have it. He even went ſo far as to refuſe M. Bougainville, and the gentlemen on board his ſhip, permiſſion to lodge in a houſe near the town, while the Boudueſe was repairing, though the owner had given his conſent.

The French commander now determined with two of his officers, to pay the viceroy a viſit, in order to make proper remonſtrances on the line of conduct he had purſued; but this haughty man would not hear him ſpeak: on the contrary, he commanded him to leave his houſe. M. Bougainville refuſed to do ſo, and even kept his ſeat ſome time after the guards had been called, who neglected to obey the ſummons; and the French departed quitely. Not long after this affair, an additional number of guns were placed round the palace, and the viceroy commanded that every Frenchman, who might be ſeen in the ſtreets after ſunſet, ſhould be taken into cuſtody. He likewiſe ordered the captain of the French ſhip called the Morning Star, to quit the ſituation where he lay, and to anchor his veſſel under the fort of Villagahon, which order was accordingly complied with.

Baniſhment and impriſonment were the fate of two of the Portugueſe officers for having behaved civilly to M. Bougainville, and the French apprehending nothing but ill uſage from the effects of the viceroy, the Count D'Acunha's tyrannical diſpoſition prepared to quit the place; though the inhabitants were willing enough to hold an intercourſe with them. M. Bougainville was ſupplied with ſome timber proper for the repairs of his veſſel by a captain of a Spaniſh man of war, and ſome planks were alſo ſold him by an inhabitant of Rio Janeiro.

M. Bougainville's account of this place being remarkable, and containing many intereſting particulars, we ſhall here recite it, though we have formerly given our reader ſome account of this ſettlement.

"The mines (ſays our author) which lie neareſt Rio Janeiro, are not leſs than an hundred and twenty miles from that city, and are denominated *The General Mines*. The king of Portugal, who has a fifth ſhare in theſe mines, ſeldom receives leſs than one hundred and twelve arobas of gold from their annual produce.

"There are mines at Sero Frio, Sabara, and Rio des Mortes, which are under the juriſdiction of the managers of the General Mines. Near Sero Frio is a river, the ſtream of which being turned out of its uſual channel, diamonds, topazes, chryſolites, and other valuable ſtones are found among the pebbles in the bed of the river; nor are any diamonds brought from the Braſils but ſuch as are found on this particular ſpot.

"The ſtones thus found are deemed the property of the owners of the mines: but the king of Portugal has appointed a ſurveyor, to whom they muſt give an account of what diamonds are found, with the utmoſt exactneſs. Theſe the ſurveyor puts into a caſket which has three locks, and is incloſed in iron plates, the viceroy keeping one of the keys, the *Provador de Hazienda Reale* the ſecond, and the ſurveyor the third. This caſket, and the keys with which it is locked, are then incloſed in a ſecond caſket, on which theſe three gentlemen affix their ſeals, and this again is placed in a third, whereon the viceroy puts his ſeal, and thus ſhips the treaſure for Portugal, where the coffers are opened in the preſence of his Moſt Faithful Majeſty, who having ſelected ſuch of the diamonds as he pleaſes, the owners of the mines are paid for them, at a rate ſtipulated by a previous agreement.

"The number of ſlaves employed in ſearching for diamonds is about eight hundred, and for every day's labour of each of theſe, the king of Portugal receives a Spaniſh dollar from the proprietors of the mines. It is extremely dangerous for any perſon to ſecrete a diamond; yet the practice is very common, as they can be ſo eaſily hidden. When a perſon is detected in this illicit trade, if he is rich, he is ſentenced to deliver up the diamonds, to pay twice their value, ſuffer one year's impriſonment, and then be baniſhed to the coaſt of Africa for life; but if the offender be poor, he is generally doomed to ſuffer capital puniſhment. In every diſtrict of the Braſils where gold is found, a houſe is erected, to which it muſt be

6 carried,

* Here, ſays our author, a band of Mulattoes performed the beſt pieces of Metaſtaſio, while the compoſitions that the greateſt geniuſes of Italy ever produced were executed by an orcheſtra, which was under the direction of a hump-backed prieſt in his canonicals.

carried, and the king's ſhare paid; the reſt is ſent to Rio Janeiro, where it is melted into wedges, and in that ſtate returned to the owners: theſe wedges being numbered, and ſtamped with the king's arms, the weight is marked on each wedge, the gold is likewiſe aſſayed, and the alloy ſtamped on it, for the greater expedition when it comes to be coined.

"About ninety miles from Rio Janeiro is a place called Praybuna, where there is an office for regiſtering the ingots which are the property of private people, and as all perſons coming from the mines muſt neceſſarily paſs by this place, two military officers are ſtationed here, having fifty men under their command, whoſe buſineſs it is ſtrictly to examine, that no illicit trade is carried on, ſo that every one who paſſes is obliged to ſubmit to the ſtricteſt ſearch. At this place, excluſive of the tax to the king, men and boats are taxed with a farther toll of a real and a half each, the moiety of which becomes the property of the officers and ſoldiers, and the other moiety goes to his Portugueſe Majeſty.

"The ingots of gold, which belong to private people having been regiſtered at Praybuna, are then carried to Rio Janeiro, where the proprietors are paid their value in demi-doubloons, which are worth about thirty ſhillings each of Engliſh money, but there is a profit to the king, for alloy, and for carrying theſe demi-doubloons, of about four ſhillings and ſixpence on each. The mint at Rio Janeiro is a very noble building, admirably adapted for the purpoſe of coining money, which is performed with great expedition; and this, indeed, is rendered neceſſary, becauſe two Portugueſe fleets uſually arrive nearly at the ſame time that the gold is brought from the mines.

"The fleet which arrives from Porto brings coarſe cloth, ſeveral articles of food, with brandy, wines, and vinegar, and this, with the fleet that comes from Liſbon, occaſions Rio Janeiro, to be a place of very conſiderable trade; the effects, on being landed, are charged with a duty of ten per cent. to his Portugueſe Majeſty.

"Soon after the earthquake at Liſbon, in the year 1755, an impoſt of two and a half per cent. under the name of a free gift to the king, was laid on all goods landed at Rio Janeiro, ſo that the whole duty paid is no leſs than twelve and a half per cent. The latter duty is inſtantly paid on the goods being brought on ſhore, but the officers of the cuſtom-houſe will take ſecurity for the payment of the former at the expiration of half a year. There are two diſtricts, named Pratacon and Quiaba, the mines of which produce diamonds; but no perſon is permitted to ſeek for them, that the market may not be overſtocked; for it is evident, that to make diamonds plentiful, would be to render them of little value. His Portugueſe Majeſty is at an expence of about 145,000l. ſterling, annually, for repairing the ſhips and public buildings, working the mines, and paying all his ſervants, civil and military. *

The Boudeuſe and Etoile weighed their anchor on the 14th of July, 1767; but as the wind abated ſoon afterwards, they were obliged again to bring to, before they could get out of the harbour. They ſailed, however, on the following day, and in the night of the 19th, the main-top-ſail of the Boudeuſe was carried away by the violence of the wind. †

1767

On the morning of the 28th the French voyagers had ſight of the Caſtilles, at the diſtance of ſomething more than 30 miles. They ſaw the entrance of a bay, which M. Bougainville conjectured to be the ſame on the banks of which the Spaniards have erected a fort. The veſſels ſailed into Rio de la Plata, and were within ſight of the Maldonados on the 29th. Early in the morning of the 31ſt they had a view of the Iſle of Lobos, and before night came to an anchor in the bay of Montevideo. As ſoon as the veſſels were anchored, the governor ſent a gentleman on board Monſ. Bougainville's ſhip, who acquainted him, that moſt of the Jeſuits in thoſe parts had been lately ſeized, and their eſtates confiſcated, in conſequence of an order received from the court of Spain, and it ſeemed that theſe victims of ſuperior power had ſcarcely made the leaſt reſiſtance, and that they bore their misfortunes with fortitude. No leſs than forty of them had been taken away in the veſſels which brought the orders for their diſgrace.

As it was neceſſary that M. Bougainville ſhould remain in his preſent ſtation, till the equinox was paſſed; his firſt care was to build an hoſpital for the ſick, and to take lodgings at Montevideo. This being done, he repaired to Buenos Ayres, in order to haſten the proviſion of ſuch neceſſaries as he wanted, for which he was to pay the ſame price as the king of Spain uſually gave for the ſame commodities.——He was alſo deſirous of converſing with the governor-general, Don Franciſco Buccarelli about the behaviour of the governor of Rio Janeiro; and he ſoon learnt that Don Buccarelli, inſtead of making repriſals on the viceroy of the Braſils, which he could have done, very much to the prejudice of Portugal, had, more prudently, only ſent a narrative of his proceedings to the court of Spain. Don Buccarelli was however ſo ready to ſupply M. Bougainville with ſuch articles as he ſtood in need of, that in leſs than three weeks two veſſels ſailed for Montevideo, with ladings of flour and biſcuits for the uſe of the French ſhips. M. Bougainville alſo went to Montevideo, leaving an inferior officer at Buenos Ayres, to ſee the remainder of the proviſions ſupplied. They now expected to ſail very ſhortly, when an accident happened that detained them ſome weeks beyond the intended time. A Spaniſh regiſter ſhip being at anchor, a violent hurricane aroſe in the night, and driving her againſt the Etoile, carried away part of the head of that veſſel, and broke her bowſprit on a level with the deck. The leaks of the latter being encreaſed by this accident, it was abſolutely neceſſary that ſhe ſhould undergo a thorough repair, but as there was not timber enough at Montevideo for this purpoſe, M. Bougainville obtained Don Buccarelli's permiſſion that ſhe might go up the river, to the Encenada de Baragan, a little bay formed by its mouth, and in this bay by the 21ſt of October ſhe was put in a condition proper for ſailing, and began to take in the neceſſary proviſions.

In the road of Encenada, M. Bougainville found a frigate and ſeveral merchant ſhips which were bound for Europe, and two Spaniſh veſſels, which having taken in a ſtore of ammunition and proviſions, were

* The amount ariſing to the king of Portugal in ſterling money, from the royal revenues of Rio Janeiro is as follows:

	Dollars.
The king's fifths are generally, one year with another, about one hundred and fifty arobas of gold, which make in Spaniſh dollars	1,125,000
The duty on diamonds amounts to	240,000
The profit ariſing from the coinage of money is	400,000
The duty of ten per cent. paid at the cuſtom-houſe is	350,000
The free gift of two and a half per cent. amounts to about	87,000
Various produces of the mines, with the poll-tax, and monies ariſing from the ſale of offices and employments	225,000
A duty laid on negro ſlaves produces	110,000
A tenth on all the food of the country, and the taxes on ſoap, ſalt and train-oil, bring a revenue of	130,000
Total	2,667,000

From whence it appears that the king of Portugal's revenues ariſing from Rio Janeiro, amount anually to above 450,000 l. ſterling.

† On board of M. Bougainville's ſhip was a profeſſor of aſtronomy, who made the expedition with a view of diſcovering the longitude at ſea, and as an eclipſe of the ſun was to happen on the 25th of the month, great hopes were formed that an opportunity would thereby be obtained of making the wiſhed-for diſcovery; but it happened that theſe ſanguine expectations were all fruſtrated, by the intervention of clouds, which obſcured the face of the ſun almoſt during the whole time of the eclipſe.

1767 were to go to Falkland's Iſlands; and from thence to the South Seas, to take on board the Jeſuits of Peru and Chili, two xebecks likewiſe lay here, one of which was loaded with preſents from his moſt Catholic Majeſty, to the inhabitants of Terra del Fuego, in return for their conduct towards the crew of the Conception, which about two years before was wrecked upon the coaſt.

The French commander obſerves that the people on the bank of the Encenada de Baragan live in mean huts, conſtructed of ruſhes, and covered with leather, which are ſituate on a ſoil ſo barren that common neceſſaries are hard to be got. This ſhip ſailed from the road of Encenada de Baragan for Spain, which had on board 250 Jeſuits and moſt of the French families that had left Falkland's Iſlands. Two Spaniſh regiſter ſhips arrived at this time, one of which being in great diſtreſs, M. Bougainville ſhewed his humanity by ſending many of his crew on board her, and ſhe was brought to Montevideo harbour by their aſſiſtance.

From the Encenada the Etoile ſailed on the 30th of October, and was followed the next day by the Boudeuſe, having on board proviſions for ten months, and in their paſſage to Montevideo, they loſt three men, a boat which they were in, running foul of the ſhip as ſhe was wearing; it was with difficulty that two others were ſaved and the boat was recovered.

A ſtorm ſoon overtook them after they had ſailed from Montevideo, in which both the veſſels loſt moſt of the cattle which they had purchaſed for ſtore.

At this time they had uncertain winds, and violent currents which drove the veſſels to the 45th degree of ſouth latitude, and at length they made Cape Virgin, which Sir John Narborough called, Cape Virgin Mary.
